Notice of Field Manager's Final Decision for the Berrett FFR Allotment

Dear Mr. Berrett:

Thank you for your application for permit renewal on the Berrett FFR (0609) allotment¹. Thank you as well for working with the BLM during the permit renewal process; I appreciate your interest in grazing the allotment in a sustainable fashion and am confident that this Final Decision achieves that objective.

As you know, the BLM evaluated current grazing practices and current conditions in the Berrett FFR allotment through 2013. We undertook this effort to ensure that any renewed grazing permit on the allotment would be consistent with the BLM's legal and land management obligations. As part of the BLM's evaluation process, a rangeland health assessment, evaluation, and determination were completed. This Final Decision incorporates by reference the information contained in those documents.

On January 11, 2013, the Owyhee Filed Office initiated by letter the collective public scoping for Groups 3 through 5 of the Owyhee 68 grazing permit renewal process. These groups are referred to as the Toy Mountain, South Mountain and Morgan Groups, respectively. The Berrett FFR allotment is one of 19 allotments in the Morgan Group. The scoping letter informed recipients that the purpose of the public outreach effort was to identify resource and management issues associated with the Idaho Rangeland Health Standards and Guidelines (Idaho S&Gs) and the Owyhee Resource Management Plan (ORMP) for the purpose of developing grazing management alternatives for all three NEPA groups, including the Morgan Group Allotments Livestock Grazing Permit Renewal Preliminary Environmental Assessment (EA) EA # DOI-BLM-ID-B030-2013-0023-EA (hereinafter, "Group 5 EA")². The letter encouraged comments and information to be received by February 25, 2013, to better identify issues associated for the Group 5 allotments. Comments were addressed in the Group 5 EA.

¹ Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.

² EA number DOI-BLM-ID-B030-2013-0023-EA analyzed 5 alternatives for livestock grazing management practices to fully process permits within the allotments.

On August 27, 2013, BLM issued the completed 2013 Rangeland Health Assessments (RHA), Evaluations, and Determinations for the Group 5 allotments (which include the Berrett FFR allotment) to you and all interested public of record. Issuance of the RHAs and Determinations afforded you an opportunity to meet with my staff to discuss any additional grazing management changes, your application, and to provide input for completion of the Group 5 EA. Additionally, a preliminary environmental assessment (without a Finding of No Significant Impact) was issued to the public on October 25, 2013, for 15-day review and comment. Issuance of the preliminary EA afforded yet another opportunity for grazing permittees and interested publics to provide additional input on the EA in preparation of completing a proposed grazing decision. In regards to both documents, you did not provide additional comments or information to assist in the development of alternatives and eventually this Final Decision.

After evaluating current resource conditions on public lands associated with the Berrett FFR allotment, and meeting with you and reviewing information provided during the scoping and review periods, it is clear that some resource concerns currently exist on this allotment; in some cases, current livestock grazing management is a significant causal factor or an influencing factor.

To assist us in addressing livestock impacts to public land resources, my office prepared and issued the Group 5 EA in which we considered a number of options and approaches to maintain and improve resource conditions. Specifically, the BLM considered and analyzed in detail five alternatives for the Berrett FFR allotment. We also considered other alternatives that we did not analyze in detail. Our goal in developing alternatives was to consider options that were important to you as the permittee, and to consider options that, if selected, would ensure that resource conditions on this allotment is consistent with the goals and objectives of the ORMP, and the Idaho S&Gs.

The Final Morgan Group 5 EA, which was published on November 26, 2013, incorporates by reference the Jump Creek, Succor Creek, and Cow Creek Watersheds Grazing Permit Renewal Final EIS # DOI-BLM-ID-B030-2012-0014-EIS and the analysis contained therein. This Final Decision incorporates by reference the analysis contained in those documents (see Appendix J).

On November 26, 2013, we issued the Group 5 Proposed Decisions, including a decision to renew your grazing permit associated with the Berrett FFR allotment. Besides the protest submitted by you on December 10, 2013, other protests pertaining to the Berrett FFR allotments were submitted and are presented in the table below: 'Response to Protests'.³ In addition, I met with you on December 17 to discuss your protest. All comments received during the completion of the EA, discussions in meetings with you and other interested publics, and protests submitted during the protest period were considered in the completion of this Final Decision. All applicable protest points have been reviewed and addressed by BLM and are discussed in the attached document.

We have now completed the permit renewal process and I am now prepared to issue a Final Decision to renew your permit to graze livestock within the Berrett FFR allotment. This decision is the culmination of a comprehensive review of the relationship between resource conditions and livestock grazing practices on the allotment, completed in accordance with the grazing regulations, Idaho S&Gs, the National Environmental Policy Act (NEPA) and the ORMP.

This Final Decision will:

- Describe current conditions and issues on the Berrett FFR allotment;
- Respond to the applications for grazing permit renewal for use in the Berrett FFR allotment;

³ Although the protest submission received from the State of Idaho, Office of the Governor was not received timely, protest points identified were considered and responses are provided in the attached document.

- Outline my final decision to select Alternative 3 for Berrett FFR allotment; and
- Explain my rationale for selecting Alternative 3.

Background

Allotment Setting

The Group 5 allotments, which are within the Owyhee Field Office, are located adjacent to one another within the northern portion of Owyhee County, Idaho. They occupy the central portions of the Owyhee Mountains south-southeast of Jordan Valley, Oregon. Elevations range from around 4,483 feet in the Walt’s Pond FFR allotment to 6,491 feet in the Rail Creek FFR allotment.

The Berrett FFR allotment is located near South Mountain, in Owyhee County, Idaho, approximately 30 miles south of Mud Flat Road. The allotment is divided into four pastures, with pastures 1, 3, and 4 including public land (BLM), and pasture 2 (private and State lands). The allotment contains 886 public land acres (18 percent), 2,065 private acres (41 percent), and 2,077 state acres (41 percent) (see attached map).

Current Grazing Authorization

You currently graze livestock within the Berrett FFR allotment pursuant to a grazing permit issued by the BLM. The terms and conditions of that grazing permit are:

Table LVST-1: Dale Berrett - Current Term Grazing Permit

Allotment	Livestock		Grazing Period		% PL	Type AUMs	Active Use	Suspended AUMs	Permitted AUMs
	Number	Kind	Begin	End					
Berrett FFR (0609)	112	Cattle	12/1	12/31	100	Active	114	0	114

Other terms and conditions:

1. Grazing use will be in accordance with the grazing schedule identified in the final decision of the Owyhee Field Office Manager dated _____. Livestock grazing will be in accordance with your allotment grazing schedule(s). Changes to the scheduled use require approval.
2. Turn-out is subject to the Boise District range readiness criteria.
3. The permittee’s certified actual use report is due within 15 days of completing the authorized annual grazing use.
4. Salt and/or supplements shall not be placed within one-quarter (1/4)-mile of springs, streams, meadows, aspen stands, playas, special status plant populations or water developments.
5. Trailing activities must be coordinated with the BLM prior to initiation. A trailing permit or similar authorization may be required prior to crossing public lands.
6. Pursuant to 43 CFR 10.4(B), the permittee must notify the BLM field manager, by telephone with written confirmation, immediately upon the discovery of human remains, funerary objects, sacred objects, or objects of cultural patrimony (as defined in 43 CFR 10.2) on federal lands. Pursuant to 43 CFR 10.4 (C), the permittee must immediately stop any ongoing activities connected with such discovery and make a reasonable effort to protect the discovered remains or objects.
7. Livestock exclosures located within the grazing allotment are closed to all domestic grazing use.
8. Range improvements must be maintained in accordance with the cooperative agreement and range improvement permit in which you are a signatory or assignee. All maintenance of range improvements within designated Wilderness requires prior consultation with the authorized officer.

9. All appropriate documentation regarding base property leases, lands offered for exchange-of-use, and livestock control agreements must be approved prior to turn out. Leases of land and/or livestock must be notarized prior to submission and be in compliance with Boise District Policy.
10. Failure to pay the grazing bill within 15 days of the due date specified shall result in a late fee assessment of \$25.00 or 10 percent of the grazing bill, whichever is greater, not to exceed \$250.00. Payment made later than 15 days after the due date shall include the appropriate late fee assessment. Failure to make payment within 30 days may be a violation of 43 CFR § 4140.1(b)(1) and shall result in action by the authorized officer under 43 CFR § 4150.1 and § 4160.1.
11. A Minimum 4 inch stubble height will be left on herbaceous vegetation within the riparian area along .5 miles of Williams Creek in the Berrett FFR allotment at the end of the growing season as identified in the fisheries objective of the Owyhee EIS.
12. Livestock grazing will be in accordance with your allotment grazing schedule(s). Changes in scheduled pasture use dates will require prior authorization.
13. Utilization may not exceed 50 percent of the current year's growth.

As part of a U.S. District Court settlement agreement, the following terms and conditions were added to the permit in March of 2000:

- Key herbaceous riparian vegetation, where streambank stability is dependent upon it, will have a minimum stubble height of 4 inches on the stream bank, along the greenline, after the growing season;
- Key riparian browse vegetation will not be used more than 50 percent of the current annual twig growth that is within reach of the animals;
- Key herbaceous riparian vegetation on riparian areas, other than the streambanks, will not be grazed more than 50 percent during the growing season, or 60 percent during the dormant season; and
- Streambank damage attributable to grazing livestock will be less than 10 percent on a stream segment.

Current Grazing Management

Based on management actions over the last 10 years, it is clear that in most years you have used this allotment with different livestock numbers and seasons compared to the numbers and dates identified in the Mandatory Terms and Conditions.

Actual use is important when considering the renewal of a grazing permit because it was actual use and not authorized levels of use that resulted in current conditions on the allotment. In other words, the current condition of the allotment is not the result of what was authorized under the current permit, but rather is the result of the removal of a varied number of AUMs and seasons of use over the past several years.

The current permit authorizes 114 AUMs within four pastures, and a season of use between April 15 and December 31, annually. Actual use reports submitted in 2008-2012 shows that active AUMs ranged from 108-112 AUMs, with livestock grazing occurring from May 1 through November 1 consistently. From 1997 to 2007, actual use reports were only submitted for 1998, 2003, and 2005. In 1998, actual use reports show that 114 AUMs were reported with grazing occurring from January 1 through December 31. In 2003, 31 AUMs from April 16 through May 16 were reported, and in 2005, 90 AUMs from June 1 through October 15 were reported.

Current Resource Conditions

The following sections provide a brief overview of current resource conditions as extracted from the Group 5 EA and the 2013 Rangeland Health Assessments, Evaluations, and Determinations for the Berrett FFR allotment. Resources presented include: *Vegetation - Uplands, Watersheds (soils), Water Resources and*

Riparian/Wetlands Areas, and Wildlife/Wildlife Habitats and Special Status Animals. Special Status Plants will not be discussed further because no special status plant populations are known to occur within this allotment.

