Jon	Sheehan	Bell Gardens	CA	90201	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. #SenatorManchin: TheCorporateShill #SenatorSinema: TheSellout #ClimateCrisis Climate Emergency #BlackLivesMatter [Disclosure: I am an old white man] #ClimateCrisis Climate Emergency #SaveTheBees #FridaysForFuture Learn to Call BULLSHIT on Climate Change Deniers #ActOnClimate #TeamSeas #WealthTax #Legalizeit #NetNeutrality #SaveTheNet #StayAtHome #PeoplesVaccine #PardonSnowden #NoBanAct #StopTheBans #BansOffMyBody #ENOUGH #ThisIsMyLane #BelieveSurvivors #BlackLivesMatter #CancelStudentDebt #ImpeachKavanaugh #IMPOTUS2 #TRE45ON #MoscowMitch #LeningradLindsay #CancunCruz Say 'No' to NAZIs! ?????</p>	2/26/2022

William	Holliday	Austin	TX	78717	Reject the Willow Master Development Plan	Reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to us. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. How stupid and shot-sighted. Any comprehensive, science-driven analysis will show that the damage would be far too great. You must use your legal authority to adopt the no-action alternative and reject this catastrophic project. You and I and our country and even the globe can't afford anything less. By the way, I'm 72 and spent 44 years in the oil industry so I know the players and their methods.	2/27/2022

Marie-Christine	Emonet-Viard		Île-de-Franc	78580	Reject the Willow Master Development Plan	<p>Je vous exhorte à rejeter l'approbation du projet de forage pétrolier Willow de ConocoPhillips dans la réserve nationale de pétrole– Alaska. Votre administration doit mettre fin à la tendance consistant à laisser les compagnies pétrolières forer dans l'Arctique sans tenir compte des dommages qu'elle cause aux personnes, à la faune et à la planète. Approuver Willow briserait la promesse du président Biden de mettre fin aux nouveaux forages sur les terres fédérales et représenterait un échec total en matière de leadership climatique. La réserve de 23 millions d'acres est le plus grand endroit non aménagé des États-Unis, abritant des ours polaires, des caribous et des millions d'oiseaux migrateurs – ainsi que des communautés autochtones qui dépendent de la terre depuis des millénaires. Les forages pétroliers et gaziers ici marqueront irrévocablement cet écosystème fragile et ne feront qu'exacerber la crise climatique. Selon le Bureau of Land Management, le projet Willow comprendrait la construction et l'exploitation d'un maximum de cinq sites de forage, de 250 puits, d'une installation de traitement, de centaines de kilomètres de routes de glace, d'une piste d'atterrissage, de plus de 380 milles de pipelines et d'une mine de gravier. Il produirait environ 590 millions de barils de pétrole sur 30 ans. Brûler ce pétrole émettrait près de 280 millions de tonnes de gaz à effet de serre. L'Alaska s'est réchauffé plus de deux fois plus vite que le reste des États-Unis au cours des 60 dernières années. Ce réchauffement cause déjà l'érosion côtière, la perte de glace de mer et des dommages à de nombreuses espèces qui dépendent du paysage gelé pour survivre et le dégel du pergélisol. De manière choquante, le plan de ConocoPhillips consiste à utiliser des refroidisseurs géants pour recongeler le pergélisol de dégel afin d'assurer une surface de forage solide. Mais l'approbation du projet ne ferait que causer plus de dégel du pergélisol et d'autres dommages causés par le changement climatique, y compris des dommages aux nombreuses ressources de surface importantes de la réserve. Les analyses environnementales antérieures du projet n'ont pas permis de décrire ou d'étudier avec précision l'importance des émissions importantes de gaz à effet de serre qu'il entraînerait. Ils n'ont pas non plus correctement pris en compte les impacts du projet sur les ours polaires, y compris les dommages causés par l'augmentation de la pollution sonore et la possibilité que des véhicules liés au projet écrasent des mères et des ours dans leurs tanières. Et ils n'ont pas examiné l'objectif et la justification du projet à la lumière du besoin urgent de cesser d'approuver le développement de nouveaux combustibles fossiles et la transition vers une énergie propre et renouvelable. Toute analyse complète et scientifique montrera que les risques sont beaucoup trop grands. Vous devez utiliser votre autorité légale pour adopter l'alternative sans action et rejeter ce projet dangereux. Le climat, la faune et les communautés de première ligne ne peuvent rien se permettre de moins.</p>	2/25/2022
Heather	Morijah	Halsey	OR	97348	Reject the Willow Master Development Plan	<p>I am writing today to strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. As you know, the 23-million-acre Reserve is the largest undeveloped place in the U.S., home to polar bears, caribou and millions of migratory birds — as well as First Nations communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the BLM, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. The bottom line: burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea ice loss, permafrost thaw and harm to numerous species that depend on the frozen landscape to survive. Ironically, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the *no-action alternative* and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you very much for your time and consideration of this important issue.</p>	2/25/2022

Paula	Morgan	Winter Springs	FL	32708	Reject the Willow Master Development Plan	The Western Arctic is no place for industrial fossil fuel development. We are fighting to save the planet, wildlife, animals, and so much more. People need transportation but we also need clean energy. Oil and gas just must ruin every part of the planet to drill for their greed. They are the reason we got to this point in the first place. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Betsy	Windisch	Gallup	NM	87301	Reject the Willow Master Development Plan	We must stop the ravaging of our Arctic land and the impact it has on Mother Earth. Enough is enough! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Frederick	Akers	Long Beach	CA	90803	Reject the Willow Master Development Plan	<p>Stop drilling -- especially in such places as Alaska's Arctic. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Larry	Kimball	Cotopaxi	CO	81223	Reject the Willow Master destruction Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The fossil fuel industry as a whole has shown no regard for the future of life on this planet. Greed is their only motivation (and keeping all those sweet subsidies coming their way). The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Melting permafrost, severe weather across the world should be enough to stop this illegal project. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Wallace	Elton	Middlebury	VT	5753	Reject the Willow Plan	I thought a plan was developed back in the Obama years that was supposed to protect much of this area. Regardless, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must halt the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent a total failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The Arctic already is suffering severely from climate change. Alaska has warmed more than twice as fast as the rest of the country over the past 60 years, with resulting coastal erosion, sea-ice loss, harm to numerous species that depend on the frozen landscape to survive, and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze Athawing permafrost to help ensure a solid drilling surface. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. andrea	eitsert	Los Angeles	CA	90034	REJECT the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration MUST end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. PLEASE DO NOT DO THIS. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Rebecca	Imel	Phoenix	AZ	85024	Reject the Willow Master Development Plan	<p>PLEASE! Consider the future of our planet. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Nancy	Arbuckle	San Francisco	CA	94109	Save the Western Arctic -- Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. My heart just sinks when I think of the implications of proceeding with this project. The thought of desecrating pristine habitat, how wildlife would be so terribly impacted, and how the climate emergency we face would be made far worse -- we just can't let these things happen. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds -- as well as Indigenous communities that have relied on the land for millennia. Erica	Walker		ON	M4C 3W2	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. In 2021, humanity was given a Code Red-it must not be forgotten! Oil development should be a thing of the past if we want a livable world for our children grandchildren and the rest of nature. If you have a code of ethics, don't ignore science or the children; reject this project based on science and the beauty of the earth with all its life forms. Emissions do not stay in one place, so the company is contributing to global emissions, ignoring climate science and the young once again. We will not be able to keep at bay, the dire 1.5 degrees. This company is just perpetuating insanity at a time when we must push healthy and safe projects only, in order to survive. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. It is poor leadership and void of compassion for future generations. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The indigenous, have borne the harshest impacts in terms of environmental racism. If this project goes through, their food, water, wildlife, livelihoods, culture and communities will be destroyed by environmental harm and increase climate events. Where is the consideration for the life on this land. We must co-exist with all biodiversity in order to create a livable world. I cannot comprehend why, in 2022, we are still assessing environmental harms on what the only expert, Science, has warned us about for decades and decades++? According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Did anyone ask the Aboriginals how they felt about people trampling on their lands, causing death, illness and more destruction? Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw.(radon escapi) Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. HAVEN'T GAS/OIL COMPANIES DESTROYED OUR PLANET ENOUGH??? DO YOU HAVE TO LET THEM KEEP ON DESTROYING EVERYTHING???</p>	2/25/2022
Mark	Butler	Moncks Corner	SC	29461	Reject the Willow Master Development Plan Now.	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Adelia	Harrison	Brooklyn	NY	11226	Reject the Willow Master Development Plan	<p>It is so heartbreaking the way human kind is gobbling up the earth and spoiling our last great wildernesses. The Arctic is precious and unique and irreplaceable. It should be protected for all time. We need alternative forms of energy and the oil and gas industry should be barred for all time from laying a hand on this sacred land. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Roy	Smoot	Kennebunk	ME	4043	Reject the Willow Master Development Plan	<p>Dear Secretary Haaland, Your heritage and love of our Creator's land and animals given to us seem to be deep within your heart and soul. As you consider approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska, I passionately urge you to reject and decline their request. Your administration must end this devastating pattern of letting oil companies drill in the Arctic without regard for harm it causes to people, wildlife and our planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia, just as Wabankai tribes here in Maine rely on their lands and waterways. Oil and gas drilling in the Reserve will irrevocably scar this fragile ecosystem and only exacerbate our climate crisis. According to the Bureau of Land Management, their Willow project would involve construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases into our atmosphere. Alaska has warmed more than twice as fast as the rest of America over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on frozen landscapes to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Their plan to do this once again shows corporate arrogance by interfering with Nature's processes for all animals and plant life. Approving their project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for their project failed to accurately describe or study the significance of substantial greenhouse gas emissions it will cause. They also failed to properly consider their project's impacts on polar bears, including harm from increased noise pollution and extreme potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for their project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show these risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

