| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13748-3 | MA# 4111, Alternative D: "Adapt management of treated areas, using a site-specific analysis of contributing factors, if not meeting or making significant progress toward vegetation objectives." Rationale: Alternative D allows for more adaptive management based on on-the-ground conditions. Alternative B suggests resting all treated areas for a minimum of five growing seasons from livestock grazing. This is too rigid and does not take actual conditions into consideration. Well managed grazing incorporates rest already, deferring grazing altogether causes increased risk of invasive annual grasses and fire. These landscapes need adaptive grazing and plant stimulus. For example, grazing stimulates plants to produce more tillers than ungrazed plants. | Management Action 4111 proposes four alternatives regarding how long a vegetation treatment will be rested from livestock grazing use. Impacts to livestock grazing from this management action are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13748-4 | MA #4420, Alternative D: "Evaluate and adjust grazing schedules, at the time of permit renewal, if any conflicts with parturition areas exist." Rationale: Alternative D appropriately and reasonably defers grazing when conflicts, if any, occur during big game parturition. Prohibiting all livestock grazing in big game parturition habitat during the birthing season (usually from May 1 through June 30), as directed in alternative B, regardless of conditions on the ground, is a blanket management prescription that does not consider seasonal changes to wildlife parturition or permit users. Alternative B also fails to recognize the prevalence of mixed land ownership, such as the checkerboard, in the RSFO. Animals give birth on all lands, and private lands with cattle operations connect to BLM allotments. Parturition areas, only where conflicts arise with grazing, should require a grazing schedule evaluation. | Management Action 4220 proposes four alternatives regarding parturition habitat management within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13748-5 | MA #4412, Alternative C: "Continue to coordinate and review with APHIS-WS and county pest control, their annual wildlife damage management plan for animal damage control activities on public lands to benefit resource use and wildlife. Identify, on a case-by-case basis, areas where proposed animal damage control activities (all or specific methods) are not compatible with BLM planning and management prescriptions or objectives for other resource activities and users. Request APHIS-WS and county pest control to amend or adjust proposed animal damage control activities accordingly." Rationale: Alternative C provides for wise coordination between BLM and APHIS-WS regarding predator control should be deferred to the annual management meeting. We also recommend that the Wyoming Department of Agriculture be included in these meetings. The preferred alternative B allows animal damage control on BLM land only if it would benefit Special Status Species or is needed for valid safety concerns. | Management Action 4412 proposes four alternatives regarding how BLM will coordinate with APHIS regarding animal damage control activities. Impacts to the various resource values from all of these alternatives are provided throughout Chapter 4 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13748-10 | MA# 6411, Alternative D: "Prohibit placement of salt and mineral supplements (such as low moisture block supplements) within ¼ mile of the following resource values (excluding prohibition for disturbed areas where stock tanks and reservoirs occur): * Perennial or intermittent water sources * BLM water improvements * Riparian or wetland areas * On each side of the NHTs or other historic roads and trails, unless the project and its associated impacts are not visible from the NHTs * Special Status plant species populations * Avoid placement of salt and mineral blocks within 500 feet of areas that are actively being reclaimed. Rationale: Alternative D uses a sufficient distance for the placement of salt blocks to protect surface waters, riparian areas, Special Status Plants, and National Trails. We also recommend including language in this alternative that allows for salt and mineral supplements to be placed in disturbed areas where stock tanks and reservoirs occur. Oftentimes, permittees move their cattle up the ridge or hillside for seasonal rotations, and place salt blocks near water tanks. These areas are already disturbed due to cattle using the site for water, regardless of their location from the resource values listed above. It is sometimes better to place salt in these already disturbed areas, rather than creating a new disturbance farther away. Overall, alternative B is overly burdensome requiring a ½ mile distance, and it is not supported by current science. | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13748-12 | Twenty-one of the seventy-nine allotments (~27%) are currently not meeting Land Leath Standards due to livestock use in the RSFO. However, our members have been informed that their allotments have not been reviewed for Land Health Standards since 2003. In one instance, a member recently requested that a BLM Range Management Specialist visit her allotment to update the assessment. The specialist informed her the allotment was in good condition but that she did not have time to update it. How can it be that the BLM has not updated these allotments in over 20 years yet lists them in the current draft RMP for the public to review to update management directives? Permittees risk a reduction in AUMs in the preferred alternative B because the Land Health Standards are not current. | Appendix G of the EIS provides information on the current status of Land Health Evaluations within the Resource Area. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13769-4 | 3. We urge the BLM to consider the synergistic effects of increasing feral horse populations and decreasing forage production in the area due to climate change. We have observed considerable impacts of wild horse forage consumption. The impacts are significant because unlike migrating wildlife or cattle, feral horses graze the same areas year around. Also, horse digestive physiology forces horses to intake more forage and use it more inefficiently than native ungulates. Horses are clearly not effectively managed and their populations increase each year. Horses also concentrate in certain areas like watering holes and the few riparian areas. We have observed a decrease in both the quantity and diversity of forage in these habitats. For example, the increase in non-palatable | Wild horse management within the Resource Area was updated via a 2023 Record of Decision and Resource Management Plan Amendment. All management actions from that amendment have been incorporated into this RMP Revision. See the Wild Horse Management Actions, beginning with Management Action 4900. Management of invasive species is described in Management Actions 4200-4213 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | species like Prickly Pear Cactus and Rubber Rabbit Brush in areas of heavy grazing is concerning. While the former can be partially attributed to drought and a changing climate, we are concerned that uncontrolled feral horse populations will result in irreversible change in species richness and net primary productivity. We report numerous 'stud pile' areas that are devoid of any vegetation because of repeated occupancy and trampling by numerous stud horses. A decrease in plant cover results in increased soil erosion and a decrease in forage production. While not documented scientifically, we observe in these areas that the trampling is so severe that it appears as if sub-soil salts are leached to the surface and form alkaline deposits that further reduce plant production and lead to the spread of noxious weeks (e.g. Halogeten (Halogeton glomeratus)). | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-16 | MA#4207, Alt. B: "Limit control of noxious weeds and other invasive plant species to mechanical and biological methods." Comment: The limited approach to address annual grasses, including cheatgrass through chemical applications will dramatically prohibited livestock grazing permittees from achieving Wyoming Land Health Standards for upland or sensitive species. The recent efforts to approve Rejuvra for long-term control of cheatgrass on BLM Rock Springs Field Office lands will not apply to the Rock Springs Field Office under Alternative B. This lack of weed suppression will have a cumulative impact to private, state, and other federal lands. | Management Action 4207 proposes four alternatives regarding management of invasive species within the Resource Area. Impacts to the various resource values are provided throughout Chapter 4 of the EIS, for all four alternatives related to Management Action 4207. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-32 | MA#6404, Alt. B: "The total authorized livestock use...would be the active AUMs. If land health evaluation shows that land health standards are not met and current livestock grazing management is determined to be among the causal factors, implement a 20% reduction annually from the 10-year average of actual billed AUMs for each permit/lessee up to three consecutive years (60%) in active AUMs until land health standards are met." Comment There are so many issues and impacts from MA#6404. First, livestock grazing permittees who stock their permits conservatively are now being punished for not utilizing the fully authorized permit. Second, BLM is not correctly following the regulations for Wyoming Land Health Standards. Livestock grazing must be determined to be the significant causal factor, not among the factors as written. All other causal factors including but not limited to wild horses, wildlife, recreation, and industry are incorporated into the determination, yet livestock grazing permittees are the only ones required to modify management. The proposed reductions to AUMs may have no change in resource conditions or meeting or working towards meeting the Standard. Finally, a reduction of up to 60% of a grazing permit would devastate the livestock grazing industry in the project area. Depending on the BLM's ability to reevaluate Wyoming Land Health Standards, the ability to regain the AUMs lost could take years. The permittees cannot assume BLM will prioritize new evaluations in a timely manner for these permits. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. Appendix G of the EIS provides information on the current status of Land Health Evaluations within the Resource Area. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-33 | MA#6405, Alt B. "Establish allotment stocking rates...(generally a light 21% to 40% utilization level) that provide wildlife cover and utilization." Comment: Wyoming Land Health Standards regulations are already in place to evaluate rangeland conditions and determine if livestock grazing utilization levels meet the Standard for Special Status Species and wildlife. The reduction in utilization levels at the Plan level is not appropriate. Utilization levels should be evaluated at the site-specific level based on Standards Determinations and project level NEPA. Additionally, the BLM already adjudicated AUMs for livestock grazing with the additional forage adjudicated to meet the needs for resource benefits, wildlife, and wild horses. | A range of alternatives was considered for Management Action 6405. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-34 | * MA#6406, Alt B: "Adjust livestock and wild horse forage allocations as needed to meet the site potential which supports wildlife habitat requirements." Comment: Adjusting current livestock grazing management may not assist in reaching site potential. Rather soil and vegetative disturbances such as fire, mowing, or tilling followed by native seeding may be required to reach site potential. If wildlife habitat requirements were not being met, this would be identified using Wyoming Land Health Standards Determinations. | Management Action 6406 proposes four alternatives regarding management of forage for wild horses and livestock. Impacts to the various resource values are provided throughout Chapter 4 of the EIS, for all four alternatives related to Management Action 6406. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-35 | MA#6407, Alt. B: "Close all exclosures within the planning area to livestock grazing. Suspend AUMs currently authorized in these exclosures." Comment: The Alternative doesn't provide how many exclosures there are in the project area or provide how many AUMs would be suspended. The Alternative fails to explain why the exclosures are in place, or how each exclosure has the original purpose and need when it was analyzed under NEPA. To change the original intent for an unknown reason followed by suspension of AUMs for livestock is unacceptable. | Detailed information about individual livestock grazing exclosures is beyond the scope of this EIS (see Section 1.4 for the Scope of this document). A summary of AUMs by alternative is provided in Management Action 6404 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-36 | MA#6411, Alt B: "Prohibit placement of salt and mineral supplements...Within 1/2 mile of natural perennial or ephemeral water sources..." Comment: The number of ephemeral channels across the project area is likely to be significant and potentially could limit many livestock grazing permittees from complying with the distance required under the Alternative while still meeting their livestock needs for salt and mineral. | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing | #13784-37 | * MA#6414, Alt B: "Prohibit livestock grazing in riparian areas that are not meeting PFC." Comment: PFC is not a quantifiable tool where data is used to conclude on a significant causal factor. PFC should inform the Wyoming Land Health Standards for Riparian, with a Determination made to causal and significant causal factors. As stated, | Management Action 6414 proposes four alternatives regarding livestock management in riparian areas. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Management (6400-6417) | | Alternative B assumes or singles out livestock grazing as the significant causal factor for all streams not meeting PFC. This misapplies the intent of PFC. | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-40 | MA#7423, Alt B: "Modify livestock grazing objectives and systems to manage for plant condition and composition most ecologically beneficial to identified wildlife species..." Comment: This Alternative conflicts with existing regulations for Wyoming Land Health Standards. BLM should only modify grazing management after a Standards Determination identifies livestock grazing as the significant causal factor. The RMP can not override BLM's existing regulations. | Management Action 7423 proposes four alternatives regarding livestock management objectives in the Greater Red Creek ACEC. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-41 | MA#7433, Alt. B: "Prohibit livestock grazing in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion (Map2-30)." Comment: The Alternative needs to identify the number of AUMs lost, as well as the number of acres in the grazing allotment the BLM would close. Additionally, there's no context as to what the intent behind removing livestock grazing would be in relation to benefiting the Sage Creek ACEC. | Management Action 7433 proposes four alternatives regarding livestock grazing within the Sage Creek Portion of the Greater Red Creek ACEC. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. The number of AUMs permitted under each alternative is provided in Management Action 6404. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-42 | MA#7438, Alt B: "Prohibit livestock grazing in the Jane's Meadow ad Upper Current Creek Pastures within Sugarloaf Grazing Allotment." Comment: The Alternative needs to identify the number ofAUMs lost, as well as the number of acres in the grazing allotment the BLM would close. Additionally, there's no context as to what the intent behind removing livestock grazing would be in relation to benefiting the Current Creek ACEC. | Management Action 7438 proposes four alternatives regarding livestock grazing within the Currant Creek Portion of the Greater Red Creek ACEC. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. The number of AUMs associated with each alternative are provided in Management Action 6404. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-43 | MA#7532, Alt. B: "Designate the ACEC an exclusion areas for: 1) surface disturbing activities that could adversely affect the resource values in the area..." Comment: Where livestock grazing overlaps the ACEC, this Alternative would prohibit livestock grazing permittees from implementing new range improvement projects such as water developments. The broad interpretation of surface disturbing activities is likely to cause significant negative impacts to the livestock grazing industry. | As shown in Map 2-30 of the EIS and described in Management Action 7530, the White Mountain Petroglyphs ACEC is 20 acres, so Management Action 7532 would only apply within those 20 acres. Impacts to livestock operations from restrictions on the development of range improvements in ACECs are discussed in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-46 | "Prohibiting use of fire chemicals, salt or mineral supplements, and range improvements within 1/4 mile of special status plant species could indirectly further protect soil quality in these areas." (p. 4-24) Comment: The prohibition of range improvements includes fencing. Fencing is often used to protect vegetation, including special status plant species. Yet, Alternative B, will not allow fencing to protect the plants within 1/4 mile of the plants. Also, how is soil "quality" protected? | Management Action 4612 allows for the construction of range improvement projects if they are beneficial to the Special Status Species. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-47 | "Livestock grazing management actions would be similar to Alternative A, except where areas open to grazing under Alternative A would be prohibited or closed to livestock grazing (exclosures and recreation areas). In these areas, reduced grazing pressure on vegetation would provide greater protection to soils compared to Alternative A." (p. 4-24) Comment: BLM needs to include the number of acres prohibited or closed to grazing to inform the public and most importantly the livestock grazing permittees of the actual impact from current management under Alternative A. | Section 4.16 of the EIS describes the number of acres closed to livestock grazing under all management actions for each alternative. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-48 | "Livestock grazing and range improvements could involve localized surface disturbance from activities such as water source development and construction of fences. These activities could result in localized vegetation removal and reduction of soil surface..." (p. 4-33) Comment: BLM is considering livestock grazing as a surface disturbance under Alternative A, which WDA can not support and does not meet the definition of surface disturbing activities "Management that prohibits or restricts recreation-related surface disturbing activities such as camping, cutting of trees and firewood for camping, and construction of recreation site facilities..." (p. 4-33) Comment: While WDA doesn't oversee recreation, we reiterate our concern of BLM's misapplication and analysis of surface disturbing activities. Camping and cutting of firewood do not disturb soils. | The language in Section 4.5.2 has been updated as necessary. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-49 | 4.5.3 Water Resources, Alternative B: "Vegetation treatment actions would have similar impacts as those discussed in Alternative A, but longer resting times for treated areas would likely provide greater protections to water resources in these areas as vegetation and soil would have a longer timeframe to establish and stabilize..." (p. 4-35) Comment: The analysis is misleading by assuming the vegetation treatments are near water or on steep slopes where soil runoff is likely to occur. Longer rest times under this analysis are assumed for livestock grazing, but not indicated specifically. Rest from livestock will not guarantee the vegetation objectives are met. | The BLM has reviewed Section 4.5.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-50 | "However, surface disturbing activities such as vegetation treatments, removing and building fences, and water developments would result in short-term vegetation loss..." (p. 4-35) Comment: Aerial spraying for cheatgrass is an example of vegetation treatment, yet has no ability to disturb soils. BLM has used surface disturbing activity across any activity, many of which are not actually meeting the definition or intent of what surface disturbing activities are. | The BLM has reviewed Section 4.5.3 of the EIS and determined that the existing analysis is adequate. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-51 | "Impacts to water resources from livestock grazing management would be similar to Alternative A. Under Alternative B some areas would be prohibited or closed to livestock grazing. In these areas, reduced grazing pressure on vegetation would provide greater protections to water resources when compared to Alternative A." (p. 4-36) Comment: The analysis fails to include the necessary information such as acres closed or prohibited from livestock grazing in Alternative B to compare with Alternative A. "Some areas" doesn't give the livestock grazing permittees the information needed to fully understand the impacts to their permits. | Section 4.16 of the EIS describes the number of acres closed to livestock grazing under all management actions for each alternative. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-53 | 4.7.3 Wildlife and Fisheries, Alternative B: "Resting lands from livestock grazing a minimum of five seasons after treatments would allow treated areas to revegetate, soils to stabilize and vegetation to mature to the point of withstanding livestock grazing pressure. Rested areas could provide wildlife with new vegetation for cover and forage without competition with livestock during the rest period." (p. 4-69) Comment: The statement and analysis are biased. If removal of livestock grazing for a period of five growing seasons is beneficial, why does wildlife grazing on the same treated areas not compromise the treatment's ability to mature? | The BLM has reviewed Section 4.7.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-54 | "Removal of fences reduces threats of injury or death from collisions or entanglement with fences, enhances migration corridors, and could allow access to additional forage and cover." Comment: There wasn't a specific management action pertaining to the removal of fences under Alternative B, Chapter 2.Fences are not a limiting factor with wildlife and forage. Remove the statement. | This language in Section 4.7.3 of the EIS has been updated as appropriate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-55 | 4.16.2 Livestock Grazing Management, Alternative A: "Large concentrations of these big game animals occur within portions of the planning areas (Map 3-3) which could require some livestock operators to alter grazing management practices to comply with the Wyoming Land Heath Standards." (p. 4-175) Comment: When the BLM evaluates Wyoming Land Health Standards and a particular Standard is not met during the Determination, current livestock grazing is analyzed to determine if it is a significant causal factor. According to the statement above, if big game concentrations were occurring and contributed to the Standard not being met, and livestock grazing was not the significant causal factor, changes in livestock grazing management should not occur. BLM must follow the regulations for Wyoming Land Health Standards and not misapply them to remove or change livestock grazing management. | The BLM has reviewed Section 4.16.2 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-56 | "Under Alternative A, 3.592,404 acres would be available for livestock grazing use and 970 acres would be managed as unavailable for grazing." (p. 4-176) Comment: The BLM must identify the Palmer Draw area as the areas where the 970 acres are unavailable for livestock grazing. Additionally, WDA believes the BLM should provide the reasoning for making this area unavailable. | The BLM has reviewed Section 4.16.2 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-57 | "Management of these recreation sites would continue to exclude forage from livestock use because these areas would be fenced. Because of the relatively small size of these sites, the impacts to livestock grazing would be minor." (p. 4-176) Comment: This section does not provide the number of acres livestock grazing is fenced out from utilizing forage. Additionally, the section does not tie back to the 970 acres mentioned earlier, leaving WDA unsure if these acres are above or in addition to the previous statement. Finally, "would be minor" assumes this will occur in the future, but Alternative A is the current management and would provide the existing impacts based on the management already occurring from when the plan was last revised. | The BLM has reviewed Section 4.16.2 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-58 | "Designated OHV areas that are closed to livestock grazing would result in a small loss of forage." (p. 4-177) Comment: Alternative A neglects to identify how many acres are closed to livestock grazing. Are the 970 acres unavailable to livestock grazing different than what this statement indicates? Closure and unavailability to livestock grazing are two different management actions. | The BLM has reviewed Section 4.16.2 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-59 | 4.16.3 Livestock Grazing Management, Alternative B: "Impacts resulting from management of the air quality, fire, cultural resources, recreation, vegetation and hazardous materials management would be the same as the Alternative A." (p.4-177) Comment: This statement is false. Alternative B requires numerous management changes and requirements to manage or reduce livestock grazing, including reduced annual utilization levels, closure to exclosures, and mandatory rest for five growing seasons for vegetative treatment areas. | The BLM has reviewed Section 4.16.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-61 | "Animal damage control activities under this alternative could directly benefit livestock operations by removing predators know to have killed livestock, (p. 4-178) Comment: The analysis for Alternative B is flawed. Alternative B removes lethal control for predators and has restricted control areas found on pg. 2-60. There is no benefit to livestock grazing under Alternative B, especially regarding predator control. In fact, livestock losses due to predators will undoubtedly increase. | This language in Section 4.16.3 of the EIS has been updated as appropriate. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-62 | "Under Alternative B, 3,583,789 acres would be available for livestock grazing and 8,576 acres would be unavailable for grazing use." (p. 4-178) Comment: Alternative B analysis neglects to explain why livestock grazing is unavailable in the 8,576 acres and what permits are impacted by the action. | The BLM has reviewed Section 4.16.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-63 | "The effects on livestock grazing resulting from the development of ROWs would be similar to Alternative A, except 2,480,876 acres would be excluded from ROW development (481% increase, which would decrease the extent of related forage removal, but could decrease opportunities for access to remote locations within the allotments." (p. 4-178) Comment: ROWs should not prohibit livestock grazing permittees access to their allotments. ROWs excluded from development does not equate to road closures or inability to manage range improvements using vehicular access. | The BLM has reviewed Section 4.16.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-65 | "Impacts on livestock grazing from managing OHV use would be similar to those presented under Alternative A, except the areas currently designated as "limited to existing roads and trails" (2,398,839 acres) would be changed to "limited to designated roads and trails" (3,367,576 acres) and all routes would be designated as open, closed or limited." (p. 4-178) Comment: Changing the terminology from "existing" to "designated" roads and trails leaves the public unable to determine the actual impacts because the "designation" is unknown under Alternative B. Livestock grazing permittees should not lose access to administrative access for the purposes of managing their permits, livestock, and range improvements. | The BLM has reviewed Section 4.16.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-66 | 4.16.5 Livestock Grazing Management, Alternative D: "Under Alternative d, 3,589,859 acres would be available for livestock grazing, with 2,515 managed as unavailable for grazing use, about 1545 fewer acres available for grazing compared to Alternative A." (p. 4-181) Comment: BLM neglects to identify the areas where livestock grazing is unavailable. These areas are: Pine Creek Special Status Plant Exclosure, McKinnon Special Status Plant Exclosure,, and Palmer Draw Exclosure. Under Alternative A, Palmer Draw excluded livestock grazing from 970 acres. Alternative D analysis fails to explain why the BLM needed to increase the size of the exclosure, why the previous size exclosure is inadequate, and special status plants are now requiring additional protection in comparison to Alternative A. | The BLM has reviewed Section 4.16.5 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-67 | "The acres designated as ACECs would be decreased...Management within a portion of the Little Mountain ACEC would require a grazing plan prior to approval of an annual grazing authorization. This management could lead to a delay when livestock use could occur once an operator identifies a desire to graze within area (Previously known as the Red Creek Portion of the Greater Red Creek ACE, 55,880 acres)." (p. 4-181) Comment: This is the first time the BLM is requiring a grazing management plan. The BLM must explain why this is necessary for not only this area, but also at the RMP level. WDA does not support restricting grazing and putting the ownness to develop a grazing plan on the livestock grazing permittees/operator. If the BLM is requiring the plan, BLM must cooperatively complete the plan in a timely manner with the livestock grazing permittees and ensure grazing is not delayed. | The language in Management Action 7443 does not require that the grazing management plan be completed by the grazing permittee, nor does it prohibit the BLM to work cooperatively with the grazing permittee in developing this plan. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-74 | 4.22.2 Methods Analysis: "Total authorized AUMs are the same for Alternatives A and D. Total authorized AUMs are 6,202 less under Alternative B due to provisions that management alternative (prohibition on grazing in certain allotments. Under Alternative C, total authorized AUMs are limited to the highest level of billed use over the last 10 years (2009 -2018). That figure is 160,387 AUMs, which is 142,881 less than the authorized AUMs under Alternatives A and D." (p. 4-234). Comment: WDA fails to see in Alternative B, Chapter 2 where the total authorized AUM count is reduced by 6,202. Chapter 2 states: "The total authorized livestock use for a grazing season within RSFO would be the active use AUMs sustained on an allotment-by-allotment basis for livestock grazing." (p. 2-119). In addition to these AUMs, BLM is proposing to reduce grazing where standards are not met, and suspend AUMs in closed exclosures. BLM must combine all of these actions and compile the total AUMs impacted. We don't believe 6,202 AUMs is representative of the actual number of lost AUMs under Alternative B in its entirety. | The BLM has reviewed Section 4.22.2 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-76 | 4.22.5 Impacts of Alternative B, Quantified Economic Impacts: "The quantified impacts of livestock grazing, coal and soda ash production, and recreation are the same under Alternative B as Alternative A." (p. 4-258) Comment: The economic impacts analysis for livestock grazing is solely based on the difference between AUMs, which is 6,202. While this seems relatively benign in relation to the total AUMs in the project area, the economic impacts analysis neglects to include the cumulative impacts and subsequent economic effect Alternative B will have. The economic impacts left out of this analysis include the predator losses to livestock producers who no longer can lethally remove predators. The death loss of livestock without lethal control is likely to increase significantly. Additional economic effects the impact analysis neglects to calculate is the loss of AUMs from implementing the management actions which reduce AUMs by 20% where Wyoming Land Health Standards are not met. Regardless if livestock grazing is the significant causal factor, up to 60% ofAUMs could be removed. This could dramatically change the economic impacts analysis if BLM provided the information based on existing standards evaluations. | The BLM has reviewed Section 4.22.5 of the EIS and determined that the existing analysis is adequate. |

|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-77 | "Alternative B would restrict certain management practices, which could increase costs. Chemical treatments for vegetation management are specifically allowed under Alternative A, but not included as an option under Alternative B."(p.4-259) Comment: Areas infested with cheatgrass, or other noxious and invasive weed species, can be one of the reasons a Wyoming Land Health Standards determination is not met, especially pertaining to Greater Sage-grouse. Reductions in livestock grazing could result in a 60% reduction by the third year due to not meeting the Standard for Special Status Species. However, BLM's Alternative B prohibits the use of chemical treatments to address these noxious and invasive species. Unless weeds are addressed, there is no possibility to work towards meeting the Standards. This is just one more example of cumulative effects and direct economic impacts to the livestock grazing industry where the analysis of Alternative B fails to address or identify the full impact of the Preferred Alternative. | The BLM has reviewed Section 4.22.5 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13784-78 | * Livestock would be prohibited in wetland and riparian areas that are not meeting PFC." Comment: Again, the economic impacts analysis fails to fully capture the extent of selecting Alternative B. Chapter 3, page 3-22 states the following: "Where livestock grazing has been identified as a significant causal factor (emphasis added) for not achieving land health standards, grazing use has been changed." As written Alternative B is legally noncompliant with 43 CFR 4100. The effects to the livestock grazing permittees from BLM modifying the permits by up to 60% for livestock being "among the contributing factors" will be devastating. | The BLM has reviewed Section 4.22.5 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13806-5 | In recent decades, ranchers have given more attention to the fact that their livelihoods require healthy landscapes, regardless of public or private designation. This I believe is not adequately represented in the DEIS, to the detriment of both public and private lands. While I appreciate as outlined above the commitment in the preferred alternative to ensuring healthy, intact landscapes, the management actions proposed for livestock grazing are so restrictive and unnecessarily punitive that they will likely result in making livestock operations economically unviable. This would have unintended consequences for both public and private lands as ranchers seek alternatives such as intensifying production on private lands, selling off private lands to developers, or pursuing other forms of income such as from industrial development. This would result in unintended habitat degradation and fragmentation. Rather than preserving management prescriptions as written in the preferred alternative, I recommend collaborating with livestock producers on site-specific and adaptive management strategies to make sure these wildlands remain thriving, working wildlands such as is generally presented in Alternative D. (In reference to management actions 6401-6417). | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13816-1 | MA 7539 Surface disturbing activities within 3 miles of trails is too far, ranchers need to be able to salt livestock for better distribution of livestock. Salting allows for more movement of animals 1/4 of a mile is much more realistic. | Management Action 6411 provides proposals for how salt and mineral supplements will be utilized within the Resource Area. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-1 | Our concern about the preferred alternative (Alternative B) is how the proposed management actions within the final RMP will effect our viability to maintain sustainable, economic and environmental, cattle ranching operations within the RSFO. We believe that the Draft Environmental Impact Statement (DEIS) does not fully evaluate the cumulative and unintended long-term impacts of the management actions proposed in the current preferred alternative. In relation to livestock grazing, we question if the need for such broad management action changes are warranted within this RMP when the overall rangeland health trend is static to increasing within the RSFO.1 | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-2 | For instance, we are troubled by MA 6404 and 6405 under the current preferred alternative. These actions seek to reduce available AUMs by 20% yearly, up to three consecutive years, and seek to establish stocking rates that target forage utilization in the 21-40% range, particularly in areas preferred by livestock. The high desert landscape is diverse, and the need for AUM adjustments varies from site to site. It is disconcerting to note that this variability was not adequately analyzed within the agency's preferred alternative of the Draft Resource Management Plan (RMP) and Draft Environmental Impact Statement (DEIS). The lack of a nuanced analysis raises significant concerns about the accuracy and appropriateness of the proposed AUM adjustments. Some areas may indeed warrant large AUM adjustments, while others may not. Without a site-specific evaluation, the proposed reductions risk being applied indiscriminately, potentially harming ranching operations that are not contributing to the identified environmental challenges. | Management Actions 6404 & 6405 propose four alternatives for the number of AUMs available for use by livestock within the Resource Area, as well as establishing stocking rates. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-3 | Bush Rim is managed by herding and Fish Creek is managed under a 2 year deferred-grazing rotation. Under the proposed alternative, a unilateral cut in AUMs, would seek to impose a solution but fail to address the underlying causal factors for "why" livestock grazing4, within each of these allotments, is contributing to the failure to meet Wyoming Land Health Standards without a site-specific analysis. As grazing permitees and active stakeholders in the RSFO management area, we find the term "generally 21-40%" to describe forage utilization levels to be ambiguous and concerning. The lack of specificity in this term raises questions about the precision and appropriateness of the proposed stocking rates. It is crucial to note that a 50% utilization level has been widely accepted and shown to result in a rangeland health trend that is static to increasing1. | A range of alternatives was considered for Management Action 6405. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-4 | Literature suggests that moderate levels of grazing propagate resilient ecosystems by suppressing exotic species proliferation.2 This is also suggested, first hand, by BLM data from our grazing allotments and current trend levels observed within the RSFO.1 After thorough consideration, we propose that the BLM accepts MA 6404 and MA 6405, as written in Alternative D of the Draft Resource Management Plan (RMP). This alternative, in our view, provides a balanced and viable approach that addresses both environmental concerns and the economic viability of ranching operations. We believe that Alternative D strikes an appropriate balance by taking into account the diverse nature of the high desert landscape and providing a more nuanced approach to AUM reductions and forage utilization levels. Accepting this alternative would mitigate the potential economic and environmental consequences for our ranch and the surrounding area. | Management Actions 6404 & 6405 propose four alternatives for the number of AUMs available for use by livestock within the Resource Area, as well as establishing stocking rates. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-5 | Additional concern lies in the restrictive nature of MA 6411, specifically regarding salt/low moisture block placement. We believe that salt blocks should be strategically placed in areas of disturbance, and any new disturbance should be minimized to the greatest extent possible. The current constraints outlined in the preferred alternative may inadvertently limit our ability to appropriately manage salt block placement in response to the needs of our ranching operations. As ranchers within the arid high desert environment we understand that soil erosion occurs most in areas of livestock congregation around water and salt/low moisture blocks. Typically these areas are sacrificed because of the repeated trampling of the soil. Limiting the ability to place salt blocks in close proximity to man-made water sources (i.e. dams and dugouts) would inadvertently cause soil loss in new areas. The conservation mindset would be to minimize the disturbance as much as possible. | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-7 | Our primary concern with MA 6414 lies in the prohibition of livestock grazing within riparian areas if they do not meet Proper Functioning Condition (PFC) criteria. It is crucial to emphasize that riparian areas are dynamic ecosystems that can recover and thrive under proper grazing management practices. The outright prohibition in the preferred alternative (B) may not take into account the positive contributions of well-managed livestock grazing to riparian health. Our concern is that; in allotments that contain long watersheds or large riparian areas significant costly structural range improvements would need to be constructed to limit livestock access. These large structural improvements have the potential to fragment large and small game habitat, in addition to providing a nesting perch for raptors in core sage grouse areas. Initially, these improvements might not be warranted if other management changes (i.e. changes in timing of use, duration of use, grazing management system ) are deemed appropriate to facilitate recovery of PFC. In addition, Swanson et. al. (2015) suggests that proper grazing management has the benefit of facilitating recovery within the riparian zone.3 In contrast, we would like to highlight that the Management Action (MA) in Alternative D of the Draft RMP, does not include a similar action to prohibit grazing in riparian areas solely based on PFC criteria. Alternative D provides a more balanced approach that acknowledges the dynamic nature of riparian ecosystems and the potential benefits of well-managed grazing to their health. | Management Action 6414 proposes four alternatives regarding livestock management in riparian areas. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13821-8 | To summarize, the unintended consequences of jeopardizing the economic viability of ranching operations within the RSFO could be severe. Increased grazing pressure on adjacent private lands may lead to additional environmental stressors across the broader landscape, counteracting the intended conservation-minded environmental goals of the plan. Additionally, the economic strain on ranching operations might result in changes in private land use that could negate the overall effectiveness and intent of the proposed plan. | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. Section 1.4 of the EIS explains "Lands covered in the RMP will consist of public land and split estate lands managed that the BLM manages. No decisions will be made relative to non-BLM administered lands." |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13823-1 | What I feel the RMP does not portray accurately is the true extent of the economic fall out that is plausible under the proposed plan. Agricultural, while a small percentage employment sector, is not directly reliant on the mining, oil and gas industry. However, it is also an industry that can be largely crippled by Alternate B. Anyone with knowledge of the business model typical of the modern ranch would conclude that the provision to remove 20% of the allotted AUM's in any given year would be untenable for any ranch, let alone if the reduction were to reach the proposed maximum of 60%. | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13823-3 | It also seems unwise to implement a plan while ignoring the variable of horse management. Until the lawsuits regarding the management of feral horses are resolved, how could the BLM possibly adjust grazing practices and land use allocation? The issue of feral horse management has been a crux of land use conflict in the region since the "Wild Free-Roaming Horses and Burros Act" was implemented and there cannot be a sustainable plan implemented to protect rangeland, without a finalized quota for feral horse numbers. | Wild horse management within the Resource Area was updated via a 2023 Record of Decision and Resource Management Plan Amendment. All management actions from that amendment have been incorporated into this RMP Revision. See the Wild Horse Management Actions, beginning with Management Action 4900. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13832-1 | MA 4420 Prohibit livestock grazing from big game parturition areas, there is no basis for this regulation recommend plan A or D. All grazing rotational systems would need to be changed, while the current system seems to be working well. | Management Action 4220 proposes four alternatives regarding parturition habitat management within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources– | #13844-1 | MA 6404 Should read meeting or making progress towards meeting the Wyoming Land Health Standards and to meet the goals and objectives of the Rmp. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |

|---|---|---|---|
| Livestock Grazing Management (6400-6417) | | | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13849-1 | Land Resource #6404. Page 2-119. Continuing current levels of livestock grazing just makes sense. Declining livestock numbers across the United States and an increased demand for beef in the consumer market is just one reason why livestock should continue grazing and AUMs should not be cut. Alternative D maintains the RSFO AUMs while still allowing for adjustments of active use AUMs when site-specific monitoring/assessment data, the results of a land health evaluation, or a site-specific NEPA analysis demonstrates that an adjustment is appropriate to facilitate proper grazing management. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13889-3 | 6411 Regarding Salt or mineral placement A or D provide the most effective management objectives for Livestock grazing management and the natural resources, trails and water improvements. Salt is a way to move livestock from one area to another reducing grazing pressure in certain areas and utilizing forage in areas off the streams or watering holes. Reasonable placement must occur if it defeats the purpose of rotating salting locations, too far from the area the livestock will not travel thus defeating the purpose. | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-3 | Alternatives A &; D would maintain authorized grazing use at current levels, while Alternative C would cut authorized use by 50%. But these pages in the DEIS do not specify exactly what the authorized use level would be under Alternative B, a violation of NEPA. The BLM must define the specific level of authorized use for this alternative. Page 4-234 mentions that total authorized AUMs would be reduced 6,202 AUMs under Alternative B, and page 4-233 assumes that authorized use would be 297,066 AUMs, but this number must be set out in the management prescription for the alternative, not just in an analysis of consequences. | The language for Alternative B in Management Action 6404 has reviewed and updated as needed. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-8 | The plan prescribes "light grazing" which it describes as "livestock grazing that consumes no more than about 30% of the current year's growth of forage plants. Light refers to the effect on the landscape, which is measured through utilization monitoring. You may reduce the number of animals by 30% and still not achieve 'light grazing,' if those animals that remain consume more than 30% of the current year's forage growth." What will the impact of this change mean to livestock production in the RSFO, and to the sustained yield goal enacted by Congress? | A range of alternatives was considered for Management Action 6405. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-9 | Page 2-122 shows that only Alternatives C and D (of the four alternatives) allow for livestock trailing. Alternatives C and D would authorize livestock trailing, "on a case-by- case basis, based on appropriate, site-specific NEPA compliance." The DEIS should note that livestock trailing is eligible for a categorical exemption. The BLM should not provide for additional environmental analysis for continued use of historic trailing, and the final decision on this RMP should include provisions for authorizing livestock trailing. | Livestock trailing is specifically provided for in Alternatives C & D of the EIS. While livestock trailing is not prohibited in Alternatives A & B, it is also not specifically provided for. The opportunity to authorize livestock trailing by utilizing a categorical exclusion in accordance with FLPMA Section 402(h)(2) would be provided for under all four alternatives in Management Action 6412. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-11 | As written, the DEIS indicates "animal control" would be prohibited. This statement should be deleted from the plan. It is not scientifically supported and the broad and undefined statement of "animal control" could prohibit the control of wild horses, feral dogs, rabid skunks, and capture of ungulates for research purposes. | Management Action 4211 proposes four alternatives regarding animal damage management within the Resource Area. Impacts to the various resource values are provided for throughout Chapter 4 of the EIS, for all four alternatives of Management Action 4211. Management Actions 4200-4213 discuss the management of invasive species and pests. Section 1.4 of the EIS explains that none of the decisions in this RMP Revision would apply to non-BLM administered lands. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-13 | How the BLM's glossary defines words will dictate how resource use is restricted. For example, Alternative B proposes to "prohibit livestock grazing in big game parturition habitat during the birthing season." The glossary defines big game to include elk, deer, bighorn sheep, moose and pronghorn. That means that livestock grazing is prohibited even in pronghorn antelope fawning habitat during the birthing season, so no domestic sheep or cattle on grazing allotments through June 30. Really? Did the BLM only mean to apply this term to specific designated birthing areas and only for certain big game species like elk, or only in certain designated areas? As written, the document would prohibit any livestock grazing on most of the district through June 30. | Management Action 4220 proposes four alternatives regarding parturition habitat management within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13892-25 | Page 3-8 states, "There currently are no bighorn sheep herd management areas in the planning area due to conflicts with domestic sheep grazing allotments (primarily disease transmission from domestic to wild sheep)." This statement is factually incorrect and prejudicial. Change it to: "The RSFO is outside of Wyoming Bighorn Sheep Management Areas as designated by Wyoming Statute § 11-19-604." | Section 3.7.1 of the EIS has been reviewed and determined to be accurate in relation to Big Horn Sheep. |
| 829 - Land Resources–Livestock Grazing | #13895-1 | Under the Taylor Grazing Act, grazing districts have been identified on federals lands and includes those lands determined to be "chiefly valuable for grazing and raising forage crops." 43 U.S.C. § 315. The BLM provides no information or data to show that these areas are no longer "chiefly valuable for grazing" or are otherwise lack sufficient forage to support livestock grazing and wildlife. | Section 1.4 explains that "The proposed RMP will be in compliance with FLPMA and all other applicable laws, regulations, and policies." All management actions comply with all laws, regulations, and policies. This would include the Taylor Grazing Act. |

|---|---|---|---|
| Management (6400-6417) | | | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13895-2 | Finally, as a private landowner and lessee of other private lands in the area, there is serious concerns about how Preferred Alternative B impacts the ability to access and otherwise use and develop private and state lands due to the massive number of restrictions placed on neighboring public lands. The impact of ROW exclusion areas and restricting motorized travel to designated roads will have on grazing, and other multiple uses, is also not adequately addressed in the DEIS due to the BLM's failure to disclose the connected and foreseeable actions of future travel management planning and foreseeable road closures. Under Preferred Alternative B, the BLM is no longer managing for multiple use and sustained yield but instead closing-off public lands and unlawfully restricting access to state and private lands at the expense and to the detriment of providing healthy rangeland, forest systems, and watersheds. | The BLM has reviewed Section 4.22 of the EIS and determined that the existing Socioeconomic analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13904-5 | MA 6404 Alt B This alternative goes against everything we, as cattle grazers have been trying to do for the past 10 years. It doesn't recognize that we have worked diligently and improved the riparian areas. This MA only serves to punish livestock grazers. This should read something like this: Adjust active use AUMs (increase or decrease) when site-specific monitoring/ assessment data, the results of a land health evaluation, or a site-specific NEPA analysis demonstrates that an adjustment is appropriate to facilitate proper grazing management to provide for meeting or making significant progress towards meeting the Wyoming Land Health Standards and to meet the goals and objectives of the RMP. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13904-6 | MA 6411 Alt b is unreasonable. Salt or mineral within 500 ft of water, wetlands, or riparian area is adequate. 1/4 mile is unreasonable and not conducive to livestock or resource management | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13905-8 | We support the establishment of the Great Sand Dunes ACEC (DEIS at 2-185), and its management to protect dunal flockets (vernal ponds) for amphibian and other wetland life. The dune ponds are habitat for the rare Great Basin spadefoot. Given the scarcity of forage within the dunes, the dune areas should be closed to grazing. | Excluding livestock from the dunal ponds would be an implementation level action that would be beyond the scope of this planning level document. See Section 1.4 of the EIS for the scope of this planning effort. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13916-5 | MA 6404 Alt B This alternative goes against everything we, as cattle grazers, have been trying to do for the past 10 years. It doesn't recognize that we have worked diligently and improved the riparian areas. This MA only serves to punish livestock grazers. This should read something like this: Adjust active use AUMs (increase or decrease) when site-specific monitoring/ assessment data, the results of a land health evaluation, or a site-specific NEPA analysis demonstrates that an adjustment is appropriate to facilitate proper grazing management to provide for meeting or making significant progress towards meeting the Wyoming Land Health Standards and to meet the goals and objectives of the RMP. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13916-6 | MA 6414 Alt B does not hold up the Wyoming Land Health Standards and guidelines. PFC is only one tool, of many, to determine if meeting std #2. Furthermore, the point is that we need to meet or be making significant progress towards meeting the Wyoming Land Health Standards. | Management Action 6414 proposes four alternatives regarding livestock management in riparian areas. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13918-1 | We also disagree with BLM's assessment that livestock grazing will not be significantly affected by such a vast designation of ACECs. We believe that ACEC designation will ultimately be used to prohibit ranchers' ability to make rangeland improvements, which are vital to reducing landscape impacts. | As described in Management Action 6416 range improvement projects would be allowed under all Alternatives. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13923-9 | Eliminating grazing in the Red Creek Grazing Allotment may concentrate grazing operations on the adjacent private and leased state lands which may cause undue environmental degradation. The land in this area represents some of the most important riparian areas in the Red Creek watershed, which is home to one of the only populations of the native Colorado River cutthroat trout in Wyoming. The degradation of the riparian areas, and subsequent erosion, may increase sediment loading and salinity downstream in the Green River. In addition to impacts to riparian areas, the prohibition of grazing in the Red Creek Grazing Allotment may lead to construction of fencing to ensure livestock do not enter the allotment. This could have the unintended consequence of restricting access to wildlife, such as elk, pronghorn, mule deer and moose, to habitat in the Red Creek Basin. | Management Action 7443 proposes four alternatives regarding livestock grazing within the Red Creek Portion of the Greater Red Creek ACEC. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13936-1 | I don't think the B alternative was sufficiently analyzed in regards to the impacts to grazing with the NSO, no early summer grazing in parturition areas, and not grazing streams not at PFC, and restrictions to fence/wells as tools to distribute cattle off of riparian areas. | The BLM has reviewed Section 4.16 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13940-10 | Management Action #6404 under Alternative B states: "If a land health evaluation shows that land health standards are not met and current livestock grazing management is determined to be among the causal factors, implement a 20% reduction annually from the 10-year average of actual billed AUMs for each permit/lease up to three consecutive years (60%) in active AUMs until land health standards are met." Id. at 2-119. This conflicts with the Wyoming Land Health Standards, which require a determination that livestock grazing is a significant causal factor before reductions can occur. Handbook 4180-1, pp. III-12 - III-14 (Jan. 19, 2001). | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. As stated in Section 1.4 of the EIS the "proposed RMP will be in compliance with FLPMA and all other applicable laws, regulations and policies." |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13940-11 | Alternative D also states that "[r]eductions in grazing use in industrialized areas could become necessary if mitigation is insufficient to maintain the current level of livestock grazing." Id. JRB does not support the reduction in grazing when industrial activity is the cause of loss of forage, invasive species, unsuccessful rehabilitation, or others. The grazing permittees should not be the ones to face reductions when their grazing activities did not cause the problem. | Management Action 6413 prescribes that reasonable and prudent mitigation would be implemented to maintain the availability of public lands for authorized livestock grazing use in areas of intense industrial operations. Under this management action reductions in grazing use would only occur when mitigation is insufficient to maintain the current level of livestock grazing. The language in Management Action 6413 does not include any actions that would prohibit negotiation or compromise between affected parties. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13945-3 | 3. MA #6404 requires 20% annual livestock grazing reductions to up to 60% for allotments if a single rangeland health standard is not met. Alternative B does not define whether a standard on a single site requires the reduction, but it is conceivable that a single site could be used to reduce a grazing permittee by 60% on an entire allotment. Grazing reductions seldom address the problem because the problem is generally due to livestock grazing use distribution, which requires using various management techniques, including salt and mineral placement, pasture use timing, herding and other measures. A simple reduction in livestock use is punitive to the permittee and does nothing to identify the reason for the problem and solutions to address the problem. The Draft EIS does not fully account for the social and economic impacts of the likely extensive reductions in livestock use to permittees and the local economy. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. Socioeconomic impacts are provided in Section 4.22 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13945-4 | 4. MA#6411 requires a minimum distance of 1/2 mile from riparian areas and certain roads for livestock salt and mineral placement. Permit terms and conditions have generally used 1/4 mile as the distance, which is a good practice. Riparian area management often requires strategic placement of salt and mineral to draw livestock off of riparian areas and encourage grazing use in the uplands. In many areas of the allotments near the Shoshone or Bridger-Teton National Forest boundaries it is difficult to find a place to use salt and mineral that is at least 1/2 mile from a riparian area. This blanket approach is not very well thought out or is a deliberate effort by the BLM to set up failure for the grazing permittees by taking away a key livestock management tool. | Management Action 6411 proposes four alternatives regarding how salt and mineral supplements may be utilized within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13945-5 | 5. MA#6414 will prohibit livestock grazing in riparian areas that do not meet PFC. Many stream segments do not meet PFC, but are moving toward PFC. The process to reach PFC often requires years of management. A single year of spring flooding that takes out beaver dams and causes erosion may set back attaining PFC for years or even decades. If a stream segment does not meet PFC, it is not a simple matter to just prohibit livestock grazing from the stream segment because riparian areas are not fenced and not even susceptible to being fenced. As a result, livestock grazing would be prohibited from an entire pasture or and entire allotment, potentially for years, which will put the permittee out of business if they are highly dependent upon the allotment for their summer and fall grazing. The Draft EIS does not quantify the number of stream miles that are currently not in PFC status nor does it attempt to show the number of AUMs that would be lost to grazing due to a prohibition of grazing on stream segments that are not meeting PFC. | Management Action 6414 proposes four alternatives regarding livestock management in riparian areas. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13945-6 | Yet, the Draft EIS makes no effort to determine the extent to which Alternative B (or any alternative for that matter) will lead to grazing allotments becoming economically unviable to use for livestock grazing and the consequential sell off of private land inholdings. The Draft EIS also makes no attempt to determine the likely environmental impacts to wildlife habitat, open space and visual resources from the development of private lands that are no longer viable for livestock grazing due to loss of economically viable grazing use of the federal BLM land imposed by Alternative B. | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-2 | Page 2-179; Management #7423 "Modify livestock grazing objectives and systems to manage for plant condition and composition most ecologically beneficial to identified wildlife species, while also considering the habitat of other species, in areas identified as habitat for Special Status Species, crucial winter range, or parturition habitat for big game." -Alternative A, which manages everything, is a much more rounded and balanced approach when considering plant condition and composition. Why single out a specific species? In this case big game when the elk herds on Aspen are so over-populated they are causing over grazing and the Wyoming Game and Fish are installing 8 ft tall fences around the aspen clones. Moreover, think about the ecological harm done by the excessive wild horses, especially during the winter months. | Management Action 7423 proposes four alternatives regarding livestock management objectives in the Greater Red Creek ACEC. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |

|---|---|---|---|
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-3 | Page 2-181; Management #7433 "Prohibit livestock grazing in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion (Map 2- 30)." -Any alternative other than B is acceptable. Alternatives A, C, and or D would maintain rangeland health. The stream is at PFC and the sheep help suppress the cheatgrass by grazing in the early summer. So why remove the livestock? They are a tool in helping maintain healthy land conditions despite the disproportionate wild horse herds who dominate and damage riparian areas. It's a proven fact that the wild horses have greater forage needs, graze closer to the ground, use the range year-round, and add harmful impacts to sagebrush and other critical browse species. | Management Action 7433 proposes four alternatives regarding livestock grazing within the Sage Creek Portion of the Greater Red Creek ACEC. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-4 | Page 2-68; Biological Resources #4420 "Prohibit livestock grazing in big game parturition habitat during the birthing season (usually from May 1 through June 30)." -The governor already has a task force to address wildlife corridors. The only reason to involve parturition is brucellosis. Alterative D is preferred because it appropriately defers consideration of potential grazing adjustments to meet conflicts, if any, with big game parturition, to the permit renewal process. Alternative D allows for site-specific management with a flexible timeframe, while other alternatives require a specific timeframe. | Management Action 4220 proposes four alternatives regarding parturition habitat management within the Resource Area. Impacts to livestock grazing are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-5 | Page 2-119; Land Resources #6404 "The total authorized livestock use for a grazing season within the RSFO would be the active use AUMs sustained on an allotment- by-allotment basis for livestock grazing, providing the Wyoming Land Health Standards are met. If a land health evaluation shows that land health standards are not met and current livestock grazing management is determined to be among the causal factors, implement a 20% reduction annually from the 10-year average of actual billed AUMs for each permit/lease up to three consecutive years (60%) in active AUMs until land health standards are met. Adjust reductions if it has been determined that significant progress has been made toward achieving land health standards." -I would be ok with either Alternative A or D. Rangeland health decisions should be made off of monitoring data, not an across the board rule of thumb. Generally speaking, rangeland health problems are often due to distribution, not stocking rates. For example, being able to create alternative water sources for all species so not just one trail takes the beating. But just for the record, rangeland health standards have been monitored and continue to meet, and more times than not, even exceed requirements and expectations on the lands we hold the permits to. Our non-use or under-use has not been due to resource conditions. Market conditions, generational changes, and other business decisions are just a few of the reasons we have utilized what we have when we have. Let's not ignore the elephant in the room…wild horses! The main reason livestock operators like ourselves have utilized few AUMs is due to the ever increasing number of wild horses. The horses have greater forage needs, they graze closer to the ground, use the range year-round, dominate water sources and cause harmful impacts to sagebrush and other critical browse species. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-6 | Page 2-123; Land Resources #6414 "Prohibit livestock grazing in riparian areas that are not meeting PFC." -This is not feasible, nor is it reasonable. Suggesting you would have to rest, or worse yet, fence whole areas that are watered by that stream would be expensive and more importantly, would conflict with sage grouse running into the fence. It also states "no grazing". So the horses would still be able to graze but the livestock would not? Let's also remember that PFC is too vague of a monitoring tool to make decisions. PFC is used as an inventory; not the trend-data tracking tool it could be to help make lasting improvements and decisions. Additionally, an inadequate PFC may be caused by a stream geomorphology or a long-term drying trend as is common, and presently taking place, in this high desert. It's ridiculous and difficult to prove that a cow or a sheep caused a headcut. I guess Alternative C would still allow grazing in riparian areas so long as they are making significant progress toward meeting WY Land Health Standards. | Management Action 6414 proposes four alternatives regarding livestock management in riparian areas. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-11 | Page 2-122; Land Resources #6413 "Reduce areas open to grazing and available AUMs where industrial activity conflicts with grazing operations and rangeland management objectives. Conflicts could include loss of forage, unsuccessful rehabilitation of disturbed areas, invasive species, safety hazards, improper livestock distribution, or other circumstances." - Alternative D uses the best collaborative approach to address conflicts between grazing and industrial development. | Management Action 6413 proposes four alternatives regarding how livestock grazing will be managed in areas of industrial development. Impacts to livestock grazing are provided for in Section 4.16 of the EIS, for all four alternatives related to this management action. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-20 | Page 2-57; Biological Resources #4111 "rest all treated areas a minimum of five growing seasons from livestock grazing." -Alternative D provides for critical site-specific determination regarding rest of treated areas and is preferred because it allows for flexible management. What is the scientific rationale for 5 years? Who would fence out the wild horses, wildlife, and or big game animals if an area is to be rested for five years? To say nothing of the problematic and devastating effects such a lengthy rest would have for livestock operators. As the Governors Task Force also noted, "Alternative A did not provide clear language as to who would be responsible for the fencing out of livestock and big game animals if necessary". | Management Action 4111 proposes four alternatives regarding how long a vegetation treatment will be rested from livestock grazing use. Impacts to livestock grazing from this management action are provided in Section 4.16 of the EIS for all four alternatives considered for analysis. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13951-23 | Additionally, the full socioeconomic impact to grazing with regards to PFC and big game parturition and reductions in grazing due to not meeting rangeland heath was not fully analyzed in the livestock grazing impacts section. Reducing AUM's when monitoring data meets and often exceeds the environmental assessments is dishonest and underhanded. The full AUM reduction due to these requirements would greatly exceed those AUM's shown and analyzed as being cut under Alternative B. Besides, what is the justification for any changes to grazing since grazing is less than it has been for many, many years; less than it was when the last ROD was approved in 1997? | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |

