

United States Department of the Interior

BUREAU OF LAND MANAGEMENT
Alaska State Office
222 West Seventh Avenue, #13
Anchorage, Alaska 99513-7504
www.blm.gov/alaska

Dear Reader:

The enclosed Errata Sheet documents minor corrections to the text of the Final Environmental Impact Statement (EIS) for the National Petroleum Reserve in Alaska Integrated Activity Plan (IAP) that was publicly released on June 26, 2020. These corrections reflect errors that were discovered after the release of the Final EIS. We have utilized "tracked changes" (red text additions and green text crossed-out deletions) for the changes where we felt it would assist the reader to more easily identify the corrections. There are no changes or significant new circumstances or information identified in this Errata Sheet that affect the impact conclusions in the Final EIS.

In the Final EIS, an error was identified in Table 2-1 for the acreage available for leasing and infrastructure under Alternative E. Correcting this error required updates throughout the text of the EIS wherever acreage available for leasing and infrastructure under Alternative E was referenced. These changes are denoted with an asterisk (*) in the errata sheet.

This Errata Sheet is part of the administrative record for the National Petroleum Reserve in Alaska IAP Final EIS. These corrections will be posted on the BLM-Alaska website at www.blm.gov/alaska.

For additional information or clarification regarding the attached Errata Sheet, please contact Stephanie Rice, Project Lead, at (907) 271-3202.

Sincerely,

Chad B. Padgett
State Director

Attachment: Errata Sheet

ATTACHMENT: ERRATA SHEET

In the Final EIS, an error was identified in Table 2-1 for the acreage available for leasing and infrastructure under Alternative E. Correcting this error required updates throughout the text of the EIS wherever acreage available for leasing and infrastructure under Alternative E were referenced. These changes are denoted with an asterisk (*) in the errata sheet.

Below are all the changes to the National Petroleum Reserve in Alaska Integrated Activity Plan Final Environmental Impact Statement:

INTRODUCTION

**Abstract, second paragraph*

The NPR-A IAP/EIS considers four action alternatives and the No Action Alternative (Alternative A). Alternative A would continue current management as approved in the February 2013 NPR-A IAP Record of Decision, and approximately 52 percent (11.8 million acres) of the NPR-A's subsurface estate would be open to oil and gas leasing. Alternative B is similar to Alternative A, but would increase the land set aside for conservation, and the area open to leasing would decrease to approximately 10.9 million acres (48 percent of the NPR-A's subsurface estate). Alternative C would increase the total number of acres open to leasing, compared with Alternative A, to approximately 17.3 million acres (76 percent of the NPR-A's subsurface estate). Alternative D would make more land open to leasing (approximately 18.6 million acres, or 82 percent of the NPR-A's subsurface estate), and the area closed to new infrastructure would decrease to approximately 4.4 million acres. Alternative E ~~would make~~ **would open** the **same amount of** ~~most~~ land **as Alternative D** ~~open~~ to leasing (approximately ~~18.7~~ **18.6** million acres, or 82 percent of the NPR-A's subsurface estate).

EXECUTIVE SUMMARY

**Page ES-6, second paragraph*

Alternative E (Preferred Alternative)

Alternative E ~~would make~~ **would open** the **same amount of** ~~most~~ land **as Alternative D** ~~open~~ to leasing (approximately ~~18.7~~ **18.6** million acres, or 82 percent of the NPR-A's subsurface estate).

CHAPTER 2

**Pages 2-2 and 2-3, Table 2-1*

Table 2-1
Quantitative Summary of Alternatives

Land Allocations	Alt. A	Alt. B	Alt. C	Alt. D	Alt. E
Closed to fluid mineral leasing	10,991,000	11,854,000	5,444,000	4,173,000	4,101,000 4,173,000
Open to fluid mineral leasing	11,763,000	10,900,000	17,310,000	18,581,000	18,653,000 18,581,000
Subject to no surface occupancy	2,489,000	4,132,000	5,269,000	4,732,000	5,939,000 5,891,000

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

Land Allocations	Alt. A	Alt. B	Alt. C	Alt. D	Alt. E
Unavailable, except for essential road and pipeline crossings	2,691,000	2,916,000	3,153,000	3,163,000	4,199,000 4,222,000
Available for new infrastructure	10,815,000	7,820,000	13,663,000	14,115,000	13,142,000 13,119,000
Visual Resource Management Class II	8,353,000	14,510,000	8,784,000	8,429,000	9,403,000 942,7000
Visual Resource Management Class III	5,805,000	368,000	1,498,000	1,498,000	4,174,000 1,172,000
Visual Resource Management Class IV	8,362,000	7,646,000	12,243,000	12,597,000	11,948,000 11,927,000

**Page 2-7, fifth paragraph*

Alternative E (Preferred Alternative)

Alternative E ~~would make~~ would open the same amount of ~~most~~ land as Alternative D ~~open~~ to leasing (approximately ~~18.7~~ 18.6 million acres, or 82 percent of the NPR-A's subsurface estate).

Page 2-38, Table 2-3, Stipulation K-1(f), Alternatives B and C

f. 1-mile setback from the ordinary high water mark of the following rivers:

- Alaktak River
- Chipp River
- Topagoruk River
- Meade River
- Usuktuk River
- Nigisaktuvik River
- Inaru River
- Avalik river
- Kungok River
- Kuk River (~~upstream from T12N, R32W, U.M.~~ see Stipulation K-4 for exception)
- Ketik River
- Kaolak River
- Ivisaruk River (~~upstream from T12N, R32W, U.M.~~ see Stipulation K-4 for exception)
- Utukok River
- Kokolik River
- Kugrua River

Page 2-38, Table 2-3, Stipulation K-1(f), Alternative E

f. 1-mile setback from the ordinary high water mark of the following rivers:

- Alaktak River
- Chipp River
- Topagoruk River
- Meade River
- Usuktuk River
- Nigisaktuvik River

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

- Inaru River
- Avalik river
- Kungok River
- Kuk River (~~upstream from T12N, R32W, U.M.~~ see Stipulation K-4 for exception)
- Ketik River
- Kaolak River
- Ivisaruk River (~~upstream from T12N, R32W, U.M.~~ see Stipulation K-4 for exception)
- Utukok River
- Kokolik River
- **Kugrua River**

Page 2-39, Table 2-3, Stipulation K-1(g), Alternative E

g. 0.5-mile setback from the ordinary high water mark of the following rivers:

- ~~Kugrua River~~

Pages 2-41 and 2-42, Table 2-3, Stipulation K-4, Alternative C

- NSO (Kogru River, Wainwright Inlet/Kuk, and Ivisaruk Rivers ~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-5 and Map 2-6)

Requirement Standard (2nd paragraph): The Kogru, Wainwright Inlet/Kuk, and Ivisaruk Rivers (~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-5 and Map 2-6) are available for leasing, subject to a NSO stipulation. New infrastructure would not be permitted, except for essential pipeline crossings.

