Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ed Renner

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sandra Setlik

Indianapolis, IN 462034921

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Christine Mattar

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kevin Carder

Columbia, SC 29229

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Pat Rose

Skokie, IL 600772183

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Robert Pacheco

Durango, CO 81302

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Solissa Romenski

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Linda Sizemore

Highland Park, IL 600351208

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Marcia Migdal

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Linda Ostro

Oakland, CA 94595

Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Thomas Crothers

Lexington, KY 40503

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Edna Mullen

Saint Charles, MN 559721536

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jan Accardo

Lincoln City, OR 97367

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Barbro Tracy

Lafayette, CA 94549

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Adam Marshall

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Barbara Ihme

Minnetonka, MN 553451019

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Shaddock

Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Wendy Brown

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

The BLM must please stop the Willow Master Development Plan proposed by ConocoPhillips. This project would cause irreparable harm to vital Indigenous communities and habitats in Alaska. You must help President Biden, who campaigned on "following the science" and tackling the climate crisis, to "walk the walk."

This delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate EIS would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

The majority of the American public is counting on you to do your job!

Sincerely,

Judith Fletcher

Bronx, NY 104631820

Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

B. R. Lemonik

Mahopac, NY 105414758

An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Frank Koonce

Phoenix, AZ 850223943

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Sherry Hartman-Apgar

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

armelle jamont

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Eric Gabriel Lehman

New York, NY 10038

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

In its final hours, the last administration approved a massive Arctic drilling project. The Willow Project from ConocoPhillips would create more than 570 miles of ice roads, an airstrip, and nearly 320 miles of pipeline in Alaska's vital landscape, bringing noise, traffic, and pollution and extending the use of fossil fuels for decades.

The Teshekpuk Lake region has been home to Indigenous Alaskans for thousands of years. It

also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. An accurate analysis of its impacts would address exacerbation of climate change, immediate and long-term impacts of construction, operations, and potential spills on communities, habitat and wildlife, and a wide range of other potential impacts that have been ignored or insufficiently addressed.

Over the last 60 years, Alaska has warmed twice as fast as the rest of the United States, leading to habitat loss, sea-ice melt, sea-level rise, and permafrost thaw that already affects the planet. The area should be off-limits to all oil drilling, industrial development, and any other projects that will worsen the already dangerous situation. I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to Indigenous communities, vital wildlife habitats, and the climate.

Sincerely,

Cheryl Gross

Sarasota, FL 342322558

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Michiele Goebel

Goleta, CA 93117

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

KURT STEINMAN

Denton, TX 762096388

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Diane Nosnik

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

C Wulff

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Karen Yde

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Lisa Simonin

Belleville, IL 622233431

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Norma Kay Mimm

Surprise, AZ 85374

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Lori DeLuca

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Erin Bright

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Mike Dresser

Wisconsin Rapids, WI 544941554

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Fossil Fuel companies have destroyed this planet enough!! It is time to put our money into safer alternative fuels and research. We only have one planet and its air is becoming unbreathable, we have more people with lung diseases than ever before. Our water systems are becoming undrinkable, without clean water we become extinct!!! The animals' habitats are destroyed, animals need their habitats...we are NOT the only animal on this planet and we are NOT above other animals!!! ALL LIFE MATTERS...OUR PLANET MATTERS...LIFE AND PLANET OVER FOSSIL FUEL, MONEY, AND GREED!!!

Sincerely,

Kayan Eplett

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Susan Peirce

Santa Fe, NM 87506

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Howard Filtz

Pittsburgh, PA 152322729

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Todd Sonquist

Bloomfield Hills, MI 483041067

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Matthew Kareis

Pittsburgh, PA 15221

The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Robin Covino

Milford, CT 064606369

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Gidon Eshel

Rhinebeck, NY 125721509

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Jenalee Muse

Williston, SC 298532328

The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Macyle Candela

New Oxford, PA 17350

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Ronalee Phares

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

JoAnne Muise

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

M. Barbour

Phoenix, AZ 850186951

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Marilyn Godar

Saint Louis, MO 63122

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

D Hubenthal

Spokane, WA 992057334

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Kyle Sterling

Burlington, CT 060132403

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Thomas Cierech

Ringwood, NJ 074562002

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Nancy Perkinson

Coos Bay, OR 974204470

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Re: Stop the Willow Project from furthering the climate crisis

"To the Bureau of Land Management:

I urge the BLM to stop the ConocoPhillips' proposed Willow Master Development Plan before it can cause irreparable harm to vital Indigenous communities and habitats in Alaska. President Biden campaigned on "following the science" and tackling the climate crisis. The vast majority of the American public who support this administration, oppose oil and gas drilling, especially in Alaska. Action must be taken to prevent the destruction of this already warming region.

The sensitive Teshekpuk Lake region has been vital for Indigenous Alaskans for thousands of years. The project would harm the ecosystem they depend on for nourishment and cultural activities. Oil and gas development and the climate impacts it causes threaten the caribou population, risking a vital resource that many Indigenous peoples rely on.

The region also provides critical habitats for polar bears and nesting grounds for millions of migratory birds. The delicate ecosystem is a perfect example of a place that should be off-limits to oil drilling and industrial development. An accurate environmental impact statement would describe and analyze the significance of greenhouse gas emissions, cumulative impacts to wildlife, and reasonable alternatives to the proposed project.

Warming twice as fast as the United States average, Alaska is already reeling from climate change. Willow will produce nearly 200,000 barrels of oil a day -- increasing emissions while putting the local region at risk of a spill.

Thank you for considering my opinion to stop the Willow Project and put people and the planet ahead of ConocoPhillips and other Big Oil polluters.

Sincerely,

Meg Gilman

Portsmouth, NH 03801
