

First Name	Last Name	Additional Comments
Rosemarie	Carbino	comment: We DO NOT WANT decades more of destructive oil drilling. End the Willow project/plan now.
Elizabeth	Bagi	comment: "the Willow Master Development Plan is a carbon bomb that threatens all Americans."
Georganne	D'Angelo	comment: A much better plan is to return the stewardship of this land to the indigenous tribes who are committed to husbanding the land for the 7th generation to come. We should learn from them., comment:
Tricia	van Oers	comment: Absolutely absurd!! No new and destructive drilling. We have to leave untouched the little that remains. We will all suffer the consequences, and the People should have a say!
Michael	Bruckheimer	comment: Additionally, if the chillers use conventional refrigeration methods, they will extract heat from the pipeline or the ground below it and radiate (add) that heat to the atmosphere and generate more heat from mechanical friction and electrical resistance thus adding to warming. The generation of the needed electricity to power the chillers if fossil fuels are used will also create pollution.
April	Woods	comment: All oil drilling has to stop now, we have to put life before money. I grew up close to Willow, save it, don't ruin it with someones greed.
Diane	Rehner	comment: Allowing the Willow Project to advance would be the direct opposite of your stated goals. If your new plan is to stop planetary warming LATER, you are mistaken. NOW is the time!
Mary	more	comment: Also, will the drilling company restore the areas completely when done? NO, the public will be left to pay for cleaning up a destroyed land, once again.,
Sophia	Santitoro	comment: As a member of Gen Z, climate change will scar the rest of my life. I ask that you keep that scar from getting any deeper by stopping the Willow Project. Thank you for your time, and I hope you follow through with this request
Karen	Wells	comment: As the wilderness disappears humans are closer to extinction. Humans create global warming. Humans are suffering from the warming. No warming, destruction for oil. No destruction for GREED. NO WILLOW PROJECT. WILLOW Project is bad for the planet. Willow Project is bad for humans. Willow project is BAD FOR BUSINESS. Dead environments are not profitable. Dead environments can not produce tax dollars. Stop Willow Project Now, before it's too late to turn back. We humans need Willow Project to stop, now.,
Martin	Christopherson	comment: At a time when we need to mitigate the global climate crisis this drilling plan in Alaska is shortsighted and only serves to enrich fossil fuel company executives. Please discontinue this destructive drilling operation. Thank you.
Claudette	Ashley	comment: BLM must stop issuing drilling & mining permits on public land without environmental studies overseen by scientist & the public.
Zareth	Jones	comment: Bureau of Land Management: Willow Must Go NOW in Jesus' Name!
Muse	Bedri	comment: By Man, Age 25
dagmar	mclaughlin	comment: clean renewable energy is the future.....
Rachel	Resnikoff	comment: Climate change is happening! This has GOT TO STOP!!! All the money that's going to go into this "Master Plan" should go into R&D for renewable energy resources.\
Rob	Vandenabeele	comment: Climate science has made it clear that we need to transition from fossil fuels to renewable energy as soon as possible. Allowing further exploration or extraction of fossil fuels is a major threat to the future generations of life on earth. Please send the right message by putting our future ahead of big oil,Ãs profits.
Neil	Fisher	comment: Completely insane: The Arctic is warming rapidly. Fossil fuel companies are to blame. And Conoco Phillips wants to put "chillers" in the ground under its proposed drilling project so the permafrost won't melt while they pump out millions of barrels of oil. It's totally dystopian.
Dawn	Broadbent	comment: Continue in your endeavors to find the truth and obtain justice
Brian	Rice	comment: Could we just hit "pause" on fossil fuel - or better yet, "stop?" We need to transition to renewables now, not later. No more drilling for climate-killing oil.,
Rita	A	comment: Dear BLM - Respectfully, As a Rural American, you,Ãour entrusted nation,Ãs public servant employees,Ãmust put the American PUBLIC concerns and interests over those of PRIVATE industries, their shareholders,Ã and lobbyists,Ã profits, gains and advancements. With appreciation of your time, thoughtful consideration and responsible action.
Heidi	Fuchs	Every good intention
David	McCracken	comment: Delaying action on climate is a form of denying how serious and extremely urgent this problem is. This administration must live up to the environmental promises it made to voters.
Sylvia	Stachura	comment: Disaster looms!
Miguel	Ossorio	comment: Do not keep adding more oil drilling outfits in our country.
Diana	Schooling	comment: Do you want to the world to turn into Soylent Green or the Lorax? No? Then do something!
		comment: Do your job! The Willow project does nothing but destroy our environment. Shut it down now.

Darrell	Noel	comment: Doing more damage to pristine environments is not the road to energy independence. Renewables are the future, both environmentally and economically. Stop all subsidies and tax breaks to fossil fuel companies and they will collapse of their own weight and cost.
Sam	Zappala	comment: Don't act like Trump.
John	Doucette	comment: Don't use the crisis over Ukraine as an excuse for new drilling in the Arctic.
K	quinn	comment: Don,Ât you read the reports? No more destructive drilling!
Scott	Eric	comment: Dont drill for oil in the Arctic.
Robin	Hordon	comment: EARTHCARE FIRST... EARTHCARE FORMOST... EARTHCARE FOREVER... EARTHCARE NOW! Do the RIGHT THING and SAVE EARTH! Robin Hordon Kingston, WA
Bill	Lundy	comment: Enough! No more! Instead of propping up your equipment to continue the destruction you,Âve already accomplished, just BE DONE NOW
Susan	Blain	comment: Even if the absurd plan to use chillers would work, a whole lot of pollution would come from extracting, transporting, and using the oil, for many years. This, of course, would shorten the number of years the planet remains mostly livable.
Steve	Sketo	comment: EVERY DAY WE LEAVE A BIGGER & BIGGER CARBON FOOTPRINT ! WE MUST REDUCE IT NOW POSTHASTE !!
ken	Yamamoto	comment: extinction??
tracey allyson	geisler	comment: fine to keep permafrost! not fine to allow more oil drilling and pipelines! !
Matthew	Sonstein	comment: Focus on Green Technologies Now!
Patsy	Duncan	comment: For all of us
Steven	Andrychowski	comment: Fossil fuels are a thing of the past. The environment and our natural wonders must be protected.
Sandy	Rhein	comment: Fossil fuels are killing our planet and us. It MUST STOP!!!! Sincerely,
Elaine	Becker	comment: Get your Energy Policy into THIS century with Clean Renewables!
David	Citron	comment: Global warming is an existential crisis facing my grandchildren. Drilling or fossil fuel in the arctic is absurd in light of changes we need to make to avoid a climate disaster.
Glen	Williams	comment: GND
Curtis	Tomlin	comment: Go all renewable now!,
David	Dougherty	comment: Hasn't our planet taken enough abuse in the name of bourgoise capitalism?
David	Karloovich	comment: How about transitioning rapidly to non-fossil fuels before we destroy the planet along with ourselves. That's short-hand for stop Willow or we hasten our demise.
Barry	Ergang	comment: How many weather catastrophes does it take to penetrate the brains of those who can work to prevent many of them by putting an end to the fossil fuel industry?
Art	Hanson	comment: However, you MUST do MUCH more. We MUST keep ALL climate-changing fossil fuels IN THE GROUND! We MUST achieve 100% clean, renewable energy by 2030.
Barb	Drake	comment: I care about the future of our planet, humanity, civilization, and those that run wild and free.,
Lauren	Tucker	comment: I demand the Willow Project be stopped because all of the damage from previous oil spillings were NOT one-off accidents
Annabelle	Herbert	comment: I don't think Biden's timeline for net/zero emissions by 2050 is early enough! The sooner we can get a grip on emissions, the better off ALL of us and our environment will be!
Sari	Fordham	comment: I have an 8 year old daughter. Her future is threatened by the Willow Project. I urge the Bureau of Land Management to revoke the permits for this project.
Ellen	Harlan	comment: I know you are not in favor of further destroying our world. Don't approve the "Willow" master development plan!
MAK	Mitchell	comment: I lived in the Alaskan Arctic for four years as a public school teacher and co-founder of a school built on the tundra in the village of Kivalina, which is now melting because of earth warming. I saw the negative effects of oil drilling in Barrow and urge you to repeal the Willow Act to avoid such environmental damage again!
Linda	McMullin	comment: I lived there before the pipeline went in. Little did we know it was going to ruin God's creatures and beauty. QUIT MAKING THE SAME MISTAKES!

		<p>comment: I lived worked for the U. of AK in a teacher training program. Nome was my post.</p> <p>I was in Nome when the North Slope Road opened up and the rush to the North began. I had to bid on a small apartment - the curtains blew inside the apartment when it was windy outside. Life was pretty basic and revolving around 9 bars in the evening. I avoided the smoke-filled bars!</p> <p>Enough is enough! No more fossil fuel extraction. We must move quickly to renewable energies!</p> <p>Please no more drilling permits for the future of Alaska!</p> <p>Reject the Willow Master Development Plan!</p>
Susan	Selbin	
		comment: I strongly believe that doing all we can for human health and safety, the environment, and mitigating climate change are all very critical issues. Yes, the message below that I am sending you did come to me from an organization that I support, and it's also one whose information I trust. Please know that I have read it entirely, carefully, and that I agree with it fully, - in fact, I could NOT have said it better!
Paul	Meyers	
		comment: I strongly oppose the Willow Master Development Plan based on its inevitable/negative environmental impact.
Susan	Sloan	
		comment: If permitted, this drilling project will destroy ecosystems and further endanger threatened wildlife species. It also will undermine Indigenous peoples' way of life. The project is egregious in its impacts and must be averted before it begins.
Thomas	Kemp	
		comment: If the future health of the environment is important at all, this project and others like it MUST be suspended.
Claire	Alkire	
		comment: If we are going to tackle the Climate Crisis head on we need to end all drilling for gas and oil on all public lands, parks and waterways.
Robert	Cavaliero	
		comment: If we don't protect our wildlife and environment now it's going to be too late. We have to speak for those who can't speak for themselves and be the voice for the voiceless.
John	Marro	
		comment: If we want to live we have to keep fossil fuels in the ground and reduce, reuse and recycle. I live in a boat despite chronic seasickness because it is the greenest lifestyle I can achieve.
Dorothea	Leicher	
		comment: In addition to the environmental damage directly causes, the very real and present danger posed by carbon in the atmosphere leave you with no option except to STOP the Willow project. I'm shocked that we as a country are even keeping this under consideration. END IT NOW, PLEASE!!
Patricia	McKellop	
		Sincerely, Patricia McKellop
		comment: In order to slow climate change and give our children, grandchildren, and future generations any chance, we need to stop extracting fossil fuels NOW! This is a moral obligation relating to our future and the future of the globe, something you must not sacrifice to enable private short-term corporate profits.
Owen	Fairbank	
		comment: In our current global political meltdown, we are failing to resolve to avert catastrophic climate change. If Earth becomes uninhabitable, NOTHING ELSE will matter!
		Our overriding need is to go head on at warding off climate catastrophes by all means at hand. In my 90th year I won't live to see the worst, but I care deeply for younger people.
Robert	Allenson	
Gehr	Brown	
		comment: Incredibly bad and amazingly stupid idea!
		comment: It doesn't make sense to drill for oil in every part of our wilderness. It is destructive of the environment and will push already struggling species to the brink. Fossil fuels are what caused the warming that threatens the planet. We need serious investment to a transition to clean energy and serious financial support for nuclear fusion because this is really the only form of clean energy that is capable of satisfying the world's energy requirements.
Julie	Bernstein	
Amy	Bright	
		comment: It is ludicrous not to consider the deplorable ramifications
K	Pendergrass	
		comment: It is my firm belief that we need to treat Nature as a sentient being and help to restore and keep safe. Not fight what Nature does naturally.
James and Lina	Harrington	
		comment: It is so important to go for clean air and water. No more oil or gas.
		comment: It is the largest single oil and gas drilling operation currently proposed on federal lands and could generate more carbon than 56 million cars emit in a year. Beyond the damage to our climate, ConocoPhillips' plan calls for 37 miles of new gravel roads, seven bridges, an airstrip, and a gravel mine, which would jeopardize the health and traditional practices of nearby Alaska Native communities and devastate local wildlife like polar bears, migratory birds, and caribou.
William		
		comment: It is time to stop ruining the Alaskan Ecosystem. Trump only signed this to make money for himself and his buddies, end of story
Gerald	Mackey	
		comment: it is way past time to stop using dirty to fuels that destroy our planet just to line the pockets of the wealthy.
James	gilmore	

SK	Nielsen	comment: It looks like the Willow Master Development plan doesn't quell carbon and threatens us humans! Chage it now! Promote, encourage and support more friendly, sustainable energy solutions now so that we'll have a future
Caryn	Wagner	comment: It's easier to stop these projects before they start than to mitigate them afterwards. We must not permit this to happen.
Pamela	Mcdonald	comment: It's hard to understand why, as our climate is suffering, the Willow project should be allowed to proceed. BLM does a poor job of protecting our lands, and I wouldn't be surprised if they authorized this disaster in the making. SOMEONE must realize the harm this would bring to both the land and air, but if the BLM runs true to past actions, we're just spitting into the wind.
Musia	Stagg	comment: It's insane. The pipeline up there is being damaged by permafrost melting. Stop these idiots please.
Jimmie	Oneal	comment: It's time to put the well being of our planet as a priority
Andrew	R.	comment: It's unacceptable and does MORE harm than good. As such, it must STOP.
Carolyn	Rilling	comment: It,Äs almost too late! We have to act immediately to save the planet.
Violet	Young	comment: JUST PLAIN....NO!!!!@
Laddie	Mills	comment: Just stop it! You are killing us!
LK	WOODRUFF	comment: Just: NO! Leave the wild for the wildlife. Fossil fuels have had their heyday. It's time to swiftly move on to better, cleaner, safer & more sustainable options!
Linda	Bauer	comment: Keep their hands off of Alaska
Marta	Wilcox	comment: Leave Alaska the hell alone, there has been enough land destroyed by fracking and drilling!!! Enough already!!!?
Rev. Paul	Bern	comment: Leave the Alaska wilderness alone! Let future generations be able to enjoy the breathtaking beauty of Alaska....
Amy Sophia	Marashinsky	comment: Leave the arctic alone.
George	Jivelekas	comment: Leave the Arctic Circle alone
Michael	Carter	comment: Leave the few pristine places as they are. Why destroy habitat and ecosystems by building roads and drilling. Just stay out.
Kathleen	Mireault	comment: Leave the filthy stuff where it belongs,Äiunderground! Our Earth is at a tipping point and doesn,Ät need more carbon mucking about!
John	Mcpeek	comment: Leave the fossils for the paleontologists!
Ann	Williams	comment: Let's stop this madness. It makes no sense at all.
Lynn	Ricci	comment: My heart hopes that the right thing is done for our environment so that ALL living can live their lives.
clarence	Krygsheld	comment: never!!!
Dave	Scherer	comment: NO DESTRUCTIVE DRILLING
JOHN	Lamb	comment: NO DRILLING ANYWHERE! Pretty Simple, huh!
peter	RING-REVOTSKIE	comment: No drilling Ever in Alaska!
Karen	Hansen	comment: No drilling in Alaska!! There is no planet B.
Carla	Cicchi	comment: No drilling in Alaska!! Stop destroying our precious lands, air, waters, wildlife, their habitats, and human lives as well.
Frances	Recca	comment: NO DRILLING IN THE ARCTIC EVER!!!!!! WE ARE TRYING TO SAVE THIS EARTH, SO STOP THE BS !!!!!!!
David	Ashley	comment: No drilling of any kind anywhere is acceptable.
Rhonda	Berger	comment: NO DRILLING! Leave it in the ground!!!!
Perry	Gx	comment: No Drilling.
Cheryl	Fontaine	comment: NO drilling...big oil has destroyed enough of the planet.... every time they drill they destroy precious wild lands and animals...every single time... they leave massive destruction and waste behind and they never clean up their messes.... so sick of big oil buying our government to earn favors for big oil...favors they are well aware will further add to the destruction of the planet, its wildlife, its forests, deserts, streams and rivers, the homes of those living there...NO MORE DRILLING!!!
Steve	Ditore	comment: No matter what the oil corporations try to tell you, no matter how seemingly-compelling their focus-shifting tricks and "messaging", THEY CAN'T DO THIS SAFELY; THEY DON'T HAVE THE TECHNOLOGY. Even if they did, THESE DAMN THINGS LEAK, constantly, sometimes catastrophically; ANY leak in any environment as fragile as the Arctic would be a virtually unrecoverable catastrophe.

Laura	Manz	comment: NO MORE "PROJECTS" THAT ARE DESTROYING OUR ENVIRONMENT! WILLOW MUST GO!
Susan	Detato	comment: No more BLAH, BLAH, BLAH!
dc	katten	comment: NO MORE destruction NOW & FOREVER...KEEP GREEDY DEVASTATING CORP. INTERESTS OUT of & off of Mother Earth and ALL her sentient beings NOW! NOW! NOW!
Julie	kAYE	comment: No more drilling (anywhere). I am so sick of greed destroying this planet
Barbara	Tosh	comment: NO MORE DRILLING!! Especially in Alaska.
Julian	Cole	comment: No more drilling. Anywhere. Ever. For our grandchildren.
Barbara	Scott	comment: No more drilling. Move to alternate energy like wind, solar, etc.
		comment: No more fossil fuels - invest in solar, wind and heat pump technology!must be revoked.
Wolfgang	burger	
Carolyn	Wacaser	comment: NO MORE FOSSIL FUELS SHOULD BE TAKEN FROM THE EARTH!
Benjamin	Martin	comment: No more projects that make the Climate Emergency worse
Bobette	Jones	comment: NO more unnecessary oil drilling -- it a total disaster!
Gisela	Ray	comment: No new fossil fuel projects please. We know they must be phased out. Let's double down on renewables instead!
Janis	Snead	comment: No oil drilling in the Arctic. It will cause irreparable damage that cannot be reversed. We need to move away from fossil fuels which are destroying our planet.
Diane	Young	comment: No oil drilling in the Artic!! Absolutely NO TO THE WILLOW project!!!,
Ronit	Corry	comment: No Willow!
Patricia	Schon	comment: NOT NOW, NOT EVER!!!
Daniel	Ormond	comment: Not now. Not ever. There are better, more forward thinking options.
Alan	Rippington	comment: Not only USA people but the whole world..think global!
Jerry	Charlson	comment: Oh Hell No!
Sandi	Cornez	comment: Oil drilling is harmful to our land, wildlife, and our planet.
Deneice	Oroszvary	comment: Oil drilling is not necessary for normal life to continue. It is time to start stamping "NO" on any request for more drilling. It will leave you more time for increasing solar and wind power.
Kenneth	Ruby	comment: Oil drilling is totally destructive and insane at this stage.
Sundar	Tumuluru	comment: Oil Drilling is very harmful and dangerous to health from both sides and it must be totally prohibited.
Rosemary	Colson	comment: Oil for energy is becoming a thing of the past. No drilling for oil should be allowed anywhere! The climate crisis is the most significant issue facing our world today. Oil is definitely a NO-NO! There is clean energy that must be used instead.
Terry	Barber	comment: Once the permafrost melts, as a recent PBS documentary shows it has, methane leaks from the Earth into the environment. And, more carbon than man has put into the environment since the Industrial Revolution will be released guaranteeing ,Äúcurtains,Äú for life as we know it. Earth may become another Venus.
Derinda	Nilsson	comment: ONE PLANET!!!!!!!!!!
Leo	Hauguel	comment: Our climate and lands are already a disaster. It is time to make CHANGE happen and not just talk about it!
Carol	Ellis	comment: Permafrost is already melting across Alaska, we are already at a tipping point, please stop this climate disaster!
Debra	Willey	comment: Please
Christopher	Feehan	comment: Please
Kathryn	Berndt	comment: Please act now to protect the future for our grandchildren. Doing nothing is no longer an option. Human life depends on actions today!
Jeanne	Deane	comment: Please do not allow any drilling for gas or oil anywhere in this country. Any power expansion should be for wind and solar energy, or in some cases wind power.
		comment: Please help preserve a livable world for us and our children and stop this project!
Chad	Gray	
Lisa	Lynch	comment: Please help take care of our Planet!
Ari	Ronai-Durning	comment: Please just don't do it,
Ellen	Osborne	comment: Please President Biden, do not approve of the destructive Willow Development Project
NIKOLAUS	MATHEIS	comment: Please protect the climate and environment for future generations. After the dramatically increased number and severity of wildfires plus increasing high temperatures (almost 120--F in my city of Portland, OR last summer), the time has come to just say no to fossil fuels and say yes to a future for our children and our planet!
Faye	Bartlett	comment: Please put our atmospheric wellbeing above profit!astrous project must be revoked.
		comment: Please reject the Willow project!
Frank	Ayers	
Paul	Marceau	comment: Please save our planet!
A.	Stricklin	comment: Please stop destroying our nation's treasures.
Terrance	Hutchinson	comment: Please stop this insanity and protect our life support systems.