The BLM completed a Rangeland Health Assessment, Evaluation, and a Determination for the Berrett FFR Allotment in 2013 (issued on August 27, 2013). As described in the RHA and Determination document, BLM concluded that some of the resources on the Berrett FFR allotment are not meeting the Idaho S&Gs. Specifically, the BLM determined that the allotment did not meet Standards 1 (Watersheds), 2 (Riparian), 3 (Stream Channel), 4 (Native Plant Communities), and 8 (Wildlife); however, Standard 7 (Water Quality) is being met. Current livestock grazing management practices were a significant causal factor in not meeting the Standards 1, 2, 3, and 8.

Vegetation - Uplands

The Berrett FFR allotment includes four pastures, in which pastures 1 and 3 are meeting Standard 4, and pasture 4 is not meeting the Standard; historic and invasive species are the causal factors for not meeting the Standard. Pasture 2 is all private land and will not be discussed further. Although soil disturbance and bare ground in pasture 1 (old pasture 1 split into pastures 1 and 4) are at moderate departure on the RHA site, leaving it at risk for future disturbance activities, all other indicators for productive native plants are maintained as appropriate to provide for proper nutrient cycling, hydrologic cycling, and energy flow in pasture 1. Evidence of historic grazing impacts (greater than expected rabbitbrush and historic soil movement and displacement) are present throughout pasture 4, with the reduced composition of deep-rooted native perennial bunchgrasses (e.g., bluebunch wheatgrass and Idaho fescue) from reference site conditions.

The ORMP management objective to improve unsatisfactory and maintain satisfactory vegetation health/condition on all areas is also not met in pasture 4. Vegetation communities shifting to dominance of shallow-rooted bunchgrasses and increased invasive annuals lead to a conclusion that the vegetation management objective is not met.

Watersheds

As presented in the Group 5 EA (see Sections 3.1.2 and 3.3.5.2.1), current livestock grazing management practices are a significant causal factor for not meeting watershed Standard 1 in the Berrett FFR allotment in pastures 1 and 4 (formerly part of pasture 1); pasture 2 is private and pasture 3 is meeting the standard. In pasture 1, relics from historic and active erosional processes are distinct. Significant livestock trailing activities has promoted a decline in deep-rooted perennial bunchgrasses and the pasture shows a shift to shallow-rooted species. As a result, increased bare ground and degraded soil structure has promoted soil surface loss and degradation.

In pasture 4, mechanical disturbance from hoof shearing and trampling has led to extensive pedestaling, leaving soils churned and exposed. Vegetative cover and biologic soils crusts are reduced, especially within interspatial areas, and contribute to reduced soil stability and hydrologic function.

The decreased ecological function, impaired soils, and use during the critical growing season in the absence of rest indicate that soil and hydrologic function are compromised. Current and past livestock management are the primary contributing factors for not meeting Standard 1 and ORMP soil management objectives of improving unsatisfactory watershed health/conditions in the Berrett FFR allotment.

Water Resources and Riparian/Wetland Areas⁴

Standards 2 and 3 are not being met in pastures 1 and 4 of the Berrett FFR allotment. A reach of Williams Creek that traverses pasture 4 was twice assessed as functional at-risk (FAR) because there were areas where the channel was over-wide for the channel type, the sinuosity was out of balance for the valley type, and some areas had vertical and lateral instability. Another short reach of Williams Creek that occurs in pasture 1 was visited in 2011, and observations indicated that the reach appears to be in proper functioning condition (PFC). Approximately 1.0 mile of Pole Bridge Creek was assessed as FAR in 2000, primarily due to the stream's sinuosity and width-to-depth ratios that were out of balance for the valley type, and there was an inadequate composition and age class of deep-rooted riparian species to protect streambanks. In addition, it was identified that the stream is vertically instable along the reach surveyed.

Subsequent to the FAR assessment, one MMIM (Modified Multiple Indicators Monitoring) site was established on the same reach of Pole Bridge Creek in pasture 1. The median stubble height was 3.6 inches, woody use was 9.7 percent, and streambank alteration was 41 percent. The metrics for stubble height and streambank alteration exceed the standards appropriate for maintenance of healthy riparian areas and stream channels.

One spring that occurs in pasture 1 and one that occurs in pasture 4 were assessed in 2011 and 2012. The unnamed spring in pasture 1 was classified as PFC, but the unnamed spring in pasture 4 was assessed as non-functioning (NF). The spring had been heavily impacted by livestock from removal of both herbaceous and woody vegetation and trailing and trampling. Only mature and decadent woody species remain with no herbaceous understory and a high percent of bare ground present creating erosion and sedimentation.

Standard 7 is being met in this allotment according IDEQ⁵ on Williams Creek within the Berrett FFR allotment. The other streams within the allotment have not been assessed by IDEQ and Standard 7 is not applicable in pasture 3. The allotment is in conformance with the Guidelines for Livestock Grazing Management.

Wildlife/Wildlife Habitats and Special Status Animals

Upland Habitat

Pastures 1 and 3 in the Berrett FFR are meeting Rangeland Health Standard 4. Sage-grouse assessment information in pasture 3 found conditions to be suitable and supports the summary for Standard 4. As evidenced by the favorable summaries of Standard 4 and sage-grouse assessments, these pastures are providing minimum composition and structure for sagebrush steppe-associated species.

Pasture 4 in the Berrett FFR allotment is not meeting Standard 4 due to historic livestock grazing management practices. The plant community has transitioned to a plant community dominated by smaller, more grazing-tolerant species such as Sandberg's bluegrass and annual invasive species, including medusahead and cheatgrass. These species do not have the robust growth form or stature such as bluebunch wheatgrass and do not provide the plant composition, structure, and function for sagebrush steppe-dependent species. Therefore, this allotment is not providing adequate upland habitat conditions for sagebrush steppe species and is not meeting Standard 8 due to historic grazing practices and invasive species.

⁴ For additional details on the current condition of the allotment, see *Initial Allotment and Permit/Lease Review and Rangeland Health Assessment and Determination for the Berrett FFR (0609) Allotment* document in the project record.

⁵ See Group 5 EA Section 3.1.3 for additional IDEQ information regarding the Berrett FFR allotment.

Riparian Habitat

Evaluation of Standards 2 and 3 determined that streams and springs within this allotment are not properly functioning due to historic and current livestock grazing. Streams and springs that are NF or FAR are lacking adequate riparian vegetation composition and distribution to provide the structure and function to support productive riparian environments. As mentioned above under *Water Resources and Riparian/Wetland Areas* above, Williams Creek and Pole Bridge Creek were rated FAR, in addition to one unnamed spring rated NF. Because Standards 2 and 3 are not being met, and this allotment is not providing adequate riparian habitat conditions to support viable aquatic and terrestrial species populations, the Berrett FFR allotment is not meeting Standard 8 due to historic and current grazing practices.

Focal Species

Sage-grouse

A total of 2,719 acres of sage-grouse preliminary priority habitat⁶ (PPH) exists in pastures 1 and 4 of the Berrett FFR allotment (Group 5 EA, Section 3.3.2). The PPH that fails within this allotment consists of 729 acres (27 percent) of sagebrush-dominated habitat and 1,990 acres (73 percent) of habitat with varying degrees of western juniper encroachment affecting sage-grouse habitat. The Berrett FFR allotment is unique in that the pastures are not contiguous and range in elevation from approximately from 5,000 feet to over 7,000 feet. There are no active leks in this allotment. This allotment provides seasonal breeding, upland summer, riparian, and winter habitat for sage-grouse. Pasture 1 is providing marginal breeding and upland summer habitat conditions, and pasture 3 is providing suitable upper elevation summer habitat conditions.

Pasture 4 is not meeting Standard 8 for sage-grouse because of an overabundance and height of the sagebrush overstory with a mixed (spreading/columnar) shape, combined with a less-than-desirable canopy cover of perennial grasses, although the combined height of perennial grasses and forbs was favorable. These overstory/understory conditions have reduced nesting, hiding, and escape value for sage-grouse during the breeding and late brood-rearing periods. Because cover values are inadequate, this allotment is not meeting Standard 8 for sage-grouse due to historic livestock grazing practices.

Columbia Redband Trout and Columbia Spotted Frog

This allotment is not identified as falling within the modeled distribution of the Columbia spotted frog. Columbia River redband trout are known to occur within the Williams Creek system (Group 5 EA Section 3.3.2). Evaluation of Standards 2 and 3 identified streams and springs within this system that are not properly functioning due to current grazing practices. Redband trout require intact channels with well-developed riparian communities that stabilize banks to minimize erosion and create undercuts, minimize impacts of flood events and filter sediments, provide shade to reduce water temperatures, and contribute woody debris to create channel structure and regulate seasonal flows. Because these in-stream and near-stream habitat characteristics are not adequately represented, this allotment is not providing adequate riparian conditions to sustain viable populations of redband trout and is not meeting Standard 8.

Guidelines for Livestock Grazing Management

In addition to a discussion of rangeland health standards, the BLM's 2013 Determination for the Berrett FFR allotment identified grazing management practices that did not conform to the BLM's Guidelines for Livestock Grazing Management for Idaho. Specifically, grazing management did not conform to the following guidelines:

⁶ PPH habitat acreage totals include public lands, state lands, and private property.

PPH sagebrush can also include small amounts of perennial grasslands, conifer encroachment, and non-habitat.

Guideline 1: Use grazing management practices and/or facilities to maintain or promote significant progress toward adequate amounts of ground cover (determined on an ecological site basis) to support infiltration, maintain soil moisture storage, and stabilize soils.

Guideline 3: Use grazing management practices and/or facilities to maintain or promote soil conditions that support water infiltration, plant vigor, and permeability rates and minimize soil compaction appropriate to site potential.

Guideline 5: Maintain or promote grazing management practices that provide sufficient residual vegetation to improve, restore, or maintain healthy riparian-wetland functions and structure for energy dissipation, sediment capture, ground water recharge, streambank stability, and wildlife habitat appropriate to site potential.

Guideline 7: Apply grazing management practices to maintain, promote, or progress toward appropriate stream channel and streambank morphology and functions. Adverse impacts due to livestock grazing will be addressed.

Guideline 8: Apply grazing management practices that maintain or promote the interaction of the hydrologic cycle, nutrient cycle, and energy flow that will support the appropriate types and amounts of soil organisms, plants, and animals appropriate to soil type, climate, and landform.

Guideline 11: Use grazing management practices developed in recovery plans, conservation agreements, and Endangered Species Act, Section 7 consultations to maintain or improve habitat for federally listed threatened, endangered, and sensitive plants and animals.

Guideline 12: Apply grazing management practices and/or facilities that maintain or promote the physical and biological conditions necessary to sustain native plant populations and wildlife habitats in native plant communities.

Issues

Based on the BLM's evaluation of the current livestock grazing management practices, the current conditions on the Berrett FFR Allotment, public response to scoping, and the BLM's obligations to meet the Idaho S&Gs and move toward meeting the ORMP management objectives, the BLM identified the following resource issues applicable to the grazing permit renewal for the Berrett FFR allotment:

Issue 1: Habitat conditions for greater sage-grouse (Centrocercus urophasianus; hereinafter, sage-grouse) - Sage-grouse habitat health is directly related to upland vegetation and watershed conditions. Specific areas of the Morgan Group allotments contain altered sagebrush community composition, structure, and function that are affecting sage-grouse and other sagebrush habitat-dependent species.

