

Alternative D: Wild Horses and Burros

Action D-WHB 1: For all HMAs, HAs and WHBTs within or that contain PPMA and PGMA, manage wild horse and burro populations within established AML to meet GRSG habitat objectives. In HMAs, HAs, and WHBTs not meeting standards due to degradation that can be at least partially contributed to wild horse or burro populations, consider adjustments to AML through the NEPA process. Adjustments would be based on monitoring data and would seek to protect and enhance PPMA and PGMA and establish a thriving ecological balance.