Zoe	Kay	comment: Please think of our children's futures and stop drilling for oil! We are going further and further into incredibly destructive natural responses..
Elizabeth	Gruben	comment: PLEASE try to think beyond the election cycle and earnings calls. There are things in this world more important than money.
Mary	Kornegay	comment: Please, help us stop the climate crisis not make it worse before it's to late.
Sue Ellen	Lupien	comment: Please, no more drilling
Sabrina	Jacklin	comment: Please, please, stand up for the environment and not for the oil barons and big corporations. This planet is what matters, not those who are willfully destroying it for their own malignant greed. Sincerely,
Rob	Kugler	comment: Please, take action to ensure that the Biden Administration live up to its promises to meet the climate crisis head on and more importantly that the Administration offer the sort of domestic and international leadership on climate that we need so urgently.
STEVEN	NASTA	comment: PRESIDENT BIDEN NO DRILLING.TELL THE GREEDY NO.
Kathy	Shoffner	comment: Protect our natural resources from self serving greedy corporations!
Robin	Patten	comment: Protecting our lands is far more important than the profits of the fossil fuel industry
Joan	Paskewitz	comment: Protecting our wild spaces is much more critical than protecting corporate profits.
Cheryl	Niccoli	comment: Really! Drill for more oil in a super sensitive environment when scientists everywhere say we must stop burning fossil fuels as quickly as possible. Of course I,Åm against this Willow Plan.
John	McSwigan	comment: Releasing methane would be a death blow to the environment and life on earth. Stop this madness. ,
Lori	Haage	comment: Reliance on fossil fuels has to end. The American auto makers are finally realizing that and no more pipelines should be built. Drilling for oil is destroying our earth.
Bruce	Hale	comment: Ruining our environment for a resource that will soon run out is shortsighted and dangerous.,
Vivian	Geltzeiler-Heyman	comment: Running on a platform and then throwing it all away is not a very good way to get a second term. Some of us need to live on this planet, you know.
Joanne	Hesselink	comment: Save that wilderness for the indigenous people and the carabao and other wildlife that depend on it. No more fossil fuel needed
Sally	Magaziner	comment: Save what,Ås left of our few remaining pristine pieces of land and precious wildlife that makes us unique. Go for stewardship and compassion. Not destruction and corporate greed.
Michael	Belcher	comment: Shut down the pipelines too!
Jan	Peterson	comment: So long as we allow corporations to profit from destroying the very ecosystem we all depend upon for life itself, we will be paying for our own demise. What's wrong with that?
Gail	Krieger	comment: So tired of companies giving more value to the all-mighty dollar than to our planet that is supposed to sustain us.
Roger	Widenoja	comment: Stop all actions that release more greenhouse gasses into the atmosphere. STOP !!
Linda	McCracken	comment: Stop allowing private companies to destroy our wilderness areas, pollute and destroy our climate! There will be no land left if you keep allowing them to do what they want, nor beauty, wildlife, or clean water and air!
Philip	Dooley	comment: Stop Global Warming NOW, or nothing else we do will matter.
Adelino	Carreira	comment: Stop killing our living planet.
Craig	James	comment: Stop killing us with your greed you dirty bastards.
Millie	Magner	comment: Stop our use of fossil fuels to save our environment, our children -- our very lives! Stop Willow now!
David	Klinge	comment: Stop the drilling!
Chuck	Jesse	comment: Stop the insanity
Angie	Duran	comment: Stop the Willow Project! Stop the Green- House Gas Pollution!Protect our Planet! Protect Our Lands,Air,Waters&Forests!
SUSAN	CASWELL	comment: STOP THIS ENVIRONMENTAL DISASTER BEFORE IT HAPPENS- STOP ALL THESE DIRTY, FILTHY, UNCLEANABLE MESSES THAT OCCUR AT EVERY ONE OF THESE DRILLING SITES,
Ann	Watters RPE,BCPP	comment: Stop this now,
Jean	Rainoshek	comment: Stop trying to ruin our planet. Support Evergreen action
Janice	Rose	comment: STOP with ALL non-green energy. NOW, is the time to make sure that we don't start any new fossil fuel exploration.
Peter	Lee	comment: Terrible ideas! And Terrible destruction will follow!
Lena	Moffitt	comment: Thank you for your bold climate goals - this project would undermine those, as well as your commitment to environmental justice. Please reject it!
Alicia	Czechowski	comment: The "Willow Project" is yet another Planet-Killer bent on gouging more dollars out of our dying world,
Kate	Kenner	comment: The BLM should NOT be catering to fossil fuel companies but strive to help fight the climate crisis- and I hope that is what they will do. Drilling is invasive, polluting, and affects people and wildlife as well. To allow willow to go forth would go against what we should be doing and that is slowing down-stopping really-more drilling.

Susan	Wald	comment: The Bureau of Land Management must reject the destructive Willow project, which would undermine President Biden's own goals and our hopes of a livable future.
Doretta(Dorie)	Reisenweber	comment: The climate clock reads a second to midnight. We must reach 50% 2030. We can do it.
Sally	Stevens	comment: The climate crisis is happening now and we must recognize the importance of taking all possible steps to reduce the greenhouse gas emissions causing it
Brian	Bustoz	comment: The climate crisis should be taken serious and action taken to protect the planet and resources. ,
Leanne	Bynum	comment: The Coast Guard said;that they cannot address emergencies there. PBS Thank you.
Robert	O,ÄöVÑ¥Brien	comment: The earth is under attack from some many different directions, it seems you would get the message and do the right thing
Diana	Sheen	comment: The environment is in bad enough shape and climate change doesn't need to be made worse. Smarten up people!
Alethea	MacKinnon	comment: The future is clear. It is vital that new fossil fuel projects must be rejected.
June	Confer	comment: The Indigenous Peoples of Alaska have cared for what is now the State of Alaska for thousands of years as their sacred duty. They know that the land is theirs on loan, not to abuse or even use for profit and greed. Allowing the Willow Project to go forward is to destroy that sacred bond held by the Indigenous tribes. Do not let it go forward. Honor the balance of nature, protect its land and waters that are home to not only these people, but all the wildlife that call the area home. Thank you.
Ann	Rogers	comment: The insanity of doing any mining is immoral.
Carmen	Nichols	comment: The only way anything will work is if we ALL work at it together. That is what it is going to take to help ourselves out of the climate crises we are now in. WE ALL HAVE TO WORK AND WORK TOGETHER!)
Derek	Benedict	comment: The science is clear. We need to stop new fossil fuel projects, phase out existing ones, and build renewable energy sources!
Meg	Lee	comment: The time for ending our reliance on fossil fuels in now. It is almost too late to turn back from the destruction of this planet due to global warming
Kim	Kaminsky	comment: The Willie Project would be a disaster for our earth and our survival on this now vulnerable planet. We are the steward,Äôs of this incredible planet and we must protect it.
Nick	Hyer	comment: The Willow Master Development Plan is the exact opposite of what we should be doing to secure our energy future. Invest in renewable energy now and we can be the leaders of the 21st century.
Jacquelyn	Griffith	comment: The Willow Master Development Plan must be stopped! We cannot, we dare not allow this in the face of permafrost lakes melting clear down into the earth,Äôs crust in 70 Arctic locations!!! The methane releases already are intolerable. We MUST get serious about the extremely urgent need to do everything we can to slow down climate change/global warming! Time is so short to avert the worst of disasters, please stop the Willow project and allow only sensible decisions for our situation, and not decisions made to make more money at the expense of all Life!
Theodore	Cochrane	comment: The Willow Master Development Plan,Äia 30-year plan to construct pipelines, roads, processing facility, and drill ,Äupads, would be a disaster for sensitive Alaskan ecosystems and Indigenous communities. It would be the single largest oil extraction project currently proposed on U.S. public land. If there were ever a project the Biden administration should reject on climate grounds, it's this one.
AG	kukulan	comment: The Willow Plan is an environmental disaster. There should be NO DRilling in Alaska, period. You know how that and Willows,Äô process is catastrophic for the planet and makes climate change worse not better as President Biden is claiming to do. Please do not allow drilling. Thank you ,
Jake	Houston	comment: The Willow project cannot continue. Please protect the Arctic
Lisa	Keim	comment: The Willow project is deeply incompatible with President Biden's climate commitment to reduce greenhouse gas pollution. Revoke the permits, please.
Judy	Epstein	comment: The Willow Project is NO!
Phyllis	Lau	comment: The Willow Project is nothing but horrific destruction of our climate and country, period. With such unfixable, dire consequences this drilling project must be stopped!
Arshad	Ameen	comment: The Willow Project Must Go!
Hannah	Mitchell	comment: The Willow project must not go forward. I support every effort by the Biden administration to limit global warming, and stopping this project must be included.
Joan	Klein	comment: The Willow Project should not even be considered. If this country is real about being green in the next few years there is no reason to be drilling here. Reconsider all ideas about drilling for oil and mining for coal. The first will ruin the land and by the time it is ready to be used the electric car of the future will be here: and, coal mining is the worst you can do. It is an unhealthy, dirty, and expensive. When all is said and done the people working in mining coal will be looking for black lung benefits and that is expensive. I grew up in a mining town and I do not want anybody else in this world to have to put up with the dirty air, fumes, and death caused by coal dust just for a couple dollars. It is not worth it. Please NO more drilling or mining.,
Patricia	Harlow	comment: The Willow Project will damage the permafrost, which is very fragile and essentially difficult to repair.
Sandra	Leaper	comment: The Willow project will lock us in to 30 years of destructive oil drilling.

Joanna	Welch	comment: The Willow project will lock us in to 30 years of destructive oil drilling. Willow is deeply incompatible with President Biden's climate commitments,Äand with the just, livable clean energy future we're fighting for.
KEVIN	OROURKE	comment: The Willow project will lock us in to 30 years of destructive oil drilling. Willow is deeply incompatible with President Biden's climate commitments,Äand with the just, livable clean energy future we're fighting for.
Diane	Ballentine	comment: The Willow project will lock us in to 30 years of destructive oil drilling. Willow is deeply incompatible with President Biden's climate commitments,Äand with the just, livable clean energy future we're fighting for.
David	Bryan	comment: The Willow project will lock us in to 30 years of destructive oil drilling. Willow is deeply incompatible with the clean energy future we're fighting for.
Gary	Albright	comment: The world does not need Arctic oil.
Linda	Dezotelle	comment: There are no words.
David	Neuendorff	comment: There are some places in the world that should be left untouched by human resource extraction. The Arctic is such a place.
Greg	Willett	comment: There is more important priorities than making money from raping the land. Time to improve our approach to energy.
Jenny	Churchill	comment: There is not more time for Business As Usual. It is your dire responsibility to humanity and all life on this planet to change course with every decision you make.
Nikki	Nafziger	comment: There is NO viable reason to allow this. You must do your job, which is to say NO to this environmentally destructive project.
Michelle	Fairow	comment: There is not one instance of any oil company showing an ability to self regulate nor a government with the resources to properly regulate oil companies. It only makes sense to diversify our investments in energy to seek improved business competition and practices. Come on folks CYA!
Kay	Glinsman	comment: There,Äs only one earth once you have destroyed it there will be no life
Nancy	Brothers	comment: Thirty-plus years of fossil fuel extraction? in the same time frame we're aiming to achieve net-zero emissions? How is this rational? >NO< TO THE WILLOW PLAN! Sincerely,
Laurel	Fee	comment: This CANNOT BE ALLOWED TO HAPPEN! Don't you want your children/grandchildren to be able to go outside and breathe clean air?
Randall	Foreman	comment: This drilling plan does not have the support of the American people, the aquatic inhabitants of Alaska's waters or the people of this planet.
Donna	Durfee	comment: This is crazy- we need to move to renewables such as solar and wind, not this crazy idea.,
Richard	Paugh	comment: This is delicate and sacred land. It MUST be protected and we don't need further assaults on our environment!
Flo	Fender	comment: THIS IS DISGUSTING!!! KEEP THEM OUT!!!!
Dan		comment: this is not just a moral imperative but a survival imperative!
Ann	R	comment: This is not needed or necessary. It is your duty to preserve this planet for the future and to protect it from those who abuse and destroy it for fun and profit.
Kim	Hart	comment: This is not the way energy development is going. It's time to place our energy decisions on a forward-thinking manner to support our environment and our future generations.
Kathryn	Burns	comment: This is one bad idea. Please don't do it.
Marc	LeMaire	comment: This is the last, actually shouldn't even exist, option that could even be proposed and must immediately be thrown into the trash. It is a lose-lose for all, except maybe for the investors, who profit richly off the backs of the rest of us.,
Nancy	Burger	comment: This madness has to stop!!! We have to protect our planet now!!!
Kristin	Grosskopf	comment: This must stop already; please put the survival of us all over the status quo of profit generation.,
		comment: This project is not forward thinking for the climate, for sensitive ecosystems, or out of respect for the sacred ground of indigenous people. The administration that made this decision did so in haste before it's term was up, and personally I believe out of spite, with no regard for long term consequences. This is an opportunity to put an end to this misguided project. Thank you, Theresa Ingram
Theresa	Ingram	
Marion	Shepherd	comment: This project must be stopped, if only to save the world from more pollution!
		comment: This project would be an environmental disaster. It is time to stop the evil of fossil fuels, destroyers of all life on this planet. This would be a particularly destructive project, with its chillers to harden ground already sliding away due to global climate collapse. Stop this nonsense!
Charles	Elliott	
Anthony	Brackett	comment: This project would definitely take us in the wrong direction, bringing us further away from saving our Planet.
Dawn	Hooper	comment: This protection is of worldwide importance. Please restore full protection and masks it irrevocable.

		comment: This Trumpian "Willow" Project is a horrendous, destructive, and will do irreparable damage to both the Native peoples and to the land and animals that make up this vulnerable environment. Furthermore, the toxic industry which would invade this still-pristine area is on the decline (thank God and the Democrats), and thus there is absolutely no justifiable argument to support drilling and all the ruination that comes with it.
Judith	Mitchell	
Sharon	Olson	comment: This will have a disastrous effect on a unique environment and wildlife reserve
Nancy-Bets	Hay	comment: To pursue this project is unconscionable, knowing what everybody knows about the climate crisis threatening our planet, our societies, our species!

Bureau of Land Management (BLM)
& The Department of Interior (DOI)

RE: Willow Master Development Supplemental Environmental Impact Statement (SEIS)

Dear BLM & DOI,

The Fairbanks Building and Construction Trades (FBCT) Council has reviewed the Conoco Phillips Alaska Willow Master Development Plan and the Council fully supports the project. The FBCT Council is a coalition of AFL-CIO affiliated Unions that represent over 3,000 union members, north of the 63rd parallel in Alaska, many of which work on oil and gas projects on the North Slope or maintain the Trans Alaska Pipeline System. As stakeholders in the project, our members and our signatory contractors are ready and willing to go to work as soon as the project receives final approval.

With global instability and record oil and gas prices it's more important than ever to finish the SEIS by focusing on the issues identified by the Alaska District Court (the climate change analysis - foreign emissions, range of alternatives analysis, and aspects of US Fish and Wildlife Service biological opinion). We urge the Federal Government to give the Willow project top priority and to expedite the process to allow construction to resume for the 2022-2023 winter season. This project has been studied to death and any further delays in completing the SEIS and the record of decision will continue to harm the interested parties, including our Union Journeyman and Apprentice that rely on oil and gas work in the winter to pay their bills.

The workers we represent have a proven track record of doing projects safely, on time, on budget, and environmentally sound which is why the Building and Construction Trades motto is "value on display, every day." High inflation numbers, the US dependence on foreign oil, unstable global oil markets can only lead to one logical conclusion. Coupling this with the financial benefits to workers, and Federal, State and Local Governments means moving this project forward, as soon as possible, is a "no brainer". Thank you for your time and consideration.

Sincerely,

Lake Williams
District 7 Representative, IUOE Local 302

Re: Support for Willow Project and Request for Timely Review & Approval

Dear Ms. Rice,

As President and CEO of the Fairbanks Economic Development Corporation (FEDC), and on behalf of the FEDC Board of Directors, I write to express FEDC's support for the Willow Master Development Plan submitted by ConocoPhillips to the Bureau of Land Management (BLM). In ConocoPhillips et al's over half century of operations in Alaska, it has shown itself to be a good corporate citizen, strong state and community partner and, central to any considerations relative to National Environmental Policy Act analyses, an operator adhering to and evidencing the highest standards of safety and environmental stewardship.

These being the case, and with recent events throwing into stark relief the critical importance of domestic energy production to not only our Nation but to our geo-strategic Allies & Partners, timely performance and completion of narrowly focused analyses to Supplement the already lengthy and thoroughly-performed primary Environmental Impact Statement process will ensure the Willow Project can advance to production with the least delay – to the economic & security benefit of our Community, Region, State, Nation and Global Partners.

Thank you for your consideration and the BLM's prompt actions toward, as near as possible, immediate federal Willow Project sanctioning.

Respectfully,

Jomo Stewart
President & CEO
Fairbanks Economic Development Corporation

March 8, 2022

Willow Supplemental EIS
Bureau of Land Management
222 W. 7th Ave, Stop #13
Anchorage, AK 99513

RE: Support for Willow Development

I am writing to strongly support the development of the Willow project. Willow has previously been through a multi-year, extensive public analysis through numerous interested agencies, including a broad public comment period. It is time to progress the Willow project and avoid further delay.

The Willow project would provide much needed financial investment and economic development for Alaska with both the private and the public sector benefitting. Willow has the potential to produce upwards of 160,000 barrels per day. This multi-billion dollar project is a beacon of hope for Alaska during these uncertain and trying times. Alaskans need jobs and the subsequent prosperity a project of this magnitude would bring. Additionally, all levels of government would collect on their share of taxes and royalties, including the Federal Government, State Government, as well as local communities, and the North Slope Borough.

ConocoPhillips has been a trustworthy steward of the Alaskan environment for decades. Their long history of responsible resource development proves they will continue operating in a safe and environmentally friendly manner at the highest standard.

As stated, our company fully supports the Willow Project. The positive impacts are far reaching to all communities and constituencies in the State. Our Alaskan owned business has been successfully operating in the interior since 1982, providing value added products and services to our clients on the North Slope, proudly using local Union labor.

Sincerely,

A handwritten signature in blue ink that reads "Genevieve Bell".

Genevieve Bell
Flowline Alaska, Inc.

Willow MDP DEIS Comments
Bureau of Land Management
Stephanie Rice
222 West 7th Avenue, #13
Anchorage, AK 99513

RE: BLM's SEIS for Willow Master Development Plan

Dear Ms. Rice:

The firm I represent is a family-owned business located in Fairbanks, Alaska. Our firm provides value added products and services which are shipped to the oil industry on Alaska's North Slope.

I can say with definite certainty, from first-hand experience, with similar development projects (such as Alpine and associated drill sites):

- ConocoPhillips has a long history of responsible development on the North Slope. They have worked through issues raised by regulatory agencies, local communities, and other stakeholder to assess and mitigate potential impacts related to air emissions, subsistence, surface disturbance, water use and people. We have seen many different measures and technological changes implemented which has allowed for smaller footprints and less environmental impacts as newer developments have been built.
- The economic impact on the lives of families and residents in the Fairbanks community and Alaskan economy would be huge. Many of the construction jobs on similar projects pull from local labor unions based in Fairbanks. The sustained operations of the Willow development will supply an additional boost to long term local and statewide employment. At this time of declining private sector job opportunities in the state, this will be a definite boost to the statewide economy.

The Willow Development Project has already gone through multiyear environmental analysis and review. The SEIS should focus on addressing the issues identified by the Alaska District Court within the following topics:

- Climate Change Analysis – Foreign Emissions
- Range of Alternative analysis
- Aspects of US Fish & Wildlife Biological opinion

The other aspects of BLM's prior Willow Master Development Plans EIS were upheld by the court and don't require further analysis in the 2022 EIS.

The additional domestic energy production provided by this project is currently needed and furthermore, with declining oil production in Alaska creating issues for TAPS, this additional oil will assist in extending the life of the TAPS system.

Flowline Alaska, Inc. fully supports the Willow Project Development, we would request a prompt regulatory review and record of decision for this project in time to allow construction in the 2022-2023 construction season.

Regards,

A handwritten signature in blue ink, appearing to read "Richard Schok", is written over the "Regards," text.

March 8, 2022

Stephanie Rice
BLM Project Manager
222 West 7th Avenue,
Stop #13,
Anchorage, Alaska 99513

Greetings Ms. Rice:

I am writing on behalf of General Steamship Agencies, Inc. regarding the forthcoming Supplemental Environmental Impact Survey (SEIS) for ConocoPhillips Willow Project. General Steamship Agencies, Inc. is a locally operated maritime services company that derives a significant portion of her business from the shipping associated with the oil and gas sector Alaska. We attend vessels transporting Alaska North Slope Crude (ANS) for foreign and domestic consumption, as well as vessels carrying products refined from ANS in Alaska. Additionally, we work with inbound vessels delivering the materials needed to develop new sites including exploratory vehicles, oil field service equipment, and drill pipe.