Issue 2: Riparian vegetation conditions - Livestock grazing is affecting riparian condition and aquatic habitat by changing the health and composition of riparian vegetation communities.

Issue 3: Fish and amphibian habitat conditions - Stream, floodplain, wetland, and mesic (moderately moist) habitat conditions are directly related to conditions within the riparian vegetation community. Altering of the riparian community may affect the health and sustainability of fish and amphibian populations.

Issue 4: Upland vegetation and watershed conditions - Livestock grazing is affecting upland vegetation by reducing or removing native vegetation communities that protect watershed soil and hydrologic function.

Issue 5: Noxious and invasive weeds - Livestock grazing and trailing has the potential to increase or spread noxious and invasive weeds.

Issue 6: Livestock trailing - Trailing may adversely affect upland vegetation, soils, weeds and riparian vegetation.

Issue 7: Socioeconomic impacts - Livestock grazing affects local and regional socioeconomic activities generated by livestock production.

Issue 8: Wildfire fuels - Livestock grazing has the potential to change vegetation that may affect wildfire.

Issue 9: Climate Change - The issue of climate change and its relationship to the proposed federal action of renewing grazing permits is twofold. Livestock grazing in Owyhee County contributes CO₂ and methane emissions to the earth's atmosphere. In addition, climate change, itself a stressor on the sagebrush-steppe semi-arid ecosystem found in the Owyhee Uplands can, when found in conjunction with cattle grazing, further stress the ecosystem's vegetation.

Analysis of Alternative Actions

Based on the current resource conditions on the Berrett FFR allotment and the issues identified above, BLM considered a number of alternative livestock grazing management schemes and changes in the Group 5 EA to ensure that the renewed Dale Berrett grazing permit will result in the maintenance or some improved conditions on the allotment. Specifically, the BLM analyzed five alternatives in detail, identified a number of actions common to all alternatives, and considered but did not analyze in detail a number of other possible actions.⁷ The alternatives analyzed in detail include the following:

- Alternative 1 - *Current Situation*
- Alternative 2 - *Applicant's Proposed Action*
- Alternative 3 - *BLM developed alternative with resource constraints and deferment*
- Alternative 4 - *BLM developed alternative with resource constraints, deferment and or rest, and Active AUM reductions*
- Alternative 5 - *No Grazing*

Final Decision

After considering the current livestock grazing management practices, the current conditions of the natural resources, the alternatives and analysis in the Group 5 EA, comments and protests received from you and other interested publics, as well as other information, it is my final decision to renew your grazing permit for ten years consistent with Alternative 3 of EA # DOI-BLM-ID-B030-2013-0023-EA. Implementation of Alternative 3 over the next 10 years will allow the Berrett FFR allotment to make significant progress toward meeting the Idaho S&Gs while also moving toward achieving the resource objectives outlined in the ORMP.

⁷ For more detailed discussion, please refer to EA number DOI-BLM-ID-B030-2013-0023-EA Section 2.3.

The terms and conditions of the renewed Dale Berrett grazing permit will be as follows:

Table LVST-2: Terms and Conditions

Allotment	Livestock		Grazing Period		% PL	Type AUMs	Active Use	Suspended AUMs	Permitted AUMs
	Number	Kind	Begin	End					
Berrett FFR (0609)	200	Cattle	4/15	11/15	16	Active	114	0	114

Other terms and conditions:

1. Within pasture 4; a minimum of 6 inch stubble height, 30 percent browse (where applicable), and less than or equal to 10 percent bank alteration will be required in key riparian areas when livestock are removed.
2. Berrett FFR Allotment - Cattle numbers may vary up to 200 head as long as the total active use AUMs by pasture or allotment and permitted season of use are not exceeded annually.
3. Grazing use will be in accordance with the grazing schedule identified in the final decision of the Owyhee Field Office Manager dated December 24, 2013. Changes to the scheduled use require approval.
4. Livestock turn-out is subject to the District range readiness criteria.
5. You are required to submit a signed and dated Actual Grazing Use Report Form (BLM Form 4130-5) for each allotment you graze. The completed form(s) must be submitted to this office within 15 days of the last day of your authorized annual grazing use.
6. Salt and/or supplements shall not be placed within one-quarter (1/4)-mile of springs, streams, meadows, aspen stands, playas, special status plant populations, or water developments. Use of supplements other than the standard salt or mineral block on public land requires annual authorization by the authorized officer.
7. Trailing activities must be coordinated with the BLM prior to initiation. A crossing permit may be required prior to trailing livestock across public lands. Permittee will notify any/all affected permittees or landowners in advance of crossing.
8. Pursuant to 43 CFR 10.4(B), the permittee must notify the BLM field manager, by telephone with written confirmation, immediately upon the discovery of human remains, funerary objects, sacred objects, or objects of cultural patrimony (as defined in 43 CFR 10.2) on Federal lands. Pursuant to 43 CFR 10.4 (C), the permittee must immediately stop any ongoing activities connected with such discovery and make a reasonable effort to protect the discovered remains or objects.
9. Livestock exclosures located within the grazing allotment are closed to all domestic grazing use.
10. Prior to turn-out, all range improvements must be maintained and in accordance with the cooperative agreement and range improvement permit in which you are a signatory or assignee. All maintenance activities that may result in ground disturbance require prior approval from the authorized officer.
11. All appropriate documentation regarding base property leases, lands offered for exchange-of-use, and livestock control agreements must be approved prior to turn out.

12. Upland forage utilization by livestock on key upland herbaceous forage species is limited to 50%.

Table LVST-3: Berrett FFR Allotment Grazing Schedule

Pasture	Year 1	Year 2	Year 3
Pasture 1	4/15-7/15	4/15-6/30	9/1-11/15
Pasture 2 (Private) ¹	3/1-2/28	3/1-2/28	3/1-2/28
Pasture 3	4/15-10/15	4/15-10/15	7/1-8/31
Pasture 4	7/1-10/15	7/1-10/15	10/1-11/15

¹Pasture 2 was left in the allotment boundary and is used in conjunction with BLM lands to establish 16 percent public land.

Notes on the Terms and Conditions

You will be offered a grazing permit for a term of 10 years for the Berrett FFR allotment. Implementation of Alternative 3 will result in no reductions in active AUMs and permitted use within the Berrett FFR allotment will be as follows:

Table LVST-4: Permitted Use

Operator	Allotment	Active Use	Suspension	Permitted Use
Dale Berrett	Berrett FFR	114 AUMs	0	114 AUMs

Rationale

Record of Performance

Pursuant to 43 CFR § 4110.1(b)(1), a grazing permit may not be renewed if the permittee seeking renewal has an unsatisfactory record of performance with respect to its last grazing permit. Accordingly, I have reviewed your record as a grazing permit holder for the Berrett FFR allotment, and have determined that you have a satisfactory record of performance and are a qualified applicant for the purposes of a permit renewal.

Justification for the Final Decision

Based on my review of the Group 5 EA number DOI-BLM-ID-B030-2013-0023-EA, the 2013 rangeland health assessments/evaluations, determinations, and other documents in the grazing files, it is my decision to select Alternative 3. I have made this selection for a variety of reasons, but most importantly because of my understanding that implementation of this decision will continue to fulfill the BLM's obligation to manage the public lands under the Federal Land Policy and Management Act's multiple use and sustained yield mandate, and will result in the Berrett FFR allotment making significant progress towards meeting the resource objectives of the ORMP and the Idaho S&Gs.

Issues Addressed

Earlier in this decision I outlined the major issues that drove the analysis and decision making process for the Berrett FFR allotment. I want you to know that I considered each alternative in light of the specific issues raised in conjunction with this allotment before I made my decision. My selection of Alternative 3 was in large part because of my understanding that this selection best addressed those issues, given the BLM's legal and land management obligations.

Issue 1: Habitat conditions for greater sage-grouse (Centrocercus urophasianus; hereinafter, sage-grouse) - Sage-grouse habitat health is directly related to upland vegetation and watershed conditions. Specific areas of the Morgan Group allotments contain altered sagebrush community composition, structure, and function that are affecting sage-grouse and other sagebrush habitat-dependent species.

And

Issue 4: Upland vegetation and watershed conditions - Livestock grazing is affecting upland vegetation by reducing or removing native vegetation communities that protect watershed soil and hydrologic function.

Deferred rotation grazing schedules provide for one or more years of grazing use after seed-set, following one or more years of growing season use. Moderate utilization levels (40 to 60 percent) at either deferred or rest-rotation grazing systems can allow for adequate recovery of upland herbaceous root growth and associated carbohydrate storage following the impact of critical-season defoliation. Additional years of deferment or rest increase opportunity for recovery and maintenance of plant health and vigor improve. Implementing these grazing practices (deferment and rest) will improve or maintain native rangeland species to attain composition, density, foliar cover and vigor appropriate to site potential (USDI BLM, 1999b) can help achieve desired conditions for native plant communities. The grazing rotation and schedule promotes species diversity and productivity, seed and root production, and seedling establishment. Establishment of desirable seedlings into a vegetation community may require a sequence of deferment years to avoid defoliation and physical impacts of livestock presence.

Alternative 3 includes April through July grazing in pasture 1 and 3 in 2 out of 3 years. In year three, grazing will occur after August 31 in pasture 1 and after June 30 in pasture 3. In pasture 4, livestock grazing will occur July through October during years one and two, and October through November in year three. Implementation of Alternative 3 will institute a deferred grazing rotation, which will reduce the frequency of livestock grazing during the spring growing season compared to the current situation. Increased years of deferment will allow opportunity for recovery and maintenance of plant health and vigor to improve (Bailey & Brown, 2011). Livestock grazing in accordance with this 3-year deferred grazing rotation will continue to meet vegetation standards and maintain satisfactory ORMP objectives for vegetation health and conditions in pasture 1 and 3. Livestock grazing beginning after June 30 each year will improve bunchgrass health and vigor due to avoidance of critical growing season grazing in pasture 4. In general, grazing management in accordance with Alternative 3 will maintain and improve herbaceous vegetation health and vigor, and meet Standard 4 and ORMP vegetation management objectives.

Alternative 3 will provide a minimum of 1 out of 3 years of deferment from spring grazing and critical growing season use for pastures 1 and 3 (pasture 2 is private), and yearly deferment to benefit soil and plant communities in pasture 4. This grazing rotation will result in reduced physical impacts to soils during the wettest period of the year (March 1-May 15) and increase the ability of native plant communities to remain healthy, vigorous, and productive during the critical growing season.

