## Introduction and Background

Sections 1503 and 1504 of the Omnibus Public Land Management Act (OPLMA) of 2009 designated six wilderness areas (approximately 517,000 acres) and 16 wild and scenic river segments (approximately 325 miles) in Owyhee County, Idaho (see Table 1 and Map 1). These designated areas are managed by the Bureau of Land Management (BLM) Boise and Twin Falls Districts. Section 1503(b)(3)(B) of the OPLMA states that:

“... the Secretary [of the Interior] shall conduct an inventory of existing facilities and improvements associated with grazing activities in the wilderness and wild and scenic rivers designated by this subtitle.”

In January 2011, the BLM Boise District published the initial Inventory Report - Wilderness Range Management Projects, which identified over 250 range projects within the six wilderness areas. The inventory was based on discussions with permittees, as well as BLM staff locating and GPSing specific projects in the field. In April and May of 2011, BLM acquired three wilderness in-holding properties that contained additional range projects. Also, additional meetings with permittees and stakeholders resulted in corrections and revisions to previous data.

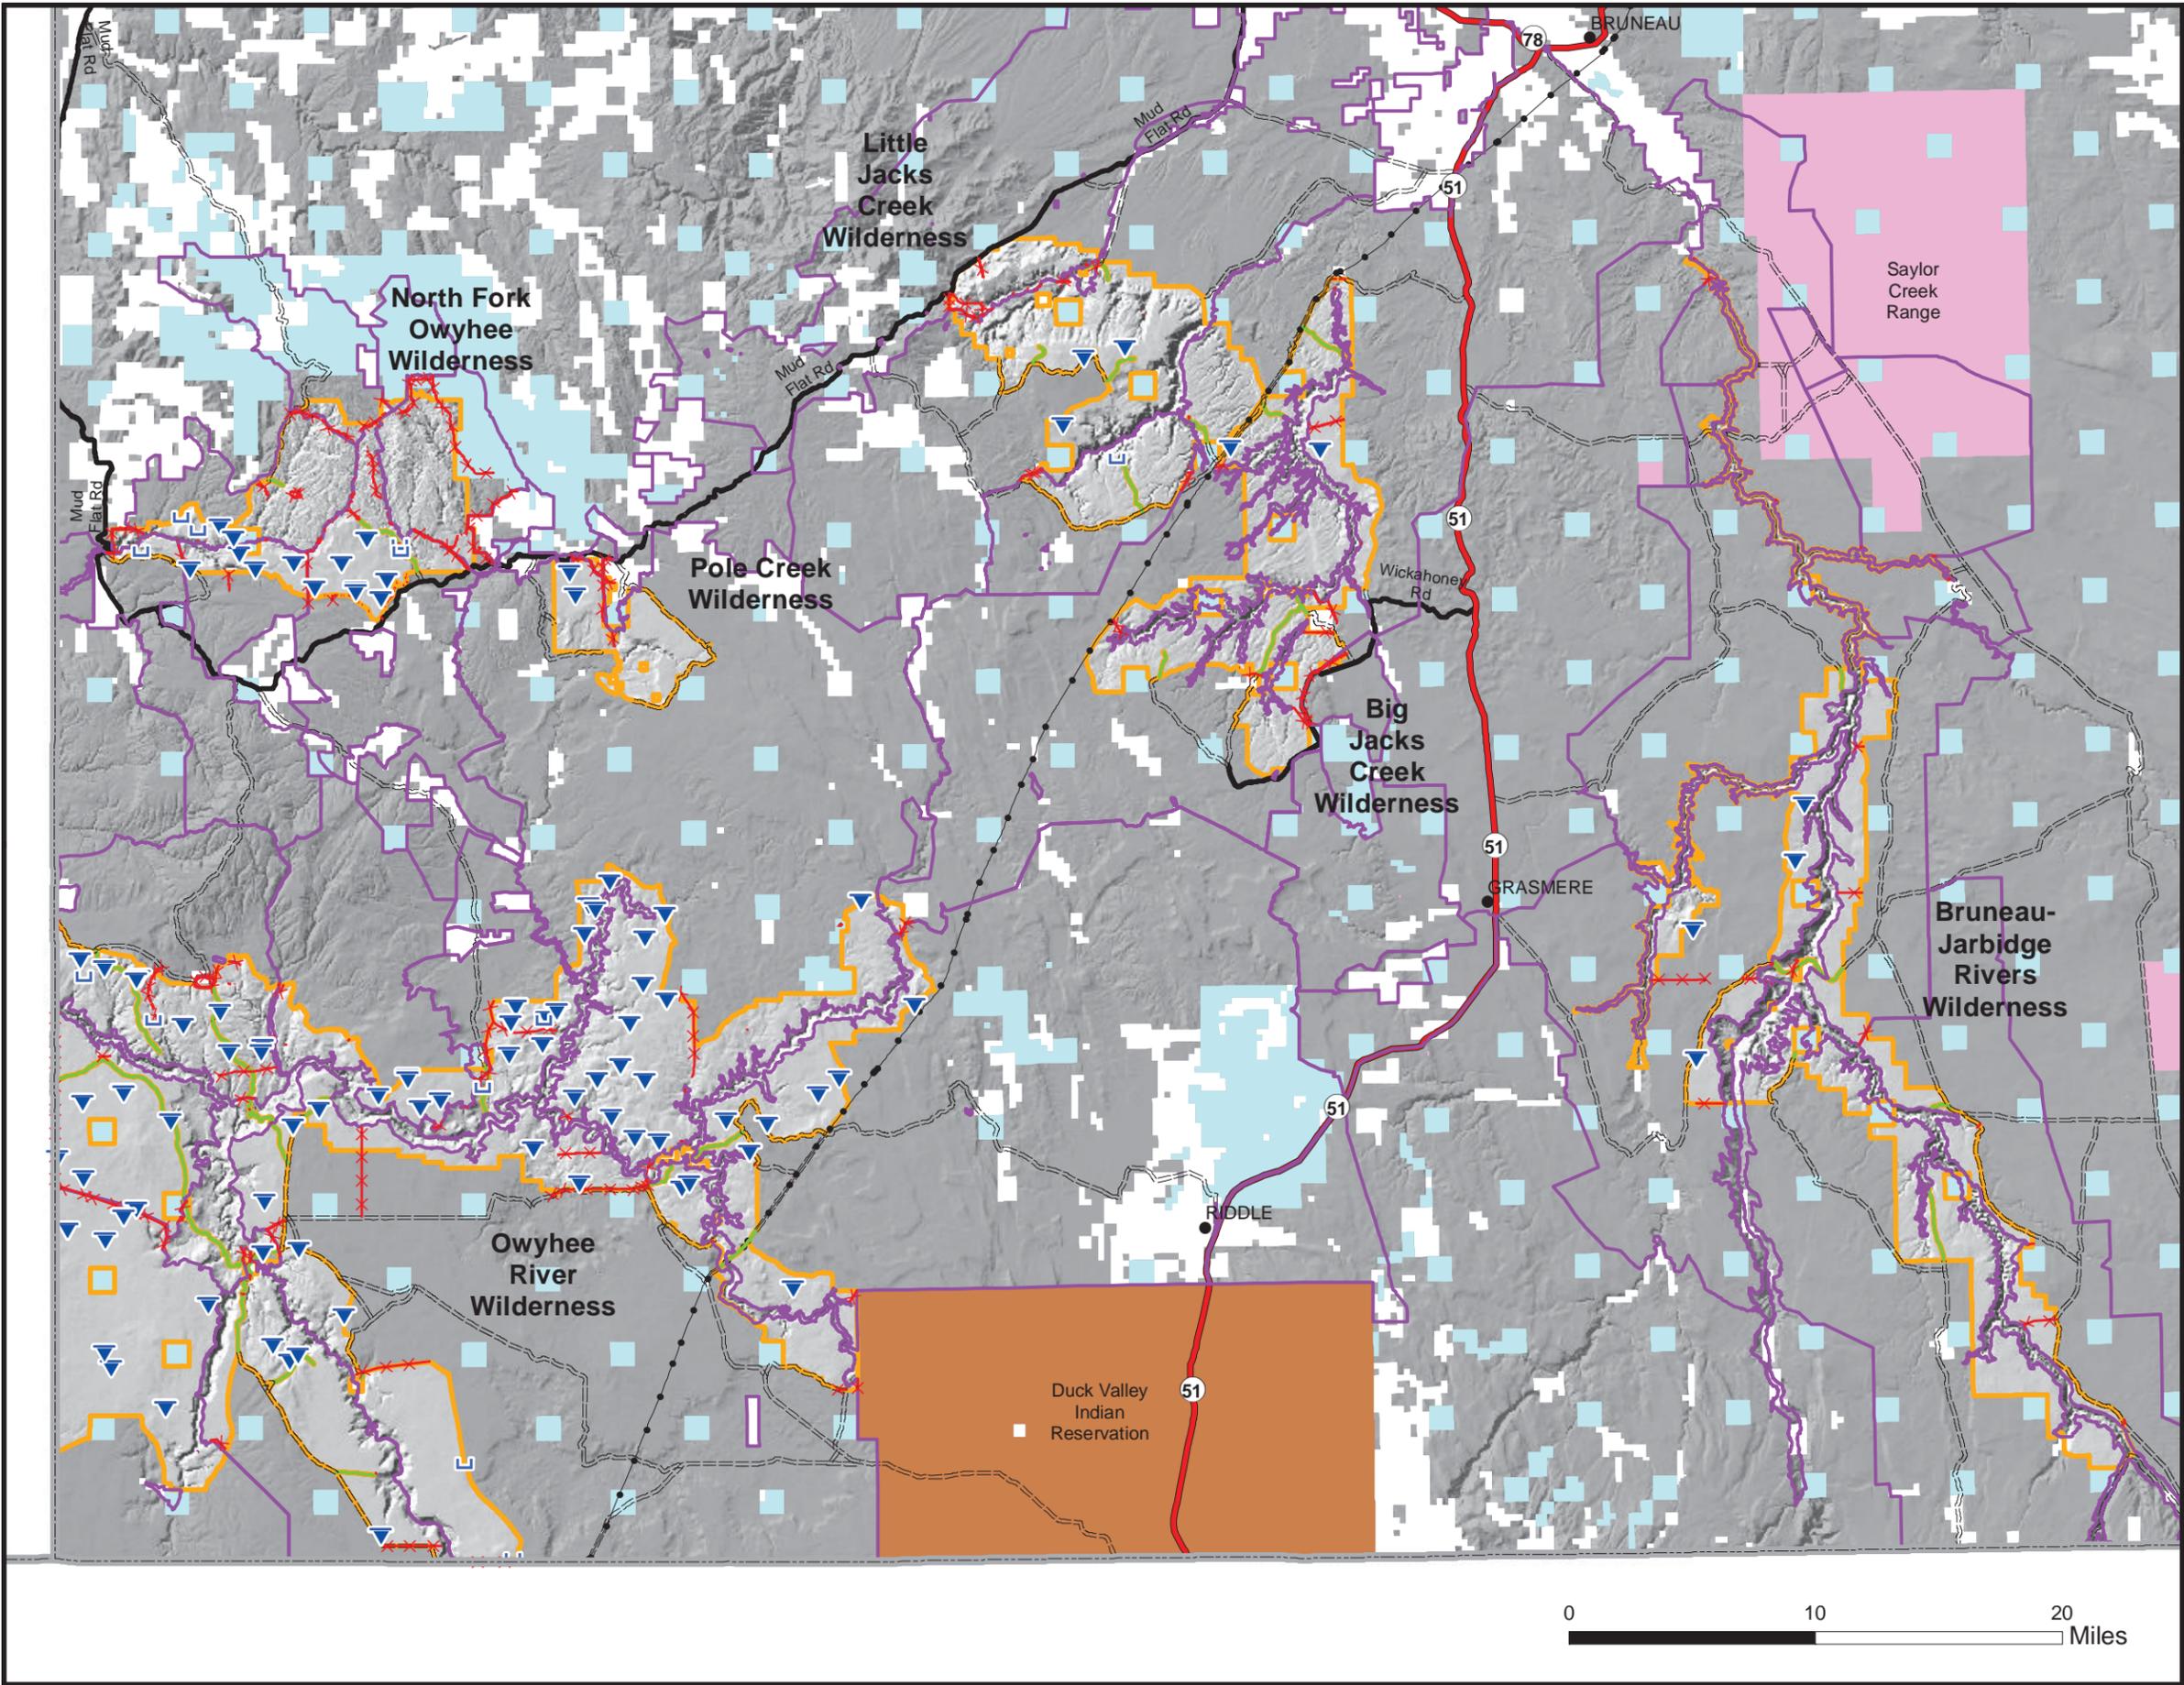

The project inventory has been revised to incorporate projects located in newly acquired lands, and to correct errors that were based on incorrect information or the location of previously unidentified projects. About 40 reservoir and fence projects from the original inventory report were deleted based on more accurate information.

This Range Project Inventory Report incorporates the latest information regarding wilderness range projects. The report describes range projects located wholly or partially within wilderness areas generally depicted on the legislative maps accompanying the OPLMA. As we complete wilderness boundary surveys, some range projects or portions thereof may later be found to be outside of a wilderness boundary. Also, a few range projects may still exist within wilderness areas that have not as yet been located.

Appendix A consists of a spreadsheet listing the inventoried range projects. The list is broken down first by wilderness area, and then by allotment. Appendix B includes: 1) overview maps of each wilderness area, and 2) maps showing range projects in greater detail by allotment.