Projects like Willow are at the heart of the Alaskan drive for economic self-determination, and are critical to generating tax revenue, and supporting local small businesses such as General Steamship Agencies, Inc.. As Alaskans, we ask that the Willow Project SEIS proceed under the following constraints:

- Focus exclusively on the issues specifically identified in the District Court review as needing further analysis (Climate change analysis - Foreign Emissions, Range of Alternatives analysis and Aspects of US Fish & Wildlife Service (USFWS) Biological opinion). The remainder of the document need not be re-addressed, nor should previously non-existent elements be included for consideration.
- That the voice of local Alaskan Stakeholders, Residents, Tribes, and Subject Matter Experts be prioritized in considering the additional measures being required of the Project.
- That the review and approval of the SEIS be sufficiently expedited so that that installation of project materials can commence during the 2022-2023 winter construction season.

ConocoPhillips has been an invaluable partner to General Steamship Agencies, Inc. and to the State of Alaska since they commenced operation here in 1952. They have a proven safety record, and are a leader in regional economic development, stakeholder engagement, and the quality stewardship of Alaska's energy resources.

Ms. Stephanie Rice
March 8, 2022
Page 2

After due examination, General Steamship Agencies, Inc. looks forward to the completion of the SEIS, and the final approval of Willow Project. We feel it is the step in the right direction for Alaska's economy, US energy independence, and maintaining a robust petroleum inventory. This is especially important now, as sources of foreign energy may soon be restricted, and rising fuel prices are affecting all Americans.

ConocoPhillips has consistently demonstrated their capacity for resource development with a minimal impact to the environment. We are confident that they will continue to maintain these high standards for the Willow Project.

Sincerely,

Scott M. Jones

Submitted Electronically

Subject: Support for Willow Master Development Plan

Dear Ms. Rice,

The Greater Fairbanks Chamber of Commerce supports the Willow Master Development Plan submitted to the Bureau of Land Management (BLM) by Conoco Phillips. Domestic energy production strengthens communities and the economy. The Willow project has the potential to create Alaskan jobs and contribute substantial revenue to state and local entities. Specifically, as identified by BLM this project would bring \$2.1 billion in State of Alaska revenue from production, property, and income taxes and \$1.2 billion North Slope Borough (NSB) revenue from property taxes. The Fairbanks Chamber supports the development of high-paying jobs for Alaskans in the construction, production, and operations industries.

We appreciate the effort BLM has put forward to ensure public involvement: more than 140 days of public comment, a public scoping period, and 13 in-person public meetings in Anchorage, Fairbanks, Nuiqsut, Utqiagvik, Atqasuk, and Anaktuvuk Pass since the EIS process commenced in 2018. We encourage BLM to continue to listen to – and involve – Alaska and North Slope stakeholders in the decision-making process, while also completing an SEIS and Record of Decision in time to allow construction in the 2022-2023 winter season. Timely project approval will avoid any further delay in public benefits and reduce risk and uncertainty for the Alaska economy and North Slope stakeholders.

The Oil & Gas industry has demonstrated responsible design, engineering, and development of their projects in a way that minimizes impacts on the environment, wildlife and subsistence activities, and maintains high standards for safety and emergency response activities. ConocoPhillips specifically has an excellent track record and a long history of operating responsibility and working with stakeholders on the North Slope and in the Arctic after 40 years in Alaska service. They are constantly gathering impact data and incorporating improvements into new development plans like Willow.

This \$5 billion dollar project would create more than 2,000 construction jobs and 300 permanent jobs supporting our natural resource development professionals in the Interior and across the state of Alaska. Fairbanks-based organizations are poised to manufacture critical supplies, transport equipment, provide skilled workers, and support this new development. Our region stands ready to work on a project like Willow, which will translate into significant economic opportunities.

The Greater Fairbanks Chamber of Commerce represents over 650 business members throughout Interior Alaska. We work to advocate for the best business environment, promote economic strength and growth for interior Alaska, and to develop the resources and networks enterprising people utilize to share knowledge.

Willow Master Development Plan Supplemental Environmental Impact Statement
Scoping Comments

Submitted to ePlanning

From: Human Rights Action Movement, Kailas Thaware

Dear All

My appeal to the users of resources is that any such natural resources development plan that destructs the environment and biodiversity has been harmful to humankind. The massive destruction of earth resources and such economic activities for profit-making purposes is always killing us every day throughout the world in various ways like extreme hot temperature causes heat waves deaths, melting glaciers, drought, etc. We are living every day with fear and pain that inflicts deep wounds in our hearts. We are blessed with nature and let it be as it is to make the whole world happy. Material luxury never increases peaceful life but it brings agony that is very painful when we suffer from serious diseases. Are we going to kill ourselves by such destruction? Please look at our agony and Save Earth and Save Humankind...!

With regards

Dr. Kailas Thaware, Professor of Economics,

(Specialization: Environmental Economics)

PUNE, INDIA

Willow Master Development Plan Supplemental Environmental Impact Statement
Scoping Comments

Submitted to ePlanning

From: ICE Services, Inc., CEO Thomas J. Bourdon

Ms. Stephanie Rice,

I am writing as a 40-year Alaskan resident and North Slope business owner. It is vital for our industry and our State that the Willow Project be allowed to proceed. This project is of the utmost importance to our State, both in royalty and tax revenues that fund Alaska's government and the good-paying jobs that Willow will create. This development will bring significant benefit to Alaskan families and allow for a future of responsible development for the next generation.

Having worked on the North Slope for many decades, I can attest to the Alaskan oil industry's commitment to safe and responsible development. All companies, from the developers to the service contractors are committed to the highest environmental standards and we hold each other to the highest levels of excellence to ensure that development occurs at the lowest impact to the environment as possible.

Furthermore, this project was sanctioned after undergoing an intensive review process. A vocal few claiming to speak in the interest of stakeholders in the area have called into question the validity of this project. However, I am confident in the BLM's original judgement in approving Willow. As Alaskans, we are in favor of this project and are relying on it for our future. The analysis conducted by the BLM was done in coordination with many state, federal and local agencies over years to produce a thorough and accurate assessment.

As the events of the past few weeks have shown us, our energy independence is of the utmost importance to our country. This project will provide greater stability in our energy markets and lead us back towards energy independence. Time is of the essence. We need a completed SEIS and decision to allow for construction to commence at the 2022-2023 winter season in order to reduce risk and uncertainty for our community.

International Union of Operating Engineers

LOCAL 302 • Alaska • Washington • Idaho • AFL-CIO

March 9, 2022

To: The Department of Interior(DOI), Bureau of Land Management (BLM)

RE: Supplemental Environmental Impact Statement for the Willow Master Development Plan in Alaska.

The IUOE represents over 14,000 women and men in Alaska, Washington, and Idaho who stand ready to perform our critical work in the maintenance and operation of the critical infrastructure needs associated with this project. We truly appreciate the ability to provide input on this very important matter.

The efforts for getting this project off the ground have been exhaustive in ensuring that Alaska native stakeholders have been heard on any concerns that they have about moving forward with this project. The fact of the matter is that this project is responsive in its efforts to ensure environmental protections and provide substantive appropriate mitigations while producing a significant number of family wage jobs directly engaged with this environmentally positive green work.

This project is proposing to deliver on all of the required regulatory obligations in addition to working collaboratively with local residents as complete insurance that any adverse environmental impacts are fully mitigated and responded to appropriately. The economic upside of this project is mission critical in stabilizing the Alaska economy by providing an influx in economic stimulus via a significant workforce job creation opportunity. Alaskans are in desperate need for the jobs and economic stimulus that this project creates. Whether it is the direct benefit to our members working on this project or the downstream economic infusion to businesses that benefit from Alaskan citizens having jobs and spending money in the local economy this project is a true win-win for Alaska.

We'd like to offer a few critical points that are both supportive of the project and responsive to the opponents of this effort.

1. **Economic Benefits.** This project will ensure for millions of barrels of recoverable oil and at peak production equate to over 100,000 barrels of oil per day. All told there will be over \$12 billion in state revenue, federal royalties, and local revenue. Nine million man hours of jobs will be created equating to over 2,000 family-wage construction jobs for the next 5+ years.
2. **Local Benefits.** With the massive influx of local revenues, essential public services will be provided to all eight villages, including schools, emergency response, health clinics, drinking water improvements, and countless other critical infrastructure improvements.
3. **Environmental Protections.** These efforts are countless in that the project mitigation efforts have factored in every possible protection to the local communities and the environment. From strict

adherence to environmental standards to countless stakeholdering engagements, no necessary protection effort has gone without consideration. Currently, there are over 270 mitigation measures/best practices in place and additional efforts that will be deployed to ensure for extreme protections and that all of the studies and EIS standards have been achieved through the duration of the project. In addition, additional commitments to the U.S. Army Corps of Engineers 404 permit and wetlands compensatory mitigation plan will be addressed. These include restoring stream function, preservation of over 800 acres of wetlands, and various other environmental protections.

4. Wildlife and Ecosystem Protections. A multitude of other protections are also included in this plan for the health and welfare of Caribou, Polar Bears, and air quality throughout the affected region. Significant steps have been taken to ensure that habitats for the habitats for this wildlife is not adversely affected and that the air quality standards remain at or above existing levels.

Three thousand of our members live and work in Alaska and are stalwart stewards to the environment and protecting their home. This project will achieve these goals and it will also afford many of them the opportunity to work in the area with which they call home. This is a project that is without the environmental consequences that many of the opponents are suggesting, as ConocoPhillips has an excellent track record of environmental stewardship. Additionally, the Willow project will promote U.S. energy security and keep a piece of the U.S. infrastructure, the Trans-Alaska Pipeline System (TAPS), economically viable.

On behalf of the members of IUOE, Local 302 and their families, I urge you to take whatever actions that are necessary to complete an SEIS and Record of Decision in time to allow construction in the 2022-2023 winter season.

Vice President & District Representative

Willow Master Development Plan Supplemental Environmental Impact Statement
Scoping Comments

Submitted to ePlanning

From: The Juggernaut Project, Principal Josh Nelson

To Whom It May Concern,

We are writing in opposition to ConocoPhillips' proposed Willow Project. This project would devastate an already fragile ecosystem, harm local indigenous communities, and make it nearly impossible for the Biden Administration to meet its own goals to achieve zero net emissions by 2050.

In addition to this public comment, we respectfully submit a petition in opposition to the Willow Project signed by over 92,000 Americans. The petition was hosted by The Juggernaut Project and sponsored by the following grassroots organizations: Civic Shout, Endangered Species Coalition, Climate Hawks Vote, Progress America, LeftNet, Friends of the Earth Action, Progressive Reform Network, Daily Kos, California Environmental Voters, Climate Reality, Greenpeace, and Evergreen Action.

Please feel free to reach out with any questions.

Subject: Willow project & Timely Completion of 2022 Supplemental
Environmental Impact Statement (SEIS)

Dear Project Manager:

Laborers' Local 942 is made up of workers across the Interior and Southeast Alaska in the fields of construction, service contracts, public transit, tourism, and pipeline maintenance. It is critical that BLM promptly completes the 2022 SEIS, addressing the narrow issues cited by the Alaska District Court, to prevent further delays in achieving the many benefits of the Willow project for the North Slope and all of Alaska. The 2022 SEIS should focus on the required issues without further expanding the scope of the review since the Court affirmed other aspects of the EIS for the Willow Master Development Plan, and the multi-year review process already successfully incorporated extensive scientific analysis in addition to agency and public input.

The BLM's prior review process was comprehensive, and the 2022 SEIS should move forward as expeditiously as possible by addressing the discrete issues cited by the Court. The prior process took into consideration public input during a 140-day timeframe, a public scoping period, and 13 in-person meetings in Anchorage, Fairbanks, Nuiqsut, Utqiagvik, Atqasuk, and Anaktuvuk Pass since the EIS process began in 2018. There were extensive scientific baseline studies and collaboration with a variety of local, state, and federal agencies for several years. Willow also has broad support from numerous North Slope stakeholders thanks to both the collaboration on the mitigation of potential impacts as well as the major potential for economic growth with the project development.

Our union members have worked firsthand to ensure that the state-of-the-art mitigation measures are in place on the North Slope and on the Trans-Alaska Pipeline System. The

Willow project builds on the strong record of responsible exploration and development in Alaska. In addition to increasing job opportunities in Alaska, the oil production from the Willow project is expected to provide a significant increase to the TAPS throughput as well as a revenue source for multiple levels of government. By increasing production in Alaska, Willow will enhance our nation's energy security with a greater domestic energy supply.

Local 942 requests that the BLM finalizes the 2022 SEIS so that construction work can begin next winter. The Willow project will help jumpstart the economy with jobs, increased revenue sources, and greater energy security.

Best,

A handwritten signature in blue ink, appearing to read 'S. Eickholt', with a stylized flourish at the end.

RE: Comment Supporting Willow Project & Limited Scope for the 2022
Supplemental Environmental Impact Statement

Laborers' Local 341 supports moving ahead with the Willow project to enhance job opportunities in Alaska, economic growth, and a resilient domestic energy supply. Laborers' Local 341 members include Alaskans working across Southcentral Alaska in the construction, oil and gas, service, and healthcare sectors, and Local 341 urges the Bureau of Land Management to limit the scope of the 2022 SEIS to those topics cited by the Alaska District Court. By properly limiting the scope of the SEIS and relying on the thorough record of prior environmental review, the Willow project can move forward as promptly as possible.

The Willow project is an exceptional opportunity for jobs, for Alaska, and for our nation's energy supply at a time when it is especially important to invest in stable, domestic energy sources. Local 341 members maintain the Trans-Alaska Pipeline System and many work at the Valdez Marine Terminal. By investing in Willow and increased oil production, the long-term economic viability of TAPS will also be extended. Willow will generate major revenue for the North Slope Borough as well as the state, including an estimated \$1.2 billion for the Borough and \$2.1 billion for the state. These revenues would help fund public safety and other essential services. In addition to generating major revenues, both construction and operations would create significant job opportunities, providing a direct boost to the local economy.

Together, labor and employers on the North Slope and throughout the Trans-Alaska Pipeline System have an unbeatable record in terms of both safety and environmental stewardship, and Willow will be building upon this industry record of the best environmental standards. Given that the 2022 SEIS only needs to address limited issues, we ask that the SEIS and Record of Decision be completed in time for construction to take place next winter.

Thank you for BLM's work on an extensive review process, and Local 341 urges BLM to complete the 2022 SEIS on limited topics to avoid any additional delay.

OFFICE OF THE
EXECUTIVE SECRETARIAT

March 3, 2022

Dear Madam Secretary,

Thank you for the opportunity to provide input on the development of a Supplemental Environmental Impact Statement (EIS) on the Willow Master development Plan submitted by Conoco Phillips Alaska, Inc.

On behalf of Lynden Air Cargo, I wish to express my support for the Alaska Willow project in the National Petroleum Reserve Alaska (NPR-A) and to urge the BLM to complete the 2022 SEIS and Record of Decision in time to allow construction in the 2022-2023 winter season.

The Willow project is vitally important to the Alaska's future. Alaskans know that our economy, our communities, and our businesses depend on a healthy oil and gas industry. The Willow project has great potential to create the jobs and substantial revenue to state and local entities that we urgently need today, and to provide jobs and prosperity for all Alaskans for many years to come.

Given that the Willow project has undergone a rigorous, thorough multi-year scientific analysis and that there has been extensive public involvement, including more than 140 days of public comment, a public scoping period, and 13 in-person public meetings in Anchorage, Fairbanks, Nuiqsut, Utqiagvik, Atkasuk and Anaktuvuk Pass since the EIS process commenced in 2018, and that multiple other aspects of the BLM's prior Willow Master Development Plan EIS were upheld by the court and don't require further analysis in the 2022 SEIS, we contend that the 2022 SEIS should focus exclusively on the discrete issues identified by the Alaska District Court in 2021.

Once again, we appreciate the opportunity to provide input on this issue of critical importance to the future of Alaska. If you have any questions, please feel free to contact me at (907) 249-4100.

Sincerely,

Richard B. Zerke

Subject: Willow Master Development Plan Supplemental EIS – SUPPORT

Dear Ms. Rice and the Bureau of Land Management (BLM):

I'm writing on behalf of Michael Baker International in support of ConocoPhillips' Willow Master Development Plan Project and supplemental environmental impact study (EIS). This project is vital to the economic sustainability of Alaska. Our firm has 50 employees in Alaska and approximately half of our business comes directly from the oil and gas industry. Other parts of our business, while not directly for oil & gas, come from Alaska's support of a robust oil and gas industry. Every dollar spent and every job created by the oil and gas industry indirectly translates into many more dollars spent and more jobs sustained throughout the state. The Willow Project is the backbone of a resurgence of North Slope activity and essential to Alaska emerging from its economic slump.

We are engineers and scientists who work with ConocoPhillips helping to develop the Willow Project in the most environmentally sustainable way. We have boots on the ground on the North Slope and have witnessed the successful development of oil and gas resources to minimize environmental disturbance and maintain ecosystems and wildlife populations.

The Willow Project is a key element to increase United States energy independence, which is especially vital as our country continues to be dependent on foreign oil and its production interruptions that can disrupt global supply. The Willow Project is a development that will produce up to 160,000 barrels per day and is a significant contributor to our country's energy independence.

The ConocoPhillips Willow Project should be approved and constructed. The Willow Project has already undergone environmental review and analysis and builds on more than 50 years of responsible energy development. Alaska complies with more environmental scrutiny than almost any other region and our state knows how to conduct business with the environment in mind. We encourage the BLM to move forward with the supplemental EIS and to stay on schedule while adhering to the National Environmental Policy Act process.

Sincerely,

Jeffrey Baker, P.E.
Senior Vice President and Alaska Manager

Stop #13
Anchorage, Alaska 99513

Re: DOI-BLM-AK-0000-2018-0004-EIS

Dear Ms. Rice:

Please accept these scoping comments of the Natural Resources Defense Council (NRDC) on the proposed Supplemental Environmental Impact Statement (SEIS) for the above-mentioned project (Willow). NRDC supports and has joined in comments filed today on behalf of numerous non-governmental organizations and businesses, addressed to Secretary Haaland and calling on the Biden administration not to approve this potentially disastrous project. We write separately now to emphasize how incompatible Willow would be with our national interest and with urgently-needed leadership on climate change. We also request that if an SEIS is prepared, the Bureau of Land Management (BLM) work closely with local leaders and health authorities to include in it a long-overdue Health Impact Assessment of the potential damage from Willow and other ongoing and planned oil and gas development on the North Slope to the health of community residents and their traditional food supplies.

Most plainly, from the standpoint of responsible decision-making about the existential threat of climate change, there is no room for this project. The International Energy Agency (IEA) recently warned that “[b]eyond projects already committed as of 2021, there are no new oil and gas fields approved for development in our pathway” to net zero emissions by 2050 (widely regarded as a prerequisite to keeping average global temperature rise near 1.5 degrees centigrade).¹ Partly this is a function of the long lead times associated with developments like Willow, compared to the needed trajectory of demand for oil and gas. As the White House pointed out in 2016, when President Obama took the waters offshore Willow permanently out of America’s energy plans, “if lease sales were to occur and production take place, it would be at a time when the scientific realities of climate change

¹ International Energy Agency. 2021. Net Zero by 2050: A Roadmap for the Global Energy Sector. Page 21. Available online at https://iea.blob.core.windows.net/assets/deebef5d-0c34-4539-9d0c-10b13d840027/NetZeroby2050-ARoadmapfortheGlobalEnergySector_CORR.pdf.

dictate that the United States and the international community must be transitioning its energy systems away from fossil fuels.”² More than five years later, that time is at hand. Partly, too, it is the consequences of following a different pathway on oil supply. The world cannot achieve the gains it must on efficiency technologies and green fuels in order to blunt serious climate consequences, if oil producing nations continue to pursue market share by flooding commerce with dirty fuels that compete against and suppress voluntary adoption of clean alternatives. Nor is this discipline something we can rely on the market itself to produce. As the IEA points out, on the transition to clean energy, “[g]overnments are in the driving seat.”³ This is a responsibility—for action here and setting an example abroad—that our federal government cannot fob off on others.

Assuming BLM prepares an SEIS undertaking to correct its unsubstantiated and insupportable assumption that in foreign markets Willow’s production would wholly displace other fossil fuel supply, that analysis will underscore the folly of authorizing Willow. In a net zero emissions scenario where the world keeps close to the vital 1.5 °C average warming limit, “the fall in oil demand and prices does not justify investments in new fields after 2021.”⁴ Willow’s production in that case might result in only moderate net carbon emissions, because without Willow other producers would probably largely make up its forgone production.⁵ But there would also be no legitimate demand for its oil if it proceeds, nothing at all to justify the risks, costs, damage, and investments, as well as whatever incremental increase in radiative forcing would result. Conversely, global failure to adopt clean alternatives would leave demand for oil in place, but the climate consequences of Willow would be all that much more dire. When demand is high, the elasticity of oil supply is correspondingly lower, and other oil sources substitute much less for forgone production. As result, much more of Willow’s oil would generate additive consumption and the associated emissions, substantially worsening an unfolding disaster. In short, either Willow’s production will be pointless or it will be particularly harmful.

