

Correction

Gateway West Transmission Line Project
Draft Supplemental Environmental Impact Statement
For Segments 8 and 9

Section 3.3.1.1 Issues Related to Cultural Resources incorrectly states the following:

- Inventory of Cultural Sites. Once the BLM has selected a Preferred Route, a Class III (intensive pedestrian) inventory of that route must be completed, so that cultural resources that may be directly or indirectly impacted can be identified. This will occur after the Draft SEIS has been received, before issuance of the Final SEIS.

This statement is incorrect. The DSEIS should have stated that a Class III (intensive pedestrian) inventory would be completed after the BLM selects an alternative in the ROD.