|---|---|---|---|
| | | Additionally, the Taylor Grazing Act spells out the AUM process. Furthermore, "the permitee or licensee has a right which is cognizable and protected by the courts" [Ragsdale, Calvin E. (1969) "Section 3 Rights under the Taylor Grazing Act," Land &; Water Law Review: Vol. 4 : Iss. 2 , pp. 399 - 430]. | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13958-1 | (6405) If our turnout date is moved back even thirty days the additional feed costs would be crippling to my operation. | Socioeconomic impacts are provided in Section 4.22 of the EIS. In the "Methods for Livestock Grazing" portion of Section 4.22.2 details are provided regarding the methods used to evaluate impacts to livestock grazing, including rationale for the methodologies used. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #13998-1 | as to table I, very much against 4 million acres bing used for grazging. reduce that to zero. we need a new plan for he public ALTERNATE Z. THE US PUBLIC SHOUDL BE CONSULTED ON EVERY LOGGING PLAN, SOLAR PLAN, OIL &; GAS TAKING - ANY IMPACT ON NATURE. that is alternate z. w[comment end] | Section 2.2.4 of the EIS explains why a Closure to Livestock Grazing alternative was not analyzed in detail. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14020-4 | Given the fact that the BLM has failed to assess Rangeland Health Standards for approximately 41 million acres it administers, further planning must examine and disclose how the agency aims to ensure complete and accurate monitoring. See Public Employees for Environmental Responsibility (PEER), BLM Land Health Status Report, November 2022, available here: https://peer.org/wp-content/uploads/2022/12/BLM-Land-Health-Data-Rpt-Nov-22.2.pdf (PEER Report). In fact, these very planning documents show that four grazing allotments remain unevaluated, including the largest allotment (Rock Springs). Vol. 1 pg. 663 map 3-11. Concerns related to a lack of monitoring are heightened by the fact that 50% of the total acres assessed by the BLM fail to meet Land Health Standards. PEER Report at 7. Considering the BLM's own disclosures, it is undeniable that livestock grazing is the main cause of allotments failing to meet Rangeland Health Standards throughout the country. | Information regarding Land Health Standards for Grazing Allotments within the Resource Area are provided in Appendix G of the EIS. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14020-5 | animal unit months (AUMs) used by the agencies to allocate forage for livestock grazing are egregiously outdated and should be updated to properly assess and address climate change. Current AUMs define the amount of forage needed to feed one 1000 lb. cow and calf for a month, even though the U.S. Environmental Protection Agency reported a mean weight of a cow was 1221 lbs. in 1990 and 1348 lbs. in 2015. United States Environmental Protection Agency (2018) A-250. Inventory of U.S. greenhouse gas emissions and sinks: 1990- 2016. United States Environmental Protection Agency available at:https://www.epa.gov/sites/default/files/2018-01/documents/2018_annex_3_-_part_b.pdf. This upward trend in the weight of cows demonstrates that there is an increase in overall forage use and physical influence on the land from cattle grazing on public lands, and that today a single cow and calf would account for 1.25 AUMs. Kauffman et al. (2022) at 1144. Despite this empirical data, this increase in cattle weight and influence is not currently considered in forage allocation, carrying capacities, or stocking rates - and could indicate that public land use by cattle may have increased by 25% over the past two decades. | The definition of an Animal Unit Month (AUM) provided in the Glossary of the EIS is consistent with the definition provided in 43 CFR 4100.5 and 43 CFR 4130.8-1(c). |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14020-6 | the BLM's own disclosures showing that livestock grazing is the primary cause of failing range health nationally and locally, the agency should more closely examine the proposed use assigned to livestock grazing. As disclosed in the Murderers Creek EA, recent interagency proposed actions continue allocating the vast majority of forage to livestock grazing, ostensibly based on nonexistent "obligations" to permit holders. This is also the case in these planning documents despite unambiguous direction from 36 CFR § 222.3 (b) and 43 C.F.R. § 4130.2(c) stating "[g]razing permits and livestock use permits convey no right, title, interest held by the United States in any lands or resources." This practice is in fact in complete violation of the authorizing Taylor Grazing Act, which unequivocally states that "[n]othing in this subchapter shall be construed in any way to diminish, restrict, or impair any right which has been heretofore or may be hereafter initiated under existing law validly affecting the public lands." 43 U.S.C. § 315. | As stated in Section 2.1 of the EIS "The alternatives represent reasonable approaches to managing resources and activities consistent with law, regulation and policy." |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14022-2 | SCCD is discouraged that the BLM wouldn't utilize the most current and relevant rangeland monitoring data that has been collected in the RSFO for this RMP revision. SCCD has been a part of several cooperative monitoring efforts in the RSFO and has compiled and summarized the data and sent it to the RSFO to be filed in the appropriate allotment files. SCCD has also worked cooperatively with grazing permittees, oil and gas operators, and BLM to conduct inventories associated with the Normally Pressurized Lance gas field as well as portions of the Jonah field. This data appears to have not been utilized and discounts the combined efforts of local BLM staff, SCCD staff, and users of BLM lands that have helped in the above efforts. | The level of data provided throughout the EIS is appropriate for a planning level document. See Executive Summary for a description of data use and planning needs. |
| 829 - Land Resources–Livestock Grazing | #14022-12 | MA#6404, SCCD disagrees that reducing AUM's is a sole answer to fix a resource issue. SCCD encourages the BLM to utilize a collaborative approach to fixing resource issues and not just the approach that cutting numbers will fix the situation. | A range of alternatives was considered for Management Action 6404. Impacts to livestock operations from all four alternatives are provided in Section 4.16 of the EIS. |

|---|---|---|---|
| Management (6400-6417) | | | |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14022-13 | MA#6407, SCCD disagrees with the Alternative B approach to eliminating grazing from exclosures. Current range science doesn't agree with this approach, and it can lead to decadent stands of forage and decreased diversity within the exclosure. SCCD encourages working with livestock producers to include exclosures in a grazing plan. | Allowing livestock to graze within exclosures is considered and evaluated under Alternative C of Management Action 6407. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14022-15 | Page 4-49, SCCD disagrees with the statement in paragraph 1 that the proposed grazing restrictions under Alternative B will essentially be the cure all for resource issues. The current range science will disagree with this statement. Exclosures already exclude grazing annually if maintained properly and reduction of AUM's doesn't necessarily cure the resource issue. | The BLM has reviewed Section 4.6.3 of the EIS and determined that the existing analysis is adequate. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14023-6 | I recommend that livestock grazing adhere to best practices and require that upwards of 70 percent of herbaceous retention be required on grazed allotments to support watershed and wildlife health. (Western Association of Fish and Wildlife Agencies 2009; Holechek, J.L. et al. 2011. Range management principles and practices. 6th ed. Prentice Hall. Boston, Mass. | Management Action 6402 would allow for livestock grazing use to be adjusted in order to meet Land Health Standards. |
| 829 - Land Resources–Livestock Grazing Management (6400-6417) | #14032-1 | the Draft RMP/EIS discusses existing resources affected by livestock grazing management decisions and the number of range improvements constructed within the planning area. However, the discussion in Chapter 3.16 does not address how current management has contributed to degradation to resources. The qualitative discussion makes it difficult to understand how the alternatives will support achievement of land health standards. | The BLM has reviewed Section 3.16 of the EIS and determined that the existing information is adequate for a planning level document. |
| 830 - Land Resources–Recreation (6500-6557) | #142-3 | Under Alternative B, land resource # 6505 and # 6512 would negatively impact recreational activities in the area. These suggested requirements are an overreach and have little value in protecting natural resources. Most recreational users practice leave no trace principles and improve areas they would be camping and collecting firewood in. | See Chapter 2.2.6, Land Resources - Recreation, Management Actions 6506 and 6512 for the full range of alternatives analyzed. |
| 830 - Land Resources–Recreation (6500-6557) | #214-1 | I agree with the closure of climbing on boars tusk but I think the current wording is slightly problematic and may confuse people. The reason of closure should not include "surface disturbance" as that can mean anything where as it is actually an archeological site with rock art. | See Chapter 2.2.6, Physical Resources - Soil and Geological Resources, Management Action 1116. Language provided for closures is sufficient. |
| 830 - Land Resources–Recreation (6500-6557) | #258-2 | RECREATION(6500-6557) Hand gold panning is allowed but no sluice boxes for ALT B. what is the environmental bane of a sluice box that one shovels into by hand? The snowmobile trail on the continental divide will not be retained as well as the Killpecker Sand Dunes Special Recreation Area. How does this not kill off part of the local tourism economy? | See Chapter 2.2.6 Land Resources - Recreation management Action 6520 for a list of analyzed alternatives regarding prospecting. In the same section see Management Actions 6521-6557 for a range of alternatives related to Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #302-2 | We also have great concern as to how Alternative B will impact motorized recreation and hunting access in the in the Rock Springs management area. You have now acknowledged that the draft land use plan contains an error as to how many miles of roads will be closed under the proposed plan (the document currently states 4,505 miles of existing roadway will be closed). People from Wyoming and throughout the country have enjoyed motorized recreation in the Rock Springs resource management area for generations. With motorized travel restrictions already in place on many federal lands, we would hope that BLM would realize the benefits of promoting reasonable and responsible motorized recreation. Without a clear understanding of the impact of the proposed plan on recreation, the plan should be abandoned and a new plan developed or one of the other preferred alternatives adopted. | See updates to Chapter 4.17 of the DEIS removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #326-1 | I feel the alternative B may be too restrictive. I am older person and am limited in the distance I can walk. there for this is my reason for requesting a lot of the areas that are show as a Exclusion area be change to Avoidance. this is for OHV, roads and trails. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-9 | Attractive recreational trails improve the quality of life in all regions, and this has been used as an important recruiting tool by local businesses, chambers of commerce and public agencies, which target people with special skills or talents, and encourage new and expanding businesses. https://headwaterseconomics.org/wp-content/uploads/Trail_Study_4-trail-use-in-minnesota.pdf | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including recreational trails. |
| 830 - Land Resources– | #8761-10 | The agency should adequately consider that the pandemic and social distancing requirements have significantly increased the public need for more dispersed camping opportunities. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including dispersed camping. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Recreation (6500-6557) | | | |
| 830 - Land Resources–Recreation (6500-6557) | #8761-11 | The agency should adequately develop and consider site-specific data that demonstrates any impact of significance to the natural environment by motorized recreation and dispersed camping when compared to naturally occurring levels of impact and change. 16. The agency should adequately develop and consider site-specific data that demonstrates that closures of motorized and dispersed camping opportunities produce any significant benefit to the natural environment. 17. The agency should adequately develop and consider site-specific data that demonstrates significant measurable impacts (compared to naturally occurring) from motorized recreation and dispersed camping. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including dispersed camping. See section Land Resources - Off Highway Vehicles, Management Actions 6600-6620 for area designations. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-12 | The Dyrt's 2022 Camping Report ( https://reports.thedyrt.com/2022-camping-report/ ) found that it is 3x harder to book a campground now than in pre-pandemic years. While over 8 million new people joined the camping community last year, the campground and dispersed camping capacity has not increased. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including dispersed camping. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-13 | The agency should adequately evaluate and consider the public safety issues created by limiting dispersed camping to within 70-foot of a road. Two of our members recently witnessed a family camping within 70-feet of the road whose dog was hit and killed by traffic. The dog owner was experiencing extreme grief and shock. Just imagine a similar incident involving the loss of a child and how devastating that would be for the parents. The 70-foot limitation is not a reasonable restriction for public safety and safe camping. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including dispersed camping. Choosing a safe spot to camp on public lands is the responsibility of the recreator. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-14 | The agency's project team should adequately consider that NEPA 1969 directed consideration of the human environment and the natural environment. The agency should adequately consider the value of motorized recreation opportunities on the human environment using site-specific data and analysis addressing social and economic values and impacts; the need for recreation and healthy activities; the need to experience "flow" and nirvana; the need to exercise our culture; and the need to address obesity and suicide issues, and the need to address physical and mental health needs. NEPA 1969 was intended to protect and promote We are a locally supported association whose purpose is to preserve trails for all environments equally. The depth and breadth of site-specific data and analysis of the human environment should be equal to that of the natural environment. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources. Personal benefits to recreational access are related to site specific planning and out of the scope of the DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-15 | The agency should adequately consider that mental health needs for youth is at extremely high levels, continues to rise, and needs to be addressed with healthy activities. https://helenair.com/news/state-and-regional/montana-youth-mental-health-needs-on-the-rise/article_c9ad3613-68b8-591d-91fc-5dae86b9b364.html 19. The agency should adequately consider that the current lack of adequate positive recreational opportunities is producing a significant impact on the human environment including suicide and mental illness. 20. The agency should adequately consider that when the agency closes motorized recreation routes that it is contributing to human stress and mental and physical health issues. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources. Personal benefits to recreational access are related to site specific planning and out of the scope of the DEIS. Route specific Travel and Transportation Management decisions are outside the scope of the DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #8761-16 | The agency should adequately consider that motorized recreationists have been hammered by motorized closure after motorized closure in Wyoming and surrounding states.3 7. The agency should adequately consider that travel planning and other planning actions have closed 25 to 75% of the historic motorized routes and all cross-country opportunities since the 1960's. 8. The agency should adequately consider that the analysis should adequately disclose and evaluate the amount of motorized access and motorized recreation that has been lost to public use since the 1960's. 9. The agency should adequately consider and mitigate the significant negative cumulative effect of all motorized closures on the public. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #9355-1 | One thing that needs to be done is conservation stamps need to be required for all out of state camping and recreation. Charge out of state visitors $100.00 for conservation of lands and a fine of up to $500.00 for failing to obtain said stamp, by doing this you will be able to have better funds and resources to conserve our lands. | Conservation stamp programs are run by state agencies and are outside the scope of the DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #9721-9 | Alternative B's blanket prohibition on surface disturbing activities is overly drastic. Further site-specific analysis must be completed and potential mitigation or BM P's considered to determine effectiveness of surface restoration before complete prohibition is considered. | Multiple factors contribute to an area being considered for an NSO. See the analyzed range of alternatives in Chapter 2.2.6 for different considerations. |
| 830 - Land Resources–Recreation (6500-6557) | #9853-10 | * Alternative B of MA# 6504 states "other resource values" where SVP expects that these include paleontological resources. | A range of alternatives has been analyzed for undeveloped recreation sites in Chapter 2.2.6 management action 6504. |
| 830 - Land Resources–Recreation (6500-6557) | #9853-11 | * Alternative B of MA# 6505 states "Close areas to camping if resource damage occurs", but because paleontological resources are nonrenewable, detailed management plans must be in place to eliminate the possibility of damage to paleontological resources in such areas in the first place. | See Chapter 2.2.6 section Heritage and Visual Resources - Paleontological Resources 5300-5309 for a range of alternatives for Management Actions related to paleontological resources. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #9853-12 | Alternative B of MA# 6516 states "Prohibit surface disturbing activities within three miles or the visual horizon, whichever is closer, of developed recreation sites unless such activities are determined to be compatible with or are done for meeting recreation objectives for the area." SVP hopes that paleontological surveys, mitigations, and excavations that will likely cause some degree of surface disturbance to be allowed. | See DEIS Glossary for definitions of 'Surface Disturbance' and 'Surface Disturbing Activities'. |
| 830 - Land Resources–Recreation (6500-6557) | #10225-3 | In polling our senior patrons we found, that for most of their lives, they have enjoyed traveling the existing backroads, two tracks and trails of Sweetwater County. This enjoyment has been passed on to their children and now their grandchildren. However, now in their later years, the only method of travel is some type of motorized vehicle. If Alternative B is out into place, anyone who is mobility challenged will no longer have the ability to enjoy the beauty of our vast desert resource, It is interesting that the ADA requires city businesses and public places to provide access to all, but none of this seems to appear in any RMP. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #10324-10 | As a college student, I do not have a large disposable income, and with things like park passes and entry fees increasing on land that I recreate, that does provide me some stress. I think it is important that not only minority groups are represented in land changing plans, but also individuals who are unable to afford some of the universal experiences in the area. I think it would be beneficial to discuss how fees for trails, parking lots, and land use would be dispersed, and how they would be created with the mindset of use for the majority of people. Just last semester in my Federal Lands class we discussed how in order to visit Yellowstone in the winter, the fees and cost associated with it provides a barrier to the majority of people, and though Rock Springs isn't a National Park, it is still important to consider any fees that could be placed on recreational opportunities and how that may discourage those wanting to enjoy our state. | There are currently no fees required to access any recreational areas in the Rock Springs Field Office. Potential future fee changes are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13064-6 | BLM Wyoming stated that it intends to remove the route closures and the references to the travel management plan from the draft Rock Springs RMP. However, BLM Wyoming did not specifically identify what would remain in the draft Rock Springs RMP and what would be removed. Therefore, the Committee would like to provide comment on the route closures and other negative impacts that Alternative B, as currently drafted, would have on Wyoming's recreation industry. | See updates to Chapter 4.17 of the DEIS removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13064-7 | Under Alternative B, the elimination of special recreation management areas would result in the entire planning area being designated as an extensive recreation management area.48 The draft Rock Springs RMP does not provide much information on what an extensive recreation management area is or what recreation focus it would provide. | See DEIS Glossary for definition of 'Extensive Recreation Management Area'. |
| 830 - Land Resources–Recreation (6500-6557) | #13191-1 | The final plan should loosen a number of the proposed management prescriptions in Table 2.1. Some of these restrictions appear to be more stringent than necessary. While I'm not prepared to address all of the many management prescriptions outlined in Table 2.1, the following is an example of one that appears to be more restrictive than necessary: "6505 Prohibit dispersed camping in riparian areas or within 200 feet of water…". Limited camping should be allowed in these areas. I encourage BLM officials to review all of the proposed management prescriptions in Table 2.1 to assure they are not more restrictive than necessary. | See Management Action 6505 for a range of analyzed alternatives related to dispersed camping in riparian areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-20 | 20. The task force supports responsible recreational use across the field office. Motorized and non-motorized access should be continued for both dispersed and developed recreation. We request that the field office invest more staffing and funding resources to support recreational use, wise management, monitoring, and mitigation as needed to address appropriate areas for expanded or concentrated use, necessary infrastructure improvements, and areas that need special protections. These efforts are necessary for both conservation special areas and special recreational places. The agency should work with local stakeholders, including state and local governments, to develop place-based plans that can address recreational needs while maintaining traditional uses within the Field Office area. | Program funding and site specific planning are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-72 | 6500 Same across all alternatives Allow commercial competitive events and organized group activities, on a case-by-case basis, where compatible with natural resource management objectives. The task force supports this management action because it supports recreation and economic development in the field office. | See Section 3.17 for a description of Recreation and Visitor Services in the Resource Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-73 | 6507 Alternative A, with amended/ additional text The Oregon Buttes, Honeycomb Buttes, Steamboat Mountain, Leucite Hills, Red Creek, Pine Mountain, Little Mountain, and Cedar Canyon areas would be managed to assure their continuing value for recreational opportunities. Recreation area management plans would be prepared for these areas if necessary. Alternative A is preferred with additional text to ensure that recreation area management plans will be developed to minimize conflicts between recreation and other types of resource uses. Revised management action with additional language in red: Recreation area management plans would be prepared for these areas if necessary to mitigate conflicts with other resource values and uses. | Alternative A is the existing management action from the 1997 RMP. See Management Action 6507 for analyzed range of alternatives related to possible future development of these management plans. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-74 | 6508 Alternative C Develop recreation project plans and an interpretive prospectus for the Sweetwater Campgrounds, Boars Tusk, Leucite Hills, and the Continental Divide Snowmobile Trail. Recreation project plans for the sites listed under Alternative C should be developed to minimize conflicts between recreation and other types of resource uses. | See Management Action 6508 for full range of alternatives analyzed for potential future development of the referenced management plans. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13210-75 | 6510 Alternative A, with amended/ additional text The Green River, Sweetwater River, Big Sandy River, and the Bitter Creek segment between the towns of Rock Springs and Green River would be managed for recreation values. Recreation area management plans would be developed, where necessary. The areas listed in Alternative A are popular recreation areas. Recreation management plans should be developed to minimize conflicts between recreation and other types of resource uses. Revised management action with additional language in red: Recreation area management plans would be developed, where necessary to mitigate conflicts with other resource values and uses. | See Management Action 6510 for full range of alternatives analyzed for potential future development of the referenced management plans. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-76 | 6513 Alternative A Recreation site development projects and access routes along intensively used streams and reservoirs would be managed to maintain or improve wetland habitat conditions. Alternative A is preferred because it draws attention to the need to maintain or improve wetland habitats along intensively used areas. | See management Action 6513 for full range of alternatives analyzed regarding recreational development adjacent to water features. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-77 | 6514 Alternative A Development of permanent recreation sites and facilities in undeveloped recreation use areas would be considered, provided proper mitigation and exceptions to Executive Order 11988 apply. The area within 500 feet of riparian areas and floodplains is an avoidance area for recreation site facilities. Exceptions may be considered following a site-specific analysis. Adverse impacts to riparian areas and water quality is prohibited. Water sources at undeveloped recreation sites would be monitored. If the water is not potable, signs would be posted. Alterative A is preferred because it allows development of permanent recreation sites and facilities in undeveloped recreation use areas, follows Executive Order 11988, and creates avoidance areas to protect floodplain values and allows exceptions following analysis. | See management Action 6514 for full range of alternatives analyzed regarding recreational development adjacent to water features. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-78 | 6522 Alternative A The Continental Divide Snowmobile Trail is designated a special recreation management area to place management emphasis on enhancing recreation opportunities and to focus management on areas with high recreation values or areas where there are conflicts between recreation and other uses (60 acres, Table 2-12, Appendix V and Map 2-29). A management plan for the Continental Divide Snowmobile Trail would be developed. Alterative A is preferred because it maintains the Continental Divide Snowmobile Trail as a special recreation management area and places management emphasis on enhancing recreation opportunities on this popular trail. | See management Action 6522-6524 for full range of alternatives analyzed regarding retention of the Continental Divide Snowmobile Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-79 | 6523 Alternative A The integrity of the Continental Divide Snowmobile Trail and the South Pass Cross Country Ski Trail would be maintained by limiting (and in some cases precluding) surface disturbing activities or facilities on or within ¼ mile of the trails. The only exceptions would be the establishment of facilities to provide services to the users of the trails and to provide for public health and safety. Alternative A is preferred because it maintains the integrity of the Continental Divide Snowmobile Trail and the South Pass Cross Country Ski Trail by limiting surface disturbing activities within ¼ mile of the trails and provides exceptions for the establishment of facilities for trail users. | See management Action 6522-6524 for full range of alternatives analyzed regarding retention of the Continental Divide Snowmobile Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-80 | 6524 Alternative A The integrity of the Continental Divide Snowmobile Trail would be maintained to allow for continued snow machine use. The trail system may be expanded by adding loop trails. Maintaining trail integrity would be accomplished by limiting surface disturbing activities, structures, or facilities that block or hinder trail use on or within ¼ mile of the trail. The only exceptions would be facilities that support trail visitor use and experiences along the trail or to protect the health and safety of trail users. Alterative A is preferred because it maintains the Continental Divide Snowmobile Trail, a popular recreational route and economic driver for the region. None of the additional management actions include similar provisions. | See management Action 6522-6524 for full range of alternatives analyzed regarding retention of the Continental Divide Snowmobile Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-81 | 6525 Alternative A The integrity of the Continental Divide National Scenic Trail would be maintained by limiting (and in some cases precluding) surface disturbing activities or facilities on or within ¼ mile of the trails. The only exceptions would be the establishment of facilities to provide services to the users of the trails and to provide for public health and safety. Alterative A is preferred because it maintains and protects the integrity of the Continental Divide National Scenic Trail, a popular recreational route and economic driver for the region. | See management Action 6525-6528 for full range of alternatives analyzed regarding retention of the Continental Divide Snowmobile Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-82 | 6531 Alternative A The former SRMA designation for the Killpecker Sand Dunes is retained (39,290 acres, Table 2- 12, Appendix V and Map 2-29). Alterative A is preferred because it retains the SRMA designation for Killpecker Sand Dunes at its current footprint. The SRMA designation is important for providing significant recreational opportunities in the region. | See management actions 6531-6536 for a full range of alternatives analyzed regarding the Killpecker Sand Dunes Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13210-83 | 6536 Alternative D 9,250 acres are designated open to off-road vehicle travel on the active sand dunes. Off- road vehicle travel on 3,581 acres of vegetated dune areas is limited to existing roads and trails. Alternative D is preferred because it is a reasonable management strategy to manage off-road vehicle travel in the Killpecker Sand Dunes SMRA while providing significant recreational opportunities. | See management actions 6531-6536 for a full range of alternatives analyzed regarding the Killpecker Sand Dunes Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13287-34 | The Barrel Springs Road and connecting county roads from Wamsutter should be designated as Backcountry Byways, and public rights-of-way should be acquired across the checkerboard along these county roads to facilitate public access to the overland trail and stage stations like Barrel Springs, Fort LaClede, and Hay Meadow. These sites of these stage stations should be acquired into public ownership, in cases where they occur on private checkerboard parcels. We support the designation of the Cherokee Trail Backcountry Byway. DEIS at 2-118. | See Chapter 3.22.5 for list of currently designated Back Country Byways and related acts. See Chapter 2.2.6 Management Actions 6300-6306 for a range of alternatives analyzed related to Back Country Byways. See also Appendix K for land tenure criteria. |

|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13287-40 | We agree that Boars Tusk should be closed to climbing and OHVs, but disagree with building a fence around it. Carsonite signs indicating the closure and regular law enforcement patrols (and diligent issues of tickets and fines) should suffice. The development of high-voltage transmission lines east of Boars Tusk already mars this landscape; these lines should be prioritized for removal and relocation. | See Chapter 2.2.6 Management Actions 7455-7470 for a range of alternatives analyzed for the Boars Tusk Portion of the Greater Sand Dunes ACEC. |
| 830 - Land Resources–Recreation (6500-6557) | #13302-1 | Under Alternative B, only 13.9% of existing roads and trails would remain open to vehicle use. The draft Rock Springs RMP also does not provide a map to show the specific routes that would be closed. The effect of these route closures may be even more significant and detrimental depending on where these closures actually are. Without a map, I cannot accurately articulate the overall impact the route closures would have on recreation. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13330-12 | * MA # 6510: Sweetwater County Farm Bureau prefers Alternative C. Alternative B is the least favorable as "management of the Green River, Sweetwater River, Big Sandy River, and the Little Sandy River with priority given to other resource values" could potentially restrict and/or eliminate the designated AUMs of the area. | See Chapter 2.2.6 MA 6510 for a full range of alternatives analyzed related to the management of the Green, Sweetwater, Big Sandy, Little Sandy Rivers, and the Bitter Creek. Impacts to Livestock Grazing can be found in Chapter 4. |
| 830 - Land Resources–Recreation (6500-6557) | #13353-9 | The BLM preferred Alternative B fails to adequately consider the impact abandoning Special Recreation Management Areas as it relates to fuel treatments and wild?re suppression near SRMAs. Closing or limiting areas to recreational roads, trails, and routes use would decrease accessibility during emergency response, and prevent these features from being used as ?re breaks to inhibit or stop the progress of wild?res in the planning area. E?orts to restrict ?re?ghting equipment will delay emergency response, impede ?re suppression e?orts, and threaten life safety, property conservation, and resource values. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Specific actions proposed for the four alternatives relating to Wildland Fire can be found in actions 3000-3013. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13409-1 | Alternative B would greatly affect RECREATION routes in southwestern Wyoming. Under Alternative B, "2,352 miles of routes would be managed as open to vehicle use and 67 miles of routes would be limited to non-motorized or non-mechanized use." Most significantly, "4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed from the transportation network and allowed to return to natural conditions." The draft Rock Springs RMP does not define "natural conditions," so it is unclear how long these roads could be removed from the transportation network. I am deeply concerned that these route closures would reduce public access to public lands. Under Alternative B, only 13.9% of existing roads and trails would remain open to vehicle use. The draft Rock Springs RMP also does not provide a map to show the specific routes that would be closed. The effect of these route closures may be even more significant and detrimental depending on where these closures actually are. Without a map, I cannot accurately articulate the overall impact the route closures would have on recreation. | See updates to Chapter 4.17 of the DEIS removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13542-64 | Literature Cited. Pergams, O.R.W., C. Zaradi, A. Patricia. 2006. LC-15 The source used is outdated and irrelevant. From the National Park Service's own website, the number of visitors has increased over the last several years: https://www.nps.gov/subjects/socialscience/annual-visitation-highlights.htm | See updated literature cited section for removal of erroneous citation. |
| 830 - Land Resources–Recreation (6500-6557) | #13542-65 | Literature Cited. Roggenbuck J.W., A.E. Watson. 1994. LC-15 Using recreation statistics from 1991, over 30 years old, does not reflect current recreation uses in the RMP area. This article goes into acreage and use of the land and states that there is a decline in using the land for recreational purposes. More recent studies, including the University of Wyoming's 2023 Wyoming Outdoor Recreation Report, suggests that more people are visiting and recreating in Wyoming's open spaces than ever before. This recreation contributes to Wyoming's economy. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See updated literature cited section for removal of erroneous citation. |
| 830 - Land Resources–Recreation (6500-6557) | #13542-67 | Literature Cited. Wyoming Travel Industry. 2007. LC-15 This report is 17 years old. There is a 2022 report available on the Wyoming Travel Industry's website. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See updated literature cited section for removal of erroneous citation. |
| 830 - Land Resources–Recreation (6500-6557) | #13542-70 | Literature Cited. Sonoran Institute, Theodore Roosevelt Conservation Partnership. LC-16 This report published in 2003 uses hunting and recreation statistics from 2001. The 22-year-old statistics conflict current data published regarding recreation and hunting in Wyoming, including harvest reports published annually by the Wyoming Game and Fish Department and University of Wyoming's 2023 Wyoming Outdoor Recreation Report on recreation statistics. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See updated literature cited section for removal of erroneous citation. |
| 830 - Land Resources–Recreation (6500-6557) | #13651-52 | The BLM preference for and encouragement of dispersed and casual recreational use of the Field Office jurisdiction creates more widespread impacts which are harder to monitor and mitigate. It presumes visitors and recreationists will be good stewards who will try to minimize their impacts and who will leave no trace. This assumption requires monitoring and mitigation measures if not met. A passive assumption that off-highway vehicle users and other visitors will do the right thing (pg. 4-184) is not good management when there is no verification. | See Chapter 4.17.1 for a list of assumptions made in the Recreation Impact Analysis. |
| 830 - Land Resources– | #13651-53 | Page 4-185: Today we cannot presume that most people know how to visit recreational (including cultural places)in ways that minimize their impacts. For dispersed and casual recreation to work the BLM must have programs to engage the public in good stewardship practices. BLM should ensure these programs include an | See Chapter 4.17.1 for a list of assumptions made in the Recreation Impact Analysis. Public engagement and site specific monitoring plans are outside the scope of this document. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Recreation (6500-6557) | | active educational component that goes beyond brochures and signage. The public needs to have the skills and an interest to ensure that locations they visit are not degraded and that they remain available for future visitor enjoyment.BLM needs to implement a program to monitor cumulative effects that arise from less formal recreation as well as from more focused site visitation. It should establish a program to regularly monitor condition of developed recreation sites (to include campgrounds, ACECs, SRMAs, etc.) so that it can assess and report on changes in condition. If resource degradation does occur, it should have plans in place to mitigate damage and prevent continuation of problems. | |
| 830 - Land Resources–Recreation (6500-6557) | #13651-54 | 4.17 Overall: The Alternatives differ in their use of ACECs, WSAs, SRMAs, Trail Protection Corridors. Each alternative proposes different special areas (ACECs, WSAs, SRMAs, Trail Management corridors), but it is unclear why preference is given to specific ones under any given alternative. The BLM should justify which special use areas are proposed under each alternative and it should explain how special use area definitions and boundaries vary between alternatives if they do. It is not clear why specific designations are being put forward under each Alternative. For example Alternative B, which proposes to withdraw and conserve the most acreage, does not include Trail Protection Corridors (proposed in Alternative D). | See Chapter 2.2.5 of the DEIS for an overview of the goals of each alternative presented. Additionally, refer to Chapter 4 for impacts from each of the four alternatives analyzed; and to Section 1.4 for the Planning Criteria for the RMP. |
| 830 - Land Resources–Recreation (6500-6557) | #13651-59 | Why are some campgrounds within right of way avoidance areas and others in areas which are open for development? This conflict needs correction as it will almost certainly result in conflicts in resource use and management. | See DEIS Glossary for definitions of 'Right-of-Way Grant'. Right of Ways are not required for casual use (also defined in the Glossary). |
| 830 - Land Resources–Recreation (6500-6557) | #13651-60 | 4.17 Alternatives: While the impacts may be the same for all alternatives (because the same sorts of improvements, development and uses are proposed), the ability for the BLM to manage, preserve and conserve recreational resources is not the same across the alternatives and BLM should stress this in the EIS. Only Alternative B provides BLM with the tools to sustainably manage resources, protect them and encourage their conservation. All the other alternatives are unbalanced with a bias in favor of resource users and developers, and their interests. | See Chapter 2.2.6 Management Actions 6500-6557 for a full list of analyzed recreational alternatives. Impacts from all four alternatives are presented in Chapter 4. |
| 830 - Land Resources–Recreation (6500-6557) | #13721-1 | A summary of Preferred Alternative B states that, "There would be fewer designated recreation sites and developed recreation areas, which could reduce the availability of facilities for use by the public. The management could provide opportunities for a more primitive recreation experience in many locations within the planning area. In addition, Alternative B would manage larger areas of viewsheds, and fewer acres of OHV routes." Our interpretation of this is that providing more "primitive" recreation experiences means favoring 'quiet-use' recreation activities at the expense of opportunities for motorized recreation access. This planning area is a very vast open space -it's questionable as to exactly how visitors would be able to access these 'increased opportunities for more primitive recreation' without a suitable range of motorized access routes on roads and trails. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13721-2 | Recreation opportunities across the Rock Springs Field Office (RSFO) are extremely important to Wyoming residents as well as our numerous out-of-state visitors. The proposal for there to be "fewer designated recreation sites and developed recreation areas" and to "reduce the availability of facilities" for the public is alarming and completely unacceptable. Recreation is a growing activity and it needs, deserves, and requires more rather than less emphasis from the BLM. Truly, it is astounding that the RSFO released this plan which proposes grossly negative implications for recreation at nearly the same time BLM nationally released its highly touted Blueprint for 21st Century Outdoor Recreation. The Blueprint advertises supposed major shifts as to how BLM prioritizes and supports outdoor recreation. It states that BLM is committed to working closely with communities and partners to respond to varying recreation opportunities and pressures and to seeking continuous program improvements. It notes a supposed shift from reactive recreation management to a proactive approach, enabling planning to consider sustainable resource management needs. In the draft RMP, the RSFO's interpretation of 'sustainable resource management' only includes reductions and closures, with emphasis on lessening motorized recreation opportunities and support. That is not acceptable. The Blueprint also includes four strategic pillars: 1) Grow and diversify resources for BLM Recreation, 2) Prioritize and embrace partnerships, 3) Expand outreach and establish a culture of inclusion, and 4) Meet the demand, protect resources and improve access. Clearly, the Draft EIS/RMP for the RSFO is quite out of sync with this newly announced BLM recreation initiative - under the preferred Alternative B it does not meet demands, it obliterates public access for all, and over-protects resources by improperly prescribing the unit using a 100% conservation-oriented agenda. | See Chapter 2.2.6 Management Actions 6500-6557 for a full list of analyzed recreational alternatives. Also see glossary for a definition of the 'Recreation Opportunity Spectrum' that BLM considers. |
| 830 - Land Resources–Recreation (6500-6557) | #13721-7 | We also request that additional open areas for OHV riding in the Killpecker Sand Dunes area be seriously considered for the final RMP preferred action alternative. OHV Rallies, Cross-Country Races and Outings OHV clubs and organizations from communities within the planning area hold various OHV endurance, race, and challenge course events, including four annual events and an average of three one-time events each year. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Killpecker Sand Dunes Open Play Area is retained under all 4 alternatives. |
| 830 - Land Resources–Recreation (6500-6557) | #13721-8 | Since this SRMA is proposed to be eliminated, the future management status of the Continental Divide Snowmobile Trail is unclear in the Draft RMP/EIS - it needs to be clarified how its status and management would change under Alternatives B, C and D. Our position is that this important trail segment must be allowed to operate as it has historically. | See DEIS Chapter 3.17.1 Recreation Use for information about SRMA designations. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13721-10 | This section of the Draft RMP/EIS is very poorly done and quite inadequate since it used recreation visits from 2011 through 2015. This is an extremely small, very outdated sampling that does not reflect current recreation trends. Table N-5 on page N-15 of Volume 2 shows that Recreation visits in 2015 were 847,318 - nearly double what they were in the first three years of this 5-year period and 64% greater than the fourth year which was used for these recreation usage calculations. This particular outdated sampling range results in an artificially low 5-year average. The document also improperly minimizes the 2015 increase by stating "it is unknown if this trend will continue." Reality is that recreation visits to public lands have continued to grow since 2015 - and exploded to new highs during and following the COVID-19 pandemic. Additionally, it states on page N-16 of Volume 2 that the RSFO recreation specialist who estimated recreation visitation patterns in the area deemed FY 2013 visitation data as "sufficiently representative for the overall analysis." This is wrong. Data that is a decade old does not reflect 2020-era recreation visitation patterns on these or any public lands in Wyoming. This entire recreation usage and impact analysis must be thrown out and be redone. Page N-17 of Volume 2 specifically notes that the economic impact of OHV riding has received considerable attention. Yet, it summarily dismisses relevant OHV studies that have been conducted by the University of Wyoming (Foulke et al. 2006 and Nagler et al. 2013). It also fails to consider the newer 2021 Wyoming Comprehensive Off-Road Vehicle (ORV) Recreation Report (Bastian et al. 2022). Instead of using Wyoming data from these reports, the BLM wrongly used National Forest NVUM modeling with the Ashley National Forest, which is an inappropriate proxy. | The socioeconomic report is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 830 - Land Resources–Recreation (6500-6557) | #13721-11 | The 2021 Wyoming ORV Report shows that OHV riding generates over $365 million per year in overall economic activity across Wyoming. Use data is provided for both visitor days and visitor trips. In particular, the 'Southwestern Wyoming' area - of which the RSFO is a predominate portion of - accounted for 10.6% of all Wyoming Resident trips and 7.6% of all Resident riding days. Nonresident trips to this area were 4.7% of the statewide total and 4.1% of Nonresident riding days in Wyoming. Residents spent an average of $55.57 per day and averaged 37.8 riding days per year - with total Resident ORV riding days totaling 2.2 million. Comparatively, Nonresidents spent an average of $87.27 per day while riding an average of 14.3 days per year in Wyoming - with Nonresidents riding days totaling 455,000 in the state. Consequently, there were approximately 167,200 Resident riding days and 18,655 Nonresident riding days within this particular area of Wyoming - totaling 185,855 recreation use days just from OHV recreation. ORV visitor spending from 15.3% of total statewide ORV trips in this area equates to over $55.8 million annually. | See DEI Volume II Appendix N.2.5 for summary of the social and economic impact analysis methods for recreation resources. |
| 830 - Land Resources–Recreation (6500-6557) | #13730-4 | "Limiting the cutting trees, and firewood for camping to designated areas" and that firewood would be provided. By WHO? Where? When? Ive always camped where I wanted and burned dead fall why is there a problem with that?! | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Action 6512 for a range of alternative analyzed related to recreational firewood cutting. |
| 830 - Land Resources–Recreation (6500-6557) | #13759-3 | Recreationists tend to show acceptance of site hardening strategies (Cahill, Marion, & Lawson, 2008), as it helps increase longevity of the site and can improve the experience of the activity. Recreation of all kinds is going to occur on the landscape, and providing regulations on permitted uses and spatial scale of recreation would give the RSFO more control on environmental impacts and user conflicts than if there was less structured management. Personally, I would advocate for selective special recreation management within the designated areas, as well as preserving areas with wilderness characteristics consistent with alternative B. I want to suggest to RSFO that integrating SRMA's into alternative B will be helpful in concentrating recreation ecology impacts to smaller areas and thus protecting wildlife. | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13776-1 | To be useful, this plan must be based on current visitation numbers with the best possible growth trends being used to plan for future impacts. The numbers in Table 4-11 (Volume 1, pages 4-233 and 4-234) assume a constant annual activity level, and the data used to develop this draft of the Rock Springs RMP appears to reflect a percentage increase in estimated visitation rather than an accurately recorded visitation statistic. Furthermore, the report appears to be based on data from 2014, before the COVID-19 pandemic which spurred the latest increase in visitation. Statewide, recreation visitation has increased significantly and continues to trend upward. We disagree, as is suggested on page ES-1, that visitation is a "minor condition" or that the "baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives." | The socioeconomic report is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 830 - Land Resources–Recreation (6500-6557) | #13776-2 | * Limiting Recreation Management Areas will not protect resources and could create a situation where more resources are damaged through dispersed use. The BLM's preferred Alternative B identifies zero acres of special recreation management areas; the other alternatives have between 135,000 acres and 592,000 acres. Without appropriate management designations like SRMAs, there are limited tools for land managers to protect resources from degradation due to increased visitation. | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13776-3 | Failure to designate any SRMAs could increase user conflicts by placing recreators in the same places on the landscape, diluting the potential enjoyment for all recreators. For example, in the Red Desert, a camper may desire to camp at the only spring for 20 miles around, but that is also the only water for sage grouse, mule deer, or other species that rely on that area. With proper planning this conflict is easily avoidable; without these designations our ability to influence public behavior is diminished. | See DEIS Chapter 3.17.1 for information about SRMA designations. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13776-8 | Similarly, we have concerns that removing the SRMA designation for the Oregon and Mormon Pioneer Trails area could ultimately reduce resource protection. A plan that manages for a high number of visitors to the area and mitigates damage may better protect resources. The details of use in this area, including the visitation numbers, are not made clear in Management Actions 6537-6539. | See DEIS Chapter 3.17.1 for information about SRMA designations. Chapter 2.2.6 Land Resources - Recreation Management Actions 6537-6539 for a full range of alternative analyzed for the management of the Oregon and Mormon Pioneer National Historic Trails Special Recreation Management Area. See management actions 7000-7022 for more management actions related to the protection of the trails. |
| 830 - Land Resources–Recreation (6500-6557) | #13784-57 | "Management of these recreation sites would continue to exclude forage from livestock use because these areas would be fenced. Because of the relatively small size of these sites, the impacts to livestock grazing would be minor." (p. 4-176) Comment: This section does not provide the number of acres livestock grazing is fenced out from utilizing forage. Additionally, the section does not tie back to the 970 acres mentioned earlier, leaving WDA unsure if these acres are above or in addition to the previous statement. Finally, "would be minor" assumes this will occur in the future, but Alternative A is the current management and would provide the existing impacts based on the management already occurring from when the plan was last revised. | See Table 1. Comparison of Land Use Restrictions and Allocations for number of acres unavailable to livestock grazing under each alternative. |
| 830 - Land Resources–Recreation (6500-6557) | #13801-1 | MA 6543 Alt B will no longer be the Wind River Front SRMA, this designation works well and should remain as is. Many different types of recreational opportunities abound in this area, hiking, hunting, fishing, horseback riding, snow mobile riding and atv riding, Just to name a few of the activities that public enjoys. | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Actions 6543-6557 for a full range of alternatives analyzed for the Wind River Front Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13856-1 | While we appreciate the attention paid to and the retention of the SRMA for the CDT, such designation may not be the top priority if other management actions occur. The Agency's Preferred Alternative B would provide for the most ideal CDT experience by optimizing conservation efforts in the area, particularly for the CDT's scenic integrity. The attention that Alternative B gives to ACEC's is a top priority for CDTC, as the management criteria for an ACEC can help to retain the character of the CDT through conservation efforts that support wildlife and plant life habitat, biodiversity, migration corridors, and a more remote, primitive experience on the trail. Additionally, the actions identified in Alternative B and partially Alternative D would provide a generous buffer from development such as extractive activities, renewable energies, and other actions that could potentially degrade the environment surrounding the CDT and, consequently, the CDT Experience. | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Actions 6525-6528 for a full list of alternatives analyzed regarding the Continental Divide National Scenic Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13878-5 | The agency inappropriately constrains itself by placing lands in either "conservation" or "recreational" - focused boxes of management for many of its lands. Special places, such as the Northern Red Desert (which can be considered the Jack Morrow Hills area and South Pass, east of HWY 28), can be managed for several uses, such as conservation, wildness, or wildlife habitat as well as recreation, without harming those former values. In fact, a failure to do so can actually result in more harm to the resource. Let's take for example the Jack Morrow Hills area. Under Alternative B, the ACECs making up this area are predominantly designed to only focus on conservation values, not recreational uses. The BLM (per info shared at the Governor's RMP Task Force) says its options are only to overtly encourage lots of recreational use as a main objective, or not at all. There has to be some middle ground. Outdoor recreation is booming in the West and especially in Wyoming. The boom will come to BLM lands, and it's better to manage for it, than just ignore it. Even in the conservation- focused lands in the JMH, there are lots of signs of degradation from outdoor recreational use. There are few shaded places for camping and resting for people, and these get used a lot. I've seen a porta-potty thrown into a stream on the north side of Steamboat Mt. where people camp a lot. There's been several homemade potties made at Chicken Springs by Bush Rim, perched right over the spring there in the trees. | See Chapter 3.17.1 for a description of Special Recreation Management Areas and Section 3.22 for Special Designations. See Chapter 2.2.6 Management Actions 6500-6557 for a full list of analyzed recreational alternatives. |
| 830 - Land Resources–Recreation (6500-6557) | #13878-7 | The Steamboat Mt. camp area and Chicken Springs are examples of where people choose to camp in shaded areas and near water sources/springs. The BLM should recognize that they've not going to change decades of behavior at these places, so should proactively take some actions that that will protect the resource values as much as possible, while accommodating human use. MA 6513 Alternative B tries to address these needs near water sources and I support this action, as much is as feasible: Manage recreation site development projects and access routes along streams and reservoirs to maintain or improve wetland habitat conditions. I strongly urge the BLM to form partnerships with invested stakeholders and users that know these areas, and develop place-based recreational use plans. These plans will contribute towards the protection of special wildlife and conservation values as well. The draft RMP is insufficient with this management objective. | See Chapter 2.2.6 Management Actions 6500- 6520 for actions that may impact recreation in the Steamboat Mountain Area. Partnerships and site specific implementation actions are outside of the scope of the DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13880-21 | Finally, Alternative B removes existing Special Recreation Management Areas. BLM has argued that this will not impact recreation in any meaningful way, but officials from Wyoming Parks and Recreation have indicated that these Management Areas are a critical tool for managing recreation on the landscape. Specifically, these Management Areas help the state guide and disperse recreational activity to protect sensitive sites and wildlife while limiting congestion. In other words, Alternative B could actually result in adverse conservation impacts across large swaths of the RSFO under the BLM's stated scenario that Management Areas will be removed but recreation will not be limited. This seems fundamentally at odds with the "conservation" theme of Alternative B, raising questions about whether the BLM intends to pursue subsequent closures to recreation after removing the Management Areas. Clarification and further study on these points are essential, given that the impacts could be as large as $40 million dollars annually in an extreme scenario where recreation is severely curtailed. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |

