The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dean Butts

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jared Jankoski

Madison, WI 537045229

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Judy Bluhm

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Connie Mcginnis

Greenfield, IN 46140

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I see the Willow Project as a dreadful mistake. We must stop all oil drilling in the Arctic now. We need to keep fossil fuels in the ground and preserve precious wilderness areas.

Sincerely,

Mary Shesgreen

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Judith Kross

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Joy Lee

Soulsbyville, CA 953729731

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

David Nichols

Portland, OR 97213-3021

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Emily Cackowski

Downingtown, PA 193354999

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kathy Fini

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Victoria Hubbard

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

alicia jackson

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

John Asprey

Moraga, CA 94556

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Nancy Shaw

Cabin John, MD 208181306

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sandra Ingelse

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

RICHARD SANDRUCK

Parkville, MD 21234-4751

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Valerie Howell

Plano, TX 750744209

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Vicki Ukman

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Rebecca Martin

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Pablo Cortez

South Salt Lake, UT 84119

"

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Teresa Kotturan

New York, NY 100226630

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Koren Harrigan

Miramar, FL 330255135

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Victor Staforelli

Torrance, CA 905033632

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dorothy Saxe

Menlo Park, CA 94025

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susanne Lewis

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Bruce McBrian

Uniontown, OH 446856329

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Michael Buescher

Lewisville, TX 750773723

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Roxanne Donohue

Weehawken, NJ 07086

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Pamela Wohlman

Renton, WA 98059

"

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Linda Trzybinski

Bowie, MD 20715

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sharon Longyear

Yorktown Heights, NY 105983229

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Tanya Kabisch

Noble Oark, CA 91210

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Caryn Rouse

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jay Humphrey

Estacada, OR 97023

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

DEREK Walker

Santa Fe, NM 875011563

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kelley Losher

Re: Stop the Willow Project from furthering the climate crisis

"Nearly every animal and environment on earth has been in a constant, steep decline due to humans and oil and fuel leaks, pollution and habitat destruction. This will have impacts that will destroy and kill for decades. Some animals may never return to an area. That is a terrible loss as they belong to a balance. Each and every tiny step that chops away at animals, marine life, birds and all of their habitat have horrible long lasting effects leading to loss on a massive scale when added up. How many more times do you need to be urgently warned of the consequences of not taking positive action for the animals and places that need our help? How many more times are you going to turn your back on doing the right thing, instead of putting the interest of a company first because someone is promising something and whispering in your ear to protect their product? We NEED a government to stand up and do what's right. These things can't be undone, and they always come at a massive and lethal cost to the innocent! Haven't any of you noticed how much less you see when outdoors? When I was kid I used to see so much wildlife from squirrels and chipmunks to deer, and to epic sized flocks of birds, and now going out I feel lucky to see a few animals and birds. This world is so much less beautiful without the animals and the environment to support them. We need them! We need the animals in the numbers they used to be! We need the bees and butterflies. We don't need more oil and gas drilling sites. It's simply lethal to the animals on land, marine life, the environment, ugly, unnecessary, and the only ones that profit are at the top while the rest of us suffer and die for it, for decades. NO MORE!!!!

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Elvier Yemaya

Saint Petersburg, FL 33711

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jacqueline Maxwell

Cathlamet, WA 98612

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I believe that global warming is humanity's #1 problem. Scientifically and logically, we can solve it. We absolutely need politics and laws to support scientific solutions. Without our dedicated determination, our children and grandchildren (and all wilderness) will suffer in ways we don't want to imagine. Please, please, protect the Arctic now.

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

D B

Berkeley, CA 94703

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

John Wiles

Durham, NC 277136542

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jonathan Crews

Santa Fe, NM 875011624

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

April Connolly

Braintree, MA 021845905

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jayne Dorfman

Wellesley, MA 024826049

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Dugger-Mathison

San Francisco, CA 94109

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Marleen Schussler

New York, NY 10010

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Thomas DeBoni

Fort Myers, FL 339083900

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ryan W.

San Antonio, TX 78240

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

William Murphy

New Port Richey, FL 34655

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sallie Fitch

Minnetonka MIs, MN 55343

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

STOP the ConocoPhillips' proposed Willow Master Development Plan before it causes irreparable harm to vital communities & habitats in Alaska.

President Biden campaigned on "following the science" & tackling the climate crisis. The vast majority of the Americans who support this administration, oppose oil & gas drilling, ESPECIALLY in Alaska. We have to take action to prevent more warming in this region.

The Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. This project would harm the ecosystem they depend on for food & cultural activities. Oil & gas development & its' the climate impacts threaten the caribou population, a vital resource vital to many Indigenous peoples.

The region also provides CRITICAL habitats for polar bears & nesting grounds for millions of migratory birds. This delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling & industrial development.

An accurate environmental impact statement will describe & analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, & alternatives to the proposed project.

Warming twice as fast as the US average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day " increasing emissions & putting the region at risk of a spill " which you know will happen without the oil industry to care. Profits for stockholders cannot be the ultimate goal of the fossil fuel industry anymore. We've run out of time..

Please STOP the Willow Project, put people & the planet ahead of ConocoPhillips & other Big Oil polluters.

Sincerely,

Judith Moderacki

Rockville Centre, NY 115703217

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ke Greenberg

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Barbara Kirkland

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.
