The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jim Barber

Evergreen, CO 804397344

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sharon Hawkinson

Citrus Heights, CA 95610

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jim Luebke

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Frankie Rodriguez

Brooklyn, NY 11215

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Dennis Kreiner

Carpentersville, IL 601101201

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Clare Hopkins

Ann Arbor, MI 48105

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

June Osbourn

Sonoma, CA 954763261

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Chris O'Connell

Chicago, IL 606402035

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

nathan schaefer

Antrim, NH 03440

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Catherine Wright

New York, NY 100283052

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

K. Ahmed

Wichita, KS 672125002

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Carol Walters

Chicago, IL 606573311

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Blake O'Quinn

Mt Pleasant, TX 754555859

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Graham

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Scott Davis

Fort Edward, NY 128289244

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Helen Cameron

Berkeley, CA 947071816

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Anand Nariboli

Pleasant Hill, IA 50317

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Joni Passarelli

Curwensville, PA 168337162

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it causes irreparable harm to Indigenous communities and wildlife habitats in Alaska.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of Americans support this. We oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource for many Indigenous peoples.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. This delicate ecosystem is a prime example of what should be off-limits to oil drilling and industrial development.

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

So where is one?

Alaska, warming twice as fast as the contiguous United States, is already reeling from climate change. Willow would produce nearly 200,000 barrels of oil a day; increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

C P Saul

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mary Hoff

Minnetonka, MN 553456147

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyse the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day - increasing emissions while putting the local region at risk of spillage.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Danny Briggs

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Cathy Martin

Smyrna, GA 30080

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Robert Murphy

London, SW194PA

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Cathy Thompson

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sheryl Fryberg

Marysville, WA 98271

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Toni Kimball

Santa Ana, CA 927061642

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Walter Juchert

Santa Rosa, CA 954096218

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Robert Waters

Wellsville, UT 843396733

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Andrea Phan

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mike Radakovich

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Silvana Villarreal

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Stella Gibson

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Virginia Huber

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Rebecca Gagliano

Philadelphia, PA 191282606

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Clement Kulish

Phoenix, AZ 85044

"

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Suzan Caylen

Rogers, AR 51566

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Linda Stitt

Hereford, AZ 85615

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Eric Zinn

Brooklyn, NY 112101131

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Amanda Pagay

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ernesto Marquez

Perris, CA 92570

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

sandrine LARIVIERE

Bayonne, 64100

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Brad Bittan

Parker, CO 801347440

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Moses

Chattanooga, TN 374031215

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Much of Alaska and the arctic has to be off limits for oil drilling as well as mines and any development (no more roads for example) if we want to have a planet. WE can no longer do "business as usual". The consequences are too great and we have to change our views to see the consequences that will destroy us along with one of the last whole ecosystems that is actually intact and clean - Alaska!!!! If you like to "eat, drink and be merry" you will stop oil drilling in the arctic and much of Alaska. You cannot eat or drink oil and it is hard to be merry if you can't breathe or have clean food and water because it is either gone or polluted. We have to wake up and start using our common sense immediately. ALL life on earth is at stake - including ours. Stop this project before it starts and start to look at what the arctic and Alaska has to offer for food production and the value of just keeping places wild and untouched.

I used to live and work in Alaska so this is coming from direct experience.

Sincerely,

Angie Dixon

Clinton, WA 982369622

These projects should always, as part of the sale, be mandated to completely restore the areas they use, instead of the public paying to repair the areas. And this is never done, citing "jobs" or whatever excuse, but then the place is left permanently unusable, unless much government funding is used to repair. This should be unacceptable.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Debi Combs

Decatur, GA 30033

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Pamela Welsh

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Deborah Shaw

Bellingham, WA 982267890

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Warren Hodgkiss

Harrisburg, PA 171032558

Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gerald Molinar

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Noenoe Barney-Campbell

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Toni Meehan

Brinnon, WA 98320

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Antonella Nielsen

Copenhagen, -Select- 02400

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gretchen Roberts

Avon Lake, OH 44012

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I WANT the BLM to STOP the ConocoPhillips' proposed Willow Master Development Plan BEFORE it can cause IRREPARABLE HARM to vital Indigenous communities and habitats in Alaska. President Biden campaigned on " FOLLOWING THE SCIENCE " and TACKLING the CLIMATE CRISIS. The VAST majority of the American public who SUPPORT this administration, OPPOSE oil and gas drilling, ESPECIALLY in Alaska. Action MUST be taken NOW ALREADY TODAY IMMEDIATELY FOREVER to PREVENT the DESTRUCTION of this already warming region.

The SENSITIVE Teshekpuk Lake region has been VITAL for Indigenous Alaskans for THOUSANDS of years. The project would HARM the ecosystem NOW ALREADY TODAY IMMEDIATELY FOREVER they depend on for nourishment and cultural activities. Oil and gas development and the CLIMATE IMPACTS it causes THREATEN the caribou population, RISKING a VITAL RESOURCE that MANY Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Al Holm

Parker, CO 80138

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Erdal Aksoy

Lake Forest, CA 92630

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Elaine Roman

Largo, FL 33774

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.