Pages 2-41 and 2-42, Table 2-3, Stipulation K-4, Alternative D

- Leasing allowed under standard terms and conditions (Wainwright Inlet/Kuk and Ivisaruk Rivers [~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-7])
- New infrastructure authorized through the normal review process (Wainwright Inlet/Kuk and Ivisaruk Rivers [~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-8])

Requirement Standard (3rd paragraph): Wainwright Inlet/Kuk and Ivisaruk Rivers (~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-7) are available for leasing subject to standard terms and conditions. New infrastructure would be permitted through the normal review process.

Pages 2-41 and 2-42, Table 2-3, Stipulation K-4, Alternative E

- NSO (Kogru River, Dease Inlet, Admiralty Bay, Elson Lagoon, and Wainwright Inlet/Kuk and Ivisaruk Rivers [~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-9 and Map 2-10], and their associated islands)
- New Infrastructure authorized through the normal review process (Wainwright Inlet/Kuk and Ivisaruk Rivers [~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-10])

Requirement Standard (3rd paragraph): Wainwright Inlet/Kuk and Ivisaruk Rivers (~~downstream from T12N, R32W, U.M.~~ see Appendix A, Map 2-9 and Map 2-10) are available for leasing subject to a NSO stipulation.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

CHAPTER 3

**Page 3-6, sixth paragraph*

Alternative E (Preferred Alternative)

Alternative E ~~would make~~ would open the same amount of ~~most~~ land as Alternative D ~~open~~ to leasing and the most amount of new infrastructure. Table 3-1 and Table 3-2 present GHG emissions for the low and high scenarios. Estimated impacts for Alternative E are identical to those of Alternative D because of equivalent projected production rates.

**Page 3-20, first paragraph*

Alternative E (Preferred Alternative)

Alternative E ~~would make~~ would open the same amount of ~~most~~ land as Alternative D ~~open~~ to leasing (approximately 82 percent of the subsurface estate of NPR-A). Emissions of criteria air pollutants and HAPs under Alternative E are shown in Table 3-6.

**Page 3-34, first paragraph*

Alternative E (Preferred Alternative)

Under the preferred alternative, Alternative E, approximately ~~18.7~~ 18.6 million subsurface acres (~~6.9~~ 6.8 million more acres than under Alternative A) and 1,487,000 surface acres of high potential area (51,000 more acres than under Alternative A) would be available for leasing.

**Page 3-55, third paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, ~~18.7~~ 18.6 million acres of the NPR-A's subsurface would be available for oil and gas leasing, with different areas subject to standard terms and conditions or NSO stipulations.

**Page 3-64, first paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, ~~18,653,000~~ 18,581,000 acres of land would be made available for fluid mineral leasing, with ~~13,142,000~~ 13,119,000 acres open for development of infrastructure and pipelines related to oil and gas leases.

**Page 3-65, first paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, ~~18,653,000~~ 18,581,000 acres of land would be made available for fluid mineral leasing, with 13,142,000 acres open for development of infrastructure and pipelines related to oil and gas leases. Approximately 4,082,000 acres under Alternative E would be made available in areas of high petroleum potential; ~~651,000~~ 1,653,000 of these acres are currently leased.

Page 3-82, third paragraph

The Alternative E leasing area includes a ~~41~~ 29 percent increase over Alternative A in river miles and 87 percent increase in lake area open for fluid mineral leasing, similar to Alternative D. Rivers in areas available for leasing cumulatively account for 2,296 river miles and the fewest major rivers in areas closed to leasing, 418 river miles.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

Page 3-82, fifth paragraph

Areas available to infrastructure have 138 river miles, a ~~17~~ 14 percent increase over Alternative A.

**Page 3-101, fourth paragraph*

Alternative E (Preferred Alternative)

Under the Preferred Alternative, Alternative E, the total area open for leasing (including the areas subject to NSO, TLs, and controlled surface use lease stipulations) would be approximately ~~58~~ 63 percent larger than under Alternative A.

**Page 3-102, Table 3-25*

Table 3-25
Acreages Open and Closed to Fluid Mineral Leasing by Development Potential Zone
Under Alternative E

Allocation	Acres Open and Closed to Fluid Mineral Leasing Under Alternative E			
	High Development Potential Zone	Medium Development Potential Zone	Low Development Potential Zone	Totals
Closed	0	1,000	4,100,000	4,101,000 4,173,000
Open	4,082,000	7,183,000	7,388,000	18,653,000 18,581,000
Subject to NSO	1,631,000	2,004,000 2,002,000	2,304,000 2,259,000	5,939,000 5,891,000
Leased ^a	651,000	242,000	0	893,000
Unleased	980,000	1,762,000 1,760,000	2,304,000 2,259,000	5,939,000 4,998,000
Subject to controlled surface use	187,000	251,000	0	438,000
Subject to TLs	777,000	350,000	2,060,000	3,187,000
Leased ^a	119,000	123,000	0	242,000
Unleased	658,000	227,000	2,060,000	2,945,000
Subject only to standard terms and conditions	1,487,000	4,578,000	3,024,000	7,615,000

^aAreas with existing leases; may be open subject only to standard terms and conditions

**Page 3-135, first paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, ~~4,101,000~~ 4,173,000 acres of land, the fewest of all alternatives, across all fish habitat units would be closed to fluid mineral leasing (**Chapter 2, Table 2-1; Appendix L, Table L-4**). This is a 62 percent decrease from Alternative A.

**Page 3-135, second paragraph*

As with Alternative D, a total of 181 miles of AWC waterbodies are closed to fluid mineral development, representing a ~~78~~ 81 percent decrease in AWC habitat protections, compared with Alternative A (Appendix L, Table L-5). A total of 1,393 miles of AWC streams are open to fluid mineral development, but with NSO provisions.

