rebecca	Tippens	Colrain	MA	1340	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I do not know why are are even considering allowing more drilling for fossil fuels. This is crazy! Plus, the 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We are truly at a disturbing point in our civilization regarding the severe damage that humans have inflicted upon our planet. It is crucial that we halt and reject all projects that will continue this assault on the climate, ecosystems, species, and communities. Earth is not here for us to destroy, it is here for us to enjoy. Industrial fossil fuel development has no place in the Western Arctic.	2/25/2022
Debbie	Wall		MB	R3G 2J3	Say no to the Willow Master Development Plan	Our poor, poor planet is much too close to her tipping point for us to be enacting policies that will only serve to push her over the edge. We must preserve whatever precious little pristine wilderness remaining and re-wild much of that stolen from the animal nations. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Andrea	Alexander	Prairieville	LA	70769	Reject the Willow Master Development Plan	<p>My name is Andrea Alexander, a lifelong resident and citizen of Louisiana. The oil and gas industry has destroyed my home in Louisiana. Our family lives within the infamous 'Cancer Alley' in the industrial corridor along the Mississippi River, where oil processing plants have destroyed our ecosystems and made a lot of people sick, including my 70-year-old mother now dying from brain cancer (most of my deceased relatives have died of cancer, and I don't need to wonder why). If anyone is in a position to oppose reckless oil drilling in one of our last pristine wilderness areas and wildlife refuges, it's me. I've had to live with this crap my entire life. Get a grip, Interior Department -- and a conscience. Stop the reckless, irresponsible plundering of our public lands! Justice demands it! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Bruce	MacBryde	Drake	CO	80515	Please, Reject the Willow Master Development Plan	<p>I urge you to not approve ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration surely must end the pattern of letting oil companies drill in the Arctic, without adequate regard for the harm it can cause to people, wildlife, and even the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands -- and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here would irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. We have to stop. According to our Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Is this absolutely necessary? No. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, permafrost thaw, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive. Whole villages are being displaced. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Good heavens! Approving the project would only cause more permafrost thaw and other damage of climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions the project would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution, and even the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Times are changing -- they have to. Any comprehensive, science-driven analysis will show that the risks are far too great. You really must use your legal authority to adopt the no-action alternative and reject this dangerous project. We know enough. The climate, wildlife and frontline communities can't afford anything less than no.</p>	2/25/2022

Chris	Dildine	Loveland	CO	80538	PLEASE REJECT the Willow Master Development Plan	I STRONGLY URGE YOU TO REJECT THE of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration MUST END the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would BREAK President Biden's promise to END new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. THIS IS CLEARLY OUTRAGEOUS AND NOT IN LINE WITH PRESIDENT BIDEN'S GOALS TO REDUCE FOSSIL FUEL CLIMATE CHANGE. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is ALREADY CAUSING COASTAL erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only CAUSE MORE PERMAFROST THAW and other damage from climate change, including HARM to the Reserve's numerous important surface resources. The prior environmental analyses for the project FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also FAILED to properly consider the project's impacts on polar bears, including HARM from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they FAILED TO EXAMINE the purpose and rationale for the project in light of the urgent need to STOP approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the RISKS ARE FAR TOO GREAT. PLEASE: You must use your legal authority to adopt the no-action alternative and REJECT this dangerous project. The climate, wildlife and frontline communities CANNOT AFFORD anything less.	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities cannot afford anything less.</p>	2/25/2022
Marjory	Clyne	San Diego	CA	92124	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Are you not concerned about these lasting effects on our climate and environment? Are you in the pocket of these rich oil companies? Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Anasuya	Lerwill	Clermont	FL	34711	Reject the Willow Master Development Plan	<p>Dear Secretary Haaland and Director Stone-Manning, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Maria	McEachern	Cambridge	MA	2138	Reject the Willow Master Development Plan	<p>I'm very sorry to bother you but I think that the cause justifies this intrusion! urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. This administration must end the reckless and environmentally inappropriate pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. The planet is already, ecologically, on the precipice of disaster and the tipping point nears. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. The planet is at a point where we cannot disregard the effect of fossil fuels on the atmosphere and the blight caused to the physical environment by their extraction. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please do not doubt the sincerity of this request on behalf of all affected creatures - both human and nonhuman. Thank you for your time.</p>	2/25/2022

