

National Greater Sage-Grouse Planning Strategy

Idaho and Southwestern Montana Vegetation

Vegetation data are based on the Northwest Regional Gap Analysis Project (NWReGAP), which derives ecological systems from satellite imagery (1999-2001). Due to the large scale of the sub-region, vegetation were categorized based on broader

vegetation classes, which encompass a larger number of finer-scale vegetation groupings. Fire perimeters were used to reclassify areas visible as burned areas in the imagery.

- | | | |
|--|---|---|
| NWRReGAP class | Nonvascular and Sparse Vascular Rock Vegetation | Preliminary Priority Habitat* |
| Unclassified | Open Water | Idaho and southwestern Montana sub-region |
| Agricultural Vegetation | Polar and High Montane Vegetation | BLM District Office boundary |
| Developed and Other Human Use | Recently Disturbed or Modified | |
| Forest and Woodland | Semi-Desert | |
| Introduced and Semi Natural Vegetation | Shrubland and Grassland | |

*Montana Preliminary Priority Habitat is based on Montana Fish, Wildlife & Parks Core habitat designations.