Lise	Wall	Idleyld Park	OR	97447	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Time is of the essence. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Such a project would cause more harm and cost than it is worth. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p> <p>Please choose the path of integrity at this crucial moment. Thank you.</p>	2/25/2022
BEN	JONES	Cedar Rapids	IA	52403	Immediately REJECT the Willow Master Development Plan	<p>I loudly urge you to immediately reject approval of ConocoPhillips' planet-killing Willow oil-drilling project in the National Petroleum Reserve-Alaska. The majority of Americans want your administration to end the suicidal & stupid pattern of letting oil companies drill in the Arctic (& everywhere else!) without regard for the horrific harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's crucial promise to end new drilling on federal lands and represent an utter failure on climate leadership. You know that the 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. And that at a time, when all the evidence points to IMMEDIATELY cease our use of fossil fuels or irretrievably ruin our only home planet! According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p> <p>Ditch this dangerous boondoggle ASAP with the thanks of my kids and yours!</p>	2/25/2022
Denis	Tidrick	San Antonio	TX	78239	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your departments must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represents an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas detection, extraction, and transport here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, harm to numerous species that depend on the frozen landscape to survive, and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Our climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Kathryn Suzanne	Stone	Middlebury	VT	5753	Reject the Willow Master Development Plan	Keep the oil in the ground. Stop this development in the fragile environment of the arctic that will hurt wildlife and indigenous communities. Tampering with the frozen ground destroys the whole environmental structure of the earth. Putting in pipelines, wells, roads, airstrips, mines and having countless trucks and heavy earth moving equipment will just destroy the environment. All this movement of the earth releases carbon and contributes to greenhouse warming gases and the potential for devastating oil spills as well as dangerous methane releases, contributing to global warming. Stop the Willow Master Development Plan.	2/25/2022
Fred	Townsend	Naples	FL	34114	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. It makes no sense to add fuel to the fire by enabling the burning of more fossil fuels. We visited Alaska in 1966 when it was a relatively pristine 'paradise'. We now spend winters in Florida which was a relatively pristine 'paradise'. If more fossil fuel development is undertaken, both regions will become 'paradise lost'.	2/25/2022
Pamla	Wood	Harrodsburg	KY	40330	Reject the Willow Master Development Plan	The ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve of Alaska is a bad idea and I ask you to reject it. I beg you to end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow is an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. As you surely know, the project's construction and operation would alter the area, and it would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Sure, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface, but what about the rest of the permafrost?! Environmental analyses for the project have not accurately described or studied the significance of the greenhouse gas emissions it would cause: significant. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. I urge you to adopt the no-action alternative, rejecting this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Linda	Lobik	Stevensville	MI	49127	Reject the Willow Master Development Plan	<p>Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands, and represent an utter failure in climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem, and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive. Permafrost is already thawing at an alarming rate, causing existing oil pipelines to twist out of place, and releasing carbon that had been stored for thousands of years into the atmosphere. Ironically, ConocoPhillips' plan would use giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approving this project would only cause more permafrost thaw, among other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution, and the potential for project-related vehicles to crush bear mothers and cubs in their dens. And, they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development, and rapidly transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative. Reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less.</p>	2/25/2022
Robert	Hughes	Chicago	IL	60618	Reject the Willow Master Development Plan	<p>Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Please stop letting oil companies drill the Arctic without regard for the harm it causes wildlife and the planet. Approving Willow will break President Biden's promise to end new drilling on federal lands. The 23-million-acre reserve is the largest undeveloped place in the U.S., home to polar bear, caribou and millions of migratory birds — and Indigenous communities that have relied on the land for millennia. Oil and gas drilling will irrevocably scar this fragile ecosystem and feed global warming. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. That infrastructure will harm wildlife. Willow would produce an estimated 590 million barrels of oil over 30 years. Burning the oil will emit nearly 280 million tons of greenhouse gases. Alaska is warming more than twice as fast as the U.S. over the past 60 years. This warming has caused coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on a frozen landscape to survive. Approving the project will cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Lys	Burden	Port Townsend	WA	98368	Reject the Willow Master Development Plan	My family and I (four taxpaying and voting adults) urge YOU to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. We agree that your administration MUST be the one to end the policy (whether official or not) of allowing oil companies to drill in the Arctic lands without regard for the harm it causes people, wildlife and our planet. It appears that approving the Willow Project would break President Biden's promise to end new drilling on federal lands. This action would constitute an utter failure on climate leadership by this administration. We understand that the 23-million-acre Reserve is the largest undeveloped place in the U. S., where polar bears, caribou roam and millions of migratory birds roost. Indigenous communities have lived and relied on this land for millennia. We concur that oil and gas drilling here would irrevocably impact this land's fragile ecosystem, and the project would only exacerbate the pollution levels creating our climate crisis. We learned that according to BLM, the Willow project would involve construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would also produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This level of impact on the land, water and air is unacceptable and unconscionable in these times of increasing climatic crisis. We have watched as Alaska has warmed more than twice as fast as the rest of the U.S. over the past 60 years, especially the last five. This current level of global warming has already caused coastal erosion, loss of sea-ice, and harm to numerous species that depend on the frozen landscape to survive and a immense permafrost thaw. Unbelievably, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to create solid surfaces for surfaces. But common sense tells us approving this project would only cause an increased rate of local permafrost thaw contributing to even more climate change. This project would irreparably harm the Reserve's numerous important land surface and groundwater resources. We have been informed that prior environmental analyses for this project have failed to accurately describe or evaluate the significance of its potential greenhouse gas emissions. Apparently the studies also failed to properly consider the project's impacts on polar bears, the harm from increased noise pollution and potential for project-related vehicles crushing bears and cubs in their dens. These omissions are unconscionable. Where is there any consideration for the urgent need to transition to clean, renewable energy? Any comprehensive, scientific analysis would show that the risks involved in this project are far too great. YOU must use your legal authority to adopt the no-action alternative. Reject this perilous project. The land, wildlife, local communities and climate crisis can afford nothing less.	3/7/2022

Janis	Buckreus	Yellowstone National	WY	82190	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Karen	Anderson	Thomson	GA	30824	Save People, Wildlife & the Planet: Reject the Willow Master Development Plan	The Western Arctic is no place for industrial fossil fuel development. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. I support ending this pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Because this 23-million-acre Reserve is the largest undeveloped place in the United States is home to various wildlife and Indigenous communities that depend on the land, please protect them by rejecting this project. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Jenifer	Steele	Berkeley	CA	94703	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Let's plan a future without destructive oil wells. Let's instead celebrate our wildlife. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Devin	Jarvis	Naugatuck	CT	6770	Reject the Willow Master Development Plan	It is time to phase out fossil fuels. The climate crisis is dire and well know at this point. We must lower carbon emissions and with this in mind it is beyond foolish to embark upon large new projects to access fossil fuels. Even more so in environments already feeling massive impact from the climate situation. At this point we must focus on developing new biofuel and green technologies as well as expanding on existing green energy. Let fossil fuels remain in the ground perhaps they will be useful for something in the future. Below follows a form letter. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please save the Western Arctic from industrial fossil fuel development!</p>	2/25/2022
Gillian	Guilbert		ON	L1S 1X5	Reject the Willow Master Development Plan	<p>PLEASE reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration MUST end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will IRREVOCABLY scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
John	zey	Sequim	WA	98382	Reject the Willow Master Development Plan	<p>No brainer. I will be dead since I am 80, but your kids and grandkids won't be. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Connie	Sweet	Lakeland	FL	33805	Please move to renewable energy and Reject the Willow Master Development Plan	Please follow the science and move away from fossil fuels. The remaining undisturbed Alaska lands need to stay just that way. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Colleen	Rodger	El Sobrante	CA	94803	Reject the Willow Master Development Plan	<p>I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Dorothy	Brown	San Francisco	CA	94110	Reject the Willow Master Development Plan	I urge you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must stop oil companies from drilling in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and would represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped piece of public land in the United States -- home to polar bears, caribou and millions of migratory birds, and to Indigenous communities that have inhabited the land for millennia. Oil and gas drilling will irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Over the past 60 years, Alaska has warmed more than twice as fast as the rest of the United States. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost temporarily to help ensure a solid drilling surface. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Prior environmental analyses for the project failed to study and accurately describe the significance of the substantial greenhouse gas emissions it would cause. They failed to consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. They also failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and front-line communities cannot afford anything less.	3/1/2022

Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Roelf	Van Bergen		Friesland	8607 BG	Reject the Willow Master Development Plan	Ik dring er bij u op aan om de goedkeuring van het Willow-olieboringsproject van ConocoPhillips in de National Petroleum Reserve-Alaska te verwerpen. Uw regering moet een einde maken aan het patroon om oliemaatschappijen in het Noordpoolgebied te laten boren zonder rekening te houden met de schade die het veroorzaakt aan mensen, dieren in het wild en de planeet. Het goedkeuren van Willow zou de belofte van president Biden breken om nieuwe boringen op federaal land te beëindigen en een totale mislukking betekenen op het gebied van klimaatleiderschap. Het 23 miljoen hectare grote reservaat is de grootste onontwikkelde plaats in de Verenigde Staten, de thuisbasis van ijsberen, kariboes en miljoenen trekvogels - evenals inheemse gemeenschappen die al millennia op het land vertrouwen. Olie- en gasboringen hier zullen dit fragiele ecosysteem onherroepelijk littekens bezorgen en de klimaatcrisis alleen maar verergeren. Volgens het Bureau of Land Management zou het Willow-project de bouw en exploitatie van maximaal vijf boorlocaties, 250 putten, een verwerkingsfaciliteit, honderden kilometers ijswegen, een landingsbaan, meer dan 380 mijl aan pijpleidingen en een grindmijn omvatten. Het zou naar schatting 590 miljoen vaten olie produceren over 30 jaar. Het verbranden van die olie zou bijna 280 miljoen ton broeikasgassen uitstoten. Alaska is de afgelopen 60 jaar meer dan twee keer zo snel opgewarmd als de rest van de Verenigde Staten. Deze opwarming veroorzaakt nu al kusterosie, verlies van zee-ijs en schade aan tal van soorten die afhankelijk zijn van het bevroren landschap om te overleven en permafrost te ontdoien. Schokkend genoeg omvat het plan van ConocoPhillips het gebruik van gigantische koelmachines om ontdooiende permafrost opnieuw te bevriezen om een solide booroppervlak te helpen garanderen. Maar het goedkeuren van het project zou alleen maar meer permafrostdooi en andere schade door klimaatverandering veroorzaken, waaronder schade aan de vele belangrijke oppervlaktebronnen van het reservaat. De eerdere milieuanalyses voor het project hebben het belang van de aanzienlijke broeikasgasemissies die het zou veroorzaken, niet nauwkeurig beschreven of bestudeerd. Ze hielden ook geen rekening met de effecten van het project op ijsberen, waaronder schade door verhoogde geluidsoverlast en het potentieel voor projectgerelateerde voertuigen die berenmoeders en welpen in hun holen verpletteren. En ze verzuimden het doel en de reden voor het project te onderzoeken in het licht van de dringende noodzaak om te stoppen met het goedkeuren van de ontwikkeling van nieuwe fossiele brandstoffen en de overgang naar schone, hernieuwbare energie. Elke uitgebreide, wetenschappelijk onderbouwde analyse zal aantonen dat de risico's veel te groot zijn. U moet uw wettelijke bevoegdheid gebruiken om het no-action alternatief aan te nemen en dit gevaarlijke project af te wijzen. Het klimaat, de natuur en de frontliniegemeenschappen kunnen zich niets minder veroorloven.	2/26/2022