|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13899-101 | Support for retaining select Special Recreation Management Areas (SRMAs) The agency has managed several areas as SRMAs since 1997 and should continue to do so - specifically, the Killpecker Sand Dunes, the Green River corridor area, and Continental Divide National Scenic Trail. These are locations that have historically been managed with an emphasis on enhancing the recreation experience, and it is reasonable to continue doing so. The proposal in Alternative B to not retain these SRMAs is at odds with community use and would not change visitation, but it would change the visitor's experience negatively. If SRMAs are retained, we encourage BLM to ensure these units promote responsible recreation by developing, and fully implementing, site-specific recreation plans to prevent and address conflicts with other users and resources. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13899-102 | C. Consider adding the Great Divide Mountain Bike Route as a SRMA The BLM failed to analyze the Great Divide Mountain Bike Route261 as a SRMA, but this popular adventure cycling experience should be considered for management that emphasizes recreational values. The route traverses the western United States from Canada to Mexico and crosses the Rock Springs Field Office in the Big Sandy Foothills and Northern Red Desert. It is the longest route off-pavement in the nation and draws in cyclists and adventurers from around the world. The section of the route in the planning area is described as "character building" and "extremely picturesque,"262 highlighting the scenery and remoteness of the Big Sandy Foothills and Northern Red Desert. The management actions we outlined earlier in these comments would serve to maintain the experience of these wild lands for adventure cyclists, however, the agency should consider analyzing the benefits of including recreation-focused management (including educational resources and amenities like water wells) for these users. | The Great Divide Mountain Bike Route within the Rock Springs Field Office is located entirely on County Roads and is not under BLM jurisdiction. The Lander Road Back Country Byway is discussed in Management Action 6304. |
| 830 - Land Resources–Recreation (6500-6557) | #13904-7 | MA 6510 There should be additional language that states Recreation area management plans would be developed, where necessary to mitigate conflicts with other resource values and uses. | Management Action 6510 analyzes a range of alternatives regarding recreational planning for these waterways. |
| 830 - Land Resources–Recreation (6500-6557) | #13904-8 | MA 6522 Alt B does away with the Continental Divide Snowmobile Trail. The Continental Divide Snowmobile trail is designated as a special recreation management area. This designation needs to be retained. | See Chapter 3.17.1 for a description of SRMAs. Management Action 6522-6524 analyzes a range of alternatives regarding the Continental Divide Snowmobile Trail Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13904-9 | MA 6543 Alt B gets rid of the Wind River Front SRMA. This should be retained. Manage the Wind River Front SRMA for motorized and non-motorized recreationists to engage in hunting, hiking, horseback riding, wildlife viewing, sightseeing, fishing, and driving for pleasure in the back, middle, and front country settings. Manage the Continental Divide Snowmobile Trail for over-the-snow vehicle use. Various means of recreation are available in this area and need to be available to all not just the able bodied walkers. | Management Action 6543 analyzes a range of alternatives regarding the retention of the Wind River Front Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13916-7 | MA 6510 There should be additional language that states Recreation area management plans would be developed, where necessary to mitigate conflicts with other resource values and uses. | Management Action 6510 analyzes a range of alternatives regarding recreational planning for these waterways. |
| 830 - Land Resources–Recreation (6500-6557) | #13916-8 | MA 6543 Alt B gets rid of the Wind River Front SRMA. This should be retained. Manage the Wind River Front SRMA for motorized and non-motorized recreationists to engage in hunting, hiking, horseback riding, wildlife viewing, sightseeing, fishing, and driving for pleasure in the back, middle, and front country settings. Manage the Continental Divide Snowmobile Trail for over-the-snow vehicle use. Various means of recreation are available in this area and need to be available to all not just the able bodied walkers. | Management Action 6543 analyzes a range of alternatives regarding the retention of the Wind River Front Special Recreation Management Area. |
| 830 - Land Resources–Recreation (6500-6557) | #13932-1 | Wildlife killing contests are allowed to proceed on Bureau of Land Management lands without any special use permits or oversight from the Wyoming Game and Fish Department nor Federal Agencies. Animals killed in these events are categorized as predators in the state of Wyoming and are under the management of the Department of Agriculture and include coyotes, foxes, skunks, raccoons, jackrabbits, prairie dogs, and gray wolves. These contests are neither effective predator control to protect livestock nor do they provide any ecological benefits. Wildlife Killing Contests would fall under The Land Resources (LR) - Recreation (6500-6557) MA#6500 section for, "Allow[ing] commercial competitive events and organized group activities, on a case-by-case basis, where compatible with natural resource management objectives." Wildlife killing contests are not compatible with natural resource management objectives on the BLM. Nor do they meet MA#6502 requirements for the "health and safety of visitors." | Competitive hunting contests are subject to 43 CFR 2932 regulations for special recreation permits. The DEIS analyzes a range of alternative for SRPs in Management action 6503. |
| 830 - Land Resources–Recreation (6500-6557) | #13932-2 | In the Chapter 2, Section 21(b) of the Wyoming Game and Fish Department General Hunting Regulations (attached), there is a provision for, "Any person hunting predatory animals on public land with an artificial light or lighting device, thermal or infrared imaging or other light imaging device shall display an activated infrared (IR) strobe beacon on their person visible from at least one hundred (100) yards in every direction. If the predator hunter is enclosed inside a vehicle, an activated IR strobe beacon shall be displayed on the exterior roof of the vehicle so as to be visible for at least one hundred (100) yards around the vehicle." However, there is no requirement for other people recreating on public lands (including the BLM) to be wearing an infrared beacon or | Safe operation of hunting equipment is the responsibility of the user and is outside of the scope of this DEIS. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | any other beacon that has a light source. This is a public safety issue that is an easy fix for the BLM to prohibit all night hunting in the Rock Springs Field Office RMP. | |
| 830 - Land Resources–Recreation (6500-6557) | #13932-3 | Alternative B of MA#6503 allows for a case-by-case basis of reviewing special use permits for recreation. While no permits have been issued for wildlife killing contests, any future permits that are applied for, should be denied by the BLM for not adhering to the goals and objectives of the BLM Resource Management Plan. Namely: BR-16: Manage for the biological integrity of terrestrial and aquatic ecosystems to maintain or enhance fish and wildlife habitat BR-17: Manage for the biological integrity and habitat function of terrestrial and aquatic ecosystems to sustain, enhance, and/or optimize distribution and abundance of all native, desirable non-native, and Special Status Species consistent with habitat capability. | Competitive hunting contests are subject to 43 CFR 2932 regulations for special recreation permits. The DEIS analyzes a range of alternative for SRPs in Management action 6503. |
| 830 - Land Resources–Recreation (6500-6557) | #13955-1 | According to the most recent report from the 2022 Bureau of Economic Analysis Report on Outdoor Recreation, "Wyoming outdoor recreation employment increased from 15,285 to 16,202 jobs, accounting for 5.6% of the state's total employment." Wyoming's outdoor recreation economy increased to $2.02 billion according to the U.S. Department of Commerce's Bureau of Economic Analysis. According to the Bureau of Economic Analysis, in 2022 Wyoming's top three industries are oil and gas at $8.99 billion, $2.5 billion for travel and tourism, $1.12 billion for agriculture, and $5.7 Billion in labor income for oil and gas1 The data also shows that $1.712 billion in Wyoming is generated from agriculture and a total of 58,780 jobs for oil and gas. Oil and gas is also the leading industry in Wyoming producing $2.72 billion. The ACEC designations and Alternatives B and D would greatly hinder the economic opportunities throughout the state. Recreation alone is nationally a trillion dollar a year industry and any alternative other than Alternative C would deprive Wyoming from capitalizing on this growing industry. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 830 - Land Resources–Recreation (6500-6557) | #13955-2 | According to the most recent report from the 2022 Bureau of Economic Analysis Report on Outdoor Recreation, "Wyoming outdoor recreation employment increased from 15,285 to 16,202 jobs, accounting for 5.6% of the state's total employment." Wyoming's outdoor recreation economy increased to $2.02 billion according to the U.S. Department of Commerce's Bureau of Economic Analysis. According to the Bureau of Economic Analysis, in 2022 Wyoming's top three industries are oil and gas at $8.99 billion, $2.5 billion for travel and tourism, $1.12 billion for agriculture, and $5.7 Billion in labor income for oil and gas1 The data also shows that $1.712 billion in Wyoming is generated from agriculture and a total of 58,780 jobs for oil and gas. Oil and gas is also the leading industry in Wyoming producing $2.72 billion. The ACEC designations and Alternatives B and D would greatly hinder the economic opportunities throughout the state. Recreation alone is nationally a trillion dollar a year industry and any alternative other than Alternative C would deprive Wyoming from capitalizing on this growing industry. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 830 - Land Resources–Recreation (6500-6557) | #13955-10 | We have already seen an increase in closing dispersed camping across public lands across the nation. The desire and need for outdoor recreation has grown tremendously the past few years with no end in sight. The BLM should recognize the value that connecting with nature through dispersed camping and recreation brings. Restricting this form of recreation and limiting areas of use will only increase impact. We recommend adopting dispersed camping standards within this plan to require public input for any dispersed camping closures. Allowing dispersed camping should also be seen as a management tool for offsetting the socioeconomic inequities that are taking root as ultra-wealthy residents displace lower- and middle-income individuals and families from accessing monument areas. Many areas that are proposed for camping restrictions are used by visitors, locals and businesses such as guides and ranchers. Youth and educational groups also benefit from dispersed camping throughout the entire monument. Prohibiting wood gathering would negatively impact dispersed camping opportunities. There is a culture of camping and survival that needs to be protected through this management plan. | See Chapter 2.2.6 section Land Resources - Recreation, Management Actions 6500-6557 for a range of alternatives analyzed for recreational resources, including dispersed camping. |
| 830 - Land Resources–Recreation (6500-6557) | #13955-11 | Aircraft should be able to continue accessing Rock Springs as they have. It should also be noted that BLM doesn't have jurisdiction over airspace. Pilots who volunteer in emergency response situations often do training and use these airstrips. BLM should not be closing access to a user group that volunteers much of their time and resources. It is especially nonsensical to prohibit drones from being flown from roads and motorized trails, which already allow other forms of motorized devices. A good shorthand for understanding the current rules for flying drones on Bureau of Land Management land is that if you can drive a vehicle there, you can fly a drone there. This makes inherent sense because drones are a kind of motorized device. Under FAA regulations, all drone operations are governed by Part 107 of the Federal Aviation Regulations unless they qualify for the "Exception for limited recreational operations of unmanned aircraft" under 49 USC 44809. This requires, among other things, that "The aircraft is flown strictly for recreational purposes." The FAA explains on its website that, "The exception for recreational flyers only applies to flights that are purely for fun or personal enjoyment." | The Bureau of Land Management does not have jurisdiction over the Rock Springs Municipal Airport or the City of Green River's Airstrip. Airspace concerns are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-1 | To be useful, this plan must be based on current visitation numbers with the best possible growth trends being used to plan for future impacts. The numbers in Table 4-11 (Volume I, pages 4-233 and 4-234) assume a constant annual activity level, and the data used to develop this draft of the Rock Springs RMP appears to reflect a percentage increase in estimated visitation rather than an accurately recorded visitation statistic. Furthermore, the report appears to be based on data from 2014, before the COVID-19 pandemic which spurred the latest increase in visitation. Statewide, recreation visitation has increased significantly and continues to trend upward. We disagree, as is suggested on page ES- I, that visitation is a "minor condition" or that the "baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives." | The socioeconomic report is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 830 - Land Resources–Recreation (6500-6557) | #13974-2 | Limiting Recreation Management Areas will not protect resources and could create a situation where more resources are damaged through dispersed use. The BLM's preferred Alternative B identifies zero acres of special recreation management areas; the other alternatives have between 135,000 acres and 592,000 acres. Without appropriate management designations like SRMAs, there are limited tools for land managers to protect resources from degradation due to increased visitation. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-3 | Failure to designate any SRMAs could increase user conflicts by placing recreators in the same places on the landscape, diluting the potential enjoyment for all recreators. For example, in the Red Desert, a camper may desire to camp at the only spring for 20 miles around, but that is also the only water for sage grouse, mule deer, or other species that rely on that area. With proper planning this conflict is easily avoidable; without these designations our ability to influence public behavior is diminished. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-4 | Pushing visitors to dispersed use poses challenges for protecting natural and cultural resources. Recreation use plans at designated SRMAs and for dispersed camping areas could help limit resource degradation, mitigate effects of increased visitation, and otherwise provide for natural and cultural resource protection. Alternative A calls for such plans in several Management Actions (6507-6510, at a minimum) and is the preferable alternative for this topic. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-5 | Emphasizing conservation and pristine experiences may limit the type of visitor able to enjoy public lands. Several places in Volume I mention the value of"pristine" experiences, with Alternative B's conservation focus offering the most of those opportunities. However, the ability to access such pristine areas may be limited by socioeconomic factors and physical limitations. Individuals with different abilities may not be able to access resources because of a lack of formal development or ADA accessibility. It is therefore important to consider roads and other access routes to key areas in this plan which provide a diverse representation of natural, cultural, and historically significant areas within the Field Office, ideally with varying levels of solitude and disturbance. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-7 | The quality of trail routes is of high-importance and single-track trails are desirable and sustainable. Alternative 8 identifies 67 miles of non-motorized routes, but does not seem to select for quality, only location. There is concern that this will limit the number of desirable useable miles. Also, two-track roads are useful for conveying visitors with multiple transportation modes and are often necessary for connecting certain areas. However, they are not often ideal routes for non-motorized recreation groups, especially. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-8 | The 39,290-acre Killpecker Sand Dunes SRMA is highly used. As a destination with many opportunities, the SRMA reduces the recreation impact on other sites, roads, and routes. Alternative C is an appropriate management for this area as outlined in Management Actions 6531-6536, with the area being properly monitored for resource degradation and misuse. | See DEIS Chapter 3.17.1 for a description of SRMAs. Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-9 | Similarly, we have concerns that removing the SRMA designation for the Oregon and Mormon Pioneer Trails area could ultimately reduce resource protection. A plan that manages for a high number of visitors to the area and mitigates damage may better protect resources. The details of use in this area, including the visitation numbers, are not made clear in Management Actions 6537-6539. | Chapter 4.17 of the DEIS analyzes recreational outcomes based on potential retention of different Special Recreation Management Areas. Management Actions 6537-6539 analyze a range of alternative regarding recreational aspects of the Oregon and Mormon Pioneer Trails. |
| 830 - Land Resources–Recreation (6500-6557) | #13974-10 | Monitoring for resource degradation is essential for ensuring users understand restrictions and that recreation management plans are being enforced. Law enforcement Gust one aspect of such monitoring) is only mentioned in this plan on Management Actions 5111 and 5309 with regard to specific and sensitive resources; it is needed throughout the Field Office. | See the Federal Land Policy Management Act for BLM's management responsibilities for public lands, including inventory and monitoring. |
| 830 - Land Resources–Recreation (6500-6557) | #14039-1 | In April 2022 the Department of Interior released it's Equity Action Plan which addresses the lack of access on public lands. In order to advance equity of access on public land for those with mobility impairment disabilities, it is important to recognize that discrimination towards Americans with disabilities within federal land management agencies is deeply rooted and hidden in plain sight. Recreation, primarily motorized recreation, has taken a backseat to conservation and protection. Motorized recreation is often the only way those with mobility impairment disabilities are able to access public lands. BLM should ensure that the plan complies with the Department of Interior's Equity Action Plan, which recognizes that restrictions on motorized access to public land create barriers of access to those with disabilities. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #47-3 | Similarly, Alternative B may not be sufficient in limiting future OHV uses that burn fossil fuels. I think that there should be more areas closed to future OHV use, especially in habitats for sensitive species. | OHV area designations have been analyzed in the DRMP and can be seen in Maps 2-25, 2-26, 2-27, and 2-28. Also see Management Actions 660-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #242-1 | “Within the area designated as limited to designated roads and trails, 2,352 miles of routes would be managed as open to vehicle use. … About 67 miles of routes would be limited to non-motorized or non-mechanized use, 4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed from the transportation network and returned to natural conditions. These routes would receive lower use or no use at all.” | See updates to Chapter 4.17 removing erroneous text on route designations. |

|---|---|---|---|
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #247-1 | In 2011 I suffered a spinal cord injury & am considered disabled. My once capable body that used to carry me over mountains is only a fraction of what it was. I am however able to walk small distances & drive. With the ability to drive, I've taken up the hobby of UTVing. I love that I can drive my buggy around the county with almost limitless access (within reason). | OHV area designations have been analyzed in the DRMP and can be seen in Maps 2-25, 2-26, 2-27, and 2-28. Also see Management Actions 660-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #258-4 | Removing 10,600 mile of roads with a stroke of the pen and closing 4,500 miles the same way is probably illegal according to RS 2477 especially those roads that can be proven to be there before 1976. | See updates to Chapter 4.17 removing erroneous text on route designations. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #302-2 | We also have great concern as to how Alternative B will impact motorized recreation and hunting access in the in the Rock Springs management area. You have now acknowledged that the draft land use plan contains an error as to how many miles of roads will be closed under the proposed plan (the document currently states 4,505 miles of existing roadway will be closed). People from Wyoming and throughout the country have enjoyed motorized recreation in the Rock Springs resource management area for generations. With motorized travel restrictions already in place on many federal lands, we would hope that BLM would realize the benefits of promoting reasonable and responsible motorized recreation. Without a clear understanding of the impact of the proposed plan on recreation, the plan should be abandoned and a new plan developed or one of the other preferred alternatives adopted. | See updates to Chapter 4.17 removing erroneous text on route designations. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #396-1 | This plan is in direct conflict with West Virginia V. EPA 597 U.S_(2022) Marbury V. Madison. SV.S. 137_(1803) Taylor Grazing Act - 1934 The Supreme Court help that WE THE PEOPLE have the Right the FREE TRAVEL These Closures are not constitutional and shall not be followed!! All Attempts to enforce closures by the BLM are unlawful and will not be accepted to be lawful requests. | See updates to Chapter 4.17 removing erroneous text on route designations. Management Actions by alternative for OHVs have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #550-9 | The BLM also proposes to severely limit recreational access for off-highway vehicles (OHVs) throughout the planning area. In the existing plan, OHVs are limited to designated roads and trails on only about one million acres, but Alternative B would limit OHVs to designated roads and trails on 3.3 million acres (91% of the 3.7 million acres of BLM surface). BLM indicates that the same number of acres would remain closed to OHVs under Alternative B as the existing RMP (255,000 acres, at ES-6), but that does not appear to be the case. In fact, BLM seems to underestimate the closed acreage given that Alternative B would newly "prohibit motor vehicle use on public lands" in some ACECs, most notably the Salt Wells portion of the Greater Red Creek ACEC (249,326 acres), which currently allows for OHV use on designated trails. | See updates to Chapter 4.17 removing erroneous text on route designations. Management Actions by alternative for OHVs have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #7447-1 | The draft RMP does not address redundant or illegal two tracks where resource damage has occurred. I wish it did. We should return this land to wildlife habitat or grazing. There are too many unneeded roads here. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-2 | These areas have a historical use and closing them is shutting the local communities off from their history. The environmental impact of the current transportation network is mitigated by the small number of current routes and open OHV areas. | Management Actions by alternative for OHVs have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-3 | The U.S. Bureau of Economic Analysis showed that in 2021 the outdoor recreation industry brought in $821 billion nationwide. By limiting access to the monument or decommissioning trails the BLM could be harming the local economy and robbing them of potential income. | An Economic Impact Comparison Analysis is available in Appendix O of Volume 2 of the DEIS. See Table O.1-1 for impact to recreational economic inputs by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-4 | The agency should adequately consider the 2008 Off-Highway Vehicle Recreation in the United States and its Regions and States report found the 18.62% of the U.S. population over 16 years of age or about 50,000,000 (current estimate) enjoy OHV recreation Cordell, H.K., C.J. Betz, G.T. Green, and B. Stephens. 2008. "Off-Highway Vehicle Recreation in the United States and its Regions and States: An update National Report from the National survey on Recreation and the Environment (NSRE)." | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-5 | The agency should adequately review recent aerial photographs of the project area and ride the area on an OHV with all types of OHVs and skill levels to determine the routes that the public currently uses and needs in the project area. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-6 | The agency should adequately consider that access to motorized trails is the most frequently cited issue by OHV recreationists. (https://bber.umt.edu/pubs/survey/MontanaOHVStudy2013.pdf). | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-7 | 22. The agency should adequately consider that the public has effectively lost the use of a significant number of trails and routes each year due to inadequate maintenance including vegetation and timber projects, erosion and flood damage, blockage from beetle kill downfall, and obliteration of the trail tread and downfall from wildfires. a. The cumulative effect of this continual loss has become significant and should be addressed and mitigated. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-8 | The agency should adequately consider the economic loss associated with the loss of motorized access and motorized recreation as demonstrated in the following report https://extension.usu.edu/apec/files/OHVeconomicimpacts.pdf | An Economic Impact Comparison Analysis is available in Appendix O of Volume 2 of the DEIS. See Table O.1-1 for impact to recreational economic inputs by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-9 | Attractive recreational trails improve the quality of life in all regions, and this has been used as an important recruiting tool by local businesses, chambers of commerce and public agencies, which target people with special skills or talents, and encourage new and expanding businesses. https://headwaterseconomics.org/wp-content/uploads/Trail_Study_4-trail-use-in-minnesota.pdf | An Economic Impact Comparison Analysis is available in Appendix O of Volume 2 of the DEIS. See Table O.1-1 for impact to recreational economic inputs by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-11 | The agency should adequately develop and consider site-specific data that demonstrates any impact of significance to the natural environment by motorized recreation and dispersed camping when compared to naturally occurring levels of impact and change. 16. The agency should adequately develop and consider site-specific data that demonstrates that closures of motorized and dispersed camping opportunities produce any significant benefit to the natural environment. 17. The agency should adequately develop and consider site-specific data that demonstrates significant measurable impacts (compared to naturally occurring) from motorized recreation and dispersed camping. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #8761-16 | The agency should adequately consider that motorized recreationists have been hammered by motorized closure after motorized closure in Wyoming and surrounding states.3 7. The agency should adequately consider that travel planning and other planning actions have closed 25 to 75% of the historic motorized routes and all cross-country opportunities since the 1960's. 8. The agency should adequately consider that the analysis should adequately disclose and evaluate the amount of motorized access and motorized recreation that has been lost to public use since the 1960's. 9. The agency should adequately consider and mitigate the significant negative cumulative effect of all motorized closures on the public. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #9354-1 | 1501 Alternative B says Allow motorized Travel only for access to State/private land. This is BLM land, people need to be able to acess it for hunting, range management. This land that is BLM is for everyone to use, even if it is for Ranching, or recreation. | MA 1501 is specific to Lands With Wilderness Characteristics under Alt B. Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #9354-6 | 4427 Alternative B-seasonally close vehicular travel in crucial and important wildlife habitats. This will restrict access to private, and state grounds as well as forest permitted ground. | See range of alternatives analyzed for Management Action 4427. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #9665-1 | RMP designates just over 2,300 miles ofroutes for vehicle use, 67 miles ofroutes for non-motorized use, while closing 4,505 miles ofroutes to all use and a further 10,000 miles of routes and other linear disturbances to be removed for any transportation purposes. It has been reported that the route closures included in the RMP were made in error but there has been no information provided by the BLM to explain what the errors were or what should be expected for route closures under the final version of the RMP. | See updates to Chapter 4.17 removing erroneous text on route designations. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #10225-3 | In polling our senior patrons we found, that for most of their lives, they have enjoyed traveling the existing backroads, two tracks and trails of Sweetwater County. This enjoyment has been passed on to their children and now their grandchildren. However, now in their later years, the only method of travel is some type of motorized vehicle. If Alternative B is out into place, anyone who is mobility challenged will no longer have the ability to enjoy the beauty of our vast desert resource, It is interesting that the ADA requires city businesses and public places to provide access to all, but none of this seems to appear in any RMP. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources– | #10494-8 | ACCESS The Rock Springs RMP has been shrouded with confusion regarding the extent to which management choices might impact both public access and access for specific purposes including livestock grazing | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Off-Highway Vehicles (6600-6620) | | management. It is now our understanding that a separate transportation plan will be developed at a future date. Nevertheless, there are significant restrictions being considered in this RMP, including the Special Designations, that, if adopted, will necessarily lead a future transportation plan toward drastic reductions in current levels of access. Frankly, our industry cannot fully assess the impacts of many of the alternatives in this RMP without concurrently being able to assess the degree to which access will influence our livestock management. | decisions are outside of the scope of this RMP and will be evaluated separately. Livestock Grazing actions can be found in Management Actions 6400-6417. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13064-6 | BLM Wyoming stated that it intends to remove the route closures and the references to the travel management plan from the draft Rock Springs RMP. However, BLM Wyoming did not specifically identify what would remain in the draft Rock Springs RMP and what would be removed. Therefore, the Committee would like to provide comment on the route closures and other negative impacts that Alternative B, as currently drafted, would have on Wyoming's recreation industry. | See updates to Chapter 4.17 removing erroneous text on route designations. Recreation effects are addressed in Chapter 4.17 for all four alternatives. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-18 | 18. Without impacting existing seasonal closures for wildlife, continued use of, and access to, all currently existing roads, trails, and open ride areas based on available mapping and satellite imagery to include OSV and the Continental Divide snowmobile trail. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-19 | 19. Include in-depth public and state agency involvement in any future planning processes that will have an impact on the existing road and trail system routes in order to create and manage a trail system. Utilize partnerships to assist with the management and maintenance expenses of all road and trail systems. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-84 | 6606 Alternative D Close, temporarily on a case-by-case basis, areas where OHV use has caused adverse effects on resources to the type(s) of vehicle causing the effects until the effects are eliminated and measures implemented to prevent recurrence. Alternative D is preferred because it includes more flexible language than Alternative B while ensuring protection of resource values including temporary and case-by-case closures of OHV use when necessary. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-85 | 6607 Alternative A Off-road vehicle use would be managed according to the OHV designations listed on Table 2-11, Appendix V and shown on Map 2- 25-Open: 12,831 acres; Closed: 225,537 acres; Limited to Designated Roads and Trails: 968,959 acres; Limited to Existing Roads and Trails: 2,398,839 acres. Alternative A is preferred because it provides off-road vehicle use on existing roads and trails, which continues to protect public lands and resources while providing opportunities for the safe use and enjoyment of OHVs. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-86 | 6608 Alternative A Areas for ORV rallies, crosscountry races, and outings may be provided on a permit basis. Alternative A is preferred because it maintains important recreational opportunities in the region. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-87 | 6610 Alternative A In areas designated as either "limited" to designated roads and trails or "limited" to existing roads and trails for off-road vehicle use, motorized vehicles must stay on designated or existing roads and trails, unless allowed an exception by the Authorized Officer. This limitation applies to all activities involving motorized vehicles. Except for areas that are closed to off-road vehicle travel, some types of off-road motor vehicle use may be allowed by the Authorized Officer provided resource damage does not occur. Alternative A is preferred because it protects public lands and resources while providing opportunities for the safe use and enjoyment of OHVs. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-88 | 6613 Alternative A Generally, over-the-snow vehicle use is subject to the prescriptions described in this section unless a site-specific analysis determines that exceptions can be allowed. Alternative A is preferred over Alternative D because the snow depth restrictions in Alternative D are too subjective to be effectively implemented (i.e. they don't discuss specific snow conditions - power or packed - just snow depth). | See updated language in Chapter 2.2.6 Management Action 6613 |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13210-89 | 6614 Alternative A The existing open area in the Killpecker Sand Dunes would remain open. Alternative A is preferred because it enables continued OHV use in a very popular recreational area. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Killpecker Sand Dunes Open Play Area remains open under each alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13287-35 | The Bureau should manage the entire RSFO under a "white-arrow" travel management scheme under which vehicle routes are closed unless posted open. No alternative currently does this (DEIS at 2-139, Item 6607). The need for this measure is illustrated by the fact that single-use vehicle tracks traversing unroaded areas are commonly followed by subsequent users, creating new unauthorized routes cross-country where no vehicle route existed before. Subsequent users, though limited to "exiting" vehicle roads and trails, can legitimately claim that their use of illegally-created vehicle ways becomes legal as soon as the illegal tracks can be seen to exist on the | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | ground. Off-road vehicle rallies (DEIS at 2-140) should not be permitted on BLM lands off graded, improved gravel roads; these should take place on private lands, because the level of resource damage they create is incompatible with requirements to protect resources on public land. | |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13409-1 | Alternative B would greatly affect RECREATION routes in southwestern Wyoming. Under Alternative B, "2,352 miles of routes would be managed as open to vehicle use and 67 miles of routes would be limited to non-motorized or non-mechanized use." Most significantly, "4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed from the transportation network and allowed to return to natural conditions." The draft Rock Springs RMP does not define "natural conditions," so it is unclear how long these roads could be removed from the transportation network. I am deeply concerned that these route closures would reduce public access to public lands. Under Alternative B, only 13.9% of existing roads and trails would remain open to vehicle use. The draft Rock Springs RMP also does not provide a map to show the specific routes that would be closed. The effect of these route closures may be even more significant and detrimental depending on where these closures actually are. Without a map, I cannot accurately articulate the overall impact the route closures would have on recreation. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13511-1 | Taking this many miles out of use will probably not accomplish as much protection to cultural resources or other resources as one would hope because people who use these vehicles often opening defy road closures when they become too restrictive. Because there will be no daily supervision of people using this form of transportation, it is easy for them to drive on roads that have been decommissioned but are still visible or still on old maps. Our experience has been that it would be more productive to have more open roads/trails, especially if they are planned routes laid out to avoid known /significant cultural resources. This certainly will not provide complete protection to cultural resources, but it is a better alternative than just closing off roads without offering other places for those people to ride as the number of OHV users is increasing every year. By planning OHV routes, the areas would be subject to archaeological surveys prior to opening them, which would afford better information to the route planners and better protection to cultural resources as well as other resources of concern. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13527-2 | OHVs should be restricted to routes already designated for their use and should be barred from WSAs and from LWCs. No "free play" areas for ORVs should be designated, as they destroy wildlife habitat and leave scars on the landscape. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13527-3 | The final plan should establish a process for reviewing existing OHV routes and identifying those that are creating impacts against bird and wildlife habitat. Any such routes should be closed and rehabilitated to restore the damaged habitat. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13564-4 | These restrictions on public access in Alternative B are due to the protection of special status plant species and sensitive resources. This is because closures could be implemented during high-risk times for plants, wildlife, and other resources. Over time, these restrictions could overlap for periods extending beyond several months. An option that would prevent this would be to have designated roads and trails, as well as managing closures on a case-by-case basis for the protection of species. Shutting off motorized access to significant portions of public lands hurts the entire surrounding community. Public lands provide open space for people from the surrounding area and beyond to recreate outdoors for free. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13585-43 | The Proposed RMP and DEIS fails to consider a reasonable range of alternatives for OHV area designations. Under the current Green River RMP, the OHV designations are as follows: 12,831 acres open; 225,537 acres closed; 968,959 acres limited to designated roads and trails; and 2,398,839 acres limited to existing roads and trails. DEIS at 2-139 (Mgmt. Action #6607). All the other alternatives propose the same OHV designations: 12,831 acres open; 225,537 acres closed; and 3,367,576 acres limited to designated roads and trails. Id. There is no difference in the alternatives, let alone a "reasonable range" of alternatives in this DEIS. See Or. Natural Desert Ass'n, 625 F.3d at 1123-24 (Off-road vehicle analysis was flawed for failing to consider "no alternative that proposed closing more than a fraction of the planning area to ORV use."); see also Ctr.for Biological Diversity v. Bureau of Land Mgmt., 746 F. Supp. 2d 1055, 1088-89 (N.D. Cal. 2009) ("All alternatives were based on the same OHV route network, and thus do not provide a truly meaningful range of alternatives."). "Sweetwater County supports outdoor recreation on federal land as part of a balanced plan of economic growth and quality of life," including OHV travel. Sweetwater County's Federal Lands and Resources Plan at Sections 19.2.l and 19.2.2 (June 2022). Under all alternatives, the BLM severely limits areas open for OHV travel and provides no opportunity for growth in the County. Preferred Alternative B also prohibits OHV rallies, cross country races, and other organized events that have a long history of occurring in Sweetwater County and across BLM's lands. See DEIS at 2-140 (Mgmt. Action #6608). The County does not support any management action that would prevent these types of events from occurring since they provide substantial economic benefits to the County and local communities.The BLM must work collaboratively with cooperating agencies to develop a reasonable range of alternatives for OHV | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. The range of alternatives is adequate for designating OHV 'open' areas and further route designations will be made in an implementation level Travel and Transportation plan. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |

|---|---|---|---|
| | | area designations, and either re-issue the DEIS or a supplemental EIS to allow for adequate public commenting on the alternatives. | |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13601-1 | The 'Off- Highway Vehicle (OHV) Area Designations' of the proposed DRMP are not clearly outlined with maps in any alternatives to be able to make a comparison. Without being able to compare the current open areas for OHV use to the proposed changes in Alternative B, C and D there is no clear path to the best suited alternatives. This area of the DRMP seems to be incomplete. Maps of current standings as well as proposed changes should be provided. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13651-52 | The BLM preference for and encouragement of dispersed and casual recreational use of the Field Office jurisdiction creates more widespread impacts which are harder to monitor and mitigate. It presumes visitors and recreationists will be good stewards who will try to minimize their impacts and who will leave no trace. This assumption requires monitoring and mitigation measures if not met. A passive assumption that off-highway vehicle users and other visitors will do the right thing (pg. 4-184) is not good management when there is no verification. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13675-1 | Closing off miles of roads & trails that have been in use for decades, or longer, will not prevent usage and will increase the impact of usage elsewhere, increasing human concentration and negative impact. | Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13706-2 | 3. Tourism Industry Impact: Reduced access to public lands could lead to a decline in tourism-related revenue, impacting the local economy. Energy Infrastructure and Rural Development Concerns: | An Economic Impact Comparison Analysis is available in Appendix O of Volume 2 of the DEIS. See Table O.1-1 for impact to recreational economic inputs by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13721-3 | According to this paragraph buried deep within the DEIS, there are currently 16,930 miles of existing roads and trails located on RSFO BLM lands. Under Alternative B, only 2,352 miles of existing roads and trails (13.9%) would remain open to vehicle use. That's unacceptable. Another 67 miles (0.4%) would be converted to only nonmotorized or non-mechanized use. Motorized use in these areas is quite low and all users can easily share the use of these low-volume routes without conflict, making these changes unwarranted. Worst of all, the remaining balance (85.7%) of existing roads and trails would be either closed to all use or removed and returned to natural conditions. This is totally unacceptable since these access routes are needed for a wide variety of uses including recreation, livestock management, general transportation and other uses related to oil, gas and minerals commerce. The WSTP is firmly opposed to your proposed closure of these existing roads and trails. | See updates to Chapter 4.17 removing erroneous text on route designations. Management Actions by alternative for OHV use have been analyzed in Chapter 2.2.6, Section Land Resources - Off-Highway Vehicles, Management Actions 6600-6620. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13721-4 | Other than in the controversial paragraph referenced above, the Draft RMP/EIS fails to provide any detailed information (tables and maps) showing exactly how many miles of existing roads and trails are "Under Alternative B, route designations from the travel management plan would be applied. Within the area designated as limited to designated roads and trails, 2,352 miles of routes would be managed as open to vehicle use. About 67 miles of routes would be limited to non-motorized or non-mechanized use, 4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed from the transportation network and allowed to return to natural conditions. These routes would receive lower use or no use at all. Reducing the number of routes could reduce the availability of motorized recreation but could provide solitude and naturalness to visitors seeking a pristine experience." Volume 1, page 4-191 within these existing acres, nor does it provide a map or table that shows where and how many miles of roads and trails that now exist on the ground that will actually end up as designated roads and trails. | See updates to Chapter 4.17 removing erroneous text on route designations. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13721-5 | While it appears that all acres currently attributed to Existing roads and trails are proposed to be moved to the Designated category, there should be clarification added to the Final EIS which quantifies the miles involved in such an action. Also, there is a very limited definitions provided as to what 'Designated' really means or how that label is determined. BLM staff have said that "designated" means "something they will put a blade to" - which seems rather unreasoned and irrational since travel routes are needed for a wide variety of uses - including many that do not require regular maintenance with a road grader. We disagree with abandoning the Existing categorization - so if the term Designated is used to replace it in the future, a much better definition than 'something we'll put a blade to' needs to be provided since all future 'designated' roads and trails needed to provide acceptable public access to the RSFO certainly would not require regular road blading. | See glossary for definition of 'designated roads and trails', along with other route indicators. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13721-6 | We are aware that Sweetwater County had all roads in the county inventoried about 10 years ago and came up with a total of about 33,500 miles. While all of those routes are not located within the RSFO, it is conceivable that a substantive percentage of those 'roads' are within the RFSO given its huge land mass within the county. Consequently, we believe there needs to be a better accounting of all existing roads and trails within the RSFO before this process moves forward - and reiterate that such accounting should be tallied by miles versus by acres. | Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. |
| 831 - Land Resources– | #13730-1 | The BLM continues to claim that the preferred alternative (B) would not result in a reduction of vehicle access due to road closures. However in Chapter 4 it states that "67 miles of routes would be limited to non-motorized or non- | See updates to Chapter 4.17 removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Off-Highway Vehicles (6600-6620) | | mechanized use, 4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed" | |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13776-11 | The inclusion of an inaccurate road-closure map has created confusion and needs clarification on several levels. Closing multiple routes will hamper access for recreation users and other groups as well. Nearly everyone we have consulted with on this plan agrees this requires clarification in a next draft, with serious consideration put into how critical access routes are for managing visitation, use, and therefore resource protection. | Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13784-58 | "Designated OHV areas that are closed to livestock grazing would result in a small loss of forage." (p. 4-177) Comment: Alternative A neglects to identify how many acres are closed to livestock grazing. Are the 970 acres unavailable to livestock grazing different than what this statement indicates? Closure and unavailability to livestock grazing are two different management actions. | Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Appendix U in Volume 2 of the DEIS shows a comparative summary of impacts to livestock grazing, broken up by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13826-28 | My concern is that the residents, agriculture, mining industries, recreation industry and private citizens, as well as those concerned with the historical and geological history of the Rock Springs BLM-RMP have the ability to have access to and use these off-road travel areas and ROWs within the BLM area for the needs of that specific situation. As a minimum allow these roads to be used through a permit system. | Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13826-29 | I am not against restrictions to protect the habitat and environment of these areas where the need is established but I believe that a compromise can be established to meet most of the needs of all parties involved. I have reviewed the actual plan and have located information about the 'ROWs' and 'Off Road Use' issues and some of these seem to be suggested for mostly the mineral, utility and industrial uses. I found it difficult to locate how the ROWs and road closures will affect agriculture, especially how it will affect local Ranchers and Farmers of the included areas as well recreational and personal use by residents for non-industrial use such as recreational (hunting, fishing, rock hunting, camping etc.) or for the local residents who just want to take a drive to view wildlife, scenery or family visits to areas related to my family history. | See Glossary for the definition of 'right of way grant' and 'casual use'. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13826-31 | How does this connect to your BLM alter B plan? I have no idea because of the lack of information given in the Alternative B plan about 'Off Road Closures' and accessing 'ROWs'. As it has been written or presented it is not clear if we will have access to this property by way of the 'ROWs' or the 'Off Road Use' changes. At one point in time the plan suggested that thousands of miles of roads within the Rock Springs district would be closed but no specific information was given as to what roads would be closed. Now BLM states this is not covered in this plan but will be dealt with at another point in time. The only information about uses of the roads that cross over BLM property or the 'Checkerboard' in this area that I can find is related to the 'ROW' maps that I previous included in these comments. | See Glossary for the definition of 'right of way grant' and 'casual use'. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13826-32 | The plan as written is not complete and it is not clearly stated as to how this will impact my desired use of these roadways. I also could not clearly understand the difference between 'ROW Exclusion' and 'ROW Avoidance' in areas or why these would apply to the areas where my grandfather's homestead is located as well as the areas surrounding the ghost town of Bryan, Wyoming where my grandfather worked on the railroad as a pumper for the UPRR. These are areas I want to visit and contribute historical and family history to the local historical societies and museums. I therefore want access to these areas as well. I think I have located the area where his accident occurred. Again, I am not sure I can go to and explore these locations and I couldn't find information within the plan to help me determine if I could have access to these locations. Mr. Dudley Gardner was interested in working with me on some of this family history since very little is known about the early history of the Blacks Fork River and Bryan, Wyoming areas.I am experiencing confusion about the terms ROW exclusion & closure | See Glossary for definitions of Avoidance and Exclusion terms used for the plan. Additionally see definition of 'casual use'. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13826-33 | Also, are these roads closed to just the oil and gas industries or will they impact the trona, agriculture and recreational industries as well as the private citizen and resident who just wants to go for a drive? Recently, I received a copy of the 'The Wyoming Legislature's Joint Travel, Recreation, Wildlife and Cultural Resources Interim Committee' comments submitted to BLM concerning what they considered the negative impacts the RMP will have on Wyoming. In that document the committee noted that the favored RMP - Alternative Plan B. "… while closing 4,505 miles of routes to all use and a further 10,000 miles of routes and other linear disturbances to be removed for any transportation purposes." They also noted in their comments that, "It has been reported that the route closures included in the RMP were made in error but there has been no information provided by the BLM to explain what the errors were or what should be expected for route closures under the final version of the RMP." I also received a copy of the comments submitted by the 'Select Committee on Federal Natural Resource Management (Committee) of the Wyoming Legislature' on the (BLM) draft Rock Springs Resource Management Plan (RMP) and Environmental Impact Statement. This committee stated that they had previously heard testimony that the road closures were part of a separate travel management plan and had not been intended to be included in the Alternative B draft. The committee's comments suggests that they were also told that BLM intended to remove the route closures and the references to a travel management plan from the draft Rock Springs RMP. The | See updates to Chapter 4.17 removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. Additionally see Glossary for a definition of 'casual use'. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | committee's comment did say that, "However, BLM Wyoming did not specifically identify what would remain in the draft Rock Springs RMP and what would be removed." They then implied that they would include their concerns about possible road closures in the plan in their comments. Now this committee stated in their comments that "… Most significantly, "4,505 miles of routes would be closed to all use, and 10,006 miles of routes and linear disturbances would be removed from the transportation network and allowed to return to natural conditions."1 The draft Rock Springs RMP does not define "natural conditions," so it is unclear how long these roads could be removed from the transportation network. …. Under Alternative B, only 13.9% of existing roads and trails would remain open to vehicle use. The draft Rock Springs RMP also does not provide a map to show the specific routes that would be closed. The effect of these route closures may be even more significant and detrimental depending on where these closures actually are. Without a map, the Committee cannot accurately articulate the overall impact the route closures would have on recreation." I am asking that you consider allowing access to BLM roads and ROWs on a case-by-case basis instead of designating these areas as non-use or restricted. | |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13880-20 | The first is the significant increase in Areas of Critical Environmental Concern, which can impact the regulations governing OHV use and access. Specifically, Alternative B significantly expands the area within which OHV users are restricted to designated routes. Second, as written, Alternative B will remove some 15,000 miles of roads and OHV roads in unspecified locations. Though the BLM has indicated this was included in error, the impacts of such a scenario would likely be significant. | See updates to Chapter 4.17 removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. Additionally see Glossary for a definition of 'casual use'. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13895-2 | Finally, as a private landowner and lessee of other private lands in the area, there is serious concerns about how Preferred Alternative B impacts the ability to access and otherwise use and develop private and state lands due to the massive number of restrictions placed on neighboring public lands. The impact of ROW exclusion areas and restricting motorized travel to designated roads will have on grazing, and other multiple uses, is also not adequately addressed in the DEIS due to the BLM's failure to disclose the connected and foreseeable actions of future travel management planning and foreseeable road closures. Under Preferred Alternative B, the BLM is no longer managing for multiple use and sustained yield but instead closing-off public lands and unlawfully restricting access to state and private lands at the expense and to the detriment of providing healthy rangeland, forest systems, and watersheds. | See updates to Chapter 4.17 removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. Additionally see Glossary for a definition of 'casual use'. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13899-100 | It is imperative BLM use an accurate route inventory to identify existing routes that are creating resource conflicts and/or are duplicative and to carefully apply the minimization criteria - as well as any relevant RMP direction - to designate which routes are open to motorized travel and ensure that others are closed and rehabilitated. Until travel planning can occur, we urge BLM to restrict motorized travel to existing routes only. | See updates to Chapter 4.17 removing erroneous text on route designations. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. Additionally see Glossary for a definition of 'casual use'. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13911-15 | But even if travel management planning occurs later, the BLM is still required to "document [within the RMP] the decision-making process used to develop the initial network; provide[] the basis for future management decisions; and set[] guidelines for making transportation network adjustments throughout the life of the plan." BLM Handbook 8242 at p. 17 (Mar. 16, 2012). This includes assessing the current ground transportation linear feature database during the pre-planning stage and producing a "map of the known and existing network of transportation linear features, includes modes of travel." Id. at 9, 17; BLM Manual 1626, Section 3.5 (Sept. 27, 2016). The Coalition and Sweetwater County provided the BLM with information on the linear network of roads within the County and Rock Springs Field Office, as well as commented on various travel zoning maps provided by the BLM. The BLM's failure to provide this information in the DEIS is entirely unsupported. The BLM must provide maps of the existing transportation network with the DEIS and allow for the public and cooperating agencies to comment on off-highway vehicle ("OHV") area designations considering the existing network. In the DEIS's current state, it is impossible to determine the effect of the proposed OHV area designations where there is no baseline date provided or mapping of even the known existing roads, routes, and other linear features. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13925-2 | The draft RMP and DEIS fail to address the major scoping issue of travel and transportation management. The BLM decision to omit travel data developed by Sweetwater County does not conform to BLM planning guidance, H-1600-1, App. C at 17-20, and violates rights of access found in federal law. 16 U.S.C. § 3210(a); 43 U.S.C. § 315h; 43 U.S.C. § 1701 n. § 701(h). Many of the management actions attached to Alternative B directly conflict with roads and access rights, thus calling into question to merit of adopting an RMP that effects a taking of these rights in violation of federal law. | Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. See Chapter 1.4 'Planning Criteria' for compliance with applicable laws. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13955-3 | Historically, there has been no group more greatly marginalized and excluded by public land management policies, and motorized travel management policies in particular, than people with disabilities. Outdoor enthusiasts with ambulatory disabilities frequently rely on motorized travel as their sole means to enjoy recreating on public lands. Not everyone has the ability to hike into a remote wilderness area, but many such people are still able to drive Jeeps, side-by-sides, and ATVs, which are restricted to the designated motorized route network. Management policies focused on "minimizing" the environmental impacts of motorized recreation have resulted in a dramatic decrease in motorized recreation opportunities on public lands over the last 20 years, which has disproportionately impacted people with disabilities. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. See Glossary for an updated definition of OHV to address accessibility equipment. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13955-5 | It should also be acknowledged that it is also entirely possible that many of the tribal members who wish to access sacred and cultural sites within the planning area currently or will at some point suffer from mobility impairment disabilities. Since the elimination of motorized access from the planning area would prevent disabled tribal members from accessing sacred and cultural sites, motorized restrictions would likely be contrary to EO 13007, EO 13985, and the American Indian Religious Freedom Act. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. See Glossary for an updated definition of OHV to address accessibility equipment. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13955-6 | Balancing conservation goals with cultural significance is crucial for the sustainable management of these areas. Managed motorized access can facilitate educational programs, allowing visitors to learn about the significance of the area and the importance of conservation efforts. This educational aspect can foster a deeper understanding and appreciation for the environment, potentially leading to more responsible behaviors among visitors. "ACEC can also provide tangible benefits, such as tourism dollars, for local communities."2 BLM should analyze how many tourism dollars are brought in due to the existing motorized routes that are being proposed for non-motorized trails. | An Economic Impact Comparison Analysis is available in Appendix O of Volume 2 of the DEIS. See Table O.1-1 for impact to recreational economic inputs by alternative. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13955-9 | Current trends show an increase in outdoor recreation the past few years that isn't looking to slow down. With more users on public lands, decommissioning and closing routes from creating more roadless areas, areas of environmental concern or wilderness characteristic areas would be irresponsible as this would concentrate more users into a smaller space which would increase the potential for injury and impact. Wilderness areas have already been studied and established. Closures should not be seen as legitimate almost hardwired responses to issues that can all be managed through other management strategies. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #13974-12 | The inclusion of an inaccurate road-closure map has created confusion and needs clarification on several levels. Closing multiple routes will hamper access for recreation users and other groups as well. Nearly everyone we have consulted with on this plan agrees this requires clarification in a next draft, with serious consideration put into how critical access routes are for managing visitation, use, and therefore resource protection. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. See updates to Chapter 4.17 removing erroneous text on route designations. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #14024-4 | Finally, SCI requests that any final RMP containing additional federal wilderness designations include a carve-out to allow the Wyoming Game and Fish Department motorized access to conduct wildlife management and research activities. The BLM has adopted similar access provisions in other resource management plans. Such carve-outs are needed to protect the State agency's ability to appropriately conserve wildlife resources in remote areas. | See glossary definition for Off-Highway Vehicle (OHV) and note that vehicle travel which has been approved by the authorized officer may be excluded. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #14034-1 | The Draft RMP/EIS does not discuss snowmobile / over-snow-vehicle (OSV) travel other than in a general reference to the Continental Divide Snowmobile Trail. Specifically, it fails to show how many existing acres of BLM lands in the Rock Springs Field Office (RFSO) are classified as open and available for OSV travel under Alternative A, the current condition. Additionally, it fails to disclose how open OSV acreage would change under your proposed Alternatives B, C and D. Consequently, tables that quantify OSV travel availability as well as maps showing exactly where these acres are located should be developed and added to this plan for each final Alternative as this planning process progresses. | See Glossary definitions for' Off-Highway Vehicle' (OHV) and 'Off-Highway Vehicle Management Designations' for clarification on over-the-snow travel. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #14034-2 | Continental Divide Snowmobile Trail (CDSMT SRMA): About seven miles of this long-distance trail are located within the RSFO. While there is a very general description/discussion of this Special Recreation Management Area (SRMA) in Appendix S on page 589 - it is proposed to be eliminated under your Preferred Alternative B. This section of the Draft RMP/EIS generally states that "over the snow vehicle use is limited to areas where snow is a minimum of 8" deep" - but provides no additional information about existing or proposed future OSV management on this trail or elsewhere. Consequently, any other management prescriptions applicable to the Continental Divide Snowmobile Trail and OSVs in general should be disclosed and be included in the final EIS/RMP. | A range of alternative regarding the Snowmobile CDT have been analyzed in Chapter 2.2.6, Special Designations, South Wind River ACEC, as well as Land Resources - Recreation sections. Under Alternative B the SRMA status is lifted, the trail remains. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #14034-3 | While the proposed 'miles of reduction/closure' to motorized vehicle travel is discussed in the Draft RMP/EIS, your document fails to quantify / provide maps and tables showing exactly where these miles of existing motorized roads and trails are located across the RSFO since existing materials only discuss 'acres' open to motorized vehicle travel. This is a serious omission which must be rectified as this planning process continues to move forward. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 831 - Land Resources–Off-Highway Vehicles (6600-6620) | #14039-1 | In April 2022 the Department of Interior released it's Equity Action Plan which addresses the lack of access on public lands. In order to advance equity of access on public land for those with mobility impairment disabilities, it is important to recognize that discrimination towards Americans with disabilities within federal land management agencies is deeply rooted and hidden in plain sight. Recreation, primarily motorized recreation, has taken a backseat to conservation and protection. Motorized recreation is often the only way those with mobility impairment disabilities are able to access public lands. BLM should ensure that the plan complies with the Department of Interior's Equity Action Plan, which recognizes that restrictions on motorized access to public land create barriers of access to those with disabilities. | Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. Accessibility equipment that is credibly assured to be in use in assisting a disability does not fall under the definition of 'OHV'. |
| 832 - Special Designations–Congressionall | #13210-16 | 16. With the exception of the 1850 Cherokee Trail, which is currently being studied by the National Park Service for eligibility as a national historic trail, eligible but not designated trails within the checkerboard should have no rights of way exclusion and retain a one quarter mile protective set back on either side of contributing sections of | A range of alternatives has been analyzed for the management of eligible but not designated trails in Chapter 2.2.6 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| y Designated Trails (7000-7022) | | trails. Those eligible but not designated trails include but are not limited to 1849 Cherokee Trail, Overland Trail, Point of Rocks to South Pass Road, and other expansion era roads and trails. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13210-119 | 7004 Alternative D Designate the National Trail Management Corridor as VRM Class II. Manage existing utility crossings within the National Trail Management Corridors VRM Class III. On contributing segments of NHT or other historic trails within the checkerboard land pattern area, manage the setting to preserve the existing character of the landscape to the extent possible within federally-managed lands. The task force supported Alternative D in acknowledgement that this is essentially the status quo. However, this included an agreement to exclude the KSLA from this management action. Agreement in principle #9 should be referenced regarding National Trail Corridors VRM classifications. | A range of alternatives has been analyzed for the VRM designations on National Historic Trails in Chapter 2.2.6 management action 7004. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13511-2 | Poor Condition: Rather than Alternative B's strict 5 Miles-On Each-Side Protection Corridor, we would recommend a 1/2 Mile-On- Each-Side Protection Corridor. For Major Linear Right-Of-Way Crossings (Large Powerlines, Pipelines, etc.): Near the Main Trail Corridor, we would recommend crossing by large ROWs occur only on disturbed areas around Highway 191 and nearby agricultural-development lands; near the Sublette Cutoff, we would recommend crossing by large ROWs occur only on either disturbed lands around Highway 191 and nearby Big Sandy/Eden Reservoir-development lands, or around the Lincoln/Sweetwater county line road. | A range of alternatives has been analyzed for the management of Congressional Designated trails in Chapter 2.2.6 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13512-8 | MA 7017 (Overland Trail) Alternative A or Alternative D with the addition of the Overland Trail Alternative A and D both adhere to the multiple-use mandate under FLPMA. If Alterative D is adopted, it should be revised to include the Overland Trail, so the historic context is carried forward. | MA#7000-7022 (Special Designations – Congressionally Designated Trails) discuss the full range of alternatives considered in the EIS. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13542-49 | Table 2-1. Special Designations (SD) - Congressionally Designated Trails 2-142 BLM is violating its own guidance when it seeks to establish rights-of-way restrictions for trails and attempting to regulate uses surrounding trails not yet designated by Congress in ways that contradict Section 7(a)(2) of the National Trail Systems Act. Please revise so that the RMP is in line with the referenced legislation. | A range of alternatives has been analyzed for the management of Congressional Designated trails in Chapter 2.2.6 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. See Chapter 1.4 Planning Criteria for compliance with applicable laws |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13542-59 | 4.4.3 Alternative B. 4-25 There is already current mineral leasing within a 5-mile area of National Historic Trails in the KSLA. This should be revised so that mineral leasing is considered on a case-by-case basis that considers historic effects on these trails. In many cases, there is no surface disturbance and subsidence is regularly monitoring. | See Chapter 1.4 Planning Criteria for discussion of valid and existing rights. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13585-63 | b. Management Actions #7002 and #7004 under Preferred Alternative B would apply a VRM Class II objective within 15 miles in all directions of national historic trails, as well as designate lands with a buffer zone of 5 miles on each side of these trails as the trail management corridor (both buffer zones being arbitrary in nature) subject to the following restrictions: closed to mineral leasing, closed to mineral material sales, a withdrawal would be pursued, and designated as ROW exclusion. DEIS at 2-143. Management Action #7006 also states: "highly visible projects and/or projects out of scale with the surrounding environment ... could be authorized within 20 miles of the NHTS only if the project causes no more than a weak contrast (VRM) to the setting of the NHTs." Id. at 2-145 said 20-mile buffer zone is similarly arbitrary. Sweetwater County objects to these expansive restrictions along historic trails considering the National Trails Act only affords protection within ¼ mile of each side a historic trail. 16 U.S.C. § 1244(a)(3); see supra p. 9. The County supports Management Actions #7002 and #7004 for Alternative C, which [d]esignate ¼ mile on either side ofNHT trail segments as VRM Class II objectives" and only limits surface disturbing activities within a ¼ mile of any segment as it is consistent with the National Trails Act and utilized nationwide. DEIS at 2-143 - 2-144. The expansive trail buffers under Preferred Alternative B are also inconsistent with how neighboring BLM Field Offices treat historical trails. For example, for the Normally Pressured Lance Natural Gas Development Project in the Pinedale Field Office, the BLM prohibited surface disturbing activities within ¼ mile of a historic trail unless the disturbance would not be visible from the trail or would occur in an existing visual intrusion. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. See Chapter 1.4 Planning Criteria for compliance with applicable laws. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13585-64 | c. Management Action #7017 under Preferred Alternative B would apply a½ to 5- mile buffer on either side of an intact trail or road segment that is eligible for protection but not congressionally designated, which depending on the distance would restrict development and implement ROW exclusion designation. The County objects to this Management Action for the same reason as noted above, and because these historic trails and road segments have not been formally designated by Congress. | A range of alternatives has been analyzed for eligible but not designated trails in Chapter 2.2.6 management actions 7017 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |

