We are ranchers that run our cows on the book cliffs or roan plateau. We feel that multiple agencies and the public stakeholders have all taken this issue very seriously and are doing a multitude of actions to help the sage-grouse. We started almost 10 years ago asking the Parks and Wildlife people what they thought we could do to help the situation. The first actions we took didn't work but since then the research has shown what actions could be more helpful. We feel that the BLM shouldn't take any other action than what they are already taking. We think that the best actions are already being used. Thank you- Chris and Tim Uphoff
