Comments (use back if needed):

The U.S. currently uses 3,819 Terawatts of electricity. Our country's wind energy potential is 89,000 Terawatts (NIS 106127:10933-10938), and our solar energy potential is 116,146 Terawatts (nrel.gov/docs/fy12osti/51946.pdf). We've lost 40% of the ocean-based oxygen since the 1960s. Instead of the 5.3 trillion dollars spent to subsidize fossil fuels each year, we should save our planet by investing in wind and solar, and provide job training in these industries for communities impacted by moving past fossil fuels!