Nancy	Haiston	Forestville	CA	95436	Please!! Reject the Willow Master Development Plan	<p>I can't even believe that my government is even considering a project like this I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Lillian	Makeda	Gallup	NM	87305	Reject the Willow Master Development Plan	<p>I am writing you today to ask you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Audrey	Diehl	Los Angeles	CA	90065	Protect the Arctic! Reject Willow Master Plan	<p>You cannot deny that our Earth is facing a Climate Emergency. It has never been more urgent to turn away from fossil fuels and to protect the last remaining endangered species habitats. There is no doubt that Climate Change will have devastating effects on all of the U.S. if we don't move boldly to stop and reverse its effects. Because of this, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. You and President Biden have promised to protect our environment and address Climate Change. In order to keep that promise, your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would represent an utter failure on climate leadership. I have children, and I want them to grow up in a world where natural places still exist and polar bears are not extinct because of the greed and stupidity of human beings. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks of new fossil fuel development in Alaska are far too great. Pipelines burst all the time. Fossil fuels are warming our planet, raising our oceans and poisoning our air. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Judith	Zingher	Elmsford	NY	10523	Reject the Willow Master Development Plan	<p>The Arctic is already melting and falling apart. Conoco-Phillips claims they have a plan to stop carbon pollution. This flies in the face of that promise. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Lindsey	Dye	Ann Arbor	MI	48108	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent this administration's failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irreversibly impact this fragile ecosystem and continue to exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This does not even account for the emissions created from carrying out this infrastructure. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming and the worsening albedo effect is causing coastal erosion, sea-ice loss, and conscious harm to numerous species that depend on the landscape to survive. Ironically, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface - recognizing the warming that they are causing and identifying it as an issue even for their own work. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous other important resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on species such as polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. I urge you to use your legal authority to adopt the no-action alternative and reject this dangerous and detrimental project. The climate, wildlife, and frontline communities can not afford anything less.	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. I want to someday take my daughter to see the natural untouched beauty created by God that this great nation has to offer. If we continue to destroy all of the natural habitats for Human needs then it will have a catastrophic effect on every living creature, minuet and large. Earth would be destroyed and there won't be anything left to enjoy. I pray that there is an alternative than to drill on Alaskan soil or any land that would endanger. Thank you	3/3/2022
James	Klein	Corpus Christi	TX	78411	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Climate change, like numerous other issues (gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.	2/25/2022

Anne	Randolph	Yellow Springs	OH	45387	Reject the Willow Master Development Plan	As someone who greatly appreciates the unlike and precious wildlife in the Western Arctic, I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I understand that this 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Very unfortunately, Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. I understand that the prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. I believe that any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please.	2/25/2022
Christina	Williams	Los Angeles	CA	90027	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Patricia	Matteson	High Falls	NY	12440	Reject the Willow Master Development Plan	I STRONGLY urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. Please note: --The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. --They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. -- They failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Lynn	Ricci	Hudson	WI	54016	Reject the Willow Master Development Plan	My heart hopes that the right thing is done for our environment so that ALL living can live their lives???????????????????? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Jennifer	Hewitson	Encinitas	CA	92024	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. When oil is required to be accessed we must find less fragile and pristine locations to do so. We know realistically, we are not free from oil needs, but as we strive to be better, we must protect our wild places. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Elinore	Cumings	Rosenberg	TX	77471	Reject the Willow Master Development Plan	The Natl Petroleum Reserve should not be compromised and destroyed to further enrich the few. Wildlife and indigenous people depend on the reserve. Our climate needs it to be preserved as is to prevent further destruction of our planet. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Diane	Kastel	Wheaton	IL	60189	Reject the "Willow Master Development Plan"!	<p>The Western Arctic is NO place for industrial fossil fuel development! Our family members, strongly urge you to reject approval of 'ConocoPhillips' Willow oil-drilling, project in the 'National Petroleum Reserve-Alaska'! Your Administration MUST end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and, the planet! Approving 'Willow' would break President Biden's promise to end, new, drilling on federal lands and, represent an, utter, failure on, climate, leadership! Successful litigation, and, fierce, advocacy have held this project at bay, thus, far. But, the federal government is, now, taking public comments on whether to re-approve the, proposed, 'Willow Master Development Plan'. The project would include up to 250 wells, hundreds of miles of ice roads, more than 380 miles of pipelines, an airstrip, a gravel mine, a, processing, plant, and, countless, trucks that could crush mother polar bears and cubs in their dens. Alaska is home to 23 million acres of, pristine, habitat for, iconic, species like polar bears, caribou, and birds that migrate to, six, continents. But, if 'ConocoPhillips' gets its way, this, single-largest, piece of, undeveloped, public land in the United States, will be breached by a, gigantic, oil development. The, 23-million-acre, 'Reserve' is the, largest, undeveloped, place in the United States, home to polar bears, caribou and, millions of, migratory, birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling, here, will, irrevocably, scar this, fragile, ecosystem, and, only, exacerbate the, climate, crisis! According to the 'Bureau of Land Management', the 'Willow' project would involve the construction, and, operation, of up to, five, drill sites, 250 wells, a, processing, facility, hundreds of miles of, ice, roads, an airstrip, more than 380 miles of pipelines, and, a, gravel, mine! It would produce an estimated, 590 million, barrels of oil over 30 years! Burning that oil would emit, nearly, 280 million tons of, greenhouse, gases! Alaska has warmed more than twice as fast as the rest of the United States over the, past, 60 years. This warming is, already, causing coastal, erosion, sea-ice, loss, and, harm to, numerous, species that depend on the, frozen, landscape to survive, and, permafrost, thaw. Shockingly, 'ConocoPhillips' plan involves using giant, chillers to refreeze, thawing, permafrost to help ensure a, solid, drilling surface. But, approving the project would, only, cause, more, permafrost thaw and, other, damage from climate change, including harm to the 'Reserve's', numerous, important surface resources. The, prior, environmental analyses, for the project, failed to, accurately, describe, or, study, the significance of the, substantial, greenhouse gas emissions it would cause. They, also, failed to, properly, consider the project's impacts on polar bears, including harm from, increased, noise pollution, and, the potential for, project-related, vehicles crushing bear mothers, and, cubs, in their dens. And, they failed to examine the purpose, and, the rationale, for the project in light of the, urgent, need to stop approving, new, fossil fuel development, and, transition to clean, renewable, energy. And, in the midst of the, ever-growing, climate emergency — already, hitting the Arctic hard — this project would emit more than 280 million tons of greenhouse gases over 30 years. Meanwhile it would cause oil spills, and, toxic, air pollution harming Indigenous communities on Alaska's 'North Slope'. Any, comprehensive, science-driven, analysis will show that the risks are, far, too great! You MUST use your, legal, authority to adopt the, no-action, alternative, and, reject this, dangerous, project! The climate, wildlife and, frontline, communities cannot afford anything less!</p>	2/25/2022
Suzanne	Alexander	Brentwood	TN	37027	Please Reject the Willow Master Development Plan	<p>I strongly urge you to please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Lynne	Gaudette	Candler	NC	28715	The Willow Master Development Plan is a DISASTER for Alaskan Wildlife	You were selected for your positions to protect our environment! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can not afford anything less.	2/25/2022
Terri	McKown	Inyokern	CA	93527	Reject the Willow Master Development Plan	I demand you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

The climate, wildlife and frontline communities can't afford anything less. I don't know if I've commented on this issue before, but I'm infuriated that these areas are EVER at the risk of destruction for profit. Fossil fuel companies have their grip on enough public land- they need to clean up what they've tainted and commit to better energy practices.	2/25/2022

Karen	Owens	Downingtown	PA	19335	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure of climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here would irrevocably scar this fragile ecosystem AND exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drilling sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive, AND permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would actually cause additional permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important natural surface resources. The already-completed environmental analyses for the project failed to accurately describe the significance of -- or even adequately study -- the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing mother bears and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to STOP approving new fossil fuel development and TRANSITION to clean, renewable energy sources. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. Wildlife, frontline communities, and the Earth's climate cannot afford anything less.</p>	2/26/2022

