List animal's age, color, gender and cause(s) of death:

Acute:

10/3/18: A 2 month old pinto filly (BCS 3) died from an acute head injury which occurred after being captured.

10/3/18: A 3 month old pinto filly (BCS 4) captured died of gather myopathy after transport to temporary holding.

10/4/18: A 3 year old black mare died of a broken neck after running into a panel while being sorted after she was captured. The mare was double club foot in the front.

10/15/18: A 6 month old sorrel filly died of gather myopathy after transport to temporary holding. A necropsy examination was performed and a report is pending.

Chronic/Pre-existing:

10/3/18: An 18 year old appaloosa mare (BCS 3) was humanely euthanized due to a pre-existing shoulder injury which caused severe lameness.

10/3/18: A 14 year old appaloosa mare (BCS 3) was humanely euthanized due to a pre-existing head injury which had caused blindness in both eyes.

10/4/18: A 5 year roan stud (BCS 4) was humanely euthanized due to a pre-existing cervical spinal injury that had resulted in severe lameness and lack of control of rear legs.

10/4/18: A 16 year old palomino mare (BCS 2.5) was humanely euthanized due to a pre-existing vaginal/rectal tear from foaling, resulting in a chronic partial rectal prolapse with a poor prognosis for recovery.

10/4/18: A 4 year old black stud was humanely euthanized in the field due to a pre-existing cervical spinal injury that had resulted in severe lameness and lack of control of all legs.

This stud had been observed the previous 2 days showing complete loss of body control.

10/5/18: A 3 year old dun mare (BCS 3) was humanely euthanized due to a pre-existing fracture of a rear pastern that had resulted in severe lameness.

10/5/18: The following animals were humanely euthanized due to angular limb deformities (ALD) in one or multiple limbs and feet. Because these angular limb deformities appear to have a genetic component and because the severity of these deformities were causing severe lameness, these animals were not suited to return to the range or place into off-range holding or adoption. These conditions were indicated by club feet, severely overgrown hoof walls, collapsed heels, limb deformity, arthritic joints, toes pointed out at the fetlock, and lameness:

1. A 3 year old pinto mare (BCS 3): Bi-lateral ALD
2. A 3 year old appaloosa mare (BCS 3): Severe club foot, left front
3. A 5 year old appaloosa stud (BCS 5): Bi-lateral ALD
4. A 7 year old bay stud (BCS 4): Bi-lateral ALD
5. A 2 year old bay stud (BCS 3): Bi-lateral ALD
6. A 5 year old appaloosa stud (BCS 5): Bi-lateral ALD
7. A 3 year old sorrel mare (BCS 3): Left front ALD and severe knee arthritis
8. A 7 year old bay mare (BCS 5): Severe club foot, right front
9. A 2 year old palomino mare (BCS 3): Bi-lateral ALD
10. A 3 year old dun stud (BCS 3.5): Left front ALD
11. An 11 year old pinto stud (BCS 4): Bi-lateral ALD

10/8/18: A 3 year old blue roan mare (BCS 4) was humanely euthanized due to a severe sway back condition.

10/8/18: A 6 year old buckskin stud (BCS 4) was humanely euthanized for a severe club foot.

10/8/18: A 3 year old appaloosa stud (BCS 5) was humanely euthanized due to severe arthritis in the knee which resulted in severe lameness.

10/9/18: A 2 year old appaloosa stud (BCS 4) was humanely euthanized due to pre-existing bilateral angular limb deformity.

10/10/18: A 2 year old dun mare (BCS 4) was humanely euthanized due to pre-existing angular limb deformity in her left front foot which caused severe lameness.

10/12/18: A 3 year old pinto mare (BCS 3) was humanely euthanized due to pre-existing bilateral stifle abnormality and old limb fracture which caused severe lameness.

10/14/2018: A 5 year old sorrel mare (BCS 2.5) was humanely euthanized due to a severe club foot on the left front which caused severe lameness.

10/16/18: A 7 year old sorrel mare (BCS 3) captured 10/15/18 was humanely euthanized due to pre-existing bilateral ruptured sesmoids in her hind legs, which caused severe lameness.

10/16/18: A yearling roan filly captured 10/15/18 died at the holding corrals. An APHIS veterinarian performed a necropsy examination which determined the filly had severe pneumonia which existed prior to capture.

10/16/18: A yearling brown colt died after capture. An APHIS veterinarian performed a necropsy examination which determined the colt had severe pneumonia which existed prior to capture.

10/20/18: A 4 year old white stud (BCS 2.5) was humanely euthanized due to pre-existing bilateral clubbed feet in the front which caused severe lameness.