Page 3-135, third paragraph

There are significant decreases in EFH habitat closed to fluid mineral leasing under Alternative E, compared with Alternative A. This includes a ~~42~~ 9 percent reduction of saffron cod EFH and

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

an ~~85~~ 69 percent reduction of Arctic cod EFH, which are completely closed to fluid mineral leasing.

**Page 3-135, fourth paragraph*

As with Alternative D, infrastructure development is closed on 189 miles of known AWC stream habitat under Alternative E, a decrease of ~~16~~ 18 percent, compared with Alternative A (Appendix L, Table L-6). Infrastructure development is allowed on ~~717~~ 787 miles of AWC streams (down less than ~~1~~ 9 percent, compared with Alternative A). It is conditionally allowed for essential development on another ~~1,239~~ 1,150 miles, an increase of 4 percent. New infrastructure development is not allowed on 347,000 acres of the Coastal Plain fish habitat (Appendix L, Table L-7). Some level of conditional infrastructure development is allowed on ~~9,745,000~~ 9,744,000 acres of the Lower Colville and Coastal Plain habitat units combined.

**Page 3-135, fifth paragraph*

In deep or very deep lake habitat under Alternative E, fluid mineral development is closed or designated NSO for 612,000 acres. This is a decrease in potential protections for deep lake habitat of 26 percent, compared with Alternative A (Appendix L, Table L-8). A total of ~~227,000~~ 228,000 acres of deep lake habitat are closed to infrastructure development under Alternative E. This is a 29 percent decrease in potential protections from infrastructure impacts, compared with these habitats under Alternative A (Appendix L, Table L-9).

**Page 3-204, seventh paragraph*

Under Alternative E ~~4,101,000~~ 4,173,000 acres are closed to fluid mineral leasing, ~~5,939,000~~ 5,891,000 acres are subject to NSO, and 9,088,000 acres are subject to standard terms and conditions (**Chapter 2, Table 2-1**); however, 893,000 acres that is NSO is already leased and is assumed to be standard terms and conditions for this analysis. An estimated 9.07 medium or large (≥ 50 barrels) spills are projected to occur under Alternative ~~B~~ E (**Appendix I, Table I-7**).

**Pages 3-204 and 3-205, last and first paragraph*

Approximately 80.9 percent of the female WAH is expected to be in areas that are closed to leasing or NSO and ~~1.3~~ 1.2 percent of the herd is expected to be in areas open to fluid mineral leasing under standard terms and condition during calving (**Appendix R, Table R-2**); 78.12 and 6.7 percent of the herd is expected to be in areas closed to new infrastructure and available to new infrastructure, respectively (**Appendix R, Table R-3**).

**Page 3-205, fourth paragraph*

Under Alternative E, at any one time, ~~30.3~~ 30.4 percent of the calving female TCH is expected to be in areas closed to leasing or NSO, ~~6.4~~ 6.2 percent in areas with controlled surface use, ~~39.1~~ 39.3 percent in areas with TLs, and ~~21.1~~ 20.9 percent in areas open to fluid leasing under standard terms and condition (**Appendix R, Table R-4**); ~~14.3~~ 14.4 percent of the herd is expected to be in areas closed to new infrastructure, and ~~66.1~~ 66.0 percent of the herd is expected to be in areas available for infrastructure (**Appendix R, Table R-5**).

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

*Page 3-224, Table 3-27

Table 3-27
Polar Bear Terrestrial Critical Habitat by Alternative, Lease Type, and Infrastructure Allowed

Type of Area	Alternative A		Alternative B		Alternative C		Alternative D		Alternative E	
	Acres ¹ (Thou- sands)	Per- cent	Acres ¹ (Thou- sands)	Per- cent	Acres ¹ (Thou- sands)	Per- cent	Acres ¹ (Thou- sands)	Per- cent	Acres ¹ (Thou- sands)	Per- cent
Mineral leasing	-	-	-	-	-	-	-	-	-	-
Closed to leasing	769 (2)	90	852 (33)	99	235 (0)	27	-	-	-130	-10
NSO	21 (6)	2	3 (3)	>1	516 (7)	60	449 (7)	52	474 792 (13)	55 60
Open	65 (29)	8	1	>1	105 (30)	12	407 (30)	47	382 392 (23)	45 30
Infrastructure	-	-	-	-	-	-	-	-	-	-

Source: BLM GIS 2019

¹Subset of total acreage currently leased in parentheses

*Page 3-248, third paragraph

Alternative E (Preferred Alternative)

Alternative E would increase the lands available for leasing by ~~6,890,000~~ 6,818,000 acres, compared with Alternative A, which would increase the potential for the nature and types of impacts described under Impacts Common to All Action Alternatives.

*Page 3-248, fourth paragraph

Compared with Alternative A, Alternative E would result in ~~2,327,000~~ 2,304,000 more acres more acres being available for new infrastructure development. Land use conflicts from development would intensify during the construction phase, with conflicts likely being reduced during the production phase. Likely impacts are temporary disruptions because of noise, dust, and activity generated from pipeline and infrastructure development and operation.

*Page 3-258, second paragraph

Alternative E (Preferred Alternative)

Alternative E would make the largest number of acres available for fluid mineral leasing (approximately ~~18.7~~ 18.6 million). The number of acres unavailable for new infrastructure would be fewest under Alternative E. In terms of direct and indirect impacts on cultural resource sites, such as Traditional Land Use Inventory and AHRS, Alternative E could affect the greatest number of documented sites (Table 3-30).

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

*Page 3-282, Table 3-32

Table 3-32
Percentage of NPR-A Subsistence Use Areas Closed and Open to Fluid Mineral Leasing

Source: See **Appendix T, Table T-2**, Subsistence Data Sources

¹Open lands are any lands available for new non-subsistence infrastructure. Lands that are unavailable for new infrastructure except for essential pipeline crossings, roads, or coastal infrastructure are not considered open.

*Page 3-288, second paragraph

Alternative E (Preferred Alternative)

Under Alternative E, the number of acres available for oil and gas leasing would be the **highest same as of any alternative Alternative D (18.7 18.6 million acres)**, and the area unavailable for any new infrastructure (including essential roads and pipelines) would be the lowest (4.3 million acres).

