Comment Title: Protest of March 2018, or Any Oil and Gas Lease Sale

You may remember that you have seen some of the attached comments before. We attempted to deliver them directly to you after we missed a laughably short and inaccessible official comment period for the December lease sale. Your staff wouldn't let us finish with our delivery. They collected some of the comments before we could read them out loud and we can't know that they didn't proceed to put them straight in the trash. Figuratively, this seems to be your standard approach when the public calls to keep fossil fuels in the ground.

We know, these comments were originally written for the December lease sale, not the March lease sale. We are choosing to submit them again because they express sentiments that don't go away with the close of a public comment period or the completion of a sale.

We know, these comments also are not specific to parcels that are on the chopping block like you would like them to be. Instead, they pertain to any and all public land in Utah. This is why we have submitted them to every Field Office involved in the March lease sale.

Comment:

We know, these comments also are not technical like you would like them to be because we aren't opposed to your actions based on technicalities. Instead, we don't feel the leasing of any public lands for oil and gas is acceptable. Hard stop.

For these reasons, we realize that you will most likely not recognize our comments as legitimate. Similarly, we don't accept your process as legitimate.

When will you stop sowing the seeds of ever-increasing climate chaos? When will you start working with us to create a livable future?

With gravity and sorrow,
A Large and Angry Portion of The Public

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

We are writing in protest of the immoral and irresponsible sale of public lands for oil and gas extraction. We know that there are official avenues we are supposed to use to submit our complaints. However, those processes are inaccessible and futile. For the December lease sale, the BLM failed to hold a meaningful or adequate public commenting period. We don't represent official organizations and we are expressing more than technical concerns about specific parcels. Instead, we are the people of so-called Utah, and we are protesting this entire process.

Science shows we must take urgent action in the next twelve years to prevent catastrophic climate change. Rather than listening to science and the demands of the public, you have instead led the largest sacrifice of land in the past decade. You are taking us backwards while accelerating the warming of our climate at a deadly pace. This is not a far away crisis. Climate change is happening here and now. In 2018, Utah experienced its driest year on record. Foreseeing this crisis in March, Governor Herbert asked faith leaders to pray for snow. We need more than prayers, though. We need to keep fossil fuels in the ground.

You have tried to sell away our future behind closed doors, but your attempts to silence us will not succeed. We are rising in defense of the land, water, air, and our communities. We demand that you stop leasing public lands to the fossil fuel industry. The actions you take will determine the health and safety of young people and future generations. We deserve a livable future.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

The short sighted policies that you are administering, including rampant leasing of oil and gas across the west, put all of our communities at risk. Climate change is a real force that is beginning to alter our world in shocking ways. We can see it from the 19 year drought in the Colorado River Basin to the mass die off of mountain forests and intensified wildfire seasons. We should be taking steps to decrease our production of and reliance on fossil fuels, not leasing sacred land to continue on this path of destruction. I assume, as a staff member of the BLM, that you are aware of climate change and the impact it is having on our public lands. I encourage you to take responsibility in this matter and use your influence and your voice to stop fossil fuel production on public lands. We need to do this.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

The notion that the United States should expand oil and gas drilling efforts is antiquated and short sighted. Continuing to invest in such practices is detrimental not only to water resources, air quality, general public health, and local ecosystems - it has an even larger impact on surrounding local municipalities. The matter of fact is that oil and gas have a history of repeated boom and bust cycles, yet never in the same place. While drilling may provide a handful of jobs to local economies over the next 2-10 years, once the oil and gas have been extracted to their full potential, a town or city will lose a major employment center forever. In the wake of oil and gas drilling will be a suffering community without a self-supporting regenerative economy and abandoned rigs on an otherwise pristine and stunning landscape. In addition to local displacement, the compounded effects of investing in oil and gas rather than investing deeper in other energy technologies will continue to contribute to the eventual displacement of hundreds of thousands as coastal areas experience more extreme cases of flooding and the west sees further drought and wildfires due to rapidly accelerated climate change due to human activity. If developing viable and robust economies is the goal of both the State of Utah and the United States of America, we need to end the exploitation of our land.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

I want a future for the young children living today. We cannot ignore climate change and the role fossil fuels have in creating changing weather patterns and climate changes. Storms are getting more severe, droughts more persistent, and wildfires more destructive. Please invest in the future of our planet and future children. A living wage is important to be sure, but there are other ways to make a living besides investing in dirty fuels that will destroy our home. Please stop denying how serious global climate change is for the survival of the human race. Planet Earth will survive without humans, but humans need Earth to continue their lives. Please, please try to be good stewards for our future.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

I am writing to express my opposition to weakening the Roadless Area Conservation Rule in Utah. I request that you press pause on submitting a petition that requests a new rulemaking process to the Secretary of Agriculture until you properly engage Utahns and consider science.

