

Project Description

Project Components

- Construction of up to 2,350 new single or multi-well pads in the project area;
- Up to 3,925 new vertical, directional, or horizontal wells would be drilled, in the project area, from the new or existing well pads with the actual locations determined during future site-specific permitting;
- Additional facilities would be constructed including up to 863 miles of access roads and associated utility corridors for pipeline transport of fluids, central tank batteries, central gas processing plants, oil and equipment storage areas, and water treatment and disposal facilities;
- Surface disturbance proposed in the project area from this project would be up to 27,735 acres. This project does not include any activity outside the project area.

Proposed Project Timeline

- Over a period of approximately 30 years, CPE proposes to drill and complete exploratory and development wells;
- Well production is anticipated to occur for a period of 20 to 40 years;
- Life-of-project is estimated to be 60 to 80 years.

Alternatives

BLM and BIA are required by law to consider alternatives to the proposed action. So far, we have identified the following alternatives. If you can think of other alternatives we should consider, we welcome your comments!

- Proposed Action
- No Action Alternative (continuation of previously approved wells)