Should BLM proceed with an SEIS, it should not limit the scope to those errors identified by the District Court. Some time ago, BLM worked closely with North Slope community leaders to produce a Health Impact Assessment (HIA) of the cumulative impacts of regional oil and gas development on local residents, integrating it into National Environmental

Policy Act (NEPA) documentation for a development plan.⁶ Though BLM was not sued for omitting an HIA from the Willow NEPA process, its failure to include one was egregious. A great many advances have been made in the scientific study of such effects over the intervening years.⁷ Neither the agency, the affected public, nor policymakers can properly evaluate the Willow proposal without bringing that research to bear on its impacts analysis, together with up-to-date information from residents of the region.

Thank you very much for the opportunity to comment on this proposal.

Sincerely,

Nathaniel Lawrence

Stephanie Rice
BLM Project Manager
222 W. 7th Avenue,
Stop #13,
Anchorage, Alaska 99513

Dear Ms. Rice:

I am writing regarding the Willow Project Supplemental EIS, on behalf of North Star Terminal & Stevedore/North Star Equipment Services.

I am a lifelong Alaskan. My grandkids are the 4th generation of my family here in Alaska. I have spent my entire career in the heavy equipment, power generation and other service-oriented businesses. In each-and-every position I have held I have worked with, and for ConocoPhillips Alaska. I have had extensive experience in dealing with ConocoPhillips from a vendor's perspective. ConocoPhillips is a very loyal, Buy Alaska, customer.

North Star Terminal & Stevedore/North Star Equipment Services is an Alaskan company that has been doing business in this state for over 70 years. We have done a significant volume of business with ConocoPhillips and their predecessors at our marine terminal facilities and on their North Slope leases for decades and find them to be a responsible steward of the land in their development projects and field operations. The Willow project will have a huge impact on our business through material cargo handling and transportation activities, and in-field support of the project development itself.

As a company who provides support to Alaska's oil and gas industry, the success of the Willow project is critical to our future, and to the future of Alaska and Alaskan families.

We ask you to please consider the following recommendations:

- 1
- The Supplemental EIS should focus on addressing issues identified by the Alaska District Court specifically, Climate change analysis - Foreign Emissions, Range of Alternatives analysis and Aspects of US Fish & Wildlife Service (USFWS) Biological opinion.

- The aspects of the BLM’s prior Willow Master Development Plan EIS that were upheld by the court should not be included in the SEIS.
- We encourage the BLM to complete an SEIS and Record of Decision in time to allow construction in the 2022-2023 winter season. A timely approval will avoid further negative economic impact for the state of Alaska.
- BLM should continue to listen to Alaska and North Slope stakeholders in the decision-making process, in line with the Biden Administration’s environmental justice goals. Approving the Willow project aligns with the Administration’s stated principles of social equity, environmental justice, and responsible resource development.
- ConocoPhillips, and its predecessor companies have been safely operating on Alaska’s North Slope since 1952.
- ConocoPhillips has an extensive stakeholder relations program and has worked collaboratively with North Slope residents to address community concerns.
- Domestic energy production strengthens communities and the economy. In addition to stimulating economic growth, Willow will also promote U.S. energy security by increasing domestic oil supply.
- The Willow project has already undergone an extensive multi-year environmental analysis, including [3+] years of baseline scientific studies.

Thank you for your Consideration,

Ken Pugh

Re: Supplemental EIS for the Willow Master Development Plan

Ms. Rice,

I am writing in regard to the Supplemental EIS for the Willow Development Plan as an Alaska resident and on behalf of Northern Energy Services, LLC (NES). NES provides support to producers and explorers on Alaska's North Slope and we are intimately familiar with the environmental stewardship of ConocoPhillips Alaska (COPA). As a COPA contractor we firmly believe that the work being performed is never so urgent that it can't be completed in a safe and environmentally prudent manner. We understand that taking care of the environment is COPA's license to operate on the North Slope and know they execute work on the North Slope with the utmost care for the environment.

As an Alaska company we know the Willow Project is critical to the State of Alaska, Alaskan residents and to our energy independence. Continued development of leases where oil finds have been made is critical to adding oil to the Trans Alaska Pipeline (TAPS) and the long-term fiscal stability of Alaska.

Scoping for the Supplemental EIS should focus specifically on addressing issues identified by the Alaska District Court. These include Climate Change analysis - Foreign Emissions, Range of Alternatives analysis and aspects of US Fish & Wildlife Service (USFWS) Biological opinion. The scope of the SEIS should not be increased beyond these specific items because the prior EIS for the Willow Master Development Plan were already upheld by the court.

It is critical to Alaskan companies that the BLM completes the SEIS and Record of Decision in a timely manner allowing construction to start during the 2022-2023 winter season. This will avoid further negative impacts to the State of Alaska, Alaska residents and Alaska contractors.

As the BLM is aware, ConocoPhillips and its predecessor companies have been operating on Alaska's North Slope since 1952. Through years of working with stakeholders and North Slope residents, COPA has developed an extensive stakeholder relations program and has worked collaboratively with North Slope residents to address community concerns for this project.

Producers in Alaska are held to the highest standards in the world and oil production should be encouraged in Alaska rather than in other areas with less strict environmental standards. Approving

this project is in alignment with the Biden Administrations stated principals of social equity, environmental justice and responsible resource development.

Thank you for your consideration.

Sincerely,
Northern Energy Services, LLC

Re: Notice of Preparation of a Supplemental Environmental Impact Statement for the Willow Master Development Plan

Acting BLM Alaska State Director Thomas A. Heinlein,

On behalf of America’s youth, Our Children’s Trust respectfully provides these comments on Bureau of Land Management’s (“BLM”) preparation of a Supplemental Environmental Impact Statement (“SEIS”) for the Willow Master Development Plan. As the Nation’s only law firm dedicated to representing youth whose constitutional rights are being infringed by their government’s conduct that causes climate change, we write to advise BLM to align its actions and decisions with the best available science to achieve the emission reductions needed to correct Earth’s energy imbalance and stabilize the climate system, and to abide by the constitutional, public trust, and legal obligations that constrain BLM’s actions. The science is clear—every ton of emissions matters and causes more danger and more temperature rise.¹

1. As stated in the EIS, “[p]roject GHG emissions and their contribution to cumulative GHG levels and climate change are unavoidable and irretrievable throughout the life of the Project.” (EIS Vol. 1, at 40) “Impacts related to a warming climate that are observed globally and nationally are amplified in the Arctic.” (EIS Vol. 1, at 31) “Temperatures on the North Slope would be expected to increase by 10 degrees F to 12 degrees F by the end of the century if global emissions continue to increase.” (EIS Vol. 1, at 31)
2. The best available science informs that Earth’s energy balance can only be restored by returning the atmospheric CO₂ concentration to below 350 ppm by 2100.² Experts have opined that it is economically and technically feasible to achieve the science-based greenhouse gases (“GHG”) emission reduction target of close to 100% by 2050, while simultaneously enhancing sequestration capacity of sinks to drawdown historical cumulative CO₂ emissions, placing the

¹ IPCC, *Summary for Policymakers*, in *Climate Change 2021: The Physical Science Basis*, 28 (2021) (“Every tonne of CO₂ emissions adds to global warming.”).

² James Hansen et al., *Assessing “Dangerous Climate Change”: Required Reduction of Carbon Emissions to Protect Young People, Future Generations and Nature*, 8 PLOS ONE e81648 (2013), <https://doi.org/10.1371/journal.pone.0081648>; Karina von Schuckmann et al., *Heat Stored in the Earth System: Where Does the Energy Go?*, 12 *Earth Syst. Sci. Data* 2013, 2014–15 (2020), <https://doi.org/10.5194/essd-12-2013-2020>.

U.S. on an emissions trajectory consistent with returning atmospheric CO₂ to below 350 ppm by 2100.³

3. Despite the climate crisis Executive Orders of President Biden, U.S. GHG emissions and fossil fuel production are moving in the wrong direction. U.S. economy-wide GHG emissions increased an estimated 6.2% in 2021,⁴ while U.S. fossil fuel production is expected to reach a new record high in 2023.⁵ How can the federal government or BLM make any claim that they are addressing the climate crisis when there is unabated production of fossil fuels and GHG emissions?
4. Oil and gas are a finite resource whose benefit is invaluable when stored in the ground as a carbon sink (their GHGs not released into the atmosphere), thus preventing further destabilization of the climate system. Future generations, who are also the beneficiaries of these resources held in trust derive significant value from keeping those resources unexploited by the present generation. As one example, a University of Alaska Anchorage study found that “U.S. households receive up to \$30 billion worth of economic value per year from the continued preservation of Alaska’s federal conservation units in their undeveloped state.”⁶
5. Climate change is *already* adversely impacting the physical and mental health of American children through, among other impacts, extreme weather events, rising temperatures and increased heat exposure, decreased air quality, altered infectious disease patterns, and food and water insecurity. Children are uniquely vulnerable to climate change impacts because of their developing bodies, higher exposure to air, food, and water per unit body weight, unique behavior patterns, dependence on caregivers, political powerlessness, and longevity on the

planet.⁷ In 2021, the U.S. experienced 20 separate billion-dollar weather and climate disasters, which caused at least 688 direct or indirect fatalities and totaled approximately \$145 billion.⁸

BLM Must Cease Infringing the Constitutional Rights of Youth

6. Our Children’s Trust represents twenty-one youth plaintiffs, including eleven Black, Brown, and Indigenous youth, in the constitutional climate lawsuit, *Juliana v. United States*, in which the Secretary, in her official capacity, and BLM are defendants. This case asserts that, through the government’s past and ongoing affirmative actions that cause climate change, it has violated the youngest generation’s constitutional rights to life, liberty, property, and equal protection of the law, as well as failed to protect essential public trust resources. In this litigation, federal courts have affirmed “that the federal government has long promoted fossil fuel use despite knowing that it can cause catastrophic climate change”⁹ and “has long understood the risks of fossil fuel use and increasing carbon dioxide emissions. As early as 1965, the Johnson Administration cautioned that fossil fuel emissions threatened significant changes to climate, global temperatures, sea levels, and other stratospheric properties.”¹⁰ The Ninth Circuit Court of Appeals found that there was evidence showing that the federal government was a substantial factor in causing the youth’s constitutional injuries because “[a] significant portion of [GHG] emissions occur in this country; the United States accounted for over 25% of worldwide emissions from 1850 to 2012, and currently accounts for about 15%.”¹¹
7. Under the 5th Amendment to the U.S. Constitution, the government is restrained from engaging in conduct that infringes upon fundamental rights to life, liberty, and property, and equal protection of the law, all of which includes a climate system that sustains human life and liberty. Under the Public Trust Doctrine, embedded in our Constitution and other founding documents, and in the very sovereignty of our Nation, U.S. residents (both present and future, i.e., Posterity) have a right to access and use crucial natural resources, like air and water. The U.S. government, and its executive agencies, have fiduciary duties as trustees to manage, protect, and prevent substantial impairment to our country’s vital natural resources which the government holds in trust for present and future generations.¹²
8. Our children and future generations are suffering injuries with long-lasting and potentially irreversible consequences at present levels of heating and thus BLM must do everything in its power to cease approving fossil fuel projects and facilitate GHG emissions reductions in line

Stop #13,
Anchorage, Alaska 99513

Dear Ms. Rice:

Thank you for the opportunity to comment on the Willow Project Supplemental EIS.

Petrotechnical Resources of Alaska is an integrated oil and gas consulting company, providing a broad range of consulting services to clients in the Alaska energy sector. We have been in business for 25 years, and are Alaskan owned and managed. We have a diverse client base, including major oil and gas companies; independent E&P companies; Alaska native corporations; utility companies; and federal, state and local government agencies.

I am writing today to express my support for the Willow project and it's operator, ConocoPhillips Alaska, Inc. This project is critical to Alaska, and supportive of energy independence for the United States. ConocoPhillips and predecessor companies Phillips and ARCO have been tremendous partners with the State of Alaska, and with the Alaska native corporations on whose land they have explored for and developed oil and gas. Their record of reducing impacts on the environment by reducing surface footprint has been world-class.

I hope you will consider the following recommendations in completing the Supplemental EIS:

- The SEIS should focus on addressing issues identified by the Alaska District Court specifically, Climate change analysis - Foreign Emissions, Range of Alternatives analysis and Aspects of US Fish & Wildlife Service (USFWS) Biological opinion.
- Aspects of the BLM's prior Willow Master Development Plan EIS that have been upheld by the court should not be included in the SEIS.

- I encourage the BLM to complete an SEIS and Record of Decision in time to allow construction in the 2022-2023 winter season. A timely approval will avoid further negative economic impact for the state of Alaska.
- Approving the Willow project aligns with the Administration's stated principles of social equity, environmental justice, and responsible resource development.
- BLM should continue to listen to Alaska and North Slope stakeholders in the decision-making process, in line with the Biden Administration's environmental justice goals.
- ConocoPhillips, and its predecessor companies have been safely operating on Alaska's North Slope since 1952.
- ConocoPhillips has a long history of being great partners, and has a an extensive stakeholder relations program. CPAI has worked collaboratively with North Slope residents to address community concerns in a very sound and productive manner.
- Alaskan oil production is less impacting on and cleaner than most other provinces in the world. In addition to stimulating economic growth, Willow will also promote U.S. energy security by increasing domestic oil supply.
- The Willow project has already undergone an extensive multi-year environmental analysis, including [3+] years of baseline scientific studies, and further delay is not justified.

Thank you for your Consideration,

Sincerely,

Tom Walsh

Willow Master Development Plan Supplemental Environmental Impact Statement
Scoping Comments

Submitted to ePlanning

From: Plumbers & Steamfitters Local 375, Clayton Bessette

To whom this may concern,

My name is Clayton Bessette and I support the Construction of the Willow Project. In Alaska, the oil and gas industry has the most stringent environment laws and regulations in the world, but Alaska is constantly under attack. Oil companies that refine Alaskan oil (light sweet clean crude) will release far less emissions than compared to the tar sands in Canada and the heavy oil's in the US Strategic Petroleum Reserves. Makes no sense economically or environmentally to import oil and gas when we can do it cleaner and cheaper in America. The Willow project would also provide many high paying jobs that are required in-order to pay for the high cost of living in Alaska. Lets get Alaskans back to work!!

Sincerely,

Clayton Bessette

Jean	Naples	Suffern	NY	10901	Reject the Willow Master Development Plan	<p>I am writing as a physician and public health advocate who strongly supports full protection from any invasive and destructive industrial exploration or drilling for gas and oil in the Western Arctic National Petroleum Reserve, which includes the Willow project. At this time, I strongly urge you to please completely reject any approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. I support this action because as our country and the world are experiencing the worsening climate change disaster, it is imperative that your administration must end the pattern of approval for fossil fuel companies to drill in the Arctic without regard for the devastating harm this Willow Project will cause to the Arctic Indigenous people, the endangered Arctic wildlife and the ability for our planet to survive. It is crucial to remember that any approval or operation of the Willow Project will be counter to and break President Biden's promise to end new drilling on federal lands. Please remember that any approval for or operation of the Willow Project represents an utter failure on the ability for our country to combat and reverse the worsening climate change disaster through climate leadership. Please do not forget that the 23-million-acre Reserve is the largest undeveloped place in the United States, is the only home to polar bears, caribou and millions of migratory birds and the Indigenous communities that have relied on sustenance from this Arctic land for millennia. I am plainly reminding you that any approval for any oil and gas drilling in the Western Arctic Reserve will result in the creation of an irrevocably scar on this fragile ecosystem and will only exacerbate the climate change disaster crisis. It is crucial to understand that any approval or allowance for the environmentally destructive Willow project, which is the ConocoPhillips operation will result in the annual creation and release of fossil fuel climate destructive emissions that will be equal to the environmental pollution exhaust from 1.5 million cars. It is also very important to remember that all emissions from this environmentally destructive fossil fuel project will also have devastating and destructive consequences for Western Arctic wildlife, Arctic water resources and subsistence hunting by Western Arctic Indigenous community members. At this time, I thank you for your consideration of my letter and request. I am alerting the BLM that it also has an obligation to thoroughly and accurately analyze the devastating climate effects and pollution that will be observed from approval for the Western Arctic Willow Project and not to ignore the Willow's climate impacts by ignoring the evaluation of climate science. To ensure the full protection of Indigenous Western Arctic community members, the Arctic wildlife and their habitat and the required environment to survive, I strongly urge you to please recognize the devastating effects of this project and take swift action to completely shut down any approval for or operation of the Willow project. As we are all aware, this decision to cancel this project is the environmentally protection responsible decision to decide and implement now. Sincerely, Jean Marie Naples, MD-Ph.D.</p>	2/26/2022
Gail	Bell	Denver	CO	80249	Reject the Willow Master Development Plan	<p>How could you possibly even consider allowing this??? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Patricia	Kerstner	Phoenix	AZ	85048	Reject the Willow Master Development Plan	<p>No more destruction of our wild lands! Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Alexa	Ross	Nelsonville	OH	45764	Reject Willow Master Development Plan	I thought we established that fossil fuel combustion is the biggest driver of climate chaos and we have resolved to end it as soon as possible. Approving ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska is exactly the wrong thing to do! The Arctic is the last place a sane person would drill for oil, considering the accelerated warming through soot's absorption of sunlight. Melting ice means future drought. What became of President Biden's promise to end new drilling on federal lands? End all drilling! I hope you like me enjoy guilt-free travel in an electric car! Our 23-million-acre Reserve is huge, and home to polar bears, caribou and millions of migratory birds and indigenous communities. We have no right to destroy an ecosystem developed over millennia. According to the Bureau of Land Management, the Willow project would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to consider emissions, impacts on polar bears from increased noise pollution and project-related vehicles crushing bear mothers and cubs in their dens. Do the consequences of global heating get any analysis? Any comprehensive, science-driven analysis will show the risk. I beg you to use your legal authority to adopt the no-action alternative and reject this for the climate, wildlife and people you serve.	2/25/2022
Marilyn	Britton	Peterborough	NH	3458	P L E A S E: Reject the Willow Master Development Plan	For a thousand and one reasons, not the least of which is keeping oil in the ground, I respectfully demand that you reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. This fight has been going on for years now and it's about time that a permanent NO is given for any drilling in Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. I feel for the majestic polar bears and their young, vital members of this ecosystem. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the RISKS ARE FAR TOO GREAT. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Lorna	Paisley	Van Nuys	CA	91406	Reject the Willow Master Development Plan	<p>We may have reached the point of no return and you don't need to rush the destruction of the earth. At least slow it down I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Theresa B	Neill	Marietta	GA	30008	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. This is so wrong! Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Nearly 50 years ago my husband and I began using very simple technology to modify our homes and make them much more energy efficient. For example we designed and built a new house in rural Minnesota. On a 20 degrees below zero day I could very comfortably run around the house in shorts and barefoot. In the last 30 years living here in southeast Arizona we have never used air conditioning! Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. As a person of faith, I am mandated to protect Creation. Have no doubt - if this project goes through, it will be another 'nail in the coffin' of a warming world with severe consequences. Don't let this go through.</p>	2/25/2022
Francois	De La Giroday	Sandy	UT	84093	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Allison	Love	Stanardsville	VA	22973	Willow Master Development Plan MUST BE ABANDONED	We are in the midst of a rapidly advancing planetary emergency with climate change. Climate change that we know has largely been driven and accelerated by the use and burning of fossil fuels. It is insane to keep drilling...anywhere on this planet. I am incensed by this proposal! Therefore, I urge you to please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. The oil must remain in the ground. To do otherwise is sheer folly. The responsibility falls on your administration to END the never-ending pattern of allowing oil companies to drill in the Arctic, and anywhere actually, without regard for the harm it causes to people, wildlife and the planet! Approving Willow will break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as indigenous communities that have relied on the land for millennia! I was hopeful that you, as an indigenous person, would protect these fragile and critical lands from disastrous drilling. Oil and gas drilling here will IRREVOCABLY scar this fragile ecosystem and only exacerbate the climate crisis. This is crazy. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine! It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. If this is humanity's plan, we can kiss our planet goodbye - not just the Arctic. As you must know, Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface! But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. This makes No Sense! The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. PLEASE, PLEASE, PLEASE...use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/27/2022

Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Aimee	Williams	Albuquerque	NM	87105	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The climate, wildlife and frontline communities can't afford anything less. This climate disaster in the making is madness. Please stop this.	2/25/2022
John	MacDonald	Akron	OH	44313	Reject the Willow Master Development Plan	After two visits to both Alaska's interior and its coastal communities, I am convinced that the U. S. holds one of the most magnificent polar regions in the world. The oil industry has threatened over and over to damage this magnificent state with its drilling, particularly on the northern coastal regions. This must stop. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Lari	Evangelinos	Forbestown	CA	95941	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Instead of destroying the planet to extract the last drop of oil from the earth, why not invest in the future and instead of this misbegotten travesty of a proposal, spend the money instead on clean energy alternatives. I have seen plenty of prime time commercials greenwashing the intent and activities of oil companies; why not put that money to better use investing in energy solutions to insure we have a tomorrow for our children and their children. The short-sighted goal of trying to look good to Americans by temporarily lowering the price of gas at the pumps is ludicrous. Money will not buy clean air, clean water, or prevent the catastrophic loss of biodiversity, which, whether you realize it or not negatively effects us all. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Virginia	Metcalf	Gig Harbor	WA	98335	PLEASE Reject the Willow Master Development Plan	I know you want to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. The Biden administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. We must end new drilling on federal lands or else we jeopardize our position on climate leadership and the future health and ability of the Earth to self organize the climate and her natural rhythms. I understand it is difficult to stand up to the oil and gas companies but there are many Americans who care much more for Mother Earth than money and greed. As you know, the environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. No consideration was made of the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And no consideration of examining the purpose and rationale for the project in light of the urgent need to STOP approving new fossil fuel development and transition to clean, renewable energy was made. Science-driven facts show that the risks are far too great. I urge you to adopt the no-action alternative and reject this dangerous project. Our home, the planet Mother Earth, and all of her passengers must be protected from further destruction. We must find convert from drilling for oil and gas and research and utilize sustainable, non-destructive alternative energy sources. We can do this. Let us not devastate Mother Earth and all of our brothers and sisters by continuing to drill for oil and gas Thank you for your work to protect our home.	2/25/2022
Joan	Bell-Kaul	Madison	WI	53704	Reject the Willow Master Development Plan	IF YOU CARE about the preservation of Earth's Ecosystem, you MUST reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The prior environmental analyses for the project FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the RISKS to our Earth's Ecosystem are far too great. Thus, YOU must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Lori	Gudmundson	Bellingham	WA	98227	Reject the Willow Master Development Plan	Please reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Faith	Willcox	Bremen	ME	4551	REJECT the Willow Master Development Plan	In the strongest possible terms, I URGE YOU TO REJECT approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. YOUR ADMINISTRATION MUST END THE PATTERN OF LETTING OIL COMPANIES DRILL IN THE ARCTIC WITHOUT REGARD FOR THE HARM IT CAUSES to people, wildlife and the planet. Approving Willow would BREAK BIDEN'S PROMISE TO END NEW DRILLING ON FEDERAL LANDS and represent AN UTTER FAILURE ON CLIMATE LEADERSHIP. THE 23-MILLION ACRE RESERVE IS the largest undeveloped place in the United States, HOME TO POLAR BEARS, CARIBOU & MILLIONS OF MIGRATORY BIRDS — AS WELL AS INDIGENOUS COMMUNITIES that have relied on the land for millennia. Oil and gas drilling here will IRREVOCABLY SCAR THIS FRAGILE ECOSYSTEM and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil WOULD EMIT NEARLY 280 MILLION TONS OF GREENHOUSE GASSES. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape and permafrost thaw to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The PRIOR ENVIRONMENTAL ANALYSES FOR THE PROJECT FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for PROJECT-RELATED VEHICLES CRUSHING POLAR BEAR MOTHERS & CUBS IN THEIR DENS. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. YOU MUST USE YOUR LEGAL AUTHORITY TO ADOPT THE NO-ACTION ALTERNATIVE & REJECT THIS DANGEROUS PROJECT. ANYTHING LESS WOULD BE A BETRAYAL of the climate, wildlife and frontline communities.	2/26/2022
Cindy	Letchworth	Saint Louis	MO	63123	Reject the Willow Master Development Plan	Please do not approve the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Joanna	Vintilla	Seattle	WA	98133	Deny Willow Master Development Plan	Frankly I can't fathom why ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska is even being considered. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. This 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Allyson	Dallmann	Cambria	CA	93428	Reject the Willow Master Development Plan	<p>We are in the midst of severe drought, fires, floods and we all know that noxious waste and gases from the oil and gas industries are the primary causes. Many endangered species are going extinct because of habitat loss and this ConocoPhillips Willow Master Development Plan, would severely exacerbate the problems for all animals, including humans. Polar bears are suffering because the Arctic ice is melting rapidly, and they are starving. This project would be devastating to them, caribou, and migratory birds, just to name a few. An educated person would understand that destruction of habitat for any further fossil fuel projects would intensify climate change, species loss, toxic waste, and more costly weather patterns that demolish entire communities of all species. Alaska, along with most of the world, is in a fragile state; this region cannot tolerate more oil wells, hundreds of miles of roads or pipelines. We know that our planet cannot bear any more greenhouse gases and this project would emit greater than 280 million tons of it! I don't want to watch my Secretary of the Interior permit more destruction of OUR planet, especially knowing that fossil fuels are literally killing us and so many other animals. I do NOT want to tell my grandchildren that polar bears, wolves, and other endangered species can only be seen in pictures or zoos because politicians just didn't care. Please REJECT this horrible Destruction Plan. Sincerely, Dr. Allyson Dallmann I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Nancy	Stocker	Denver	CO	80210	Reject the Willow Master Development Plan	<p>With the situation developing in Ukraine and the related likely energy crisis in Europe, It would be easy to approve the ConocoPhillips Willow oil-drilling project in the National Petroleum Reserve in Alaska. I beg you not to! In the lower 48 states, oil and gas companies are failing to collect natural gas that's draining from many of their drill and production sites. Working on this potential source of energy and reducing our fossil fuel independence makes a great deal more sense than starting new sites in Alaska. These new sites likely would not produce results until too late for the current crisis anyway. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Thomas	Dukes	San Antonio	TX	78209	Reject the Willow Master Development Plan	<p>I urge you to reject ConocoPhillips' Willow oil-drilling project in Alaska's National Petroleum Reserve. All too often oil companies drill in the Arctic without regard to the harm it causes people, wildlife and the planet. Oil and gas drilling here will irrevocably scar this fragile ecosystem and further inflame the climate crisis. The National Petroleum Reserve is the largest undeveloped place in the United States. Polar bears, caribou, millions of migratory birds and traditional Indigenous communities depend on this land. The Bureau of Land Management says the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed twice as fast as the remainder of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the constantly frozen permafrost. We urgently need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks of drilling here are far too great. Please approve the no-action alternative and reject this dangerous project.</p>	2/26/2022

Wendy	Fast	Dansville	NY	14437	Reject the Willow Master Development Plan	A Reserve is a place of protection for all berths tat are there. Allowing already heavily subsidized corporations to drill there is to negate the designation of Reserve, and concurrently to vastly exacerbate the destruction of our already polluted environment, further endangering our survival. Therefore, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. This administration has a dismal record when it comes to oil and gas leases despite its claim to become greener. Do the right thing get rid of big oil on public lands.</p>	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Any more drilling anywhere is contributing to a serious climate crisis. Doing so in the Arctic would be the worst 'energy' choice that could be made.	2/25/2022
Bruce	Higgins	North Port	FL	34286	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving the Willow project would break President Biden's promise to end new drilling on federal lands and would represent an utter failure on his avowed climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States. It is home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling and other activities there would irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project did not accurately describe or evaluate the significance of the substantial greenhouse gas emissions it would cause. They also did not thoroughly consider the project's likely adverse impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And finally, they did not examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will undoubtedly show that the risks of the Willow project are far too great. Therefore, I recommend that you use your legal authority to adopt the No-action alternative and reject this dangerous project. The climate, wildlife, frontline communities, and the rest of humanity can't afford anything less.	2/25/2022
Rosemarie	Bislar	Greenacres	WA	99016	DO NOT approve the Willow Master Development Plan	I urge you to not approve ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. SHERRY	REISCH	New York	NY	10023	Reject the Willow Master Development Plan	<p>We do not want to destroy this pristine land. Our environment is more important than dirty money. It is time for green energy and the preservation of wildlife and wild places! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
Ted	Trefsgar	Souderton	PA	18964	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Haven't we done enough damage and devastation to our planet, the wildlife, forests, grasslands, climate and human beings? We cannot continue this devastation. Please, please stop approving fossil fuel development.</p>	2/25/2022
Beth	Deaton	Bishop	CA	93514	Reject the Willow Master Development Plan	<p>Your administration has a choice. It can cave to pressure from fossil fuel companies and continue to open up new areas for drilling and fracking. For the length of your administration, the results will likely look like business as usual. There will be growing climate crises, of course, but for now, for the next 3 - 7 years, we can pick up the pieces and imagine it isn't happening. But then the long-term results will become worse and worse. If you truly care about the future of our country and our world, you will have to chart a different course, one that pulls financial resources from fossil fuels and gets serious about building a renewable energy, less extractive economy. As a crucial step down that road, I urge you to reject the approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/1/2022
Leda Beth	Gray	Blue Hill	ME	4614	Reject the Willow Master Development Plan	<p>Please rtheConocoPhillips' Willow oil-drilling project proposed for the National Petroleum Reserve-Alaska. i am hoping that your administration will end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and would be a total failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here would irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Marlene	Schwarz	Auburndale	MA	2466	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. These lands need to remain untouched by humans if we are to survive on this planet together. Without the natural reserves and diversity of all species the balance critical to everyone and everything will falter and even the human race will suffer. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. It is preposterous to think that this plan would result in an effort to heat the planet when we know how detrimental the warming world is to all species. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Charlotte	Fremaux	Harpers Ferry	WV	25425	Kill this Arctic Killer: Reject the Willow Master Development Plan	<p>This ill conceived and dangerous project should have never been allowed off the drawing board, considering the fragility of the environment, the need to protect intact ecosystems and biodiversity in key areas such as this, and the global effect of burning the fuels that would be extracted. We are in a crisis to avoid the worst effects of climate change, which is accelerating in the Arctic faster than anywhere else. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. An oil pipeline has no business disturbing Alaska's pristine habitat of iconic animal species like polar bears, caribou, and birds that migrate to six continents, even maybe, to your back yard. Our climate emergency is already hitting the arctic hard, don't contribute to this land's hardship.</p>	2/25/2022

Marianne S	Wilson	Deer Harbor	WA	98243	Reject the Willow Master Development Plan	I join with other to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Your administration CAN end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. Use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Our Earth needs to places where nature comes first.	3/2/2022
Mark	Gall	Albuquerque	NM	87114	The Willow Master Development Plan is a Problem	As a retired National Park Ranger who also worked for BLM and is very aware of current petroleum needs, please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you for being responsible and doing the next right thing.	2/25/2022
Robert	Stevens	Saint Louis	MO	63139	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Wait a few years and all the ice will be gone. Then the oil can be used to help create and fuel rocket ships to blast off this dying earth. Only joke here is man's patience vs greed.	2/25/2022
Jackie	Clark		NSW	2422	From Australia I ask you to Reject the Willow Master Development Plan	People from across the world are watching the US to see what happens with this project. It is of vital importance to the globe's welfare. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Now is the time to reduce fossil fuel use, not increase it.	3/4/2022
Linda	Campbell	Emmaus	PA	18049	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This scenario does not belong in such a sensitive and environmentally important preserved area. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. This misguided strategy seems counterintuitive to me. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. This certainly illustrates another counterintuitive strategy. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. The time has come to allow science to override politics. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you for your consideration on this extremely sensitive environmental issue. Stop all proposed fossil fuel related activity in the Arctic completely!	2/25/2022
Michael	Kutilek	San Jose	CA	95112	Reject the Willow Master Development Plan	As a professional wildlife biologist, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Cristina E. Zois, Greek Ambassador's wife	2/26/2022
THOMAS	LA POINT	Fort Collins	CO	80526	Reject the Willow Master Development Plan	As a biologist, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The prior environmental analyses for the project failed to accurately consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And it failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy.	2/25/2022

Diane	Bardol	Philadelphia	PA	19115	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. I lived in Alaska for 37 years and personally experienced the damage of the ExxonValdez oil spill. I am so tired of having to defend our environment from the greed of the fossil fuel industry. It's time that you hold them responsible and It's time that they dig deep in their hearts and consciences where hopefully, they will find some concern for the common good instead of digging for oil their self-interest. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Rosie	Munn		R.C.T.	CF38 2EN	Reject the Willow Master Development Plan	<p>I am not a US citizen but fossil fuel emissions and harm to wildlife affects us all on this planet. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Guy	Sheldon	Derry	NH	3038	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The people of our country cannot afford this. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. We should not give this up so a private corporation can make relatively short-term profits while the world will pay for it in other ways for a long time. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases at a time when we are supposed to be cutting back to preserve the future. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. And those 'chillers' have to emit that heat they are removing to refreeze the permafrost - where will that go and how much will that exacerbate the global warming problem? You can only make things cold by moving heat elsewhere. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. There is so much in this area that needs preserving, not more intrusions from humans. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We cannot urge this more strongly - protect this habitat.	2/25/2022

Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Laura	Fox	San Francisco	CA	94124	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. What are we trying to do? Keep destroying our natural habitats? For what? Just so companies can keep making their billions in a wrongful way? When will we put an end to the use of fossil fuels? It must stop!</p>	2/27/2022
Robert S.	Redfield	Baldwin	NY	11510	Reject the Willow Master Development Plan	<p>Although the printed text below seems to say it "all," it actually doesn't say what's on my mind: that the proposed project in the Arctic is nothing more than a continuation of the previous administration's reckless disregard for needs of the people and the planet. It's a needless, Destructive project and really must be scrapped. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Alexandra	Samaras	Rockland	ME	4841	Reject the Willow Master Development Plan	I ask that you reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. There is nothing good about letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States - home to polar bears, caribou and millions of migratory birds - as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here would irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development, and instead, transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. Please use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and front line communities cannot afford anything less. Thank you.	2/26/2022
Marie-Anne	Lecouté-Loewe		Normandie	50580	Reject the Willow Master Development Plan	I URGE you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Dr. John D.	Stickle D.C.	Kelseyville	CA	95451	Reject the Willow Master Development Plan	I truly can Not believe that is 'project' is even on the table! This project Defies Logic and Science and any pretense of actually Addressing Climate Disruption! Instead, I Strongly urge you to absolutely Reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration simply Must end the pattern of letting oil companies drill in the Arctic without any regard for the harm it causes to people, wildlife and the planet. Approving Willow would totally Break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Is this Administration just another T.rump repeat in terms of actually Promises made about Addressing Climate Change? I am beyond disappointed and far too many T.rump choices seem to still be on the table and active policy choices! This is just Wrong! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Not to mention what it will Continue to do to our Climate and to our One Planet. Is anyone paying attention? How can a project like this Even Be Considered, given that 2021 was the Hottest year on record! That this project is even being Considered is truly Outrageous. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Again, are you not Paying Attention? This project approval will Greatly Set Back any real climate progress. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. This project is totally Unjustifiable. The prior environmental analyses for the project Failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also Failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they Failed to examine the purpose and rationale for the project in light of the clearly Urgent need to Stop approving new fossil fuel development and transition to clean, renewable energy. Yet you even Consider going forward? Any comprehensive, science-driven analysis will show that All of these risks are Far Too Great. You Must use your legal authority to adopt the no-action alternative and Reject this dangerous and Reckless project. The climate, wildlife and frontline communities can't afford anything less. This is NOT what I voted for in 2020! If President Biden will Not keep his Promises about the Most Important 'Issue' of our time, what reason do I (or Anyone else) have to vote for Biden in 2024? The answer is None. I am Sick and Tired of reading about or finding out that this Administration is doing it's best to wreck our One Planet, Just like T.rump. It seems to me that either we put our resources toward both Sustainable and Renewable Energy OR we don't do this.	2/26/2022

Karen	Schnitzer	Cheshire	CT	6410	Reject the Willow Master Development Plan	I urge you to REJECT approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The risks of allowing this to proceed are too great. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This would cause harm to wildlife and contribute to climate change. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Jill	MacMillan		Auckland	1061	Reject the Willow Master Development Plan	The earth's ecosystem is implicated in what happens in the Arctic. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. The rest of the world cares too!	2/25/2022
Susan	Balthasar	Los Osos	CA	93402	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Oil is obsolete.	2/28/2022

John	Czachurski	Huntsville	AL	35801	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Science is continually revealing how delicate the Arctic environment is and we are increasingly aware of the dangers to the climate associated with changes in the permafrost. The delicacy of this area cries out for us to use extreme caution and not harm it. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It is particularly offensive that we seem to think that Indigenous people do not matter as much as corporate profits. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Federal backing of this project makes no sense for the long-term climate crisis - we should be backing renewable energy instead. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Cynthia	Huffman	Port Townsend	WA	98368	Reject the Willow Master Development Plan	<p>The urgent need to stop approving new fossil fuel development is NOW! PLEASE reject ConocoPhillips' Willow oil-drilling project in Alaska. The Earth and its inhabitants can no longer deny the long-term damage that oil drilling causes! New drilling is unsound and irrational in this time of global warming. The Willow oil and gas drilling here will harm the fragile ecosystem of the south slope, exacerbate the climate crisis and put at greater risk to/of the Indigenous communities that rely on the land. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing Alaska coastal erosion, sea-ice loss, and harm to numerous species. The urgent need to stop approving new fossil fuel development and transition to clean, renewable energy is now! The environmental analyses for the project failed to accurately study and describe the significance of the substantial greenhouse gas emissions it would cause. It also failed to properly consider the project's impacts on polar bears, including harm from increased stress and noise pollution and the potential for project construction crushing bear mothers and cubs in their dens. Did the study consider the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. There will be irreparable environmental damage once ConocoPhillips begins blasting for a gravel pit to supply its road construction. You must use your legal authority to reject the Willow dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Judy Ann	Alberti	Berkeley	CA	94705	Reject the Willow Master Development Plan	I am an old lady now. I am so tired of hearing about the way this marvelous country is going to do what's best for the entire world and what great leaders we are -- while we continue to destroy the Earth on which we ALL live. Please stand up to your heritage and help save what is left. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. The environment and people are not disposable. There must be equal protection under rule of law for all. Stop predatory capitalism. Thank you.</p>	2/25/2022
regula	hess	Dixon	CA	95620	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole- Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/25/2022
Sue	Martin		BC	V9A 7J9	You must reject the Willow Master Development Plan	<p>Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Elizabeth L	Mathieson	Alameda	CA	94501	Reject the Willow Master Development Plan — Keep it in the ground!	As a geologist, I know that our fossil fuels are naturally sequestered carbon. These deposits formed over tens of millions of years during which the plants that compose the deposits added oxygen to Earth's atmosphere and made our planet habitable for life as we know it. We are now reversing that life-giving process. We must keep fossil fuels in the ground. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Gail	Tinsley	Goleta	CA	93117	The Willow Master Development Plan Must Be Halted!	ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska must be cancelled. Your administration has to end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less. We were better at one time. Through the years, everything has been done quicker, easier, cheaper, at the cost of the environment. We need to think of ways to reverse this trend, & help the earth & thus everyone else in the long run. Don't forget about cutting back our carbon footprint. (and all that entails, including reduce, refuse, reuse, recycle, compost—when you can safely, & living as simply as possible, cutting back on excess, downsizing, etc. . .). I'm trying, but I think we could do more to encourage others around the world. Including setting a good example ourselves. I'm not sure Trump did the wrong thing. I was not in favor of the Paris Agreement for my own reasons, and I am a tree hugger. I also love this planet & all in it. but the nuclear option could blow it for all of us. (making it worse than it could ever get—because nuclear energy is very dangerous) I sometimes wonder about people who are pushing for the nuclear option. Do they just not know the past mishaps? do they have too much trust in humanity? do they not think of terrorism or other such deeds? Not to mention natural disasters?, etc. . . I think that was a mistake. It, nuclear energy, should not have been included in the answer to our problems. & I worry that this is buried in this Green New Deal as well. Happy Winter; Take care; Stay safe, & God Bless All . . .	2/28/2022

I think we've had enough! Please reject this and all future endeavors to remove oil in the ground.</p>	2/25/2022
Linda	Johnson	Mountain View	CA	94040	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Because I visit Alaska frequently, I know the value of the value of the natural countryside there in every season. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, including Indigenous, as well as the wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce oil that burning would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years, I have read. This warming is causing coastal erosion, sea-ice loss, and harm to numerous peoples and species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan appears to involve using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project appear to inaccurately describe or study the significance of greenhouse gas emissions it would cause. Analyses failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. The risks are far too great. You must use legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Daniel	Goldberg	Normal	IL	61761	Reject the Willow Master Development Plan	<p>As a biologist and nature lover, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022

Stacy	Moller	Mount Shasta	CA	96067	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The planet and ALL its inhabitants (including human!) need to see the end of 'dinosaur' energy sources and move into clean, renewal sources. This project is a waste of money, and the environmental consequences unjustifiable. Again, I strongly urge you to reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Carmela	Vignocchi	Grover Beach	CA	93433	Reject the Willow Master Development Plan	<p>I urge you to REJECT APPROVAL of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to native peoples who call this home, wildlife fauna and the one planet that is HOME TO ALL LIVING BEINGS. Approving Willow BREAKS President Biden's PROMICE to end new drilling on federal lands and represent an utter FAILURE on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project, possibly conducted under the previous federal administration, FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show, what we all know, and that is these risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities, and really all living things that depend on the EARTH can't afford anything less.</p>	2/25/2022