Utah's roadless forests provide numerous ecological and social benefits. Roadless areas provide clean drinking water for millions of Utahns and pristine, intact habitat for many species, including bears, elk, bighorn sheep, and moose. Roadless areas are often the backdrop of many popular recreation destinations across the state and support a thriving tourism and hunting and fishing industry. Building roads and conducting commercial logging in national forest roadless areas threatens our drinking water, wildlife, recreation opportunities and tourism industry.

The other states that have sought changes to the roadless rule spent years collecting public comment and holding public meetings to ensure citizens were properly engaged from the outset. By contrast, Utah's petition is being developed largely behind closed doors on an extremely abridged time frame, with little to no opportunity for meaningful public input.

Our forests are critical for our citizen's well-being -- this we can agree -- but weakening the roadless rule on an expedited timeline is not the route to healthy forests and healthy communities.

Thank you for considering this letter.

With Urgency and Heart,

Veronica Egan

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

Offering up hundreds of thousands of acres of public lands to private extraction companies is unconscionable when roughly 70% of all current leases go unused. There is absolutely no need to sell our legacy to the lowest bidder, other than dogmatic adherence flawed management practices that overvalue extractive industry interests. Additionally, the current IPCC report and the Fourth Governmental Assessment on Climate Change both highlight catastrophic impacts due to fossil fuel extraction and use, the consequence of which will cost Americans billions of dollars in lost economic earnings. As a public agency you are tasked to follow the best available science, and work to meet the needs of your constituency. You have failed on both counts. Proffering fossil fuel leases on public lands is neither in the best interest of the public, nor demonstrated as a clear and urgent need. As a resident of Utah, I spend a majority of my free time hiking, camping, and visiting our public lands. It is why I live here. Recognize that the best use for public lands is to allow them to provide vital ecosystem services and a place for communities to learn and grow together.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

Oil prices are at a low point. It makes better environmental and financial sense to leave it in the ground until it is needed. Short term profit does not benefit the people of our state, especially those of us who depend on recreational lands for our town's income.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

There has to be a more deliberate and thoughtful process to this development. There has been too much careless and willful destruction of these, our lands. Stop contributing to rising the temperatures on our planet due to excessive fossil fuel development. Climate change is real and must be acknowledged. Do not think you can get away with this destruction. Consider the current changes in our weather patterns and the strength of our storms, drought conditions, and other extreme phenomena.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

I am opposed to further environmental destruction for limited use energy on public lands. In particular many of the areas that are up for auction have delicate ecosystems, and fauna that depend on clean air, soil, and water. Along with pollution potentially harming people in the area. Water and wind will always spread these contaminants. We have too many toxic energy sites abandoned, and running as it is in our state. Many areas up for lease are areas of public recreation which would ruin the landscape for potential visitors. We are able to make healthy economies in the area from recreation with no need for more damaging oil and gas extraction on public lands. These are precious lands and vulnerable. We should be looking for more environmentally supportive means for energy or it's not the right choice. Thank you for listening.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

Utah is already in the top ten for worst air in the nation. Utah has already sold out the Western mountains of salt lake county to complete ruin. Utah has sold out the point of the mountain to Geneva, and the northern salt lake area to horribly damaging industries. We have allowed the continual dumping of radioactive waste in our back yard. When does it stop? When will the public health matter. When will the environmental health matter? When will you stop allowing our greatest landscapes and attractions to be desecrated?

