

**Appendix 4K  
Production Summary**

<b>Table K1: Devils Gate Allotment Key Area DG-03</b>						
Range Site: Loamy 8-10" (R025XY019NV)						
Species	Total Dry Weight Production (lbs./acre)/Percent Composition of Total					
	6/26/2014					
GRASSES						
Squirreltail	551.3/73.2					
Sandberg bluegrass	74/9.8					
Indian ricegrass	15.4/2.1					
Cheatgrass	11.6/1.5					
<b>Total grass</b>	<b>652.3/86.6</b>					
FORBS						
Hoods phlox	81.4/10.8					
Milkvetch	0.9/0.1					
Mustard	2.6/0.3					
<b>Total forb</b>	<b>84.9/11.2</b>					
SHRUBS						
Douglas rabbitbrush	16.4/2.2					
Snowberry						
Serviceberry						
Bitterbrush						
<b>Total shrub</b>	<b>16.4/2.2</b>					
<b>Grand Total (lbs/acre)</b>	<b>754</b>					
<b>Ecological Status/Similarity Index**</b>	<b>15.4% Early Seral</b>					

**\*\* The ecological status/similarity index is a rating that indicates how similar the composition of the site is to the potential natural community (PNC). PNC is the natural plant community in the absence of abnormal disturbances and physical site deterioration and is also referred to as the historic climax plant community. PNC would be a rating from 76 – 100%. The other categories (seral stages) are: Early Seral 0 – 25%; Mid Seral 26 – 50%, and Late Seral 51 – 75%.**