And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. With so little relatively pristine areas left on the globe, it is imperative to protect those few surviving areas, not just for the denizens of those areas but also for humanity and global survival. Fossil fuels must remain in the ground. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please continue the First Peoples' pledge to consider the next Seven Generations. Thank you for considering my comments	3/1/2022
Dusty	Cordell	Pueblo	CO	81004	Reject the Willow Master Development Plan	This shouldn't even be up for consideration!! Fossil fuels have already set this planet, the only one we can Really Live On, up for failure!! Everyone in our gov should hopefully be aware of that, and have enough sense to Not let ANY MORE searching for fossil fuels happen, WE HAVE TO GET OFF THAT SHIT!!! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Calah	Gipson	Nashville	TN	37204	Reject the Willow Master Development Plan	Reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Any comprehensive, science-driven analysis will show that the risks are far too great. Use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Janice	Palma-Glennie	Kailua Kona	HI	96745	Reject the Willow Master Development Plan	Aloha, What will be left for our children? abandoned oil fields speaking to an ignorant, greedy human legacy. that's why I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. Gail	Beeson	Milton Freewater	OR	97862	Say No to the Willow Master Development Plan	For decades we've been keeping the Arctic as free from drilling as possible and disaster due to same. It'd be great if we Americans would put greed on the back burner and consider the planet and the people that will be living on it years from now. How about all the wild things that depend on us to protect their lives and homes? Therefore, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Lloyd	Williams	Barre	MA	1005	Reject the Willow Master Development Plan	<p>Once again, I am writing to encourage you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Our National Reserves are reserved for a reason - to protect natural beauty from polluting development and to set areas of particular sensitivity aside as 'off limits' to business as usual on the part of Big Oil and Gas. We must put a permanent end to the pattern of allowing oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Why was it set up as a National Reserve in the first place? To protect it. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Nancy	Lasley	Park City	UT	84098	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We cannot afford to take chances with the environment any longer, no more steps backwards.	2/25/2022
Ann	Wardowski	Hillsboro	OR	97124	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Coastal Villages have already been moved inland more than once. Higher temperatures and rising waters will destroy the coastal cities. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Francis	Schilling	Vail	AZ	85641	The Willow Master Development Plan Must Be Rejected	<p>The idea of drilling and digging every resource out of the earth as fast as humanly possible and that there is infinitely much for infinitely many for all of time on a FINITE planet are not only logically absurd, but morally reprehensible! There is not enough oil to account for even 5% of what we use in this country! What possible long term difference will this make beyond the additional and avoidable environmental damage that drilling for it will cause? The cost/benefit analysis on that one should be clearly obvious. We are talking potential wholesale destruction of habitats and entire ecosystems if a tragedy like the one in the Gulf were to occur in the Arctic. All of that risk for what? A trickle of oil compared to what we have been using? I'd like to see *my* CEO's response to a proposal that heavy on risk and light on reward! I am sick and tired of having national policy based on what greedy self-interested corporations want instead of on sound science and common sense. Thus, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Toni	Francis	Peachtree City	GA	30269	Reject the Willow Master Development Plan	<p>This is wrong! I strongly urge you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must immediately end the old pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and it would be an utter failure on climate leadership. These wilderness areas are a treasured resource which must be protected and preserved. For over 4 decades I have called, written, donated, and petitioned to stop any and all drilling or mining in the Arctic. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably ruin this fragile ecosystem and greatly exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. It's unthinkable! We cannot allow any of this activity to go forward. Leave it in the ground and leave the area undisturbed by industry. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approving this atrocity would only cause more permafrost thaw and other extreme damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to STOP approving new fossil fuel development and focus instead on rapid transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority urgently to adopt the no-action alternative and reject this terribly dangerous project. The climate, wildlife and frontline communities can't afford anything else. Stand firm and protect these wild lands and wildlife. No amount of wealth in corporate donations can ever justify ruining this area.</p>	2/26/2022
Marcia Robin	Clouser	Schwenksville	PA	19473	Reject the Willow Master Development Plan	<p>We urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Jill	Moore		London	N6 5HS	Reject the Willow Master Development Plan	<p>We all know that the climate is changing for the worse. We all know that Alaska is already endangered, that wildlife is suffering. So why allow all these drilling sites to encroach upon one of the few places in the world where flora, fauna and indigenous people can still exist. These oil companies do not care about anything except making money. Are you willing to say that you do not care about life in Alaska, that you would rather help these encroaching companies to make profits? I do hope not. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Julia	Tullis	Providence	RI	2906	Reject the Willow Master Development Plan	I most strongly urge you to REJECT approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration simply must END the history of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would BREAK the promise that President Biden made to end new drilling on federal lands, and represent a total failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irreversibly damage this fragile ecosystem AND exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. We do NOT NEED IT! Alaska has warmed more than twice as fast as the rest of the US over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers - using fossil fuel! - to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project FAILED to study and include the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And perhaps most importantly they FAILED to examine rationale for the project in light of the urgent need to stop new fossil fuel development and transition to clean, renewable energy. Science-based analysis shows that the risks are far too great. You must use your legal authority to adopt the no-action alternative and REJECT this dangerous project. The climate, wildlife and frontline communities depend on you!	2/25/2022
Carole	Ferrill	West Chicago	IL	60185	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. As a country we need to protect what God has created instead of leaving a legacy of destruction. We need to put more effort into creating and building energy that doesn't do such harm to the world we are dependent upon for sustaining life. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Neela	Patel	Belmont	CA	94002	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I am certain that Gina McCarthy would agree that drilling for oil (anywhere but especially in the Arctic) runs completely contrary to our goals of reducing our carbon emissions to zero as soon as possible. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. I had the good fortune to visit Alaska and can attest to the restorative and spiritual value of pristine wilderness, the way in which being in harmony with our fellow travelers on this earth is vital. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Terry	Derting	Murray	KY	42071	Reject the Willow Master Development Plan	<p>NO to oil drilling in Alaska reserves period. There is no replacement for Alaska's reserves. Its native wildlife and human populations are irreplaceable and already struggling to cope with the impacts of fossil fuels on the environment. There is no such thing as a safe oil project. Accidents do happen and they do cause massive destruction of plants, animals, and ecosystems. We must invest in less harmful and renewable sources of energy. Please do everything you can to maintain and increase the protection of all reserve area in Alaska. American citizens are counting on you to reject further damage and destruction of our heritage. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Please do the right thing.</p>	2/25/2022

A.	Brennan	Philadelphia	PA	19103	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. The climate, wildlife and frontline communities can't afford anything less. What is it about Human Caused Climate that you don't understand? Fossil fuels are a drug addiction which we must leave behind if life on Earth is to continue!	2/25/2022
Patti	McCrorry	Burlingame	CA	94010	Please Reject the Willow Master Development Plan	First, I want to thank you for your acceptance of your positions in service to our country. I ask you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. As you are well aware, the 23-million-acre Reserve is the largest undeveloped place in the United States and home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably damage this magnificent, unspoiled tiny piece of the planet forever. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It is mind boggling to imagine the destruction to this last untouched land governed by the United States. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approval of the project would cause more permafrost thaw, in addition to further harm to the Reserve's numerous important surface resources. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you for your critical attention to this issue. I'm so proud to finally have two thoughtful and qualified leaders at the helm of the DOI and the BLM.	2/26/2022
Dianna	Sahhar	Corona Del Mar	CA	92625	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. John	Sonin	Douglas	AK	99824	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. It's true that every organic system on this planet impacts the efficient functioning of every other organic system, relevant to proximity and scale, but all organic systems are directly affected by Earth's lynchpins, its polar icecaps, via jet streams, solar-energy reflection, global temperatures, global precipitation patterns, ocean acidity, etc. etc.! According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Mark and Patty	2/25/2022
David	Carp	Desert Hot Springs	CA	92240	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Carolyn	Johnson	Dexter	MO	63841	Reject the Willow Master Development Plan	<p>I'm a retired geologist with experience in Alaska. I both worked and recreated there during tackling proposed coal development projects to strip mine in highly sensitive permafrost regions and build new transportation infrastructure. I also put in some time examining projects to reduce the destruction from oil and gas drilling projects. Fortunately, the coal projects were defeated. Unfortunately the destruction from the oil and gas projects could not be remediated. In this is a lesson to be heeded for the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. This project cannot be designed to prevent massive long-term damage and major contributions to climate-warming and to further delay of building a renewable energy future. It is past time for this administration to stop with the reassuring words and promises and take real actions to end new drilling and prevent more greenhouse gas emissions and toxic air pollution. Heed the warnings in your own agency findings. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska is warming more than twice as fast as the rest of the United States and that warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive. Polar bears and other arctic species and food chains are already in trouble. Permafrost areas and thawing areas on not places to build infrastructure or enable other massive man-made disturbances. We have the responsibility to be good stewards of our environment. I call on you to exercise your stewardship and reject this foolish project. The risks are too great.</p>	2/25/2022

Van	Knox	Lititz	PA	17543	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, permafrost thaw, and harm to numerous species that depend on the frozen landscape to survive. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed accurately to describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to consider properly the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Lastly they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less.	2/25/2022

According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Renee	Elvenheart	Gulfport	MS	39507	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Steve	Moore	Captain Cook	HI	96704	Reject the Willow Master Development Plan	You know why. You know what the right thing to do is. You know who the bad guys are in this conflict. Because you have a heart. You understand that preserving life, preserving diversity, is more important than preserving profits. Trust your heart, give it power, keep fossil fuels in the ground. That's where they belong, not in the air, in the waters, in the food that all our relations depend on.	2/25/2022

Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Yours sincerely Corinne C Randall	2/25/2022

Debra	Siefken	Orrtanna	PA	17353	Please Reject the Willow Master Development Plan	This development plan is terrible for the Western Arctic! Please disapprove it. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	3/1/2022
Mary	Shaughnessy	Indianapolis	IN	46217	Willow Master Development Plan is a Non-Starter	ConocoPhillips: the name says we must turn a blind eye to the ravages of fossil fuels. And ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Eric	Cornetta	Hingham	MA	2043	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Willow project is huge and would produce huge climate crisis pollution. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They have failed to properly consider the project's impacts on polar bears, including project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Nathan	Havlick	Austin	TX	78703	Reject the Willow Master Development Plan	In the name of our precious wilderness, which is fragile and crucial to all life on the planet, I urge you to reject Conoco-Phillips' Willow oil-drilling project in the Nat'l Petroleum Reserve in Alaska. We must stop allowing oil companies to drill in the Arctic. Such projects can do enormous harm to people and wildlife alike. The Reserve is the largest undeveloped place in the U.S. It's home to polar bears, caribou and millions of birds. It also houses Indigenous communities that have lived on the land for thousands of years. Oil and gas drilling here will leave permanent scars and further accelerate climate crisis. The BLM says that this project would result in up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce 590 million barrels of oil over 30 years, which would produce 280 million tons of greenhouse gases. In the past 60 years, Alaska has been warming twice as fast as the rest of the U.S. This has already caused coastal erosion, loss of sea-ice, and harm to numerous species. Conoco-Phillips' plan calls for refreezing thawing permafrost, yet would ultimately cause more thaw and other damage from climate change. Environmental analyses to date have failed to address the full significance of resultant greenhouse gas emissions. They failed to consider the project's full impact on polar bears. They failed to examine the project in light of the world's need to transition to clean, renewable energy. Any truly science-driven analysis would clearly show that this project is far too risky. But aside from risk, the fact is that this project will result in enormous damage on all levels. The risk is only that damage will be even greater than expected. You can't pound the ice without some of it breaking. It's imperative that you exercise your legal authority to adopt the no-action alternative. Reject this dangerous project. Help save this fragile world.	2/25/2022

Patricia	Vance	Paulding	OH	45879	Reject the Willow Master Development Plan	<p>This world means so much to me. I want my descendants to be able to enjoy it as I have known the splendor. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/27/2022

Lisa Ann	Kelly and Family	Santa Barbara	CA	93101	Reject the Willow Master Development Plan	Once this fragile ecosystem is compromised, destroyed by development of oil wells, roads, pipeline, airstrip, etc that damage cannot be undone. The Western Arctic wildlife and habitats will suffer the consequences of human activity and interference. My family and I urge that you reject the Willow Master Development Plan and remain steadfast in your protection of the Western Arctic's fragile environment. Thank you for your consideration of our comments herein. Sincerely, The Kelly Family: Lisa Ann Chad Geoffrey George and Tristan	2/25/2022

