Southern California Edison's West of Devers Upgrade Project Additional Material Yard Environmental Review

F4-2

PREPARED FOR: MPO
 PREPARED BY: Patty Nevins/SCE CEHS
 DATE: September 22, 2015

SCE has included an additional Material Staging Yard, due to the potential for any one of the yards listed in the West of Devers Upgrade DEIR Section B Project Description Table B-5 to be occupied and unavailable prior to SCE commencing with construction. SCE has also updated Figure B-16 to include the additional yard. The environmental analysis of this additional yard, as well as SCE’s conclusion that the addition of this yard would not result in any additional impacts beyond those already described in the DEIR/DEIS, is described below:

Table B-5. Potential Staging Yard Locations

Yard Name	Location	Condition	Approx Area (acres)
Match Material and Equipment Staging Area	SE corner of E Theodore St and N Hathaway	Previously Disturbed; vacant	21

Match Corporation Material Yard: The site is located in the city of Banning, Riverside County, California, Parcel Numbers 534-241-003, 534-241-004, 534-242-001, 534-241-002, and 534-242-003. The site is bounded on the south, southwest, and west by residential and undeveloped properties, on the east by North Hathaway Street/Morongo Reservation, and on the north by a sand and gravel mining operation. The site encompasses an area of approximately 21 acres and has historically been used as an equipment and materials yard. The site surface is composed of approximately 50 percent concrete (paved) and 50 percent friable soil.

Aesthetics

- Using the site as a material yard is a similar use to previous uses. Residences are located bounding the south, southwest, and west sides of the proposed material yard. The proposed fence and screening will mitigate visual impacts. The material yard will be fenced for security and the fence would contain a visual barrier to minimize views into the site. The material yard would not conflict with the types of structures and uses in the area and would not result in a change to the visual character of the area.
- The material yard would be temporary in nature and generally consistent with the conclusion in Section D.18 Visual Resources p. D.18-33 of the DEIR.

Agriculture and Forestry Resources

Comment Set F4 – Southern California Edison (cont.)

**F4-2
cont.**

- The site is not currently used for agricultural and forestry purposes. The site use is temporary and would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to nonagricultural use or result in the conversion or loss of forest land to non-forest use.
- The material yard would be temporary in nature and generally consistent with the conclusion in Section D.2 Agricultural p. D.2-10 of the DEIR.

Air Quality

- Historic uses of the site are similar to what SCE is proposing. There are sensitive receptors across the street from the yard, but the proposed yard would not introduce new sources of pollutants since the proposed use is consistent with the existing use.
- In addition, with the incorporating of the DEIR proposed mitigation measures, the material yard would be temporary in nature and generally consistent with the conclusion in Section D.3 Air Quality p. D.3-15 of the DEIR.

Biological Resources

- Based on a field visit to the site and review of available reports and materials, construction and operation of the yard would not result in significant or substantial adverse effects on any known candidate, sensitive, or special status species. The Los Angeles pocket mouse (*Perognathus longimembris brevinasus*), and San Diego pocket mouse (*Chaetodipus fallax fallax Northwestern*) have a potential to occur in the area. With incorporation of the DEIR Mitigation Measures, which would apply to the construction and operation of the material yards, potential impacts would be reduced, and be generally consistent with the conclusion in Section D.4 and D.5.

Cultural Resources

- The proposed material yard has been surveyed for cultural resources (DeCarlo 2015, submitted to CPUC under separate cover). No cultural resources were recorded within the proposed material yard. Mitigation Measures identified in the DIER and the cultural report include measures to reduce potentially significant impacts from the Project, which would apply to the construction and operation of the material yards.
- Based on the cultural resources survey and review of available materials, potential impacts to cultural resources would be less than significant and are generally consistent with the conclusion in Sections D.7 and D.14.

Geology and Soils

- No geological hazards were observed at the site. Due to the temporary nature of construction activities, the probability of a large earthquake exposing construction personnel to fault rupture and seismic-related hazards during construction of the Proposed Project would be extremely low. Implementation of SWPPPs and soil stabilization measures would reduce the potential for soil erosion. The site will be restored to the current configuration upon completion of

Comment Set F4 – Southern California Edison (cont.)

construction. Topsoil materials may have to be removed and set aside during grading operations. Erosion controls will mitigate erosion of topsoil materials. Therefore, the Proposed Project would have a less than significant impact to geology and soils with regard to construction and operation of the material yard, and would be generally consistent with the conclusion in Section D.9.

F4-2
cont.

Climate Change

- The greenhouse gas emission calculations in the DEIR assumed that material yards would be needed and were incorporated into the project design. Therefore, construction of the new material yard will not result in a net increase in construction activities with the potential to impact greenhouse gas emissions not already addressed by the DEIR. In addition, the material yard would be temporary in nature and generally consistent with the conclusion in Section D.6 Climate Change.

Hazards and Hazardous Materials

- The proposed material yard will not result in construction activities with the potential to impact the location and quantity of hazards and hazardous materials not already addressed by the DEIR. In addition, the siting of a material yard does not contain listed DTSC sites. Therefore, impacts are generally consistent with the conclusion in Section D.10.

Hydrology and Water Quality

- Based on field evaluation, the site does not contain drainage(s) that would be considered jurisdictional waters. Therefore, the proposed material yard does not significantly affect area hydrology and water quality.

Land Use and Planning

- The siting of a material yard at this site would not physically divide an established community or conflict with any applicable land use plan or zoning ordinance, habitat conservation, or natural community conservation plan. As noted in the DEIR, the Proposed Project construction would not conflict with locally adopted land use plans, policies, or regulations, and impacts would be less than significant. The Match Yard location would fall under the City of Banning General Plan and would be consistent with the plan, policies and programs. Land that may be disturbed at a staging yard would be restored to pre-construction conditions or to conditions agreed upon between SCE and the landowner. Therefore, impacts are generally consistent with the conclusions in Section D.11.

