- ▨ Steller Sea Lion Seaward Buffer 20 Nautical Miles
- Steller's Eider Critical Habitat
- Steller Sea Lion Haulout/Rookery

Note: Regarding the steller sea lion habitat, the discrepancy between the sizes of the landward and seaward buffers, 3000 feet for the former versus 20 nautical miles for the latter, coupled with the map scale create a situation in which the landward buffer area is not readily seen, as it is covered up by the symbology. For these reasons it can be assumed that every steller sea lion haul out/rookery point is also the location of landward buffer.