The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Robyn	Weber	Denver	CO	80220	Reject the Willow Master Development Plan	<p>No, no, no, no, No. I respectfully urge you to stop this misguided action immediately. I implore you to understand that our economic well-being rests upon our environmental well-being. Outdoor recreation, and those who want to see wildlife (rather than hunt and kill or frack and exploit the environment), generates \$646 billion dollars in annual spending and it creates 6.1 million jobs each year. Only a tiny slice of this comes from hunting. Outdoor recreation provides \$39.9 billion in federal tax revenue in 2012 and more now in 2022. In addition to those significant economic benefits, the right thing to do—is to protect our precious environment and finite natural resources. Regardless of what is happening on the world stage...I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Kurt	Harvey	Sunnyvale	CA	94089	Reject the Willow Master Development Plan	Building roads and drilling for fossil fuels in such delicate areas is very short term thinking and at this point if our history, more than ever before, we need to take the long view. Climate change is happening now. We need these areas to stay wild, healthy, and vast in order to help deal with the climate crisis we've brought on ourselves. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We in North America, Alaska and Canada, with lands bordering the Arctic Sea, have a moral responsibility to protect the indigenous peoples, the Arctic ocean and adjacent Arctic and subarctic land frozen and seasonally thawing lands, and the wildlife of the lands and waters and ice shelves. These ecosystems can be irrevocably damaged and destroyed by the drilling and roads and infrastructures if the Willow Master Development Plan goes forward. I urge you, implore you, to reject the Willow plan, and keep the systems in as stable conditions as the prevailing weather and geophysical structures of those delicate systems permit. We are in a transitional state whereby we must phase out further exploration for oil and gas, in order to reduce further damage and release of greenhouse gases. There ARE renewable energies available, solar, wind, geothermal, ocean waves and tides, that must be used to replace the old and dirty and extreme weather causing releases of greenhouse gases. ConocoPhillips needs to join the world in cutting down temperature rises and promoting existing, non-polluting renewable resources. President Biden needs to stick with his earlier decisions to keep fossil fuel developments out of our northern Arctic lands and oceans. Thanks for your kind consideration.	2/25/2022

Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Peter	Ayres	Naperville	IL	60563	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Leave this undeveloped. It needs to function as undeveloped land that does the work the earth needs to be livable for all living things on this planet. This development will create roads that will cut through and harm all kinds of areas. It will also risk water sources. Stop any plans like this. They have become more destructive than helpful. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Colleen	Kennedy	New York	NY	10012	Reject the Willow Master Development Plan	The proposal to building the gigantic Willow project in the heart of the most pristine, environmentally rich National Petroleum Reserve is unspeakable! This incredible 23-million acre reserve is the heart and soul of the home of polar bears, caribou, millions of migratory birds. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. The destruction of habitat, the unavoidable deaths of animals, such as the already endangered polar bears, the pollution, the destruction of a way of life for the people who live there --- this is the stuff of nightmares. It cannot be denied that the effects of climate warming are everywhere - fires, floods, unprecedented high temperatures. This is it. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 MILLION TONS of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. The Willow project is a disaster in the making. I urge you to use totally destructive and dangerous project. The climate, wildlife and frontline communities are depending on you to do the right thing!	2/25/2022
Laurel	Shull	Tenino	WA	98589	Reject the Willow Master Development Plan	I urge you to reject approval of over reaching ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. We are clearly at a tipping point with this catastrophic plan. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Nick	Engelfried	Bellingham	WA	98225	Stop the Willow Oil Drilling Project	I'm writing to urge you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. At a time when we are supposed to be transitioning into a renewable energy future, this misguided project takes us in exactly the wrong direction. Approving it would undercut the Biden administration's goals for reducing carbon emissions and the U.S. contribution to climate change. Finally, this oil project threatens sensitive wildlife species like caribou as well as Indigenous peoples who have lived in the Arctic since time immemorial. In order for the U.S. to send a signal to the world that we are serious about action on climate change, we must stop approving massive new fossil fuel extraction projects. Willow is a prime example of the kind of project we need to be turning the page on. Please reject this oil development plan for the sake of our climate, Indigenous rights, and Arctic wildlife.	2/25/2022

Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you for your time in reading this letter.	2/26/2022
Fredericka marilyn	Hunter brenneman	Houston Colorado Springs	TX CO	77019 80906	Reject the Willow Master Development Plan Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. The climate, wildlife and frontline communities can't afford anything less. Why are we still talking about this? Stop drilling.</p>	2/25/2022
David	DePrez	Orland	ME	4472	Reject the Willow Master Development Plan	<p>Do not approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve--Alaska. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia are incompatible with construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine and 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. I find detestable, cynical, mocking irony in ConocoPhillips' plan to set up giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface in the Arctic that is experiencing a disproportionate 12 degree average warming compared to the world's average of 1.5 degrees. THIS ABSURDITY FLIES IN THE FACE OF FOSSIL FUEL COMBUSTION BEING THE ROOT CAUSE OF THIS DESTABILIZING CLIMATE CHANGE, proven to have been foreseen by Big Oil scientists, yet covered up decades ago. So, of course, environmental analyses for the project have not so mysteriously FAILED to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Sharon	Daugherty	Greensboro	NC	27407	Reject the Willow Master Development Plan	I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies continue to fuel their greed and drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Larry	Lambeth	Springfield	MO	65810	The Willow Master Development Plan Must Be Rejected!	The DOI must take action now to protect our environment and our public lands! I strongly urge you to reject approval of the highly polluting ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. It is imperative that your administration end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Fossil fuels are killing us, destroying the environment, wildlife and our future. The DOI must reject this toxic and unacceptable project. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The project is highly polluting from extraction, transport, refinement, combustion and toxic waste generation. The wells, along with the roads, pipelines, airstrip, gravel mine, processing plant and truck traffic will vastly increase the release of stored methane trapped in the permafrost which will greatly increase global warming. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Unacceptably approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. These adverse impacts are neither desirable nor acceptable. Existing environmental analyses are highly deficient and failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Lynda	Alfson	Orange Park	FL	32073	Reject the Willow Master Development Plan	I want to protest vigorously the insane, risky, ignorant idea that there is a good reason for drilling in The Western Arctic at all. This is so seriously against all common sense in that area. There are no reasons and certainly no assurances that would matter or make sense drilling for crude oil in this pristine area of the Arctic. Stop this insanity now before millions of animals die and this area is ruined permanently because an accident occurs. This area should never be drilled or disturbed by invasive drilling for oil ever. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Erica	McDonald	Cordova	TN	38018	Reject Willow Master Development Plan	I urge you to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States. The Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It's clear this is a massive operation that will irrevocably scar this fragile land. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years, and already faces coastal erosion, sea-ice loss, and declining wildlife populations. ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface - a sign of how much damage is already done, and a wasteful, short-term solution that would create further damage. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
James	Abendroth	Bloomington	NY	12913	Reject the Willow Master Development Plan	As an American citizen who cares about our precious environment I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Harlan	Smith	Huntington	WV	25701	Reject the Willow Master Development Plan	I write as a retired professional economist. A political Moderate. An AARP member. A resident of WV, in the heart of fossil-fuel country. And a Son of Big Oil. My late father was an Exxon Lifer, who spent the latter decades of his career working out of World HQ, right in the middle of the company's worldwide footprint. To cite just one example, in 1973/74 he was named to the small team Exxon set up to work directly with the Saudis, behind the scenes, to manage the OPEC Oil Crisis of that period. My Dad's 30-year retirement from Exxon was gold-plated: up to the end of his days the company was ADDING benefits to his package. He'd tell you that Big Oil is doing just fine, thank you, without having to pursue damaging projects like the Willow Master Development Plan. And he always told me, back in the 90's and into the 21st century, that once the price of gas at the pump hits \$4 per gallon and stays there, we'd all be 'astonished' (his word) at the alternative energy technologies that would be rolled out. Our business sector is a lot more ready for a post-fossil fuel future than many folks - my senator Joe Manchin included. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Briana	Anderson	Independence	MO	64052	Reject the Willow Master Development Plan	<p>I feel as though I am writing these letters over and over again - asking to please refrain from letting fossil fuel companies do as they please. The age of fossil fuels is ending swiftly, and I hope that we can finally acknowledge that by refusing fossil fuel companies' plans. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This hunger for money will only cause untold millions of dollars in damage to the ecosystem of the area, kill off endangered species, cause indigenous people to starve, sicken and die as well as poison the land and sea for decades. That is not worth any amount of money that might be taken out of the earth or any amount of oil either. There is so little wilderness left that all of it precious beyond words and has no value that can be priced or replaced. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Mimi	Sandeen	Chicago	IL	60626	The Willow Master Development Plan is a Terrible Idea	I cannot say strongly enough how much I am against the Willow Master Development Plan in Alaska. The environmental cost - both immediate and also long-term - is just too high. And it's completely counter to this administration's promise and commitment to fight climate change. I'm sick and tired of corporate fossil fuel companies destroying wildlife and harming the health and quality of life of local communities for deadend fossil fuel. We need to stop this project in its tracks. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Rose	Glickman	Berkeley	CA	94710	Reject the Willow Master Development Plan	Wildlife on the planet is in constant danger from human intervention. This has to stop! Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Oil companies wantonly drill in the Arctic to matter what the harm it visits on people, wildlife and the planet. President Biden's promised to end new drilling on federal lands and represent an utter failure on climate leadership. He should put his money where his mouth is. What is special about this region? It is an immense undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. This is vastly more important to our planet the some more oil and gas. Drilling here will forever scar this fragile ecosystem and make the climate crisis worse. According to the Bureau of Land Management, the Willow project would involve destroy up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This condition is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. With utter disregard for this criminal destruction, ConocoPhillips' plan plans to use giant chillers to refreeze thawing permafrost in order to insure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Gina	Price	Roy	UT	84067	Reject the Willow Master Development Plan	I highly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Gloriana	Casey	Blodgett	OR	97326	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. *****Who told the OIL companies that they were God and could rule the world???? OIL is killing People, Places and the Planet!!!!***** The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. *****OIL COMPANIES care for the money, and not the People or the Planet! This area is one of the last pristine places on Earth---and NO AMOUNT OF MONEY should taint it!***** According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases.* *****A few will make lots of money on this----but if Biden and Blinken don't seem to care, the LIFE on this planet will soon be worthless and a joyless place to be!***** Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you.	2/25/2022
Molly	Molloy	Tempe	AZ	85282	Please Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. This unique place must be protected - as must your pledge to stop drilling!!! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thanks for doing the right thing!	2/28/2022
Edward	Norkus	West Berlin	NJ	8091	Reject the Willow Master Development Plan	After years of rubber stamping big oil's wish lists it is time to put the needs of our environment and the health and safety of all our citizens first. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Nancy	Shinn	Coos Bay	OR	97420	Reject the Willow Master Development Plan	<p>My family and I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. This is a unique and amazing place. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Think of the impact. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. This is insane! Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. We don't see how this project could go forward because the prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. The people living in the upper Alaskan area are already sinking! Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thank you so much for reading our letter!</p>	2/26/2022
Dorothy	Jordan	Lynden	WA	98264	Reject the Willow Master Development Plan	<p>I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. E	Worthington	Greencastle	PA	17225	Reject the Willow Master Development Plan	I am writing as a concerned American citizen. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. I can not imagine you are not aware of this but felt it was important to be sure. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. The fossil fuel companies have been give many advantages over the years without regard to the effects on the wildlife, climate, or people. It has always been of concern to me that the indigenous people are never consulted about such projects but informed of their decision. They are not allowed to make a decision as if they were children or impaired and must be cared for even if they are not. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Ms. Maria Celia	Hernandez	East Boston	MA	2128	Reject the Willow Master Development Plan	US Interior Department Sub: Reject the Willow Master Development Plan Reject this project and keep Arctic oil in the ground — for the sake of wildlife, people and the climate. Secretary Deb Haaland Director Stone-Manning, With due respects, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Barbara	Slinker	Alexandria	VA	22303	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive, as well as permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. However, approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Additionally, they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less.</p>	2/25/2022

Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We have the utmost responsibility to protect our majestic wildlife and pristine wild places for future generations. To allow the destruction of these irreplaceable treasures for the benefit of greedy corporations and special interest groups is not only shameful, it is a national disgrace. What you choose to save is what you say about yourself. The American people are watching. Choose well for our earth.</p>	2/25/2022
Marya	Bradley	Milwaukee	WI	53202	Reject the Willow Master Development Plan	<p>I am writing because I am strongly opposed to allowing the ConocoPhillips' Willow oil drilling project in the National Petroleum Reserve in Alaska. I am gravely concerned by the destruction it will cause to critical habitats, the acceleration of global warming it will commit, and the suffering and death of species already threatened with extinction. I am truly appalled that in this time of mass extinction, habitat loss and calamity on account of global warming this plan is even being considered. So it is I write to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips’ plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve’s numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project’s impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can’t afford anything less.</p>	2/25/2022

Marcy	Amato	Half Moon Bay	CA	94019	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. Bradley	Smith	Cape Coral	FL	33909	Reject the Willow Master Development Plan	<p>The Earth can't take anymore! Please stop this. Every pristine area on Earth is being eyed by these terrible companies, and all have a horrific record of destroying the areas and animals that live there. Do you really like seeing areas destroyed? Animals writhing around and slowly dying, for decades? And land and sea beds scarred for decades after these filthy companies cap a well? It's a new era, so why don't you lead by example instead of being the little pet of oil companies! It's time to help the planet heal. I am begging on my knees, pleading for you to reject the approval. Thank you for your time. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Karen	Jacques	Sacramento	CA	95811	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would be extremely irresponsible and break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. It is a giant carbon bomb with devastating consequences for wildlife and for indigenous communities whose rights absolutely must be respected. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. This country has a terrible history of allowing the fossil fuel industry to turn our public lands into toxic waste dumps while driving the increase of climate related disasters including hurricanes, floods, massive fires and heat waves so hot that they kill. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. To allow this horrible, greed driven project to go forward would be an assault on the future of our planet and is totally unacceptable. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. You must put an end to this project once and for all as fast as possible. There is no possible way it can be justified.</p>	2/26/2022
Tony	LaMorticella	Elmira	OR	97437	Reject the Willow Master Development Plan	<p>I urge you to reject approval of in ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Judy	Schultz	San Francisco	CA	94115	Reject the Willow Master Development Plan	<p>I implore you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Oil companies cannot continue to drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. There simply is no justification for approving Willow - we cannot continue to act as though the climate crisis is not happening and won't worsen with every new driving project, and the profits of an oil company are not worth the damage done. As you know, according to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. Eleanor	Hiteshew	Brooksville	FL	34613	Reject the Willow Master Development Plan	I urge you to wholly reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. And it should remain undeveloped for the sake of the health of our planet. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Marguerite	Barragan	Watsonville	CA	95076	Reject the Willow Master Development Plan	Stop all drilling in the Arctic! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Mary	Hood	Plain City	OH	43064	Reject the Willow Master Development Plan	<p>The Western Arctic is a fragile arctic environment. It should not be ravaged by drilling for oil (or mining or fracking or any other industrial use). There's only one arctic area under U.S. control and this is it. I want my children, grandchildren, and descendants to be able to observe or photograph polar bears, caribou & their migration, snowy owls, arctic fox, ptarmigan, and all the other inhabitants of the Western Arctic. The Western Arctic has also been home to the Gwich'in people for thousands of years. They live in harmony with the wildlife. We need to respect this as their land. Let's leave the oil in the ground and pursue solar, wind, geothermal, biofuel, and other sustainable sources of energy. It's not worth trashing our only arctic habitat for a little more dirty oil. Do the right thing for our future! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Enough is enough. Greed is the root of all evil. Just say NO to these greedy oil companies. STOP STOP STOP.	
Susan Jo	Myers	Minneapolis	MN	55443	Reject the Willow Master Development Plan		2/25/2022
						I implore you to disallow the ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. I expect the Biden administration to prohibit oil companies from drilling in the Arctic because of the harm it causes to the planet and by extension to the people and wildlife who occupy it. Permitting the Willow project would counter President Biden's promise to halt new drilling on federal lands and would represent an absolute failure on climate leadership. This Reserve is the largest undeveloped place in the United States, and is inhabited by caribou, polar bears, and millions of migratory birds. In addition, Indigenous communities have relied on this land for thousands of years. Oil and gas drilling on this pristine ecosystem would permanently scar this fragile land and worsen the climate crisis. During the past 60 years, Alaska has warmed more than twice as fast as the rest of the United States, causing permafrost thaw, sea-ice loss, coastal erosion, and harm to many species that require a frozen landscape to survive. Approving this project would cause additional permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. I read that the precious environmental analyses for the project did not accurately describe or study the significance of the substantial greenhouse gas emissions it would cause, nor consider the project's impacts on polar bears. Furthermore they failed to explain the purpose and rationale for the project in light of the dire need to stop approving new fossil fuel development and transition to clean, renewable energy. A comprehensive, science-driven analysis will reveal that the dangers are much too great. Please use your legal authority to implement the no-action alternative and to reject this hazardous project. Thank you for your attention to this critical issue.

Craig	Downer	Minden	NV	89423	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. It's extremely reckless to permit such oil exploitation and extraction in the Arctic today and further jeopardizes all precious Life on Earth, just so modern society can maintain its sluggardly consumerist lifestyle! Not Right! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Roger	Zimmerman	Bethel	ME	4217	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Finally, I've been there. Not in a quickie fly-over, but in leading backpacking trips there several years ago. There is no place like it. We must not allow fossil extraction to kill this place. As a guide-as a citizen knowledgeable about what produces climate change, we must prevent this project from taking place. This is sacred land for Indigenous people. Do not allow this project to proceed. Thank you for your consideration. Roger Zimmerman, Ph.D.	2/25/2022
Kristine	Plisga	Columbus	OH	43214	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. We need to keep this carbon sequestered so that our planet doesn't succumb to a runaway greenhouse effect not unlike the one on the planet Venus. Right now we are the Goldilocks planet, not too hot and not too cold. Let's keep it that way. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/27/2022
J	Kronick	Lake Orion	MI	48361	Reject the Willow Master Development Plan	I'm writing today to urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. I believe the administration must stop allowing oil companies to drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Do I need to point out that approving the Willow project will break President Biden's promise to end new drilling on federal lands? And that it would be a failure for climate leadership? The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But meanwhile, ironically, approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022

Scott	Slocum	Saint Paul	MN	55110	Reject the Willow Master Development Plan	<p>We need your administration to reject ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here would damage its fragile ecosystem, and worsen the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Global warming has affected Alaska more than twice as fast as the rest of the United States over the past 60 years. It's already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive. Prior environmental analyses for the project failed to accurately describe or evaluate the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on wildlife. Any comprehensive, science-driven analysis will show that the risks are far too great. We need your administration to adopt the 'no-action' alternative and reject this dangerous project. The climate, wildlife, and native communities are depending on you.</p>	2/25/2022
Jane	Baird - Texas voter		London	SE24 0AB	Reject the Willow Master Development Plan	<p>Approving the ConocoPhillips project in Alaska would be nothing but short-sighted. Huge oil developments in the Arctic moves us away from renewable energy, a necessary future, and toward global warming, a destructive future. Please reject the Willow oil-drilling project. This would hurt wildlife, Indigenous people and our own children and grandchildren. Approving this would also be bad politics. It would break President Biden's promise to end new drilling on federal lands. Whatever he does, it won't earn him any votes from the oil industry, but it will lose him the votes of environmentalists and progressives, who won't bother to turn out. The prior environmental analyses did not consider a lot of potential harm this project would cause. They failed to examine the purpose and rationale for the project in light of the urgent need to make a transition to clean, renewable energy. The risks are far too great. Please use your legal authority to adopt the no-action alternative and reject this dangerous project.</p>	2/25/2022
K.	Smith	Canandaigua	NY	14424	Reject the Willow Master Development Plan	<p>Enough is enough! We must protect the Arctic from fossil fuel extraction once and for all. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. I hope to visit this area someday and find it pristine.	2/28/2022
Paige	Gulley	Yorba Linda	CA	92886	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife, and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou, and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling there will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Peter	Lynch	South Salem	NY	10590	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Major O&G companies CAN NOT handle their business safely - note all the problems in the gulf where it is mild and they are VERY close to land - and you cannot handle it. Now you want to drill in the artic - THOUSANDS of miles from any serious help in an emergency. Plus the climate there is varied and can be very cold and windy as opposed to the bathtub gulf. This should not even be a question or a subject for discussion among rational people who understand RISK. This INSANE. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Marian	Reisman	Scottsdale	AZ	85254	Reject the Willow Master Development Plan	<p>I live in Arizona and I'm an avid bird watcher. I am very disturbed by this drilling project which is in the largest undeveloped place in the United States. Millions of migratory birds as well as other wildlife need this land. Can't we leave anywhere unspoiled for wildlife? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