|---|---|---|---|
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13628-1 | When LFO went through their RMP process, they came up with protection measures that would preserve their portion of this highly significant High Potential Segment. Since this High Potential Segment continues into RSFO and is of the same high quality, it is obvious that the same protections should be given to RSFO's share of the Segment. It also is within several existing and proposed ACEC areas, making it even more worthy of protection. - Designated utility corridors across the Segment should not be allowed; they should instead be limited to existing disturbance around Farson and Highway 191 to avoid damage to the Segment; | A range of alternatives has been analyzed for eligible but not designated trails in Chapter 2.2.6 management actions 7017 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13628-2 | The Primary Route, west of the Green River - 25 total miles long, in RSFO; Location and Condition: - These NHT portions run from the two main crossings of the Green River (near Lombard Ferry) to the boundary of the Rock Springs/Kemmerer Field Offices (near an abandoned (?) mine in the NW corner of T20N R110W). See Map "6". - This was primary route to Fort Bridger, taken by almost all Utah bound emigrants, and probably by a majority of the rest of the emigrants during mid-1800's. - This part of the Primary Route ranges from fair to excellent shape. It has been damaged in spots by a highway, roads, and other development. My Management Recommendations: - An up to 3-miles-wide protection corridor (with viewshed analyses that could reduce the corridor width) around this section of the Primary Route. - Designated utility corridors across the Cutoff should be limited to existing disturbance around Highway 372, to minimize damage to the trails or their intact settings; - Outside of the protection corridor, highly visible projects and/or projects out of scale with the surrounding environment would be authorized only if the project causes no more than a weak visual contrast; | A range of alternatives has been analyzed for eligible but not designated trails in Chapter 2.2.6 management actions 7017 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13628-3 | The Sublette Cutoff - 50 miles long, in RSFO; Location and Condition: - This NHT runs from Parting of the Ways (east of Eden Reservoir) to the Green River (near La Barge). See Maps "9", "10", and "11". - This was a very well-used shortcut, which saved several days of travel over the primary route. Wyoming.gov describes the Cutoff's history this way: "The Cutoff was taken by about a third of the travelers. It was first opened in 1844 and saved about 46 miles." - The Sublette Cutoff is in good to excellent shape for most of its length in the RSFO. It has been damaged only around the Eden and Big Sandy Reservoirs, and around eastern Lincoln County. My Management Recommendations: - An up to 5-miles-wide protection corridor (with viewshed analyses that could reduce the corridor width) around the Cutoff from Parting of the Ways to near Eden Reservoir. The same for the stretch from one mile west of Highway 191 to the east edge of Sec. 8, T26N R109W. Then, because of Very High oil and gas development potential, an up to 3-miles-wide protection corridor (with viewshed analyses that could reduce the corridor width) around the Cutoff from the east edge of Sec. 8 to the Lincoln County line. Finally, because of previous damage from oil and gas exploration, an up to 1/2-mile-wide protection corridor (with viewshed analyses that could reduce the corridor width) around the Cutoff from the Lincoln County line to the Green River,. - Designated utility corridors across the Cutoff should be limited to existing disturbance around Eden/Big Sandy Reservoirs/Highway 191, and the Lincoln/Sweetwater County Line road to minimize damage to the trails or their intact settings; - Outside of the protection corridor, highly visible projects and/or projects out of scale with the surrounding environment would be authorized only if the project causes no more than a weak visual contrast; | A range of alternatives has been analyzed for congressionally designated trails in Chapter 2.2.6 management actions 7000 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13628-4 | The Kinney and Slate Creek Cutoffs - 60 total miles long, in RSFO; Location and Condition: - These NHTs runs from the Big Bend of the Big Sandy River (near Highway 28) to several spots on the Green River (between Fontenelle Dam and Lombard Ferry). See Map "12". - These variants were developed so emigrants could miss a long dry stretch of the Sublette Cutoff but still access it farther west on its way to Idaho. On the ground evidence shows these variants were well used, but little data on their use is available in the historical record. - Some damage has occurred near Highway 28 and near the Green River, but a majority of the Kinney and Slate Creek Cutoff variants are in good to excellent shape. My Management Recommendations: - An up to 5-miles-wide protection corridor (with viewshed analyses that could reduce the corridor width) around the Cutoffs is recommended for T24N R109W and T23N R108W,109W, and 100W, due to Sage Grouse Key Habitat and Very Low or Low Potential for oil and gas development. For T24N R110W and R111W, due to High or Moderate oil and gas development potential, an up to 3-miles-wide protection corridor (with viewshed analyses that could reduce the corridor width) is recommended. - Designated utility corridors across the Cutoffs should not be permitted; - Outside of the protection corridor, highly visible projects and/or projects out of scale with the surrounding environment would be authorized only if the project causes no more than a weak visual contrast; | A range of alternatives has been analyzed for congressionally designated trails in Chapter 2.2.6 management actions 7000 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13628-5 | The Seminoe Cutoff - 44 total miles long, in both RSFO and LFO; Location and Condition: - This Segment runs from Warm Springs Creek (east of 6th Crossing, in LFO) to Oregon Slough (near Burnt Ranch/9th Crossing, in RSFO). - This well used shortcut was used by faster moving emigrants who wished to avoid the crowding and disease along the primary route. WyomingHistory.org describes the Cutoff's history this way: "Among the many branches and variants of the Oregon Trail was the 35-mile Seminoe Cutoff, which allowed travelers to avoid the last four crossings of the Sweetwater River as well as the difficult climb over Rocky Ridge." - 14 miles of the 44 mile-long Seminoe Cutoff NHT runs through the RSFO, and it has the same qualities as in the LFO. See Map "13". - The Seminoe Cutoff is in good to excellent shape for almost all of its length in both RSFO and LFO. My Management Recommendations: - When LFO went through their RMP process, they came up with protection measures that would preserve this significant NHT. Since this NHT variant continues into RSFO and is of the same high quality, it is obvious that the same protections should be given to RSFO's share of the Segment | A range of alternatives has been analyzed for congressionally designated trails in Chapter 2.2.6 management actions 7000 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |

|---|---|---|---|
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-2 | Alternative B is the only alternative which approaches what is required to comply with the National Historic Trails Act (NTSA). It develops avoidance/buffers, preserving viewsheds and landscapes, and enables more public involvement and enjoyment. As mentioned in the draft Environmental Impact Statement (EIS) Rock Springs District has more National Historic Trails (NHT) than any other public land unit in Wyoming (please provide information on miles of NHTs in this district compared to other districts to substantiate this statement.) | A range of alternatives has been analyzed for congressionally designated trails in Chapter 2.2.6 management actions 7000 - 7022. Analysis of impacts for actions in each alternatives is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-6 | We hope to see a discussion in detail about how boundary determinations were made for historic trail corridors. The final EIS should reference, discuss and provide copies or links to agreements with the State Historic Preservation Office and the Advisory Council on Historic Preservation as they pertain to district resources. | See Chapter 1.4 Planning Criteria for compliance with applicable laws. See Chapter 5.1.2 Coordination and Consistency for discussion of coordination actions with SHPO and other agencies. A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-30 | Goal SD-02 It is improper to put NRHP Trails that are not designated under the NTSA in this Congressionally designated trails section. The proper place to put them is within the NHPA section. There are entirely different responsibilities under the NHPA (National Register) and the NTSA. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-31 | SD-02: Preserve and protect the historical remains and historical settings, if appropriate, of other trails and roads that are eligible for the NRHP but are not congressionally designated. These roads and trails include, but are not limited to, the Overland Trail, the Cherokee Trail, the Point of Rocks to South Pass Road, and Expansion Era Roads. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-32 | 7100: Develop Management Prescriptions in accord with BLM Manual Policy for NHTs and Technical Manuals. Under NTSA develop prescriptions in conjunction with volunteers and volunteer trails organizations. | A range of 7000-7022 (Special Designations – Congressionally Designated Trails) discuss the full range of alternatives considered in the EIS. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-33 | 7101: Coordination should specify participation of volunteers and volunteer trail organizations per Section 11 (16 USC 1250) of NTSA. | A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-34 | MA 7002 (Page 2-143): The term "trail management corridor" in Alternative B is introduced but there is no place in the document that defines how the five-mile corridor was established as reasonable and appropriate: Designate lands within five miles on each side of the NHTs as the trail management corridor. | See Glossary for definition of corridor. A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-35 | The concept of a trail management corridor is excellent and consistent with BLM responsibilities under the NTSA. By statute on public lands the management of NHTs should depend upon maintenance of the historic character of the trail as a "federal protection corridor." Also under statute, federal land management agencies should encourage nonfederal entities owning lands to consider actions to maintain the historic character for which the National Historic Trails were designated. Definition of the optimal protection corridor should have a basis in an empirical assessment of the character of the landscape of the trail regardless of ownership. We prepared a map that establishes the viewshed of the California NHT associated with the Rock Springs RMP planning area. An assessment such as this should be made of actions that can take place within the trail corridor based on visual and audible elements and short term impacts and irretrievable and irreversible impacts. | A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-36 | For many of the NHTs, an "accordion-type" of boundary may be more appropriate, accommodating significant viewsheds, related structures, geologic features relating to the trail story, and other associated properties, while minimizing corridor width in less important areas. Ideally a national trail may have several distinctly different "boundaries," defining property parcels, related features and views, affected drainages, and access points or buffers. This statement and our map point out that BLM has statutory responsibilities under NTSA that extend beyond public lands in the Field Office boundaries. The plan should consider all of these cumulative and indirect impacts in coordination with private landowners, volunteers and volunteer trail organizations. Measures such as | A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | land exchanges, conservation easements and assistance to landowners to cooperate in conservation of the NHT historic landscape within the planning area will support conservation of the continuous nature of designated NHTs as the NTSA directs. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-37 | MA # 7017 through 7022 (page 2-148 through 2 through 2- 152] These management actions are in the wrong section. There are different rules and responsibilities for trails under the National Historic Preservation Act and trails designated under the NTSA. To merge responsibilities under NHPA and NTSA detracts from the BLM ability to comply with federal directives and indicates a fundamental lack of awareness of independent regulatory responsibilities. This section on "Eligible but not Designated" trails should be moved to cultural resources or better yet renamed simply to "Trails eligible for or included in the NRHP." Then place them in a section along with other categories of archeological resources and historic properties. In this sense trails are no different from other categories of cultural resources (e.g., rock art, bison kills). | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-38 | The government should produce separate maps for each category of resource and present them in a manner that provides information for understanding and analysis of values to include setting. All the management actions deal with surface occupancy protections. Alternatives that may affect integrity of the existing or eligible NRHP characteristics have the same requirement to protect ARPA resource values. The conservation requirement is simple, protect visual and audible impacts to properties included or eligible for the NRHP under ARPA. Complicated variable "buffer zones" between alternatives do not address the requirement. In any case the RMP should cross reference to management actions in other resource programs where there are NSO stipulations (listed in MA #7017 are mineral leasing, new rights-of-way and locatable minerals). | See Chapter 1.4 Planning Criteria for compliance with applicable laws. See Chapter 5.1.2 Coordination and Consistency for discussion of coordination actions with SHPO and other agencies. A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-43 | 3.22.4 Special Designations-National Historic Landmarks (pages 3-30-3-31) This section in its entirety states: The South Pass National Historic Landmark (NHL) was congressionally designated in 1961 to preserve and protect the nationally significant character of the historic landscape that was so important to emigrants (Map 2-29). South Pass made possible the westward migration that began in the 1840s by providing a relatively gentle pass across the mountains, crossing the Continental Divide. The NHTs located within the planning area all pass through and are part of the historic landscape. Several efforts have been made to designate an official NHL boundary. However, these efforts have not been successful. Consequently, through a letter of agreement in February 2006 with the Wyoming State Historic Preservation Office, the NHL boundary has been defined as the same boundary as the South Pass ACEC. This will continue until an official boundary is designated. Please include text to describe how the South Pass NHL and the South Pass Historic Landscape ACEC boundaries were established. Include the February 2006 letter of agreement with the Wyoming SHPO in an appendix or make it publicly accessible by reference to a print or web publication. | The description of the South Pass National Historic Landmark (NHL) in Section 3.22.4 Special Designations-National Historic Landmarks (pages 3-30-3-31) is adequate. See Chapter 3 for discussion of affected environment, and the Analysis of Management Situation on the RMP revision eplanning site. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-44 | In Section 2.2.6 BLM should make a commitment to revise the original 1961 NHL designation. The revision should at a minimum enhance the old narrative for historic significance and establish clear boundaries. Under the NTSA that commitment should include a pledge of concurrent submittal of the revised nomination to the Keeper of the National Register, Wyoming SHPO, interested Tribal Historic Preservation Officers and volunteer Trails Organizations. We suggest that you include timeframes for completion of this task along with estimations of level of effort. | A range of alternatives has been analyzed for the South Pass Historic Landscape in Chapter 2.2.6 management actions 7498 - 7503. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-45 | 3.22.6 Special Designations - National Historic Trails (page 3-31)states: NHTs are congressionally designated parts of the National Trails System, administered by the National Park Service. The planning area contains more linear miles of intact NHTs, NHT candidates, and historical wagon roads than any other field office in Wyoming. The field office contains a high number of historic properties for which setting is a very important attribute including NHT, NHT candidates and sites associated with NHTs. There are four NHTs located within the planning area; they include the Oregon, Mormon-Pioneer, California, and the Pony Express trails (Map 3-7). The Overland and Cherokee Trails are not congressionally designated but are considered candidates for inclusion within the National Trails System. Both are eligible for nomination to the NRHP. See 3.11 Cultural Resources section for more information on Indian Gap and Indian Gap Trail. Who has determined that the Overland and Cherokee Trails are "… candidates for inclusion in the National Trails System?" If they are not designated as part of the National Trails System then it is irrelevant and pre-decisional to state they are candidates for that system. It usurps the role of Congress to designate components of the National Trails System, even if a feasibility study has been authorized, which as far as we know is not the case here. Similarly the statement that the "…field office contains a high number of historic properties for which setting is a very important attribute." We don't deny that setting is very important for both NHTs and all NRHP properties and that these settings require appropriate management but want to emphasize that the provisions for management vary by type of designation. For parallelism, if BLM would list NRHP eligible and listed trails in the special designation section then all NRHP listed and eligible properties need inclusion at the same place. Our point is that the current documents for review provide inadequate consideration of classes of NRHP eligible and listed properties and classes of archeological resources (see our discussion about section 3.11 pages 3-14 to 3-15). | See Chapter 3.22.6 Special Designations - National Historic Trails, as well as the Analysis of Management Situation document on the RMP Revision eplanning site for discussion of existing conditions. See Chapter 1.4 Planning Criteria for compliance with applicable laws. |
| 832 - Special Designations– | #13651-56 | Since NHTs are specially designated by Congress and must be managed in compliance with the NTSA they should have the same buffers, protection, and management practices no matter what the alternative. | A range of alternatives was analyzed for Congressionally designated trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| Congressionally Designated Trails (7000-7022) | | | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13651-57 | In addition, the discussion of NHTs focuses on the Oregon and Mormon trails. Other NHTs (California and Pony Express) also pass through the District, often overlapping with the Oregon and Mormon trail routes. They remain unmentioned yet they are visited as recreation and cultural/historic sites. BLM needs to correct this deficiency. | See Chapter 3.22.6 Special Designations - National Historic Trails for a discussion of trails in the planning area. A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13672-4 | The Draft RMP incorrectly applies management actions to trails that are not congressionally designated National Historic Trails (NHT). Management actions #7017-7022 in the Draft RMP incorrectly apply "NHT-like" restrictions to eligible but NOT congressionally designated trails ("non-NHT trails"). Management Actions #7017, #7018, #7019, #7020, #7021, #7022 should be removed altogether because they do not follow current rules, regulations, policy and guidance. Non-NHT trails are adequately covered by Management Actions #5000-5004. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13672-5 | The broad-brush approach of applying standard buffers to all sections of non-NHT trails found in management actions #7017-7022 goes against the Protocol already established between the BLM and Wyoming SHPO for management of cultural resources. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13702-12 | The BLM Rock Springs Field Office needs to reevaluate the boundaries of the Congressionally Designated Trails consistent with guidance. BLM Technical Reference 6280-1 states that "inventory, assessment, and monitoring (IAM) is guided by Bureau of Land Management (BLM) Manual 6280-Management of National Scenic and Historic Trails under Study or Recommended as Suitable for Congressional Designation-and is the responsibility of BLM staff to carry-out." In addition, it states that "IAM results can be used to establish a National Trail Management Corridor." The RMP needs to be revised to use the IAM results to establish a National Trail Management Corridor.Additionally, Section 7(a)(2) of the National Trail System Act (as Amended in 2019) states that "Pursuant to section 5(a), the appropriate Secretary shall select the rights-of-way for national scenic and national historic trails and shall publish notice thereof of the availability of appropriate maps or descriptions in the Federal Register; Provided, That in selecting the rights-of-way full consideration shall be given to minimizing the adverse effects upon the adjacent landowner or user and his operation. Development and management of each segment of the National Trails System shall be designed to harmonize with and complement any established multiple-use plans for the specific area in order to insure continued maximum benefits from the land. The location and width of such rights-of-way across Federal lands under the jurisdiction of another Federal agency shall be by agreement between the head of that agency and the appropriate Secretary. In selecting rights-of-way for trail purposes, the Secretary shall obtain the advice and assistance of the States, local governments, private organizations, and landowners and land users concerned." In accordance with this, the RSFO needs to obtain the advice and assistance of the State, local governments, private organizations, and landowners and land users concerned when establishing the alternative rights-of-way for the national scenic and national historic trails. | See Chapter 1.4 Planning Criteria for compliance with applicable laws and regulations. A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13715-12 | MA #7002-7003 (National Historic and Scenic Trails). Alternative B creates a 10 mile wide trail management corridor (5 miles per side) of right-of-way exclusion areas in the general area where the boundaries of Sublette, Lincoln, and Sweetwater counties converge, on the northwest portion of the RFSO, with an additional ROW avoidance area from mile 5 to 15. This is an area of significant and dense existing natural gas production, is currently fully-leased for oil & gas, and includes EPP's existing Bird Canyon compressor station. This is an area not deemed worthy of ACEC or other special status in any alternative. As noted in MA #7002 for Alternative D, BLM and Wyoming SHPO have agreed that the setting of the NHT in the western part of the RSFO has been compromised by existing development, justifying a ¼ mile buffer on each side of the NHT, not the 10 mile ROW exclusion zone (and combined 30 mile exclusion and avoidance zone) proposed in Alternative B. As discussed in Comment #4 above, the elimination of future right-of-way access for transportation of natural gas is an impairment of the leasehold rights of existing oil & gas lessees. In this case, where BLM has agreed with SHPO that existing development justifies only a¼ mile buffer, it is arbitrary and capricious to impose a giant exclusion zone (and co1Tesponding future leasing withdrawal) where the area is a developed field, and where the protective measures proposed in each of the other three alternatives are fully adequate to protect the NHT resource | A range of alternatives has been analyzed for buffers on Congressionally Designated Trails in Chapter 2.2.6 management actions 7002-7003. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated | #13715-14 | For National Historic and Scenic Trails within the KSLA, avoid surface disturbing activities within 1/4 mile of any contributing NHT segment if it would be visible from the trail , subject the area beyond 1/4 mile from the NHTs to standard NHPA and BLM/SHPO Protocol measures to avoid, minimize, or mitigate effects to NHTs; allow NHT crossings by rights-of-way in areas where trail ruts have been modified by modem uses, where previous crossings | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Trails (7000-7022) | | exist, or where new corridor crossings would not damage trail remains. The BLM and SHPO have agreed that the setting of the NHT in the KSLA has been compromised by existing development Sec e.g., Management Actions 7002, 7003, 7004, 7017. and 7021 BLM's imposition of a 30-mile-wide corridor is directly contradictory to best evidence and consensus (including its own agreement with Wyoming SHPO). | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-11 | The Overland and Cherokee Trails must be managed correctly Management actions 7017-7022 in the proposed Rock Springs RMP/DEIS incorrectly apply "National Historic Trail (NHT)-like" restrictions to "non-NHT trails". We recommend Management Actions 7017 through 7022 be removed altogether because they do not follow current rules, regulations, policy and guidance. Non-NHT trails are adequately covered by Management Actions 5000-5004. The correct procedure for non-NHTs is to follow the BLM/State Protocol and determine the impact to historical properties (including non-NHTs) on a case-by-case basis if the site can't be avoided, then buffers and other measures are to be determined through consultation. Section 106 of the National Historic Preservation Act (NHPA) recognizes the reality that some projects may unavoidably have conflicts due to siting, location, and/or logistical considerations. In such instances, the applicable rules, guidance, and practice is to minimize the impact and imposition of administrative requirements. The simple "no activity buffers" approach employed in the proposed RMP ignores this guidance. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-12 | The Overland and Cherokee Trails are not congressionally designated but are undergoing a Feasibility Study process by the National Park Service are considered candidates for inclusion within the National Trails System. Because these trails are only candidates for NHT designation, but not yet designated, they are currently considered typical cultural/historic properties (linear features, but non-NHTs) eligible for nomination to the National Register of Historic Places (NRHP). Trails are managed by the BLM per BLM Manual 6280 as follows: "While a trail is undergoing a National Trail Feasibility Study process or when a trail has been recommended as suitable for designation and Congress has not yet acted to designate the trail, the BLM manages the values, characteristics, and settings of the trail in accordance with Federal Land Policy Management Act of 1976, as amended (FLPMA). This policy provides guidance on management during this time, which can vary greatly in duration, before Congress acts." FLPMA requires case-by-case NEPA review for projects, and thus invokes applicable rules such as the NHPA under Section 106 and 36 CFR 800. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-13 | The Overaland and Cherokee Trails as presented in the draft RMP/DEIS have not been located or mapped correctly in the Known Sodium Leasing Area and they do not provide significant cultural value in the KSLA due to their previously impacted condition. The public was not provided ample opportunity to comment on these particular trail sections because the National Park Service (NPS) circumvented NEPA by avoiding public comment opportunity. We specifically request Congress to NOT activate/designate these particular trail sections for these reasons. We present several figures and supporting information below to demonstrate the errors BLM and the NPS has made regarding these particular trail sections. Figure 2. Overview map - RMP/DEIS Cultural Resource Map that shows the 1850 Cherokee and Overland Trail (among others).[...]Within the KSLA the Overland Trail as depicted in the RMP/DEIS is not even in the correct location, so it certainly doesn't meet the NHT1 criteria. The Cherokee Trail in the KSLA similarly does not meet the NHT1 criteria because it has been replaced by an improved dirt road and as such the appearance of the trail is completely absent. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-14 | At the time of this document, to the best of our knowledge, Congress has not yet Activated the Overland or Cherokee Trails. We highly recommend that Congress demand a re-study of the 1850 Cherokee and Overland Trails in the KSLA and reconsider them entirely because they are completely inaccurate as presented in the January 17, 2020 request letter. In the KSLA, these trail locations are inaccurate and/or the trails have been removed by historic activities. BLM can only manage these trails as NHT's in their land planning process after Congress has activated them. The Overland and Cherokee Trails must be removed from the Management Actions 7017- 7021, and they should continue to be managed under Management Actions 5000-5004. | Congressional requests for NHT studies are outside the scope of this EIS and RMP. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-15 | BLM did not consider multiple use as required when establishing National Trail Management Corridors The Draft RMP/DEIS Management Action 7002 proposes a National Trail Management Corridor (NTMC) under Alternative D. Similarly, it establishes an undefined "trail management corridor" under Alternative B. Both suggests a 5 mile buffer as the corridor around National Historic Trails (NHT). Under Alternative B, the term "trail management corridor" is undefined and causes confusion with the NTMC. As such, we suggest the term "trail management corridor" in Alternative B be more clearly defined and explained or removed entirely. | See Chapter 1.4 for the Planning criteria and applicable laws. A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. See Glossary for the definition of 'corridor'. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-16 | Under Alternative B, 7002 calls for a closure to mineral leasing and a withdrawl would be pursued. Under Alternative D, it notes that "The BLM and SHPO have agreed that the setting of the NHT in parts of the Western portion of the RSFO has been compromised by existing development." This particular area is only mentioned in 7002 and is not mapped or mentioned anywhere else in the DEIS. As such, there is no way to understand where this is located. | A range of alternatives has been analyzed for corridors for the Congressionally Designated Trails in Chapter 2.2.6 management actions 7002. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionall | #13751-17 | Futhermore, Management Action 7004 establishes Visual Resource Management (VRM) Classes based on the National Trail Management Corridor established in 7002 Alternative D. Under Alternative B, a VRM Class II is suggested for the NHT and its associated landscape with protection for 15 miles in all directions BLM has ignored | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

|---|---|---|---|
| y Designated Trails (7000-7022) | | cooperating agency input and has not solicited any input from the local trona industry as an interested party. Establishment of the National Trail Management Corridor (NTMC) has significant impact on the trona industry within the KSLA. The only references to the NTMC in the Draft RMP/DEIS are as follows: Management Actions 7002, 7003, 7004, 7006, 7009, and Map 2-32. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-18 | NTMC is not included in the glossary or any discussion throughout the entire draft RMP/DEIS. With such a substantial impact on interested parties there should be additional background, explanation, documentation of authority, opportunity for mitigation, and futher discussion on the NTMC. In regard to NTMC's, BLM has failed to work with cooperating agencies and interested parties during the land planning process. | The term 'corridor' can be found in the Glossary. See Chapter 1.4 Planning Criteria for discussion of the planning effort. See Chapter 5.1 Consultation and Coordination for discussion of coordination with other agencies, and 5.1.1 for a list of the cooperating agencies that have been involved in the development of this document. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-19 | BLM must refer to the Comprehensive Trail Management and Use Plan in its land use planning decisions. In the draft RMP/DEIS, BLM makes no mention of which Comprehensive Trail Management Plan they are using to make decisions. The BLM can only refer to National Historic Trails that have been Congressionally designated, this includes specific trails and locations. For example, the Comprehensive Management and Use Plan for the Oregon Trail recommended that "eventually a corridor averaging a half mile wide centered along the trail along the full length of each of the seven cross-country segments (318 miles) should be protected from the kinds of use and development which may adversely impact the Oregon Trail." The draft RMP completely ignores the Comprehensive Trail Management Plan by suggesting 5 mile corridors. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-20 | Similarly, Congress has designated particular described routes of the California, Mormon, Pioneer and Pony Express trails. BLM's maps the National Historic Trail routes in Map 3-7 and in their provided electronic shapefiles. However, these routes do not entirely match the Congressionally Designated routes but must. Only then can corridors be discussed surrounding those Congressionally Designated routes. | See Chapter 3.22.6 Special Designations - National Historic Trails for discussion of trails in the planning area. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-21 | Furthermore, BLM has not fully considered the SHPO/BLM approved Class III inventory reports for the area. These reports investigate and document contributing and non-contributing trail sections within the KSLA. Many of the routes and corridors being suggested no longer contribute to the National Register, let alone the value of a National Historic Trail Management Corridor. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-22 | In the checkerboard land ownership portions of the Rock Springs Management area, the large broad-brush ROW exclusion and avoidance areas prescribed in MA#7002 and MA#7003 do not follow the guidance in BLM's own Manual 6280 and could make it impossible for private landowners to exercise their rights for access and development. These broad-brush exclusions and avoidance areas need to be removed and replaced with case-by-case assessments in the checkerboard ownership areas with application ONLY to contributing sections. | See Ch 1.4 for the Planning Criteria, including discussion of BLM's planning efforts and private lands. A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-23 | Lastly, under Management Action 7004 Alternative D, BLM is managing the National Trail Management Corridor as a VRM Class II. In Alternative B, they provide no logic but designate the "trail management corridor" (undefined) as a VRM Class II for 15 miles in all directions. The concept of 5 and 15 miles is being mis-used. BLM should retain the ¼ mile NHT buffer where applicable based only on contributing segments, and then conduct visual resource assessments on a case-by-case basis according to BLM Manual H-8410-1 and 6280-1 rather than applying a 5 to 15 mile visual buffer directly to the entire corridor. | A range of alternatives has been analyzed for VRM classes on Congressionally Designated Trails in Chapter 2.2.6 management actions 7004. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-88 | Congressionally Designated Trails: The BLM Rock Springs Field Office needs to reevaluate the boundaries of the Congressionally Designated Trails consistent with guidance. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-89 | The RMP needs to be revised to use the IAM results to establish a National Trail Management Corridor. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated | #13751-90 | In accordance with this, the RSFO needs to obtain the advice and assistance of the State, local governments, private organizations, and landowners and land users concerned when establishing the alternative rights-of-way for the national scenic and national historic trails. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. See Chapter 5 for information regarding cooperating agencies and consultation. |

| Trails (7000-7022) | | | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-91 | In the checkerboard land ownership areas of the management area, the large broad brush ROW exclusion and avoidance areas prescribed in MAs 7002 and 7003 could make it impossible for private landowners to exercise their rights for access and development. These broad-brush exclusions and avoidance areas need to be removed and replaced with case-by-case assessment in the checkerboard ownership areas. | See Ch 1.4 for the Planning Criteria, including discussion of BLM's planning efforts and private lands. A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-92 | Eligible but Not Congressionally Designated Trails: Management actions 7017-7022 in the proposed Rock Springs RMP/DEIS incorrectly apply "NHT-like" restrictions to "non-NHT" trails. We recommend Management Actions 7017 through 7022 be removed altogether because they do not follow current rules, regulations, policy and guidance. Non-NHT trails are adequately covered by Management Actions 5000- 5004. The correct procedure for non-NHTs is to follow the BLM/State Protocol and determine the impact to historical properties (including non-NHTs) on a case-by-case basis if the site can't be avoided, then buffers and other measures are to be determined through consultation. Section 106 of the National Historic Preservation Act recognizes the reality that some projects may unavoidably have conflicts due to siting, location, and/or logistical considerations. In such instances, the applicable rules, guidance, and practice is to minimize the impact and imposition of administrative requirements. The simple "no activity buffers" approach employed in the proposed RMP ignores this guidance. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-93 | Section V(D) of the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014, states "A determination of effect is made after avoidance and minimization through standard treatment measures and/or best management practices (BMPs) have been integrated into the project design". It's clear that the effect of a project cannot be established until best management practices have been integrated into an individual project. The broad-brush approach of applying standard buffers to all sections of non-NHT trails found in management actions 7017- 7022 goes against the Protocol already established between the BLM and Wyoming SHPO for management of cultural resources. | See Chapter 1.4 Planning Criteria and Chapter 5.1 Consultation and Coordination for discussion of coordination with SHPO and other agencies. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-94 | Further, before implementing any management actions related to the designated, but not historical trails, the BLM must accurately map the trails and then provide an opportunity for public comment. It appears that the BLM has mapped the Overland Trail in the Known Sodium Leasing Area using the USGS Quad maps (GLO mapping). The Quad maps in the KSLA are known to be inaccurate for the location of the Overland Trail. Actual experience with location of the Overland Trail, in consultation with SHPO, has shown its actual location to be several miles away on many of the segments compared to what is shown on the maps provided by the BLM in this resource management plan process. Without an accurate map of location, it is unreasonable to propose and apply any management actions that are not case-by-case. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-96 | Historic trails represent a significant new restriction in the RMP which BLM did not adequately analyze nor collaborate with interested parties. The Overland and Cherokee Trails must be managed correctly according to current rules and regulations. BLM did not consider multiple use as required when establishing National Trail Management Corridors. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-164 | MA #7002#SD-01, HR-11#The area within ¼ mile or the visual horizon (whichever is less) of any contributing trail segment would be an avoidance area for surface disturbing activities. Developments such as roads, pipelines, and power lines may be allowed to cross trails in areas where previous disturbance has occurred and the trail segment has lost the characteristics that contribute to its National Register significance. Crossings may include additional disturbance of trail ruts in the areas where previous disturbances have occurred but the ruts themselves have not been disturbed. Development actions would be analyzed on a case-by-case basis through site- specific analysis to identify mitigation needs and meet management objectives. Industry Position: Acceptable. Reason: Follows current laws and regulations.#Designate lands within 5 miles on each side of the NHTs as the trail management corridor. Subject all actions within 5 miles on each side of the NHTs, except for highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants), to the following restrictions: 1) closed to mineral leasing; 2) closed to mineral material sales; 3) a withdrawal would be pursued; 4) exclusion area for ROWs. Industry position: Not acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Five miles is arbitrary and does not follow the National Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM admits in alternative D that the Western portion of RFSO has been compromised. The same restrictions for the full RFSO clearly do not take this reality into account. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful.#Avoid surface disturbing activities within ¼ mile of any contributing NHT segment if it would be visible from the trail. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

|---|---|---|---|
| | | Subject the area beyond ¼ mile from the NHTs to standard NHPA and BLM/SHPO Protocol measures to avoid, minimize, or mitigate effects to NHTs. Allow NHT crossings by ROWs in areas where trail ruts have been modified by modern uses, where previous crossings exist, or where new corridor crossings would not damage trail remains. Industry position: Acceptable. Reason: Follows current laws and regulations. This alternative supports trona development in the KSLA while still protecting contributing sections of key trails because it keeps management of trails largely similar to the existing successful trails management in the KSLA where the BLM already acknowledges that the area is compromised by development and thus not good candidate for meeting BLM's objective of "Preserve and Protect the …historical setting". Additionally, this alternative provides for more substantive trails management in areas where there are larger concentrations of contributing segments and the trails reside in less developed areas that provide a potential opportunity to meet BLM's objective of "Preserve and protect the…historical setting.#Designate lands within 5 miles on each side of the NHTs and the Continental Divide National Scenic Trail and Connecting Side Trail as the National Trail Management Corridor. The BLM and SHPO have agreed that the setting of the NHT in parts of the Western portion of the RSFO has been compromised by existing development. In this area, the National Trail Management Corridor will be reduced to ¼ mile on either side of NHT ruts and swales. The area within ¼ mile on either side of a NHT will be closed to Oil Shale. Industry position: Not acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Five miles is arbitrary and does not follow the National Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. The BLM needs to define the "Western portion of the RSFO" in the RMP.#Alternatives A and C are acceptable. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-165 | MA #7003#SD-01, HR-11#No similar action#Subject all actions within five to 15 miles on each side of the NHTs, except for highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants), to the following restrictions: 1) open to mineral leasing with CSU restrictions, 2) open to mineral material sales with CSU restrictions, 3) open to locatable minerals; 4) is a ROW avoidance area with CSU restrictions. Industry position: Not acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Fifteen miles is arbitrary and does not follow the Nation Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful.#No similar action Industry position: Acceptable. Reason: See MA #7002#Apply the following actions within the National Trail Management Corridor: * National Trail Management Corridor is a CSU for fluid minerals. * The area within ¼ mile on either side of a NHT will be closed to Oil Shale. * Surface disturbing activities will be prohibited if the project causes more than a weak contrast (VRM) to the setting of the National Historic and Scenic Trails. * Designate as a ROW avoidance area. * Allow new ROWs if it is determined by the AO that impacts associated with the action will not cause an adverse effect to the National Historic and Scenic Trails. * Allow mineral material disposals if it is determined by the AO that impacts associated with the action will not cause an adverse effect to the National Historic and Scenic Trails. * Allow new surface disturbing activities only if they will not cause an adverse effect to the National Historic and Scenic Trails. Industry position: Not acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. This alternative does not take into consideration the energy corridors that were designated on federal lands under Section 368 of the Energy Policy Act of 2005. Several of trail segments and proposed avoidance areas lie within the energy corridors and cannot be removed without undergoing NEPA. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful.#Avoid surface disturbing activities within ¼ mile of any contributing NHT segment if it would be visible from the trail. Subject the area beyond ¼ mile from the NHTs to standard NHPA and BLM/SHPO Protocol measures to avoid, minimize, or mitigate effects to NHTs. Allow NHT crossings by ROWs in areas where trail ruts have been modified by modern uses, where previous crossings exist, or where new corridor crossings would not damage trail remains. Taken from Alternative C of MA #7002 | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-166 | MA #7004#SD-01, HR-11, HR-10#No similar action Industry position: Acceptable.#Designate the NHT and associated landscape as: * VRM Class II objectives within 15 miles in all directions. * VRM Class II objectives for all designated NHT crossings. Industry position: Not acceptable. Reason: The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM classifications.#Designate ¼ mile on either side of NHT trail segments as VRM Class II objectives. Industry position: Not acceptable. Reason: The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM classifications.#Designate the National Trail Management Corridor | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. |---|---|---|---|
| | | as VRM Class II. Manage existing utility crossings within the National Trail Management Corridor as VRM Class III. On contributing segments of NHT or other historic trails within the checkerboard land pattern area, manage the setting to preserve the existing character of the landscape to the extent possible within federally-managed lands. Industry position: Not acceptable. Reason: BLM is required to adhere to Section 7(a)(2) of the NHSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs.#Alternative A is acceptable. Otherwise the alternative should include a discussion on how BLM will use Technical Reference 6280, in consultation with SHPO, to inventory, assess, and monitor NHTs on a case-by-case basis when an action is in proximity to an NHT. The results should be used to establish management objectives. MA #7005#SD-01, SD-02#No similar action#On contributing segments of NHT or other historic trails within the checkerboard land pattern area, manage the setting to preserve the existing character of the landscape to the extent possible within federally-managed lands and on non- federal land when activity is part of a federal undertaking (connected action). Industry position: Not Acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights.. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM Manual 6280 requires a consideration of "How to minimize adverse impacts, to the extent practicable, on adjacent landowners, users, and operations". "to the extent possible" as proposed in this MA does not minimize adverse impacts on adjacent users. . Rather, replacement of that language with "to the extent practicable and commercially viable" would be in line with 6280 guidance.Further, the RMP planning process should not be used to sanction controls on non-federal lands where such management is not authorized by FLPMA#Same as Alternative B Industry position: Not Acceptable. Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights.. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM Manual 6280 requires a consideration of "How to minimize adverse impacts, to the extent practicable, on adjacent landowners, users, and operations". "to the extent possible" as proposed in this MA does not minimize adverse impacts on adjacent users. Rather, something along the lines of "to the extent practicable and commercially viable". Further, the RMP planning process should not be used to sanction controls on non- federal lands where such management is not authorized by FLPMA#See management action 7004. Industry position: Not acceptable. Reason: BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs.# Alternative B would be acceptable with removal of "to the extent possible" to "to the extent practicable and commercially reasonable" along with removal of the reference to non-federals lands. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-168 | MA #7006#SD-01, HR-11, HR-10#No similar action#Highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) could be authorized within 20 miles of the NHT ony if the project causes no more than a weak contrast (VRM) to the setting of the NHTs Industry position: Not Acceptable Reason: 20 miles is arbitrary. The language is also not clear that this only applies to contributing sections and it should only apply to contributing sections. The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM actions.#Authorize highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) on a case-by-case basis avoiding adverse impacts to the NHTs Industry Position: Acceptable. Case-by- case basis makes the most sense in the Known Sodium Leasing area where much of the area is already compromised by existing development.#Authorize highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) that are outside the National Trail Management Corridor only if the project causes no more than a weak contrast (VRM) as viewed from important corridor related National Historic and Scenic Trails features, contributing trail segments, high potential sites and segments, and other key observation points that contribute to the nature and purpose of the National Trails. Industry position: Not Acceptable Reason: The definition of important features, high potential sites and segments is not clear to allow for reasonable interpretation and planning. The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM actions. NHT specific actions should NOT apply outside of the NHT Management Corridor#Alternative C is acceptable | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. | | | Expansion Era (i.e., 1870-1940) roads would be managed according to their historical context. Era Roads are those routes developed after establishment of the Transcontinental Railroad in Wyoming in 1869. Management prescriptions similar to those in the Oregon/Mormon Pioneer National Historic Trails Management Plan would be applied, although the ¼-mile protective setback might not always be applied. Management actions would include development of activity plans with the objective of preserving the historical integrity of significant NRHP contributing segments. Activity plans may include NRHP nomination of those Expansion Era trails that qualify. Industry position: Not acceptable. Reason: BLM applies restrictions without conducting an analysis according to guidance. Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State#Historic roads and trails that are eligible for the NRHP but are not congressionally designated (these include, but are not limited to the Point of Rocks to South Pass Road and other Expansion Era roads and trails) will be managed according to their historical context and as follows: * Actions within 500 feet of a contributing segment of road or trail: - NSO for fluid minerals - Designate as a ROW avoidance area. For most projects, the setting will be analyzed out to one mile on either side of contributing segments of the historic roads and trails. For highly visible projects, impacts to setting will be analyzed on a case- by-case basis. Should any roads or trails be congressionally designated as part of the NHT system, they would be managed according to the prescriptions set forth in the National Historic Trails section. Industry position: Not acceptable. Recommend the addition of the Overland Trail so the historic context from Alternative is carried forward in the RMP Trails not designated as National Historic Trails (non- NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014 rather than applying broad-brush buffer and exclusion areas.#New Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014 rather than applying broad-brush buffer and exclusion areas. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13751-172 | MA #7021 Manage the Overland and Cherokee Trails to preserve the trail values, characteristics, and settings for which the trail was identified for study. Actions within ¼ mile of contributing trail segments: * CSU for fluid minerals * Closed to Oil Shale * Designate as a ROW avoidance area * Petition to segregate and withdraw from locatable mineral entry * Open to solid leasable minerals by subsurface methods only. For most projects, the setting will be considered out to three miles to either side of contributing portions of trail. Allow, on a case-by-case basis, highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) within five miles of the trail only if the project causes no more than a weak contrast (VRM) to the setting of the Overland or Cherokee Trails. Apply the National Historic Trail prescriptions (see National Historic Trails subsection) should any historic road or trail be designated as part of the National Historic Trail System. Industry position: Not acceptable. Reason: This alternative does not take into consideration the energy corridors that were designated on federal lands under Section 368 of the Energy Policy Act of 2005. Several of trail segments and proposed avoidance areas lie within the energy corridors and cannot be removed without undergoing NEPA. Further, the broad-brush ¼ mile ROW avoidance area is not acceptable. Trails not designated as National Historicl Trails (non- NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014 rather than applying broad-brush buffer and exclusion areas. Trails not designated as National Historicl Trails (non-NHT trails) should be managed as cultural resources under MAs 5000- 5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014 rather than applying broad-brush buffer and exclusion areas. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. |---|---|---|---|
| Congressionally Designated Trails (7000-7022) | | along similar trails with little to no significant impact to the wilderness experience.41The BLM does not explain the need to create such a significant buffer- and again, in doing so it particularly targets renewable energy development as clearly the ability to site wind farms and transmission lines will be most substantially impacted by this buffer. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13783-11 | Under Alternative B, BLM proposes to place a five-mile no oil and gas leasing/right-of- way exclusion buffer on either side of nationally designated trails (national historic trails). Between five and 15 miles of these same trails rights-of-way will be avoided and oil and gas leasing will be permitted only under controlled surface use stipulations. By contrast, current restrictions are limited to case-by-case restrictions and mitigation and avoidance of surface uses within 0.25-mile of designated trails. For trails that are eligible for designation, but not nationally designated, Alternative B would prohibit oil and gas leasing, except under NSO stipulations, within two miles of either side of the trail and exclude rights-of-way. "Highly visible" projects would be denied within 5 miles of eligible trails. When added to the proposed ACECs, these measures represent a massive expansion of the ROW exclusion zones in the planning area, jumping from approximately 430,000 acres to 2.5 million acres and a decrease in areas open to rights-of-way from 2.5 million to 1 million acres. Draft EIS at ES-5 BLM provides little justification for the proposed changes. Indeed, BLM states in the impact analysis that impacts to cultural resources (including trails) "from the management of ROWs would be similar to those described under Alternative A." Draft EIS at 1-146. Indeed, all federal actions in the planning area, regardless of their distance from historic trails, are subject to National Historic Preservation Act Section 106 consultation, including consultation with the State Historic Preservation Office ("SHPO") requiring resolution of adverse effects for undertakings adversely affecting eligible historic properties. That means that under current management, undertakings within the viewshed of these trails are already carefully examined, cautiously permitted, and subject to minimization and mitigation requirements in consultation with the SHPO. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13783-12 | Under BLM's proposed Alternative B, all discretion would be removed from the agency and SHPO to address adverse effects on a site-specific basis, in favor of a blanket restriction on surface uses within 2 miles of the trail and prohibition on "highly visible" uses within five miles of the trail. BLM does not explain why such drastic measures must be taken to protect a trail segment that has not been nationally designated and can be mitigated under current management. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13783-13 | Further, Wexpro specifically objects to BLM's proposed right-of-way exclusion area for the Cherokee Trail cutting a 4-mile-wide swath through the Vermillion Field. The below map shows the proposed ROW exclusion area (red shaded zones) in relation to the existing field. This same map is appended to this letter in full scale for ease of reference and so BLM can expand the file to better view the map key and other details. BLM's heavy-handed proposal would cripple ongoing oil and gas development, which has already been analyzed in the Vermillion Infill Environmental Assessment, by foreclosing off-lease facilities, transmission, and access in this active oil and gas field that has been in production already for 80 years. Specifically, even though Wexpro makes use of a system of existing connecting roads and gathering systems in the area,3 it is not possible to develop new wells without some off-lease rights-of-way. For Wexpro's 40-well development program in 2023, ten new rights-of-way were required for water haul routes, use of an evaporation pond, gathering pipelines, temporary surface water transfer lines, access roads, and well pads. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13783-14 | In many cases, the rights-of-way allow Wexpro to reduce surface impacts and provide operational flexibility. For instance, in 2023, an existing multi-well drilling location within the Alkali Gulch Unit Area was used to develop wells on acreage near, but outside the unit area. If no right-of-way was available, development outside the unit area would have required the construction of a new well pad on the outside acreage, building a road to access the well pad, and the laying of pipeline (water and gas) to the well pad. Rights-of-way often provide the flexibility necessary for operators to reduce surface disturbance and mitigate wildlife and cultural impacts. At the very least, designating much of the Vermillion Field as a right-of-way exclusion zone eliminates the ability to use off-lease infrastructure to minimize disturbance. But even more importantly, disallowing rights-of-way results in the impairment of existing rights by cutting off access to leased acreage. This blatant violation of Wexpro's existing lease rights specifically in the Vermillion Field for alleged protection of the Cherokee Trail is doubly concerning given that both BLM and the SHPO agreed to appropriate mitigation for the Cherokee Trail, which is being implemented as part of the Project. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-25 | Resource: Special Designations (SD) - Congressionally Designated Trails (7000-7022) Overland Trail, Green River to South Pass Trail, Emigrant Trail, and 1850 Cherokee Trail traverse the KSLA. The National Trail Management Corridor is not depicted on Map 2-32 if the area is defined as the "lands within 5 miles on each side of the NHTs and the Continental Divide National Scenic Trail and Connecting Side Trail." | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022 . Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionall | #13787-26 | The Lander RMP follows guidance (BLM Technical Reference 6280) to establish the boundaries of the Congressionally Designated Trails, including the setting of the trails as well as their nature and purpose. The BLM Rock Springs Field Office needs to reevaluate the boundaries of the Congressionally Designated Trails consistent | See Chapter 1.4 Planning Criteria for compliance with applicable laws. |---|---|---|---|
| y Designated Trails (7000-7022) | | with guidance. BLM Technical Reference 6280-1 states that "inventory, assessment, and monitoring (IAM) is guided by Bureau of Land Management (BLM) Manual 6280-Management of National Scenic and Historic Trails under Study or Recommended as Suitable for Congressional Designation-and is the responsibility of BLM staff to carry-out." In addition, it states that "IAM results can be used to establish a National Trail Management Corridor." The RMP needs to be revised to use the IAM results to establish a National Trail Management Corridor." In addition, Section 7(a)(2) of the National Trail System Act (as Amended in 2019) states that "Pursuant to section 5(a), the appropriate Secretary shall select the rights-of-way for national scenic and national historic trails and shall publish notice thereof of the availability of appropriate maps or descriptions in the Federal Register; Provided, That in selecting the rights-of-way full consideration shall be given to minimizing the adverse effects upon the adjacent landowner or user and his operation. Development and management of each segment of the National Trails System shall be designed to harmonize with and complement any established multiple-use plans for the specific area in order to insure continued maximum benefits from the land. The location and width of such rights-of-way across Federal lands under the jurisdiction of another Federal agency shall be by agreement between the head of that agency and the appropriate Secretary. In selecting rights-of-way for trail purposes, the Secretary shall obtain the advice and assistance of the States, local governments, private organizations, and landowners and land users concerned." In accordance with this, the RSFO needs to obtain the advice and assistance of the State, local governments, private organizations, and landowners and land users concerned when establishing the alternative rights-of-way for the national scenic and national historic trails. Further, per BLM Manual 1601, Land Use Planning, Section 6(G) "Policy - Valid Existing Rights. All decisions made in land use plans, and subsequent implementation decisions, will be subject to valid existing rights. This includes, but is not limited to, valid existing rights associated with oil and gas leases, mineral leases, mining claims, and lands and realty actions (e.g., rights-of-way, easements, leases, etc.). The BLM has the discretion, subject to the agreement of holders of valid existing rights, to modify proposed actions to reduce the effect of actions on resource values and uses. These modifications may be necessary to maintain the choice of alternatives being considered during land use plan development and implementation, and may include appropriate stipulations, relocations, redesigns, or delay of proposed actions." The RMP needs to be revised to recognize valid existing rights before establishing National Trail Management Corridors. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-28 | MAs #7017-7022 in the proposed Rock Springs RMP/DEIS incorrectly apply "NHT-like" restrictions to eligible but NOT congressionally designated trails ("non-NHT trails"). MAs #7017, #7018, #7019, #7020, #7021, #7022 should be removed altogether because they do not follow current rules, regulations, policy and guidance. Non-NHT trails are adequately covered by MAs #5000-5004. The correct procedure for non-NHTs is to follow the BLM/State Protocol and determine the impact to historical properties (including non-NHTs) on a case-by- case basis if the site can't be avoided, then buffers and other measures are to be determined through consultation. Section 106 of the National Historic Preservation Act recognizes the reality that some projects may unavoidably have conflicts due to siting, location, and/or logistical considerations. In such instances, the applicable rules, guidance, and practice is to minimize the impact and imposition of administrative requirements. The simple "no activity buffers" approach employed in the proposed RMP ignores this guidance | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-29 | Section V(D) of the State Protocol Between BLM and SHPO (Wyoming) signed August 25, 2014, states "A determination of effect is made after avoidance and minimization through standard treatment measures and/or best management practices (BMPs) have been integrated into the project design". It's clear that the effect of a project cannot be established until BMPs have been integrated into an individual project. The broad-brush approach of applying standard buffers to all sections of non-NHT trails found in MAs #7017-7022 goes against the Protocol already established between the BLM and Wyoming SHPO for management of cultural resources. | See Chapter 1.4 Planning Criteria and Chapter 5.1 Consultation and Coordination for discussion of coordination with SHPO and other agencies. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-30 | Further, before implementing any management actions related to the designated, but not historical trails, the BLM must accurately map the trails and then provide an opportunity for public comment. It appears that the BLM has mapped the Overland Trail in the Known Sodium Leasing Area using the USGS Quad maps (GLO mapping). The Quad maps in the KSLA are known to be inaccurate for the location of the Overland Trail. Actual experience with location of the Overland Trail, in consultation with SHPO, has shown its actual location to be several miles away on many of the segments compared to what is shown on the maps provided by the BLM in this resource management plan process. Without an accurate map of location, it is unreasonable to propose and apply any management actions that are not case- by-case. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. See Executive Summary, Chapter 4.1 and 4.2 for adequacy of data and analysis. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-82 | MA #7002 SD-01, HR-11 The area within ¼ mile or the visual horizon (whichever is less) of any contributing trail segment would be an avoidance area for surface disturbing activities. Developments such as roads, pipelines, and power lines may be allowed to cross trails in areas where previous disturbance has occurred and the trail segment has lost the characteristics that contribute to its National Register significance. Crossings may include additional disturbance of trail ruts in the areas where previous disturbances have occurred but the ruts themselves have not been disturbed. Development actions would be analyzed on a case-by-case basis through site- specific analysis to identify mitigation needs and meet management objectives. Industry Position: Acceptable Reason: Follows current laws and regulations. Designate lands within 5 miles on each side of the NHTs as the trail management corridor. Subject all actions within 5 miles on each side of the NHTs, except for highly visible projects and/or projects out of | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for surface disturbing activities and Congressionally Designated Trails in Chapter 2.2.6 management action 7002. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants), to the following restrictions: 1) closed to mineral leasing; 2) closed to mineral material sales; 3) a withdrawal would be pursued; 4) exclusion area for ROWs. Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Five miles is arbitrary and does not follow the National Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM admits in alternative D that the Western portion of RFSO has been compromised. The same restrictions for the full RFSO clearly do not take this reality into account. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful. Avoid surface disturbing activities within ¼ mile of any contributing NHT segment if it would be visible from the trail. Subject the area beyond ¼ mile from the NHTs to standard NHPA and BLM/SHPO Protocol measures to avoid, minimize, or mitigate effects to NHTs. Allow NHT crossings by ROWs in areas where trail ruts have been modified by modern uses, where previous crossings exist, or where new corridor crossings would not damage trail remains. Industry position: Acceptable Reason: Follows current laws and regulations. This alternative supports trona development in the KSLA while still protecting contributing sections of key trails because it keeps management of trails largely similar to the existing successful trails management in the KSLA where the BLM already acknowledges that the area is compromised by development and thus not good candidate for meeting BLM's objective of "Preserve and Protect the …historical setting". Additionally, this alternative provides for more substantive trails management in areas where there are larger concentrations of contributing segments and the trails reside in less developed areas that provide a potential opportunity to meet BLM's objective of "Preserve and protect the…historical setting. Designate lands within 5 miles on each side of the NHTs and the Continental Divide National Scenic Trail and Connecting Side Trail as the National Trail Management Corridor. The BLM and SHPO have agreed that the setting of the NHT in parts of the Western portion of the RSFO has been compromised by existing development. In this area, the National Trail Management Corridor will be reduced to ¼ mile on either side of NHT ruts and swales. The area within ¼ mile on either side of a NHT will be closed to Oil Shale. Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Five miles is arbitrary and does not follow the National Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. The BLM needs to define the "Western portion of the RSFO" in the RMP. Alternatives A and C are acceptable. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-83 | MA #7003 SD-01, HR-11 No similar action Subject all actions within five to 15 miles on each side of the NHTs, except for highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants), to the following restrictions: 1) open to mineral leasing with CSU restrictions, 2) open to mineral material sales with CSU restrictions, 3) open to locatable minerals; 4) is a ROW avoidance area with CSU restrictions. Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. Fifteen miles is arbitrary and does not follow the Nation Trails System Act. Restrictions should not include non-contributing sections. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful. No similar action Industry position: Acceptable Reason: See MA #7002 Apply the following actions within the National Trail Management Corridor: * National Trail Management Corridor is a CSU for fluid minerals. * The area within ¼ mile on either side of a NHT will be closed to Oil Shale. * Surface disturbing activities will be prohibited if the project causes more than a weak contrast (VRM) to the setting of the National Historic and Scenic Trails. * Designate as a ROW avoidance area. * Allow new ROWs if it is determined by the AO that impacts associated with the action will not cause an adverse effect to the National Historic and Scenic Trails. * Allow mineral material disposals if it is determined by the AO that impacts associated with the action will not cause an adverse effect to the National Historic and Scenic Trails. * Allow new surface disturbing activities only if they will not cause an adverse effect to the National Historic and Scenic Trails. Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. This alternative does not take into consideration the energy corridors that were designated on federal lands under Section 368 of the Energy Policy Act of 2005. Several of trail segments and proposed avoidance areas lie within the energy corridors and cannot be removed without undergoing NEPA. Restricting actions without consulting States, local governments, private organizations, and landowners and land users concerned is unlawful. Avoid surface disturbing activities within ¼ mile of any contributing NHT segment if it would be visible from the trail. Subject the area beyond ¼ mile from the NHTs to standard NHPA and BLM/SHPO Protocol measures to avoid, minimize, or mitigate effects to NHTs. Allow NHT crossings by ROWs in areas where | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for restrictions within the corridor for Congressionally Designated Trails in Chapter 2.2.6 management action 7003. Analysis of impacts for actions in each alternative is found in Chapter 4. |