In compliance with applicable laws, regulations, and policies, including the Wilderness Act of 1964 and BLM's wilderness grazing guidelines, this project information will be used to help

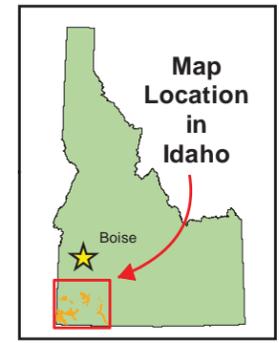

develop decisions regarding when, where, and in what manner motorized or mechanized vehicles or equipment may be authorized within wilderness areas for the purpose of occasional range project maintenance or repair.

Boise District, Boise ID

Map Date: 8/16/2012

## Maps and Legal Descriptions

In October 2011, the BLM Idaho State Director approved official maps and legal descriptions of the Big Jacks Creek and Little Jacks Creek Wilderness Areas based on boundary surveys completed by the BLM Idaho Cadastral Survey Unit. Boundary surveys will continue until maps and legal descriptions are completed for all six wilderness areas, which may take 5 to 10 years due principally to the size, configuration, and remoteness of the Owyhee River and the Bruneau-Jarbidge Rivers wilderness areas. When approved by the BLM Idaho State Director, official wilderness maps and legal descriptions are forwarded to the BLM Washington Office for submittal to the Committee on Energy and Natural Resources of the Senate and the Committee on Natural Resources of the House of Representatives.

With the exception of the Little Jacks Creek and Big Jacks Creek Wilderness areas, wilderness boundaries used in this report reflect the boundaries generally depicted on the legislative maps referenced in the OPLMA.

## Coordination

In 2009, BLM Boise District staff initiated the range project inventory process by first examining existing range project files to formulate a list of authorized facilities within wilderness boundaries. In 2011 and 2012 staff continued the inventory process by reviewing topographic maps and aerial imagery to identify visible range facilities. BLM staff met with grazing permittees in the field and in the office to review and verify data gathered during the inventory. Follow-up meetings with permittees were conducted in early 2012. Discussion topics during these meetings included the wilderness management planning process, as well as an overall review and clarification of the permittees' proposed motorized access needs.

## Methods

During the project inventory, BLM staff walked the length of each fence and visited each spring, pipeline, reservoir, or other improvement. The location of each range project was recorded using a Trimble Juno SB Global Positioning System (GPS) unit. The GPS data averaged 2 to 5 meter accuracy after differential correction. The data dictionary used to collect field data was created and approved by the BLM Idaho GPS Committee, and the collected attributes conformed to BLM Idaho statewide standards. Table 1 reflects the types and numbers of range projects identified during the survey.

## Findings

**Table 1. Wilderness Range Management Projects.**

Wilderness Area	Fences <sup>a</sup>	Corrals and other structures	Reservoirs, Ponds, Lakes and Dugouts	Water Developments (Troughs, Guzzlers Wells and Springs)	Total Projects
Big Jacks Creek	17	0	3	0	20
Bruneau – Jarbidge Rivers	17	0	2	1	20
Little Jacks Creek	10	0	5	3	18
North Fork Owyhee	24	2	10	4	40
Owyhee River	50	3	56	7	116
Pole Creek	3	0	4	0	7
<b>Total</b>	<b>121</b>	<b>5</b>	<b>80</b>	<b>15</b>	<b>221</b>

<sup>a</sup> The “Fences” category includes eight exclosures. Fence projects total approximately 120 miles.

Appendix A provides information for all known wilderness range projects. The spreadsheet is organized first by wilderness area, then by the allotment(s) within the wilderness. Permittee names, maintenance responsibility, and Rangeland Improvement Project System (RIPS) numbers were included where known. Legal descriptions denote Township (T), Range (R), Section (Sec), and Subsection (Sub). Where specific project names were unknown, a landmark name or other identifiable characteristic was used to reference the project. Projects highlighted in blue have either been added or contain new information since the original (2011) inventory report.

Appendix B includes maps of the wilderness areas and the affected grazing allotments. Every effort has been made to portray on the maps the location of each range project identified during the inventory. However, due to page size limitations, and in the interest of generating readable maps, some projects located in close proximity to one another were grouped and are shown as one project. In addition, to enhance map readability, a legend is located at the front of Appendix B that pertains to all of the maps, thus negating the need for separate legends on each map.

## **Appendix B - Wilderness Range Project Maps**

# Map Series Information

Every effort has been made to portray on the enclosed maps the location of each range management project identified during the inventory. However, due to page size limitations, and in the interest of generating a readable map, some projects that are located in close proximity are shown as one improvement. Some of these projects will be shown in greater detail for permittee-specific discussions.

## Legend

### Range Improvements

-  HORSE CAMP
-  CORRAL/OUTBUILDING
-  SPRING/TROUGH
-  RESERVOIR
-  FENCE
-  RANGE ALLOTMENT
-  RANGE PASTURE