The climate, wildlife and frontline communities can't afford anything less. How can you even dream of doing such a thing. It is wrong in so many ways and destructive to almost everything, already endangered wildlife, the immediate environment and the planet in general. So it is life threatening to everyliving creature, including ourselves. So stop. It's not worth it. As stated above, there are many other sources of energy and more are being discovered all the time.</p>	2/25/2022
Perry	Kendall	Glenside	PA	19038	Reject the disastrous Willow Master Development Plan	<p>For the greater good of all people and the lands and water we rely upon for survival please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve, Alaska. Your administration must cease the dreadful pattern of allowing oil companies to drill in the Arctic with no regard for the disastrous harm it causes people, wildlife and our planet. Do not approve Willow. Fo not would break President Biden's promise to end new drilling on our federal lands. Failure on climate leadership is verboten. The 23-million-acre Reserve is the largest undeveloped place in the nation. Land that is home to Indigenous communities who have relied upon it for millennia. Critical habitat for polar bears, caribou and millions of migratory birds too. Oil and gas drilling will irrevocably scar this fragile ecosystem exacerbating climate catastrophe we must avert. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Missy	Garland	Newport Beach	CA	92660	Reject the Willow Master Development Plan	<p>Please please please do not drill oil in this sacred space of earth. All the polar bears will become extinct. They are already facing starvation. Honestly, this is no place to drill oil. Nothing good will come from it; just greed and dirty money. We have to protect this earth and all the endangered species. It matters to God and a lot of people like me and all the animals need it to survive. Please care about life; someone else's life that depends on it. The earth is a sacred and beautiful place that needs protection. The earth and thousands of endangered species are already suffering. Please make a positive impact of the planet. One you can be proud of. Let's be a positive and safe place that gives home to species, and their homes. Polar bears have every right to live and not become extinct. Please care about something else besides greedy corrupt money. Thank you so much for being a positive force for this planet Earth. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Thomas	Fincher	Hudson	NH	3051	Reject the Willow Master Development Plan	Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Now is clearly not the time to be expanding oil drilling in wilderness lands. The 23-million-acre Reserve is the largest undeveloped place in the United States. Please let it stay that way.	2/26/2022
William	McColl	Blaine	WA	98230	Please Reject the Willow Oil Drilling Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and front line communities can't afford anything less.	2/25/2022
Rosemary	Colson	Tallahassee	FL	32308	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I beg you to reject any oil-drilling in Alaska, or anywhere else, for that matter. Oil is becoming a non-energy commodity, with clean energy sources now becoming the norm. Fortunately, for the environment oil is on its way out! We all need to be more concerned about Indigenous communities, wild animals, saving environments and eliminating toxic air pollution that harms everybody. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Colleen	Cade	Lansing	MI	48906	Reject the Willow Master Development Plan	<p>Id like to begin by asking ' Why must all animal life constantly be destroyed?' Rich fat cats are greedy and SELFISH. I don't LIKE people very much and this is why, the total disregard for are children's future, are they not allowed to grow up with the same AWESOME WILDLIFE that we have? Only to destroy it for surprise YET ABOUT MONEY, I'm begging you to STOP THE ANINAL MURDERER S WITH OIL ON THE BRAIN AND ALL MIGHTY S... I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Katha	Ricciardi	Cohasset	MN	55721	Reject the Willow Master Development Plan	<p>Protect our planet. Save wildlife and bio-diversity! Reflect approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Sheila	Williams	Liberty	MO	64069	Reject the Willow Master Development Plan	As a concerned citizen and taxpayer, I'm writing to strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. This project would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they totally failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	3/2/2022
Gabriele	Schubert	San Diego	CA	92111	Reject the Willow Master Development Plan	I ever-so-strongly urge you to reject approval of ConocoPhillips' proposed (ill-conceived) Willow oil-drilling project in the single largest undeveloped part of the National Petroleum Reserve-Alaska. Your administration must consider the climate emergency and stop letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving 'Willow' would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, a largely pristine home for polar bears, caribou and millions of migratory birds — and as you so well know: Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis, catastrophically for animals and people here and across the world. According to the Bureau of Land Management, the Willow project would involve the construction and operation of hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine along with up to five drill sites, 250 wells, a fossil fuels processing facility. 'Willow' would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing huge losses of sea ice and permafrost thaw, harming numerous species that depend on the frozen landscape to survive and emitting methane in massive volumes. Noting the collapse and contamination of the Arctic by Russian oil development on thawed soils, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw due to the tremendous use of fossil energy to do so, and harm to the Reserve's numerous important surface resources. Prior environmental analyses for 'Willow' did not accurately describe or even study the significance of the substantial greenhouse gas emissions it would cause. They failed to examine the purpose and rationale for this fossil fuels drilling project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy! They did not properly consider the project's immediate impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Nor the longterm impacts of contributing to the global warming crises that will face all our children. Any comprehensive, science-driven analysis will show climate, community and eco-risks are far too great and unnecessary. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less than your protection from this profiteering gouge in all our faces.	2/25/2022
Beverly	Simone	West Nyack	NY	10994	Reject the Willow Master Development Plan	You need to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We MUST do the Right Thing!!!!	2/25/2022
Sarah-Marie	Belcastro	Holyoke	MA	1040	Please Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. There has been a pattern of letting oil companies drill in the Arctic without regard for the harm this causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Russell	Wray	Hancock	ME	4640	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Protecting our environment and steering our nation and the world towards genuinely sustainable ways of being on this wonderful planet is extremely import to me personally, and I know it is for a great many other people. Please put the wellbeing of our people and planet ahead of corporate profits...Please do the right thing and reject this project.	2/25/2022
Barbara	Trypaluk	Saratoga Springs	NY	12866	Reject the Willow Master Development Plan	Joe Biden ran for president as a climate champion and now he's greenlighting the huge Willow Oil project in Alaska which will turn a pristine ecosystem into an industrial sacrifice zone. NO WAY! I urge you to reject all permits for this project. The Interior Department must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. Brooks	Robinson	Powell	WY	82435	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Brooks Robinson</p>	2/25/2022

The climate, wildlife and frontline communities can't afford anything less. This issue is very important to me as a US citizen. Artic oil is a very bad idea</p>	2/25/2022
Christopher	Herlihy	Boston	MA	2113	Reject the Willow Master Development Plan	<p>I'm an American and I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must forbid oil companies from drilling in the Arctic without regard for the harm that causes to people, wildlife, and our planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and mean an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia, and still do. Oil and gas drilling here would irrevocably scar this fragile ecosystem, and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and so are threatened by permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving that project would only increase thaw and other damage from climate change, including harm to the Reserve's many important surface resources. The previous environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. Therefore, you must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife, and frontline communities can't afford anything less. Thank you,</p>	2/25/2022
Heather	Rykhus	Minneapolis	MN	55436	Reject the Willow Master Development Plan	<p>I support the following message and hope u will too. Thank u I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/26/2022

Angela	Green	Denver	CO	80233	Reject the Willow Master Development Plan	<p>While I recognize the need for fossil fuels, currently, it is more urgent that the carbon sequestered in these reserves be left in place. We cannot reach our carbon goals if we are removing more carbon allowing it to enter the atmosphere. Additionally, we can't afford to destroy more habitat and especially permafrost regions, these regions contain very unstable methane pockets which when released are 3x the warming gas than carbon dioxide. Decreasing methane is our commitment to the international climate community. And finally, the impact of destroying more biodiversity is unrecoverable. Protecting these critical ecosystems and biomes is worth far more to our planet and our species than the low return on investment these traditional recovery methods and resources can provide. The only way to promote a more rapid transition to new sustainable forms of energy is to stop further drilling and encourage increased research and resources to supporting sustainable energy. Furthermore, allowing this drilling substantially increases our methane footprint which breaks our agreement made during the most recent world climate panel. The only way to have a future is to really create a sustainable approach, that means considering planet, profit, and people. This project is only protecting profit for a major corporation that is not concerned for the planet or the people and other life that live on it. I supported this administration because I believed its commitment to a sustainable future was genuine. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership.</p>	2/27/2022
Roslyn	Feldberg	Brookline	MA	2446	No oil development in the Arctic, Reject the Willow Master Development Plan	<p>Our future is at stake. We have to protect these important areas of our planet. Please reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. We need a strong leader who has the courage to say "no more" to the fossil fuel interests. They are not looking out for our best interests. You need to that! Please, protect our children and grandchildren. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Lehman	Holder	Vancouver	WA	98664	Reject the Willow Master Development Plan	<p>We simply MUST transition away from fossil fuels. With this in mind, I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022
Susan	Mayer	San Diego	CA	92109	Stop Disasterous Willow Master Dev't Plan!	<p>I implore you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to indigenous people, wildlife and the planet. Approving this disasterous project would break President Biden's promise to end new drilling on federal lnds and represent an utter failure on climate leadership! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as native communities reliant on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the BLM, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. The climate, wildlife and frontline communities can't afford anything less. We SO do NOT need more drilling, especially in such ecologically sensitive areas. If you drill you spill - period. Not a Q of 'if' but of 'when' - it's inevitable. And no oil driller to date has successfully cleaned up a spill they caused - what makes you think that will change??</p>	2/25/2022
Dr. Peter	Carrington	Haslett	MI	48840	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. This strikes at the heart of three initiatives for the future of the earth. First, oil expansion is the enemy of stabilizing the climate and ensuring the survival of future generations. Second, the destruction of important lands that support the most vulnerable of all regions, the circumpolar North. And finally this project hold the dagger of extinction over the species diversity of the most imperiled ecosystem we have, and its nearby oceans. Cancelling this project would seem to be a 'no brainer'. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Mark	Knight	Kennett Square	PA	19348	Reject the Willow Master Development Plan	<p>I strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. I, as a U.S. citizen, need to know that there are pristine wild places left in the world, including in the U.S., even if I never personally get to visit them. Sometimes these areas are seen in documentaries, and I personally feel a primal need to know that they do exist, so PLEASE do NOT destroy them for the sake of private corporation profits. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. We really need to preserve what is left of our great natural areas, AND get off of our dependence on oil.	2/25/2022
June	Szasz		BC	V6H 1S5	Reject the Willow Master Development Plan	I live in British Columbia and in 2021 alone we had 600 souls perish due to an unprecedented heatwave. The entire town of Lytton burned to the ground during this same time. In November the unprecedented rains flooded the entire Fraser Valley, Merritt and beyond. We have had years of wild fires, and that deforestation contributes to the flood when excessive amounts of rain falls. If this is not an indication that we need to stop ANY expansion of the fossil fuel industry I do not know what is. To proceed with this should be considered a crime against humanity. You must stop this insanity: it is killing us, wildlife and the very planet we live on. I'm sure that you already know it, so please act like it and put life over your profits, or your profits will be completely meaningless. Do you have an armoured hearse? I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/26/2022
Juliana	de Tarnowsky	La Grange Park	IL	60526	Reject the Willow Master Development Plan	As the world watches volatile acts from Russia against innocent people of Ukraine, I write to ask you to reject the approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve–Alaska. Like Russia, this volatile act against Mother Earth and her inhabitants in the Arctic, cannot continue. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Marc	Fleisher	Moscow	ID	83843	Reject the Willow Master Development Plan	This is absurd. Why do you need to be reminded by ordinary citizens like me to do the right thing? Can you not figure this out on your own? Is there a political motive behind this? Am I missing something? Is the Biden administration on autopilot? Your administration must stop letting oil companies do whatever they want with the heritage of the American people and the planet. Five drill sites? 250 wells? A processing facility? An airstrip? 400 miles of pipeline? A gravel mine? What on earth are you thinking? That the degradation of the habitat will just be a blip? That thirty years of oil is worth 280 million tons of greenhouse gas? The risks to Alaska and the planet are too great. There is no good science behind this. The only actions that makes any sense is the no-action alternative. Have you got the good sense to do that? I hope so. I am tired of having to remind this administration to do the right thing.	2/25/2022

