

# Rights-of-Way

The public has identified the need to address right-of-way (ROW) decisions and to consider ROW corridors. Specifically, the existing RMP's site-type rights-of-way decision needs clarification and possible adjustment to address issues, including the following:

- What areas have potential for wind and solar development?
- What ROW decisions are necessary to support such developments?
- What areas should be designated as ROW avoidance areas (areas to be avoided, but may be available with special stipulations) and exclusion areas (areas not available for ROWs)?

In association with ROW decisions, the RMP Revision needs to address designated ROW corridors. The RMP Revision will address issues, including:

- What happens if a currently designated ROW corridor going through a town or city is primarily private land?
- What level of corridor planning is required where the Western Energy Corridor left gaps?
- Should an existing designated corridor be moved if sensitive species habitat would be threatened (e.g., Amargosa to Roach corridor through Ash Meadows ACEC and habitat for the endangered Spring Loving Century plant)?