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

Please be considerate of those who have full time or multiple jobs who are not aware of the political process by which the federal government leases public lands, specifically for oil and gas extraction. Please extend comment periods and educational initiatives that are designed to raise awareness around the use and decision making around public lands. Utah has a lot of it and the process by which public land is spoken for should be a public process- one that is widely publicized, widely discussed, and open to comment from all sectors of the community. Community meetings, polls, surveys, door to door, anything helps in educating people about how public lands are used and what their options are. No meetings and no outreach about the matter is equivalent to taking action without public input. The public process takes time and requires consistent and repetitive outreach. People, specifically people who are inherently connected to public lands through their ancestral and cultural practices, (such as Native American tribal peoples) should be allowed to understand the options and have a way to voice their input.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,
In a state that consistently has air pollution levels worse than that found in major cities in China, we can't afford to allow the industrial waste from extraction methods and continued practice of oil usage. Additionally, and just is importantly, this land was designated land for the people and should have never been permitted to private companies for profit. There are major economic and ecological benefits to be gained in a Green New Deal which benefits citizens locally and all life on Earth as a whole. Per more and more scientific findings in the field of climate change, we are running out of time to make significant changes in the oil and coal industries let alone already falling short of the milestones set to mitigate the already disastrous results of a two degree increase in our global temperatures. Enough is enough, we can't allow the financial gain of the already affluent few outweigh the health of all life on our planet. All the money in the world can't buy a new world. Even oligarchs and oil executives have grandchildren and unless we change course in a major way, it's those same children that will be fighting wars over water and suffer significant health issues from poor air quality. This is not hyperbole, please read any of the findings among the 99% consensus of climate scientists and even those scientists hired by the Koch corporation.

Our children's futures are in your hands. Your grandchildren can't breathe nor eat the cash that you're seemingly amassing for their benefit.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

Utah has leased enough of its land to private interests and without the addition of fossil fuel extraction is already a large enough contributor to pollution and climate change. If we are going to lease land which we should not as it belongs to the public, it should not be land that grants mineral or resource rights ; unless the resource happens to be sunlight or wind for renewable energy production.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

This is a decision that needs more consideration! Please put it off for now and let's talk about it more. The responsibility of people in leadership is to really hear both sides. It feels like you are rushing to sell these lands off before the tide turns the other direction, instead of making a good, well thought out plan That takes into consideration many points of view and by debating, comes up with a win-win solution. A solution That will set up the future to be in a better place instead of a possibly worse place.

It Makes me sad to see oil pumps and fracking beds so close to Dead horse point and other places that I have spent my life loving, hiking, exploring, letting the beauty of the red desert take my breath away every single time I see it!

In recent years as I have visited national parks, And seen the crowds and throngs of people enjoying nature, it's obvious as the population grows we need more open natural spaces and not less, otherwise what is the point of life?

I'm sure there are other sources of gas and oil, don't turn our beautiful Utah into a wasteland.

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

These lands belong to ALL citizens of the United States. As a citizen co-owner I do not approve of the sale of any part of the national parks. These lands should be preserved for future generations to enjoy in their natural state. The land also need to be preserved for the endangered wildlife that needs this land to survive.

Besides this, these lands are historically and culturally important to the USA and to native Americans and should not be disturbed.

There is no excuse that could possibly validate sale of any portion of these lands - not to ranchers for grazing or to oil and gas corporations or for any other exploitation of the land's natural resources!

Re: Protest of December 2018 Oil and Gas Lease Sale

Dear State Director Ed Roberson,

I live in between Arches National Park and Bears Ears Monument, in the heart of the Colorado Plateau. The Trump administration's determination to sell off our public lands via leases to transnational corporations, usually at basement prices, is of grave concern to me. Each quarter, hundreds of thousands of acres across this state are being offered up for oil and gas drilling. This amounts to a staggering total of over 420,000 acres in 2018 alone, right next to important landmarks such as Canyonlands NP and Glen Canyon National Recreation Area just to name a couple. As I stated I live here, and it is of great concern to me because we live in an era of climate change, which translates to extreme drought across the state. Allowing oil and gas drilling not only puts are already precious water resources at risk, but also our perpetuates climate change, air pollution, wild life habitat degradation, and disrupts irreplaceable landscapes. Salt Lake already has some of the worst air quality in the country in the winter. We deserve to be working towards solutions to the existing pollution verses creating new sources of toxic contamination via fracking and drilling. I have seen the effects of the boom and bust cycles of the oil and gas industry. Our communities deserve not only clean air, water, and soil, but regenerative economies that provide consistent employment. We demand that the BLM end all leasing of public lands for oil and gas drilling now.