And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. My family is taking many steps to use less oil and gas like buying an electric stove and an id4 electric car. Our government should support our efforts by stopping fossil fuel developments.	2/26/2022
Debra	Neel	Dallas	TX	75223	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. You know the risks involved and the potential for endangering precious wildlife and human beings. Please do the right thing for our earth. Thank you for your consideration.	2/25/2022

Ruth	Adams	Worcester	MA	1604	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. What's next ... a housing development? Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022
Lesley	Brill	Alfred	NY	14802	Reject the Willow Master Development Plan	IF YOU'RE AWAKE, YOU WILL REJECT THIS AWFUL PROJECT! I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Merv	Renton		SA	5014	Please Reject the Willow Master Development Plan	Please deny approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. The administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. And approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Notably, the 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. The Bureau of Land Management reports the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases! :(Already Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. as if to prove this ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. I read that prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. It's clear that a comprehensive, science-driven analysis will show that the risks are far too great. Please use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. Thanks for putting life and nature ahead of big company profits.	2/25/2022
Walter	Walkington	Miami	FL	33143	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Over 80% of US voters prefer renewable energy instead of dirty. Extend leases for solar and wind projects, not fossil projects. Any comprehensive, science-driven analysis will show that the risks are far too great. In cost : benefit analysis, use a Social Cost of Carbon at a zero discount rate (over \$200/MT). You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.	2/25/2022

Tanya	Paul	Fair Oaks	CA	95628	Reject the Willow Master Development Plan	<p>I most strongly urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. We need less oil dependence, not more ecological catastrophes. Your administration MUST end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. Unacceptable! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis, towards which we are careening at top notch speed due to avarice and so many who have the power to do something just going along as if there is no disaster rapidly approaching (many believe it is already here, but can become much, much worse). According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. MADNESS. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. Such hubris. Please be advised that approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project (oddly enough) failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Caribou populations are crashing, there is no escape and no safety net for any living being with this insane quest for oil, oil, oil at all costs (and its fracking cousin, natural gas). And the environmental analysis failed to examine the purpose and rationale for the project in light of the URGENT NEED TO STOP approving new FOSSIL FUEL development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. It is absolutely imperative that you use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. If you won't do it for my grandchildren, for the love of whatever is sacred to you, do it for yours. Please. NO MORE PURPOSELY WRECKING OUR LIFE SUSTAINING PLANET and PRETENDING THAT IT WILL BE OKAY. IT IS NOT OKAY AND IT IS GETTING WORSE WITH EACH PASSING DAY. DON'T ALLOW THESE OIL COMPANIES TO ADD TO THE PROBLEM ANY MORE THAN THEY ALREADY HAVE. Thank you in advance.</p>	3/1/2022

This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. As a Norwegian-born human, with the humanity inside intact.</p>	2/26/2022

Leslie	Spurling	Seattle	WA	98133	Reject the Willow Master Development Plan	<p>No “development” in the Arctic! Drilling is NOT development! It is intrusive, destructive, polluting, solely to extract fossil fuels to sell at a high cost to a public that is moving away from them. I urge you to reject approval of ConocoPhillips’ Willow oil-drilling project in the National Petroleum Reserve–Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden’s promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Please note the use of the word “Reserve.” According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips’ plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve’s numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. DAVID	Williams	Elkmont	AL	35620	Reject the Willow Master Development Plan	<p>Destroying public lands for short term private gains enriches the few while impoverishing the many. Once destroyed, habitats cannot be rebuilt. The seemingly insignificant species we destroy in our greed might have held the key to our own survival. Assaulting nature is assaulting the future of mankind. We have the technology to transform our energy economy to renewable sources. Solar and wind are cost competitive with fossil fuels, and can be put closer to the point of use, reducing the impact of severe weather, earthquakes, and other disasters. Geothermal and hydroelectric plants are already contributing where hot springs and flowing water exist. Hydrogen is the logical fuel for vehicles, and is available in limited areas already. A nationwide hydrogen fueling system should be developed by adding electrolysis equipment to existing gas stations. Some workers will have to be retrained, but when arctic oil workers learn they can make good money and sleep in their own beds at home every night in green energy manufacturing, installation, and maintenance jobs, their families will be much happier.</p>	2/25/2022

Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less. The entire planet cannot afford anything less!</p>	2/26/2022
Amber	Anastasion	Santa Fe	NM	87507	Reject the Willow Master Development Plan	<p>I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. The time to act is now. You must take drastic action to make drastic changes and end the United States dependency on fossil fuel. Allowing this project to move forward is unacceptable and will cause irreparable harm to the Arctic environment and surrounding communities. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. Thomas	Browne	Fremont	CA	94536	Reject the Willow Master Development Plan	I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve-Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. I have spent time up in the National Petroleum Preserve and can attest to it's uniqueness. To site this industrial development here on the preserve would be an obscene slap in the face to everything that is just and right. Deep six these plans and leave the rightful inhabitants of these lands in peace! The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership. The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. According to the Bureau of Land Management, the Willow project would involve the construction and operation of up to five drill sites, 250 wells, a processing facility, hundreds of miles of ice roads, an airstrip, more than 380 miles of pipelines, and a gravel mine. It would produce an estimated 590 million barrels of oil over 30 years. Burning that oil would emit nearly 280 million tons of greenhouse gases. Alaska has warmed more than twice as fast as the rest of the United States over the past 60 years. This warming is already causing coastal erosion, sea-ice loss, and harm to numerous species that depend on the frozen landscape to survive and permafrost thaw. Shockingly, ConocoPhillips' plan involves using giant chillers to refreeze thawing permafrost to help ensure a solid drilling surface. But approving the project would only cause more permafrost thaw and other damage from climate change, including harm to the Reserve's numerous important surface resources. The prior environmental analyses for the project failed to accurately describe or study the significance of the substantial greenhouse gas emissions it would cause. They also failed to properly consider the project's impacts on polar bears, including harm from increased noise pollution and the potential for project-related vehicles crushing bear mothers and cubs in their dens. And they failed to examine the purpose and rationale for the project in light of the urgent need to stop approving new fossil fuel development and transition to clean, renewable energy. Any comprehensive, science-driven analysis will show that the risks are far too great. You must use your legal authority to adopt the no-action alternative and reject this dangerous project. The climate, wildlife and frontline communities can't afford anything less.</p>	2/25/2022

Jim	Steitz	Gatlinburg	TN	37738	Willow Master Development Plan is Ecological Madness	<p>***Your apparent decision to defend the 'Willow' oil extraction project is a disturbing suggestion that you are not sincere about wishing to stabilize Earth's climate at or below 1.5C of heating. The latter goal is mathematically irreconcilable with the tapping and extraction of a massive new oil field in a remote, frontier space where the economics of sunk-costs will demand continued production for decades. Your Administration's action on the 'Willow' project is a crucible junction to determine whether you actually wish a different climate future, or will join the rest of America's business and political elite in liquidating the Earth for immediate economic gratification. The recent IEA report confirms that no new fossil fuel reservoirs can be brought online within the carbon budget remaining to avoid climate catastrophe. There is no purpose of punching oil infrastructure into America's largest remaining wild space, other than to plunge irrevocably into an abyss of catastrophic climate change. The commitment of billions of dollars of capital into hydrocarbon infrastructure would mathematically ensure that the climate goals set of either the Paris Accord and the Biden Administration are unattainable. In the future world that includes the exploitation of NPR-A, including the ConocoPhillips 'Willow' project, climate change has soared beyond 5 degrees C, rendering the Earth incapable of supporting human life. If this Administration views that future as unacceptable, then you must reject any and all permits for this project, and firmly tell ConocoPhillips that its proposal is erroneous in its basic conception and will not be entertained.*** The 23-million-acre Reserve is the largest undeveloped place in the United States, home to polar bears, caribou and millions of migratory birds — as well as Indigenous communities that have relied on the land for millennia. Oil and gas drilling here will irrevocably scar this fragile ecosystem and only exacerbate the climate crisis. Lani	Hummel	Annapolis	MD	21403	Reject the Willow Master Development Plan	<p>I will never forget seeing the video footage of the BP Deepwater Horizon oil spill catastrophe. The nightmare I had dreaded for years had become an ugly reality. As a lifelong lover of wildlife and wild places, I was utterly devastated at the death and destruction. After many years, the clean-up and restoration efforts are still not completed. And some areas will never recover. The dirty secret about oil drilling is that there are many leaks and spills every year. They just aren't publicized. The chances of a spill in the pristine proposed drilling areas are significant. And, the consequences of a spill would be greater in an Arctic environment. All of the spill mitigation strategies that have been developed were designed for warmer waters. What are the plans for dealing with a major spill in Alaska? What are the estimates of damage to wildlife and their habitat? Risking the loss of a national treasure in order to generate a profit for a few actors in a dying industry makes no sense. We should, instead, be focused on the development of non-polluting energy sources that would enable us to preserve Alaska's natural wonders for our children and future generations. I urge you to reject approval of ConocoPhillips' Willow oil-drilling project in the National Petroleum Reserve—Alaska. Your administration must end the pattern of letting oil companies drill in the Arctic without regard for the harm it causes to people, wildlife and the planet. Approving Willow would break President Biden's promise to end new drilling on federal lands and represent an utter failure on climate leadership.