Currently this allotment is providing adequate upland and sage-grouse habitat conditions in pasture 1 and 3 and is not meeting Standard 8 in pasture 4 (Group 5 EA Section 3.3.2.1.4). Under Alternative 3, the 3-year deferred grazing rotation will improve habitat composition and structure, and benefit sage-grouse by increasing security and escape cover, and forage, during the nesting/early brood-rearing period (April 1-June 30). Increased security and escape cover will reduce vulnerability of detection and predation in pastures 1 and 3. In pasture 4, upland and sage-grouse habitat improvements will occur because the grazing rotation incorporates 1 in 3 years of deferment during the critical growth period (May 1-June 30). This prescription also allows for increased security and escape cover during the nesting/early brood-rearing period. Sage-grouse habitat conditions would improve because of the increased security and escape cover

elements available during the nesting/early brood-rearing period and the reduced vulnerability to detection and predation by terrestrial and avian predators.

Issue 2: Riparian vegetation conditions - Livestock grazing is affecting riparian condition and aquatic habitat by changing the health and composition of riparian vegetation communities.

And

Issue 3: Fish and amphibian habitat conditions - Stream, floodplain, wetland, and mesic (moderately moist) habitat conditions are directly related to conditions within the riparian vegetation community. Altering of the riparian community may affect the health and sustainability of fish and amphibian populations.

Alternative 3 will provide a minimum of 1 out of 3 years of deferment from spring grazing and critical growing season use for pastures 1 and 3 (pasture 2 is private), and yearly deferment to benefit soil and plant communities in pasture 4. Consequently, within the allotment, 2.2 miles of perennial, 2.4 mile of intermittent stream, and one spring will be affected by the impacts associated with the spring, summer, and fall seasons of grazing alternately over the course of a three-year rotation.

The Berrett FFR allotment is currently (under Alternative 1/year-round) not meeting the standards associated with the riparian-wetland resources. Under Alternative 3, the allotment would be managed under a defined three year grazing schedule that incorporates riparian area constraint period deferment one of the three years in the pastures that contain riparian areas (pastures 1 and 4). This rotation includes grazing one in three years after August 31 for both pastures 1 and 4. In addition, pasture 1 will be grazed between April 15 and June 30 in year one, and April 15 and July 15 in year two. In general, grazing in pasture 1 would avoid grazing during July and August 2 of out every 3 year rotation. Grazing as such will decrease impacts from livestock congregating within the riparian areas of canyons and draws during the hot summer months, decreasing the degree of livestock grazing and physical streambank damage overall. Furthermore, other mandatory terms and conditions of the permit under this alternative include assurances that would reduce impacts (stubble height, woody browse, and bank alteration) within the riparian areas when grazed. This monitoring would be required within pasture 4, where grazing would occur two out of three years during portions of the riparian constraint period⁸. Adherence to the prescribed grazing rotation and achieving the other terms and conditions will allow for making significant progress towards meeting Standards 2 and 3 and in meeting ORMP objectives RPN-1 and FISH-1.

Currently this allotment is not providing adequate riparian function and aquatic habitat conditions (Section 3.3.2.1.4). Under Alternative 3, reduced grazing pressure along with identified terms and conditions (i.e. stubble height, woody browse, and bank alteration; Section 2.4.2.3) will improve herbaceous and woody plant communities within riparian areas and benefit Columbia redband trout because of the increased stream shade, woody debris, flow regulation, and less sediment delivery. As riparian habitat function improves, stream, wetland, and spring habitats will benefit by the regeneration and establishment of herbaceous and woody species. The quality of aquatic habitats will improve as banks stability improves, erosion is reduced and sediment delivery minimized. Columbia redband trout will further benefit because of the absence of livestock activity in aquatic habitats during the spring spawning period (March 15–June 15), allowing improved survival of eggs and fry. Under this Alternative, current riparian conditions will improve and make significant progress toward meeting Standard 8 and ORMP objectives.

⁸ See EA number DOI-BLM-ID-B030-2013-0023-EA Section 2.4.2.3 for more details regarding Alternative 3 Resource Constraints.

Issue 5: Noxious and invasive weeds - Livestock grazing and trailing has the potential to increase or spread noxious and invasive weeds.

And

Issue 6: Livestock trailing - Trailing may adversely affect upland vegetation, soils, weeds and riparian vegetation.

Although no noxious weeds are known exist on public land in this allotment, invasive annuals (medusahead and cheatgrass) are found in areas of each allotment. The dominant visual aspect in this allotment is sagebrush with Sandberg bluegrass dominating the understory, while bluebunch wheatgrass and western juniper are common. Although some invasive species are present, the native plant community is generally healthy and capable of competing for resources. Under Alternative 3, current resource conditions are expected to improve for all Standards and meet ORMP objectives.

Although Alternatives 4 and 5 would further reduce the potential for livestock to introduce and spread invasive and non-native annual species as compared to Alternative 3, livestock remain only one of a number of vectors for seed dispersal and soil surface disturbance. BLM's coordinated and ongoing weed control program would still be required in the absence of livestock grazing in the allotment.

Issue 7: Socioeconomic impacts - Livestock grazing affects local and regional socioeconomic activities generated by livestock production.

During the NEPA and public comment process, a concern was raised that selection of certain alternatives could impact regional socio-economic activity. I share this concern, and have taken this into consideration in making my decision; however, my primary obligation is to ensure that the new grazing permit(s) protects resources in a manner consistent with the BLM's obligations under the Idaho S&Gs and the ORMP. As noted above, I have selected Alternative 3 for the Berrett FFR allotment in large part because the selection accomplishes those latter goals, while minimizing the reduction in active AUMs.

Consideration of Alternatives 1 and 2 disclosed that neither alternative would allow the allotment to meet Idaho S&Gs or the ORMP resource objectives. Therefore I could not select them despite the lesser economic impacts that they may have. Over the long term, your grazing operation relies upon maintenance of the natural resources, including productive and healthy rangelands capable of supplying a reliable forage base. Selection of an alternative based in unsustainable grazing practices that do not meet rangeland health standards would result in less reliable amounts of forage over the long-term, in addition to reducing economic opportunities from ecosystem services and alternate socio-economic resources, such as recreation, that rely on healthy, functional and aesthetically pleasing open spaces and wildlife habitats.

I have considered a wide range of issues at the allotment level, including the social and economic impacts that result from modifying grazing authorizations. I have minimized reductions in grazing use levels where current levels are compatible with meeting rangeland health standards and ORMP objectives and where not compatible, have attempted to select alternatives designed to meet resource needs. In cases of particular or particularly acute resource needs, I have selected the alternative most responsive to such needs, with the aim of best promoting rangeland health.⁹

Issue 8: Wildfire fuels - Livestock grazing has the potential to change vegetation that may affect wildfire.

⁹ For more detailed discussion, please refer to EA number EA number DOI-BLM-ID-B030-2013-0023-EA Section 3.3.1.2.3.6.

During the NEPA process, some asked the BLM to consider using grazing to limit wildfire. The BLM has considered the issue and determined that it would be theoretically possible to use targeted grazing to create fuel breaks on this allotment with the hope that those fuel breaks would help control the spread of large wildfires in the area. However, the resource costs associated with this strategy are such that I have decided against it. Ultimately, implementation of Alternative 3 for the Berrett FFR allotment will not significantly alter the BLM's ability to fight wildfire in the area.

Although a number of sources identify the potential to use grazing to reduce fine fuels on a landscape scale, identified benefits are greatest with targeted grazing that strategically maintains fuel-breaks to aid fire suppression actions. Landscape-scale fuels reduction with livestock grazing has its greatest application in grass-dominated vegetation types and specifically within seedings of grazing tolerant introduced grasses and annual grasses. Such conditions do not exist on this allotment at a pasture-wide scale. In addition, the levels of livestock grazing and the season of yearly use necessary to reduce fine fuels prior to the fire season are not conducive to sustaining native perennial herbaceous species. This is one of the main reasons a targeted grazing system to control fire is not viable on this allotment at this time. The BLM's current permit renewal is focused on improving native upland and riparian plant communities on this allotment, and targeted grazing to create fuel breaks would not support that improvement.

The selected alternative retains a level of grazing use that reduces the accumulation of fine fuels, and thus will lessen the spread of large wildfires when fire weather conditions are less extreme. More importantly, it is designed to benefit and promote the health and vigor of native perennial species on the allotment, thereby limiting the dominance of annual species and so limiting the accumulation of continuous fine fuels and extreme fire behavior, while enhancing post-fire recovery.¹⁰

Issue 9: Climate Change - The issue of climate change and its relationship to the proposed federal action of renewing grazing permits is twofold. Livestock grazing in Owyhee County contributes CO2 and methane emissions to the earth's atmosphere. In addition, climate change, itself a stressor on the sagebrush-steppe semi-arid ecosystem found in the Owyhee Uplands can, when found in conjunction with cattle grazing, further stress the ecosystem's vegetation.

Climate change is another factor I considered in building my decision around Alternative 3 for the Berrett FFR allotment. Climate change is a stressor that can reduce the long-term competitive advantage of native perennial plant species. Since livestock management practices can also stress sensitive perennial species in arid sagebrush steppe environments, I considered the issues together—albeit based on the limited information available on how they relate in actual range conditions. Although the factors that contribute to climate change are complex, long-term, and not fully understood, the opportunity to provide resistance and resilience within native perennial vegetation communities from livestock grazing induced impacts is within the scope of this decision. The selected alternative combined seasons, intensities, and durations of livestock use to promote long-term plant health and vigor. Assuming that climate change affects the arid landscapes in the long-term, the native plant communities on this allotment will be better armed to survive such changes. The native plant health and vigor protected under this alternative will provide resistance and resilience to additional stressors, including climate change.

Additional Rationale

Considerable amount of thought and effort went into developing grazing management that responds to your allotment's specific resource needs, geography, and size. These considerations were made to address all

¹⁰ For more detailed discussion, please refer to EA number EA number DOI-BLM-ID-B030-2013-0023-EA Section 2.3.

concerns and requirements mandated to the BLM. Each allotment has different ecology and management capability due to the size and location/topography that result in various issues and priorities. All attempts to coordinate grazing throughout the entire allotment were made by me and my staff with you and the interested public. I recognize the difficulty of not only providing the mandated needs for the resources, but also the needs and capability that you, the permittee have. I believe I have balanced those needs of the resource and your capabilities with the information I have to the extent possible.

I did consider selecting Alternatives 1, 2, 4, and 5 for this allotment. However, based on all the information used in developing my decision, I believe that the BLM can meet resource objectives and still allow grazing on the allotment. In selecting Alternative 3 for the Berrett FFR allotment rather than Alternatives 1, 2, 4 or 5, I especially considered (1) BLM's ability to meet resource objectives using the selected alternatives, (2) the impact of implementation of Alternative 5 on you, and (3) your past performance under previous permits.

During the public comment period for the Draft EA and the 15-day protest period for the Proposed Decisions, we received comments from members of the interested public stating that the BLM should analyze the effects of livestock grazing in an Environmental Impact Statement (EIS) rather than an EA. The BLM completed EIS # DOI-BLM-ID-B030-2012-0014-EIS that analyzes the effects of livestock grazing in the Chipmunk Group 2 allotments that are associated with the Owyhee 68 permit renewal process. The scope of analysis in this EIS is relevant to all the allotments within the Owyhee Field Office and supports the analysis in the Groups 3, 4, 5, and 6. As stated earlier in this Decision, I am incorporating by reference the analysis in the Chipmunk Group 2 EIS.