Nerys	Lloyd-Pierce		Wales	CF119BU	Reject the Willow Master Development Plan	Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. We are facing a biodiversity and a climate crisis. If we carry on with our old patterns, our planet, and all of us with it, will face dreadful consequences. Nature is essential for human wellbeing. While allowing the climate to warm further all sound the death knell for the human race. In order to preserve life as we know and enjoy it, this administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less. We do not need to allow a small group of profit rakers to scam taxpayers into paying for their plan to take pollution causing fossil fuel from the ground and pocket millions as the agents.	2/25/2022
Carlene	Nakagawa	Sunnyvale	CA	94087	Please Disapprove Willow Master Development Plan	Please do not approve ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. This project will emit more than 280 million tons of greenhouse gases over 30 years, and cause oil spills and toxic air pollution which will harm Indigenous communities on Alaska's North Slope. Approving Willow will break President Biden's promise to end new drilling on federal lands and be a setback for climate leadership.	2/26/2022
Judith	Gray	Millsboro	DE	19966	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Fracking, drilling and breaching the Reserve in any manner is Not Healthy for any living thing.. The BLM seems to be for any project they deem profitable regardless of the consequences. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please, please do not allow this project or any other destructive projects to move forward. Keep Alaska as it has been forever.	2/25/2022

Kathleen	English	Salt Lake City	UT	84124	Reject the Willow Master Development Plan	I strongly oppose development in this region. The coastal plane is critical for caribou calving, and polar bear survival. Thousands of birds nest here. It is so ugly to think of drilling here. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Michael	Sheppard		East Sussex	BN2 0BU	Willow Master Development Plan, Alaska	I am writing to urge you to reject the proposed ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. You must stop letting oil companies drill in the Arctic without regard for the harm that it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent a failure in climate leadership. The Reserve is the largest undeveloped area in the United States. It is home to polar bears, caribou, and millions of migratory birds, as well as communities that have relied on the land for millennia. Oil and gas drilling here will scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. This issue matters to me because we should all now be doing as much as we can to protect and preserve the natural environment.	2/26/2022
karlene	schwartz	Center Harbor	NH	3226	Reject the Willow Master Development Plan	As a biologist, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. We reject fossil fuel development in light of our climate crisis as fuels of the past. Wind and solar are our future to mitigate the climate crisis we have caused. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
David	Klinge	Fenton	MO	63026	Reject the Willow Master Development Plan	I urge you to please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent another failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds, as well as Indigenous communities that have relied on the land for generations. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only worsen the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Lucy	Harmon	Lindale	TX	75771	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. The ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. This plan is illogical and would cause irreparable harm. The prior environmental analyses for the project FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also FAILED to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. They FAILED to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. EXTINCTION MEANS FOREVER !!! Every comprehensive, science-driven analysis will show that the risks are far too great! Use your legal authority to adopt the no-action alternative. Reject this dangerous project. The climate, frontline communities and Earth's biodiverse flora/ fauna/ life can't afford anything less.</p> <p>EXTINCTION MEANS FOREVER !!!</p>	2/25/2022
Carl B.	Lechner	Windsor	OH	44099	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Susan	Reilly		Bedfordshir	LU5 6BZ	Reject the Willow Master Development Plan	I am a citizen of the United Kingdom and I believe that wherever we live in the world we should unite to do what is right and I therefore urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would be a catastrophe, to say the least. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Utterly shameful. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please protect them.	2/27/2022
Jim	Boone	Las Vegas	NV	89117	Reject the Willow Master Development Plan	I've been to the arctic and I've seen the damage left by decades-old mining and oil exploration. It is simply unacceptable in this day and age to continue damaging the fragile arctic environments. Native people depend on a healthy arctic, wildlife depends on a healthy arctic, and the soul of America depends on a healthy arctic (even if it is out over the horizon). Don't damage our dream, however unlikely it might be, that we can still head West and find a new life out there somewhere in the wilderness. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Can't we save a landscape and environment that isn't polluted by searching and finding carbon based energy? Most of the earth is polluted and debased by plastics and other forms of petroleum pollution. Our economy must move away from carbon based energy. Climate change is an existential threat to mankind. In my opinion we don't need more oil exploration.</p>	2/26/2022
Barbara	Halpern	Newfield	NJ	8344	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Robert	Wasilewski	Wilkes Barre	PA	18702	Reject the Willow Master Development Plan	For many years I have been adamantly opposed to oil production the the Arctic. Today I am writing to urge you to reject approval of yet another poorly conceived oil production project -- ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. The Biden Administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds, as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. However, approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing mother bears and cubs in their dens. Moreover, this analyses failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks of the Willow project are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities cannot afford anything less.	2/25/2022
Stephen	Welgos	Wake Forest	NC	27587	The Willow Master Development Plan must be rejected	Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Mary and Brian	Iokela	Deer Park	WA	99006	Reject the Willow Master Development Plan	<p>We urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Carolynn	Kohout	Hillsboro	OR	97124	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project - in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic - without regard for the harm it causes to - people, - wildlife and - the planet. Approving Willow would break President Biden's promise - to end new drilling on federal lands and - represent an utter failure - on climate leadership. The 23-million-acre Reserve - is the largest undeveloped place in the United States, home to - polar bears, - caribou and - millions of migratory birds - Indigenous communities - that have relied on the land for millennia. Oil and gas drilling here will - irrevocably scar this fragile ecosystem and - exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of - up to five drill sites, - 250 wells, - a processing facility, - hundreds of miles of ice roads, - an airstrip, - more than 380 miles of pipelines, and - a gravel mine. It would produce - an estimated 590 million barrels of oil - over 30 years. Burning that oil would emit - nearly 280 million tons of greenhouse gases. VERY BAD! Alaska has warmed more than twice as fast as the rest of the United States - over the past 60 years, causing - coastal erosion, - sea-ice loss, and - harm to numerous species - that depend on the frozen landscape - to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves - using giant chillers - to REFREZE THAWING permafrost - to help ensure a solid drilling surface. Approving the project - would cause more permafrost thaw and - other damage from climate change, including - harm to the Reserve's numerous important surface resources. The climate, wildlife and frontline communities can't afford anything less. When are we going to understand that facilitating more oil drilling is not in our best interests? Oil extraction is an industry that is outdated and detrimental to our health and well being. We need to focus on energy sources that allow us to live in harmony with our environment so that there is a viable future for our planet. Please don't approve this project.</p>	2/25/2022

Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/27/2022
Kevin	Crisman	Milwaukee	WI	53212	Reject the Willow Master Development Plan	I write today to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Elaine	White	Phoenix	AZ	85012	Stop Big Oil Industrial Development in Western Arctic	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Indigenous peoples of America have already seen, experienced and been victimized by the toxic wastes produced by big oil pipelines and fossil fuel development. Native American peoples already understand how delicate and fragile the earth is. It takes centuries for the earth to recover from oil spill disasters. Protect the Western Arctic: its water, animals, and natural environments.	2/25/2022
Alyshia	Perri	Folsom	CA	95630	Reject the Willow Master Development Plan	We need to stop using and investing in fossil fuels. This is ridiculous, why are we even taking a vote on this project? It is extremely short-sighted to continue investing in fossil fuels. Leadership needs to do what's right for the people and the world in the long run, not for what fills some greedy pockets in the short run. There are other ways to create jobs for people as well. The logic for this project just isn't sound. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Kathy	Wilmering	Seattle	WA	98116	Reject the Willow Master Development Plan	Please reject the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. We are facing environmental catastrophe, especially in the polar areas and there is no doubt that this will accelerate the process. Our government has to stop rubber-stamping projects like this. Climate leadership does not look like this. There is no way to drill here without harming the land and the indigenous people who live there. The BLM's analysis was worrying: the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. These facts also show that this project moves us closer to climate catastrophe: 'Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources.' The prior environmental analyses ignored much of this information. I strongly support the no-action alternative.	2/27/2022

The climate, wildlife and frontline communities can't afford anything less. Reject this oil drilling project, for all people, the environment and the wildlife! Don't add to the damage climate change has done already to the Arctic!	2/25/2022
FRED	DAVIS	Tampa	FL	33613	Reject the Willow Master Development Plan	I urge you to reject the approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is an essential undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Unfortunately, oil and gas drilling will irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous significant surface resources. The preliminary environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too significant. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less. Respectfully I remain FRED R DAVIS, (MORTAL)	2/25/2022

Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Marianne	Follingstad	Rockville	MD	20851	Reject the Willow Master Development Plan	<p>As a 72yo who is extremely concerned about the environment, wildlife, and public health and safety, I adamantly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. M.A.	Dobler		ON	N3Y4K5	Willow Master Development NOT a good Plan	<p>You can't seriously be considering approving the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration Must end the pattern of letting oil companies drill in the Arctic without regard for the HARM IT CAUSES to people, wildlife and the planet. As you know, approving Willow would break President Biden's promise to END new drilling on federal lands and would show an utter failure on leadership, climate or otherwise. You must also know that the 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably damage this fragile ecosystem and only exacerbate the climate crisis. Do you really want that? According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. You might Not know that Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' misguided plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause MORE permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to STOP approving new fossil fuel development, and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. The health of our planet greatly depends on your foresight in this extremely important matter. Thank you.</p>	2/25/2022
Holly	A Gardner	Dallas	TX	75220	Please Reject the Willow Master Development Plan	<p>The last thing this planet needs is more drilling. We can't even afford to burn all the oil we have already taken from the ground. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Karen	Burtness Prak	Menlo Park	CA	94025	Permanently Reject the Willow Master Development Plan	I urge you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Environmentalists and others who care about a future with clean air and water for our descendants count on your administration to end the destructive pattern of allowing oil companies to drill in the Arctic without consideration for the harm drilling causes to people, wildlife and the planet. Approving Willow would devastate President Biden's promise to end new drilling on federal lands. It would also be an utter failure of climate leadership! The 23-million-acre Reserve -- the largest undeveloped place in the United States -- is home to polar bears, caribou and millions of migratory birds. It also supports Indigenous communities, people who have, for millennia, relied on this land! Oil and gas drilling here will irrevocably devastate these communities, permanently scar this fragile ecosystem, and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Think of it! 280 million tons!!! Aren't we trying to REDUCE greenhouse gas emissions? Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years, warming which has already caused coastal erosion, sea-ice loss, and harm to numerous species which depend on the frozen landscape to survive, as well as on permafrost thaw. Shockingly, ConocoPhillips' plan would use giant chillers to refreeze thawing permafrost, ensuring a solid drilling surface, which would generate increased permafrost thaw and accelerated damage from climate change. It would, in addition, cause potentially irreparable harm to the Reserve's numerous important surface resources! The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, impacts which include both harm from increased noise pollution and the potential for project-related vehicles crushing dens -- dens with bear mothers and cubs inside! Finally, prior analyses failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy! This is irresponsible, to put it mildly. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject, permanently, this dangerous project! The climate, the health of our wildlife, and the lives of those in frontline communities, can afford nothing less!	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Barbara	Brinkley	Jonesboro	AR	72401	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
George	Milkowski	Chicago	IL	60645	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Claudette	Kulkarni	Pittsburgh	PA	15206	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Rebecca	Sullivan	Colorado Springs	CO	80918	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Neil	Prater	Jackson	TN	38305	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Christine	Garcia	Dickson	TN	37055	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. David	Drecktrah	Broomfield	CO	80023	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Croitiene	ganMoryn	Ocala	FL	34480	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
April	Hardee	Emerald Isle	NC	28594	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

wayne	senft		ON	N6K 1C2	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/1/2022
Meredith	Mohr	Elkton	MD	21921	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Laura	Garro	Davenport	IA	52806	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Christopher	Benjamin	Saint Petersburg	FL	33705	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Cleda	Houmes	Salinas	CA	93901	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Sharon	Urban	Tucson	AZ	85712	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Patricia	Walker	Brookville	PA	15825	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/2/2022

edna	anderson	Beloit	WI	53511	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

Stephen	MacNish	Pleasant Valley	NY	12569	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/2/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Dave	Howard	Wimauma	FL	33598	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
Sondra	Boes	Campbell	CA	95008	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Jennifer	Murer	Modesto	CA	95355	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Jacqueline	Cuthbertson	Charlotte	NC	28227	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Claudio	Niedworok	Broadway	NC	27505	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Tanja	Gistl		Bayern	82216	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Cathryn	Moitoret	Tyrone	NM	88065	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Sonja	Birdsong	Lexington	KY	40515	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

William	Kadish	Worcester	MA	1606	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Teal	McConn	Livermore	CA	94551	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Martha	Delaney	Minooka	IL	60447	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/8/2022
Jason	Koontz	Rock Island	IL	61201	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Heidi	Ananthkrishnan	Arlington	VA	22201	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
Mary	Lyda	Kerby	OR	97531	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Jane	Murphy	Congers	NY	10920	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Andrew	Henry	New Fairfield	CT	6812	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Faith	Strailey	Quincy	CA	95971	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Mary	Miller	Minneapolis	MN	55416	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Kathryn	Fox	Salem	OR	97317	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Dan	Silver	Los Angeles	CA	90012	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Linda	Helvie	Las Vegas	NV	89108	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Gregory	Rouse	Cambridge	VT	5444	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022

Robert and Louis	Juracka	Amherst	WI	54406	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