|---|---|---|---|
| | | trail ruts have been modified by modern uses, where previous crossings exist, or where new corridor crossings would not damage trail remains. Language is taken from Alternative C of MA #7002 | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-84 | MA #7004 SD-01, HR-11, HR-10 No similar action Industry position: Acceptable Designate the NHT and associated landscape as: * VRM Class II objectives within 15 miles in all directions. * VRM Class II objectives for all designated NHT crossings. Industry position: Not acceptable Reason: The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM classifications. Designate ¼ mile on either side of NHT trail segments as VRM Class II objectives. Industry position: Not acceptable Reason: The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM classifications. Designate the National Trail Management Corridor as VRM Class II. Manage existing utility crossings within the National Trail Management Corridor as VRM Class III. On contributing segments of NHT or other historic trails within the checkerboard land pattern area, manage the setting to preserve the existing character of the landscape to the extent possible within federally-managed lands. Industry position: Not acceptable Reason: BLM is required to adhere to Section 7(a)(2) of the NHSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. Alternative A is acceptable. Otherwise, the alternative should include a discussion on how BLM will use Technical Reference 6280, in consultation with SHPO, to inventory, assess, and monitor NHTs on a case-by-case basis when an action is in proximity to an NHT. The results should be used to establish management objectives. | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for VRM classes and Congressionally Designated Trails in Chapter 2.2.6 management action 7004. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-85 | MA #7005 SD-01, SD-02 No similar action On contributing segments of NHT or other historic trails within the checkerboard land pattern area, manage the setting to preserve the existing character of the landscape to the extent possible within federally-managed lands and on non- federal land when activity is part of a federal undertaking (connected action). Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM Manual 6280 requires consideration of "How to minimize adverse impacts, to the extent practicable, on adjacent landowners, users, and operations". "[T]o the extent possible" as proposed in this MA does not minimize adverse impacts on adjacent users. Rather, replacement of that language with "to the extent practicable and commercially viable" would be in line with 6280 guidance. Further, the RMP planning process should not be used to sanction controls on non-federal lands where such management is not authorized by FLPMA. Same as Alternative B Industry position: Not acceptable Reason: Alternative is not in accordance with BLM Land Use Planning Manual 1601, Section 6(G) Valid Existing Rights. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. BLM Manual 6280 requires consideration of "How to minimize adverse impacts, to the extent practicable, on adjacent landowners, users, and operations". "[T]o the extent possible" as proposed in this MA does not minimize adverse impacts on adjacent users. Rather, replacement of that language with "to the extent practicable and commercially viable" would be in line with 6280 guidance. Further, the RMP planning process should not be used to sanction controls on non- federal lands where such management is not authorized by FLPMA. See management action 7004. Industry position: Not acceptable Reason: BLM is required to adhere to Section 7(a)(2) of the NHTSA when establishing the trail management corridor for historic trails. In addition, the BLM should follow technical reference 6280 to inventory, assess, and monitor NHTs. Alternative B would be acceptable with replacement of "to the extent possible" with "to the extent practicable and commercially reasonable" along with removal of the reference to non-federals lands. | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for highly visible projects and Congressionally Designated Trails in Chapter 2.2.6 management action 7005. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-86 | MA #7006 SD-01, HR-11, HR-10 No similar action. Highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) could be authorized within 20 miles of the NHT only if the project causes no more than a weak contrast (VRM) to the setting of the NHTs Industry position: Not Acceptable Reason: The use of 20 miles is arbitrary. The language is also not clear that this only applies to contributing sections and should only apply to contributing sections. The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM actions. Authorize highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) on a case-by-case basis avoiding adverse impacts to the NHTs Industry Position: Acceptable The use of case-by-case basis makes the most sense in the Known Sodium Leasing area where much of the area is already compromised by existing development. Authorize highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) that are outside the National Trail Management Corridor only if the project causes no more than a weak contrast (VRM) as viewed from important corridor related National Historic and Scenic Trails features, contributing trail segments, high potential sites and segments, and other key observation points that contribute to the nature and purpose of the National Trails. Industry position: Not Acceptable Reason: The definition of important features, high potential sites and segments is not clear to allow for | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for highly visible projects and Congressionally Designated Trails in Chapter 2.2.6 management action 7006. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| | | reasonable interpretation and planning. The IAM methodology described in Technical Reference 6280 should be used to establish the VRM classifications for the NHTs and crossings. Without completing a viewshed analysis of the NHTs the BLM cannot arbitrarily establish VRM actions. NHT specific actions should NOT apply outside of the NHT Management Corridor. Alternative C is acceptable. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-87 | MA #7014 SD-01, HR-11 No similar action Industry Position: Acceptable Reason: Follow current rules, regulations and policy New audible and atmospheric effects would not exceed current levels existing along NHT corridors. Industry Position: Not acceptable Reason: Atmospheric effects are not defined and are arbitrary as noted and must be removed. There are no known/established audible restrictions for trails and the National Trails System Act has no references to audible impacts. If audible impacts are of concern, then impacts from federal actions such as the FAA should be considered. Such impacts are likely greater than industrial impacts. Additionally, there is no outlined method to measure such effects so the restriction can't be evaluated. Subject projects creating new audible and atmospheric effects to NHTs to measures in the NHPA to avoid, minimize or mitigate those effects. Industry Position: Not acceptable Reason: Atmospheric effects are not defined and are arbitrary as noted and must be removed. There are no known/established audible restrictions for trails and the National Trails System Act has no references to audible impacts. If audible impacts are of concern, then impacts from federal actions such as the FAA should be considered. Such impacts are likely greater than industrial impacts. Additionally, there is no outlined method to measure such effects so the restriction can't be evaluated. Allow actions that introduce new audible and atmospheric levels that exceed current levels in the National Trails Management Corridor only if they do not cause adverse impacts to the congressionally designated trails. Industry Position: Not acceptable Reason: Atmospheric effects are not defined and are arbitrary as noted and must be removed. There are no known/established audible restrictions for trails and the National Trails System Act has no references to audible impacts. If audible impacts are of concern, then impacts from federal actions such as the FAA should be considered. Such impacts are likely greater than industrial impacts. Additionally, there is no outlined method to measure such effects so the restriction can't be evaluated. Alternative A is acceptable. | See Chapter 1.4 Planning Criteria for compliance with applicable laws. A range of alternatives has been analyzed for audible and atmospheric effects and Congressionally Designated Trails in Chapter 2.2.6 management action 7014. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-88 | MA #7017 SD-02, HR-09 Management of historic roads and trails that are eligible for the NRHP but are not congressionally designated would generally be the same as for designated trails including a ¼-mile protective setback on either side of the trails. These trails may be recommended for listing to the NRHP. These trails include the Overland Trail, the Cherokee Trail, and the Point of Rocks to South Pass Road. Industry position: Not acceptable Reason: The reference to "generally the same as for designated trails" as the proposed management actions for designated trails are not acceptable for eligible but not designated trails. Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming), signed August 25, 2014, rather than applying broad-brush buffer and exclusion areas. Manage historic roads and trails that are eligible for the NRHP but are not congressionally designated (these include, but are not limited to, the Overland Trail, the Cherokee Trail, the Point of Rocks to South Pass Road and other Expansion Era roads and trails), as follows: Within ½ mile on either side of an intact trail or road segment, unless the proposed project and its associated impacts are not visible from the road or trail, would be: 1) open to mineral leasing with NSO restrictions; 2) closed to mineral material sales; 3) an exclusion area for new right-of- way; 4) pursue withdrawal from mineral location. ½ to two miles on each side of the intact road or trail segment, unless the proposed project and its associated impacts are not visible from the road or trail, would be: 1) open to mineral leasing with NSO restrictions; 2) closed to mineral material sales; 3) an exclusion area for new right-of- way; 4) open to locatable minerals. Two to five miles on each side of the intact road or trail segment, unless the proposed project and its associated impacts are not visible from the road or trail, would be: 1) open to mineral leasing with CSU restrictions; 2) open to mineral material sales with CSU restrictions, 3) open to new right- of-way with CSU restrictions; 4) open to locatable minerals. Deny highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, and power plants) within zero to five miles on each side of intact segments of the road or trail unless the project and its associated impacts are not visible from the road or trail. Should any roads or trails be congressionally designated as part of the NHT system, they would be managed according to the prescriptions set forth in the National Historic Trails section. Various Expansion Era (i.e., 1870 to 1940) roads would be managed according to their historical context. Era Roads are those routes developed after the establishment of the Transcontinental Railroad in Wyoming in 1869. Management prescriptions similar to those in the Oregon/Mormon Pioneer National Historic Trails Management Plan would be applies, Manage, on a case-by-case basis based on their resource values, historic roads and trails that are eligible for the NRHP but are not congressionally designated (these include, but are not limited to, the Overland Trail, the Cherokee Trail, the Point of Rocks to South Pass Road and other Expansion Era roads and trails). Provided such actions do not occur directly on the historic road, actions along the intact road or trail segments would be: * Open to mineral leasing with standard lease stipulations * Open to mineral material sales * Open to new right-of-way * Open to locatable minerals. Manage highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, and power plants) with the following restrictions from zero to five miles on each side of intact segments of the road or trail unless the project and its associated impacts are not visible from the road or trail. Should any roads or trails be congressionally designated as part of the NHT system, they | See Chapter 1.4 Planning Criteria and Chapter 5.1 Consultation and Coordination for discussion of coordination with SHPO and other agencies. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

|---|---|---|---|
| | | would be managed according to the prescriptions set forth in the National Historic Trails section. Various Expansion Era (i.e., 1870-1940) roads would be managed according to their historical context. Era Roads are those routes developed after establishment of the Transcontinental Railroad in Wyoming in 1869. Management prescriptions similar to those in the Oregon/Mormon Pioneer National Historic Trails Management Plan would be applied, although the ¼-mile protective setback might not always be applied. Management actions would include development of activity plans with the objective of preserving the historical integrity of significant NRHP contributing segments. Activity plans may include NRHP nomination of those Expansion Era trails that qualify. Industry position: Not acceptable Reason: BLM applies restrictions without conducting an analysis according to guidance. Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Historic roads and trails that are eligible for the NRHP but are not congressionally designated (these include, but are not limited to the Point of Rocks to South Pass Road and other Expansion Era roads and trails) will be managed according to their historical context and as follows: * Actions within 500 feet of a contributing segment of road or trail: - NSO for fluid minerals - Designate as a ROW avoidance area. For most projects, the setting will be analyzed out to one mile on either side of contributing segments of the historic roads and trails. For highly visible projects, impacts to setting will be analyzed on a case- by-case basis. Should any roads or trails be congressionally designated as part of the NHT system, they would be managed according to the prescriptions set forth in the National Historic Trails section. Industry position: Not acceptable Reason: Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming), signed August 25, 2014, rather than applying broad-brush buffer and exclusion areas. Trails not designated as National Historic Trails (non-NHT trails) will be managed as cultural resources under MAs #5000-5004. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-89 | although the ¼- mile protective setback might not always be applied. Management actions would include development of activity plans with the objective of preserving the historical integrity of significant NRHP contributing segments. Activity plans may include NRHP nomination of those Expansion Era trails that qualify. Industry position: Not acceptable Reason: BLM applies restrictions without conducting an analysis according to guidance. Trails not designated as National Historic Trails (non-NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming), signed August 25, 2014, rather than applying broad-brush buffer and exclusion areas. Protocol Between BLM and SHPO (Wyoming), signed August 25, 2014, rather than applying broad-brush buffer and exclusion areas. | See Chapter 1.4 Planning Criteria and Chapter 5.1 Consultation and Coordination for discussion of coordination with SHPO and other agencies. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13787-91 | MA #7021 SD-02 HR-09 No similar action Industry Position: Acceptable No similar action No similar action Manage the Overland and Cherokee Trails to preserve the trail values, characteristics, and settings for which the trail was identified for study. Actions within ¼ mile of contributing trail segments: * CSU for fluid minerals * Closed to Oil Shale * Designate as a ROW avoidance area * Petition to segregate and withdraw from locatable mineral entry * Open to solid leasable minerals by subsurface methods only. For most projects, the setting will be considered out to three miles to either side of contributing portions of trail. Allow, on a case-by-case basis, highly visible projects and/or projects out of scale with the surrounding environment (e.g. wind farms, gas plants, large transmission lines, and power plants) within five miles of the trail only if the project causes no more than a weak contrast (VRM) to the setting of the Overland or Cherokee Trails. Apply the National Historic Trail prescriptions (see National Historic Trails subsection) should any historic road or trail be designated as part of the National Historic Trail System. Industry position: Not acceptable Reason: This alternative does not take into consideration the energy corridors that were designated on federal lands under Section Trails not designated as National Historic Trails (non-NHT trails) will be managed as cultural resources under MAs 5000-5004. BLM will apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol between BLM and SHPO (Wyoming), signed August 25, 2014. Management Actions Analysis Table MA# Goal/Obj. Alternative A Alternative B Alternative C Alternative D Proposed Alternative 368 of the Energy Policy Act of 2005. Several of trail segments and proposed avoidance areas lie within the energy corridors and cannot be removed without undergoing NEPA. Further, the broad-brush ¼ mile ROW avoidance area is not acceptable. Trails not designated as National Historicl Trails (non- NHT trails) should be managed as cultural resources under MAs 5000-5004. BLM needs to apply guidance as outlined in Section 106 of the National Historic Preservation Act and the State Protocol Between BLM and SHPO (Wyoming), signed August 25, 2014, rather than applying broad-brush buffer and exclusion areas | See Chapter 1.4 Planning Criteria and Chapter 5.1 Consultation and Coordination for discussion of coordination with SHPO and other agencies. A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13826-4 | I would like to add a comment about the Historic Sites and Trails; the Oregon Trail, Overland Trail, Mormon Trails, the Parting of the Way, South Pass area and the other historic sites. I noted that the Alternative B plan and the Alternative D plan both say these would no longer be under the management of BLM. I am not sure what this exactly means. Will these be available for tourist and visits? Will they be left to go back to their natural state and not be cared for? I would like more clarification on this. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13826-7 | SD-01: Preserve and protect the historical remains and historical settings of congressionally designated National Historic Trails (e.g., Oregon, California, Mormon- Pioneer and Pony Express) and NHT-related resources (e.g., camps, graves, inscription sites, stations, natural landmarks). My Concern: These places should be made accessible because they are congressionally designated as national Historic trails. They need to be maintained and made accessible to all people. This can't be done if they are placed in a special designation or within ACECs. This would also involve the Continental Divide Trail. Also some of these sites have religious and spiritual and family heritage significance and need to be accessible to members of the public that have links to these. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13826-8 | SD-02: Preserve and protect the historical remains and historical settings, if appropriate, of other trails and roads that are eligible for the NRHP but are not congressionally designated. These roads and trails include, but are not limited to, the Overland Trail, the Cherokee Trail, the Point of Rocks to South Pass Road, and Expansion Era Roads. My Concern: These trails need to be maintained and made available for the public to access. They provide an educational and cultural experience and link to our American past. I believe this needs to be done with respect and involvement with the people these sites have significance to. | A range of alternatives has been analyzed for management of eligible but not designated trails in Chapter 2.2.6 management actions 7017-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13856-1 | While we appreciate the attention paid to and the retention of the SRMA for the CDT, such designation may not be the top priority if other management actions occur. The Agency's Preferred Alternative B would provide for the most ideal CDT experience by optimizing conservation efforts in the area, particularly for the CDT's scenic integrity. The attention that Alternative B gives to ACEC's is a top priority for CDTC, as the management criteria for an ACEC can help to retain the character of the CDT through conservation efforts that support wildlife and plant life habitat, biodiversity, migration corridors, and a more remote, primitive experience on the trail. Additionally, the actions identified in Alternative B and partially Alternative D would provide a generous buffer from development such as extractive activities, renewable energies, and other actions that could potentially degrade the environment surrounding the CDT and, consequently, the CDT Experience. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13856-3 | To help achieve the stewardship goals of a National Scenic Trail, we encourage the Rock Springs BLM office to employ the BLM's National Scenic and Historic Trail Inventory, Assessment, and Monitoring Methodology to identify the holistic values of the trail in the area - cultural, historic, scenic, etc.. The standards set forth in the IAM Methodology for National Scenic Trails helps to safeguards the nature and purposes of the CDT, ensures compliance with requirements across jurisdictions, provides consistent and repeatable processes for a Congressionally-designated resource spanning multiple field offices in the state, and identifies opportunities for innovative and adaptable management practices on the ground. Combined with consultation with partners and community members, CDTC urges the utilization of these standards and practices to determine the suitability of all BLM actions taking place within the Continental Divide landscape. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13856-4 | In 2024, CDT conducted a small business survey to gather data on the impact of the CDT for business owners and their community, and while report has not been published, these results from our 2022 Small Business Survey can help to give an idea of the importance of the CDT for local economies is: 90% of all respondents believe protecting, promoting, and enhancing public lands is important to the well-being of businesses, jobs, and their community's economy - 80% have seen growth in business in their community at large due to use of the CDT since 2014 - 70% of respondents support the 30x30 initiative to protect 30% of lands and waters in the continental U.S. by 2030 - 70% of respondents reported that trail users spend money and have a positive impact on their revenue - 60% have experienced growth in their business in particular due to use of the CDT since 2014 | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13899-19 | the establishment of viewshed protections for the main branches of the Oregon-California- Mormon National Historic Trails with an adjustment to the corridor. We ask the BLM to adjust the blanket 5-mile (on each side of the trails) corridor to instead parallel the management set forth for the National Historic Trails (NHTs) Management Corridor in the Lander Resource Management Plan67 - to have the protections extended up to five miles on each side according to a viewshed analysis. Within this corridor, the proposed closures in Alternative B for fluid mineral leasing, exclusion of rights-of-way, proposed withdrawal for locatable minerals, and closure for salable minerals are appropriate. We believe this management direction should be applied to the entire National Historic Trails management corridor and all branches of the National Historic Trails (including the Lander Road) from the Lander-Rock Spring Field Office to U.S. Highway 191. From U.S. Highway 191 to the western field office boundary, we believe this management regime, within a buffer of up to five miles, should be applied to all "high potential"68 trails segments-for those in poorer condition, the buffer can be reduced to a ½ mile. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13899-20 | We do not support the proposed management in Alternative B that excludes rights-of-way along these trails and up to 2 miles on either side71 - particularly where these trails conflict with the actions we support regarding the designation of West-Wide Energy Corridors (we discuss this below in more detail but will note we support where the Energy Corridors cross historic trails). We believe a more targeted approach in the public-private land checkerboard is warranted: apply Rights-of-Way exclusion to the intact and National Register-eligible sections of trail itself. For the viewshed buffer, ROW avoidance is merited within a 1/2 mile of each side of the intact and eligible sections. Additionally, where avoidance and exclusion are not achievable, we ask the BLM to invest in significant mitigation measures to preserve the history of these trails: including having the agency support | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |

|---|---|---|---|
| | | documentation, development of exhibits, and other educational opportunities that help provide learning opportunities about these routes and their history. | |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13904-10 | MA 7004 Alt B is particularly arduous. Fifteen miles in VRM class II and Five miles on either side of the NHT is too far, ¼ mile is much more realistic because the ramifications of a vrm class II rating make it difficult to impossible to make a range improvement like a water tank or some other benefit to both livestock and wild life. | A range of alternatives has been analyzed for VRM classes and Congressionally Designated Trails in Chapter 2.2.6 management action 7004. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13925-4 | . Congress did not designate South Pass due to the private lands affected and efforts to establish South Pass Historic Trail or Landmark District due to lack of landowner consent. The DEIS incorrectly assumes the integrity of the other trail segments and nevertheless imposes a 5-mile buffer on each side. Work on the Hiawatha Infield EIS raised significant questions about the integrity and location of Cherokee Trail segments and those reports disprove the draft RMP's scenic buffer and management as an historic trail. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 832 - Special Designations–Congressionally Designated Trails (7000-7022) | #13974-11 | The well-preserved condition and number of intact historic trail and wagon road miles in this Field Office warrant serious protection. Ideally and for continuity, the Rock Springs RMP would match the National Historic Trails protections outlined in the Lander Field Office RMP, with similar viewshed protections and NSO conditions. For Management Actions 7001-7006, Alternative D provides the most balanced approach, acknowledging that viewshed in certain parts of the National Historic Trails has been compromised. | A range of alternatives has been analyzed for Congressionally Designated Trails in Chapter 2.2.6 management actions 7000-7022. Analysis of impacts for actions in each alternative is found in Chapter 4. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #4026-9 | Chapter 3.22.2 Wilderness Study Areas (WSA). In order for an area to have been designated a WSA, those lands had to have been determined to possess wilderness characteristics. In other words, all WSAs are also LWCs. I have participated in the BLM WSA process since the late 1970s and have been dismayed over the years when politicians sponsored legislation to unilaterally remove WSA status from BLM lands that underwent extensive agency review and public comment. I fully support Alternative B, where if an existing WSA has that status removed, those lands would still be considered LWCs and will subsequently be managed to protect those wilderness characteristics. This proposed management falls completely within the guidelines of Chapter 1.6 A of BLM Manual 6310. | A range of alternatives has been analyzed for potential dismissal of Wilderness Study Areas in Chapter 2.2.6, Special Designations - Wilderness Study Area, Management Action 7101. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13287-1 | For example, wilderness inventories have identified lands with wilderness characteristics that do not qualify for protection solely because they are consolidated into 640-acre units, and which would fully qualify for wilderness (and Wilderness Study Area) protections if they were in consolidated federal ownership. A National Conservation Area proposed for the Red Desert (Attachment 1) includes checkerboard lands, whose management would be complicated by intermixed private lands and minerals. Sage grouse Priority Habitat Management Areas exist in checkerboard lands, and it is difficult to apply the full level of prescribed protections to these checkerboard portions due to fragmented land ownership patterns. Wildlife migration corridors cross the checkerboard, and their conservation is impeded by the presence of private inholdings. Alternative B considers providing public access to public lands across private property at the landowner's request (DEIS at 2-109); if access is to be granted only on a request basis, it should be at the public's request rather than the landowner's. | See chapter "3.22.2 Special Designations - Wilderness Study Areas" for reference of wilderness qualifiers and BLM manuals. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13515-5 | Instead of independent (large and small) ACEC management direction, RMEF recommends that specific management treatments and decisions be made at the project level where potential impacts can be better assessed. Special Designation Wilderness designation (Wilderness Areas - WA, Lands with Wilderness Characteristics - LWC, and Wilderness Study Areas - WSA) and ACECs often restrict various active land management activities that are needed to ensure healthy, sustainable landscapes. This concept is embedded in several proposed land use designations. RMEF supports active management on our public lands to benefit wildlife habitat and manage fire risk. Given the current conditions of many public forests and rangelands, RMEF supports planning components that limit additional wilderness and other special designations that limit management. | Wilderness Study Area designation process is covered in section 3.22.2. Alternatives for management are analyzed in Chapter 2.2.6, section Special Designations, Wilderness Study Area, management actions 7100-7103. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13542-66 | Literature Cited. The Wilderness Society. 2007. LC-15 This report uses data from 2005 and prior. The report is very generalized and discusses the entire western USA. The area being analyzed for the RMP should not use generalized statements that apply to Idaho, Montana, Wyoming, Utah, Colorado, and New Mexico. Statistics presented within the report end in 2005 and do not look at any of the large economic impacts in the last 18 years for farming and ranching, mining, oil and gas extraction, or the timber industry. This report also implies that processional and service sectors are not used in and support those industries previously stated. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | Socioeconomic analysis methods are adequately covered in section 4.22.2. See also Chapter 3 Introduction for a description of baseline conditions for analysis. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13624-15 | Several areas within the RMP have been identified as wilderness study areas. The purpose of a wilderness study area is to protect a specific location until Congress formally designates the location as "wilderness". Alternative B states that "should Congress not designate the [wilderness study areas] in the planning area (partially or wholly) as wilderness, the management of the identified areas would be for wilderness values." Draft EIS, Management Action 7101, Ch. 2, p. 2-152. Managing for wilderness values appears to imply that areas not designated as | See update to section 2.2.6, Special Designations, Wilderness Study Areas (7101) - correction See also Glossary for definition of 'wilderness characteristics'. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | "wilderness" by Congress would, instead, be managed as wilderness by BLM. The term "wilderness values" is not defined and does not appear to be a consistently used or legally binding term. BLM should provide additional information describing what it means to manage for "wilderness values". Allowing BLM to manage land as "wilderness" when it has not been designated as "wilderness" ignores congressional intent and overrides congressional power to designate a wilderness area in accordance with 16 U.S.C. 1132(b). Even if areas outside of a designated Wilderness Study Areas are to be managed for "wilderness values", such areas need to be clearly defined, identified and the impacts of such management identified and articulated. However, management for "wilderness values" should not be used as a work-around Congress' role in the lawful designation of wilderness. | |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-64 | Please provide to the public the results of now decades old wilderness studies as part of this RMP so congress can make a decision. | Congressional decisions on wilderness are outside of the scope of this RMP. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-65 | It appears BLM really does not care what Congress decides, they will manage the area for wilderness values. | Alternatives adequately covered in section 2.2.6, Special Designations, Wilderness Study Areas, Management Actions 7100-7103. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-66 | As stated previously, BLM will analyze lands with wilderness characteristics as part of the planning process." BLM must provide the results of its analysis of the wilderness study areas in this RMP. The only analysis available to the public is the 2011 Wilderness Characteristics Inventory, which includes a form for each area | Wilderness Study Area designation process is covered in section 3.22.2. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-67 | This is the only publicly available information regarding the wilderness analysis that has been completed in the past 47 years. This analysis is completely lacking in depth and true analysis as required by BLM policy. Without unbiased scientific study, monitoring and reporting, how is Congress to ever decide on these study areas? BLM should conduct a true wilderness study as part of this planning process for each of the areas suggested to have wilderness characteristics and WSA's, submit a report of their findings to Congress, obtain Congress' determination, and only then include suitable areas into the Draft RMP/DEIS. | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-68 | Further, the Draft RMP/DEIS 2011 Wilderness Characteristics Inventory includes some mapping but the illustrations are by township/range rather than by wilderness characteristic or study area. This is misleading to the reader, and it makes a determination of anthropogenic impacts unclear. | Map 3-21: Lands With Wilderness Characteristics adequately displays lands that meet criteria for consideration. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-69 | The illustrations below show one example of a wilderness study area and the linear features therein. This exercise to map linear features was completed within a few hours, so a more detailed study would likely result in the mapping of more linear features. The exercise was not intended to be exhaustive, but illustrative. The illustrations below show one example of a wilderness study area. The area shown is Devil's Playground WSA and Twin Butte WSA, with the draft RMP/DEIS proposed Pine Springs ACEC. Using 2019 NAIP imagery, the red lines show the anthropogenic linear features such as roads, two-tracks, and fences. This is more 'study' of the WSA in a few hours, than what appears to have been completed by BLM in the past 47 years, based on what is publicly available. This type of analysis and study should be included in the report to congress to assist them in determining what should be studied as a wilderness or not. This area clearly has a significant amount of linear features and is absolutely not a roadless area, it has extensive livestock grazing including stock dams and reservoirs. Further, it has significant human induced noise from the nearby highways and from motorboats on the adjacent Flaming Gorge National Recreation Area. In conclusion, the work of man's hand is noticeable and as such should not meet Congress' need for further study as a wilderness and it is the duty of BLM to provide unbiased reporting to Congress. Figure 7. Wilderness study area - aerial mapping of roads and fences | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-101 | BLM did not meet the standard of "hard look" in preparing the Draft RMP. A "hard look" requires reliance on the best, most current data available. The "hard look" standard was intended not only to make sure the agency made an informed decision but to assure the public and affected parties were provided a clear understanding of the impacts of the Draft RMP. BLM has not taken a "hard look" at wilderness study areas and as a result those areas remain in limbo. | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. See also Chapter 3 Introduction for a description of baseline conditions for analysis. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13751-173 | MA #7101 Should Congress not designate areas (partially or wholly) as wilderness, the management of the nondesignated areas would be in accordance with the approved Green River RMP or as otherwise directed by Congress. Industry Position: Not acceptable Reason: The non-designated areas fall into an interim policy under the RMP and no action ever occurs. Page 23-24 of the Final Scoping Report: "WSAs will continue to be managed under the Interim Management Policy for Lands under Wilderness Review until Congress either designates all or | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. Alternatives for management are analyzed in Chapter 2.2.6, section Special Designations, Wilderness Study Area, management actions 7100-7103. |

Resource: Special Designations (SD) - ACECs (7400-7570) | |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13806-1 | This is a testament to the long-standing value placed upon such wilderness areas by Wyomingites and the risks they face if not adequately protected. I believe this provides justification for special management under such tools as overlapping ACECs as well as the commitment from the BLM in the preferred alternative to manage these areas for their wilderness values even if released by congress. I recommend retaining both in the final plan (In reference to management action 7101). | A range of alternatives has been analyzed for potential dismissal of Wilderness Study Areas in Chapter 2.2.6, Special Designations - Wilderness Study Area, Management Action 7101. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13899-13 | E. BLM should manage Wilderness Study Areas and their viewsheds to protect wilderness quality. We support the management direction of MA 7101 in Alternative B that states "should Congress not designate the WSAs in the planning area (partially or wholly) as wilderness, the management of the identified areas would be for wilderness values."36 We also support MA 7103 in Alternative B, which adds a viewshed buffer around WSAs, managing three miles around each WSA (or the visual horizon, if it is closer) as Visual Resource Management Class II.37 These are important management actions for maintaining the wilderness character of these units. Furthermore, we support Areas of Critical Environmental Concern designations proposed in Alternative B that include and overlap WSAs. These important administrative prescriptions add an additional layer of protection and natural habitat connectivity to those areas not yet permanently protected. Maintaining ACEC boundaries as proposed under Alternative B to include protections for current WSAs aligns with national habitat connectivity priorities and BLM direction that ACECs are to be as large as is necessary to protect the important and[...] relevant values38. Those important and relevant values do not dissipate at WSA boundaries, are often distinct from wilderness characteristics, and yet provide important protections for wildlife and plant communities and cultural resources that contribute to a WSAs naturalness and undeveloped character. | A range of alternatives has been analyzed for potential dismissal of Wilderness Study Areas in Chapter 2.2.6, Special Designations - Wilderness Study Area, Management Action 7101. ACEC Alternatives are adequately analyzed in Chapter 2.2.6, MA #s 7400-7570. |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #13899-14 | BLM should consider new Wilderness Study Areas during this planning process. BLM has authority under FLPMA Section 202 to designate lands as Wilderness Study Areas (WSAs) to ensure their durable conservation management.39 WSAs provide the most consistent and durable opportunity to protect wilderness characteristics and undisturbed public lands through land-use planning process. Designating an area as a WSA under FLPMA Section 202 is consistent with BLM's mandate to manage public lands for multiple use and sustained yield, including preservation of wilderness resources, while ensuring decisions about the future of these lands are made with consideration of public input. WSAs designated administratively through NEPA processes offer ample | Wilderness Study Area designation process is covered in section 3.22.2. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | opportunities for public input, collaboration with local communities, and transparent decision-making. WSA management, clearly outlined in BLM Manual 6330, provides certainty for these resources as compared to other case-by-case management decisions for other special designations. We believe BLM should consider designating new Section 202 WSAs in the Rock Springs Field Office. The draft Rock Springs RMP and EIS fails to analyze new WSA designations. When BLM commits and brings into compliance its LWC inventory, as outlined above, we believe the agency should analyze the potential to manage LWC units, especially those adjacent to existing WSAs, as Wilderness Study Areas. This includes the LWC units adjacent to Devil's Playground, Twin Buttes, Honeycomb Buttes, Oregon Buttes, Buffalo Hump, Whitehorse Creek, and Red Creek Badlands WSAs. | |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #14023-1 | I recommend that Lands with Wilderness Characteristics (LWC) be managed as Wilderness. * I recommend that WSA and LWC be designated and managed as non-mechanized (non-motorized and no bicycle) areas. | Wilderness Study Area designation process is covered in section 3.22.2. Alternatives for management of Lands with Wilderness Characteristics are analyzed in Chapter 2.2.6 Section Physical Resources - Lands with Wilderness Characteristics, Management Actions (1500-1517). |
| 833 - Special Designations–Wilderness Study Areas (7100-7103) | #14023-4 | I recommend that current Wilderness Study Areas (WSA) be managed for their wilderness values even if they are released by congressional action. | A range of alternatives has been analyzed for potential dismissal of Wilderness Study Areas in Chapter 2.2.6, Special Designations - Wilderness Study Area, Management Action 7101. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #9227-1 | Regarding the first factor, we were able to find a digital version of the 1992 analysis of Wild and Scenic eligible and suitable streams for the Green River Resource Area (the former name of the Rock Springs Resource Area), but the complete report was not included in the appendices of this draft RMP and EIS. Therefore, members of the public were not able to review the earlier findings and maps of eligible and suitable waterways. It is noteworthy that in the 1992 report, the BLM found five of the nine Wild and Scenic eligible streams to be unsuitable for designation due to the scattered nature of the BLM parcels along these streams, but it provided no land ownership maps demonstrating that to be true. The BLM did note in the 1992 report the following with regards to land ownership along the Wild and Scenic eligible sections of the Green River: "The BLM administers only a minute amount of land (4%) along the 71 miles of the Green River flowing through the Green River Resource Area. However, other Department of the Interior Agencies (Bureau of Reclamation and U.S. Fish and Wildlife Service) manage a large part of the remaining lands along the river. In addition, there was quite a bit of public interest for designation of the Green River as a Recreational River. The BLM would participate in any future joint study efforts or wild and scenic river reviews along the Green River (pg. 154, Record of Decision and Green River RMP, October 1997)." Unfortunately, because the BLM declined to conduct an updated analysis of Wild and Scenic eligible and suitable streams in the recently released draft RMP and EIS, it did not follow through on its previous commitment to "participate in any future joint study efforts or wild and scenic river reviews along the Green River." | The requested report is found in Volume 2, Appendix L of the DEIS. Creation of a joint management plan for the Green River is outside the scope of this document. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #9227-2 | Below is a partial list of some of the common changes that have occurred on BLM lands over the past few decades that could affect Wild and Scenic eligibility and suitability: * Climate change has profoundly impacted waterways and aquatic species, making the preservation of cold water refugia a higher priority * More frequent and intense wildfires have burned millions of acres of public lands * New species have been listed or petitioned for listing under the Endangered Species Act * Previously impounded waterways have been restored through dam removals * Native fish populations have been restored * Private land inholdings have been brought into public ownership * New forms of recreation (e.g., packrafting) have exploded in popularity * Recognition of tribal treaty rights has broadened, and protection of indigenous cultural sites has become a higher priority | Chapter 3.22.3 paragraph 3 states that the contents of 1992 report were reexamined and determined to still be sufficient for existing conditions. Appendix L of the DRMP (volume 2) shows the suitability review report. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #9227-3 | In closing, we believe the BLM made an egregious error by failing to conduct an updated analysis of Wild and Scenic eligible and suitable streams in its draft RMP and EIS. In so doing, it violated section 5(d)(1) of the Wild and Scenic Rivers Act and ignored its own guidance in BLM Manual 6400 pertaining to Wild and Scenic Rivers. In order to comply with existing laws and guidelines, the BLM must conduct a new Wild and Scenic eligibility and suitability analysis before issuing a final RMP and EIS. | Chapter 3.22.3 paragraph 3 states that the contents of 1992 report were reexamined and determined to still be sufficient for existing conditions. Appendix L of the DRMP (volume 2) shows the suitability review report. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #13624-37 | Wild and Scenic Rivers and Streams The Draft RMP/EIS states that a 9.7-mile reach of the Sweetwater River was "found to meet the wild and scenic rivers suitability factors to be given further consideration for inclusion in the Wild and Scenic Rivers System." Draft RMP/EIS, Ch. 2, p. 2-153. However, nine stream segments are identified to be eligible for Wild and Scenic designation, for a combined total of 281.15 miles. Draft RMP/EIS, Ch. 3, § 3.22.3, pp. 3-29 to 3-30. The identified Management Action #7203 specifies that half a mile on either side to the riverbank would be a right-of- way exclusion, meaning that no mineral development or crossings of pipelines or roads will be allowed. Map 6 depicts what WDEQ understands those wild and scenic river segments and associated right-of-way exclusions would be. If Map 6 is correct, BLM should identify and discuss the impacts on development, such as electric transmission and pipelines, that would be impacted by those exclusion areas. BLM should also provide information on how lands remaining available for multiple use would be accessed. Additionally, it is unclear how WDEQ-WQD could access these lands for the purposes of water quality monitoring, sampling, and non-point source activities when necessary. | Chapter 3.22.3 states all river segments considered for suitability, and those not found to be suitable. Appendix L of the DRMP (volume 2) shows the suitability review report for all considered river segments. Wording and economic analysis is sufficient for impacts of those lands BLM identified as suitable (see summary results of Appendix L) |

|---|---|---|---|
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #13751-72 | Page L-21 shows R112W, T18N, Section 6. The Green River does not exist in that area. The table should be corrected accordingly. | See updates on page L-21. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #13899-15 | BLM should complete an updated Wild and Scenic Rivers eligibility study. BLM's decision to not conduct an updated analysis of Wild and Scenic eligible and suitable rivers during this resource management plan revision is unreasonable. The last review of waterways in this planning area for potential Wild and Scenic Rivers (WSR) suitability was in 1992. BLM's determination that the 1992 report "was sufficient" and "no additional evaluation would occur" for this draft RMP is not defensible.40 According to BLM's guidance for Wild and Scenic Rivers,[...] "If a systematic evaluation of eligible rivers or a comprehensive administrative unit-wide suitability study has been previously completed and documented, additional assessment and study through the land use planning process need only be done if: (1) the documentation no longer exists or is incomplete or outdated; (2) changed circumstances warrant additional review of eligibility (e.g., a new outstandingly remarkable value, see chapter 3.1E)".41 The 1992 evaluation of BLM waterways for potential WSR designation is not only outdated, citing only a portion of that report in Appendix L for this draft RMP makes that documentation incomplete for this public planning process. At a minimum, the full report should be incorporated into this draft for public review, given the length of time (32 years) since it was made available. Clearly it is also outdated, thus, BLM's first requirement for additional assessment has been met. Additionally, doubtless conditions have changed along these waterways since 1992-climate change has impacted waterways and aquatic species, altering conditions for cold water refugia and the species that depend on them. Land ownership along the streams may have shifted or will imminently shift.42 In order to comply with Manual 6400 and the Wild and Scenic Rivers Act, BLM must commit to updating the study of Wild and Scenic River suitability after the completion of the Rock Springs RMP. | Chapter 3.22.3 paragraph 3 states that the contents of 1992 report were reexamined and determined to still be sufficient for existing conditions. Appendix L of the DRMP (volume 2) shows the suitability review report. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #13899-16 | H. Support for Wild and Scenic suitability determinations for the Sweetwater River. Because there was no updated study to find other suitable waterway segments, the only segments considered for further inclusion in the Wild and Scenic Rivers system are nine segments along the Sweetwater River in the Big Sandy Foothills. In both Alternatives A, B, and D the BLM recommends classifying 5.8 miles as "wild," .5 miles as "scenic," and 3.4 miles as "scenic"43. We support these classifications and the associated management proposed in Alternative B to maintain these qualities. The management afforded to the Sweetwater River is warranted given in the Field Office it is a Class I water designated by the State of Wyoming Department of Environmental Quality.44 | Chapter 3.22.3 paragraph 3 states that the contents of 1992 report were reexamined and determined to still be sufficient for existing conditions. Appendix L of the DRMP (volume 2) shows the suitability review report. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #14023-2 | I recommend that 9.7 miles of the Upper Sweetwater River be managed and recommended for Wild and Scenic River Designation. | Appendix L of the DRMP (volume 2) shows the suitability review report. Chapter 2.2.6 Management Actions 7200-7234 (volume 1) analyzes a range of alternative for management of the Sweetwater River. |
| 834 - Special Designations–Wild and Scenic Rivers (7200-7234) | #14023-3 | I recommend the BLM manage all sections of streams retaining Wild and Scenic values as if they were designated as such. | Appendix L of the DRMP (volume 2) shows the suitability review report. |
| 835 - Special Designations–Management Areas (7300-7348) | #13210-11 | 11. The task force recognizes the important value of the Greater Little Mountain Area, a crown jewel in southwest Wyoming; therefore, we support management actions that conserve the area's hunting, fishing, and recreational opportunities while maintaining the multiple-use mandate. | See DEIS Volume I Chapter 2.2.6 Management Actions 6540-6541 for a range of alternatives analyzed regarding the potential Little Mountain Special Recreation Management Area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13210-12 | 12. The task force recognizes that the Northern Red Desert (Jack Morrow Hills and South Pass Area) is of national and local economic and cultural significance, rich with the history, scenic beauty and wildlife of the American West and Indigenous cultural use. It is a rugged and remote landscape that offers opportunity for many uses. We support BLM management actions that conserve the area's wildlife, tourism, motorized and non-motorized access, recreation, cultural, grazing, historic and wild land values while meeting its multiple use and sustained yield mandate. | See DEIS Volume I Chapter 2.2.6 Management Actions 7305-7311 for a range of alternatives analyzed regarding the potential Red Desert Watershed Management Area, and Management Actions 7498-7507 for a range of alternatives analyzed regarding the potential South Pass Historic Landscape ACEC. |
| 835 - Special Designations–Management Areas (7300-7348) | #13210-13 | 13. The task force recognizes that the Big Sandy Foothills (i.e., Wind River Front, Golden Triangle) area is regionally significant for its wildlife habitats, historic sites, recreational opportunities, and unparalleled views. The Foothills are a largely natural area that support migrating and wintering big game, the highest concentration of Greater Sage-grouse in the West, are crossed by the Oregon-California-Mormon emigrant trails, and which serve as a gateway to the Wind River Mountains. We support BLM management actions that conserve the area's local economic, wildlife, tourism, motorized and non-motorized access, recreation, cultural, grazing, historic and wild land values while meeting its multiple use and sustained yield mandate. | See DEIS Volume I Chapter 2.2.6 Management Actions 6543-6557 for a range of alternatives analyzed regarding the potential Wind River Front Special Recreation Management Area. |

|---|---|---|---|
| 835 - Special Designations–Management Areas (7300-7348) | #13210-21 | 21. The task force does not support any special management area designations within the checkerboard except for existing Cedar Canyon and Natural Corrals, and Special Status Plant Species ACEC. The task force does recognize the importance of wildlife migration and winter range within the checkerboard. | See DEIS Volume I Chapter 2.2.6 Management Actions 7300-7348 for a range of alternatives analyzed regarding potential designation of Special Management Areas. See Management Actions 7400-7570 for a range of alternatives analyzed regarding potential designation of ACECs. |
| 835 - Special Designations–Management Areas (7300-7348) | #13247-3 | a. In general, zeroing out the SRMAs as proposed in Alternative Bis not consistent with Wyoming and Fremont County interest in concentrating recreation in specific areas to protect the larger landscape. Closing out the SRMA's is the opposite of that strategy and not consistent with a broader strategy to protect the landscape. | See DEIS Volume I Chapter 2.2.6 Management Actions 6521-6557 for a range of alternatives analyzed regarding potential designation of different Special Recreation Management Areas. |
| 835 - Special Designations–Management Areas (7300-7348) | #13658-14 | In the table of Special Designation - Management Areas (SOMA) there are several management areas that indicate further study must be done to determine if specific resources exist to meet the ACEC relevance and importance criteria or that the area was not found to contain values that meet these criteria. Yet, in Alternative B these same management areas in full or in part, are designated as ACECs. BLM must not designate areas that are required to contain specific resources and meet specific criteria when these areas are found to not contain these resources or meet these criteria or when it is unknown whether they do. BLM must analyze these areas and follow the law in their designation of them. Any area that was not found to contain these resources or do not meet the required criteria should be removed from all the alternatives as SDMAs. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action for ACECs and SDMAs has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 835 - Special Designations–Management Areas (7300-7348) | #13663-1 | I would also like to address the fact the BLM-preferred Alternative B would also eliminate all the Special Recreation Management Area designations yet the Draft EIS states "SRMA management will sustain and enhance these resources as well as accommodate visitor demand." In my opinion this is a wrong move to take special focus off significantly scenic and important, nationally recognized recreation areas. This would lead to a lack of management focus and degradation of the user experience. I would like to see these special designations remain in place. | See DEIS Volume I Chapter 2.2.6 Management Actions 6521-6557 for a range of alternatives analyzed regarding potential designation of different Special Recreation Management Areas. |
| 835 - Special Designations–Management Areas (7300-7348) | #13769-2 | While we wholeheartedly agree with the intent of the Monument Valley OMA, we are concerned that the private lands inholdings will make management of an OMA unworkable. We are unsure of the conservation goals and management options of O MAs. Protecting the Adobe Town WSA is of paramount importance. The Monument Valley OMA as proposed in Alternative B overlaps the WSA (RMP map 2-29) and encompasses so much private land that based on our experiences an OMA in Monument Valley would become an untenable management nightmare. | See DEIS Volume I Chapter 2.2.6 Management Actions 7340-7348 for a range of alternatives regarding potential designation and management for Monument Valley Management Area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13776-3 | Failure to designate any SRMAs could increase user conflicts by placing recreators in the same places on the landscape, diluting the potential enjoyment for all recreators. For example, in the Red Desert, a camper may desire to camp at the only spring for 20 miles around, but that is also the only water for sage grouse, mule deer, or other species that rely on that area. With proper planning this conflict is easily avoidable; without these designations our ability to influence public behavior is diminished. | See DEIS Volume I Chapter 2.2.6 Management Actions 6521-6557 for a range of alternatives analyzed regarding potential designation of different Special Recreation Management Areas. |
| 835 - Special Designations–Management Areas (7300-7348) | #13776-7 | The 39,290-acre Killpecker Sand Dunes SRMA is highly used. As a destination with many opportunities, the SRMA reduces the recreation impact on other sites, roads, and routes. Alternative C is an appropriate management for this area as outlined in Management Actions 6531-6536, with the area being properly monitored for resource degradation and misuse. | See DEIS Volume I Chapter 2.2.6 Management Actions 6531-6536 for a full range of alternatives analyzed regarding potential designation of the Killpecker Sand Dunes Special Recreation Management Area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13784-38 | * MA#7342, Alt B: "Manage surface disturbing activities, including rights-of-way to avid slopes greater than 20% and highly erosive areas." Comment: Page 2-10, MA#1107, Alternative B states "slopes greater than 25%." The Alternatives must be consistent between resources for analysis purposes. | Alternatives analyzed in Management Action 1107 would apply to the whole field office unless otherwise specified. The closure of areas with 20% or greater slope in alternative B of Management Action 7342 is specific to the potential Monument Valley Management Area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13806-3 | As such, I recommend the BLM maintain ACEC boundaries as proposed in the preferred alternative to include overlapping protections for other special designations such as WSAs and LWCs. (In reference to management actions 7200-7570). | See DEIS Volume I Chapter 2.2.6 Management Actions 7200-7570 for a full range of alternatives analyzed potential designations of Special Management Areas and ACECs. WSAs are designated by congressional decision and are outside the scope of this DEIS. |
| 835 - Special Designations–Management Areas (7300-7348) | #13849-3 | Special Designations #7303. Page 161. I respectfully and firmly oppose. This is one more blatant attack on grazing in the over 1300 pages to this radical environmental plan. The very fact that the area is being looked at as a wilderness area and a restricted area is not only out of date, it is illegal for the BLM to include Wilderness in any change of land use. Federal Land Policy and Management Act (FLPMA) Section 603 is the only provision in federal law that authorizes the identification, study and recommendation of public lands for wilderness designation; but, it must be authorized by Congress. Thus, BLM is not at liberty to add wilderness to other provisions in FLPMA when Congress so clearly chose not to, State of Utah v. Babbitt, 137 F.3d 1193 (10th Cir. 1998). | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. Alternatives for management are analyzed in Chapter 2.2.6, section Special Designations, Wilderness Study Area, management actions 7100-7103. Management Action 7303 is not related to Wilderness designations. |