Finding of No Significant Impact (FONSI)

A finding of no significant impact (FONSI) was signed on November 20, 2013, and concluded that the final decision to implement Alternative A, is not a major federal action that will have a significant effect on the quality of the human environment, individually or cumulatively with other actions in the general area. That finding was based on the context and intensity of impacts organized around the 10 significance criteria described at 40 CFR § 1508.27. Therefore, an environmental impact statement is not required. A copy of the FONSI for EA number DOI-BLM-ID-B030-2013-0023-EA is available on the web at:

http://www.blm.gov/id/st/en/prog/nepa_register/owyhee_grazing_group/grazing_permit_renewal3.html

Conclusion

In conclusion, it is my decision to select Alternative 3 over the other four alternatives analyzed because livestock management practices under this selection best meet the ORMP objectives allotment-wide and the Idaho S&Gs. This grazing decision and subsequent permits are being issued under the authority of 43 CFR 4100 and in accordance with the Owyhee Resource Management Plan (43 CFR 4100.0-8), thus all activity thereunder must comply with the objectives and management actions of the Plan.

Authority

The authorities under which this decision is being issued include the Taylor Grazing Act of 1934, as amended, and the Federal Land Policy and Management Act of 1976, as promulgated through Title 43 of the Code of Federal Regulations (CFR) Subpart 4100 Grazing Administration - Exclusive of Alaska (2005). My decision is issued under the following specific regulations:

- 4100.0-8 Land use plans; The ORMP designates the Berrett FFR allotment available for livestock grazing;
- 4130.2 Grazing permits or leases. Grazing permits may be issued to qualified applicants on lands designated as available for livestock grazing. Grazing permits shall be issued for a term of 10 years unless the authorized officer determines that a lesser term is in the best interest of sound management;
- 4130.3 Terms and conditions. Grazing permits must specify the term and conditions that are needed to achieve desired resource conditions, including both mandatory and other terms and conditions; and
- 4180 Fundamentals of Rangeland Health and Standards and Guidelines for Grazing Administration. This final decision will result in taking appropriate action to modifying existing grazing management in order to make significant progress toward achieving rangeland health.

Right of Appeal

Any applicant, permittee, lessee or other person whose interest is adversely affected by the final decision may file an appeal in writing for the purpose of a hearing before an administrative law judge in accordance with 43 CFR §§ 4160.3(c), 4160.4, 4.21, and 4.470. The appeal must be filed within 30 days following receipt of the final decision. The appeal may be accompanied by a petition for a stay of the decision in accordance with 43 CFR § 4.471, pending final determination on appeal. The appeal and petition for a stay must be filed in the office of the authorized officer, as noted:

Loretta V. Chandler
Owyhee Field Office Manager
20 First Avenue West
Marsing, Idaho 83639

In accordance with 43 CFR § 4.401, the BLM does not accept fax or email filing of a notice of appeal and petition for stay. Any notice of appeal and/or petition for stay must be sent or delivered to the office of the authorized officer by mail or personal delivery.

Within 15 days of filing the appeal or the appeal and petition for stay with the BLM officer named above, the appellant must also serve copies on other persons named in the copies sent to section of this decision in accordance with 43 CFR § 4.421 and on the Office of the Field Solicitor located at the address below in accordance with 43 CFR §§ 4.470(a) and 4.471(b).

Boise Field Solicitors Office
University Plaza
960 Broadway Ave., Suite 400
Boise Idaho, 83706

The appeal shall state the reasons, clearly and concisely, why the appellant thinks the final decision is in error and otherwise complies with the provisions of 43 CFR § 4.470.

Should you wish to file a petition for a stay, see 43 CFR § 4.471 (a) and (b). In accordance with 43 CFR § 4.471(c), a petition for a stay must show sufficient justification based on the following standards:

- (1) The relative harm to the parties if the stay is granted or denied.
- (2) The likelihood of the appellant's success on the merits.
- (3) The likelihood of immediate and irreparable harm if the stay is not granted, and
- (4) Whether the public interest favors granting the stay.

As noted above, the petition for stay must be filed in the office of the authorized officer and served in accordance with 43 CFR § 4.471.

Any person named in the decision that receives a copy of a petition for a stay and/or an appeal, see 43 CFR § 4.472(b) for procedures to follow if you wish to respond.

If you have any questions, please contact me at 208-896-5913.

Sincerely,

Loretta V. Chandler
Owyhee Field Manager

Group 5 Response to Protests

Protest ID	Protest Point No.	Protest Text	Protest Response
5DBerrett12102013	1	<p>Berrett FFR - I strongly protest Term and Condition 1 of the Berrett FFR Proposed Decision which states "Grazing use will be in accordance with the grazing schedule identified in the final decision of the Owyhee Field Office Manager dated. Livestock grazing will be in accordance with your allotment grazing schedule(s). Changes to the scheduled use require approval." I also protest Term and Condition 14 on page 12 of the Proposed Decision which states "Berrett FFR Allotment- Cattle numbers may vary up to 200 head as long as the total active use by pasture or allotment and permitted season o(use are not exceeded annually." BLM cannot dictate when and how I use my private property or my State of Idaho Grazing Leases. Furthermore, I protest the 200 head limit on cattle in the Berrett FFR as identified in Term and Condition 14 (page 12 of proposed decision) due to the fact that the majority of the land in the Berrett FFR is either managed by the Idaho Department of Lands or it is my private land. BLM has no management authority on private and State lands in Idaho.</p>	<p>The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.</p>
5DBerrett12102013	2	<p>Berrett FFR - I further protest that fact that BLM has arbitrarily changed the percent public land from 100% public land to 16% public land in order to incorporate my private land and my State Grazing Leases into BLM's grazing management schematic without my knowledge and especially when BLM has the smallest percentage of land ownership in the Berrett FFR.</p>	<p>The BLM disagrees and has changed the percent public land to reflect what is actually occurring on the landscape. Percent public land for the Group 5 allotments were calculated based on the normal year potential production of ecological sites for the proportion of public lands in the allotment, as compared to the total of public lands plus lands which may be controlled by the permittee (USDA NRCS 2009). Although the ecological condition of lands within the allotment may not be in reference condition, the assumption was made that both public lands and lands controlled by the permittee are in equal condition and the proportion of production from each does not</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
			differ from the proportion of production at reference site conditions. Instead of using 100 percent public lands as displayed in Alternative 1, the BLM displays these lands in Alternative 2-4 using the calculations as appropriate. The BLM is managing only the Public Lands.
5DBerrett12102013	3	Berrett FFR - BLM in their proposed decision has done just the opposite and changed the percent public land use to 16% which includes all private and state lands, and then BLM applies all of these lands by pasture to their Grazing Schedule identified on page 12 of their proposed decision instead of considering this land for disposal (2013 supplement RHA).	Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership. As noted above, BLM management prescriptions apply only to the Public Lands.
5DBerrett12102013	4	Berrett FFR - I protest the fact that BLM did not adequately follow their process identified in 43 CFR 4130.2(b) which states, "The authorized officer shall consult, cooperate and coordinate with affected permittees or lessees, the State having lands or responsible for managing resources within the area, and the interested public prior to the issuance or renewal of grazing permits and leases." Had BLM properly followed 43 CFR 4130.2 and consulted, cooperated, and coordinated with me, they would have known at the very beginning of this permit renewal process I had no interest or desire in putting my private lands and my State Grazing Leases under their grazing schedules identified on page 12 of the proposed decision (Table PROP 1.1 Berrett FFR Allotment Grazing Schedule).	The BLM met with you in April and December of 2013 and discussed the issues and your protest points and incorporated them into the Final Decision. As per 4130.3-3, "Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use,

Protest ID	Protest Point No.	Protest Text	Protest Response
			<p>or to change the terms and conditions of a permit or lease.” The BLM has completed extensive consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents occurred.</p>
5DBerrett12102013	5	<p>Berrett FFR - Terms and Conditions 12 and 13 should state that these Terms and Conditions apply only to the public lands within the Berrett FFR.</p>	<p>The BLM agrees and these authorizations are only for BLM acres associated with the Berrett FFR. Regarding allotments with FFR in their name: the BLM’s legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.</p>
5DBerrett12102013	6	<p>Berrett FFR - The Owyhee Resource Management Plan on pages 14 and 18 states bank alteration at 10% or less, not less than 10% as BLM has incorrectly identified in Term and Condition 13.</p>	<p>Final Decision language in T&C #13 adjusted to read ‘...less than or equal to 10%...’</p>
5DBerrett12102013	7	<p>Berrett FFR - How can BLM make management changes and state that their decision was based in part on upland vegetation and watershed conditions -Livestock grazing is affecting upland vegetation by reducing or removing native vegetation communities that protect watershed soil and hydrologic function "with only one year of utilization monitoring data, and no upland trend data, and the one year of utilization data was rated at 14% use (very light grazing)?</p>	<p>The BLM agrees and used in part upland vegetaion and watershed information, however, Berrett FFR allotment is not meeting desired conditions because of riparian and wildlife concerns as well, see the final determination and EA for full affected environment discussion.</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
5DBerrett12102013	8	Berrett FFR - I protest the fact that BLM did not adequately follow their process identified in 43 CFR 4130.2(b) which states, "The authorized officer shall consult, cooperate and coordinate with affected permittees or lessees, the State having lands or responsible for managing resources within the area, and the interested public prior to the issuance or renewal of grazing permits and leases. "	The BLM met with you in April and December of 2013 and discussed the issues and your protest points and incorporated them into the Final Decision. As per 4130.3-3, "Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use, or to change the terms and conditions of a permit or lease." The BLM has completed extensive consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents occurred.
5DBerrett12102013	9	Berrett FFR - As the proposed decision currently stands with its grazing schedule identified on page 12, this will be an unworkable schedule for my operation as many years there is no way to use the higher elevation pastures due to these pastures still under snow on the dates BLM has scheduled livestock to be turned out.	The BLM has selected Alternative 3 as the Final Decision and feels that it adequately addresses resource concerns on the BLM managed lands within the Berrett FFR Allotment. The BLM also feels that one in three years of deferment instead of repeated May through October grazing annually is

Protest ID	Protest Point No.	Protest Text	Protest Response
			a reasonable decision.
5DBerrett12102013	10	Boulder Allotment - I protest the fact that BLM did not adequately follow their process identified in 43 CFR 4130.2(b) which states, "The authorized officer shall consult, cooperate and coordinate with affected permittees or lessees, the State having lands or responsible for managing resources within the area, and the interested public prior to the issuance or renewal of grazing permits and leases. " Had BLM properly followed 43 CFR 4130.2 and consulted, cooperated, and coordinated with me, they would have known at the very beginning of this permit renewal process that their grazing schedule identified on page 12 of the proposed decision (Table PROP 1.1 Boulder Allotment Grazing Schedule) would not work in my situation due to the limited or lack of water during the fall of the year.	The BLM has modified the Final Decision for the Boulder Allotment as per CCC with you in December 17, 2013. See BLM response to protest point 9.