*Page 3-288, sixth paragraph

While **5,939,000 5,891,000** acres of land are subject to NSO under Alternative **E**, 893,000 acres of this leased land may be subject only to standard terms and conditions while the terms of the leases are in effect; thus, if the existing leases are developed, the percentage of use areas affected by oil and gas infrastructure under Alternative E (i.e., areas open only to standard terms and conditions) would be higher for some communities than that shown in **Table 3-3**.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

**Page 3-306, seventh paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, the number of acres available for oil and gas leasing would be the ~~highest same as of any alternative~~ **Alternative D**; the area unavailable for any new infrastructure (including essential roads and pipelines) would be the lowest.

**Page 3-316, first paragraph*

Given that under Alternatives **D and E** the number of acres available for oil and gas leasing would be the highest of ~~the any~~ alternatives, the BLM would expect the greatest level of disproportionately high and adverse subsistence-related effects ~~under this alternative~~.

**Page 3-316, sixth paragraph*

Given that under Alternatives **D and E** the number of acres available for oil and gas leasing would be the highest of ~~the any~~ alternatives, the BLM would expect the greatest level of disproportionately high and adverse subsistence-related effects ~~under this alternative~~.

**Page 3-324, second paragraph*

Alternative E (Preferred Alternative)

The nature and type of potential impacts would be as described under *Impacts Common to All Action Alternatives*. Compared with Alternative A, increasing the acres available for lease sales to ~~18,653,000~~ **18,581,000** acres, ~~12,714,000~~ **12,690,000** acres (~~56~~ **68** percent) of which would be available for surface use, would increase the potential for oil and gas exploration and development to alter the recreation setting and displace visitors.

**Page 3-336, fourth paragraph*

Alternative E (Preferred Alternative)

Under Alternative E, potential impacts on wilderness character would be reduced in the inventory areas being managed as closed to fluid mineral leasing (~~3,968,200~~ **4,037,0800** acres) or as open to fluid mineral leasing but subject to NSO requirements (~~5,410,400~~ **5,364,400** acres). There would be ~~893,000~~ **890,300** acres open to fluid mineral leasing and subject to NSO that have valid existing leases and no valid existing leases in areas closed to leasing; however, wilderness characteristics could be affected by development in wilderness inventory units next to lands available for leasing, and surface occupancy could experience impacts on wilderness characteristics.

**Page 3-336, fifth paragraph*

Alternative E (Preferred Alternative)

Overall, Alternative E would make ~~18,653,000~~ **18,581,000** acres available for oil and gas lease sales in the planning area, which would adversely affect wilderness characteristics to a greater extent than Alternative A due to more acres being available for oil and gas leasing in wilderness inventory units.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

*Page 3-340, Table 3-38

*Pages 3-341 and 3-342, last and first paragraph

Alternative E (Preferred Alternative)

Under Alternative E, there would be ~~1,302,800~~ 1,302,700 acres of VRI Class II areas that are managed as VRM Class III or Class IV, which could degrade the scenic quality. In addition, there would be ~~4,741,500~~ 4,724,000 acres of VRI Class III areas that are managed as VRM Class IV, which could also degrade the scenic quality. In total, there would be ~~6,044,300~~ 6,520,000 acres (~~26-29~~ percent of BLM-managed surface lands in the decision area) where scenic quality could degrade in VRI Class II and Class III areas. Compared with Alternative A, this would create 1,732,300 additional total acres where scenic quality could degrade in VRI Class II and Class III areas.

*Page 3-347, eighth paragraph

Alternative E (Preferred Alternative)

The nature and types of impacts on travel and transportation infrastructure from the leasing program under Alternative E would be as described under Impacts Common to All Alternatives. Compared with Alternative A, ~~6,890,000~~ 6,818,000 more acres would be available for leasing, and ~~2,327,000~~ 2,304,000 more acres would be available for new roadways for oil and gas development.

*Page 3-360 fourth paragraph

Alternative E (Preferred Alternative)

Alternative E ~~would make~~ would open the same amount of ~~most~~ land as Alternative D ~~open~~ to leasing (approximately ~~18.7~~ 18.6 million acres); however, the difference in acreage open to leasing between Alternative E and Alternative D is less than 1 percent.