| 835 - Special Designations–Management Areas (7300-7348) | #13851-4 | Special Designations #7303. Page 161. I respectfully and firmly oppose. This is one more blatant attack on grazing in the over 1300 pages to this radical environmental plan. The very fact that the area is being looked at as a wilderness area and a restricted area is not only out of date, it is illegal for the BLM to include Wilderness in any change of land use. Federal Land Policy and Management Act (FLPMA) Section 603 is the only provision in federal law that authorizes the identification, study and recommendation of public lands for wilderness designation; but, it must be authorized by Congress. Thus, BLM is not at liberty to add wilderness to other provisions in FLPMA when Congress so clearly chose not to, State of Utah v. Babbitt, 137 F.3d 1193 (10th Cir. 1998). | Congressional decisions on wilderness are outside of the scope of this RMP. Wilderness Study Area designation process is covered in section 3.22.2. Alternatives for management are analyzed in Chapter 2.2.6, section Special Designations, Wilderness Study Area, management actions 7100-7103. Management Action 7303 is not related to Wilderness designations. |
| 835 - Special Designations–Management Areas (7300-7348) | #13856-2 | The CDT and the relevant Special Recreation Management Areas in the Rock Springs area should be delineated on maps. As a National Scenic Trail, the CDNST protected corridor should be a spatially identifiable area wide enough to encompass the significant scenic, historic, cultural, and natural features that contribute to the trail's setting and significance (FSH 1909.12, Sec. 24.43 (2)(f)). | See DEIS Volume I Maps 2-29, 2-30, 2-31, and 2-32 to see all potential Specials Designations and Management Areas under the range of proposed alternatives, including Special Recreation Management Areas. |
| 835 - Special Designations–Management Areas (7300-7348) | #13911-9 | The BLM has layered ACEC designations on top of WSA designations throughout the planning area under Preferred Alternative B. According to BLM's own policies, "[a]n ACEC designation will not be used as a substitute for wilderness suitability recommendations." BLM Manual 1613, Section 06. While ACECs may be designated within WSAs, "[i]f an ACEC is proposed within or adjacent to a [WSA], the RMP or plan amendments shall provide a clear description of the relationship of the ACEC to the recommendations being made for the WSA." Id. at Section 33.D. One thing to consider when determining the appropriate management prescriptions for a Proposed ACEC is if the area includes "an area recommended for designation (or already designated)" and if the "management under the other designation afford sufficient protection of potential ACEC values." Id. at Section 22.A.6. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 835 - Special Designations–Management Areas (7300-7348) | #13915-1 | Overall, we propose the following resource management decisions focused solely on the GLMA portion of the Rock Springs field office: ? Implement an upfront plan for responsible oil and gas management within the proposed GLMA. ? Incorporate restrictions on oil and gas leasing, as well as exclusion areas for industrial right of way (ROW), to protect fish and wildlife habitat, improve watershed conditions, and maintain recreational opportunities. ? For areas that are made available for leasing, strict stipulations should apply. Note that No Surface Occupancy (NSO) stipulations on BLM lands surrounded by State and/or private lands will likely not be sufficient to protect sensitive watersheds due to risk of infrastructure development on State and/or private lands (further described below). ? Exception, waiver, and modifications criteria should clearly state that such changes will only be approved if the resource values in need of protection are no longer present and will not be present in the future (e.g., restored). ? Within areas made available for leasing, Wyoming Game and Fish Department's "Recommendations for Development of Oil and Gas Resources within Crucial and Important Wildlife Habitat" should be incorporated to the maximum extent possible in the form of stipulations. ? For valid existing oil and gas leases within areas available for leasing, applications to drill should only be approved if stipulations identified in the revised RMP are incorporated as conditions of approval. For valid existing leases within areas that are made unavailable for leasing, the revised RMP should identify conditions of approval that will protect fish and wildlife habitat, improve watershed conditions, and maintain recreational opportunities. ? For valid existing leases, the revised RMP should identify criteria under which granting or renewing lease suspensions would be considered, as well as the criteria for lease suspensions that would be denied. ? Distinguish between exclusions for industrial rights of way (ROW) (e.g., transmission corridors) versus small ROW necessary for maintaining traditional land uses (e.g., water lines to serve livestock tanks), further described below. Limit or properly site industrial ROW in this defined exclusion and avoidance areas referenced in map 2-22 because they create visual impacts, fragment habitat, and disrupt migration corridors. We support the BLM's management of ROW Requests that limits development in the defined exclusion and avoidance areas referenced in map 2-22. | Management Actions analyzed under a range of alternatives for the 'Greater Little Mountain Area' can be seen in the DEIS Volume I Chapter 2.2.6 Management Actions 7418-7445 regarding the potential Greater Red Creek ACEC, and Management Actions 6540-6541 regarding the potential Little Mountain Area Special Recreation Management Area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13915-2 | State and Private Land Implications When considering the effects of energy development in the GLMA, it is important to recognize that land ownership patterns could exacerbate fish and wildlife impacts from oil and gas development by focusing infrastructure in stream valley locations. Should No Surface Occupancy (NSO) stipulations be implemented on BLM lands, accessing underlying oil and gas resources would require directional drilling from State and private lands, which are predominantly located along streams (Figure 1). These valley bottoms and riparian zones are highly sensitive to surface disturbances, while also being rich habitat for both native trout and wildlife. For instance, the CRCT population in Currant Creek is almost entirely located on state lands where infrastructure would have to be located in order to potentially access nearby federal minerals. | Management Actions analyzed under a range of alternatives for the 'Greater Little Mountain Area' can be seen in the DEIS Volume I Chapter 2.2.6 Management Actions 7418-7445 regarding the potential Greater Red Creek ACEC, and Management Actions 6540-6541 regarding the potential Little Mountain Area Special Recreation Management Area. Uses of adjacent state owned lands are outside of the scope of the DEIS. |
| 835 - Special Designations–Management Areas (7300-7348) | #13915-3 | In considering the range of management options for oil and gas leasing within the GLMA and cumulative effects, we encourage the BLM to take into account land ownership patterns and how various stipulations could displace infrastructure to sensitive lands that are not managed by the BLM. In some instances, NSO stipulations may protect the BLM surface but would result in unavoidable deleterious impacts to fish and wildlife within the GLMA. In these situations, a decision to make these lands unavailable for leasing would be the only effective way to prevent impacts to fish and wildlife resources. | Management Actions analyzed under a range of alternatives for the 'Greater Little Mountain Area' can be seen in the DEIS Volume I Chapter 2.2.6 Management Actions 7418-7445 regarding the potential Greater Red Creek ACEC, and Management Actions 6540-6541 regarding the potential Little Mountain Area Special Recreation Management Area. |

|---|---|---|---|
| 835 - Special Designations–Management Areas (7300-7348) | #13915-4 | Rights of Way Clarification Right of ways (ROW) are another issue that deserves greater consideration, including distinguishing between industrial ROW (e.g., transmission corridors) versus small ROW necessary for maintaining traditional land uses (e.g., water lines to serve livestock tanks). Within the GLMA, ROW exclusion is appropriate for new industrial-scale ROW. However, we encourage the BLM to consider the unintended consequences of ROW exclusion for small-scale infrastructure and existing traditional land uses and clarify that exclusions only apply to industrial new ROW. Trout Unlimited worked directly with the Ramsay Ranch to improve their irrigation infrastructure on BLM lands. This project stopped an active head cut allowed the ranch to maintain their water rights, allowed for fish passage, and improved trout habitat. BLM was a funder on this project. This project has a BLM ROW and would be in jeopardy if the Preferred Alternative were to be adopted for this management action. | See DEIS Volume I Glossary for updated definition of 'Right of Way'. |
| 835 - Special Designations–Management Areas (7300-7348) | #13915-12 | Management Recommendations (Management Action 7312) ? In the Salt Wells area, we support measures that will maintain fish, wildlife, and recreation values, including conformance with WGFD's "Recommendations for Development of Oil and Gas Resources within Crucial and Important Wildlife Habitat," while also allowing for a greater degree of development than should be permitted elsewhere in GLMA. | See DEIS Volume I Chapter 2.2.6 Management Action 7312 for a full range of alternatives analyzed regarding potential retention of this management area. |
| 835 - Special Designations–Management Areas (7300-7348) | #13951-12 | Page 2-161; Special Designation #7303 "Analyze any increase in vegetative production, and if feasible, prioritize it for watershed stabilization and improvement, and wildlife forage, before considering it for livestock." -I oppose this! Why this outright discrimination against ranchers and livestock? | Management Action 7303 is specific to livestock operations within designated Special Management Areas. See Management Actions 7300-7348 for a full range of alternatives analyzed for these potential designations. |
| 835 - Special Designations–Management Areas (7300-7348) | #13974-3 | Failure to designate any SRMAs could increase user conflicts by placing recreators in the same places on the landscape, diluting the potential enjoyment for all recreators. For example, in the Red Desert, a camper may desire to camp at the only spring for 20 miles around, but that is also the only water for sage grouse, mule deer, or other species that rely on that area. With proper planning this conflict is easily avoidable; without these designations our ability to influence public behavior is diminished. | See DEIS Volume I Chapter 2.2.6 Management Actions 6521-6557 for a range of alternatives analyzed regarding potential designation of different Special Recreation Management Areas. |
| 835 - Special Designations–Management Areas (7300-7348) | #13974-4 | Pushing visitors to dispersed use poses challenges for protecting natural and cultural resources. Recreation use plans at designated SRMAs and for dispersed camping areas could help limit resource degradation, mitigate effects of increased visitation, and otherwise provide for natural and cultural resource protection. Alternative A calls for such plans in several Management Actions (6507-6510, at a minimum) and is the preferable alternative for this topic. | See DEIS Volume I Chapter 2.2.6 Management Actions 6521-6557 for a range of alternatives analyzed regarding potential designation of different Special Recreation Management Areas. |
| 835.01 - Red Desert Watershed Management Area | #13925-31 | Red Desert Western Portion RSGA notes that this proposed ACEC was considered in 1997 and as expanded in 2012. Visual resources alone are not basis for expansive ACEC Neither the Red Desert Eastern nor the Red Desert Western portions evaluated in the 1997 Green River RMP met the relevance and importance criteria and thus were not designated as an ACEC. However, BLM now states that all criteria are met, and more importantly, the BLM adds approximately 20,000 acres. It should also be noted that Sage- Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected from disturbances under Wyoming Executive Order 2015-04 and the 2015 GrSG ARMPA. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without expansive ACEC. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 835.02 - Pine Mountain Management Area | #548-1 | The BLM has admitted that the RMP draft is flawed. For example, the BLM has insisted that no roads would be closed by any of the Alternatives in the RMP draft, as a different plan will later be released to address this. However, Alternative B on page 2-166 of the RMP would mandate the following in the Pine Mountain area: "Prohibit motor vehicle use on public lands within the area, except for the protection of life and property. Apply a “no net gain in roads” in crucial habitats and consider seasonal road closures." This is a direct contradiction to what the BLM initially said | See range of alternatives for action #7323. Impacts from each alternative can be found in Chapter 4. |
| 835.02 - Pine Mountain Management Area | #13210-90 | 7312 Alternative A or D Alternative A: The area is not designated as an ACEC, but would be maintained as a geographic management unit (see Glossary). The Pine Mountain Management Area is not recommended as part of the Greater Red Creek ACEC because Pine Mountain does not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in this area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus would not need to receive the same management emphasis. Alternative D: Same as A Alternative A is preferred because it maintains the Pine Mountain Management Area at its current size. There is little potential for mineral (minable and liquid) development and the areas contains important wildlife resources. | See DEIS Volume I Chapter 2.2.6 Management Action 7312 for a full range of alternatives analyzed regarding potential retention of the Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13210-91 | 7313 Alternative A The Pine Mountain area would be managed as an avoidance area for rights-of-way and surface disturbing activities. This management action was voted on as a block (7313- 7315). The task force prefers Alternative A, which aligns with the work of the Greater Little Mountain Coalition. | See DEIS Volume I Chapter 2.2.6 Management Action 7313 for a full range of alternatives analyzed regarding Rights of Way and surface disturbing activities in the potential Pine Mountain Management Area. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 835.02 - Pine Mountain Management Area | #13210-92 | 7314 Alternative A The area is open to mineral leasing and related exploration and development activities with appropriate mitigation requirements (CSU) applied to protect all other resource values. This management action was voted on as a block (7313- 7315). The task force prefers Alternative A, which aligns with the work of the Greater Little Mountain Coalition. | See DEIS Volume I Chapter 2.2.6 Management Action 7314 for a full range of alternatives analyzed regarding mineral leasing in the potential Pine Mountain Management Area |
| 835.02 - Pine Mountain Management Area | #13210-93 | 7315 Alternative A Livestock grazing objectives and management practices would be re-evaluated and, as needed, modified to be consistent with the watershed, water quality, fisheries, recreation, and riparian management objectives. Grazing systems would be designed to achieve desired plant communities and PFC of watersheds (upland and riparian) (Appendix G). This management action was voted on as a block (7313- 7315). The task force prefers Alternative A, which aligns with the work of the Greater Little Mountain Coalition. | See DEIS Volume I Chapter 2.2.6 Management Action 7315 for a full range of alternatives analyzed regarding livestock grazing in the potential Pine Mountain Management Area |
| 835.02 - Pine Mountain Management Area | #13210-94 | 7316 Alternative D No similar action (see Livestock Grazing Management, Water Resources, and Riparian and Wetland Resources sections) Alternative D was preferred over Alternative A because it does not prohibit activity that impacts a PFC. | See DEIS Volume I Chapter 2.2.6 Management Action 7316 for a full range of alternatives analyzed regarding stream quality in the potential Pine Mountain Management Area |
| 835.02 - Pine Mountain Management Area | #13210-95 | 7317 Alternative D No similar action (see actions common to all management areas 7300-7304) Alternative D was preferred over Alternative A because it does not require that any increase in vegetation production would be reserved for watershed stabilization and improvement purposes. | See DEIS Volume I Chapter 2.2.6 Management Action 7317 for a full range of alternatives analyzed regarding vegetative production in the potential Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13210-96 | 7318 Alternative A Management of habitat for Special Status Species, if identified, would be developed on a case-by-case basis. Alternative A is preferred because it allows for case-by- case decision making. Absence of funding for a habitat management plan/implementation made Alternative A the best choice. | See DEIS Volume I Chapter 2.2.6 Management Action 7318 for a full range of alternatives analyzed regarding special species management in the potential Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13210-97 | 7321 Alternative C Determine VRM classes by the Visual Resource Inventory and management direction for the individual locations as appropriate. Alternative C is preferred because it provides for individual location decisions for VRM management as appropriate. An existing ROW corridor runs through this area already and transmission towers have already been installed. Alternative C ensures ROW access would remain open. | See DEIS Volume I Chapter 2.2.6 Management Action 7321 for a full range of alternatives analyzed regarding visual resource management in the potential Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13210-98 | 7324 Alternative A The area is open to consideration of activities that conform with objectives for the area. Such activities may include fencing, interpretive signs, transportation or other use barriers, and sediment or erosion control structures to meet resource management objectives. Any actions to be conducted in the Pine Mountain Area would be considered and analyzed on a case-by-case basis. Controls may be placed on the amount, sequence, timing, or level of activity or development that may occur to assure that the actions would be consistent with or help to meet the management objectives for the area. This may result in such things as limiting the number of roads and other construction or other surface disturbing activities (such as well pads) or deferring activities or development in some areas until other areas have been reclaimed and restored to previous uses (Appendix I). Alternative A is preferred because it allows for consideration of activities that conform with management objectives for the area. | See DEIS Volume I Chapter 2.2.6 Management Action 7324 for a full range of alternatives analyzed regarding habitat protection in the potential Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13210-99 | 7329 Alternative D Retain the area as a management area (Table 2-12, Appendix V and Map 2-32). Alternative D is preferred because it retains the area without the additional recommendations in Alternative A. | See DEIS Volume I Chapter 2.2.6 Management Action 7329 for a full range of alternatives regarding potential designations for the Sugarloaf Basin Management Area. |
| 835.02 - Pine Mountain Management Area | #13915-11 | Pine Mountain Management Area The Pine Mountain Area is presently a designated management area in the Green River Resource Management Plan due to significant fish and wildlife habitat, along with important groundwater recharge areas. The updated RMP should provide a high level of protection for big game and fisheries resources. Management Recommendations (Management Actions 7313, 7314, 7325, 7326, 7327, and 7328) ? At a minimum, NSO for 14,982 acres ? CSU for 2,513 acres At a minimum, the Coalition recommends NSO of 14,982 acres in the Pine Mountain area to protect groundwater recharge areas, crucial big game habitat and parturition areas and important Colorado River cutthroat trout (CRCT) habitat. Outside of the proposed NSO, the Coalition recommends 2,513 acres of CSU stipulations, utilization of mandatory best management practices, implementation of a phased development scenario and mandatory reclamation standards prior to more development. Additional recommendations for mineral management include directional drilling from a minimal number of well pads and implementing the Wyoming Game and Fish Department's "Recommendations for Development of Oil and Gas Resources within Crucial and Important Wildlife Habitat."1 | See DEIS Volume I Chapter 2.2.6 Management Actions 7312-7328 for a full range of alternatives analyzed regarding potential designations of the Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13923-2 | The Jack Morrow Hills CAP established a process for implementation, monitoring and evaluation of the plan's management in Appendix 2 (JMH CAP, A2-1, 2006). Baseline and indicator data were to be collected for monitoring and mitigation measures were to have been developed for plan decisions and management actions that could be evaluated to determine if objectives were being met. Sportsmen request that the BLM review whether these data were collected, cataloged, reviewed, and evaluated. If they were not completed and/or if they need | See DEIS Volume I Chapter 2.2.6 Management Actions 7305-7311 for a range of alternatives analyzed regarding the Red Desert Watershed Management Area. Monitoring data is available at the Rock Springs Field Office. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | additional evaluation and review, the BLM needs to make this a priority. The Final Rock Springs RMP should incorporate these processes with the findings of the baseline and indicator data as well. | |
| 835.02 - Pine Mountain Management Area | #13923-5 | At a minimum, the Coalition recommends NSO of 14,982 acres in the Pine Mountain area to protect groundwater recharge areas, crucial big game habitat and parturition areas and important Colorado River cutthroat trout (CRCT) habitat. Outside of the proposed NSO, the Coalition recommends 2,513 acres of CSU stipulations, utilization of mandatory best management practices, implementation of a phased development scenario and mandatory reclamation standards prior to more development. Additional recommendations for mineral management include directional drilling from a minimal number of well pads and implementing the Wyoming Game and Fish Department's "Recommendations for Development of Oil and Gas Resources within Crucial and Important Wildlife Habitat." | See DEIS Volume I Chapter 2.2.6 Management Actions 7312-7328 for a full range of alternatives analyzed regarding potential designations of the Pine Mountain Management Area. |
| 835.02 - Pine Mountain Management Area | #13923-6 | The entire Greater Little Mountain Area is incompatible with oil shale extraction and should be an oil shale withdrawal area. | Please see Glossary definition of 'withdrawal', which does not apply to leasable minerals. The existing 'oil shale withdrawn area' is for the protection of oil shale development from the 1872 Mining Law minerals. Management Actions analyzed under a range of alternatives for the 'Greater Little Mountain Area' can be seen in the DEIS Volume I Chapter 2.2.6 Management Actions 7418-7445 regarding the potential Greater Red Creek ACEC. |
| 835.02 - Pine Mountain Management Area | #13923-7 | For portions of the Greater Little Mountain Area, sportsmen are requesting ROW exclusion. The impetus for this is to limit industrial scale projects that could do potential environmental harm by disrupting sensitive soils. The ROW exclusion should not, however, impact small scale agricultural operations who are in good standing with the BLM. These small operations should not be in the same category as industrial scale transmission lines, pipelines, and roads, etc. We encourage the BLM to revisit the Rights-of-Way policy to differentiate between industrial scale and small scale operations. | Management Actions analyzed under a range of alternatives for the 'Greater Little Mountain Area' can be seen in the DEIS Volume I Chapter 2.2.6 Management Actions 7418-7445 regarding the potential Greater Red Creek ACEC, and Management Actions 6540-6541 regarding the potential Little Mountain Area Special Recreation Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-100 | 7330 Alternative B Manage the Sugarloaf Basin portion (87,240 acres; Map 2-30) as an exclusion area for rights-of- way and surface disturbing activities, unless the purpose of the activity is to benefit the resource objectives for the management area. Alternative B is preferred because it will manage the Sugarloaf Basin portion as an exclusion area for ROW and surface disturbing activities. There exists little to no oil and gas or mineral development potential in the area. | See DEIS Volume I Chapter 2.2.6 Management Action 7330 for a full range of alternatives analyzed regarding surface disturbing activities in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-101 | 7331 Alternative D Allow surface disturbing activities if the operator and the BLM arrive at an acceptable plan for avoidance, minimization, rectification, and/or restoration within the Sugarloaf Basin area. The purpose of the plan is to ensure that fluid mineral development activities are pursued in a manner that maintain habitat function and result in no significant declines in species distribution or abundance. The BLM will consult with the WGFD to evaluate the adequacy of the conservation plan prior to finalization. Alternative D is preferred because it is the only alternative that states that the BLM will consult with the WGFD to evaluate the adequacy of the conservation plan prior to finalization. | See DEIS Volume I Chapter 2.2.6 Management Action 7331 for a full range of alternatives analyzed regarding surface disturbing activities in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-102 | 7332 Alternative D No similar action (see Common to All Resources section) Alternative D was preferred over Alternative A which states that any increase in vegetation would be reserved for watershed stabilization and improvement purposes. | See DEIS Volume I Chapter 2.2.6 Management Action 7332 for a full range of alternatives analyzed regarding vegetative production in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-103 | 7333 Alternative A Management of habitat or Special Status Species, if identified, would be developed on a case-by-case basis. Restrictions for protection of raptors, big game crucial winter range, and big game calving/fawning areas would apply (see Wildlife section and Appendix J). Exceptions to this restriction may be approved if conditions and criteria described in Appendix B. Alternative A is preferred because the task force found no need to deviate from the status quo. | See DEIS Volume I Chapter 2.2.6 Management Action 7333 for a full range of alternatives analyzed regarding special status species and their habitat in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-104 | 7334 Alternative A The area would be managed consistent with the Class II and Class III VRM classifications. Alternative A is preferred because it includes limitations on VRM classifications and obstructing the scenic view. | See DEIS Volume I Chapter 2.2.6 Management Action 7334 for a full range of alternatives analyzed regarding visual resources in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13210-105 | 7335 Alternative A Recreation developments would be kept to a minimum and designed primarily for the protection of resource values, the prevention of resource damage, and for public health and safety. Alternative A is preferred because the task force found no need to deviate from the status quo. | See DEIS Volume I Chapter 2.2.6 Management Action 7335 for a full range of alternatives analyzed regarding developed recreation in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13908-31 | 7331 D Allow surface disturbing activities if the operator and the BLM arrive at an acceptable plan for avoidance, minimization, rectification, and/or restoration within the Sugarloaf Basin area. The purpose of the plan is to ensure that fluid mineral development activities are pursued in a manner that maintain habitat function and result in no significant declines in species distribution or abundance. The BLM will consult with the WGFD to evaluate the | See DEIS Volume I Chapter 2.2.6 Management Action 7330-7331 for a full range of alternatives analyzed regarding surface disturbance and rights of way in the potential Sugarloaf Basin Management Area. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | adequacy of the conservation plan prior to finalization. We recommend the Sugarloaf Basin Management Area include NSO protections. | |
| 835.03 - Sugarloaf Basin Management Area | #13911-6 | Similarly, during the development of the Green River RMP, Sugarloaf Basin was found to "not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in the area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus does not need to receive the same management emphasis. The watershed, scenic, and wildlife resources are determined to be neither more than locally significant nor fragile, sensitive, or rare, when compared to those values found in Currant, Sage, and Red Creeks." Id. at 2-168 (Mgmt. Action #7329) (emphasis added). Under the Green River RMP, the Sugarloaf Basin was only a management area. Id. The BLM provides no explanation or analysis indicating what has changed in the area to now warrant an ACEC designation when it so clearly did not meet the relevant and important criteria in the past. See id. at Appendix C-15 - C-16. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 835.03 - Sugarloaf Basin Management Area | #13915-6 | Management Recommendations (Management Action 7330): ? No Surface Occupancy (NSO) For Sugarloaf Basin ? Rights-Of-Way (ROW): Upgrade Sugarloaf Basin SMA from avoidance to exclusion for industrial ROW. | See DEIS Volume I Chapter 2.2.6 Management Action 7330 for a full range of alternatives analyzed regarding surface disturbance and rights of way in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13927-4 | Recommended Management for Specific Geographies within the GLMA Sugarloaf Basin Special Management Area Movement data from big game collared as part of the University of Wyoming's Deer-Elk Ecology Research indicates that Sugarloaf Basin provides high-value habitat for wintering deer and elk. Pronghorn antelope are also found in this area, and a portion of the SMA is designated Greater sage-grouse core habitat while other portions contain habitat for midget-faded rattlesnakes, a sensitive species in Wyoming. The SMA provides a significant Utah juniper habitat complex, supporting an assemblage of juniper-obligate mammal and bird species. It is also a known groundwater recharge area providing local aquifers important water supplies for plants, springs, and streams in the area. The addition of roads (from energy development activities) can create hard surfaces that prevent rain and snow from soaking back into the ground and replenishing these valuable groundwater recharge zones. From a fisheries standpoint, the Marsh Creek complex flows directly into the Flaming Gorge Reservoir, and the sensitivity of this area to erosion means that these creeks could be significant contributors to sedimentation and siltation of the reservoir. | See DEIS Volume I Chapter 2.2.6 Management Actions 7329-7335 for a full range of alternatives analyzed regarding management in the potential Sugarloaf Basin Management Area. |
| 835.03 - Sugarloaf Basin Management Area | #13943-8 | From a fisheries standpoint, the Marsh Creek complex flows directly into the Flaming Gorge Reservoir, and the sensitivity of this area to erosion means that these creeks could be significant contributors to sedimentation and siltation of the reservoir. Management Recommendations (Management Action 7330): * No Surface Occupancy (NSO) For Sugarloaf Basin * Rights-Of-Way (ROW): Upgrade Sugarloaf Basin SMA from avoidance to exclusion for industrial ROW. | See DEIS Volume I Chapter 2.2.6 Management Actions 7329-7335 for a full range of alternatives analyzed regarding management in the potential Sugarloaf Basin Management Area. |
| 835.04 - Pinnacles Geographic Area | #13925-30 | Only 1,344 acres includes the actual Pinnacles Geologic feature yet BLM designates 8,960 acres as an ACEC to protect the pinnacles. RSGA questions this expansion when the visual resource is limited to a discrete geologic feature - not the larger watershed area. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without sweeping ACECs. It should also be noted that Sage- Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected from disturbances under Wyoming Executive Order 2015-04 and the2015 GrSG ARMPA. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 835.06 - Monument Valley Management Area | #13769-2 | While we wholeheartedly agree with the intent of the Monument Valley OMA, we are concerned that the private lands inholdings will make management of an OMA unworkable. We are unsure of the conservation goals and management options of O MAs. Protecting the Adobe Town WSA is of paramount importance. The Monument Valley OMA as proposed in Alternative B overlaps the WSA (RMP map 2-29) and encompasses so much private land that based on our experiences an OMA in Monument Valley would become an untenable management nightmare. | See DEIS Volume I Chapter 2.2.6 Management Actions 7340-7348 for a range of alternatives regarding potential designation and management for Monument Valley Management Area. |
| 835.06 - Monument Valley Management Area | #13769-3 | It seems to us that Monument Valley in S3, T14N, R97W is a great place to start protecting the Adobe Town WSA. A proper buffer would provide such protection; it would extend from Monument Valley in a north-westerly arc roughly covering Adobe Town Rim, then extend northerly to Manuel Gap, then to the north-east trending arc covering the Haystacks. (shown on BLM 1:100,000 map, Kinney Rim) This buffer would involve an exchange of approximately 22 sections of land. We urge the BLM to pursue such an exchange. | See DEIS Volume I Chapter 2.2.6 Management Actions 7340-7348 for a range of alternatives regarding potential designation and management for Monument Valley Management Area. |
| 835.06 - Monument Valley Management Area | #13911-7 | The BLM previously concluded that "[a]lthough the Monument Valley area has unique scenic features and has the apparent high potential for significant cultural and paleontological resources, there has been little systematic inventory of these features and resources. This lack of information precludes identification of specific resources that meet the ACEC relevance and importance criteria for designation of ACECs." Id. at 2-171. In Appendix C, the BLM does not describe any new inventory of "significant cultural and paleontological resources" and instead bases the ACEC designation on the qualities associated with the Adobe Town Wilderness Study Area ("WSA"). Id. at | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. Wilderness Study Areas are designated by congress and may be changed at any time, and are outside of the scope of this DEIS. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | Appendix C-26. The DEIS fails to explain why the Checkerboard lands to the north of the WSA warrant ACEC designation or why the WSA designation is insufficient to protect the resources of concern | |
| 835.06 - Monument Valley Management Area | #13925-26 | The 1997 Green River RMP deferred any findings but did identify only 69,940 acres as a potential ACEC. Thus, BLM's increase of approximately 30,000 acres is extremely concerning and must be disclosed and further analyzed. Raptor nesting sites, alone, do not constitute a regionally or nationally important resource. The BLM must analyze and disclose what type of raptors use the cliffs, in which areas, and at what times. The BLM may not extrapolate from an isolated occurrence the further and widespread presence of raptors or their national significance. There is no indication that these features are in jeopardy or require special management. Although they may be scenic, the purposes of the ACEC should not be to restrict uses that will not interfere with the resource. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without expansive ACEC designation. The Sage-Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected from disturbances. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #302-1 | Alternative B classifies over 1.8 million of the 3.6 million acres of land in the Rock Springs management area as Areas of Critical Environmental Concern (ACEC), which is an increase of ACEC designation of over 1.3 million acres from the current Rock Springs RMP. The ACEC designation will effectively prohibit energy development, and primarily development of the mineral estate, on over 50% of the resource management area. This prohibition will negatively impact the State of Wyoming through loss of the State's portion of federal mineral royalties as well as increasing our nation's dependence on foreign or unreliable and unproven energy sources. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #531-2 | Also, prescriptive management in the form of targeted management would be the most effective management that doesn't severely impact large areas of land. For example, Steamboat Mountain ACEC should be managed for targeted areas of interest, not simply increasing the size of the ACEC acreage by ten-fold. | See DEIS Chapter 2.2.6 management Actions 7516-7529 for a full range of alternatives analyzed regarding Steamboat Mountain ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #531-3 | The preferred alternative almost doubles the number of ACEC designations, as well as triples the total number acres for these special designated areas. There is no question that natural resources need to be managed carefully and wisely, but we cannot do so at the expense of our state's cornerstone industries in the process. This increase in ACEC's will also require an increase in BLM staffing for adequate enforcement of such large swaths of land protection. The triple in acreage under ACEC protective measures should honor prior and existing rights for the agricultural community, among other users of federal lands. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #539-3 | The next ACEC issue is that the South Wind River ACEC and the Big Game Migration Corridor ACEC likely violate PRIA and the TGA. As noted above, the congressional intent of PRIA is to "prevent economic disruption and harm to the western livestock industry." The TGA created grazing districts (which FLPMA specifically kept in existence) and the Secretary has already deemed that these districts are "chiefly valuable for grazing," meaning that the primary purpose of the lands in these districts are for livestock grazing, even over other purposes such as wildlife, conservation, plant habitat, etc. | See DEIS Chapter 1.4 'Planning Criteria' of the DEIS states the legality of the contents of the DEIS. See DEIS Chapter 2.2.6 Management Actions 7538-7547 for a range of alternatives analyzed regarding the South Wind River ACEC and management actions 7555-7562 for a range of alternatives analyzed regarding the Big Game Migration Corridor ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #539-4 | Appendix N of Volume 2 outlines the economic analysis of the plan. However, this analysis is lacking and has failed to take a "hard look" at what economic disruption the management prescriptions in this plan would have on the livestock industry. For example, as discussed supra, grazing could be reduced by 20% in riparian areas within the ACEC if the BLM determines an allotment is not meeting the BLM's rangeland health standards, or due to restrictions related to the ACEC itself, AUMs or rangeland improvement projects could be hamstrung which could significantly affect our grazing operations and these kinds of affects were not looked into under Alternative B. We attest that significant reductions in AUMs would run our operation out of business and a further economic analysis should be done under the circumstances presented under Alternative B. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #539-5 | Wind River Front West: Historic: Buckskin Crossing Cemetery. Wildlife: big game crucial winter range, big game parturition, designated Sublette mule deer migration corridor. Special Status Species: sage-grouse PHMA, bluehead sucker, flannelmouth sucker, round-tail chub, limber pine. South Wind River: Cultural: NHT. Wildlife: big game crucial winter range, designated Sublette mule deer migration corridor. Special Status Species: sagegrouse PHMA, bluehead sucker, flannelmouth sucker, and round-tail chub. Paleontological resources: middle Eocene fossil resources. Scenic: panoramic landscape. Big Game Migration Corridor: Cultural: NHT. Wildlife: designated Sublette mule deer migration corridor, big game crucial winter range, big game parturition. Special Status Species: sagegrouse PHMA.25 These values should not result in the heightened scrutiny of an ACEC designation for the following reasons. First, when the BLM is seeking to protect the historic and cultural values mentioned such as historic trails, cemeteries, etc., it seems extraordinarily arbitrary and capricious to designate a vast 374,710 acre land restriction rather than to make a small- targeted--ACEC for each of these areas. Or by contrast there could be specific protections through management prescriptions offered for these cultural and historic resources by simply putting guidelines for these specific resources in this RMP. Furthermore, having surface disturbance restrictions near trails such as NHT or CDNST to the tune of having multiple miles of buffer is an incredibly broad amount of land needed to "protect and prevent irreparable damage" to an area. | See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. See DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 836 - Special Designations–ACECs (7400-7570) | #539-6 | Next, with regard to wildlife, the BLM should remember that the State of Wyoming is responsible for management of its wildlife in this jurisdiction. While the BLM does have a responsibility to manage the landscape, one would think that before designating vast ACECs, the BLM would seek whether the Wyoming Game and Fish Department would think it was a good concept. For example, it was the State of Wyoming, after all, that designated the sublette mule deer migration corridor. In doing so, the State's report noted that "[m]aintaining the integrity of ranching operations will benefit the continued movement of animals across the landscape, and consequently efforts to conserve ranches within the migration corridor will conserve the corridor itself."26 Additionally, if an ACEC can be designated to protect big game populations and their accompanying corridors, then the entire western United States could be designated as one big ACEC. Therefore, LSGA requests that this line of reasoning for designation either removes the ACEC or sets aside specific exceptions to allow for continued livestock grazing as it has been done along with rangeland improvements. By the BLM's own analysis, rangeland improvement projects benefit wildlife.27 | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Chapter 2.2.6 Management Actions 6400-6417 for a full range of alternatives analyzed related to livestock grazing. |
| 836 - Special Designations–ACECs (7400-7570) | #539-8 | Ultimately, Congress intended for the BLM to only use ACECs to "protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards." Livestock grazing in Wyoming has been going on since the mid-1800s.29 Before that, bison and wildlife have always grazed the landscape.30 To think that livestock grazing could create irreparable damage to the landscape is not only arbitrary and capricious, but ahistorical. Because of this, we ask the BLM to rescind the Big Game Migration Corridor ACEC and the South Wind River ACEC. If the BLM will not do that, we at least ask that livestock grazing be given exceptions to strict management protocols that would restrict our livestock operations and would restrict surface disturbance activities related to livestock grazing. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #539-15 | Under the Special Designations section, specifically as it relates to ACEC MAs, LSGA sees a number of troubling management prescriptions. First, we would attest that MA 7402 would violate the TGA because the BLM is prioritizing watershed stabilization/improvement and wildlife over grazing. We similarly argue that MA 7414 & 7423 would also violate the TGA for the same reason. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Chapter 1.4 'Planning Criteria' of the DEIS states the legality of the contents of the DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #540-1 | It must also be noted that, to the extent BLM relies on the Consent Decree of 2013 as justification for planning wild horse management and livestock grazing as part and parcel of one another, the 2013 Consent Decree has expired and is no longer in effect. The 2013 Consent Decree should not be considered by BLM when selecting locations to be designated as ACECs. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #540-3 | BLM should also consider the benefits to the range by limiting livestock grazing in the ACECs and the planning area, allowing for thriving wild horse populations that are highly beneficial to the rangeland.17 Studies demonstrate that equids support healthy ecosystems on public land if given sufficient habitat and left alone (Lundgren et al., 2021; Lundgren et al., 2017; Downer 2014). Wild horses spread plant seeds over large areas where they roam and do not decompose the vegetation they ingest as thoroughly as ruminant grazers, such as cattle or sheep, allowing the seeds pass through their digestive tract intact into the soil fertilized by wild horse droppings. Wild horses also help to prevent catastrophic fires and help to build more moisture-retaining soils. Soil moisture dampens out incipient fires and makes the air coating the earth moister. | See DEIS Chapter 3.9 'Wild Horses and Burros' and associated document, Record of Decision for Wild Horse Management in the Rawlins and Rock Springs Field Offices. |
| 836 - Special Designations–ACECs (7400-7570) | #540-4 | As noted in the RMP/EIS, another primary issue BLM intends to address is areas in the planning area which may be utilized for "[r]enewable energy development and associated transmission infrastructure" and "[e]nergy and minerals development."20 While drilling and energy exploration is allowed in some of the proposed ACECs, BLM should support the underlying goal of creating locations for ACECs for the protection and preservation of areas that have "significant" cultural, scenic, wildlife, recreational, biodiversity, paleontological, historic, and geologic values.21 Mining, drilling, and other forms of energy exploration, and the construction of related facilities and infrastructure, are often the antithesis of the protection and preservation that is the goal of creating ACECs. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. |
| 836 - Special Designations–ACECs (7400-7570) | #541-1 | Under 43 C.F.R. § 1610.7-2(b)1, the BLM's State Director "shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitation, if any, which would occur if it were formally designated". The Federal Register announcing the proposed designations2 contains nothing more than an ACEC name, acreage, and a list of vague significant values for the 16 proposed ACECs and over 1.8 million acres of potentially impacted public lands. No member of the public will be able to see what public land resource use will be constrained, if any. This is a considerable oversight on the part of the BLM. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #541-2 | I have made my disapproval of the hastily constructed and uncooperative Preferred Alternative B well known. It appears that the handling of ACECs in this draft RMP is no different. While some additional information can be found on the proposed ACECs in the 1350 pages of the draft RMP/EIS, the BLM has already publicly walked back sections of the draft that were included by mistake3. If the public cannot trust what is written in the draft RMP, how are they supposed to make informed, substantive comments on proposed ACEC designations given the extremely limited information included in the Federal Register? | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations– | #541-3 | This rushed process makes the BLM seem disingenuous and is detrimental to Wyoming people and is unique to the Rock Springs RMP. For example, the August 4, 2023 Federal Register4 included a notice of availability for the draft RMP/EIS for the Colorado River Valley Field Office and Grand Junction Field Office RMP. Their nine | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| ACECs (7400-7570) | | proposed ACECs, covering 69,400 acres of additional designation (a differentiation not made in the Rock Springs RMP) contained at least a basic description of the resource use restrictions. For ACECs covering an area over 26-times larger than Colorado's draft RMP, the BLM is treating Wyoming differently by not including this essential information in the Federal Register, referring the public to an admittedly flawed draft RMP, and yet still expects the public and concerned state agencies to respond with substantive comments. Additional and recent examples of more detailed ACEC proposals accompanying draft RMPs in the Federal Register can be found with the notices of availability for the Draft RMP/EIS for the Grand Staircase-Escalante National Monument in Utah5 and the draft RMP/EIS for the Redding and Arcata Field Offices in California6. | |
| 836 - Special Designations–ACECs (7400-7570) | #550-7 | BLM's proposed designation of vast Areas of Critical Environmental Concern (ACECs) causes much of the decrease in lands available for leasing and infrastructure. But FLPMA reserves ACECs for lands in need of special management attention to protect important and relevant resource values. Relevance requires the presence of significant historic, cultural, scenic, wildlife, or other natural systems, and importance requires qualities of more than local significance, i.e., special worth, consequence, meaning, distinctiveness, or cause for concern. In the past, the BLM has taken a scrupulous and careful approach to designating ACECs, rooted in the evaluation of the aforementioned values present in an area potentially subject to ACEC designation. The BLM does not support its proposal to vastly expand ACECs to cover broad landscapes, particularly where the resources in need of special management (i.e., wildlife habitat, bird areas, or presence of historic trails) are found throughout the RMP area and have been successfully managed under the existing plan for decades. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #4026-21 | Map 2-30: Special Designations and Management Areas - Alternative B. Appendix C.11 (Monument Valley ACEC Evaluation) describes the features within the unit that warrant ACEC designation. I feel all the factors described for that area also carry over to the approximately 12,000 contiguous acres in the Haystack Wash area. This area is also contained within the Adobe Town Wilderness Study Area. I would not be surprised that a future RMP update for the Rawlins District will look at that district's adjacent Adobe Town lands for ACEC designation. Exclusion of the Haystack Wash tract in the Rock Springs District could ultimately result in an island on non-ACEC lands surrounded by a greater Adobe Town ACEC and therefore pose management issues. I recommend the entire Haystack Wash area within the Adobe Town WSA also be included in the Monument Valley ACEC. | See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #10494-5 | ACEC designations have previously appropriately been applied to relatively small parcels of land in the Resource Area that have unique features or provide unique services that require special management actions. It is inconsistent with the intent and purpose of such designation to apply it to vast acreages as is proposed in several alternatives. WSGA urges that no new designations be made at this time and that large existing ACEC designations, in particular Greater Red Creek, Greater Sand Dunes, and Steamboat Mountain, be carefully reviewed to determine whether they should be continued, and, if continued, whether their objective could be met with reduced acreages. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #10494-7 | WSGA urges BLM to reject any alternative that maintains Jack Morrow Hills as a distinct management area. This extensive area of 622,000 acres incorporates several other areas with appropriate special designations. The JMH designation only confuses management of these more narrowly defined areas of special significance. | See DEIS Volume I Map 3-20: Jack Morrow Hills for a visual of areas included in the lands referred to as 'Jack Morrow Hills'. |
| 836 - Special Designations–ACECs (7400-7570) | #13064-9 | The Committee is greatly concerned with Alternative B increasing ACEC by 460%.60 There is no evidence to support a 460% increase in ACEC in the draft Rock Springs RMP. Alternative B is simply increasing areas to "protect important historic, cultural, wildlife and scenic values" while negatively impacting multiple use of these lands. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13064-10 | Alternative B would designate a new ACEC called the Big Game Migration Corridor ACEC.63 This ACEC would contain significant portions of the Red Desert to Hoback migration corridor.64 The Committee heard testimony from Wyoming's Game and Fish Department at our meeting on October 6, 2023 that Alternative B's inclusion of the Red Desert to Hoback migration corridor within the ACEC would be detrimental to the Wyoming Game and Fish Department's management of wildlife populations within the migration corridor. The Committee stands by the hard work the Wyoming Game and Fish Department has put into migration corridors | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13210-21 | 21. The task force does not support any special management area designations within the checkerboard except for existing Cedar Canyon and Natural Corrals, and Special Status Plant Species ACEC. The task force does recognize the importance of wildlife migration and winter range within the checkerboard. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13210-22 | 22. The majority of the task force has grave concerns about the adoption of new or expanded ACECs in Alternative B, because of the potential negative impacts these ACECs could have on the economy, customs, and culture in SW Wyoming. The task force did not have time to develop nuanced approaches to the management in these proposed ACECs or propose different management designations. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations– | #13287-36 | We would like to see the protections of ACEC designations extended to the Kinney Rim North and South Citizen Proposed Wilderness areas as well. This area provides habitat for desert elk, is home to a wild horse HMA popular | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| ACECs (7400-7570) | | with the wild-horse-viewing public, and contains large tracts of undeveloped sage grouse habitats important to sagebrush obligate species. | |
| 836 - Special Designations–ACECs (7400-7570) | #13287-37 | We support the Sugarloaf Basin, Currant Creek, and Sage Creek portions of the Red Creek ACEC (see DEIS at 2-168), and they could be combined into a single Little Mountain ACEC. This is an important area for Colorado River cutthroat trout conservation. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13287-39 | The statement for the Monument Valley Management Area under Alternative A, arguing that a determination cannot presently be made that the area meets relevance and importance criteria (DEIS at 2-171), is nonsensical. This area was designated Very Rare or Uncommon by the State of Wyoming, whose criteria for designation are essentially the same as BLM relevance and importance criteria for ACEC designation (Attachment 18). A viewshed analysis was performed, illustrating that all lands in the MVMA, plus excluded portions of Adobe Town WSA (which deserve to be included in the ACEC) are critical to the scenic viewshed of the area. This designation was the result of a comprehensive review of abundant data and testimony from leading scientists and artists (see, e.g., Attachment 18). | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13287-41 | A second unit of this ACEC should be designated west of US Highway 191 to protect the Path of the Pronghorn migration route along known and documented satellite collar migrations as far south as Interstate 80. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13330-13 | * MA # 7418: Sweetwater County Farm Bureau prefers Alternative C. Sweetwater County Farm Bureau opposes the expansion of the Greater Red Creek ACEC. (page 2-177). This expansion would place additional restrictions on private landowners within the ACEC. | See DEIS Volume I Chapter 2.2.6 Management Actions 7418-7430 for a full range of alternatives analyzed related to the Greater Red Creek ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13330-15 | MA # 7438: Sweetwater County Farm Bureau prefers Alternative C. Sweetwater County Farm Bureau is opposed to the prohibition of grazing in Jane's Meadow and Upper Currant Creek Pastures within the Sugarloaf Grazing Allotment. (page 2-182). This management action does not state the reasoning to close this area to grazing. Is it being recommended for closure due to land health standards not being met or is this recommended closure arbitrary? | See DEIS Volume II Chapter 2.2.6 Management Action 7438 for a full range of alternatives analyzed regarding grazing in the Currant Creek portion of the Greater Red Creek ACEC. See DEIS Volume II Appendix C.3 for the ACEC evaluation of this area. |
| 836 - Special Designations–ACECs (7400-7570) | #13330-16 | MA # 7443: Sweetwater County Farm Bureau prefers Alternative C. Sweetwater County Farm Bureau is opposed to the prohibition of grazing in the Red Creek Allotment. (page 2-184) This management action does not state the reasoning to close this area to grazing. Is it being recommended for closure due to land health standards not being met or is this recommended closure arbitrary? | See DEIS Volume II Chapter 2.2.6 Management Action 7438 for a full range of alternatives analyzed regarding grazing in the Red Creek portion of the Greater Red Creek ACEC. See DEIS Volume II Appendix C.2 for the ACEC evaluation of this area. |
| 836 - Special Designations–ACECs (7400-7570) | #13412-2 | The Red Desert to Hoback migration corridor spans 150 miles and crosses private land, state trust land, United States National Forest land, and public land managed by the BLM. This migration corridor is the longest known mule deer migration corridor in the United States and is traveled by approximately 5,000 deer biannually. Alternative B would designate a new ACEC called the Big Game Migration Corridor ACEC. This ACEC would contain significant portions of the Red Desert to Hoback migration corridor. As I am following the the Select Committee on Federal Natural Resource Management (Committee) of the Wyoming Legislature, the Committee heard testimony from Wyoming's Game and Fish Department at our meeting on October 6, 2023 that Alternative B's inclusion of the Red Desert to Hoback migration corridor within the ACEC would be detrimental to the Wyoming Game and Fish Department's management of wildlife populations within the migration corridor. I support the hard work the Wyoming Game and Fish Department has put into migration corridors. I am committed to conserving these vital migration corridors to help maintain wildlife populations. I believe that designating migration corridors within ACEC is not in the best interest of the state or the wildlife. | See DEIS Volume I Chapter 2.2.6 Management Actions 7555-7562 for a full range of alternatives analyzed regarding the potential designation of the Big Game Migration Corridor ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13515-1 | RMEF is very supportive of active management on our public lands to benefit wildlife habitat and fire risk management. Executing active forest management techniques such as prescribed burns, thinning, and other treatments helps prevent catastrophic wildfires and assists in long-term ecosystem resilience. In addition, managing natural ignitions can help achieve fuel and vegetation goals. RMEF expresses concern about vegetation and timber management restrictions that would be in place following implementation of several Areas of Critical Environmental Concern (ACEC). The draft Plan components lack clarity as to desired conditions for timber production or vegetation management that would support vegetation diversity and heterogeneous vertical structure. As-is, priority would be given to activities that protect, rather than conserve and manage vegetative conditions. | See DEIS Volume I Chapter 3.19 'Forestry and Woodlands' for description of existing conditions of these areas. See DEIS Volume 1 Chapter 2.2.6 Management Actions 3000-3013 for a full range of alternatives analyzed regarding Fire and Fuels Management. |
| 836 - Special Designations–ACECs (7400-7570) | #13515-2 | RMEF recognizes the need to utilize new tools like ACECs. Some of the proposed designations seem to address very limited landscapes and appear to micro-manage a planning effort that may be better suited for project-level management. Alternatively, similar protections could be addressed in plan components that protect/conserve special status species. | See DEIS Volume I Chapter 2.2.6 Management Actions 7508-7515 for a full range of alternatives analyzed related to the Special Status Plant Species ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |

|---|---|---|---|
| 836 - Special Designations–ACECs (7400-7570) | #13515-4 | As part of a balanced approach to resource conservation and recreational opportunities, we appreciate consideration of seasonal closures to protect crucial habitats and wildlife activities during important life stages (e.g., crucial winter range, parturition, etc.) RMEF recognizes the proposed overall shift in designated acreages from various Recreation Areas to ACECs or other designations. While we understand the ecological need behind some of the proposed shifts, RMEF is sensitive to the perceived loss of recreation. Continued discussion with the recreational community is needed to clarify where, when, and what type of recreational activities are or are not allowed across the planning area. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See Management Actions 6500-6557 for alternatives analyzed related to Recreation, and Management Actions 6600-6620 for alternatives analyzed related to Off Highway Vehicle Use. Route specific designations are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13515-5 | Instead of independent (large and small) ACEC management direction, RMEF recommends that specific management treatments and decisions be made at the project level where potential impacts can be better assessed. Special Designation Wilderness designation (Wilderness Areas - WA, Lands with Wilderness Characteristics - LWC, and Wilderness Study Areas - WSA) and ACECs often restrict various active land management activities that are needed to ensure healthy, sustainable landscapes. This concept is embedded in several proposed land use designations. RMEF supports active management on our public lands to benefit wildlife habitat and manage fire risk. Given the current conditions of many public forests and rangelands, RMEF supports planning components that limit additional wilderness and other special designations that limit management. | Wilderness Study Area designation process is covered in section 3.22.2, and is outside of the scope of this DEIS. Alternatives for management are analyzed in Chapter 2.2.6, section Special Designations, Wilderness Study Area, management actions 7100-7103. A range of alternatives analyzed regarding Lands with Wilderness Characteristics can be seen in Management Actions 1500-1517. A range of alternatives analyzed regarding ACECs can be seen in Management Actions 7400-7570. |
| 836 - Special Designations–ACECs (7400-7570) | #13549-8 | The last area I would like to address is 7490-7497 page 2-194. This states that the Pine Springs ACEC would be expanded to 6,480 acres. These extra acres would inhibit water development or maintenance because there is no live water in the area and because of this animal dispersement. Wildlife and livestock would be more congregated around other water resources which would impact range health. | See DEIS Volume I Chapter 2.2.6 Management Actions 7490 - 7497 for a full range of alternatives analyzed regarding potential designation / expansion / dismissal of the Pine Springs ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-6 | BLM Must Correct Both Procedural Errors and Its Analysis of Areas Proposed for Designation as Areas of Critical Environmental Concern Sweetwater County and the Coalition of Local Governments ("Coalition") have commented extensively on the BLM's analysis of areas proposed for designation as an Area of Critical Environmental Concerns ("ACECs") over the past 12 years. These comments specifically focused on the BLM's analysis of the relevant and important values identified by the BLM in what is now Appendix C of the DEIS, and the BLM's failure to demonstrate any threat of irreparable damage to the resources to correctly measure the need for ACEC designation. Sweetwater County has attached the Coalition's previously submitted ACEC Table (Attach. 4, ACEC Comment Table (Aug. 2017)) for the BLM's convenience and incorporates that discussion by reference here. In addition, the BLM failed to comply with its own regulations and policies when filing the notice of the proposed ACECs in Preferred Alternative B by not specifying the resource use limitation for each ACEC, not providing a complete list of all areas considered for ACEC designation, failing to explain why a nominated area did not qualify for designation as an ACEC, and failing to provide any monitoring requirements for special designated areas such as ACECs. | ACEC monitoring plans are site specific planning documents and are not within the scope of this DEIS. See DEIS Volume II Appendix C for a complete evaluation report for each ACEC considered for designation within the DEIS. See DEIS Volume II Appendix V for tables of restrictions that would occur in each proposed ACEC under each alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-7 | a. BLM Failed to Specify the Resource Use Limitation for Each ACEC and to Identify Areas Not Proposed for ACEC Designation in the Federal Register Notice Pursuant to 43 C.F.R. § 1610.7-2(b), "[t]he State Director, upon approval of a draft resource management plan, plan revision, or plan amendment involving ACECs, shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitation, if any, which would occur ifit were formally designated." The Federal Register notice for the Rock Springs Proposed RMP and DEIS provided a list of the proposed ACECs under the preferred alternative and included only the ACEC name, acreage, and short list of vague significant values for the areas. 88 Fed. Reg. 56654, 56654-56655 (Aug. 18, 2023). The Federal Register notice failed to specify the resource use limitation(s) that would occur if the areas were formally designated as an ACEC thereby failing to provide notice to anyone affected by the particular limitation(s). | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-8 | In addition, BLM Manual 1613 requires the BLM to provide a list of all areas considered for ACEC designation, including nominated areas that are not proposed for ACEC designations under the Preferred Alternative. See BLM Manual 1613, Section 21.A.2 and Section 32 (Sept. 29, 1988). The County believes that the BLM may have failed to disclose in the Federal Register Notice other areas that were nominated for ACEC designation but dropped from further consideration. See 88 Fed. Reg. at 56654-56655. At the September 25, 2023, City of Rock Springs Workshop, the Rock Springs Field Manager stated, "over the course of scoping, because we scoped in 2011, and again in 2013, we had received over 27 ACEC proposals." Attach. 5, Transcript of Rock Springs Workshop Meeting (Sept. 25, 2023). Neither the Scoping Report for the Rock Springs RMP revision, the current Proposed RMP and DEIS, nor the Federal Register Notice for the release of the DEIS include a list of all 27+ proposed ACECs. Appendix C of the DEIS lists 26 proposed ACECs, but the Field Manager's statement represented that even more were proposed. | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-9 | The BLM has failed to follow its own procedures for notifying the public about nominated and proposed ACEC's and must correct this procedural error. In accordance with the regulations, other BLM Field Offices have provided more detailed descriptions in their Federal Register Notices of the proposed ACECs under Preferred Alternatives for their RMP amendments, in addition to listing those areas that were nominated but are not moving forward for designation as an ACEC. See e.g. Attachs. 6, Federal Register Notices re ACEC Proposals. Providing all | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs, including all possible use limitations. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | information in the notice as required by the regulations will properly inform the public of the implications of any ACEC designations and potential restrictions that will be placed on other multiple uses. | |
| 836 - Special Designations–ACECs (7400-7570) | #13585-10 | The BLM must also provide a complete list of nominated and not nominated proposed ACECs to cooperators for review and consideration before re-noticing the proposed ACECs. This would allow for cooperators to review all nominated ACECs and provide meaningful feedback to the BLM. Knowing all areas that the BLM and/or the public have nominated for ACEC designation within the Rock Springs Field Office is also important for consideration and comparison for those areas the BLM is proposing to carry forward for designation under the Preferred Alternative | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-11 | b. BLM Failed to Disclose and Analyze in the DEIS When an Area Does Not }Jeet ACEC Criteria "When an area is found not to meet the relevance and importance criteria, the analysis supporting that conclusion must be incorporated into the plan and associated environmental document." BLM Manual 1613, Section 21.D (Sept. 29, 1988). If more than the identified 26 Proposed ACECs from Appendix C are nominated as discussed above, then the BLM also fails to provide an analysis in the DEIS at Chapter 4.21 explaining why certain nominated areas did not meet the relevance and importance criteria for ACEC designation. See DEIS at 4-229 - 4-231. This similar analysis is lacking in relation to Alternatives C and D, which propose either no ACECs or a reduced amount of ACECs for designation despite the BLM's conclusions in Appendix C that the areas meet the relevance and importance criteria. See DEIS at 4-230 - 4-231; see also BLM Manual 1613, Sections 33.E and 33.F. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-12 | When the BLM had previously identified Alternative D as the Preferred Alternative, the BLM had also failed to explain why certain proposed ACECs were not going to be nominated despite meeting the "relevance" and "importance" criteria. The CLG on behalf of member cooperators had supported exclusion of certain areas from ACEC designation and provided extensive comments on why those areas did not qualify. See Attach. 4, ACEC Comment Table (Aug. 2017). This type of discussion must be included within the DEIS. See BLM Manual 1613, Sections 33.E and 33.F. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-14 | BLM Fails to Adequately Explain the Proposed ACEC's Relevance and Importance The BLM has proposed areas for ACEC designation that were previously rejected under the Green River RMP but has failed to explain why the areas now warrant designation after having previously been found to not meet the relevant and importance criteria. For example, the Pine Mountain Management Area was "not recommended as part of the Greater Red Creek ACEC because Pine Mountain does not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in this area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus would not need to receive the same management emphasis." DEIS at 2-163 (Mgmt. Action #7312). Under the Green River RMP, Pine Mountain was maintained as a geographic management unit. Id The BLM provides no explanation or analysis indicating what has changed in the area to now warrant an ACEC designation, or that the area should be expanded to include the rest of the Proposed Salt Wells ACEC. See DEIS at Appendix C-13 - C-14. Similarly, Sugarloaf Basin was found to "not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in the area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus does not need to receive the same management emphasis. The watershed, scenic, and wildlife resources are determined to be neither more than locally significant nor fragile, sensitive, or rare, when compared to those values found in Currant, Sage, and Red Creeks." DEIS at 2-168 (Mgmt. Action #7329). Under the Green River RMP, the Sugarloaf Basin was a management area. Id. The BLM provides no explanation or analysis indicating what has changed in the area to now warrant an ACEC designation when it so clearly did not meet the relevant and importance criteria in the past. See DEIS at Appendix C-15 -C-16. The same discussion and failure relates to many of the other "newly" Proposed ACECs, which under the Green River RMP were managed as either Special Recreation Management Areas or Management Areas. One last example is the Monument Valley Management Area that Preferred Alternative B proposes for ACEC designation. Id. at 2-171 - 2-172. The BLM previously concluded that "[a]lthough the Monument Valley area has unique scenic features and has the apparent high potential for significant cultural and paleontological resources, there has been little systematic inventory of these features and resources. This lack of information precludes identification of specific resources that meet the ACEC relevance and importance criteria for designation of ACECs." Id. at 2-171. In Appendix C, the BLM does not describe any new inventory of"significant cultural and paleontological resources" and instead bases the ACEC designation on the qualities associated with the Adobe Town Wilderness Study Area ("WSA"). Id. at Appendix C-26. There is no explanation as to why the Checkerboard lands to the north of the WSA warrant ACEC designation or why the WSA designation is insufficient to protect the resources of concern. In addition, the County opposes any ACEC designations within the Checkerboard that would impact private landowner rights. The other failure of the BLM's ACEC analysis is that it has not been able to show that the relevant resource value to be protected had more than local significant importance or that it was otherwise so rare and irreplaceable that additional protection was necessary. The Coalition, on behalf of its members such as Sweetwater County, commented extensively on these failings over the last decade. See e.g. Attach. 4, ACEC Comment Table (Aug. 2017). One of the main rationales given for the Proposed ACECs is to protect specific wildlife habitat, including raptor nesting areas, big game crucial winter range habitat, migration corridors, and sage-grouse priority habitat management areas. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | However, there is no discussion about how the wildlife habitat within the Rock Springs Field Office is any more significant or important than habitat found in the Little Snake, White River, Pinedale, Kemmerer, or Vernal Field Offices, or any habitat found in any other state. Furthermore, the BLM fails to explain how the wildlife habitat is so sensitive, rare, or irreplaceable compared to any other habitat found across BLM's public lands. Wildlife habitat in the Rock Springs Field Office does not have "special worth, consequence, meaning, distinctiveness, or cause for concern, especially compared to any similar resource." BLM Manual 1613, Section l l(B)(l). The only time that the BLM addresses the potential rarity or importance of wildlife habitat is under the Proposed Big Game Migration Corridor ACEC. DEIS at Appendix C-62 - 6-63. The BLM explains that the "migration corridor is the longest known mule deer migration corridor in the U.S. and is traveled by up to 5,000 deer twice each year." Id. at C-63. However, significant migration corridors exist in about every state in the western United States and additional corridors exist in the State of Wyoming. This alone does not warrant ACEC designation. In addition, as discussed more thoroughly in the next section, most important wildlife habitat receives protection through specific management actions that place seasonal restrictions, buffers, density disturbance requirements, etc. | |
| 836 - Special Designations–ACECs (7400-7570) | #13585-15 | ii. BLM Completely Ignores Discussion on Whether Special Management is Required to Protect and Prevent Irreparable Damage to Important Resources Even if a nominated area meets the relevance and importance criteria for the ACEC, the BLM must still consider whether "special management attention is required" "to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish, wildlife, and plant resources, or other natural system or processes." 43 U.S.C. §1702(a); see also BLM Manual 1613, Section 12. The BLM ignores this portion of the ACEC analysis and fails to consider how the relevant resources are already protected under existing statutes, regulations, and/or existing management actions. A significant example of this failure is the BLM's attempt to layer ACEC designations on top of WSA designations throughout the planning area under Preferred Alternative B. If the ACEC designation is proposing the same management and restrictions as a WSA, then there is no reason for an overlapping ACEC designation. By law, WSAs are closed to development. 32 U.S.C. § 1782(c). The BLM provides no explanation as to why the ACEC designation is necessary to protect the underlying resource value when it is already protected by the WSA designation. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-16 | In addition, under Preferred Alternative B, the BLM also proposes to continue managing WSAs that Congress chooses not to designate as Wilderness for their "wilderness values." DEIS at 2-152 (Mgmt. Action #7101). The County opposes this management action, but also notes that the BLM provides no rationale for the need for an overlapping ACEC designation. The County objects to any ACEC designations that overlap with existing WSAs, including the Pine Springs ACEC, Oregon Buttes ACEC, Greater Sand Dunes ACEC, and Greater Red Creek ACEC. See DEIS at Maps 2-29, 2-30, 2-32. The County also objects to any ACEC designations that border WSAs to the extent the BLM is using it as substitute for expanding the current WSAs' boundaries. | See DEIS Volume I Chapter 2.2.6 Management Actions 7100-7103 for a full range of alternatives analyzed regarding Wilderness Study Areas and management following potential dismissal by congress. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-17 | The other resource values often cited in the ACEC analysis include areas of cultural significance, such as rock art panels, petroglyphs, and other geological features, as well as historic trails. While Sweetwater County does not object to the relevance and importance of some of these sites, the BLM fails to recognize the statutory protections these sites already receive. The Archaeological Resources Protection Act ("ARPA"), 16 U.S.C. §§ 470aa-470mm, and the National Historic Preservation Act ("NHPA"), 54 U.S.C. §§ 300101-300315; 36 C.F.R. Part 800, already provide longstanding protections to archaeological and cultural resources. The BLM must show additional special management is required to protect these resources or that the current laws are inadequate to protect them. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-18 | Cedar Canyon, La Barge, Sugarloaf, Tolar, and White Mountain are areas that are protected by ARPA and NHPA, and the BLM should not use the rock art and petroglyph sites as a basis for ACEC designation. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-19 | Sweetwater County especially objects to the expansion of existing ACECs, such as Cedar Canyon ACEC and White Mountain Petroglyphs ACEC, when those specific sites are already protected by statute and pursuant to other proposed management actions. Compare DEIS at Map 2-29 with Map 2-30. The BLM proposes to manage rock art sites and their surrounding viewshed "to protect their cultural and historical values" by prohibiting surface occupancy, placing a no surface occupancy for fluid minerals, designating it as a right-of-way exclusion area, etc. DEIS at 2-91 - 2-92 (Mgmt. Action #5100). ACEC designation is not necessary to protect this resource. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-20 | Finally, national historic trails and wagon roads are also protected by the NHPA and do not necessitate a large swath of land to be designated as an ACEC to protect the trails themselves. Pursuant to the National Register Bulletin #15, a trail must also retain its integrity to be considered in the National Register of Historic Places. A trail must still be well-established or still visible, and not obscured by modem use. Many of the historic trails, such as the Cherokee Trail, in Wyoming are no longer visible and have only a few segments that can even be located. For those that are visible, a¼ mile buffer on each side of the trail is only warranted pursuant to the National Trails Act. See e.g. 16 U.S.C. § 1244(a)(3) ("The authority of the Federal Government to acquire fee title under this paragraph shall be limited to an average of not more than ¼ mile on either side of the trail."). The BLM provides no explanation why the National Historic Trails within the Proposed South Pass Historic Landscape ACEC would require an additional 50,000+ acres under the Preferred Alternative B to protect trails that in many places are no | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. See DEIS Volume I Chapter 2.2.6 Management Action 7498-7507 for a full range of alternatives analyzed regarding potential management of South Pass Historic Landscape ACEC. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | longer visible. See DEIS at 2-195 (Mgmt. Action #7498 - expanding South Pass ACEC from 53,940 acres to 171,300 acres under Preferred Alternative B). | |
| 836 - Special Designations–ACECs (7400-7570) | #13585-21 | The BLM must correct the substantial failure of addressing whether special management prescriptions are necessary to protect the resource values identified within the Proposed ACECs, and address the fact that many of these areas are already protected by existing laws, other designations, and/or proposed management actions. The BLM must allow cooperator participation upon said correction. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-22 | ACECs Are Not a Substitute for Wilderness Study Areas According to BLM's own policies, "[a]n ACEC designation will not be used as a substitute for wilderness suitability recommendations." BLM Manual 1613, Section 06. While ACECs may be designated within WSAs, "[i]f an ACEC is proposed within or adjacent to a [WSA], the RMP or plan amendments shall provide a clear description of the relationship of the ACEC to the recommendations being made for the WSA." Id at Section 33.D. One thing to consider when determining the appropriate management prescriptions for a Proposed ACEC is if the area includes "an area recommended for designation (or already designated)" and if the "management under the other designation afford sufficient protection of potential ACEC values." Id at Section 22.A.6. The BLM has conveyed to cooperators that the ACEC designations on top of WSAs are proposed in case the WSAs are not retained. MA#7101 further admits the BLM's policy of using ACECs as a substitute for WSAs. However, the BLM fails to provide any discussion in the DEIS on the relationship between the proposed ACECs and the overlapping and/or neighboring WSAs. As discussed above, there is no description as to why an ACEC designation is necessary overtop an existing WSA, which is already managed to protect the area's wilderness values. There is also no explanation as to why an ACEC designation is necessary for those areas surrounding the WSA, which under the Preferred Alternative B would be managed as a "VRM Class II within three miles or the visual horizon (whichever is closer) of a WSA boundary." DEIS at 2-152 (Mgmt. Action #7102). For example, for the Monument Valley Management Area that Preferred Alternative B proposes for ACEC designation, the BLM fails to describe any new inventory of "significant cultural and paleontological resources" and instead bases the ACEC designation on the qualities associated with the Adobe Town WSA. DEIS at Appendix C-26. There is no explanation as to why the Checkerboard lands to the north of the WSA warrant ACEC designation or why the WSA designation is insufficient to protect the resources of concern. The County continues to object to the overlapping designations, but the BLM must still provide sufficient explanation within the DEIS as to the relationship between the WSA and ACEC designations to properly inform the public of the management of these areas and to allow for meaningful participation in reviewing these explanations | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13585-23 | d Monitoring Requirements for ACECs Pursuant to 43 C.F.R. § 1610.4-9, a "proposed plan shall establish intervals and standards, as appropriate, for monitoring and evaluation of the plan." These should be based on the sensitivity of the resource to the decisions involved and provide for a way to evaluate whether mitigation measures are satisfactory, or a significant change has occurred that warrants a plan amendment. Id. In addition, BLM Manual 1613 requires ACEC monitoring to be part of the monitoring provisions in a RMP. BLM Manual 1613, Section 63. Intervals and standards for monitoring ACECs must be established and "is critical - not only to ensure that protection of the identified resource values occurs, but also to keep the managing official aware of how well the RMP provisions are accomplishing their objectives." Id. The BLM is also required to annually report on the progress of implementing and monitoring ACECs. Id. at Section 65. The DEIS fails to discuss any intervals and standards for monitoring ACECs. The Proposed RMP currently provides a management action to "establish an implementation, monitoring, and evaluation process, including all interdisciplinary monitoring plan, which would evaluate the overall effectiveness of implementing the management decisions for the planning area and would be used as a basis for making management adjustments." DEIS at 2-4 (Mgmt. Action #0008). However, this is insufficient, as a monitoring plan should be included within this currently Proposed RMP and DEIS. The DEIS further fails to discuss any monitoring plan for ACEC management actions. | ACEC monitoring plans are site specific implementation documents and are not within the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13624-31 | Areas of Critical Environmental Concern Page 3-28 of the draft EIS purports to quote the definition of an ACEC from Section 103(a) of FLPMA. The DEQ/AQD notes that the quote is not complete. The DEQ/AQD suggests that BLM remove the quotes or indicate the omitted material by inserting brackets ([ ]). | Updates to language was reviewed for accuracy. |
| 836 - Special Designations–ACECs (7400-7570) | #13651-4 | The present cultural resource sections (3-11 & 4-12) are far too abbreviated and require elaboration. There is no discussion of how much of the RMP Update area has been inventoried or surveyed. How reliable is the existing cultural resources data? What is the average site density? What proportion of sites are eligible to the National Register of Historic Places (NRHP)? Given average densities and proportion of historic properties, how many eligible sites/places might remain undiscovered? The importance and significance of the highlighted cultural resource sites and landscapes needs further development. What is the rationale behind the selection and boundaries of specific Areas of Critical Environmental Concern (ACEC)? Why are certain rock art sites so important? | See DEIS Volume I Chapter 2.2.6 Management Actions 5100-5106 for a full range of alternatives analyzed regarding known rock art sites which may or may not be within the boundaries of proposed ACECs. Language in this section of the DEIS confirms that future discoveries would receive equal protections. Location of cultural sites is often confidential data. |
| 836 - Special Designations– | #13651-42 | 3.22.1 Special Designation-Areas of Critical Environmental Concern and Other Management Areas Areas of Critical Environmental Concern (page 3-23-3.29) The section on ACECs indicates all but one has a cultural component. Please discuss this fact, the nature of the cultural component and what the ACECs do in management | Location of cultural sites is often confidential data. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume I Chapter 2.2.6, section 'Heritage and Visual |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| ACECs (7400-7570) | | terms for the cultural resources they contain. That discussion also deserves attention in the Cultural Resources affected environment section (3.11). The map section of Volume II of the draft EIS should include additional maps of these Cultural resources ACECs to depict information on a range of factors important to an understanding of the ACECs and the landscape of the ACEC. Another map we recommend would provide an illustration of all special designations including designations for ACECs illustrating for example: transportation networks, oil and gas wells, mine claims and permit areas. | Resources (HR) - Specific Cultural Resources', Management Actions 5100-5127 for a full range of alternatives analyzed regarding potential management decisions on a variety of known and unknown cultural resources. |
| 836 - Special Designations–ACECs (7400-7570) | #13651-55 | A similar concern is the fragmentation of ACECs that arises from tolerance of oil/gas and other development uses in a portion but not the entirety of ACECs. If it qualifies as an ACEC why segment it and allow development in any part? If the BLM plans to do so, your EIS should clearly state the intention to segment ACECs. | See DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13651-61 | 4.21 Special Designations (pages 4-229 to 231) The BLM should detail ACECs to compare the alternatives. These details should specify acreage and stipulations that apply to management in the individual alternatives. The current maps don't speak for themselves. Create a comparison table for ACECs under the Alternatives designed to specify name, acreage and protective stipulations. | See DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. Differing acreage prescriptions can be seen in this section as well. Table 1 in the DEIS Executive Summary shows overarching ACEC acreages by alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-1 | BLM improperly relies on sage-grouse protections for establishing ACECs, despite expressly disclaiming that it will use sage-grouse conservation in its decision making process. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-10 | As illustrated by FLPMA's legislative history,6 ACECs were intended to be narrow designations with management prescriptions tailored to protection of the specific resource requiring the designation. As one Senate Report states, [The ACEC] category is not designed to be a 'no growth' category. Only uncontrolled development is unwanted. The adjective 'incompatible' is present to make certain that development is to be allowed which is compatible with the basic environmental or renewable resources values or safety problems of the land in question. In short, multiple use, when planned, is clearly expected. Secondly, the category has been subdivided into subcategories to pinpoint the basic values of the land involved so as to better provide opportunities for development which can demonstrate its compatibility with such values. S. Rep. 95-734 O, at 128 (1973). This language demonstrates that Congress never intended the designation of ACECs to override multiple-use management. | See DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-11 | BLM merely offers a simple list of "relevant" and "important" resources associated with each ACEC. See, e.g., RMP Draft EIS at C-4 - C-64. The agency cites numerous resources as relevant or important, but not both. See id. Moreover, BLM never explains why the protections available under the Green River RMP are inadequate or why special management attention is required. In other words, BLM has not justified the expanded or newly created ACECs with any reasoned explanation. It has not demonstrated what has changed since it first established existing protections under the Green River RMP such that the relevant and important resources are (a) not adequately protected under the Green River RMP, or (b) in need of special designation now through a new or expanded ACEC. See Manual at § 1613.12. Most troublingly, BLM admits that it failed to provide its rationale for proposing the ACECs and will only provide that reasoning when it is too late for members of the public to comment: "The rational for designating or not designating ACECs will be provided in the Final Environmental Impact Statement (FEIS)." RMP Draft EIS at C-3. That is illegal and alarming. FLPMA's regulations state that BLM "shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitations, if any, which would occur if it were formally designated." 43 C.F.R. § 1610.7-2. More specifically, the ACEC Manual requires that "[t]he public ha[ve] an opportunity to comment on BLM's assessment of relevance and importance criteria[.]" Manual at § 1613.42. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-12 | Second, the proposed ACECs cover far too much land. Their geographic scope is enormous, and disproportionate to their supposed goals. BLM fails to properly define the ACEC borders to fit the "relevant" or "important" resources it attempts to define. BLM is required to geographically limit an ACEC to fit the unique "special management" approach needed to protect the relevant and important resources. Nothing more. See Manual at § 1613.12; see also id. at § 11613.22B.2. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-13 | As discussed above, an area may meet the criteria for a "relevant" "fish or wildlife resource" if it includes "habitat for endangered, sensitive or threatened species, or habitat essential for maintaining species diversity." 43 C.F.R. § 1610.7-2(a); Manual at § 1613.11(A)(2). Mule deer and other large game species (which are identified in the EIS at 3-7-3-8) are not endangered, sensitive, or threatened.9 In fact, BLM's EIS identifies federally listed wildlife in the planning area and "Wyoming BLM Sensitive Wildlife Species" that BLM has determined "require special management consideration to avoid potential future listing under the ESA." See id. at 3-10-3-12. Notably absent from either list are mule deer and other large game species. Nonetheless, BLM contends that it has evaluated the creation of the Big Game Migration Corridor ACEC "based on a citizen propos[al]"10 and that the ACEC meets the criteria for a "relevant" fish-and-wildlife resource simply because the area is a "significant migration corridor for large game species." Id. at C-62.11 That is patently insufficient for ACEC designation: big game are not a special status species and do not require special management consideration. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. Section C.26 covers the Big Game Migration Corridor ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 836 - Special Designations–ACECs (7400-7570) | #13665-14 | Indeed, BLM fails entirely to explain why new special management for the big-game migration corridor is necessary. See id. at 2-210-2-211; C-62-C-63. BLM does not address why existing seasonal restrictions and surface-occupancy stipulations (in existing leases and following the Wyoming Game and Fish Department's guidance) are insufficient to protect the big-game migration areas. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. Section C.26 covers the Big Game Migration Corridor ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-15 | The recommendation also indicates that fences and other potential impediments should not be constructed. Id. Overall, as this guidance demonstrates, the Wyoming Game and Fish Department recognizes that oil-and gas development can occur within big-game migration corridors with a few limited restrictions. In managing wildlife habitat, the federal government should defer to the state's management prescriptions. As the D.C. Circuit explained, in enacting FLPMA, Congress "carefully and explicitly" "assigned the states the primary responsibility of management of wildlife programs within their boundaries." Defenders of Wildlife v. Andrus, 627 F.2d 1238, 1248 (D.C. Cir. 1980). | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. Section C.26 covers the Big Game Migration Corridor ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-16 | With respect to the Natural Corrals ACEC, under Alternative B, BLM proposes to "retain" the prior 1,110-acre ACEC designation established by the Green River RMP. RMP Draft EIS at 2-191.14 In a change from the prior RMP, however, BLM now proposes to close the Natural Corrals ACEC "to consideration of fluid mineral exploration and development." Id. But BLM's 14 There is a discrepancy in BLM's characterizations of the total acres included within the Natural Corrals ACEC. Compare RMP Draft EIS at 2-191 (listing 1,110 acres) with id. at 3-28 (listing 1,142 acres). explanation for the change is inadequate. It simply does not express why the protections provided in the Green River RMP are now inadequate to protect the values and resources in the ACEC, requiring BLM to suddenly preclude all oil-and-gas development. See id.; see also id. at C-28-C-29. BLM merely offers the following limp justification: Impacts to wildlife and fisheries from the management of the Natural Corrals ACEC (1,110 acres) would be similar to those described under Alternative A [i.e., the Green River RMP]. Some additional protective measures to prevent or reduce surface disturbance could provide greater protection of habitat and reduce disturbance to wildlife from vehicles, machinery, or human presence. Id. at 4-72-4-73. This cursory explanation acknowledges the impacts to "wildlife and fisheries" remain the same and does not even identify the specific species or populations of wildlife that "could" be protected. | See updates to DEIS Chapters 2.2.6 Section Special Designations - ACECs, subsection Natural Corrals ACEC and Chapter 3.22.1 - Special Designations ACECs and Other Management areas for consistent listing of current ACEC acreage. See DEIS Volume II Appendix C.12 for a full report of the Natural Corrals ACEC Evaluation. See DEIS Chapter 2.2.6 Management Actions 7477-7489 for a full range of alternatives analyzed regarding the Natural Corrals ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-19 | The Draft EIS's opening chapter provides that "[a]ll [sage-grouse] management actions … are outside the scope of this planning effort and are not analyzed," and BLM disclaims that any of its management decisions are based on sage-grouse. RMP Draft EIS at 1-3. Nonetheless, in the Draft RMP, BLM cites sage-grouse core areas (designated by the State of Wyoming) as relevant wildlife resources that support its proposed designation of several ACECs. See, e.g., id. at App. C-9-C-11, C-13-C-14, C-17, C-28. For example, in laying out its rationale for one of the proposed ACECs, the Salt Wells ACEC, BLM cites the sage-grouse priority-habitat management area ("PHMA") (a federal designation that is different from-though overlapping with-the 15 There is also a discrepancy in BLM's characterizations of the total acres included within the Cedar Canyon ACEC. Compare id. at 3-28 (listing 2,550 acres) with id. at 4-72 (listing 2,540 acres). state's "core area") as "more than locally significant"; having "qualities or circumstances that make it fragile … endangered, threatened, or vulnerable"; and a "national priority." Id. at C-13- C-14. But BLM cannot have it both ways-either the sage-grouse habitat is relevant to its ACEC decisions, or it is not. | Decisions specific to sage grouse management are outside of the scope of this DEIS, but sage grouse habitat may still be considered as an important factor in determining significance of landscapes. See DEIS Volume II Appendix C for all considered factors in ACEC evaluations. Difference in acreages referenced is due to different alternatives being discusses in the aforementioned sections. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-20 | In any event, although BLM is currently considering amendments to its Wyoming Greater Sage- Grouse RMP that guide the conservation of sage-grouse in several Western states,16 it has not yet released its proposed sage-grouse RMP amendments, so there are no proposed maps, restrictions, or analyses for the public to consider during this comment period. They are not made a part of this Rock Springs proposed RMP in any event. It is therefore impossible for the public to understand, much less accurately comment on, a sage-grouse-based ACEC. And "[a] decision made without adequate notice and comment is arbitrary or an abuse of discretion." NRDC v. EPA, 279 F.3d 1180, 1186 (9th Cir. 2002) (citing 5 U.S.C. § 706(2)(A)). | Decisions specific to sage grouse management are outside of the scope of this DEIS, but sage grouse habitat may still be considered as an important factor in determining significance of landscapes. See DEIS Volume II Appendix C for all considered factors in ACEC evaluations. |
| 836 - Special Designations–ACECs (7400-7570) | #13665-21 | BLM's currently designated PHMAs for sage-grouse, outlined in the Wyoming Greater Sage- Grouse RMP,17 overlap with Wyoming's core sage-grouse area designations. They cover much of Wyoming and the Rock Springs area, and they both implement a multiple-use strategy. The PHMA's "management priority is: to open to oil and gas leasing, but with restrictions; to exclude or avoid disturbance to sage-grouse and their habitat; and to minimize impacts to PHMA where they cannot be avoided." Wyoming Greater Sage-Grouse RMP, at 6 (Mar. 2019). BLM's Draft RMP fails to provide any justification for why management under the current PHMA framework does not sufficiently protect sage-grouse in the areas covered by BLM's newly proposed ACECs, or why the areas must be entirely closed to further oil-and-gas leasing, rights-of-way, or new roads solely to protect sage-grouse. BLM's designation of ACECs based on the presence of sage-grouse is arbitrary and contrary to BLM's assertion that its new RMP decisions are not based on sage-grouse conservation. | Decisions specific to sage grouse management are outside of the scope of this DEIS, but sage grouse habitat may still be considered as an important factor in determining significance of landscapes. See DEIS Volume II Appendix C for all considered factors in ACEC evaluations. |
| 836 - Special Designations–ACECs (7400-7570) | #13668-3 | Management # 7421 Page 2-178 …Prohibit surface disturbing activities, except for activities intended to protect or enhance ACEC values. I would prefer a different alternative than B that will not prohibit surface disturbing activities, such as drilling a well and limiting the kind of fence that one would be allowed to use. Areas of our allotment that would be VRM 2 on the top of Mellor Mtn. and the Sage Creek pasture may, in the future need solar panels or some other means to supply water to a well for not only our livestock, but for all species who currently | See DEIS Volume I Chapter 2.2.6 Management Actions 7418-7433 for a full range of alternatives analyzed for potential management actions in the Greater Red Creek ACEC. See DEIS Glossary definition for 'Visual Resource Management Classes' for idea of what projects could be permitted in each class. See DEIS Volume I Maps 2-17 through 2-20 for a range of alternatives analyzed regarding Visual Resource Management Classes throughout the field office. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | drink, and limiting that due to "visibility" does not seem logical nor humane; to say nothing of achieving and maintaining rangeland health. Wells can address livestock distribution in addition to the distribution of other species. Lastly, if only electric fences are allowed, then what do we do about the sage grouse running into it? A well-thought out alternative that takes into consideration the whole picture and all apparent factors would be a sensible approach. | |
| 836 - Special Designations–ACECs (7400-7570) | #13668-4 | Management # 7433 Page 2-181 Prohibit livestock grazing in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion (Map 2- 30). I would prefer any alternative other than B, because it would maintain the rangeland health. The stream is at PFC and the sheep help suppress the cheatgrass by grazing in the early summer. So why remove the livestock as they are a tool in helping maintain healthy land conditions? | See DEIS Volume I Chapter 2.2.6 Management Action 7433 for a full range of alternatives analyzed regarding livestock grazing in the Mellor Mountain allotment. |
| 836 - Special Designations–ACECs (7400-7570) | #13691-6 | DCFB rejects the potential designations of new "Area of Critical Environmental Concern" (ACEC) 14when the resource value is based entirely on the concept of "Scenic Value." Scenic Value may be used in coordination with another physical, natural, or historical resource to be conserved. Working in coordination with all interested personnel with good standing, in making those decisions is the desired approach of DCFB. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13702-13 | In its consideration of designating new, and expanding existing, ACECs in its preferred alternative, the BLM has failed to account for the management activities that have been in place which have allowed these areas to retain and enhance their unique values. The BLM has failed to prove how additional management prescriptions are needed. During its 12-year review, cooperators and the BLM had seemingly decided that some of the current ACECs were ripe for belt-tightening and that all proposed ACECs did not meet relevance and importance criteria. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13702-14 | Per Appendix V, all ACECs would be closed to oil and natural gas leasing. The BLM fails to explain how oil and natural gas development would impair the values for which the ACEC is proposed. The BLM did not disclose any analysis within any ACEC report noting how current development has impaired those values. | Please note that DEIS Volume II Appendix V contains a full range of alternatives analyzed, with Management Actions for each alternative broken out in DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570. A full ACEC evaluation report for each proposed area can be seen in DEIS Volume II Appendix C. |
| 836 - Special Designations–ACECs (7400-7570) | #13715-9 | Under Alternative B, BLM would expand Areas of Critical Environmental Concern ("ACECs") by some 83%, to over 1.7 million acres. Notably, the Greater Red Creek ACEC, currently traversed by EPP's existing MAPL pipeline, would be more than tripled in size, from 131,600 acres to 468,170 acres. Yet the DEIS failed to analyze how development of these areas has impaired any environmental concerns within the area, how proposed limitations on use would affect existing uses, or why the proposed expansions are necessary to protect identified concerns when lesser restrictions would meet the same goals. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13751-7 | The treatment of existing, expanded and new ACEC's appears to be based on BLM's April 3, 2023 proposed Conservation and Landscape Health rule (88FR19583), even though these rules have yet to be finalized. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13751-8 | The Draft RMP/DEIS document tends to reflect the proposed rules and not the actual rules in place at the time the document was drafted and subsequently released as a Draft. This is particularly true in preferred alternative B. BLM should reevaluate all ACEC designations under the existing rules rather than apply the rules they hope to see in place. If BLM is unwilling to do so, BLM should advise the public and stakeholders of the impact of the final adoption of the "Conservation and Landscape Health" rules will have on the adoption of any of the alternatives listed in the Draft and/or subsequent final alternative to be adopted. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13754-11 | In the Chapter 2 discussion of the alternatives, particularly as it relates to the ACECs on pages 2-174 through 2-211, the acreage detailed is different than in the summary Table 3-5 on page 3-28 through 3-29. The BLM should ensure the information is consistent throughout the DRMP so that the public is fully and accurately informed. We have noted the discrepancies below, with the first number reflecting the value from Table 3-5 and the second number determined from the Chapter 2 details. Current ACECs are as follows: * Cedar Canyon (2,550/2,550 acres) - cultural values, scenic values, and wildlife habitat; * Greater Red Creek (131,890/131,600 acres) - watershed, riparian values, cutthroat trout habitat, fisheries management, wildlife habitat; * Greater Sand Dunes (36,850/39,290 acres) - geologic and biological features, recreation uses; * Natural Corrals (1,142/1,110 acres) - cultural, historical, recreational, wildlife, and geological values; * Oregon Buttes (3,450/3,440 acres) - scenic integrity as an historic landmark, wildlife and geologic values; * Pine Springs (6,030/6,030) - cultural, historic, prehistoric, geologic, and scenic values; * South Pass Historic Landscape (53,940/53,940 acres) - visual and historical integrity of the National Historic Trails, scenic and wildlife values; * Special Status Plant Species (Variable/1,200 acres) - plant communities, habitat, threatened and endangered species; * Steamboat Mountain (43,270/47,280 acres) - water quality, vegetation, soil, wildlife resources, geological and ecological features, diverse habitats, stabilized Sand Dunes, Steamboat elk herd and other big game populations; * White Mountain Petroglyphs (20/20 acres) - cultural resource values, wildlife and scenic values. | See updates to DEIS Volume I Chapters 2.2.6 and 3.22.1 for improved consistency in listing existing ACEC acreage. |
| 836 - Special Designations–ACECs (7400-7570) | #13754-12 | Per Appendix V, all ACECs would be closed to oil and natural gas leasing. The BLM fails to explain how oil and natural gas development would impair the values for which the ACEC is proposed. The BLM did not disclose any analysis within any ACEC report noting how current development has impaired those values. The BLM further failed to analyze current development pervasiveness and techniques which lessen footprint disturbance and | Please note that DEIS Volume II Appendix V contains a full range of alternatives analyzed, with Management Actions for each alternative broken out in DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570. A full ACEC evaluation report for each proposed area can be seen in DEIS Volume II Appendix C. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | advancements in reclamation. Closing lands to responsible oil and natural gas leasing and development is not supported and is the most restrictive method for preserving other natural resource values. | |
| 836 - Special Designations–ACECs (7400-7570) | #13776-10 | As managers of South Pass City State Historic Site, SPCR recognizes that the expanded South Pass Historic Landscape ACEC is an improvement for cultural resource and scenic viewshed protection. Matching the boundaries of the ACEC to those in the Lander Field Office is useful for ensuring the National Historic Trail corridor and landscape are preserved. | See DEIS Volume I Chapter 2.2.6 Management Actions 7498-7507 for a full range of alternatives analyzed regarding the potential South Pass Historic Landscape ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13779-6 | Under the proposed alternative, the wisdom and utility of the mitigation hierarchy is arbitrarily rejected; the proposed restrictive wildlife management actions preclude the practice of avoiding, minimizing, and mitigating impacts through the permitting process. In contrast, under current management practices, and under proposed Alternative D (a ready example of BLM's ability to continue such management practices), most activities can proceed as long as impacts are avoided, minimized, or mitigated.13 The existence of these practices clearly establishes that BLM has the necessary tools to ensure responsible development can occur while at the same time meeting wildlife and habitat conservation goals. | See DEIS Volume I Chapter 2.2.6 Management Actions 4400-4436 for a full range of alternatives analyzed for management actions related to Fish and Wildlife. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-7 | ACECs proposed in Alternative B of Rock Springs RMP suffer from systemic inadequacy. First, BLM abandons its statutory obligation to explain why the proposed ACECs requires special management attention beyond those protections already afforded. Second, BLM fails to explain why various resources as both relevant and important. Third, BLM draws expansive, undisciplined ACEC borders instead of properly drawing the borders to the extent of the relevant and important resources. Lastly, BLM neglects to incorporate its multiple-use mandate into the ACECs, instead proposing blanket restrictions like the disallowance of oil and gas leasing altogether. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-8 | BLM fails to explain the need for new ACECs and why special management is required as FLPMA demands. BLM merely offers a simple list of "relevant" and "important" resources associated with each ACEC. See, e.g., Draft EIS, Appx. C at C-4 - C-64. But BLM never says what has changed since the implementation of the Green River RMP that now necessitates such restrictive special management. BLM even admits that it is omitting the analysis until it is too late to comment: "The rational for designating or not designating ACECs will be provided in the Final Environmental Impact Statement (FEIS)." Draft EIS, Appx. C at C-3. FLPMA's regulations state that BLM "shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitations, if any, which would occur if it were formally designated." 43 C.F.R. § 1610.7-2(b). More specifically, "[t]he public has an opportunity to comment on BLM's assessment of relevance and importance criteria[.]" BLM ACEC Manual 1613.42 (emphasis added); see also Id. at 1613.12 ("Management prescriptions providing special management attention should include more detail than prescriptions for other areas"). Without the assessment, the only comment the public can offer is really a two-word question: "What changed?" And that question only highlights the notice's inadequacy under the APA and its noncompliance with FLPMA's regulations and ACEC manual. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-9 | BLM also neglects the basic tenants of ACEC designation. Several named resources that are the apparent bases for ACEC designation are not deemed either relevant or import, including, but certainly not limited to, a big game range (Cedar Canyon), outlaw Bill Pidgeon's gravesite (Red Creek), and a juniper community (Salt Wells). Draft EIS, Appx. C at C-4, C-7, C-8, C13, C-14. BLM also paints ACECs with broad, untethered strokes. BLM must geographically limit the ACEC to fit the special management attention (unique prescription) needed to protect the relevant and important resource and nothing more. BLM ACEC Manual 1613.12. Not only should ACECs be sized correctly, the "necessary" prescription should be tailored to protect that resource while also permitting other uses. Id. Under the current RMP, BLM and Wyoming do just that. They permit oil and gas leasing on lands also home to big game and sage grouse with some seasonal and spacing restrictions. But now and in contravention of FLPMA, BLM proposes to ban oil and gas leasing on these ACECs. Draft EIS at 2-69. Congress never expected a multiple-use exemption for ACECs. See S. Rep. No. 94-583, at 43; S. Rep. 95-734 O, at 128. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-10 | These failures to properly support and define ACECs are typical across the Rock Springs planning area. BLM intentionally withholds its rationale for ACEC designation. It cites numerous resources for relevance or importance but not both. It expands the geographic scope of ACECs well beyond what is necessary to protect the relevant and important resource. And it proposes prescriptions without justifying why they are necessary to protect the resource. These failures are systemic and render each ACEC designation incompatible with FLPMA's ACEC mandates. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-25 | BLM goes much further still and requires almost the entirety of all ACECs to follow VRM Class II objectives "to provide greater protections against surface disturbance." Draft EIS 4-147. Surface disturbance matters in the visual resource context only to the extent that it could cause damage to the visual resource or its viewshed. And it cannot possibly be true that every inch of every ACEC is a sensitive visual resource or within its viewshed. True, ACECs do provide BLM discretion to depart from VRI findings (which, again, BLM has not disclosed), but FLPMA still requires BLM to properly scope each ACEC in both size and prescription types. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. See DEIS Volume I Maps 2-17 through 2-20 for a range of alternatives analyzed regarding Visual Resource Management Classes throughout the field office. |
| 836 - Special Designations–ACECs (7400-7570) | #13783-26 | Manual H-8410-1 V.A.2; BLM ACEC Manual 1613.12. Recall, resources considered under FLPMA have "been subdivided into subcategories to pinpoint the basic values of the land involved so as to better provide opportunities for development which can demonstrate its compatibility with such values." S. Rep. 95-734 O, at 128 (1973). So only ACECs designated specifically to protect visual resources can command visual restrictions. And if ACECs or | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. See DEIS Volume I Maps 2-17 through 2-20 for a range of alternatives analyzed regarding Visual Resource Management Classes throughout the field office. |

|---|---|---|---|
| | | portions of ACECs are not based on the existence or protection of visual resources, BLM cannot implement visual restrictions for those ACECs or portions thereof. But once again, BLM runs afoul of FLPMA by doing so anyway. | |
| 836 - Special Designations–ACECs (7400-7570) | #13784-39 | MA#7414, Alt B: "Consider livestock water developments only if wildlife habitat and resource conditions would be improved or maintained." Comment: Narrowing all range improvement projects to only focus on wildlife habitat does not meet the intent of numerous other reasons for the projects. For example, if the concern is to address a stream segment in Functioning At Risk category under PFC, Alternative B will prohibit the water development and directly conflict with MA#4300. | See DEIS Chapter 2.2.6 Management Action 7414 for a full range of alternatives analyzed regarding livestock water development within the existing Cedar Canyon ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13784-67 | "The acres designated as ACECs would be decreased...Management within a portion of the Little Mountain ACEC would require a grazing plan prior to approval of an annual grazing authorization. This management could lead to a delay when livestock use could occur once an operator identifies a desire to graze within area (Previously known as the Red Creek Portion of the Greater Red Creek ACE, 55,880 acres)." (p. 4-181) Comment: This is the first time the BLM is requiring a grazing management plan. The BLM must explain why this is necessary for not only this area, but also at the RMP level. WDA does not support restricting grazing and putting the ownness to develop a grazing plan on the livestock grazing permittees/operator. If the BLM is requiring the plan, BLM must cooperatively complete the plan in a timely manner with the livestock grazing permittees and ensure grazing is not delayed. | See DEIS Volume I Chapter 4.16 for a breakdown of potential impacts to Livestock Grazing Management across all analyzed alternatives. |
| 836 - Special Designations–ACECs (7400-7570) | #13784-72 | "ACEC habitat prescriptions to manage land development, occupancy, and view sheds would limit renewable energy developments. The placement of renewable energy facilities, structures, and transmission/pipe lines; allowance of surface disturbing activities associated with construction, and vehicle access to development sites would be impacted adversely by those restrictions." (p. 4-221) Comment: Again, the BLM has selected Alternative B as the Preferred Alternative, yet directly conflicts with the statement mentioned above. Alternative B increases ACEC, and prohibits surface disturbing activities throughout the Plan Revision. | See DEIS Volume I Chapter 4.20 for a breakdown of potential impacts to Renewable Energy across all analyzed alternatives. |
| 836 - Special Designations–ACECs (7400-7570) | #13787-93 | MA #7490 SD-29 The 6,030 acres of BLM- administered public lands in the Pine Springs area are designated the Pine Springs ACEC (Table 2- 12, Appendix V and Map 2-29). Industry Position: Not aceptable Reason: Follows the existing RMP, however the ACEC conflicts with the KSLA which is a higher value resource than the ACEC. Recommend do not retain the ACEC but revert to the original 90 ac ACEC. The ACEC designation would be retained (Table 2-12, Appendix V and Map 2-30). Industry Position: Not acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. The ACEC would not be retained. Industry Position: Acceptable Reason: The ACEC conflicts with the KSLA and should be reduced to the original 90 acres. Same as Alternative B Retain the Pine Springs Expanded ACEC and rename to the Pine Springs ACEC. Industry Position: Not acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. Alternative C is acceptable. | See DEIS Volume I Chapter 2.2.6 Management Action 7490-7497 for a full range of alternatives analyzed regarding management actions for the potential Pine Springs ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13787-95 | MA #7508 SD-34, BR-27, BR-32 The 1,200 acres of BLM- administered public lands in Special Status Plant Species areas are designated an ACEC (Table 2-12, Appendix V and Map 2-29). Industry Position: Not acceptable Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon that will be misunderstood. Retain the Special Status Plant Species ACEC (Table 2-12, Appendix V and Map 2- 30). Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon. The ACEC would not be retained. Industry Position: Acceptable Reasons, See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species- specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. Same as Alternative B Industry Position: Not acceptable Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon. Alternative C is acceptable. See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed | See DEIS Volume I Chapter 2.2.6 Management Actions 7508-7515 for a full range of alternatives analyzed related to the Special Status Plant Species ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for nominated ACECs. |