Protest ID	Protest Point No.	Protest Text	Protest Response
5DBerrett12102013	11	<p>Boulder Allotment - I protest alternative 4 where the active use AUMS will no longer be made available and will not be converted to suspension." This proposed reduction would cancel 65 AUMS and not placed them into suspension. BLM did not properly follow their grazing regulations (4110.3-3(a) in part which states "After consultation, cooperation, and coordination with the affected permittee or lessee, the State having lands or managing resources within the area, and the interested publics, reductions of permitted use shall be implemented "</p>	<p>The BLM is following the 9894 Federal Register I Vol. 60, No. 35, which clearly states that the Department does not believe that it is appropriate to add or carry suspended AUMs on a renewed grazing permit unless there is a reasonable expectation that the AUMs will be returned to active use in the foreseeable future. The EIS and determinations provided a thorough explanation of resource conditions and causal factors for the BLM to make clear decisions on whether the reduction in Active AUMs were likely to be re-activated in the foreseeable future. Reductions in Active AUMs were made on allotments that were not meeting or making significant progress due to current livestock grazing. Clearly, in these situations, resource conditions were impacted to the point that our minimum requirements (Idaho Standards for Rangeland Health and ORMP objectives) could not be achieved. This provided me the information to know with certainty that in order to meet or make significant progress towards the standards, the selected reductions were required for the term of the permit. There was no way to predict if any increases would be possible following the ten-year term, nor would it be appropriate for me to expect or predict that information. Also, see Response to Protest # 102.</p> <p>Additionally, regardless of whether the reduced Active AUMs were placed in suspension or eliminated, the exact same process to re-activate those AUMs would be required (43 CFR 4110.3-1).</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
5DBerrett12102013	12	Boulder Allotment - BLM never met in person with me to discuss the AUM reductions at any point in time during my permit renewal process for the Boulder Allotment. Every point during my permit renewal process that I contacted BLM, they stated that everything was fine and gave me no inclination that there were any proposals of reductions or major changes in the season of use.	See response to protest point 4.
5DBerrett12102013	13	Boulder Allotment - BLM never discussed AUM reductions with me in person during my permit renewal process at any time. I question how BLM can say they have met their requirements of 43 CFR 4110.3-3(a) in part which states "After consultation, cooperation, and coordination with the affected permittee or lessee, the State having lands or managing resources within the area, and the interested publics, reductions of permitted use shall be implemented "	See response to protest point 4.
5MorganProp12102013	14	Morgan Properties - We must protest this recommendation, as this will harm our operation by severely limiting our ability to effectively use our allotments. When I asked what to do with the dates we were given in the recommended rotation that we know are going to be too late in the season to be able to use them, Carmela said that if we were not able to use them during the dates given, we would need to rest them. Since the Alternative 4 we were given already has one year of rest in a three-year rotation, this would effectively result in a 66% reduction in grazing for these allotments.	As discussed in our December meeting with you, these alternatives selected in the Final Decision were fully analyzed in detail in the Morgan Group 5 EA including the Socioeconomic impacts section.

Protest ID	Protest Point No.	Protest Text	Protest Response
5MorganProp12102013	15	Morgan Properties - Since many of these Morgan Properties BLM parcels are small, or located on the edge of private or State lands, it means that many are in close proximity to roads and/or fence lines. The recommendations do not take these factors into account, nor do they accurately reflect the true use or health of the land examined. We disagree with the science and the methods used to arrive at those recommendations and it appears that budget constraints dictated just how thoroughly the allotments were actually evaluated--or whether they were estimated from behind a desk.	We note your disagreement with our findings.
5QuintanaRanch12122013	16	I reiterate that the method by which the evaluation was completed was flawed. The permit holder should have been contacted and given the opportunity to be present.	The BLM met with you in April and December of 2013 and discussed the issues and your protest points and incorporated them into the Final Decision. As per 4130.3-3, "Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use, or to change the terms and conditions of a permit or lease." The BLM has completed extensive

Protest ID	Protest Point No.	Protest Text	Protest Response
			consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents occurred.
5QuintanaRanch12122013	17	The process was arbitrary, and we have no way of confirming the sampling integrity. The individuals who collected the samples are not familiar with the area, and the input of the permit holder could have been very helpful. Phil Williams actually had conversation with one of the crews gathering assessment data in the spring of 2012, who informed him that they were assessing the Boulder Flat allotment. They were in fact in one of Barrett's allotments. It is impossible to accept the data presented when events like this occur.	The BLM has taken a hard look at the allotments as required by NEPA.

Protest ID	Protest Point No.	Protest Text	Protest Response
5QuintanaRanch12122013	18	<p>Replacement discs were mailed, but the response time was not extended to compensate for the BLM mistake. This cut the comment response time to eight days. The combined documents that have to be evaluated total nearly nine hundred pages. I do not feel that any court in the United States would quantify that as adequate response time given the complexity and volume of data, and the gravity of the issue.</p>	<p>The BLM agrees that the response time for comments was quick. However, the CEQ regulations do not require agencies to make EAs available for public comment and review. However, the BLM met with you in April and December of 2013 and discussed the issues and your protest points and incorporated them into the Final Decision. As per 4130.3-3, “Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use, or to change the terms and conditions of a permit or lease.” The BLM has completed extensive consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents occurred.</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
5QuintanaRanch12122013	19	Although seasons of use are reflected within the alternatives, details of the wildlife constraints, specifically perennial vegetation, reveal that utilization is restricted to 21% from 41% if more than 30 days grazing is allowed during the growing season. This effectively makes it impossible to utilize allotted aums.	Point noted. The alternatives analyzed in detail the effects of the season of use and utilization.
5QuintanaRanch12122013	20	The BLM cannot dictate how private nor State Land is utilized, and range improvements must be provided to allow BLM land to be segregated if the BLM wishes to change seasons of use. This is not the responsibility of the majority landholder.	The BLM agrees and does not manage private or state lands. On FFR allotments the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5QuintanaRanch12122013	21	Bachelor Flat - Truly, it is not a reasonable assessment site for the pasture at any time. Cattle have restricted entrance/egress of this section due to a rock rim that bisects this pasture section for approximately one third its width. Sampling in this location cannot adequately evaluate the health of the entire pasture, yet it was the sole sample point. Pasture 2 was the only site evaluated not meeting (specifically Watershed) due to current livestock grazing, despite the fact that Table RIPN 13 showed improvement between 2001 and 2011.	The BLM sampling location represent the BLM managed lands only and not a reflection of the entire pasture. The BLM agrees and does not manage private or state lands. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5QuintanaRanch12122013	22	Boulder Flat - Deferment of both Pasture 1 and Pasture 2 are a requirement of preferred alternative 3. This equates to one year in three of non use. There is no water source in either of these pastures to allow for late summer or fall use. This is an effective cut of one third of our aums.	Opinion noted. The alternatives analyzed in detail the effects of the season of use and utilization.

Protest ID	Protest Point No.	Protest Text	Protest Response
5QuintanaRanch12122013	23	<p>While it is stated that season of use may vary as long as total aurns are not exceeded, resource constraints restrict use March 1 to May 31 two of three years. In point of fact, the grazing schedule outlined in Table ALT-40 does not match the grazing periods contained within the resource constraints. To address this question I met with my range con on or about November 6 who could not provide an answer, and left a phone message for Jake Vialpando, which was not returned prior to submitting my comments. Coincidentally, the call was returned at 4:00p.m. on November 12, by Carmella Romerio. The comments were submitted at 8:00a.m. that morning, indicating the lack of a return call. Subsequent to that conversation, I met with Carmella and Loretta Chandler on November 14 in the Marsing BLM office. Carmella informed me that the resource constraint was a "typo", and that the table took precedence. Despite the comments and subsequent meeting, the "typo" was not corrected. This is indicative of the fact that the comments were not even considered before proposed decisions were made.</p>	<p>The BLM met with Williams in April and you in November of 2013 and discussed the issues and your protest points and incorporated them into the Final Decision. As per 4130.3-3, "Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use, or to change the terms and conditions of a permit or lease." The BLM has completed extensive consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents occurred.</p>
5WWP12112013	24	<p>Morgan Allotment - We strongly Protest the FRH findings that are in-error, as current chronic cattle degradation is a highly significant factor, and there are vital resources that need to be protected. This includes redband tout and CSF habitat. See BLM Pole Creek and TS FEAs and FDs, describing how very</p>	<p>The determination under standards 2 and 3 was based on best available information, and alternatives were developed that incorporate both riparian area deferment and/ or rest. The preferred alternative in the proposed decision avoids grazing during the riparian area's vulnerable time (6/15-9/30) in all</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
		awful hot season grazing is for streams.	riparian pastures.
5WWP12112013	25	Morgan and Toy Allotments - In all of these Proposed Decisions, we protest that BLM has not provided necessary protective measures as mandatory measurable use standards to provide for residual cover for sage-grouse, for watershed protection, for clean water, for hiding cover for a broad range of microfauna, to enable sufficient healing to meet the requirements of abundant native grasses and forbs in interspaces for sage-grouse, and to aid (along with intact microbiotic crusts) in armoring the native plant community against highly invasive cheatgrass, medusahead, bulbous bluegrass, and other invasive grasses and exotic weeds.	The Alternative selected will continue to maintain or move towards desired conditions as analyzed in full in the EIS. A range of alternative was created that provide the BLM with management flexibility to select an option that will best progress conditions towards meeting range health standards and guides and ORMP objectives. Any alternative selected will maintain or move soils, upland vegetation community, riparian vegetation community, sensitive plants, and wildlife habitats towards desired conditions. The selection of an alternative and the rate of progress towards meeting desired conditions will depend on the existing conditions of the allotment/pasture.
5WWP12112013	26	We Protest the failure of BLM to comply with watershed, water quality, sensitive species (habitats and viable populations), big game, recreation, ACEC, and other requirements of the RMP.	Each allotment was assessed and evaluated and determinations were generated to summarize current conditions and identify casual factors for not meeting rangeland health standards and guide. A range of Alternatives in the FEIS were further developed and an impact analysis was conducted to consider the direct, indirect, and cumulative effects of livestock grazing on focal species and their habitat to the pasture level and within the greater cumulative effects analysis area. Based on the current condition of the allotment and the level of progress required to meet range health standards and guidelines, an appropriate alternative was selected that modified grazing systems intended to maintain and improve upland/riparian composition and habitat structure and function for all wildlife largely based on the needs of selected focal species.