*Page 3-375 fifth paragraph

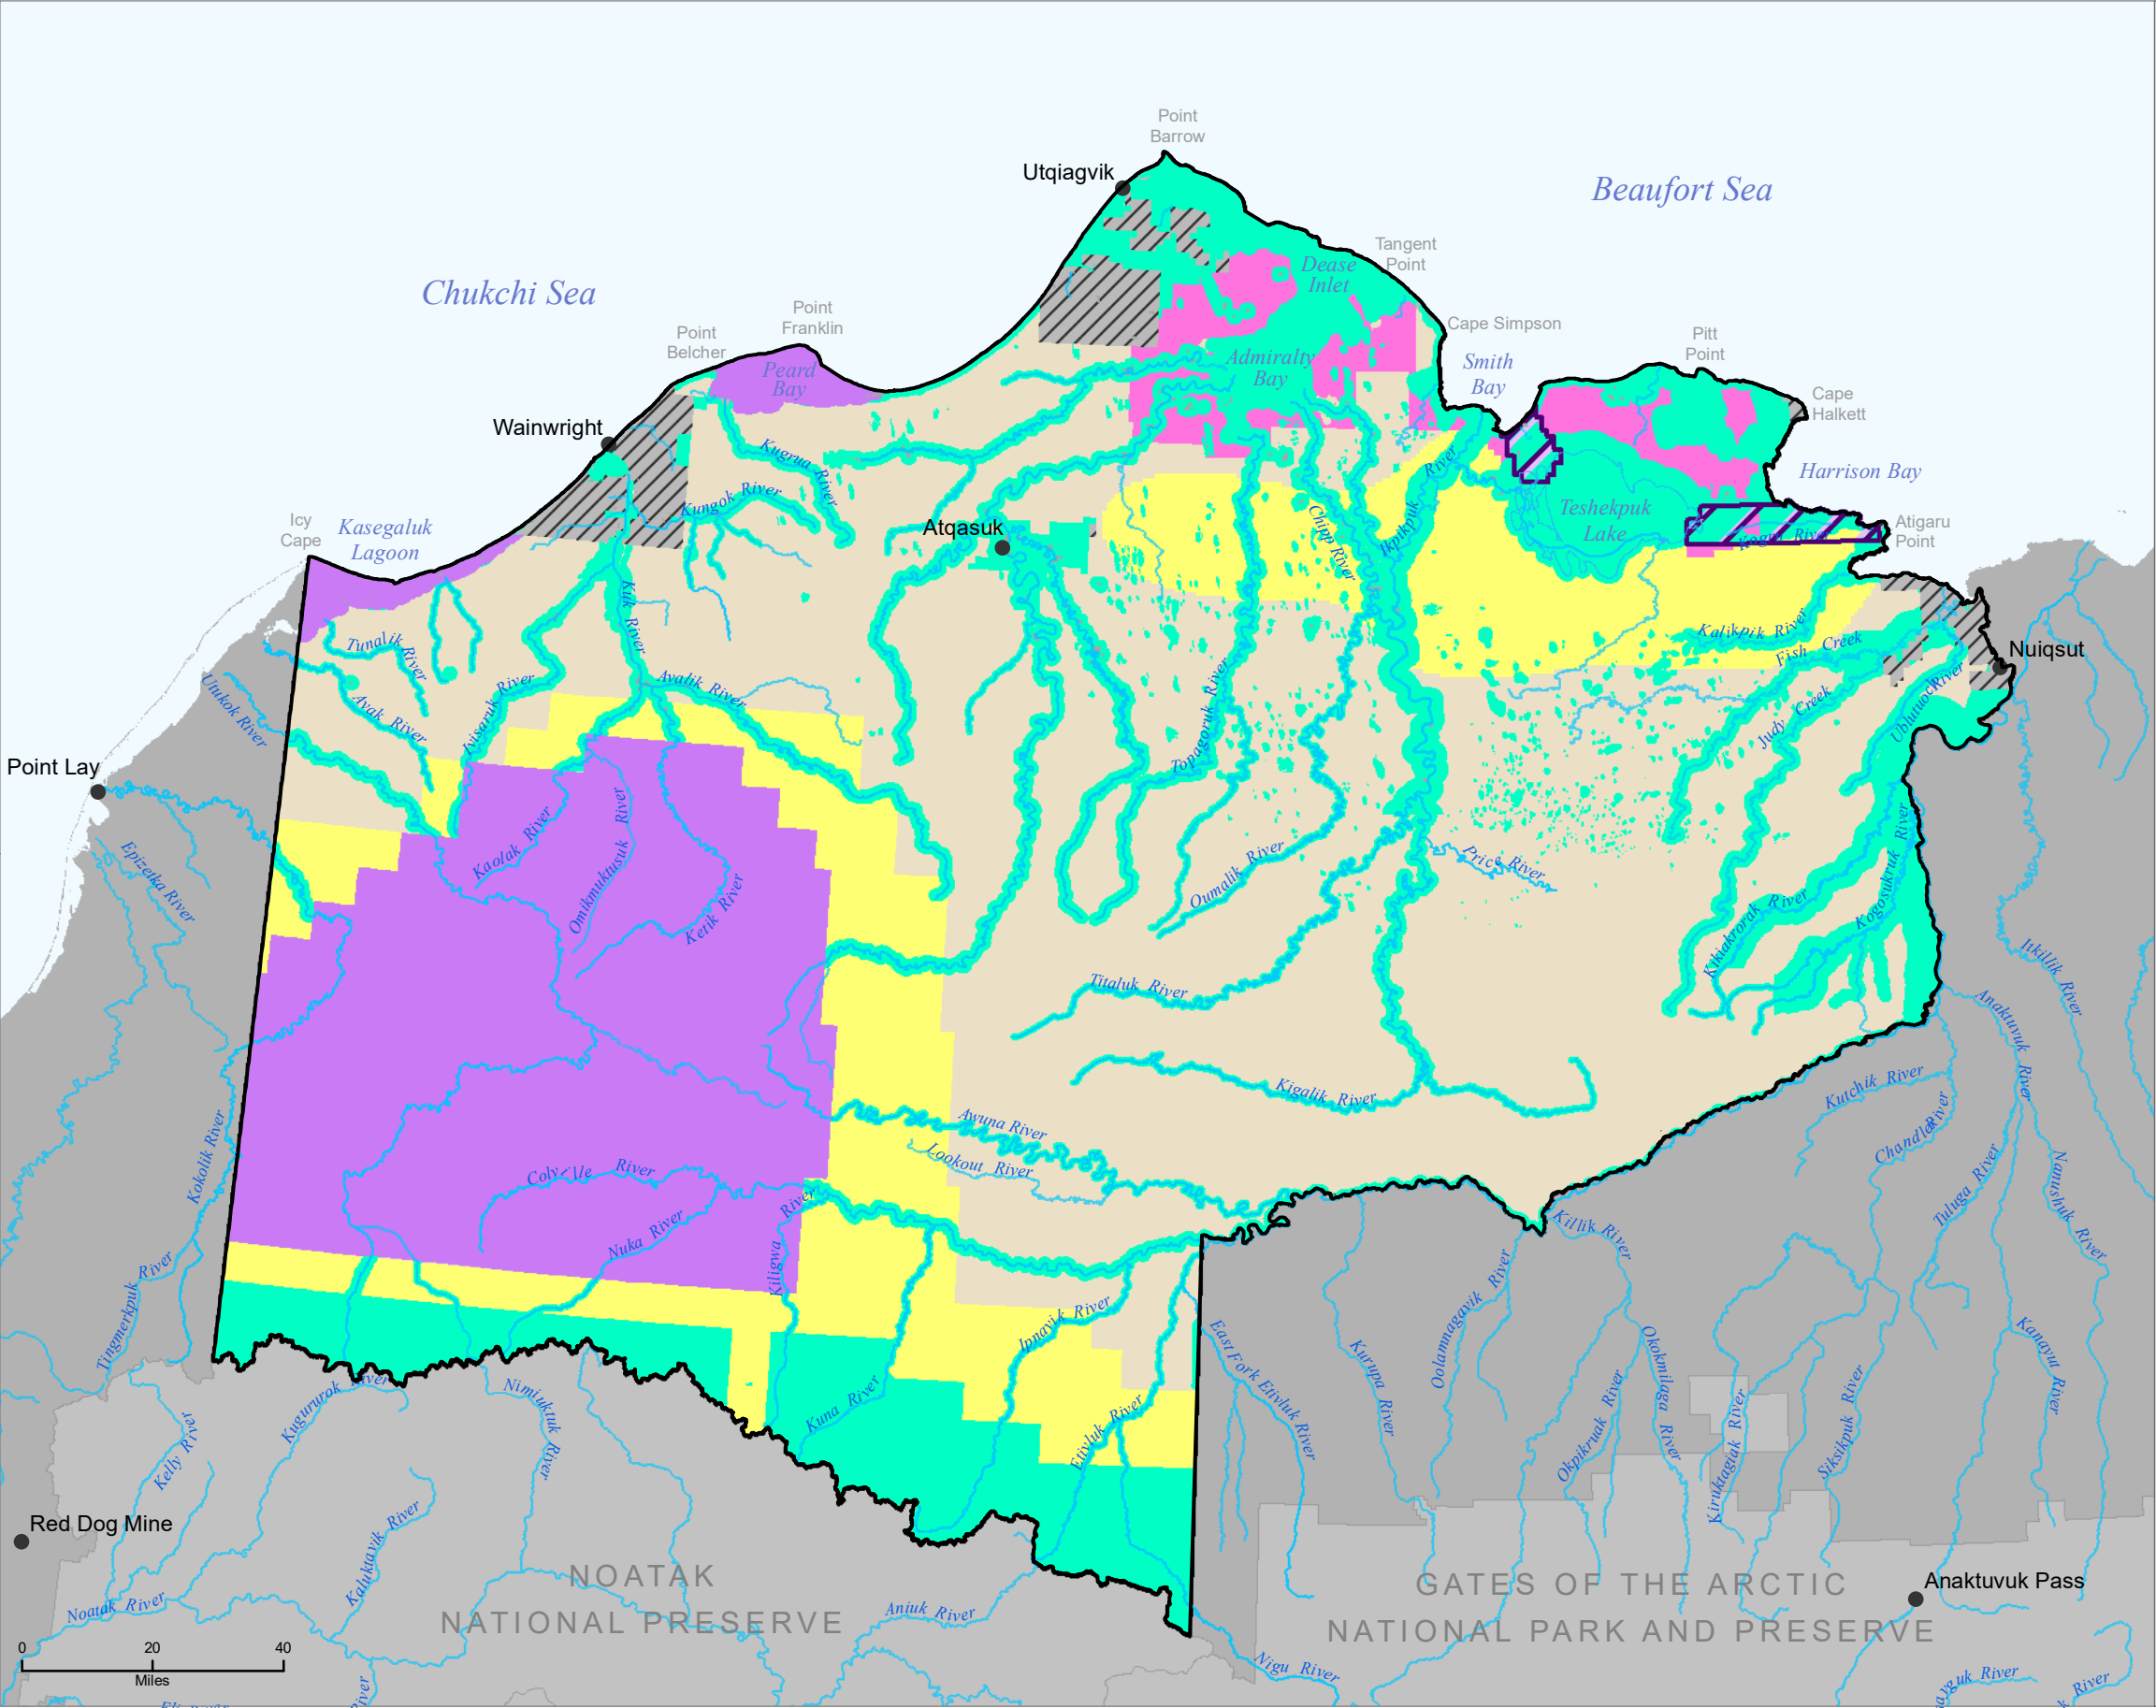

Alternative E (Preferred Alternative)

Under Alternative E, the number of acres available for oil and gas leasing would be the ~~highest same as of any alternative~~ Alternative D (~~18.7~~ 18.6 million acres), and the area unavailable for any new infrastructure (including essential roads and pipelines) would be the lowest (4.3 million acres). Similar to Alternative D, the only areas completely closed to mineral leasing would be in the western portion of the NPR-A in areas of low oil and gas potential.

***APPENDIX A**

Maps 2-9, 2-10, 2-19, 2-20, and 2-28 have been corrected according to the Chapter 2 changes listed above.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

