

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Cheryl Branch

Grass Valley, CA 959456207

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Hannah Banks

Newton, MA 024591741

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sandy Lynch

Bremerton, WA 983119523

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

MaryJane Ryan

Mill Valley, CA 949413752

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jane Edsall

Mount Sinai, NY 117660144

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susanne Spring

Woodridge, NY 127895924

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Michael R. Watson

Sonoma, CA 95476

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Rehana Huq

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

william A Ross

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

christine harker

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Karen L Pecsok

West Plains, MO 65775-5424

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Stephen Slavens

Waukesha, WI 531882526

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

James Bateman

Davie, FL 333282200

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

L L

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Walsh

Palm Beach Gardens, FL 334184570

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Annika Karlson

South Lyon, MI 481788982

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

David Stagliano

Burlington, VT 054082812

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Christoph Nauer

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kathleen Stevens

Plainfield, IL 60544

"

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

John Casper

Miller Place, NY 11764

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

anthony cardott

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Carla Dorantes

Rochester, MN 55901

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Herrmann

Excelsior, MN 553310111

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gino Czaster

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

regula kummer

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

ANNETTE Howell

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jeffrey Askanazi

Hamilton, MI 494199653

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kaneisha Lewis

Fort Worth, TX 761343618

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

David Welch

Boise, ID 83709

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

JAMES GIESEL

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Rebecca Beaton

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Stacey Lightfoot

Williamsburg, VA 231852997

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dustin Sullivan

Huntsville, OH 433249798

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sheila Dunleavy

Oakland, NJ 074362745

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Elena Bashir

Chicago, IL 606372033

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Lisa Howell

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Wendy Chandler

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gladys Eckard

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dave Stauber

Braintree, MA 021841012

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Bern Suran

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Andrew Kurzweil

Brooklyn, NY 112294416

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

C. Falls

Williston, FL 326965527

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Cindy Wren

Clarkesville, GA 305234281

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Laura Delmas

Kirkland, WA 980336938

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mary Dome

Cape Fair, MO 656240222

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mark Walton

Wichita, KS 67213

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kirsty MacCalman

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land

We want America's wonderland of Alaska to not fall prey to industrial lust.

Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Toni Paris

Milwaukee, WI 532071941

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Rodney Sharka

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Janet Tice

Chapel Hill, NC 27516