Protest ID	Protest Point No.	Protest Text	Protest Response
5WWP12112013	27	We Protest the failure to take a full and fair hard look at current ecological science, as well as the historical record and plant ecology.	All available data and information was used as required by NEPA. The most recent current vegetation data from PNNL that is approximately 12 years old remains the best available information and remain valid for sagebrush steppe vegetation types that change slowly. This data along with recent land health assessments were used to analyze the current condition when measured against past ecological condition (ecological site descriptions). The EA analysis and the natural resources Specialist Reports support the NEPA's hard look requirements.
5WWP12112013	28	BLM never looked at all the conflicts and made a rational decision about whether some lands within a pasture or allotment and no longer withstand grazing disturbance for the next 10 years. We Protest this.	This protest point does not address which pastures and allotments are of concern, but we are attempting to address this within the context of the entire statement which alludes to the no-grazing alternative, and states that this was not considered for specific pastures. When analyzing the effects of each alternative (including the no-grazing alternative), the analysis applies to all allotments. This does not bind the BLM to select one alternative as a blanket prescription for every allotment as the protest point suggests. The BLM is choosing different alternatives for specific allotments based upon the resource needs. The no-grazing alternative was fully analyzed as to what the effects may look like on the allotment scale. The BLM stands behind this analysis of the no-grazing alternative.

Protest ID	Protest Point No.	Protest Text	Protest Response
5WWP12112013	29	Yet BLM fails to conduct the necessary site-specific inventory, analysis, or even a cursory on the ground current look at the magnitude of damage being caused by grazing and trampling impacts, and the erosional processes that are occurring across these lands and watersheds with their weedy, unraveling drainage networks that often abound in cultural materials.	BLM did conduct site specific inventory, monitoring and analysis, as is thoroughly explained in the EA. These surveys were on-the-ground visits to 66 percent of the potential livestock congregation areas and to 20 percent of the total number of previously recorded sites that are within 100 meters of a congregation area. BLM field personnel also recorded two newly discovered sites. Watershed health is not a cultural resources concern per se. BLM appreciates any specific information about areas on public land that abound with cultural material so they can be recorded, and protected if necessary. Impacts to sites produced by grazing activities or any other causes are assessed on a site specific basis. Mitigation or protection measures are determined by the nature of the effect and the site's National Register status. Many pre-NHPA Section 106 range projects have been surveyed for this EA and several other EAs.
5WWP12112013	30	We Protest lack of necessary detailed analysis of these matters of concern. Full analysis and a site specific hard look is necessary to prevent undue degradation to all the affected resources, apply necessary mitigation, and understand what actually needs to be done to minimize grazing disturbance harms in the Owyhee landscape.	We stand by the site-specific analysis which starts in section 3.3 in the EA and continues for more than 200 pages with the effects analysis presented in allotment-specific subsections. Each alternative management action and the environmental effects that would result are explained at a site-specific (allotment) level.
5WWP12112013	31	We are also alarmed that BLM fails to apply any protective measurable use standards at all to springs, seeps, and meadows that are crucial to sage-grouse, even in PPH, and the agency has not even assessed many of these areas.	Where riparian pastures are grazing more than 1/3 years during the riparian area's critical time period (6/15-9/30), stubble height, browse, and bank alteration monitoring are required. They are a term and condition on the proposed permit.

Protest ID	Protest Point No.	Protest Text	Protest Response
5WWP12112013	32	<p>And how much worse will climate change make all of this? BLM has not taken a hard, site-specific look at the sustainability of grazing use here in any of the allotments.</p> <p>We Protest this.</p>	<p>We stand by the site-specific analysis which starts in section 3.3 in the EA and continues for more than 200 pages with the effects analysis presented by allotment specific subsections. As for climate change, we L36recognized this as an issue to be considered (EA at section 1.6.3). Sections 3.2 and 3.4 of the EA discuss the potential effects from climate change, and the BLM uses several reference sources to aid in the consideration of climate change in the analysis process (see section 6 of the EA)</p>
5WWP12112013	33	<p>Historic grazing is never adequately defined, and BLM is inconsistent in how it applies the term in the FRH process, and in the NEPA analysis. If BLM is using the "before this 10 year permit" as its historic period, then this is completely arbitrary. That could be a year ago.</p>	<p>Current livestock grazing was in most cases the length of the existing permit or ten years; in some cases the current grazing management was less than that in instances where change of ownership occurred and different AUMs were authorized. Each allotment was taken a hard look at and the current situation was used as a baseline for analysis in the Morgan Group 5 EA, see Appendix B for recent actual use. Anything outside this period is historic use.</p>
5WWP12112013	34	<p>BLM's series of rubberstamp EAs are all about "process", and constructing increasingly elaborate grazing schemes to cover up a serious flaw, i.e. that BLM has not taken the hard look and developed alternatives that fully recognize and deal with the magnitude of loss and chronic degradation that exists. BLM ignores the intensive site-specific hard look necessary to address, mitigate and minimize grazing harms in this landscape.</p>	<p>Refer to response to protest 25 and 26. The NEPA calls for a process by which agencies consider the effects of their actions. In this case, groupings of allotments and analyzing the effects of livestock grazing for these groups were the common-sense approach. Each EA considers environmental impacts on an allotment scale and each develops a range of alternative management schemes based upon resource needs. Through this approach, we believe that we not only fulfill the hard look requirement of the NEPA through site-specific analysis, but also believe this is the best way to present the effects of agency actions to the interested public.</p>

Protest ID	Protest Point No.	Protest Text	Protest Response
5WWP12112013	35	BLM ignores any full and fair consideration of WWP's alternative and mitigation actions. BLM never met with us, never asked us for any clarification of alternative and mitigation actions for this current spate of EAs.	<p>Please see the description of Alternative 11 in section 2.3 of the Group 5 EA. The BLM did consider alternative management actions proposed by the Protestant. The BLM's Purpose and Need does not accommodate landscape level restoration projects or designations of special management areas such as ACECs. There are specific needs and specific purposes for this agency actions and these are clearly defined in the Purpose and Need statement in section 1.4 of the EA. If alternatives are proposed that do not satisfy the agency's purpose and need, the BLM will likely consider them, but is not obligated to implement them.</p> <p>(2) Many of the allotments at issue are currently being managed under permits developed prior to adoption of the Idaho Standards for Rangeland Health and approval of the 1999 ORMP.</p> <p>(3) BLM agreed to fully process permits for these allotments on or before December 31, 2013. (See WWP v. Dyer 1:97-cv-00519-BLW (Docket # 451 dated May 15, 2008). To meet this deadline, BLM is not considering new range improvements in this permit renewal process (see section 2.3 Morgan Group Allotments Livestock Grazing Permit Renewal Environmental Assessment for Alternatives Considered but not Analyzed in Detail, for further discussion of this point).</p>
5WWP12112013	36	BLM never takes the necessary hard look at the big picture of degradation so it can understand how major the grazing changes - both within and across allotments - need to be to protect sensitive species, watersheds, water quality and quantity, and a full range of values of the public lands.	NEPA requires BLM to take a hard look. The S&G process evaluates 8 Standards simultaneously to assess the ecological condition of the landscape holistically. The cumulative effects allow resources to be evaluated across allotment boundaries.

Protest ID	Protest Point No.	Protest Text	Protest Response
5WWP12112013	37	We Protest the failure of the EIS to take a hard look at the large body of threats, habitat losses, habitat fragmentation and indirect and cumulative impacts to sensitive species habitats and population viability, as well as clean water, recreation, etc. across this landscape.	Refer to response to protest 25 and 26. This protest point references the EIS, however the NEPA document supporting the decision rationale for Group 5 is an EA. The BLM stands with the NEPA analysis and we believe the NEPA's hard look requirement has been fulfilled. The EA includes analysis of the effects to sensitive species and their habitat, addresses Standard 7 (water quality) and analyzes effects to recreation.
5WWP12112013	38	A critical and hard look at opposing science and full and fair analysis of competing views - such as the need for significant rest to jump start recovery and /or protect remaining better condition native vegetation communities so that they do not turn in to a weed lands is not undertaken.	The BLM has taken a hard look at the allotments as required by NEPA. Alternative 6 was analyzed in detail in the EA that looked at resting allotments for ten years.
5WWP12112013	39	A Supplemental EIS must be provided to take the careful hard look at ecological conditions, and ensure that sensitive species, watersheds, water flows, clean water, etc. are conserved, enhanced and restored.	The protest point calls for a Supplemental EIS (SEIS). A SEIS is appropriate when an EIS has already been prepared. The NEPA analysis supporting Decisions for the Group 5 permit renewal process is an EA. Once again, the BLM stands behind the EA's analysis and is comfortable that the NEPA's hard look requirement has been met.
5WWP12112013	40	BLM violates the GSG NTT and IMs, and the Owyhee RMP. BLM is required to conserve, enhance and restore sage-grouse habitat, and this includes by modifying grazing practices.	Each allotment was assessed and evaluated and determinations were generated to summarize current conditions and identify casual factors for not meeting rangeland health standards and guide. A range of Alternatives in the FEIS were further developed and an impact analysis was conducted to consider the direct, indirect, and cumulative effects of livestock grazing on focal species and their habitat to the pasture level and within the greater cumulative effects analysis area. Based on the current condition of the allotment and the level of progress required to meet range health standards and guidelines, an appropriate alternative was selected that modified grazing systems intended to maintain and improve

Protest ID	Protest Point No.	Protest Text	Protest Response
			upland/riparian composition and habitat structure and function for all wildlife largely based on the needs of selected focal species.
5TGluch12122013	41	Mr. Gluch states, "I am protesting the Field Manager's proposed decision on the Gluch FFR Allotment....I am protesting the proposed grazing use on Pasture 1, Pasture 2 and Pasture 3." There are no specific protest points in the protest letter.	Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5Idaho12192013	42	Berrett - The State protest the fact that BLM has not adequately follow their process identified in 43 CFR 4130.2(b) which states, "The authorized officer shall consult, cooperate and coordinate with affected permittees or lessees, the State having lands or responsible for managing resources within the area, and the interested public prior to the issuance or renewal of grazing permits and leases."	Please see comment response # 58. On January 11, 2013, The Owyhee Field Office initiated by letter the scoping process for Group 5 grazing permit renewal process. The letter served to request additional resources and monitoring information that could help the BLM to complete the permit renewal process. Comments were received from Idaho Department of Fish and Game (IDF&G) and Idaho Department of Environmental Quality (IDEQ). A preliminary EA was issued on October 25 for a 15-day review and comment period.
5Idaho12192013	43	Berrett - BLM's has proposed a grazing schedule that has livestock scheduled to graze in pastures 1 and 3 beginning on April 15. Both of these pastures are high elevation pastures. Pasture 3 is at 8000 feet in elevation. The range at this elevation on April 15 each year is covered in snow and is impossible to turn out livestock at high elevation with grounds covered in snow.	Grazing schedules proposed were based in part on conversations with the permittee in April of 2013. Schedules were taken from Alternative 2 that were submitted by the permittee of April 15 through October 15 annually and modified for other Alternatives developed in detail in the EA.
5Idaho12192013	44	Berrett - The State questions and protests the fact that BLM has arbitrarily changed the percent public land from 100% public land to 16% public land.	The actual percentage of public land was not changed; the change in the permit characterization was based on the allotment boundary and better reflects that portion of the public lands found within the allotment. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger

Protest ID	Protest Point No.	Protest Text	Protest Response
			parcels of non-federal ownership. As noted above, BLM management prescriptions apply only to the Public Lands.
5Idaho12192013	45	Berrett - BLM's grazing rotation on page 12 and in term and condition 14, which specifically states in part that "Cattle numbers may vary up to 200 head as long as the total active use by pasture or allotment and permitted season of use are not exceeded annually. "	Cattle numbers were based on permittees proposals.
5Idaho12192013	46	Berrett - Term and Condition 13 is incorrect when BLM states in part "less than 10 percent bank alteration will be maintained in key riparian." The Owyhee Resource Management Plan on pages 14 and 18 states bank alteration at 10% or less, not less than 10% as BLM has incorrectly identified in Term and Condition 13.	The BLM agrees that 10 percent is acceptable.
5Idaho12192013	47	Berrett - The State questions how BLM can determine that "Livestock grazing is affecting upland vegetation by reducing or removing native vegetation communities that protect watershed soil and hydrologic function" with incomplete to very limited data.	The BLM has taken a hard look with the data available and has created alternatives based input from permittees to come up with alternatives as analyzed in detail in the EA.
5Idaho12192013	48	Boulder - their grazing schedule identified on page 12 of the proposed decision (Table PROP 1.1 Boulder Allotment Grazing Schedule) would not work in the permittees situation due to the limited or lack of water during the fall of the year.	The BLM agrees, after meeting with the permittee and has made changes in the Final Decision.
5Idaho12192013	49	Boulder - I protest alternative 4 where the active use AUMS will no longer be made available and will not be converted to suspension."	Reduction in AUMs from current permits will not be transferred to suspension, in conformance with regulatory direction at 43 CFR § 4110.3-2.