Bonnie	Bledsoe	Seattle	WA	98125	Reject the Willow Master Development Plan	Please turn down the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. This extensive natural area is home to many animals and birds and, of course, Indigenous communities. Drilling in this area would only further damage a land, animals and people already adversely affected by global warming...this would make make the situation worse. The Biden administration said no more new drilling and they need to stand by that! Protect our lands, our nature, our animals, and thereby ourselves!	2/26/2022
Aixa	Kendrick	New York	NY	10030	PLEASE Reject the Willow Master Development Plan	PLEASE reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. MOTHER EARTH & ALL HER CHILDREN ARE RELYING ON YOU TO RESPECT THIS PLANET. NOT ABUSE OR RAPE IT.	2/25/2022
Margaret	Beegle	Minneapolis	MN	55427	Reject the Willow Master Development Plan	Please reject the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the entire planet. Approving Willow would make a mockery of President Biden's promise to end new drilling on federal lands and represent a dereliction of duty on climate leadership. The 23-million-acre Reserve is the largest undeveloped location in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and drastically exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Sabine	Albers		Balears	7840	Reject the Willow Master Development Plan	Ich fordere Sie dringend auf, die Genehmigung des Willow-Ölbohrprojekts von ConocoPhillips in der National Petroleum Reserve-Alaska abzulehnen. Ihre Regierung muss das Muster beenden, Ölfirmen in der Arktis bohren zu lassen, ohne Rücksicht auf den Schaden, den es den Menschen, der Tierwelt und dem Planeten zufügt. Die Genehmigung von Willow würde das Versprechen von Präsident Biden brechen, neue Bohrungen auf Bundesland zu beenden, und ein völliges Versagen bei der Klimaführung darstellen. Das 23 Millionen Hektar große Reservat ist der größte unbebaute Ort in den Vereinigten Staaten und beherbergt Eisbären, Karibus und Millionen von Zugvögeln - sowie indigene Gemeinschaften, die seit Jahrtausenden auf das Land angewiesen sind. Öl- und Gasbohrungen hier werden dieses fragile Ökosystem unwiderruflich vernarben und die Klimakrise nur verschärfen. Nach Angaben des Bureau of Land Management würde das Willow-Projekt den Bau und Betrieb von bis zu fünf Bohrstandorten, 250 Bohrlöchern, einer Verarbeitungsanlage, Hunderten von Kilometern Eisstraßen, einer Landebahn, mehr als 380 Meilen Pipelines und einer Kiesmine umfassen. Es würde schätzungsweise 590 Millionen Barrel Öl über 30 Jahre produzieren. Die Verbrennung dieses Öls würde fast 280 Millionen Tonnen Treibhausgase ausstoßen. Alaska hat sich in den letzten 60 Jahren mehr als doppelt so schnell erwärmt wie der Rest der Vereinigten Staaten. Diese Erwärmung verursacht bereits Küstenerosion, Meereisverlust und Schäden für zahlreiche Arten, die auf die gefrorene Landschaft angewiesen sind, um zu überleben und den Permafrost aufzutauen. Schockierenderweise beinhaltet der Plan von ConocoPhillips die Verwendung riesiger Kaltwassersätze, um auftauenden Permafrost wieder einzufrieren, um eine solide Bohrfläche zu gewährleisten. Aber die Genehmigung des Projekts würde nur mehr Permafrosttauwetter und andere Schäden durch den Klimawandel verursachen, einschließlich schädigen die zahlreichen wichtigen Oberflächenressourcen des Reservats. Die früheren Umweltanalysen für das Projekt konnten die Bedeutung der erheblichen Treibhausgasemissionen, die es verursachen würde, nicht genau beschreiben oder untersuchen. Sie haben es auch versäumt, die Auswirkungen des Projekts auf Eisbären richtig zu berücksichtigen, einschließlich der Schäden durch erhöhte Lärmbelästigung und das Potenzial für projektbezogene Fahrzeuge, die Bärenmütter und -junge in ihren Höhlen zerquetschen. Und sie haben es versäumt, den Zweck und die Gründe für das Projekt im Hinblick auf die dringende Notwendigkeit zu untersuchen, die Genehmigung neuer fossiler Brennstoffe und den Übergang zu sauberer, erneuerbarer Energie einzustellen. Jede umfassende, wissenschaftsgetriebene Analyse wird zeigen, dass die Risiken viel zu groß sind. Sie müssen Ihre rechtliche Befugnis nutzen, um die No-Action-Alternative zu übernehmen und dieses gefährliche Projekt abzulehnen. Das Klima, die Tierwelt und die Gemeinden an vorderster Front können sich nicht weniger leisten.	2/25/2022

Patricia	Simmons	Bozeman	MT	59718	Stop Willow Master Development Plan	Stop the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. This is our unique and precious land, wildlife habitat and wildlife. Do not sacrifice it for greedy, profit making companies which would worsen our climate horribly! Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. The risks are far greater than the benefits and we need to prioritize our lands, wildlife and climate. Help Save the Earth!	2/25/2022
Bonnie	DeClark	San Rafael	CA	94901	Reject the Willow Master Development Plan	ALASKA is the last PRISTINE part of our precious country; PLEASE DO NOT drill for oil there! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Eric	Scheihagen	Dallas	TX	75229	Reject the Willow Master Development Plan	I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Any comprehensive, science-driven analysis will show that the environmental risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022
Thomas	Proett	Valley Springs	CA	95252	Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve, Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic. The harm it causes to people, wildlife and the planet far outweighs any profit it may provide to ConocoPhillips. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only accelerate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Ironically, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears who are finding the environment they evolved for disappearing at a bewildering pace. In addition, they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and Indigenous communities can't afford anything less.	2/26/2022

Joette	Storm	Bend	OR	97701	Reject the Willow Master Development Plan	Now is the time to stop oil drilling. Not next year or after that. We must exercise some discipline and end our extraction of fossil fuels NOW. Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Joseph Biden candidate, promised to end fossil fuel extraction. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. 						<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole– Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/25/2022

Grindl	Dockery		Merseyside	L17 9PP	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We are many across the globe who are asking you to support our fight against climate change, protect our natural environment and our future as a species. There are no geographical borders with climate change!	2/25/2022
Ocean	Pellett	Waterford	CT	6385	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Ian	Hall	Palmdale	CA	93551	APPROVE the Willow Master Development Plan	<p>I urge your approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Oil is relatively inexpensive and reliable. Lack of wind or sunshine is not an issue for mineral-based energy generation. Earth has had no ice at either pole for 75% of the last approx. 500 million years. Both poles are known to have had tropical climates based on examination of core samples. Science (MIT) shows Earth has experienced at least 3 cataclysmic events that brought back 'ice ages'. The last event is the asteroid strike in the Gulf of Mexico. Let's not mess with Mother Nature warming the planet. Let's help Earth out. Drill baby drill!!</p>	2/25/2022
Valerie	Zachary	Los Osos	CA	93402	Reject the Willow Master Development Plan	<p>Don't risk the National Petroleum Reserve-Alaska with drilling. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
James	Bass	Wahpeton	ND	58075	Reject the Willow Master Development Plan	<p>Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Best wishes,</p>	2/25/2022
Carole G.	Whitehead	Memphis	TN	38117	Reject the Willow Master Development Plan	<p>I urge you to REJECT APPROVAL OF CONOCO-PHILLIPS' Willow oil-drilling PROJECT in the National Petroleum Reserve-ALASKA. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the HARM IT CAUSES to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an UTTER FAILURE ON CLIMATE LEADERSHIP. The 23-million-acre RESERVE is the LARGEST UNDEVELOPED PLACE IN THE US, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. WE NEED TO AMELIORATE THE CLIMATE CRISIS, NOT MAKE IT WORSE. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that THE RISKS ARE FAR TOO GREAT. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Vivienne	Lenk	Little Neck	NY	11363	Reject the Willow Master Development Plan	Parts of the Arctic and other 'cold' places in the world are already melting, being inundated by heavier than normal rains, rise in sea levels - and much of it is due to human development, human wastefulness and over consumption. It does not make any sense to continue that march toward higher sea rises, climate migrants, environmental destruction on a large scale. That is why I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Rudolf	Filip		DE	21444	Reject the Willow Master Development Plan	<p>Ich fordere Sie dringend auf, die Genehmigung des Willow-Ölbohrprojekts von ConocoPhillips in der National Petroleum Reserve-Alaska abzulehnen. Ihre Regierung muss das Muster beenden, Ölfirmen in der Arktis bohren zu lassen, ohne Rücksicht auf den Schaden, den es den Menschen, der Tierwelt und dem Planeten zufügt. Die Genehmigung von Willow würde das Versprechen von Präsident Biden brechen, neue Bohrungen auf Bundesland zu beenden, und ein völliges Versagen bei der Klimaführung darstellen. Das 23 Millionen Hektar große Reservat ist der größte unbebaute Ort in den Vereinigten Staaten und beherbergt Eisbären, Karibus und Millionen von Zugvögeln - sowie indigene Gemeinschaften, die seit Jahrtausenden auf das Land angewiesen sind. Öl- und Gasbohrungen hier werden dieses fragile Ökosystem unwiderruflich vernarben und die Klimakrise nur verschärfen. Nach Angaben des Bureau of Land Management würde das Willow-Projekt den Bau und Betrieb von bis zu fünf Bohrstandorten, 250 Bohrlöchern, einer Verarbeitungsanlage, Hunderten von Kilometern Eisstraßen, einer Landebahn, mehr als 380 Meilen Pipelines und einer Kiesmine umfassen. Es würde schätzungsweise 590 Millionen Barrel Öl über 30 Jahre produzieren. Die Verbrennung dieses Öls würde fast 280 Millionen Tonnen Treibhausgase ausstoßen. Alaska hat sich in den letzten 60 Jahren mehr als doppelt so schnell erwärmt wie der Rest der Vereinigten Staaten. Diese Erwärmung verursacht bereits Küstenerosion, Meereisverlust und Schäden für zahlreiche Arten, die auf die gefrorene Landschaft angewiesen sind, um zu überleben und den Permafrost aufzutauen. Schockierenderweise beinhaltet der Plan von ConocoPhillips die Verwendung riesiger Kaltwassersätze, um auftauenden Permafrost wieder einzufrieren, um eine solide Bohrfläche zu gewährleisten. Aber die Genehmigung des Projekts würde nur mehr Permafrosttauwetter und andere Schäden durch den Klimawandel verursachen, einschließlich schädigen die zahlreichen wichtigen Oberflächenressourcen des Reservats. Die früheren Umweltanalysen für das Projekt konnten die Bedeutung der erheblichen Treibhausgasemissionen, die es verursachen würde, nicht genau beschreiben oder untersuchen. Sie haben es auch versäumt, die Auswirkungen des Projekts auf Eisbären richtig zu berücksichtigen, einschließlich der Schäden durch erhöhte Lärmbelästigung und das Potenzial für projektbezogene Fahrzeuge, die Bärenmütter und -junge in ihren Höhlen zerquetschen. Und sie haben es versäumt, den Zweck und die Gründe für das Projekt im Hinblick auf die dringende Notwendigkeit zu untersuchen, die Genehmigung neuer fossiler Brennstoffe und den Übergang zu sauberer, erneuerbarer Energie einzustellen. Jede umfassende, wissenschaftsgetriebene Analyse wird zeigen, dass die Risiken viel zu groß sind. Sie müssen Ihre rechtliche Befugnis nutzen, um die No-Action-Alternative zu übernehmen und dieses gefährliche Projekt abzulehnen. Das Klima, die Tierwelt und die Gemeinden an vorderster Front können sich nicht weniger leisten.</p>	3/3/2022
annie	houston	Brooklyn	NY	11222	Reject the Willow Master Development Plan	<p>I am so disappointed in this administration's continued support of oil companies drilling in the arctic. I recall a pre-presidential promise to put an end to that. That act disregards the sanctity of the planet by destroying wildlife and harming people. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Alaska has warmed twice as fast as the rest of the US. Allowing drilling would expedite that warming further by burning 280 million tons of greenhouse gases over the next 30 years. A dangerous act that could cause the destruction of Earth in a major way and the extinction of humanity. I plead with you to use your legal authority to adopt the no-action alternative and reject this dangerous project.</p>	2/25/2022
james	kowalsky	Fairbanks	AK	99712	Reject the Willow Master Development Plan	<p>I am an Alaskan and I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

The climate, wildlife and frontline communities can't afford anything less. You know it is the right thing to do and we expect you to do what is right for the world, animals, and the people.	3/1/2022
Dr Ronald	Williams	Bloomington	IN	47403	Reject the Willow Master Development Plan	As a former Dept of Interior employee and former oil development expert, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration can literally help save our planet and it's wild places. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Jimmy	Tallal	Malibu	CA	90265	Reject the Willow Master Development Plan	Please reject the ConocoPhillips Willow oil-drilling project in the National Petroleum Reserve-Alaska. We don't need the oil, and letting oil companies drill in the Arctic is just a recipe for disaster. In the event of an oil spill, there is no way to clean it up in the arctic - it's just too cold and remote. The process disturbs wildlife and the oil just contributes to global warming. So stay out, unless Biden wants to break his promise to end new drilling on federal lands be an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped area in the U.S. - home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that rely on the land. According to the Bureau of Land Management, the Willow project would involve construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. As if that didn't destroy the land enough, ConocoPhillips' plans to use giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. Please use your legal authority to adopt the no-action alternative and reject this project.	2/25/2022
Miriam	Hudson-Courtney	Fayetteville	AR	72703	Reject the Willow Master Development Plan	If we are to have a chance to save the earth from worse catastrophic climate change, we must stop contributing to new or existing fossil fuel projects. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. One reason (Russia) Putin are 'performing' the invasion to Ukraine is the reduction in fossil fuel needs - the idea that Europe and the world will panic. If we reduce our dependency on Russia and fossil fuel consumption by going with solar, wind power and other ecofriendly solutions, it will not only stop Putin, but stop Russia's hold over Europe and all the free world.	2/25/2022
Marilee	Meyer	Port Angeles	WA	98362	The Willow Master Development Plan Must Be Rejected	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Mel	N.		AB	T1S 1K7	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Stop putting the onus and blame on the citizenry for the degradation of our world, when we all know it is Big Industry that causes the most damage. Alaska has been warmed more than twice as fast as the rest of the United States over the past 60 years. This induced warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they purposely failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to cleaner energy. Don't keep pushing the narrative of 'climate change' being at fault, when it is massive corporations' operations that lay waste to the environment. Any comprehensive, actual science-driven analysis will show that the risks are far too great, especially without a detailed cost-benefit ratio study. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Janice	Jarrett	Tucson	AZ	85704	Reject the Willow Master Development Plan	How much evidence is enough to realize we are already late in addressing the damage our energy habits have created - and that these careless, destructive habits will soon render us in a state of no turning back? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Mary Lou	Rosczyk	Murrieta	CA	92562	Reject the Willow Master Development Plan	Do not be swayed by the powerful influence of a large company. The ConocoPhillips' Willow oil-drilling project would be a disaster for the fragile Arctic plain. The Arctic plain is home to Polar Bears, Caribou and migrating birds from six continents. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States. Besides being home to wildlife, indigenous communities have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The climate, wildlife and frontline communities can't afford anything less. Stop the madness of chasing oil, and get ready for the future.	2/26/2022
Lori	Zielen	Springville	NY	14141	Reject the Willow Master Development Plan	I am sick to death about writing to you about this! This is MY property, the taxpayers. NOT for you to use to destroy the native homelands to so many species. Just so you can line your wallets and bank accts with PAC oil money. Stop it now, or this administration will be stopped next election. Ask the voters NOW whether we want a balanced ecosystem with animals and plants thriving, or more oil, instead. Invest in sustainable fuel. Your grandkids won't even be able to find any oil in the U.S. They will get to enjoy importing from the midwest at any price just like we have to now. Except they will have to import ALL of it. I insist you reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Oil pollution is detrimental to the environment, especially habitats and wildlife. Oil spills in the past have taken thousands of dollars and energy to clean up. In some cases, strategies to remove oil have even put more chemicals in the water. For these reasons, it's extremely important to prevent, instead of having to scramble to solve for the negative impacts after the damage has been done.	2/25/2022

Marty	Grundy	Needham	MA	2492	Reject the Willow Master Development Plan	Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. The pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet must stop, and stop sooner rather than later. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Why should you permit yet more extraction of oil and gas when it is clear that what is already known and being extracted and burned is more than enough to raise global temperatures to dangerously high levels? The answer is you would only do it so that certain wealthy individuals can become yet richer. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Recognizing the damage already done, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Obviously, approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Therese	MacKenzie	Haverford	PA	19041	Reject the Willow Master Development Plan	Please, please do not approve ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska! End the pattern of letting oil companies drill in the Arctic. The harm is incalculable, and renewable energy must be fostered long-term. Protect the 23-million-acre Reserve, the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Louisa	McCleary	Portland	OR	97210	Reject the Willow Master Development Plan	Anyone who sees the looming calamitous threat of climate change is already disappointed in the Biden Administration's approval of new fossil fuel projects in the Gulf of Mexico. Drilling in the Arctic is an absolutely unconscionable further failure to address climate policy, and demonstrates the utter hypocrisy of mouthing support for turning away from fossil fuels. In addition to dumping tons of carbon into the atmosphere, this project would destroy enormous numbers of animal and bird species, and ravage the irreplaceable biodiversity of the region. This is wildlife genocide. We must leave pristine places like the Western Arctic alone. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

The climate, wildlife and frontline communities can't afford anything less. Let me tell you something climate change is real. I went to one of my favorite marine preserves, Leo Carillo Beach, it's dead. There used to be tidepools teeming with gobbie, sea urchins, anemones, crabs, octopi and various algae. I saw one single limpet. In my backyard in Acton, we haven't seen any goldfinches. Other bird species are down to less than half what they were 30 years ago. I used to see 3 or 4 road kill snakes every day during the season. Now I don't see that many the entire year! Even insects are diminished, we hardly see any honey bees. We used to have dozens of bees come get a drink at our bird fountain during the summer. We are trying to go solar, LA County Building and Safety are dragging their feet. We need to get serious about climate change. We've only got one planet, if we mess it up we are in big trouble. All the money and fire-power in the world wouldn't be able to buy or take something that no longer exists. Stop new fossil fuel projects and get serious with green projects before it is too late for us humans.</p>	2/25/2022
Susan	Gere	Portland	OR	97203	Reject the Willow Master Development Plan	<p>You already know all the following. So please, just Get It Done! !!! But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. During the Obama administration, the then under-consideration Keystone XL pipeline was evaluated by the U.S. State Department. Their conclusion was that the pipeline would have no effect on greenhouse gas emissions, because if the KXL pipeline wasn't built, some other pipeline would be. Please don't revert to this kind of destructive thinking when it comes to the Willow drilling project. The attitude that is desperately needed now and going forward is 'No one should, and we won't.'</p>	2/26/2022