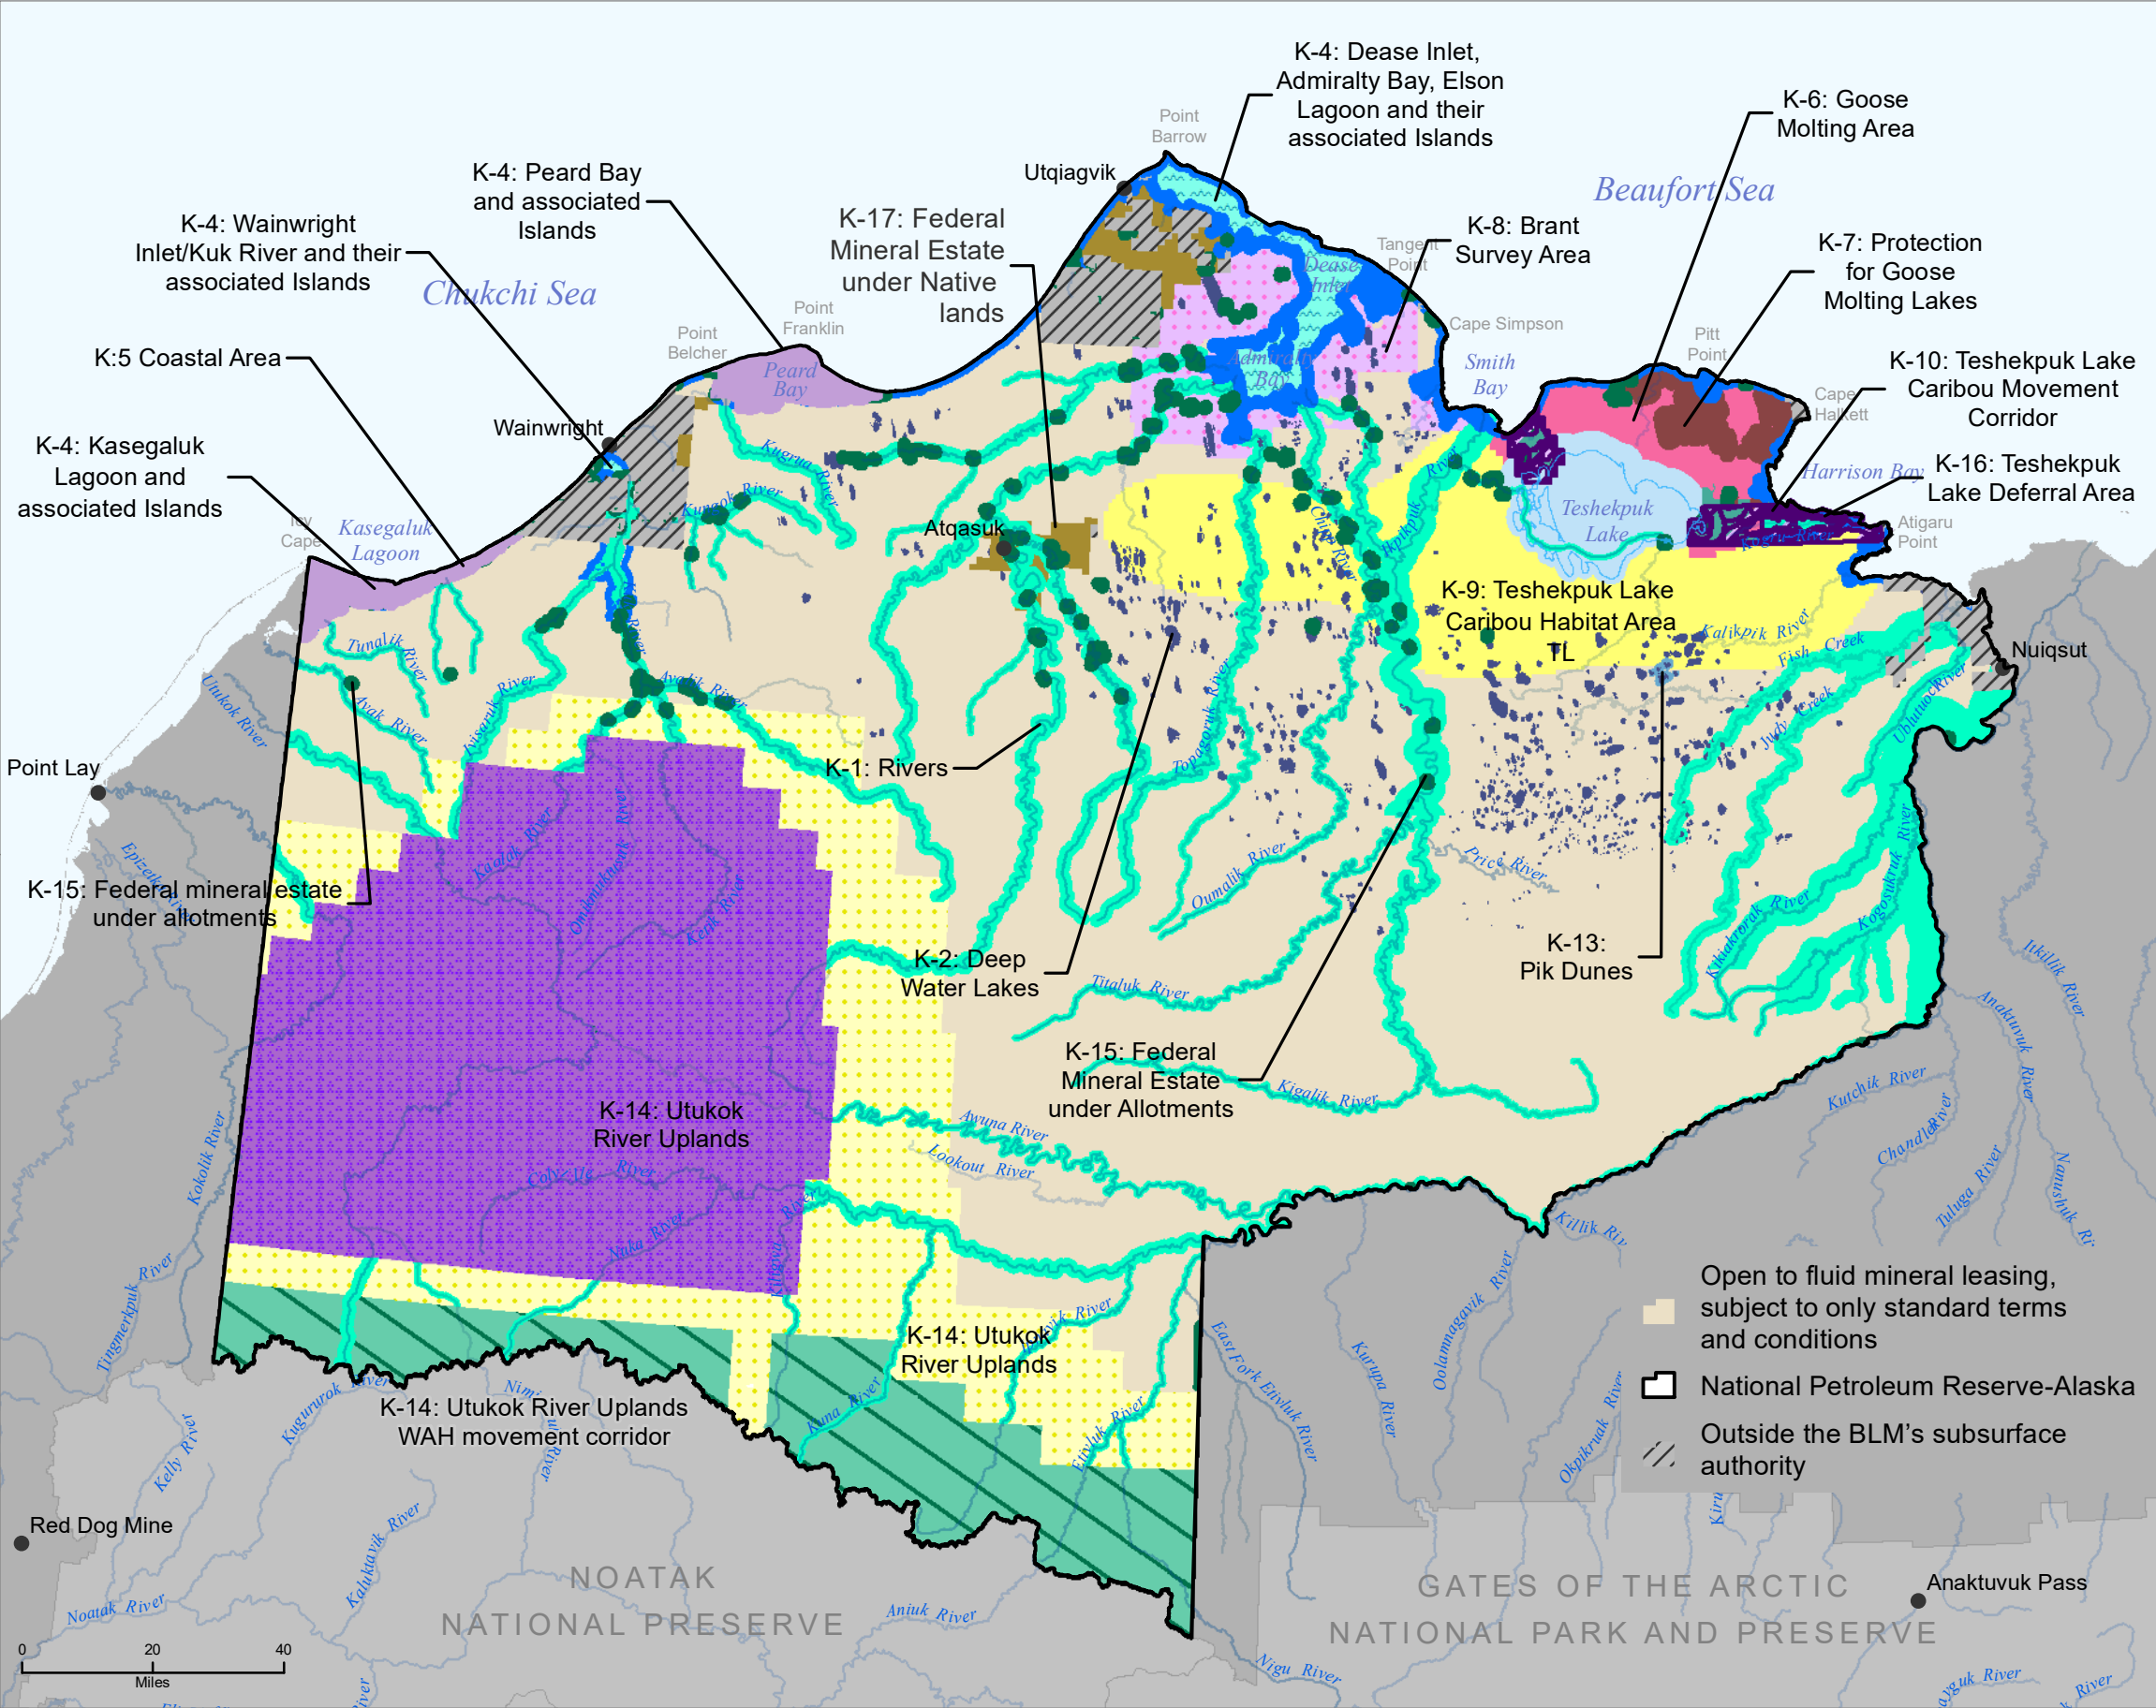

- Closed to fluid mineral leasing
- Open to fluid mineral leasing, subject to no surface occupancy
- Open to fluid mineral leasing, subject to controlled surface use
- Open to fluid mineral leasing, subject to a timing limitation
- Open to fluid mineral leasing, subject to only standard terms and conditions
- Teshekpuk Lake Deferral Area, no leasing for 10 years
- National Petroleum Reserve-Alaska
- Outside the BLM's subsurface authority

Data source: BLM GIS 2019

APPENDIX E

**Page E-8, Table E-1*

Table E-1
Percentage of NPR-A Subsistence Use Areas Closed and Open to Fluid Mineral Leasing

Community	Alt. A		Alt. B		Alt. C		Alt. D		Alt. E		Percent of Total Use Areas in NPR-A
	Closed	Open	Closed	Open	Closed	Open	Closed	Open	Closed	Open	
Anaktuvuk Pass	3	<1	3	<1	0	4	0	4	0	4	4
Atqasuk	25	71	36	60	4	92	1	94	1	95 94	100
Utqiagvik	28	33	30	30	15	45	11	49	11	49	62
Nuiqsut	14	26	16	24	5	35	0	40	0	40	41
Point Lay	29	10	32	7	27	12	27	12	27	12	40
Wainwright	36	29	39	26	24	41	24	41	24	41	66

Source: See NPR-A IAP/EIS, Table T-2, Data Sources

“Open” lands include any lands open to leasing, including those subject to no surface occupancy, controlled surface use, timing limitations, best management practices, and standard terms and conditions.

**Page E-42, first paragraph*

Under Alternative E, the number of acres available for oil and gas leasing would be the ~~highest same as of any alternative~~ **Alternative D**.

**Page E-42, second paragraph*

The remainder of the NPR-A would be open to mineral leasing subject to NSOs, controlled surface use, timing limitations, or standard terms and conditions. While ~~5,939,000~~ **5,891,000** acres of land are subject to NSO under Alternative E, 893,000 acres of this land have existing leases.

