Comments (use back if needed):

I think coal is going to continue to be
a major part of our daily lives, coal
produces most of the power and
things we use today. coal can be
just as clean and efficient as other
ways to produce power. where I
live everybody depends on the coal
market. without it nobody would
be living there, most people think
that coal burns dirty, that's not true
steam is what you see coming out of
the stacks of a coal powered power plant

There are other ways that they
want to produce power and they are
more dangerous and toxic than coal,
stop the war on coal