Linda	Cummings	Saint Louis	MO	63122	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you.</p>	2/25/2022
Lois	Feuerle	Portland	OR	97214	Reject the Willow Master Development Plan	<p>My letter is to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Letting oil companies drill in the Arctic without taking into account all the harm it will cause to people, wildlife and the planet is unconscionable. Approving Willow will break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

heike	graefe		ND	58642	Reject the Willow Master Development Plan	Ich fordere Sie dringend auf, die Genehmigung des Willow-Ölbohrprojekts von ConocoPhillips in der National Petroleum Reserve-Alaska abzulehnen. Ihre Regierung muss das Muster beenden, Ölfirmen in der Arktis bohren zu lassen, ohne Rücksicht auf den Schaden, den es den Menschen, der Tierwelt und dem Planeten zufügt. Die Genehmigung von Willow würde das Versprechen von Präsident Biden brechen, neue Bohrungen auf Bundesland zu beenden, und ein völliges Versagen bei der Klimaführung darstellen. Das 23 Millionen Hektar große Reservat ist der größte unbebaute Ort in den Vereinigten Staaten und beherbergt Eisbären, Karibus und Millionen von Zugvögeln - sowie indigene Gemeinschaften, die seit Jahrtausenden auf das Land angewiesen sind. Öl- und Gasbohrungen hier werden dieses fragile Ökosystem unwiderruflich vernarben und die Klimakrise nur verschärfen. Nach Angaben des Bureau of Land Management würde das Willow-Projekt den Bau und Betrieb von bis zu fünf Bohrstandorten, 250 Bohrlöchern, einer Verarbeitungsanlage, Hunderten von Kilometern Eisstraßen, einer Landebahn, mehr als 380 Meilen Pipelines und einer Kiesmine umfassen. Es würde schätzungsweise 590 Millionen Barrel Öl über 30 Jahre produzieren. Die Verbrennung dieses Öls würde fast 280 Millionen Tonnen Treibhausgase ausstoßen. Alaska hat sich in den letzten 60 Jahren mehr als doppelt so schnell erwärmt wie der Rest der Vereinigten Staaten. Diese Erwärmung verursacht bereits Küstenerosion, Meereisverlust und Schäden für zahlreiche Arten, die auf die gefrorene Landschaft angewiesen sind, um zu überleben und den Permafrost aufzutauen. Schockierenderweise beinhaltet der Plan von ConocoPhillips die Verwendung riesiger Kaltwassersätze, um auftauenden Permafrost wieder einzufrieren, um eine solide Bohrfläche zu gewährleisten. Aber die Genehmigung des Projekts würde nur mehr Permafrosttauwetter und andere Schäden durch den Klimawandel verursachen, einschließlich schädigen die zahlreichen wichtigen Oberflächenressourcen des Reservats. Die früheren Umweltanalysen für das Projekt konnten die Bedeutung der erheblichen Treibhausgasemissionen, die es verursachen würde, nicht genau beschreiben oder untersuchen. Sie haben es auch versäumt, die Auswirkungen des Projekts auf Eisbären richtig zu berücksichtigen, einschließlich der Schäden durch erhöhte Lärmbelästigung und das Potenzial für projektbezogene Fahrzeuge, die Bärenmütter und -junge in ihren Höhlen zerquetschen. Und sie haben es versäumt, den Zweck und die Gründe für das Projekt im Hinblick auf die dringende Notwendigkeit zu untersuchen, die Genehmigung neuer fossiler Brennstoffe und den Übergang zu sauberer, erneuerbarer Energie einzustellen. Jede umfassende, wissenschaftsgetriebene Analyse wird zeigen, dass die Risiken viel zu groß sind. Sie müssen Ihre rechtliche Befugnis nutzen, um die No-Action-Alternative zu übernehmen und dieses gefährliche Projekt abzulehnen. Das Klima, die Tierwelt und die Gemeinden an vorderster Front können sich nicht weniger leisten.	2/26/2022
Chris	Jenkins	Minneapolis	MN	55407	Please REJECT the Willow Master Development Plan	I urge you to REJECT APPROVAL of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Roy	Wallis	Mesa	AZ	85209	Don't allow more drilling in the Arctic	I voted for Biden and Sen. Kelley because I thought they would fight for the environment and against climate change. This plan is a disaster for the fauna that make Alaska their home, and a long-term disaster for the world (including my grandchildren) because it will produce more fossil fuel. PLEASE DON'T ALLOW THIS! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership.	2/26/2022
Ezekiel	Martin	Wooster	OH	44691	Please, for the Love of God, Do Not Reapprove the Willow Master Development Plan	As both a research biologist and a Louisiana native, I am acutely aware of the devastating impacts continuing investment in fossil fuels is wreaking on our planet's glorious biodiversity, from global warming to mass pollution to habitat destruction. As, I assume, are you. I assume you already know about the manmade mass extinction wrought on this planet by our species' ceaseless greed for toxic fuel. I assume you already know about the billions of lives sacrificed to Mammon, victims of our exponentially growing global death cult. You have the power to staunch this flow of oil and blood. You have the power to preserve 23 million acres of unspoiled habitat and all the natural wonders that thrive there. But I fear that you simply do not care. I fear that you have already made your choice. So I leave you with this: when the revolution comes, whose side do you want to be on? The side who fights to save the world, or the side who fights to line their pockets? Food for thought.	2/25/2022
Mary	Bull	San Francisco	CA	94117	PLEASE Reject the Willow Master Development Plan	THIS SHOULD BE A NO-BRAINER. YOU HAVE GOT TO GET TOUGH WITH BIG OIL!!! NO MORE DRILLING IN THE ARCTIC!!! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Daniel	Salisbury		Canterbury	8071	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. Please use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you</p>	2/25/2022
Pamela	Alvesteffer	Fremont	MI	49412	Reject the Willow Master Development Plan	<p>Will you stand by and allow the single-largest piece of undeveloped public land in the United States by breached by a gigantic oil development? I certainly hope not!! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Karen	Jettmar	Anchorage	AK	99503	Reject the Willow Master Development Plan	Having spent a great deal of time paddling and hiking and watching wildlife in the Western Arctic, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. We need more than empty rhetoric--President Biden promised to end new drilling on federal lands. Prove it. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow will be another broken promise. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Felix	Wittchen		Niedersach	49610	Reject the Willow Master Development Plan	Ich fordere Sie dringend auf, die Genehmigung des Willow-Ölbohrprojekts von ConocoPhillips in der National Petroleum Reserve-Alaska abzulehnen. Ihre Regierung muss das Muster beenden, Ölfirmen in der Arktis bohren zu lassen, ohne Rücksicht auf den Schaden, den es den Menschen, der Tierwelt und dem Planeten zufügt. Die Genehmigung von Willow würde das Versprechen von Präsident Biden brechen, neue Bohrungen auf Bundesland zu beenden, und ein völliges Versagen bei der Klimaführung darstellen. Das 23 Millionen Hektar große Reservat ist der größte unbebaute Ort in den Vereinigten Staaten und beherbergt Eisbären, Karibus und Millionen von Zugvögeln - sowie indigene Gemeinschaften, die seit Jahrtausenden auf das Land angewiesen sind. Öl- und Gasbohrungen hier werden dieses fragile Ökosystem unwiderruflich vernarben und die Klimakrise nur verschärfen. Nach Angaben des Bureau of Land Management würde das Willow-Projekt den Bau und Betrieb von bis zu fünf Bohrstandorten, 250 Bohrlöchern, einer Verarbeitungsanlage, Hunderten von Kilometern Eisstraßen, einer Landebahn, mehr als 380 Meilen Pipelines und einer Kiesmine umfassen. Es würde schätzungsweise 590 Millionen Barrel Öl über 30 Jahre produzieren. Die Verbrennung dieses Öls würde fast 280 Millionen Tonnen Treibhausgase ausstoßen. Alaska hat sich in den letzten 60 Jahren mehr als doppelt so schnell erwärmt wie der Rest der Vereinigten Staaten. Diese Erwärmung verursacht bereits Küstenerosion, Meereisverlust und Schäden für zahlreiche Arten, die auf die gefrorene Landschaft angewiesen sind, um zu überleben und den Permafrost aufzutauen. Schockierenderweise beinhaltet der Plan von ConocoPhillips die Verwendung riesiger Kaltwassersätze, um auftauenden Permafrost wieder einzufrieren, um eine solide Bohrfläche zu gewährleisten. Aber die Genehmigung des Projekts würde nur mehr Permafrosttauwetter und andere Schäden durch den Klimawandel verursachen, einschließlich schädigen die zahlreichen wichtigen Oberflächenressourcen des Reservats. Die früheren Umweltanalysen für das Projekt konnten die Bedeutung der erheblichen Treibhausgasemissionen, die es verursachen würde, nicht genau beschreiben oder untersuchen. Sie haben es auch versäumt, die Auswirkungen des Projekts auf Eisbären richtig zu berücksichtigen, einschließlich der Schäden durch erhöhte Lärmbelästigung und das Potenzial für projektbezogene Fahrzeuge, die Bärenmütter und -junge in ihren Höhlen zerquetschen. Und sie haben es versäumt, den Zweck und die Gründe für das Projekt im Hinblick auf die dringende Notwendigkeit zu untersuchen, die Genehmigung neuer fossiler Brennstoffe und den Übergang zu sauberer, erneuerbarer Energie einzustellen. Jede umfassende, wissenschaftsgetriebene Analyse wird zeigen, dass die Risiken viel zu groß sind. Sie müssen Ihre rechtliche Befugnis nutzen, um die No-Action-Alternative zu übernehmen und dieses gefährliche Projekt abzulehnen. Das Klima, die Tierwelt und die Gemeinden an vorderster Front können sich nicht weniger leisten.	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Sarah	McKee	Amherst	MA	1002	Reject the Willow Master Development Plan	<p>Fossil fuels kill us in three ways. Getting them out of the ground is a killer. Burning them is a killer. Then, what burning them does to destroy a livable climate kills us, too. So I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Debra	Dunson	Spring Hill	TN	37174	Reject the Willow Master Development Plan	I urge you to stop ConocoPhillips' "Willow" oil-drilling project in the National Petroleum Reserve—Alaska. Climate change, driven by the fossil fuel industry, is causing the Arctic to warm faster than any other region on earth, leading to melting permafrost, eroding coastlines, and a host of other impacts that are devastating to this fragile region. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. ConocoPhillips' proposed Willow oil-drilling project will cause irreparable harm to vital Indigenous communities and habitats in Alaska. According to the BLM, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. All these installations and mechanized operations will severely pollute the area's air, lands and waters. Furthermore, utilization of the petroleum-based fuels for power and energy is projected to contribute nearly 280 million tons of greenhouse gases over a 30-year period. Prior environmental analyses failed to accurately determine the quantities of greenhouse gases that would be emitted by the project. The analysis also failed to ascertain the project's effects on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Most importantly, the project's analysis has failed to properly consider the Indigenous Alaskans, who have resided in Alaska's Teshekpuk Lake region for millennia. The project would harm the ecosystem these people depend on for nourishment and cultural activities. One primary food source utilized by Alaska's Indigenous peoples is caribou. Oil and gas projects endanger the caribou herds that these people rely on for food. A proper scientific investigation of the environmental impacts of oil and gas development in the Greater Willow Area would prove this region should remain off-limits to the fossil fuel industry. I am aware that the federal government historically set aside this area for oil and gas development. However, the science is clear that we must stop developing fossil fuel extractive industries if we are going to save our arctic ecosystems and mitigate climate change. Your agency has an obligation to steward public lands for the good of every living thing and to consider long-term climate impacts when deciding whether to permit oil drilling. Your obligations have far-reaching impacts for future generations, including your own descendants. Please do not move forward with this drilling project that will harm us all for the sake of the bottom line of a single company.	2/25/2022
Joan	Michel Lagen		AL	18006	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Joan	Raiselis	Tarrytown	NY	10591	Reject the Willow Master Development Plan	Many people are making sacrifices in their lives to mitigate the impacts our own actions have toward the warming planet. Large corporations need to change their business plans and in their modes of operation as well and one of those is not to damage exponentially by cutting down forests that ingest carbon in order to drill for oil that pollutes. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Rona	Fried	Huntington Station	NY	11746	Reject the Willow Master Development Plan	Since the US is SUPPOSEDLY moving quickly away from fossil fuels, why would the Biden Admin even consider more drilling in Alaska???? If this stupid, harmful project is approved, you FAIL on climate leadership. This 23-million-acre Reserve - the largest undeveloped place in the US - is home to polar bears, caribou and millions of migratory birds and indigenous communities. This is NOT a place to open to oil/gas drilling!!!!!!!!!! Why must I waste my time writing you about this when it's so obvious??? According to BLM, this project requires hundreds of wells, hundreds of miles of roads, an airstrip, 380 miles of pipelines, and a gravel mine. After all that, we're stuck with 590 million barrels of oil over 30 years. the result? 280 million tons of greenhouse gases and yet another crushing loss for wildlife and ecosystems. Alaska is warming twice as fast as the rest of the US. It's easy to see the resulting coastal erosion, sea-ice loss, and permafrost thaw. How sick is this? You'd actually go along with ConocoPhillips' plan to use giant chillers to refreeze thawing permafrost ... so they can have a solid drilling surface! Any comprehensive, science-based analysis will show this is a project that must be rejected. What happened to Biden's 'All of Government' approach to addressing climate change? How sad that this comes from a Democratic Administration. I'd expect it from Republicans.	2/25/2022

Carol	O'Connell	New Hope	PA	18938	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The Arctic is a critically sensitive eco environment that has a controlling impact on the oceans and the planetary ecosystems. Arctic animals, birds and sea life will be damaged or destroyed by this project. It is no longer viable to be allowing and drill and extraction in the Arctic. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

I.	Klaver		gelderland	7300	Reject the Willow Master Development Plan	Ik dring er bij u op aan om de goedkeuring van het Willow-olieboringenproject van ConocoPhillips in de National Petroleum Reserve-Alaska te verwerpen. Uw regering moet een einde maken aan het patroon om oliemaatschappijen in het Noordpoolgebied te laten boren zonder rekening te houden met de schade die het veroorzaakt aan mensen, dieren in het wild en de planeet. Het goedkeuren van Willow zou de belofte van president Biden breken om nieuwe boringen op federaal land te beëindigen en een totale mislukking betekenen op het gebied van klimaatleiderschap. Het 23 miljoen hectare grote reservaat is de grootste onontwikkelde plaats in de Verenigde Staten, de thuisbasis van ijsberen, kariboes en miljoenen trekvogels - evenals inheemse gemeenschappen die al millennia op het land vertrouwen. Olie- en gasboringen hier zullen dit fragiele ecosysteem onherroepelijk littekens bezorgen en de klimaatcrisis alleen maar verergeren. Volgens het Bureau of Land Management zou het Willow-project de bouw en exploitatie van maximaal vijf boorlocaties, 250 putten, een verwerkingsfaciliteit, honderden kilometers ijswegen, een landingsbaan, meer dan 380 mijl aan pijpleidingen en een grindmijn omvatten. Het zou naar schatting 590 miljoen vaten olie produceren over 30 jaar. Het verbranden van die olie zou bijna 280 miljoen ton broeikasgassen uitstoten. Alaska is de afgelopen 60 jaar meer dan twee keer zo snel opgewarmd als de rest van de Verenigde Staten. Deze opwarming veroorzaakt nu al kusterosie, verlies van zee-ijs en schade aan tal van soorten die afhankelijk zijn van het bevroren landschap om te overleven en permafrost te ontdoien. Schokkend genoeg omvat het plan van ConocoPhillips het gebruik van gigantische koelmachines om ontdooiende permafrost opnieuw te bevriezen om een solide booroppervlak te helpen garanderen. Maar het goedkeuren van het project zou alleen maar meer permafrostdooi en andere schade door klimaatverandering veroorzaken, waaronder schade aan de vele belangrijke oppervlaktebronnen van het reservaat. De eerdere milieuanalyses voor het project hebben het belang van de aanzienlijke broeikasgasemissies die het zou veroorzaken, niet nauwkeurig beschreven of bestudeerd. Ze hielden ook geen rekening met de effecten van het project op ijsberen, waaronder schade door verhoogde geluidsoverlast en het potentieel voor projectgerelateerde voertuigen die berenmoeders en welpen in hun holen verpletteren. En ze verzuimden het doel en de reden voor het project te onderzoeken in het licht van de dringende noodzaak om te stoppen met het goedkeuren van de ontwikkeling van nieuwe fossiele brandstoffen en de overgang naar schone, hernieuwbare energie. Elke uitgebreide, wetenschappelijk onderbouwde analyse zal aantonen dat de risico's veel te groot zijn. U moet uw wettelijke bevoegdheid gebruiken om het no-action alternatief aan te nemen en dit gevaarlijke project af te wijzen. Het klimaat, de natuur en de frontliniegemeenschappen kunnen zich niets minder veroorloven.	2/25/2022

Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Sincerely, Sandra Jarmuth New York, NY 10021</p>	2/26/2022
Virginia	Brace	Frederick	MD	21702	Reject the Willow Master Development Plan	<p>Once the environment in the Arctic is ruined for short-term gain, there is no recovery. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. 						ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska must be permanently rejected. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States. It is home to Indigenous communities who have relied on the land for millennia. Drilling for oil, against the will of these Indigenous, would be one more criminal act of genocide in a long history of genocidal treatment of Indigenous people by the U.S.A. In addition the Reserve is home to polar bears, caribou and millions of migratory birds. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Most shocking (though of course not surprising, considering the strangle hold of the fossil fuel industry lobby on government agencies) they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Climate crisis is brought to us by fossil fuel! Continued extraction of fossil fuel in the Arctic (and everywhere) is suicidal! Fossil fuels must stay in the ground. Any comprehensive, science-driven analysis will show that the risks of drilling in the Arctic are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska must be permanently rejected.

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you.</p>	2/25/2022
Tamera	Trexler	Asheville	NC	28801	Reject the Willow Master Development Plan	<p>Make a commitment, no matter what, no oil drilling in Alaska and Arctic—go solar. go sustainable , full stop. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Vicki	Smith	Merrillan	WI	54754	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Our 'voiceless' children and grandchildren are counting on us to do right by them since it will be they that will have to live with the consequences of our decisions that affect or worsen climate change. The voiceless animals deserve voices raised for them also since they may not even have a home with the pace of change occurring in the Arctic. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It is crazy to think that spoiling this is a good idea, especially now. Car manufacturers are working hard to go all electric. Ruining this and having oil consumption go down are just more foolishness...but with dangerous outcomes. It isn't just cosmetic. It is life and death for many with eroding shorelines, rising oceans, worsening storms.... According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The climate, wildlife and frontline communities can't afford anything less. While many people are ignoring science these days; I am not. We rely on computers - science. We rely on weather forecasts - science. Improving fuel efficiencies - science. Now is the time to take the climate science very seriously. We are so close to a tipping point where if we don't get this right...no matter what else happens after that; it will be too little / too late. The time is now!	2/25/2022

Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Dr. Malcolm	MacPherson	Santa Fe	NM	87505	Reject the Willow Master Development Plan	I'm a scientist living in Santa Fe, New Mexico. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. mauricette	bigard		Provence-A	83700	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole– Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/26/2022
Diana	Myers	Chicago	IL	60640	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Think about those three words: People. Wildlife. Planet—as in planet Earth, our only living space. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on both conservation and climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Nancy	Sullivan	Cincinnati	OH	45205	No to the Willow Master Development Plan	As an Episcopalian, I have followed many issues around fossil fuel extraction in Alaska. I am telling my sons I don't want grandchildren, global climate chaos is not a world for the next generation. Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Judy	Clark	Cinebar	WA	98533	Mitigate Climate Warming and Reject the Willow Master Development Plan	We are on a limited time frame to mitigate the catastrophic effects of climate warming on this planet. This drilling project, the Willow Project by ConocoPhillips, does not benefit those mitigation efforts, but carries on the passive acquiescence we've had over the last 30 years by continuing the use of fossil fuels. Time is not on our side any longer. We must commit to protection of ecosystems, protection of wild places and wild life, and protection of the Native communities that live within this rapidly warming and deteriorating environment. Hold the line and be true to the promises made. Do not let the Willow Project move forward--STOP the drilling. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The Arctic is warming three times as fast as the rest of the United States. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses had failed to consider several factors. It failed to accurately describe or study the significance of the substantial greenhouse gas emissions the project would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and front-line communities can't afford anything less.	3/1/2022
Marshall	Dinowitz	Belmont	CA	94002	We must Reject the Willow Master Development Plan	Do we want to accelerate climate disaster? Do we want to further degrade the habitats that we and all the world depend on? NO! Reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. End the pattern of oil companies drilling in the Arctic. Stop the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and front line communities can't afford anything less. PLEASE DO NOT PERMIT ANY DRILLING FOR OIL! We need to cease using fossil fuels as soon as possible for the sake of the planet and life on the planet. Climate change has already created horrific results, we must do all we can to cut down on the amount of gases in our atmosphere that cause more warming and thus more severe climate change. PLEASE DO YOUR PART!	2/25/2022
Jean	Le Marquand		QC	H7W 4P4	Reject the Willow Master Development Plan	I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. This history of allowing oil companies drill in the Arctic with complete impunity for the harm caused to people, wildlife and the planet. Approving Willow would dishonor President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less.	2/27/2022
Steve-Anna	Stephens	Tucson	AZ	85718	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Linda	Yow	Glenallen	MO	63751	Reject the Willow Master Development Plan	Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. We need to stop letting oil companies drill in the Arctic without regard for the harm it causes. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Linda	Aron	Loveland	CO	80538	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I have been to Alaska, and it is an outstandingly beautiful land. To allow drilling would spoil its beauty, not to mention the harm to wildlife and Native Alaskans. We can't spoil one of our last remaining pristine environments by allowing drilling in it. Please don't allow this to proceed! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less.	2/25/2022

Nancy Anne	Earl	San Francisco	CA	94131	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Sheila	Wofsy	Suches	GA	30572	Reject the Willow Master Development Plan	As our environment is increasingly in peril, it is tantamount that we protect what is left of pristine habitat and the species that depend on it. That is not done with massive new oil drilling projects. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Kathleen	SEWRIGHT	Winter Springs	FL	32708	The Willow Master Development Plan is a REALLY BAD idea.	The Western Arctic is NO place for industrial fossil fuel development--we are in a full-blown climate emergency, and more drilling--in the Arctic or anywhere else--will just make it worse. We certainly don't need the estimated 280 million tons of greenhouse gasses that the project would produce over 30 years, we don't need up to 250 wells, more than 380 miles of vulnerable pipeline and all of the traffic from the countless trucks that would be hauling gravel and other material, ruining millions of acres of currently pristine habitat for polar bears, caribou and migratory birds. This project is not necessary, will do more harm than good, and is only being proposed because of the greed of ConocoPhillips and its contempt for the people and animals of this earth. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds -- as well as Indigenous communities that have relied on the land for millennia. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Sincerely, Guyonvarch Nathalie France Bretagne 56 Février 2022</p>	2/28/2022
Erin	Thomson	Tucson	AZ	85719	Reject the Willow Master Development Plan	<p>I am shocked and very angry that this terrible 'plan' is being considered once again. I very strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