**Page E-43, first paragraph*

The percentage of subsistence use areas open to oil and gas leasing under Alternative E would be substantially higher than Alternative A for Atqasuk (~~95~~ **94** percent of subsistence use areas), Utqiagvik (49 percent), Nuiqsut (40 percent), and Wainwright (41 percent; **Table E-1**).

**Page E-43, second paragraph*

Compared with Alternative A, under Alternative E there is a 62 percent decrease in fish habitat units that are closed to fluid mineral leasing, and a ~~78~~ **81** percent decrease in ~~Anadramous~~ **Anadromous** Water Catalog stream habitat protections.

APPENDIX F

Page F-11, fourth paragraph

Alaska ~~Liquid Nitrogen~~ **Liquified Natural Gas** Project (reasonably foreseeable future)—
This development would include a gas treatment plant at Prudhoe Bay, a 42-inch-diameter, high-pressure, 800-mile pipeline, and eight compressor stations to move the gas to a proposed

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

liquefaction plant at Nikiski, on the Kenai Peninsula. The pipeline would be designed to accommodate an initial mix of gas from the Prudhoe Bay and Point Thomson fields and room to accommodate other gas fields in the decades ahead. The Alaska LNG project would be mutually exclusive to the Alaska stand-alone gas pipeline (below), meaning only one, if any, would be built.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.

Source: ADFG. Calculated from the seasonal utilization distributions of collared female caribou 1990–2018 (Appendix A of the Final IAP/EIS, Map 3-22). Utilization distributions were calculated using kernel density estimation and the plug-in bandwidth estimator (see Prichard et al. 2019 for a description of the methods).

¹Parturient Caribou only 2002–2018.

²Areas that are currently leased but are in areas that would have been closed to leasing or no surface occupancy (NSO) in the Final IAP/EIS.

(*) denotes a follow-on change from correcting the acreage available for leasing for Alternative E in Table 2-1.