Mineral Resources

- Although mineral resources in the form of sand and gravel are found in the general area, the site does not appear to have been used as a source of sand and gravel. A large sand and gravel mining operation is located adjacent to the site along the northern boundary. The material yard

Comment Set F4 – Southern California Edison (cont.)

is considered temporary and would have no impact on mineral resources in the future. Therefore, impacts are generally consistent with the conclusions in Section D.12.

F4-2
cont.

Noise

- The potential noise generated by material yard operations is anticipated to be similar to the noise generated by historic use of the site as well as the sand and gravel mining operation, located to the north. Therefore, the proposed material yard will not result in a net increase in noise impacts not already addressed by the DEIR Environmental Impact Analysis. Therefore, impacts are generally consistent with the conclusions in Section D.13.

Socioeconomics, Population and Housing, and Environmental Justice

- The site would not induce growth or result in the displacement of housing that would require construction of replacement housing elsewhere. Based on the use of the site and the socioeconomics, population and housing, and environmental justice impact analysis presented in the DEIR, the siting of a material yard at this location does not result in significant additional impacts beyond those already discussed in Section D.8

Public Services and Utilities and Service Systems

- The site will not require significant additional public services to operate. The DEIR analysis anticipated the use of material yards to support construction. Therefore, the siting of a material yard at this location does not result in significant additional impacts from what was analyzed in Section D.17.
- The site will not require significant additional utility services to operate with the exception of an electrical distribution line. Electrical lines are readily available in the general area and the material yard will only require minimal energy to operate. Portable toilets will be used for personnel operating the material yard. Therefore, the siting of a material yard at this location does not result in significant additional utility and service system impacts.

Recreation

- The site is not located adjacent to or nearby existing recreation areas. The proposed project will not utilize existing recreational facilities. Therefore, the siting of a material yard at this location does not result in significant additional impacts and is generally consistent with the conclusions in Section D.15

Transportation and Traffic

- The site has been used as a materials and equipment yard. In addition, Hathaway Street, is a main road with existing truck traffic from adjacent uses. Because of the temporary nature of the yard and with the incorporation of mitigation measures proposed in Section D.16 Transportation and Traffic, impacts would be generally consistent with the conclusions in the DEIR.

Responses to SCE Comments Related to Project Description Changes (Comment Set F4)

F4-1 The commenter has attached a revised Table B-1 (Typical Transmission Structure Dimensions) and Table B-2 (Transmission 220 kV Removal and Installation Per Segment). These suggested modifications have been made to the Final EIS, as addressed in Responses to Comments F3-41, F3-42, F3-43, F3-45 and F3-46.

F4-2 The commenter has provided information on a new Match Material and Equipment Staging Area that would be used in the event that one of the other proposed yards is occupied and unavailable prior to SCE commencing with construction. Table B-5 (Potential Staging Yard Locations) and Table B-6 (Potential Staging Yard Approximate Land Disturbance) have been updated to add the Match Material and Equipment Staging Area, as also addressed in Response to Comment F3-63.

Analysis of the Match Material and Equipment Staging Area has been incorporated into each environmental discipline in Section D, as applicable. Given that the Match Material and Equipment Staging Area is previously disturbed, would be used temporarily during construction, is in the same general area as the Hathaway #1 and #2 Yards, and has historically been used as a material and staging yard, no new or more substantial impacts than those identified in the Draft EIR/EIS would occur.

F4-3 The commenter has provided a revised Figure B-16 (Proposed Staging Yard Locations). Therefore, Figure B-16 has been updated in the Final EIS to add the Match Material and Equipment Staging Area, as is also addressed in Responses to Comments F3-63 and F4-2.

F4-4 The commenter has submitted as an attachment the following updated figures:

- Figure B-2b (Existing and Proposed Corridor Profile – Segment 1),
- Figure B-3b (Existing and Proposed Corridor Profile – Segment 2),
- Figure B-4b (Existing and Proposed Corridor Profile – Segment 3),
- Figure B-5b (Existing and Proposed Corridor Profile – Segment 4),
- Figure B-6b (Existing and Proposed Corridor Profile – Segment 5),
- Figure B-6c (Existing and Proposed Corridor Profile – Segment 5), and
- Figure B-7b (Existing and Proposed Corridor Profile – Segment 6).

As requested, these seven updated figures have been incorporated into Section B (Description of the Proposed Project) of the Final EIS.

F4-5 The commenter has provided a revised Figure B-10 (Typical 220 kV Transmission Structures). Therefore, Figure B-10 has been updated in Section B (Description of the Proposed Project) of the Final EIS, as also addressed in Response to Comment F3-84.

F4-6 The commenter has provided an updated Table Ap.1A-1 (Structure Heights), as is also addressed in Comment F3-574. As requested, Table Ap.1A-1 has been updated in Appendix 1 (Project Description Information) of the Final EIS.

F4-7 The commenter has provided an updated Table Ap.1B-1 (FAA Hazard Marking Evaluation) from Appendix 1, as is also addressed in Comment F3-575. As requested, Table Ap.1B-1 has been updated in Appendix 1 (Project Description Information) of the Final EIS.

F4-8 The commenter has provided updated data for Tables Ap.1B-2 to Ap.1B-7 (Preliminary FAA Evaluation), as are also addressed in Comment F3-576. As requested, Tables Ap.1B-2 to Ap.1B-7 have been updated in Appendix 1 (Project Description Information) of the Final EIS.
