

Preliminary List of Affected Resources

The Crescent Point Energy EIS will address the effects of the construction, operation, and maintenance of the proposed wells on the environment. The resources already identified for analysis include:

- Air quality
- Water resources
- Geology and minerals
- Paleontological resources
- Soil resources
- Vegetation
- Threatened, endangered, or candidate species
- Wildlife
- Cultural resources
- Livestock grazing
- Special management areas
- Recreation
- Visual resources
- Socioeconomics and environmental justice
- Transportation and access

If you know of additional resources we should consider, or subsets of the above listed resources, or ways to minimize impacts to those resources, we welcome your comments!
