Lisa	Mandarino	Redondo Beach	CA	90278	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Larry	Olson	Montpelier	VA	23192	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Andrea	Snyder	Hickory	NC	28602	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Justin	Chernow	Paso Robles	CA	93446	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Claude	Leger		ON	K0C1A0	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022
Paula	Hensel	Naples	FL	34113	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Sarah	Weekley	Dayton	OH	45439	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

David	Fallow	Madison	WI	53714	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Margo	Salone	Shubuta	MS	39360	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Caroline	Kipling	Georgetown	MA	1833	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Alison	Collins	Lafayette	CA	94549	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Cheryl	Parkins	Oakland	CA	94611	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Gemma	Isaac		Lancashire	BLO 9yN	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Gretchen	Roberts	Avon Lake	OH	44012	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Lu	Shoberg	San Jose	CA	95116	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
David	Mullett	Vienna	VA	22180	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Harrie	Kessler	Kirkland	WA	98034	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
Leigh	Sands	Denton	MD	21629	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Stephanie	Walkowiak	Costa Mesa	CA	92627	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Caitlin	Archambault	Richmond	VA	23220	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022
Eliot	Kaplan	Woodland Hills	CA	91364	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/27/2022

The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Chris	Tassone		ON	l7e2n8	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Nancy	Peters.	Kirkland	WA	98033	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
Norma	Kline	Meadville	PA	16335	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
maureen	loosli	Gilbert	AZ	85234	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Dorothy	Parshall	Langley	WA	98260	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/3/2022
Susan	Magana	Tracy	CA	95377	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
Jackie	Morales	Denver	CO	80209	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Jo	Feyhl	Lebanon	NH	3766	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Kathryn A	McWilliams	Colorado Springs	CO	80909	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Alyssa	Freeman	Henrico	VA	23238	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Linda	Leonard	Summit	NJ	7901	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Patricia	Anderson	Marquette	MI	49855	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Twila	Roth	Encinitas	CA	92023	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Michael	Hall	New Britain	CT	6051	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Dana	Facaros	Cleveland	OH	44113	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Mary	Mallonee	Hartsdale	NY	10530	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Jonathan	Adams	Stoneham	MA	2180	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
Lisa	Warden	Salem	VA	24153	Please! Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Elizabeth	Enright	Scottsdale	AZ	85251	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

karen	steele	Eureka	CA	95501	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Jenny	Chin		QC	JOL 2H0	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Keri	Smith	Jupiter	FL	33469	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. William	Uzgalis	Corvallis	OR	97330	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Margot	TollefsonConard	Stratford	IA	50249	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Susan	Campbell	Bolton	CT	6043	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
