CHERYL	FAHLMAN	Gaithersburg	MD	20879	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Cynthia	Faulkner	Burlington	WI	53105	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Kathy	Lee	Costa Mesa	CA	92627	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Tobin	MacIntosh		ON	M4L2B2	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Cynthia	Leask	Canby	OR	97013	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Eric	Brooker	Charleston	SC	29492	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Dave	Searles	Brodhead	WI	53520	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Heidi	Siebens		--	2812	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/2/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Carole	Pappas	Grand Blanc	MI	48439	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Colin	Harris		london	n16 5ds	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Sheila	Martin	Astoria	OR	97103	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
Sammy	Low	Stanwood	WA	98292	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Charles	McDonald	Tucson	AZ	85750	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Michael	Thomas	Woodruff	WI	54568	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Stephen	Boletchek	Apex	NC	27502	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

mindy	sturgis	Westminster	MD	21157	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Steven	Wy	Malden	MA	2148	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
J	McDermott		BC	V5H 2J3	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
DOLORES	K	Mission	KS	66202	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/4/2022

Erika	Shershun	San Francisco	CA	94109	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Faith	Williamson	Eden Prairie	MN	55344	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Eesha	Williams	Brattleboro	VT	5301	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

A.	Todd	Eugene	OR	97404	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Michael	Lemes	Mililani	HI	96789	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Chris	Pincetich	Petaluma	CA	94954	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Ann	Toner	Middletown	NY	10940	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022
Susan	Ash	Flagstaff	AZ	86004	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/1/2022
Sharon	Clark	Holly	MI	48442	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Dale	Armelin	Commerce City	CO	80022	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Noemi	Catalina-Hernandez		Spain	25001	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/28/2022

The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Justin	Truong	San Francisco	CA	94112	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/28/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Dolores	Fifer	Pittsburgh	PA	15201	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Gina	Ness	Eureka	CA	95501	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	3/8/2022
Lynn	Offutt	Everett	WA	98208	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Christine	Stalter	Oak Forest	IL	60452	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Laura	Rushton	Strongsville	OH	44149	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Alfred	Ferraris	Port Townsend	WA	98368	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Kathy	Shiroky	Las Vegas	NV	89139	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Anna	Hamilton		QC	J6k113	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Erin	Van Sante		AK	8470	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Paula	Feldmeier	Salem	OR	97305	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Darla	Bowman	Louisville	KY	40220	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022
Eunice	Sousa		AK	27450	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Cynthia	Dickinson	Brimfield	MA	1010	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Mark	Wolf	South Milwaukee	WI	53172	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Stephanie	Jackel	Vista	CA	92081	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