Protest ID	Protest Point No.	Protest Text	Protest Response
5Idaho12192013	50	Boulder - BLM never met in person with the permittee to discuss the AUM reductions at any point in time during his permit renewal process for the Boulder Allotment.	Meetings were held in April of 2013 and again in December 17, 2013 to discuss the permit renewal process with Dale Berrett. As per 4130.3-3, "Following consultation, cooperation, and coordination with the affected lessees or permittees, the State having lands or responsible for managing resources within the area, and the interested public, the authorized officer may modify terms and conditions of the permit or lease when the active use or related management practices are not meeting the land use plan, allotment management plan or other activity plan, or management objectives, or is not in conformance with the provisions of subpart 4180 of this part. To the extent practical, the authorized officer shall provide to affected permittees or lessees, States having lands or responsibility for managing resources within the affected area, and the interested public an opportunity to review, comment and give input during the preparation of reports that evaluate monitoring and other data that are used as a basis for making decisions to increase or decrease grazing use, or to change the terms and conditions of a permit or lease." The BLM has completed extensive consultation, cooperation, and coordination with all parties involved and continues to coordinate with parties affected. As outlined the Final Decision meetings were held and multiple opportunities to review documents provided.
5Idaho12192013	51	Big Field - The State questions and protests the fact that BLM has arbitrarily changed the percent public land from 100% public land in the Big Field FFR 40% public land in the Big Field Allotment.	The percent public land was changed based on the allotment boundary to more accurately reflect the portion of public lands found in the allotment. These calculations are available in the project record.

Protest ID	Protest Point No.	Protest Text	Protest Response
5Idaho12192013	52	Big Field - By BLM implementing constraints such as Cattle numbers may vary up to 168 head as long as the total active use AUMS by pasture or allotment and permitted season of use are not exceeded annually, while the State hopes this just applies to the public land portions of the allotment, it severely limits the permittees ability to use his private/state lands as he desires.	The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5Idaho12192013	53	Big Field - First, the "less that 10% bank alteration will be maintained in key riparian areas at the end of the grazing season" is inaccurate. The ORMP on pages 14 and 18 state "10% or less bank alteration" and not less than 10% bank alteration. Second, the Term and Condition needs to state that it only applies to the public land portions of the Big Field FFR.	The BLM agrees that 10 percent is consistent with the ORMP.
5Idaho12192013	51	Rail Creek - The State questions and protests the fact that BLM has arbitrarily changed the percent public land from 100% public land in the Rail Creek FFR to 3% in the Rail Creek FFR.	The percent public land was changed based on the allotment boundary and reflects that portion of the BLM lands associated within the allotment. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership. As noted above, BLM management prescriptions apply only to the Public Lands.
5Idaho12192013	52	Rail Creek - BLM must disclose these calculations of livestock forage available on both the public and the private lands in order to arrive at a percent public land and not be arbitrary in the calculations of percent public land.	The BLM agrees and the calculations are available in the project record.

Protest ID	Protest Point No.	Protest Text	Protest Response
5Idaho12192013	53	Rail Creek - BLM further claims here on page 7 of the Initial Allotment Review and the Rangeland Health Assessment for the Rail Creek Allotment that BLM is "unable to manage the minimal public lands in the Rail Creek FFR allotment due to the limited ownership, lack of separation from private lands, and separation of public lands from other public lands by boundary fences. The actions on private lands determine how the allotment is used and managed. "	The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5Idaho12192013	51	Rail Creek - BLM claims on page 7 of the Initial Allotment Review and RHA that "Review of available information indicates that grazing or other issues are known to exist. However, the allotment has no or limited potential for management. Available information is adequate to complete the evaluation and determination. This is the RHA for this allotment. Complete the Evaluation/Determination form and consider the public land for disposal. "	The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5Idaho12192013	52	Rail Creek - Rail Creek FFR Allotment - Cattle numbers may vary up to 300 head as long as the total active use AUMS by pasture or allotment and permitted season of use are not exceeded annually.	Cattle numbers were based on permittees proposals.
5Idaho12192013	53	Rail Creek - BLM must include in this Term and Condition that this only applies to the public land portions of the allotment. BLM does not have the authority to manage a permittees private land or State lands.	The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.

Protest ID	Protest Point No.	Protest Text	Protest Response
5Idaho12192013	54	Walt's Pond - The State questions and protests the fact that BLM has arbitrarily changed the percent public land from 100% public land in the Walt's Pond Allotment to 20%.	Actual percentages were not changed; the permit's percentage of public land was changed based on the allotment boundary and reflects that portion of the public lands associated within the allotment. The BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership. As noted above, BLM management prescriptions apply only to the Public Lands.
5Idaho12192013	55	Walt's Pond - BLM has proposed and developed in their Grazing Schedule specific time frames and maximum livestock numbers without any input from the permittee.	Cattle numbers were based on permittees proposals.
5Idaho12192013	56	Walt's Pond - BLM is wording Term and Condition 16 so the operator is restricted on how he uses his 2,174 acres of private ground with restrictions such as cattle numbers may vary up to 75 head as long as the total active use AUMS by pasture or allotment and permitted season of use are not exceeded annually.	The BLM agrees and does not manage private or state lands; management prescriptions apply to the Public Lands only. BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership.
5Idaho12192013	57	Jim's Peak - The State questions and protests the fact that BLM has arbitrarily changed the percent public land from 100% public land in the Jim's Peak Allotment to 40%.	Please see response to Comment # 54. The percent public land was changed based on the allotment boundary and reflects that portion of the BLM lands associated within the allotment. Regarding allotments with FFR in their name: the BLM's legal and regulatory management responsibilities for public land resources are not attenuated or reduced by the presence of limited public land acreage within larger parcels of non-federal ownership. As noted above, BLM management prescriptions apply only to the Public Lands.

Protest ID	Protest Point No.	Protest Text	Protest Response
5Idaho12192013	58	Jim's Peak - BLM must consult and coordinate on a regular basis with the permittee as required in the grazing regulations (43 CFR 4130.2 (b) prior to issuing a grazing permit.	A scoping letter was mailed to permittees on January 11, 2013. The letter encouraged comments and information for the Morgan Group allotments. In addition, the OFO staff met with the Jim's Peak permittees on April 16, 2013 at Marsing, ID to develop an amended grazing proposal and allotment specific clarification of existing conditions. During this meeting, BLM discussed its preliminary conclusions regarding rangeland health and standards and guidelines and made grazing management recommendations associated with the grazing permit renewal application. On August 27, 2013, BLM issued the completed 2013 Rangeland Health Assessments (RHA), Evaluations, and Determinations for the Jim's Peak allotment to the permittees. Issuance of the RHAs and Determinations afforded an opportunity to meet again with the OFO staff to discuss any additional grazing management changes, the permittees' application, and to provide input for completion of the Morgan Group EA. The EA was issued October 18, 2013, for a 15-day review and comment period. Issuance of the preliminary EA afforded another opportunity for grazing permittees to provide additional input. The OFO staff met again with permittees on December 3, 2013.
5Idaho12192013	59	Jim's Peak - BLM must make clear in all of their Terms and Conditions that the Terms and Conditions apply only to the public lands within the Jim's Peak Allotment. The permittee must be able to use his private lands in the Jim's Peak Allotment as he desires in order for his operation to be feasible and produce positive economical returns.	The BLM is mandated to manage public land resources and values in accordance with the Taylor Grazing Act, the Federal Land Policy and Management Act, and other legislation. A grazing permit is the document that authorizes livestock grazing on public land. Terms and conditions on grazing permits are the tools that fulfill the BLM's responsibility for applying actions that will allow standards and guidelines, as well as resource management objectives to be met

Protest ID	Protest Point No.	Protest Text	Protest Response
			for resources and values on public land.
5Idaho12192013	60	Jim's Peak - The State of Idaho protests the reduction in 2 AUMS in the Jim's Peak Allotment.	The alternative selected in the Final Decision was fully analyzed in detail and a hard look was taken at the AUMs.

Appendix J

This appendix hereby incorporates by reference the below language in its entirety into the DOI-BLM-ID-B030-2013-0023-EA Final Environmental Assessment (EA).

During public scoping and comment periods for the Morgan Group permit renewal process, suggestions were received from interested publics that the BLM's NEPA process would be better served if the agency would prepare an Environmental Impact Statement (EIS) rather than an EA and Finding of no Significant Impacts (FONSI) to identify and analyze the geographic extent of the environmental impacts of livestock grazing activities in these allotments.

The BLM published a Final EIS (DOI-BLM-ID-B030-2012-0014-EIS) on October 4, 2013, that analyzed the renewal of grazing permits on twenty-five allotments (known as Group 2) in the Jump Creek, Succor Creek, and Cow Creek watershed areas in the northern part of the Owyhee Field Office. This EIS defined Cumulative Impacts Analysis Areas (CIAAs) for social and economic effects and for the Owyhee subpopulation area, including, but not limited to (Connelly, Knick, Schroeder, & Stiver, 2004) sage-grouse habitat.

The BLM subsequently prepared three EAs (for the Toy Mountain Group, South Mountain Group, and the Morgan Group of allotments). When the CIAAs were defined, the boundaries were the same as the Group 2 EIS CIAA boundaries. The BLM found that the geographic boundary beyond which impacts to resources and habitat would no longer be measurable is the same for all groups. The rationale for establishing these boundaries is found in Section 3.4 of the Toy Mountain, South Mountain, and Morgan EAs where cumulative effects analysis begins; the cumulative effects analysis that resulted from the EIS did not unveil any effects not also recognized in the cumulative effects analyses in the EAs.
