The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Myra Bush

Miami, FL 33178

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Carol Kummer

Pittsville, WI 544669467

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jerry Floyd

Hemet, CA 925458102

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Robert Michielutti

Asbury Park, NJ 07712

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mary McKeever

Cincinnati, OH 45231

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Daniel Kauff

Arlington Heights, IL 600045563

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Emily Lin

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Helen Yeomans

Overland Park, KS 662123942

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"Facts: World population 1965 around 3 1/4 billion. Today world population just shy of 8 billion.

All the problems of the environment, depletion of natural resources, air quality, global warming, etc. might well be solved if we could find a way to reduce world population to less than 6 billion.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

RICHARD ENDRIS

Bridgewater, NJ 08807

Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kathryn Stone

Charleston, WV 253022937

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Randy Hershey

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

Please to stop the Willow Master Development Plan that is proposed by ConocoPhillips.

The proposed plan will cause irreparable harm to Indigenous communities and habitats in Alaska. Take action consistent with the science, to address the climate crisis, and to prevent further damage to this already warming region.

In particular, the sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The proposed project would harm the ecosystem that Indigenous Alaskans depend on for food, other natural resources, and cultural activities. Oil and gas development and the climate impacts it worsens threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. That ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. The proposed Willow project will produce nearly 200,000 barrels of oil a day, which will increase emissions while putting the local region at risk of a spill.

Respect the balance of the long-term interests and needs of people and the planet ahead over the narrow and temporary special interests of ConocoPhillips.

Stop the Willow Project.

Sincerely,

Edward Main

Houston, TX 77098

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

michelle autin

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Debby Hahamy

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Inger-Johanne Marheim

Akershus, --Select-- 1455

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ginny Nichols

Bodega Bay, CA 949239726

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Alabama Sarah

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Magda Gabor-Hotchkiss

Lenox, MA 01240

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

James DeJager

Rochester, NY 14615-1322

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Karen Spaar

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Joseph Luke

National City, CA 919506033

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Phyllis Skinner

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

It is not a question of if they will degrade, destroy, spill, pollute ... it is when they will do so. The Arctic just cannot tolerate this type of activity.

That is why I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sue McHenry

Silverthorne, CO 804981492

Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Joe Salas

Carlsbad, CA 920081167

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Irini Dieringer

Parker, CO 80134

"

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Muammer Ekin

Hamilton, NJ 08690

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Pit Wenninger

Bremen, 28215

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Tina Baraque

Seminole, FL 337724663

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Valerie Rosenfeld

Binghamton, NY 139054262

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

Stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters. Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

I urge the Bureau of Land Management to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. Most of the American public who support this administration, oppose oil, and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

John Zdencanovic

Atlanta, GA 30327-1515

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sandra Marshall

Las Cruces, NM 880126089

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ericka Kreager

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Peter Scantalides 1

Henderson, NV 89044WE

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Kritzik

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Christopher Stimson

Akron, OH 443135062

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dawn Dubruiel

Fort Lauderdale, FL 33311

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I respectfully urge you to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. I agree with those who oppose oil and gas drilling, especially in Alaska. We must prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem upon which they depend for nourishment and cultural activities. Oil and gas development and its associated environmental and climate damage would also threaten the area's caribou population, which is a vital resource for Indigenous people.

The region provides critical habitats for polar bears as well as nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change.

Please put people, wildlife, and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Peter Lathrop

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Michael Webb

Providence, RI 029041649

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Desiree Nagyfy

Deer Park, WA 990068352

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gloria R. McKinnon

Santa Fe, NM 875073403

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Anandita Kumar

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Hannah McConnell

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Maryetta Ryan

Niskayuna, NY 12309

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Joy Morgan

Austin, TX 78753

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Debra Carter

Temple Terrace, FL 33617

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

laura tibbo

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ryan Olson

Santa Rosa, CA 95403

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

JENNIFER SARFF

San Diego, CA 92104-3441

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gerry Milliken

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Peggy Nelson

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Evelyn Adams

McKinney, TX 75071

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

jennifer boneta

Colorado Springs, CO 809054437