Isaac	Kantor	Missoula	MT	59803	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Additionally, you are both familiar with the American west, with Ms. Stone-Manning from my own state of Montana, and I expect that you've both experienced the increased summer drought and wildfire plaguing us for the last couple of decades. Although Alaska's western arctic is a bad location for oil and gas development due to local ecology, any oil and gas development is moving us backward instead of forward from a climate change perspective. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022
Ed	Friedman	Bowdoinham	ME	4008	Preserve the Reserve!	Particularly from my perspective as a former USFWS researcher on the Arctic National Wildlife Refuge I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Stephanie	Phan	South Pasadena	CA	91030	Reject the Willow Master Development Plan	I am writing to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Alaska and the earth are warming. There is unrefutable scientific evidence of this, agreed upon by nearly the entire scientific community. Oil drilling makes this worse. Oil drilling may be profitable - but only in the short term. The long term financial consequences of oil drilling however will be born by the costs of money spent on carbon reduction strategies that may not ultimately work. It is extremely short sighted to only think of short term financial gains. If the Reserve is drilled, multiple future generations of Americans - and the world - will see your decision to allow this to happen as a capstone to the destruction of the planet. You will not be remembered in a good light. You may not care about that now, but you will one day, as will your children's children. That is inevitable. You can help prevent coastal erosion, sea-ice loss, and harm to numerous species that depend on the icy landscape to survive. I urge you, as a fellow human being and a fellow American, to use your legal authority to adopt the no-action alternative and reject this project. You have the ability to help leave the world a better place than it is. I hope you take this opportunity to do so.	2/25/2022
Kelly	Wynn	Reston	VA	20191	Reject the Willow Master Development Plan	Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. The climate, wildlife and frontline communities can't afford anything less. It's time to tell these antiquated money machines that enough is enough. We can make more and better power with alternate sources of energy.</p>	2/27/2022
Sabine	coller		United King	74300	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole— Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs — ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/27/2022
Alan	Benford	Manchester	CT	6042	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. THE ONLY SAFE PLACE FOR FOSSIL FUELS IS IN THE GROUND. ANY INVESTMENT IN SUBSIDIZING, EXPLORATION, EXTRACTION, PROCESSING, TRANSPORTING OR USING FOSSIL FUELS SHOULD BE REDIRECTED INTO SUSTAINABLE/RENEWABLE SOURCES OF ENERGY. THE ENVIRONMENTAL DAMAGE DONE BY ANY OF THESE ACTIVITIES WITH FOSSIL FUELS IS IMPOSSIBLE TO TOLERATE. THE LIFE OF THIS PLANET, OUR LIVES AND THE LIVES OF OUR CHILDREN AND GRANDCHILDREN DEPEND ON OUR TAKING ACTION NOW!! PLEASE DO EVERYTHING YOU CAN TO SAVE OUR PLANET AND OUR LIVES!! Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Elisabeth	Clemmons	Pawling	NY	12564	Reject the Willow Master Development Plan	<p>I am a public policy student deeply invested in Arctic affairs, including in Alaska. I am writing to ask you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve in Alaska. The exploitation of the Arctic without regard for the harm it causes to people, wildlife and the planet must be stopped once and for all. Approving Willow would represent an utter failure on climate leadership and endanger our position in Arctic security. What we truly need is an Arctic Treaty that forbids nations from exploiting the areas around the borders - not more profiteering and manipulation of the masses. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The Willow project would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has already warmed more than twice as fast as the rest of the United States over the past 60 years. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. This is hypocritical, risky technology that fails to systemically prevent long-term permafrost thaw and other damage. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. ConocoPhillips is manipulative and attempting to evade accountability all for the sake of their own selfish profit. There is an urgent need to stop approving new fossil fuel development and transition to clean, renewable energy and ceasing ConocoPhillips's profiteering once and for all is essential to this. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Carol	Wong	Los Angeles	CA	90045	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Laura	Rushing	Colorado Springs	CO	80915	Reject the Willow Master Development Plan	I had such high hopes for the Biden administration. Hope that the powers that be would restore sanity to our government, hope that politicians would listen to the people that they serve and hope our planet would survive the greedy humans. I find it exhausting to live in the golden age of stupidity. Please do the right thing. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Michael	Mendiola	Mukitoo	WA	98275	Reject the Willow Master Development Plan	I'm writing to STRONGLY URGE you to reject approval of ConocoPhillips' Willow oil drilling project in the Alaska. Your administration must STOP letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis all for the PROFIT OF PRIVATE COMPANIES. The Bureau of Land Management, itself determined the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases and ONLY PROFIT PRIVATE COMPANIES. Over only the last 60 years, Alaska has warmed more than twice as fast as the rest of the United States. This warming is already causing coastal erosion, sea-ice loss, and harm to countless species who depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using RIDICULOUS giant chillers to refreeze thawing permafrost to ensure THEIR solid drilling surface. But the project would only cause more permafrost thaw RELEASING TONS OF METHANE (4x more potent than CO2) and other numerous types of damage to the RESERVE's local surface resources as well as the climate from climate change. The prior environmental analysis for the project was inadequate and failed describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, caribou and migrating birds. This includes harm from increased noise pollution and the potential for vehicles crushing bear mothers and cubs in their dens. If the new roads would disrupt caribou migration routes and open the reserve for poachers and hunters. And they REFUSED TO EXAMINE THEIR RATIONALE FOR THE PROJECT in light of the URGENT NEED TO STOP APPROVING NEW FOSSIL FUEL DEVELOPMENT AND TRANSITION TO CLEAN, RENEWABLE, SUSTAINABLE ENERGY. ANY FULL SCIENCE-DRIVEN ANALYSIS WILL SHOW THE RISKS OUTWEIGH THEIR DESIRE FOR PROFIT. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022

Mark	Olinger	Mount Vernon	TX	75457	Reject the Willow Master Development Plan	<p>Alaska is home to 23 million acres of pristine habitat for iconic species like polar bears, caribou, and birds that migrate to six continents — even, maybe, to your own backyard. But if ConocoPhillips gets its way, this single-largest piece of undeveloped public land in the United States will be breached by a gigantic oil development. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your organization must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling in the National Petroleum Reserve-Alaska will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, hundreds of miles of ice roads, more than 380 miles of pipelines, an airstrip, a gravel mine, a processing plant, and countless trucks that could crush mother polar bears and cubs in their dens. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Cindy	Parker MD	Salida	CO	81201	Reject the Willow Master Development Plan	<p>As a physician charged with protecting the public's health, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. We depend on healthy ecosystems for our most basic needs - clean water, healthy soil to produce good, clean Air, and a stable climate. Healthy ecosystems require biodiversity to maintain their own health. Drilling in one of the most pristine, but already beleaguered by climate change ecosystems in the world, puts everyone's health at risk. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Sylvia	DRIOULE		AK	46817	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole– Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueraient irrévocablement cet écosystème fragile et ne feraient qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/25/2022
Kathy	Berigan	Cohasset	MA	2025	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. The climate, wildlife and frontline communities can't afford anything less. Thank you for your most urgent attention, time, and care in protecting the Arctic. Most sincerely, Kathleen M Berigan Educator Conservation Commissioner Cohasset, MA 02025</p>	2/25/2022
Carol	Van Petten	Riverside	CA	92503	Reject the Willow Master Development Plan	<p>I strongly urge you to prevent oil-drilling by Conoco Phillips in the Alaskan National Petroleum Reserve. This is an appalling violation of the world's TOP PRIORITY at this time: decreasing use of fossil fuels to prevent even further global warming. This HAS to be addressed before all else. Furthermore, the Reserve is the home of indigenous people who have lived there for thousands of years, and also to many animals and birds. The future lives of these humans and animals need to be saved. This project is reckless, dangerous, and in total disregard of the urgency of halting further damage to the planet and all life on it. We need to put all our effort into transitioning to renewable and clean energy. Future generations are depending on your action. Sincerely, Carol Van Petten, MD Riverside, CA 92503 cjvp@charter.net</p>	2/25/2022
Roberta	Swanson	Walnut	CA	91789	REJECT the Willow Master Development Plan!	<p>I urge you to REJECT approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Sharon	Burke	Seattle	WA	98126	Please Stop the Willow Master Development Plan	Please reject the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. We must stop oil companies from defiling our remaining wilderness areas. If we are to have any hope of stopping the worst of climate change, you cannot allow this massive greenhouse gas-producing project to proceed. In addition to the life-threatening greenhouse gas emissions, there is also localized toxic pollution and spills from this kind of drilling project that will decimate wildlife in the area and threaten the indigenous communities that live nearby. The National Reserve is home to many endangered and threatened species like the polar bear and many migratory birds. When we elected Joe Biden, he promised to end new drilling on federal lands and if this project is allowed to go forward, that would be a huge betrayal. I live in the Pacific NW and am already seeing unprecedented wildfires, prolonged drought and ocean acidification that is killing marine life. If we continue as we are, rising sea levels will eventually drown our island and coastal communities. Please, we know what the problem is and what steps we must take to stop it. Keep the oil in the ground. Preserve our wild spaces and biodiversity. You must use the no-action alternative and stop the ConocoPhillips Willow Master Development Plan.	3/1/2022
Robert	Johnson	Denver	CO	80203	Reject the Willow Master Development Plan	My family, friends and myself here in Colorado, need you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Richard	Bradus	San Francisco	CA	94115	Reject the Willow Master Development Plan	I am writing to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. It is imperative that our government must thoroughly reconsider applications for oil exploration and drilling in the Arctic with full consideration the harm it causes to people, wildlife and the planet. I have read that the Western Arctic Reserve is the largest undeveloped place in the United States, home to Indigenous communities that have relied on the land for millennia as well as polar bears, caribou and millions of migratory birds which require this land for survival. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Approving Willow would break President Biden's promise to end new drilling on federal lands and would be a failure of climate leadership. According to the Bureau of Land Management, the Willow project would be a massive industrial undertaking, projected to produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Already, over the past 60 years Alaska has warmed more than twice as fast as the rest of the United States. This warming is causing increasing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Amazingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the full extent of the project's impacts on polar bears. I am particularly concerned, as a bird enthusiast, of the detrimental impacts for migrating birds, already suffering from significant habitat destruction and alterations from climate change. Most glaringly, the prior analyses failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. A comprehensive, science-driven analysis will show that the risks are far too great, and the benefits will be few and go primarily to ConocoPhillips and its partners, not the American people. The best alternative for the vast majority of Americans is one of sustainable energy development, protection of the wildlife and habitat of precious regions such as the arctic, and support for the frontline and indigenous communities. I therefore urge you to use your legal authority to adopt the no-action alternative and reject this dangerous project. Please consider all the impacts and make the best decision to lead to a more sustainable future.	3/8/2022

Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Fran	Majestic	Bark River	MI	49807	Reject the Willow Master Development Plan	Secretary Haaland and Director Stone-Manning, I have to believe you are both adamantly opposed to reapproving this plan and will put forth the no-action alternative. This plan was approved ABSENT appropriate science in the first place. I cannot imagine that the Biden administration would even consider this project. What happened to true action on reducing climate destruction? Not only will this not stop current problems, it will jumpstart a faster demise for the earth. Is your climate action limited to injecting money into electric cars and thinking that's all it takes to keep the environmentalists voting? I've had the privilege of visiting the Arctic more than once, and the changes I've seen in a few short years due to drilling and climate change, in the landscape and the birds and wildlife, are stark and unsustainable. How dare we even consider deliberately signing off to ruin some of the last of the most pristine lands in North America? In the interest of what? Driving around to buy fast food or more junk? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less. As we get closer to the 1.5 degrees of warming which will tip the scales of climate change in a catastrophic direction we MUST STOP oil and gas exploration and development. Time is running out. Please keep the President's promise for the sake of our children and grandchildren.</p>	2/25/2022
Angela	Bates	Questa	NM	87556	No development in the western arctic !	<p>The horrifying plan proposed by Conoco must be stopped. Our planet cannot tolerate another abuse of this size. At some point, like right now, we humans must say NO to the degradation of this planet. Our survival and that of the millions of species we share this beautiful earth with is at stake. Corporate greed and profit must be curtailed. I voted for the Biden administration for this reason. And I celebrated his appointment of you, Secretary Haaland, a fellow New Mexican, hoping you would bring compassion and a long term understanding of humans' debt and responsibility to our only home - and be a force for protecting it. Please side with our earth. Shut down this disgusting corporate assault on the arctic. Thank you!</p>	2/25/2022
Tom	Parrett	Millerton	NY	12546	Willow Master is a Disaster	<p>Please do not approve the ConocoPhillips Willow oil-drilling project in the National Petroleum Reserve—Alaska. The pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet must end. Moreover, Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and exacerbate the climate crisis. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Marjorie	Hoskinson	Thousand Oaks	CA	91360	Reject the Willow Master Development Plan	<p>Again and again, I have asked, demanded, pleaded that no more fossil fuel be developed in fragile habitats. Please recognize how dangerous it is to continue our wasteful practices of developing and burning oil. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Elizabeth	Sexton	Clarkdale	AZ	86324	Reject Willow Master Development Plan	<p>Please say NO to the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. This reserve is undeveloped. It is an essential resource for indigenous people in the area, and the animals and plants of the region. It is essential for climate change that we stop destroying the carbon holding natural places we are stewards of. The project would devastate the area by lacing it with roads and airports and drilling sites. This means pollution and eco damage for a pristine area. According to the Bureau of Land Management, the Willow project would As long as land, animals, and trees are looked at as commodities we will continue to destroy our planet home.</p>	2/25/2022

It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Allan	Tweddle	Charleston	WV	25304	Reject the Willow Master Development Plan	<p>We do not need this Climate killing project. We must be on track to use less oil that is a major source of greenhouse gas emissions. And Alaska's pristine condition must be preserved for our health and that of our children, grandchildren and theirs as yet unborn. So as an 89 year senior, an engineer whose entire career has been focused upon eliminating air pollution and addressing the global warming crisis, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. The climate, wildlife and frontline communities can't afford anything less. Let's keep the Arctic pristine as Mother Nature has planned.	2/27/2022
Lynn	Bradley	Staunton	VA	24401	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. This project is incompatible with our efforts to slow climate change and it will damage pristine ecological areas that with global warming, stand no chance of recovery. Now is the time -- your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Carol	Papworth	Mukilteo	WA	98275	Reject the Disasterous Willow Master Development Plan	I'm writing to STRONGLY URGE you to reject approval of ConocoPhillips' Willow oil drilling project in the Alaska. Your administration must STOP letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis all for the PROFIT OF PRIVATE COMPANIES. The Bureau of Land Management, itself determined the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases and ONLY PROFIT PRIVATE COMPANIES. Over only the last 60 years, Alaska has warmed more than twice as fast as the rest of the United States. This warming is already causing coastal erosion, sea-ice loss, and harm to countless species who depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using RIDICULOUS giant chillers to refreeze thawing permafrost to ensure THEIR solid drilling surface. But the project would only cause more permafrost thaw RELEASING TONS OF METHANE (4x more potent than CO2) and other numerous types of damage to the RESERVE's local surface resources as well as the climate from climate change. The prior environmental analysis for the project was inadequate and failed describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, caribou and migrating birds. This includes harm from increased noise pollution and the potential for vehicles crushing bear mothers and cubs in their dens. ll the new roads would disrupt caribou migration routes and open the reserve for poachers and hunters. And they REFUSED TO EXAMINE THEIR RATIONALE FOR THE PROJECT in light of the URGENT NEED TO STOP APPROVING NEW FOSSIL FUEL DEVELOPMENT AND TRANSITION TO CLEAN, RENEWABLE, SUSTAINABLE ENERGY. ANY FULL SCIENCE-DRIVEN ANALYSIS WILL SHOW THE RISKS OUTWEIGH THEIR DESIRE FOR PROFIT. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022

Ellen	Karnowski	Kelseyville	CA	95451	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and front line communities can't afford anything less. Keep the Arctic oil in the ground!</p>	2/26/2022
David	Rudin	Colorado Springs	CO	80904	<p>Come Down on the Right Side of History: Reject the Willow Master Development Plan</p>	<p>As the world teeters on the edge of war and climate change further destabilizes our futures, now is the time to send a clear message that we are moving in a new direction. The polar region is changing fast, fueling that change not only affects the creatures and peoples of the Arctic but everyone who calls planet earth home! This is why I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Sarah	Fichter	Washington	DC	20008	Reject the Willow Master Development Plan	As a someone who is increasingly worried about our ability to survive on this planet if we do not take real and meaningful action right now, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. It's your time to act, you have the power to make an enormous difference in the shape of all of our future. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. The climate, wildlife and frontline communities can't afford anything less. We are depending on you to help us all. Please, I am asking you to take bold action away from yet more fossil fuels.	2/28/2022
Peter	Jones	Northport	AL	35475	Reject the Willow Master Development Plan	Please reject ConocoPhillips' Willow project in Alaska's National Petroleum Reserve. Approving Willow will break President Biden's promise to end new drilling on federal lands. The 23-million-acre Reserve is home to polar bears, caribou, migratory birds, and Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irreparably scar this fragile ecosystem. According to the Bureau of Land Management, the Willow project would involve up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, 380 miles of pipelines, and a gravel mine. Burning that oil would emit nearly 280 million tons of greenhouse gases. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze permafrost to help create a solid drilling surface! But the project would then cause more permafrost thaw and harm important surface resources. Prior environmental analyses for the project failed to accurately study the consequences of related greenhouse gas emissions. Prior analyses failed to properly consider impacts on polar bears, including the possibility that project vehicles will crush bears and cubs in their dens. Prior analyses also failed to examine the project in light of the urgent need to transition to clean energy. Comprehensive scientific analysis will show that these risks outweigh the benefits of the Willow project. Please use your legal authority to adopt the no-action alternative and reject the Willow project.	2/26/2022
C. Sharyn	Magee	Pennington	NJ	8534	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. I am especially concerned about protecting biodiversity. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Marilee	Potthoff	Los Angeles	CA	90045	Reject the Willow Master Development Plan	<p>For the sake of the planet, the National Petroleum Reserve needs to be left untouched by oil and development. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration needs to end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Furthermore, approval of Willow would break President Biden's promise to end new drilling on federal lands and represent a failure in climate leadership at a critical time. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please side with the environment for a beautiful healthy America!	2/25/2022
Adrienne	S.	Erie	CO	80516	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you.	2/27/2022

L.	Watchempino	Pueblo Of Acoma	NM	87034	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to this critical ecosystem - to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and take a step backwards on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and accelerate our climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only exacerbate and damage the Reserve's numerous important surface resources. The previous environmental analyses for the project failed to accurately describe or study the significant greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on endangered polar bears, such as harm from increased noise pollution and the potential for project-related traffic and road construction to crush bear mothers and cubs in their dens. And they failed to account for the The climate impacts of approving new fossil fuel development and the need to transition to clean, renewable energy. Any comprehensive, science-driven analysis of this project will show that the risks outweigh any economic benefits. You must use your legal authority to adopt the no-action alternative and reject this irresponsible project. Our climate, wildlife and frontline communities shouldn't have to pay the price for unfettered development.</p>	2/26/2022

Rebecca	Richardson	Tucson	AZ	85749	Reject the Willow Master Development Plan	In the name of God, please protect what we have left of pristine regions. You have the power to do this, at least in America, and so you should. We must be stewards of the land and its wildlife, not destroyers. The entire planet will see that the US truly wants change from poisonous fossil fuels that we now know are a big part of climate change. We need to lead. We WILL SUCCEED IN DEVELOPING ALTERNATIVE ENERGY SOURCES. It is short-sighted for us to enable use of fossil fuels, thinking that Oh, just for another short while. Procrastination. We delude ourselves that we must have oil to survive. Nope. Actually we ought to sacrifice our wasteful 'needs'--for huge vehicles, for cruise ships, for heating and cooling everywhere into oblivion. We must submit to inconveniences in our personal lives that are selfish. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Marilou	Jung		CA	57910	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole– Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/25/2022
Patty	Teubner	Kirkland	WA	98034	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Sophia	Lyles	Friday Harbor	WA	98250	Reject the Willow Master Development Plan	<p>The issue of developing the Western Arctic in the next 20 years is of paramount importance to every human being on Earth. As ice melts and new road ways and water ways open up every oil and gas company in the world will want to get a piece of the potential profit to be had by drilling for fossil fuels. This is a bad idea not only because of the pristine natural spaces that exist in the arctic, but also because of the wildlife that live there. If protecting these things from destruction is not enough of a reason to not open the Western Arctic to fossil fuel development, perhaps the fact that if it is opened up and we burn those fossil fuels we are condemning our planet to global ruin via climate change. The American people keep waiting for our elected officials to act like sane human beings and take action on this urgent issue. So I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Juanita	Hull	Ogden	UT	84405	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership... The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. STOP THEM IMMEDIATELY - DON'T LET THEM ANYWHERE NEAR THAT AREA. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. SUCH A TRAGIC PROJECT. ???????? Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. THESE ARE LIVES THIS PROJECT WILL DESTROY AND I'M SURE YOU'RE NOT A MURDERER. RIGHT?	
Maria	M Angelini	Los Angeles	CA	90027	Reject the Willow Master Development Plan		2/26/2022
						I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet and future generations.. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The President must stand behind his campaign promises. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis causing a due and irreversible harm to this eco system. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Be on the right side of history. This is a moment in time that defines your legacy as well as our President.

David J	Hunt	Spokane	WA	99203	Reject the Willow Master Development Plan	I ask you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic. We simply must not allow the further harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's PROMISE to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States. It is home to polar bears, caribou, millions of migratory birds, and Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and greatly exacerbate the climate crisis which is already beginning to bring devastation, destruction, desertification, and death to our imperiled earth. IF WE DO NOT CHANGE OUR DIRECTION, WE WILL END UP WHERE WE ARE HEADING !! According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw.