|---|---|---|---|
| | | or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species-specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. | |
| 836 - Special Designations–ACECs (7400-7570) | #13787-96 | MA #7509 SD-34, BR-27, BR-32 The BLM-administered public land areas occupied by four Special Status (candidate) plant species are included in the ACEC designation (making up about 66 sites involving about 1,200 acres of BLM- administered public lands). Additional acres may be added to the ACEC, if more of these Special Status (candidate) plant species or their essential habitat areas are found on BLM-administered public lands. Management and protection to actual plant locations is provided for Arabis pusilla, Astragalus proimanthus, Descurainia torulosa, and Thelesperma pubescens (Map 2- 29). Industry Position: Not acceptable Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon that will be misunderstood. Expand the ACEC to include all BLM Special Status plant species on BLM-administered public land areas occupied by those species. Additional areas could be added to the ACEC, if more populations of these Special Status plant species are found on BLM-administered public lands (3,610 acres, Table 2-12, Appendix V, and Map 2- 30). Industry Position: Not acceptable Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon. No similar action, the ACEC would not be retained. Industry Position: Acceptable Reasons, See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species- specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. Modify the ACEC to include the Cedar Mountain Easter daisy (Townsendia microcephala) and Green River greenthread (Thelesperma caespitosa) plant species on BLM-administered public land areas occupied by those species (1,120 acres, Table 2-12, Appendix V, and Map 2-32). Industry Position: Not acceptable Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon. Alternative C is acceptable. See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species-specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. | See DEIS Volume I Chapter 2.2.6 Management Actions 7508-7515 for a full range of alternatives analyzed related to the Special Status Plant Species ACEC. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for nominated ACECs. |
| 836 - Special Designations–ACECs (7400-7570) | #13787-97 | MA #7555 SD-40, SD-41, SR-01 No similar action Industry Position: Not applicable Designate the Big Game Migration Corridors as an ACEC (226,335 acres, Table 2-12, Appendix V, and Map 2-30). Industry Position: Not acceptable Reason: Big game winter range and similar area have been appropriately managed according to season restrictions. Big game migration corridors should be managed in the same fashion without new ACEC designations. The science and corridors are only now being evaluated by WY G&F; premature action by BLM is not warranted at this time. Recommend BLM refer the WY Governor's Executive Order for actions. No similar action, the Big Game Migration Corridors would not be designated as an ACEC. Industry Position: Acceptable Same as Alternative C Industry Position: Acceptable Alternatives A, C or D are acceptable. | See DEIS Chapter 2.2.6 Management Actions 7555-7562 for a range of alternatives analyzed regarding the Big Game Migration Corridor ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13791-1 | Alternative C, which does not designate any ACECs, and Alternative D which arbitrarily reduces the acres designated as ACECs from existing management, are not based on any legitimate management considerations. The analysis does not convincingly explain why areas designated as ACECs decades ago (existing management) no longer meet the ACEC criteria. BLM planning guidance makes clear that where the relevant and important | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | criteria have been established, as is the case in Alternative B, alternatives which do not designate those areas as ACECs must explain how the criteria will be protected through alternative means. Both alternatives C and D utterly fail in this regard. | |
| 836 - Special Designations–ACECs (7400-7570) | #13806-3 | As such, I recommend the BLM maintain ACEC boundaries as proposed in the preferred alternative to include overlapping protections for other special designations such as WSAs and LWCs. (In reference to management actions 7200-7570). | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13826-1 | The draft RMP Alternative B, designates 1.9 million acres of that as 'Areas of Critical Environmental Concern'. Referred to as (ACES) as a result of this increase, designated management areas would decrease to 183,938 acres because the existing 'Managed Areas' would be designated as 'ACECs' under this alternative. 1) My concerns is this increasing ACECs by 460% 2) The legislative committees submitted in their comments that there is no evidence to support a 460% increase in ACEC in the Draft Rock Springs RPM and they felt that Alternative B is simply increasing areas to protect important historic, cultural, wildlife and scenic values. 3) These committees felt that doing this would negatively impact Multiple Use of these lands. and they recommend that the ACECs either remain at the current acreage amount or decrease. I agree with these committees concerns and recommendations. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13826-2 | I am concerned that Alternative B will increase the ACEC by 460%. I have read in legislative comments that the draft Rock Springs RMP does not present evidence to support this large increase. See the information above. Their comment states it is doing so to "Protect important historic, cultural, wildlife and scenic values. I agree with the committee's recommendation that the ACECs either remains as they are currently designated or even decrease these ACECs. My concern is that this designation not only decreases acres available for public use but I feel that these are some of the most important areas for the public to experience and view. These areas are special areas to local culture not just for Native People but also for local families that have lived in these areas for decades. Some have connections that go back over a hundred years | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13826-14 | Making them a part of planning the management of these areas would be a beginning. The BLM Alternative B plan doesn't support this stewardship with the public if these important cultural, historical and landscapes are placed within ACECs where the general public will not be able to access or view them. My recommendation is that these sites are not placed in ACECs and that BLM reject the Alternative B plan and go back to Alternative A and at that point work with state and local officials to submit a more reasonable and workable plan. | See DEIS Volume I Management Actions 7400-7570 for a full range of alternatives analyzed for each considered ACEC. These include allowable uses under each alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #13827-13 | two ACEC nominations for the Rock Springs Field Office - one for the Boar's Tusk (included in the Greater Sand Dunes ACEC) and another for Indian Gap Trail (incorporated into the Steamboat Mountain ACEC) - were proposed by Tribal Members and deserve extra attention when determining if and how these are to be carried forward into the final resource management plan. | MA#5200-5202 and H.R.#3, 4, & 14-16 address consultation and relationship with Native American tribes. MA#7400-7570 (Special Designations - ACECs) discuss the full range of alternatives considered in the EIS. Consultation with Native American Tribes is described in Section 5.1.3. |
| 836 - Special Designations–ACECs (7400-7570) | #13839-1 | The BLM national office has no accurate database of ACECs. There is no standard format for reporting information about ACECs within the agency or to the public. The BLM in recent years has used ACECs to restrict recreational demands, obliterate grazing rights, and hinder economic development in lower-income communities. The absence of a standardized format of ACEC data, while the BLM pushes for more land to be designated as ACECs, is already leading to a growing delta of distrust of what this draft RMP could mean for future BLM land decisions. | National data collecting and monitoring standards are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13839-2 | while it may be the intention (however unlikely) that implementation of Alternative B will not limit recreational opportunities at this time, nobody, including BLM officials, can know what the designation of an area as an ACEC will mean in the coming years given that BLM plans to "…provide additional guidance for how to incorporate ACECs into resource management decisions in a way that considers trade-offs..." We know that BLM intends to rework which lands can be designated as ACEC and how those lands will be managed. What we don't know is what the outcomes will mean for recreation, or other multiple uses, as the proposed Conservation and Landscape Health Rule has received heavy pushback from the public and has yet to be finalized. We believe it would be an error to designate more than 1.5 million acres in the FO as ACEC when it is unknown what that designation will entail. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. |
| 836 - Special Designations–ACECs (7400-7570) | #13845-7 | During the last two years, several externally proposed ACEC nominations were submitted to BLM, including the Red Desert and Little Sandy ACEC nominations submitted by Wyoming Wilderness Association (WWA) and Pew, and two Indigenous-led nominations, the Boar's Tusk and the Indian Gap Trail, submitted by the Indigenous Land Alliance of Wyoming (ILAW) et al. Pew strongly supports these four ACEC nominations. We appreciate that the BLM recognized the high cultural significance of the Boar's Tusk in its analysis, including analyzing Boar's Tusk as a stand-alone ACEC within the Greater Sand Dunes ACEC. While the other three ACEC nominations overlap those evaluated in Appendix C, it is unclear if BLM fully analyzed the Red Desert, Little Sandy, or Indian Gap Trail within its evaluation. | Red Desert is evaluated within the Western Portion of the Red Desert Watershed, Appendix C.16. Little Sandy is evaluated within the Wind River Front West Portion of the South Wind River, Appendix C.18 and the Sandy Rivers Portion of the South Wind River, Appendix C.19. Indian Gap Trail is evaluated within the Steamboat, Appendix C.23. See Appendix C for the ACEC nomination process and which nominations were evaluated. Some ACEC nominations may have been submitted after alternatives had been developed and analysis initiated and, therefore, were not included in this EIS. |
| 836 - Special Designations– | #13845-8 | The Red Desert ACEC nomination contains high ecological intactness, which fulfils the relevance criteria of fish and wildlife habitat and the importance criteria of mitigating potential threats and vulnerabilities to adverse change. From the CSP report:We observed high ecological intactness within the proposed Red Desert ACEC, with a score | See DEIS Volume II Appendix C for a full evaluation report of each ACEC considered for designation within the EIS. Specifically, see section C.16, Western Portion of the Red Desert Watershed ACEC. Many considered ACECs overlap significant portions of the Red Desert's geography. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| ACECs (7400-7570) | | in the 81st, 63rd, 81st, and 89th percentile compared to other equivalently-sized lands across the West, BLM lands within the West, Wyoming, and BLM lands within Wyoming, respectively... We therefore expect the proposed Red Desert ACEC to maintain the integrity of ecological processes within the region and to be especially critical for supporting the area's imperiled species that rely on intact, high-quality habitat, especially sagebrush obligates like the greater sage-grouse and pygmy rabbit. | |
| 836 - Special Designations–ACECs (7400-7570) | #13845-9 | the Little Sandy ACEC nomination meets the relevance criteria related to natural processes, including high climate accessibility, which means species can track suitable climatic conditions. CSP also found Little Sandy meets the importance criteria by containing exemplary conditions essential for maintaining species diversity under climate change. These values contribute to climate resilience, which BLM is directed to evaluate under IM 2023-13. If protected, this area could serve as a biodiversity stronghold. From CSP's report:The [Little Sandy] proposed area is exemplary in climatic accessibility, scoring within the 89th, 93rd, 98th, and 100th percentiles relative to other equivalently-sized areas in the West, western BLM lands, Wyoming, and Wyoming BLM lands, respectively…These above-average values suggest that this area, if left intact, may function as an important stronghold of species diversity under changing climatic conditions (McClure et al. 20175). | See DEIS Volume II Appendix C for a full evaluation report of each ACEC considered for designation within the EIS. The Little Sandy area is included within section C.18 of the Wind River Front West Portion of the South Wind River ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13845-10 | ew recommends that the BLM consider the following types of management for each ACEC, which will ensure the resources and values are safeguarded: * Withdrawal from mineral entry; * Closed to leasing or allow leasing only with NSO with no exceptions, waivers, or modifications; * Designation as ROW exclusion areas; * Closed to construction of new roads; * Closed to motor vehicle use, as limited to motor vehicle use on designated routes, or as limited to mechanized use on designated routes; * Closed to mineral material sales; * Designation as Visual Resource Management (VRM) Class I or II; * Restriction of construction of new structures and facilities unrelated to the preservation or enhancement of wilderness characteristics or necessary for the management of uses allowed under the land use plan; and/or retain public lands in federal ownership. | See DEIS Volume I Chapter 2.2.6 Section 'Special Designations - ACECs' Management Actions 7400-7570 for a full range of alternatives regarding potential management actions in considered ACECs. See DEIS Volume II Appendix V for acreage tables of different withdrawals proposed under each alternative in all considered ACECs. |
| 836 - Special Designations–ACECs (7400-7570) | #13845-11 | Finally, underlying designations do not preclude the BLM from designating ACECs. The BLM can consider areas that meet the relevance and importance criteria regardless of underlying designations (Manual 1613) such as Wilderness, WSAs, Back Country Areas (BCAs), or other conservation designations. While wilderness and other designations can provide protection, ACECs can be overlaid to provide management prescriptions specific to the values for which an ACEC is designated. In this way, the BLM can fulfill its responsibilities outlined in FLPMA to prioritize the designation of ACECs. | See Maps 2-29, 2-30, 2-31, 2-32, for a visual representation of Special Designation Areas proposed under each alternative. |
| 836 - Special Designations–ACECs (7400-7570) | #13865-27 | L. MA #4609 Alternatives A, B, and D of MA #4609 fail to follow NEPA as they would allow BLM to designate new ACECs without public input. The protections of rare plants are already addressed in MA #4602. For these reasons, PacifiCorp recommends that the BLM adopt Alternative C of MA #4609. | Any additional areas considered for ACEC designation under DEIS Volume I Chapter 2.2.6 Management Action 4609 would follow proper process for designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for ACECs. |
| 836 - Special Designations–ACECs (7400-7570) | #13865-38 | 12. Special Designations The expansion of the special designations associated with Alternative B will significantly impair transmission and distribution operations. Alternative B will increase ACEC size by and the amount of ROW exclusion areas in the project area. In Alternative A, currently 426,709 acres are categorized as ROW exclusion. Under Alternative B, this increases to 2,480,876 acres, making the siting of transmission projects difficult across the entire project area. Alternative A is preferred to enable transmission projects to be sited with reduced impacts to resources by shorter routes. | Please note that DEIS Volume I Chapter 2.2.6 Management Actions 7400-7570 contains a range of analyzed alternatives for potential designation of each considered ACEC. See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. |
| 836 - Special Designations–ACECs (7400-7570) | #13865-40 | A. MA #7418 and #7421 Alternative B of MA #7418 will expand the Greater Red Creek ACEC to include the Sugarloaf and Salt Wells Management area. Paired with Alternative B of MA #7421 to make the Greater Red Creek ACEC a ROW Exclusion Area, these Special designations greatly reduce and/or prohibit the potential development of new electricity transmission lines on the East side of Flaming Gorge, increasing cost of potential consumption of renewable hydro-generation power in south-central Wyoming. Alternative A of MA #7418 will maintain the Greater Red Creek ACEC at 131,600 acres by not adopting the Sugarloaf and Salt Wells Management Areas. Alternative A is preferred to maintain corridors for future development. | Please note that DEIS Volume I Chapter 2.2.6 section 'Special Designations- ACECs' subsections 'Greater Red Creek ACEC' contains a range of analyzed alternatives regarding Right of Ways. |
| 836 - Special Designations–ACECs (7400-7570) | #13865-41 | B. MA #7456 Alternative B of MA #7456 will designate the Boars Tusk ACEC as an exclusion area for ROWs. This increase of exclusion area associated with the Boars Tusk ACEC reduces the ability to transmit energy to previously identified customers, thereby increasing future costs of energy grid delivery and reliability. Alternative A of MA # 7456 is preferred because it maintains the approved activities within this ACEC. | Please note that DEIS Volume I Chapter 2.2.6 Management Action 7456 contains a full range of analyzed alternatives. |
| 836 - Special Designations–ACECs (7400-7570) | #13865-42 | C. MA #7498 and #7502 Alternative B of MA # 7498 will expand the South Pass Historic Landscape ACEC to 171,300 acres (from 53,940 acres). This, paired with Alternative B of MA # 7502 making the South Pass Historic Landscape ACEC a ROW Exclusion Area, greatly reduces and/or prohibits the potential development of new electric transmission lines across South Pass to deliver cost-efficient energy. Alternative B would negatively impact the West-Wide Energy Corridor (WWEC) by reducing the area available to develop new ROWs. Specifically, Pg. 2-116 or the EIS states"[E]liminate the existing corridor identified in the WWEC ARMPA/ROD (2009) east of Flaming Gorge in the planning area (126-218). Corridor widths would be 3,500 feet wide. Designate no new corridors." The ability to site new transmission in this energy corridor is critical to renewable energy development in the west and reducing widespread impacts by line siting around areas considered exclusion zones in Alternative B. Alternative A | See DEIS Volume I Chapter 2.2.6 Management Actions 6100-6108 for a full range of alternatives analyzed regarding Renewable Energy. See Management Actions 7400-7570 for a full range of alternatives analyzed regarding potential ACEC management. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | of MA # 7498 is preferred in order to maintain the existing size of the South Pass Historic Landscape ACEC that will allow for the communities separated by the pass to grow and be delivered power reliably and cost effectively. | |
| 836 - Special Designations–ACECs (7400-7570) | #13878-8 | The BLM has set off a firestorm of public concern around the use of ACECs in the draft RMP. I believe there are places the agency could limit the overlap and duplication of ACECs with other protective measures, and still achieve its Alt B conservation objectives. Below is a GIS map I created showing the overlap among ACECs with other ACECS and WSAs in Alternative B, just in the northern portion of the RMP area. While I understand there might be management objectives written on paper regarding some ACECs that overlap with WSAs, that provide MORE management guidance than what's in WSA management directives, in real life, I don't see that the BLM is managing much at all in those remote areas. For example, I believe you could make do without the ACECs covering the East Sand and Red Lake WSAs. Maybe the only difference there is attention to elk herd management, that a new ACEC could provide. I suggest just writing that into the focus for the area and not creating a whole new ACEC. I suggest eliminating other areas of unnecessary overlap between ACECs and WSAs. | See DEIS Volume II Appendix C 'ACEC Report' for full information on each proposed designation. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for Areas of Critical Environmental Concern. Please note that each referenced Management Action has a full range of potential alternatives analyzed in DEIS Volume I Chapter 2.2.6. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 836 - Special Designations–ACECs (7400-7570) | #13878-9 | Northern Red Desert Landscape I struggle with the broken up and overlapping ACEC designations within the former Jack Morrow Hills area (dotted black line in map above) and South Pass area north of it. This is an area that is a wholistic landscape with many shared values relating to cultural and historic resources (Indigenous, emigrant and frontier, etc.), the highest concentration of BLM WSAs in Wyoming, vital wildlife habitat, scenic beauty, expansive vistas and rugged landscape with few signs of human development. I suggest you combine the Steamboat, Sand Dunes, and South Pass Historic Landscape ACECs into just one area and call it something like the Red Desert Western Heritage Landscape. Within this larger area, there is no need for the smaller ACECs of Oregon Buttes and Pinnacles…since they are on top of the larger area. I suggest you just write in the special management prescriptions for different parts of this area, as it done now anyway for your ACECs and other land management. (For example, under the current RMP the Pinnacles have special management prescriptions without calling it another ACEC. Even in your Alt. B ACECs, you divide up special parts for different management, such as for Boar's Tusk or Indian Gap.) I personally don't see a need for the ACEC label if you're covering the on-the-ground management prescriptions in your document. | See DEIS Volume I Chapter 2.2.6 section 'Special Designations - ACECs' for a full range of alternatives analyzed regarding potential management actions for ACECs considered within the Red Desert landscape. |
| 836 - Special Designations–ACECs (7400-7570) | #13878-10 | I do support limiting future oil and gas development in the combined area mentioned above (your Steamboat, South Pass and Sand Dunes ACECs combined from Alt B) to only current existing leases and rights, as is outlined in Alt. B. The majority of this landscape anyway, has been o?-limits to new O&G leasing for 20+ years and also contains significant NSO areas. I've monitored the O&G development in this area for decades, and it's on a steady decline. There hasn't been a new field in 30+ years. Last I looked in detail (2019) within the JMH area there were only 6 producing wells, although maybe with some change in gas prices, some shuttered wells have been restarted. When I examined this all in detail in 2019, my economic contribution figures showed that those 6 wells produced in total approximately $300,000 in natural gas sales in 2019 compared to $2-3 million in big game hunting revenues in economic activity. Even by economic contribution figures, this area's value is for its natural resources such as wildlife, recreation and conservation values. An examination of the state parcels in this area during the state's oil and gas lease sales also shows the same pattern: few parcels are bid on, and the few that are, are returned to the state and not developed. The BLM could do more to clean up old O&G sites that appear abandoned. The photo here is of one site along a county road that could present a public hazard. | See DEIS Volume I Chapter 2.2.6 section 'Special Designations - ACECs' for a full range of alternatives analyzed regarding potential management actions for the Steamboat Mountain ACEC, South Pass Historic Landscape ACEC, and Greater Sand Dunes ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13880-3 | One of the many features that make federal land management in Wyoming unique is the presence of the "checkerboard" and the requirement for heightened consistency, trust, and cooperation between federal, state, and private land managers. The previously mentioned task force on the Rock Springs RMP recognizes this importance and voted for complete consensus on the following statement: "The task force does not support any special management area designations within the checkerboard except for existing Cedar Canyon and Natural Corrals, and Special Status Plant Species ACEC. The task force does recognize the importance of wildlife migration and winter range within the checkerboard." Beyond special designations, rights of way (ROW) stipulations have an oversized impact on the ability for the state and private citizens to access and utilize property within the checkerboard. From an energy perspective, the federal land in the checkerboard area that would be designated as ROW exclusion areas under the preferred alternative, and will have a significant impact on the placement of transmission lines, access roads, and pipelines by limiting access to oil, gas, and renewable sites, and restricting placement of facilities, pipelines, transmissions lines, communication facilities and roads. ROW exclusion areas in the checkerboard would preclude any type of development on adjacent private and state parcels because it will severely limit access to the sites and options for accessing the land or getting the product out. In order to comply with the mandate that a land use plan must "use and observe the principles of multiple use and sustained yield," the entire planning area should be open to consideration of granting ROWs as set forth in alternative D. This applies to management actions: 6201, 6202, 6207, and 6209.7 | See DEIS Volume I Chapter 2.2.6 Management Actions 6201, 6202, 6207, and 6209 for a full range of alternatives analyzed regarding Rights of Ways and Corridors. |
| 836 - Special Designations– | #13880-22 | The task force spent considerable time discussing the designations of various ACECs proposed in Alternative B. Much of the BLM's restrictions are too overly-broad and their justifications and analyses are undercooked. ACECs are supposed to be used sparingly, surgically, and to protect a specific value. The ACECs in Alternative Bare none | See DEIS Chapter 2.2.6 Management Actions 7400-7570 for a full range of alternatives analyzed related to ACECs. See DEIS Volume II Appendix C, introduction section for an explanation of the designation process for |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| ACECs (7400-7570) | | of these. It is evident that many proposed designations are being put forward to see what may stick. Huge tracts of land are simply closed off from multiple use without the prescribed flexibility that the BLM claims they are able to use. I do not support the designation of any ACECs except for those specifically agreed to by the task force. ACECs are not new to Wyoming or to this RSFO and the task force supported multiple designations, both old and new. These stemmed from having precise and thoughtful approaches, specific to the values in which they were created to protect, and not blanket restrictions, which take entire landscapes out of productive use. | Areas of Critical Environmental Concern. See the rest of Appendix C for a full evaluation report on each proposed area. |
| 836 - Special Designations–ACECs (7400-7570) | #13892-20 | Pages 2-209 South Wind River ACEC, 2-210 East Sand Dunes ACEC, p 2-211 Big Game Migration Corridor, all mention "Manage a separate offsite mitigation area for biological impacts from energy development." Yet the Preferred Alternative will make these areas unavailable for leasing or energy development. Explain. Where will this offsite mitigation area be located? | See DEIS Volume I Chapter 2.2.6 updates to section 'Special Designations ACECs', sub designations 'East Sand Dunes -Red Lake ACEC' 'Big Game Migration Corridor ACEC' and ' South Wind River ACEC' for clarification of language used describing mitigation efforts. |
| 836 - Special Designations–ACECs (7400-7570) | #13892-21 | referring to the South Wind River ACES on p4-103 through p4-104 states "Managing land as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Special status wildlife such as mountain plover, white-tailed prairie dogs, and swift fox could benefit from the low, early seral areas of vegetation." These are different species than identified in the earlier pages. Why the inconsistency, and what is the specific plan for offsite mitigation? The claim that this off-site mitigation could result in benefits to swift fox is a bit concerning, since the swift fox is a species not known to occur in the RSFO. Please explain how offsite mitigation will work, and why this provision is specifically added to these three ACECs. | The swift fox has been known to historically occur within the RSFO planning area, and is mentioned in the DEIS Volume I Chapter 3.7 'Wildlife and Fisheries Habitat' section. It is also identified in Table 3-1 as a Wyoming BLM sensitive wildlife species. |
| 836 - Special Designations–ACECs (7400-7570) | #13899-17 | Additionally, we support ACEC nominations submitted by our organizations in late 2022 and early 2023. Indigenous Land Alliance of Wyoming/Wyoming Outdoor Council, et al, submitted ACEC nominations with a co-stewardship structure for Boar's Tusk and Indian Gap Trail and Wyoming Wilderness Association, et al, submitted ACEC nominations for the Red Desert and Little Sandy. These submissions largely overlap with proposed BLM ACECs (South Wind River, Steamboat Mountain, Greater Sand Dunes, Big Game Migration Corridor) and thus serve as further evidence of the relevant and important values of BLM's proposed ACECs. However, the nomination submitted for Red Desert does not entirely overlap with a proposed BLM ACEC, so at a minimum, BLM should retain the eastern portion of the Red Desert Watershed MA (the western portion is proposed to be incorporated into the Steamboat Mountain ACEC) in the final RMP. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836 - Special Designations–ACECs (7400-7570) | #13904-11 | MA 7540 VRM It is not appropriate to designated nearly 300,000 acres of land as a certain VRM just because the lands got lumped together. . Instead VRM classes should be determined by the Visual Resource Inventory and management direction for the individual locations as appropriate. | Management actions for all four alternatives for the South Wind River ACEC are identified in the DEIS in management actions 7538 - 7547. |
| 836 - Special Designations–ACECs (7400-7570) | #13905-8 | We support the establishment of the Great Sand Dunes ACEC (DEIS at 2-185), and its management to protect dunal flockets (vernal ponds) for amphibian and other wetland life. The dune ponds are habitat for the rare Great Basin spadefoot. Given the scarcity of forage within the dunes, the dune areas should be closed to grazing. | Management actions for all four alternatives for the Greater Sand Dunes ACEC are identified in the DEIS in management actions 7446 - 7554. |
| 836 - Special Designations–ACECs (7400-7570) | #13911-2 | BLM Failed to Follow Proper Procedure in Providing Notice to the Public of Areas Proposed for ACEC Designation Pursuant to 43 C.F.R. § 1610.7-2(b), "[t]he State Director, upon approval of a draft resource management plan, plan revision, or plan amendment involving ACECs, shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitation, if any, which would occur if it were formally designated." The Federal Register notice for the Rock Springs Proposed RMP and DEIS provided a list of the proposed ACECs under the preferred alternative and included only the ACEC name, acreage, and short list of vague significant values for the areas. 88 Fed. Reg. 56654, 56654-56655 (Aug. 18, 2023). The Federal Register notice failed to specify the resource use limitation(s) that would occur if the areas were formally designated as an ACEC. Id. The BLM has failed to follow its own procedures for notifying the public about nominated and proposed ACECs and must correct this procedural error. Providing all information in the notice as required by the regulations will properly inform the public of the implications of any ACEC designations and potential restrictions that will be placed on other multiple uses. | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. ACEC Environmental Concern Evaluations can be found in Appendix C. Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570. |
| 836 - Special Designations–ACECs (7400-7570) | #13911-4 | i. ACEC's Relevance and Importance Criteria The Coalition directs the BLM to the attached ACEC Table (Attach. 1) that specifically addresses the relevance and importance criteria for each proposed ACEC. In addition, one of the major failings in the BLM's analysis of an area's "relevance" and "importance" is the failure to explain why areas previously proposed for ACEC designation but rejected during the development of the Green River RMP now warrant protection as ACECs in the Preferred Alternative B in this Proposed RMP and DEIS. For example, the Pine Mountain Management Area was "not [previously] recommended as part of the Greater Red Creek ACEC because Pine Mountain does not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in this area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus would not need to receive the same management emphasis." DEIS at 2-163 (Mgmt. Action #7312). Pine Mountain was maintained as a geographic management unit. Id. The BLM provides no explanation or analysis indicating what | ACEC Evaluations can be found in Appendix C under C.2 and C.5 and for the Greater Red Creek ACEC and Salt Wells ACEC respectively. Management actions for all four alternatives for the Greater Red Creek ACEC is identified in the DEIS in management actions 7418 - 7430 (Pine Mountain Management Area and Salt Well Management Area incorporated into the Greater Red Creek ACEC for Alternative B). |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | has changed in the area to now warrant an ACEC designation, or why the Greater Red Creek area should be expanded to include the rest of the Proposed Salt Wells ACEC. See id. at Appendix C-13 - C-14. | |
| 836 - Special Designations–ACECs (7400-7570) | #13911-6 | Similarly, during the development of the Green River RMP, Sugarloaf Basin was found to "not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in the area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus does not need to receive the same management emphasis. The watershed, scenic, and wildlife resources are determined to be neither more than locally significant nor fragile, sensitive, or rare, when compared to those values found in Currant, Sage, and Red Creeks." Id. at 2-168 (Mgmt. Action #7329) (emphasis added). Under the Green River RMP, the Sugarloaf Basin was only a management area. Id. The BLM provides no explanation or analysis indicating what has changed in the area to now warrant an ACEC designation when it so clearly did not meet the relevant and important criteria in the past. See id. at Appendix C-15 - C-16. | ACEC Evaluations can be found in Appendix C under C.2 and C.6 and for the Greater Red Creek ACEC and Sugarloaf Basin ACEC respectively. Management actions for all four alternatives for the Greater Red Creek ACEC is identified in the DEIS |
| 836 - Special Designations–ACECs (7400-7570) | #13911-7 | The BLM previously concluded that "[a]lthough the Monument Valley area has unique scenic features and has the apparent high potential for significant cultural and paleontological resources, there has been little systematic inventory of these features and resources. This lack of information precludes identification of specific resources that meet the ACEC relevance and importance criteria for designation of ACECs." Id. at 2-171. In Appendix C, the BLM does not describe any new inventory of "significant cultural and paleontological resources" and instead bases the ACEC designation on the qualities associated with the Adobe Town Wilderness Study Area ("WSA"). Id. at Appendix C-26. The DEIS fails to explain why the Checkerboard lands to the north of the WSA warrant ACEC designation or why the WSA designation is insufficient to protect the resources of concern | ACEC Evaluations can be found in Appendix C under C.11 for the Monument Valley ACEC. |
| 836 - Special Designations–ACECs (7400-7570) | #13911-8 | The other majoring failing of BLM's ACEC analysis is that it has not been able to show that relevant resource value to be protected had more the local significant importance or it was otherwise so rare and irreplaceable that additional protection was necessary. One of the main rationales given for the Proposed ACECs is to protect specific wildlife habitat, including raptor nesting areas, big game crucial winter range habitat, migration corridors, and sage-grouse priority habitat management areas. However, there is no discussion about how the wildlife habitat within the Rock Springs Field Office is any more significant or important that habitat found in the Little Snake, White River, Pinedale, Kemmerer, or Vernal Field Offices, or any habitat found in any other state. Nor has the BLM been able to explain how the wildlife habitat is so sensitive, rare, or irreplaceable compared to any other habitat found across BLM's public lands. Wildlife habitat in the Rock Springs Field Office does not have "special worth, consequence, meaning, distinctiveness, or cause for concern, especially compared to any similar resource." BLM Manual 1613, Section 11(B)(1). | ACEC Evaluations can be found in Appendix C |
| 836 - Special Designations–ACECs (7400-7570) | #13911-9 | The BLM has layered ACEC designations on top of WSA designations throughout the planning area under Preferred Alternative B. According to BLM's own policies, "[a]n ACEC designation will not be used as a substitute for wilderness suitability recommendations." BLM Manual 1613, Section 06. While ACECs may be designated within WSAs, "[i]f an ACEC is proposed within or adjacent to a [WSA], the RMP or plan amendments shall provide a clear description of the relationship of the ACEC to the recommendations being made for the WSA." Id. at Section 33.D. One thing to consider when determining the appropriate management prescriptions for a Proposed ACEC is if the area includes "an area recommended for designation (or already designated)" and if the "management under the other designation afford sufficient protection of potential ACEC values." Id. at Section 22.A.6. | ACEC Evaluations can be found in Appendix C |
| 836 - Special Designations–ACECs (7400-7570) | #13911-10 | The other resource values requiring protection in the ACEC analysis include areas of cultural significance, such as rock art panels, petroglyphs, and other geological features, as well as historic trails. While the Coalition does not object to the relevance and importance of some of these sites, it does not agree with the expansive additional acreage proposed under Preferred Alternative B. In its analysis, the BLM fails to recognize the statutes that protect these types of sites. For example, Cedar Canyon, La Barge, Sugarloaf, Tolar, and White Mountain, which are areas that contain rock art and petroglyphs, are already protected by the Archaeological Resources Protection Act ("ARPA"), 16 U.S.C. §§ 470aa-470mm, and the National Historic Preservation Act ("NHPA"), 54 U.S.C. §§ 300101-300315; 36 C.F.R. Part 800. In addition, under all alternatives, the BLM proposes to manage rock art sites and their surrounding viewshed "to protect their cultural and historical values" by prohibiting surface occupancy, placing a no surface occupancy for fluid minerals, designated it as a right-of-way exclusion area, etc. DEIS at 2-91 - 2-92 (Mgmt. Action #5100). The BLM must show additional special management is required to protect these resources or that the current laws are inadequate to protect them before designating them as ACECs. | ACEC Evaluations for Cedar Canyon, La Barge, Sugarloaf, Tolar, and White Mountain can be found in Appendix C. |
| 836 - Special Designations–ACECs (7400-7570) | #13911-11 | Finally, national historic trails and wagon roads are also protected by the NHPA and do not necessitate a large swath of land to be designated as an ACEC to protect the trails themselves. Pursuant to the National Register Bulletin #15, a trail must also retain its integrity to be considered in the National Register of Historic Places. A trail must still be well-established or still visible, and not obscured by modern use. For those that are visible, a ¼ mile buffer on each side of the trail is only warranted pursuant to the National Trails Act. See e.g. 16 U.S.C. § 1244(a)(3) ("The authority of the Federal Government to acquire fee title under this paragraph shall be limited to an average of not more than ¼ mile on either side of the trail."). In addition, the BLM fails to explain why the National | Management actions for all four alternatives for the South Pass Historic Landscape ACEC is identified in the DEIS in management actions 7498 - 7503. Appendix C under C.21 details the South Pass Historic Landscape ACEC evaluation. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | Historic Trails within the Proposed South Pass Historic Landscape ACEC would require an additional 50,000+ acres under the Preferred Alternative B to protect trails that any many places are no longer visible. See DEIS at 2-195 (Mgmt. Action #7498 - expanding South Pass ACEC from 53,940 acres to 171,300 acres under Preferred Alternative B). | |
| 836 - Special Designations–ACECs (7400-7570) | #13912-5 | The Draft EIS fails to analyze and address the negative effects that the imposition of new ACECs within the Rock Springs Field Office checkerboard area will have on the access to, and the economic development and or use of, private lands within, and affected by, the checkerboard pattern of the ACECs. | Management actions for all four alternatives for the Greater Red Creek ACEC is identified in the DEIS management actions 7300 - 7348. |
| 836 - Special Designations–ACECs (7400-7570) | #13912-12 | In general, BLM has avoided designation of ACECs in the checkerboard area for the precise reason that special management of an ACEC most often requires, depending on the resource, jurisdiction of numerous contiguous blocks of land. BLM's forbearance when it comes to ACECs on checkerboard lands would be reversed under Alternative B. BLM proposes to designate: * The Currant Creek and Sage Creek Portion of the Greater Red Creek ACECs that will extend from the south into checkerboard lands; * The Monument Valley ACEC extending from the south into the checkerboard area on the eastern edge of the planning area; and * The Big Game Migration Corridor ACEC intruding onto the checkerboard lands from the north in an area east of State Highway 191 and running almost as far south as Interstate 80. | ACEC Evaluations can be found in Appendix C. Impacts from all proposed alternatives can be found in Chapter 4. |
| 836 - Special Designations–ACECs (7400-7570) | #13912-13 | The area would also be designated as visual resource management ("VRM") class II (MA# 7557), so that no activity would be allowed that might attract the attention of the casual observer.2 Specific to the class II designation, the decision does not align with the visual resource inventory ("VRI") class designations for the area of the Big Game Migration Corridor ACEC within the checkerboard. See Draft EIS, Map 3-16. Much like VRM classes, VRI classes-which BLM determines under a thorough rubric-are listed from I through IV with lower numerals representing areas of higher interest. BLM Manual H-8410-1 V.A.1. Most of the Big Game Migration Corridor ACEC falls within VRI class III designations, but BLM proposes to designate those same areas as VRM class II. | Management actions for all four alternatives for the Big Game Migration Corridor ACEC is identified in the DEIS in management actions 7555 - 7562. |
| 836 - Special Designations–ACECs (7400-7570) | #13912-14 | Draft RMP, Map 2-18, Map 3-16, Appx C-64. BLM offers no explanation for this misalignment. And without an explanation, no interested party can adequately assess or comment on the difference. And if the rationale for VRM class II designation is simply that the area is an ACEC, BLM has failed to meet FLPMA's requirements. Draft RMP, 4-147. Under FLPMA, BLM must properly determine the range for both the size and prescription type of each ACEC. If some portion of or the entirety of an ACEC is not founded on a visual resource, BLM cannot implement visual restrictions in those ACEC areas on the basis of special management of the ACEC. Because BLM both fails to explain why it deviated from the VRI class III designations and has, perhaps, simply used a blanket VRM class II designation for the entire ACEC, the proposed RMP fails FLPMA and its required processes. | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. ACEC Evaluations can be found in Appendix C. |
| 836 - Special Designations–ACECs (7400-7570) | #13912-15 | Further, even though BLM may have identified a relevant resource (the big game migration corridor) that has sufficient importance (is more than locally significant), BLM fails to explain why this resource now demands special management when it has been effectively managed for decades to ensure adequate mitigation on a project-by-project basis through the application of seasonal restrictions and other mitigation measures. As discussed above, Sweetwater has long been a supporter of WGFD and BLM efforts to effectively study big game and protect the integrity of the migration corridor. BLM makes no attempt whatsoever to explain how new restrictions, which amount to a de facto wilderness designation, are required, in particular on the checkerboard areas where BLM controls only half of the surface. Sweetwater Royalties strongly urges BLM to eliminate the proposed Big Game Migration Corridor ACEC, or at least limit its designation only to those areas north of the checkerboard lands and overlapping with other historic and biologically significant areas along the Wind River Front and through the South Pass area. | Management actions for all four alternatives for the Big Game Migration Corridor ACEC is identified in the DEIS in management actions 7555 - 7562. ACEC Evaluation for the Big Game Migration Corridor can be found in Appendix C under C.26. |
| 836 - Special Designations–ACECs (7400-7570) | #13913-6 | Lastly, BLM has recently issued interim guidance regarding ACECs and land-use planning, which notes that the agency should identify if the relevant and important values of an ACEC have "substantial significance to Tribes"6 and could "support Tribal co-stewardship or traditional and customary uses"7. In the consultation BLM undertakes with Tribal Nations between this public comment period and the record of decision, we encourage the agency to inquire about interest in Tribal co-stewardship for these ACECs that may have substantial significance to Tribal Nations. During this process, BLM should take under consideration recommendations made in a recent report commissioned by the National Association of Tribal Historic Preservation Officers (NATHPO) and The Wilderness Society, which discusses obstacles, and their solutions, for BLM and Tribal Nations co-management or co-stewardship.8 | MA#5200-5202 and H.R.#3, 4, & 14-16 address consultation and relationship with Native American tribes. MA#7400-7570 (Special Designations - ACECs) discuss the full range of alternatives considered in the EIS. Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria |
| 836 - Special Designations–ACECs (7400-7570) | #13918-1 | We also disagree with BLM’s assessment that livestock grazing will not be significantly affected by such a vast designation of ACECs. We believe that ACEC designation will ultimately be used to prohibit ranchers’ ability to make rangeland improvements, which are vital to reducing landscape impacts. | Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 836 - Special Designations–ACECs (7400-7570) | #13925-8 | The ACEC boundaries must be the smallest area necessary. Neither AMS or the DEIS document efforts to tie the size to need for special management. Instead, Alternative B grossly inflates the size of the ACECs to more than half of the entire Field Office. | ACEC Environmental Concern Evaluation can be found in Appendix C. Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570 |
| 836 - Special Designations–ACECs (7400-7570) | #13925-22 | Bryan to South Pass Stage Road, Indian Gap Trail, Crookston Homestead These trails and sites are important but do not warrant 12,927 acres of ACEC designation. The Crookston Homestead (approximately 40 acres) is currently on the National Register of Historic Places and is therefore protected under the NHPA. If the trails are visible, they too are protected under NHPA rules. A working natural gas field should immediately preclude this area from being designated as an ACEC. BLM has provided no information as to what benefit designation will provide that would outweigh the socioeconomic benefits of leaving the area to be managed as an SRA. The SRA sees more than 10,000 user days a year. | ACEC Environmental Concern Evaluation for the Eastern portion of the Greater Sand Dunes ACEC Evaluation can be found in Appendix C under C.7. |
| 836 - Special Designations–ACECs (7400-7570) | #13925-23 | Western Greater Sand Dunes The Indian Gap trail does not support the entire ACEC. The trail is largely unrecognizable and segmented and currently protected under existing statutory schemes. A single feature cannot be used to manage more than 28,000 acres as an ACEC. Even so, Boars Tusk is entirely circumscribed by Chilton Road and the larger area is crisscrossed by roads. The Boars Tusk feature is not part of the Buffalo Hump WSA.RSGA does not believe that "overlapping resources" in "unique juxtaposition" fall under FLPMA definition of an ACEC, even assuming this is more than "word salad." Without support for special management, this area will not qualify as an ACEC. Moreover, the area appears to be primarily protected by WSA designation. and thus an ACEC designation is not needed. | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. ACEC Environmental Concern Evaluation for the Western portion of the Greater Sand Dunes ACEC Evaluation can be found in Appendix C under C.8. |
| 836 - Special Designations–ACECs (7400-7570) | #13925-24 | Boars Tusk as part of Greater Sand Dunes ACEC The Boars Tusk ACEC could be extracted from the surrounding area. This would allow the specific site to be protected without blanketing the larger area with unnecessary restrictions. The DEIS fails to document the need for special management. | Management actions for all four alternatives for the Boars Tusk Portion of the Greater Sand Dunes ACEC are identified in the DEIS in management actions 7455 - 7470. |
| 836 - Special Designations–ACECs (7400-7570) | #13925-25 | Crookston Homestead as part of Greater Sand Dunes ACEC RSGA believes the Crookston Homestead ACEC should be separate and extracted from the surrounding area. This would allow the specific site to be protected without blanketing the larger area with unnecessary restrictions. | Management actions for all four alternatives for the Crookstone Homestead Portion of the Greater Sand Dunes ACEC are identified in the DEIS in management actions 7471 - 7476. |
| 836 - Special Designations–ACECs (7400-7570) | #13927-1 | Overall, we support the recommendations for the GLMA made by the GLMC and the Wyoming Governor's Task Force. However, in the Currant Creek Portion of the Red Creek ACEC, Sage Creek Portion of the Red Creek ACEC, and Pine Mountain Management Areas - because of the unique and sensitive nature of the CRCT habitat found in these areas as well as TU's long track record of investment in habitat restoration in collaboration with the BLM, state agencies, industry, and private landowners - we ask that you consider making lands in these areas unavailable for leasing to provide greater protection than No Surface Occupancy stipulations. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836 - Special Designations–ACECs (7400-7570) | #13940-2 | For many of the ACECs, the BLM has failed to adequately explain a proposed area's "relevance" and "importance." One glaring issue is providing any analysis as to why certain areas proposed for ACEC designation under the previous Green River RMP, but rejected, now warrant ACEC designation in this RMP. For example, the Pine Mountain Management Area was "not [previously] recommended as part of the Greater Red Creek ACEC because Pine Mountain does not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in this area are interconnected with those of Greater Red Creek. | ACEC Evaluations can be found in Appendix C under C.2 for the Greater Red Creek ACEC. Management actions for all four alternatives for the Greater Red Creek ACEC is identified in the DEIS in management actions 7418 - 7430 (Pine Mountain Management Area incorporated into the Greater Red Creek ACEC for Alternative B). |
| 836 - Special Designations–ACECs (7400-7570) | #13940-3 | even if a nominated area meets the relevance and importance criteria for the ACEC, the BLM must still consider whether "special management" is required "to protect and prevent irreparable damage to important historic, cultural, or scenic values; fish, wildlife, and plant resources, or other natural system or processes." 43 U.S.C. §1702(a); see also BLM Manual 1613, Section 12. The BLM ignores this portion of the analysis and fails to consider how the relevant resources are already protected under existing statutes, regulations, and/or existing management actions. Most of the proposed ACEC acreage is already protected through a Wilderness Study Area ("WSA") designation or protected by the Archaeological Resources Protection Act ("ARPA") | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. ACEC Evaluations can be found in Appendix C. |
| 836 - Special Designations–ACECs (7400-7570) | #13951-13 | Pages 174-212; Special Designations 7400-7570. Specifically SD #'s 7418, 7419, 7421, 7423, 7426, 7430, 7431, 7432, 7433, 7447. -Shortly after my parents purchased the historic Brooks Ranch, we tried to fence along Gooseberry Creek to keep the cattle from going where they weren't supposed to be and to protect the stream in the very area in Sage Creek and that portion of the Mellor Mountain Allotment that this plan would like to take away from us. At the time, we were not allowed to do that because the fence would interfere with the migration of wildlife and game animals. So everyday, there was a horseman down there moving the cows up the hill. As a result, and after more than $8000 in legal fees in the early 1990's and a substantial amount of time, the BLM's decision was to relocate some of those AUMs. We agreed to the terms and have been compliant ever since. We've added sheep to improve vegetation and rangeland health. The sheep eat weeds and cheatgrass early in the spring before the cattle are dispersed and the stream is at PFC. Livestock are a proven tool in helping maintain a healthy and beautiful landscape where wildlife and big game also thrive. Now, Alternative B is calling for a fence for preservation. What about ALL of the wildlife, including the controversial sage grouse and those species that are | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. Chapter 1 Section 1.4 Planning Criteria of the DEIS recognizes the State's responsibility and authority to manage wildlife. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | attracting the media; that would be in eminent danger with a fenced enclosure? That's going to be mandated now? What is the justification for excluding grazing and replacing it with Alternative B's goals of catering solely to the recreational user and protecting the scenic qualities? Alternative A is a much better option at this point. The BLM already has measures in place to see if rangeland health objectives are being met. I am against any and all expansions of the ACEC's and I'm also against increasing restrictions, such as the VRM2 would do. | |
| 836 - Special Designations–ACECs (7400-7570) | #13953-15 | ACEC designations by themselves do not change the management prescriptions or use of public lands. According to land use planning regulations 43 CFR § 1610.7-2(b), the BLM "shall publish a notice in the Federal Register listing each ACEC proposed and specifying the resource use limitations, if any, which would occur if it were formally designated." Reviewing the notice in the Federal Register should lead every reader to the conclusion that the ACECs proposed for the Rock Springs RMP area do not contain any resource use limitations. The notice provides the following description: * Cedar Canyon ACEC: 2,540 acres with significant cultural, scenic, and wildlife values. * Greater Red Creek ACEC: 468,170 acres with significant historic, cultural, paleontological, wildlife, and scenic values. * Greater Sand Dunes ACEC: 39,290 acres with significant historic, cultural, geological, and wildlife values. * Natural Corrals ACEC: 1,110 acres with cultural, historical, recreational, wildlife, scenic, and geological values. * Oregon Buttes ACEC: 3,440 acres with significant historic, cultural, wildlife, and scenic values. * Pine Springs ACEC: 6,480 acers with historic, cultural, and paleontological values. * South Pass Historic Landscape ACEC: 171,300 acres with significant cultural, scenic, and wildlife values. * Special Status Plant Species ACEC: 3,610 acres with significant Special Status Species value. * Steamboat Mountain ACEC: 439,330 acres with significant historic, cultural, wildlife, and scenic values. * White Mountain Petroglyphs ACEC: 20 acres with significant Native American concerns and scenic values. * South Wind River ACEC: 374,710 acres with high value air, cultural, biodiversity, and visual resources. * Red Lake East Sand Dunes ACEC: 22,340 acres with scenic and wildlife values. * Big Game Migration Corridor ACEC: 226,335 acres with wildlife and biodiversity values for the protection of big game. * Big Sandy Openings ACEC: 2,020 acres with scenic, watershed, and geologic values. * Pinnacles ACEC: 1,340 acres with scenic, paleontological, and wildlife values. * Monument Valley ACEC: 69,960 acres with wildlife, geologic, cultural, and paleontological values. As shown, there is no resource limitation provided for any of the proposed ACECs. The notice only gives a broad statement of the generic resource value that is being proposed for protection from irreparable damage. However, if one reads through the Draft RMP they will find that the BLM is proposing substantial limitations across the proposed ACECs. | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570. |
| 836 - Special Designations–ACECs (7400-7570) | #13953-16 | Beyond the deficiency of notice, the Draft RMP fails to explain what irreparable damage the resource limitations are attempting to address. This is the fundamental question for determining the need for anACEC. If there is no special management attention required to protect and prevent irreparable damage, there is no basis for the establishment of an ACEC. It is highly unlikely that a newly proposed ACEC that is wholly inside an existing ACEC designation with identical resource limitations is facing irreparable harm. This would eliminate the need for Boar's Tusk, Crookston Homestead, The Pinnacles and others that are already within existing ACEC designations. Additionally, ACEC designations that are in areas designated as wilderness or in areas managed as wilderness under a wilderness study area are likely without justification when considering potential for irreparable damage. | ACEC Evaluations can be found in Appendix C. |
| 836 - Special Designations–ACECs (7400-7570) | #13953-18 | While the WCCA can appreciate the BLM's authority in designating ACECs the substantial acreage proposed would triple the acreage designated as ACECs and would pose a substantial economic burden on the people and industry in the Rock Spring RMP area. Without belaboring the point, the socioeconomic impact analysis present in the Draft RMP is lacking a comprehensive view of overlapping restrictions. It is therefore highly likely that the impacts to our communities will be substantially more severe than described. | The socioeconomic impacts for Alternative B are detailed in Chapter 4 Section 4.23.5. |
| 836 - Special Designations–ACECs (7400-7570) | #14023-5 | I recommend that the BLM reassess the District's lands for ACEC designation with equal weight given to existing and long-term values generated by sustainable surface uses as those customarily attributed to underground, highly impactful, extractable resources. * I recommend that the existing ACEC boundaries be retained and expanded if-and- when new supportive data becomes available. | ACEC Evaluations can be found in Appendix C. Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570. |
| 836 - Special Designations–ACECs (7400-7570) | #14026-3 | BLM proposes in this alternative, among other restrictions, to increase the size of Areas of Critical Environmental Concern (ACECs) in the region from the current 286,470 acres to over 1.605 million acres-44% of the 3.6 million acres covered by this Draft RMP/EIS.9 ACECs historically are managed to limit uses such as recreation, mineral and oil and gas production, agriculture, and electricity infrastructure siting. NRECA urges BLM to withdraw this proposed ACEC designation; or, if BLM proceeds with the designation, it should work with all stakeholders in the region to determine the appropriate size of the ACEC and to allow major and principal uses as detailed under FLPMA to continue in that region. NRECA further requests detailed information about how the preferred alternative's ACEC designation would affect electricity transmission, distribution, and project siting in the area, as well as how it may impact access to Rights-of-Way ("ROW") and vegetation management and grid hardening practices. | Adherence to applicable laws, regulations, and policies is addressed in Chapter 1 under 1.4 Planning Criteria. Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570. |
| 836.01 - Cedar Canyon ACEC | #13210-106 | 7404 Alternative B Retain the Cedar Canyon ACEC designation (Table 2-12, Appendix V and Map 2-30). Alternative B is preferred because it retains Cedar Canyon ACEC while Alternative C and D do not. | Management actions for all four alternatives for the Cedar Canyon ACEC are identified in the DEIS in management actions 7404 - 7417 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 836.01 - Cedar Canyon ACEC | #13665-17 | The same is true for the 2,550-acre Cedar Canyon ACEC.15 It also is currently designated as an ACEC in the Green River RMP. Under that RMP, however, "the BLM-administered public lands in the ACEC are open to consideration for mineral leasing with restrictions to protect cultural and wildlife values, particularly raptors and raptor habitat, big game winter range, and watershed values." Id. at 2-174. Now, BLM's Alternative B proposes to "[c]lose the BLM-administered public lands in the ACEC to mineral leasing to protect cultural and wildlife values, particularly raptors and raptor habitat, big game winter range, and watershed values." Id. The only justification BLM offers is that "additional management would allow for greater habitat protection." Id. at 4-72; see also id. at C-4-C-5. That is inadequate. BLM's proposed exclusion of all impacts from "human presence," including oil-and-gas development, in these and other ACECs is unwarranted and runs directly contrary to FLPMA's multiple-use mandate and BLM's obligation to foster mineral development on public lands | The DEIS's adherence to applicable law, regulation, and policy is addressed in Chapter 1 under 1.4 Planning Criteria. Management actions for all four alternatives for the Cedar Canyon ACEC are identified in the DEIS in management actions 7404 - 7417. |
| 836.01 - Cedar Canyon ACEC | #13925-11 | Cedar Canyon 5,241 Acres DEIS App. C-4 The Task Force supported the ACEC. There are still problems however with BLM documentation. The 1997 Green River RMP only identified 2,550 acres for this ACEC. There is no explanation for doubling the area to be protected. BLM does not explain why existing law including civil and criminal penalties are insufficient. BLM should return the ACEC to the original 2550 acres. There is no special management needed since the rock are panels are protected under ARPA and NHPA, including civil and criminal penalties. Native American Rock Art Panels as particular sites meet importance criteria but evaluation form does not document the basis to increase the proposed ACEC size to 5,241 acres. | Acreage determinations can be found in Appendix V Tables for the Cedar Canyon ACEC. Management actions for all four alternatives for the Cedar Canyon ACEC are identified in the DEIS in management actions 7404 - 7417. |
| 836.01 - Cedar Canyon ACEC | #13940-4 | Cedar Canyon, La Barge, Sugarloaf, Tolar, and White Mountain, which are areas that contain rock art and petroglyphs, are already protected by ARPA and NHPA. In addition, under all alternatives, the BLM proposes to manage rock art sites and their surrounding viewshed "to protect their cultural and historical values" by prohibiting surface occupancy, placing a no surface occupancy for fluid minerals, designated it as a right-of-way exclusion area, etc. DEIS at 2-91 - 2-92 (Mgmt. Action #5100). And notably, these protections are limited to the actual site without overly expanding it to include thousands of additional acres like the proposed ACEC designations. The BLM must show additional special management is required to protect these resources or that the current laws are inadequate to protect them before designating and/or expanding any of these areas as an ACEC. | Acreage determinations can be found in Appendix V Tables for the Cedar Canyon ACEC. Management actions for all four alternatives for the Cedar Canyon ACEC are identified in the DEIS in management actions 7404 - 7417. |
| 836.02 - Greater Red Creek ACEC | #13210-107 | 7418 No Alternative The task force voted to support the adjustment of the northern boundary to exclude the checkerboard lands from the ACEC, but as a standalone action, not tied to any of the existing alternatives. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-108 | 7421 Alternative D Allow surface disturbing activities only if they protect or enhance ACEC values. Close to fluid mineral leasing Petition to segregate and pursue a withdrawal from mineral location. Close to oil shale leasing. Designate as a ROW avoidance area. Designate as VRM Class II. Closed to Coal Leasing See also management action 7418 There are no active oil and gas leases or coal development potential in the area. The task force supported Alternative D out of recognition of the work of the Little Mountain Coalition. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-109 | 7429 Alternative D No similar action Alternative D is preferred because it does not mandate management prescription on the land unlike Alternatives A and B. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-110 | 7433 Alternative A No similar action Alternative A is preferred because it does not affect grazing while Alternative B would prohibit it in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-111 | 7438 Alternative A No similar action Alternative A is preferred because it does not affect grazing while Alternative B would prohibit it in the Jane's Meadow and Upper Currant Creek Pastures within the Sugarloaf Grazing Allotment. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-112 | 7443 Alternative D Require the completion of a grazing management plan prior to any annual authorization for livestock use in the allotment. A grazing permitee, in collaboration with BLM and WGFD, has made significant positive improvements to the land and any other alternative would be very detrimental to that work. Alternative D is preferred because it allows this permittee to responsibly graze the allotment in question. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13210-113 | 7444 Alternative D No similar action Alternative B would pursue the acquisition of the state parcel, Alternative D is preferred because it includes no similar action. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13287-38 | In addition, the same direction proposed for the Salt Wells unit of the Greater Red Creek proposed ACEC should be applied here, as this area provides important habitat for the Steamboat Mountain herd of desert elk. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.02 - Greater Red Creek ACEC | #13769-5 | We have previously expressed our concern about the permeance of an ACEC designation. Now we express our concern about the future actions of a neighboring landowner in response to the BLM's selection of alternative B especially proposed management action 7443 - prohibit livestock grazing in the Red Creek allotment. While we endorse the conservation intent of Alternative B, we urge the BLM to reconsider the decision to revoke the grazing permits near the Red Creek ACEC. We believe that the BLM has erred in its expressed conservation intent by | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | adopting a management option (7443) that punishes a Department of the Interior landowner-of-the-year by revoking his (never used) grazing permits. This landowner has not only cooperated with the BLM and Wyoming Game and Fish, but he has matched conservation funds. These actions and the landowner's progressive management are restoring a severely degraded riparian area and a watershed that has the purest strain of Colorado River Cutthroat trout. This landowner's management approach should be promoted as a demonstration of compatible conservation and livestock production. The last thing we need on the edge of the Red Creek ACEC is for the landowner to sell to a developer. Then we will have a subdivision that undoes all the conservation work he has done in taking three decades of non-use. | |
| 836.02 - Greater Red Creek ACEC | #13783-28 | The Salt Wells Area ACEC Designation is Too Expansive and Not Adequately Supported. Wexpro specifically opposes Alternative B's proposal to designate the Salt Wells ACEC, which overlaps with its leases and authorized development in the Vermillion Field. See Draft EIS, Appx. C at C-13 to C-14. In the below map, the Vermillion units are shown in color blocks, and the proposed ACEC is the red shaded area that intrudes from the northwest into the field. This map is also included in the map appendix to this letter. The Draft RMP describes the 249,326-acre Salt Wells ACEC as an expansion of the current 64,200-acre Pine Mountain management area. When BLM considered this same area in 1997 for the Green River RMP, it explained that the Pine Mountain management area did not meet the criteria for designation as an ACEC because it did "not contain the same sensitivity of resources found in Greater Red Creek [which was designated to protect watershed resources], even though the watershed resources in this area are interconnected with those of Greater Red Creek." GR RMP at 37-38. And no other resources demanded special management. Without explaining what has changed from then to now, or how the Salt Wells resource values are under threat or in need of special management, BLM now proposes a vastly expanded ACEC to include the Salt Wells area. BLM cites the presence of several resources in the ACEC without detail or geographic delineation-none of which justify the ACEC. As discussed in detail below with respect to each resources, BLM references several historic trails, a historic road, wildlife habitat (raptor nesting area, sage-grouse core areas, and big game crucial habitat), stands of junipers, an impaired and unnamed stream, fossil assemblages, fragile soils and steep cliffs, and an area of pine bark beetle kill with increased risk of wildfire. Draft EIS, Appx. C at C-13 to C-14. BLM fails to claim relevance and importance for several or the resources (both of which are required for ACEC designation, see Section II.B above), including for the juniper stands, impaired stream, fossil assemblages, and area of pine bark beetle infestation. Thus, none of these one-and-not-the-other qualities can form the basis of an ACEC. Even where BLM lists the resources as both relevant and important, its evaluation is conclusory; lacks the detail necessary to understand the nature, value, and sensitivity of the resource; and fails to outline the special management needs of the resource. Instead, BLM mashes together references to vague and ill-defined resources and generally concludes that an ACEC over the entire 249,326 acres is justified. Draft EIS, Appx. C at C-13. This approach fails to meet BLM's requirement to show both relevance and importance for each specific resource and tie proposed management prescriptions to the special management needs and geographic extent of the resource, while continuing to allow for multiple uses. One question persists for every cited resource throughout the proposed ACEC: What has changed? If relevant and important resources were not identified in the Green River RMP, which concluded that the Pine Mountain and its 64,200 acres should not be an ACEC, what is the basis of its vast expansion and ACEC designation?5 If a quality has become sensitive or has garnered more than local significance since the Green River RMP was completed, BLM should say so. But BLM has not said, and cannot make a case for, designation of the ACEC as a whole, where current management has been sufficient to protect sensitive resources. For each of the resources cited in the proposed Salt Wells ACEC, the following subsections discuss the lack of relevance, importance, or need for special management attention. The final subsection addresses why, even if some or all the resources justify the ACEC, the geographic scope of the designation and proposed management prescriptions are not narrowly tailored to the affected resource-why the designation of the entirety of the area and the elimination of multiple uses is not supported. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-30 | Cherokee Trail, Overland Pass Variant, and Browns Park Wagon Road The first resources BLM cites as relevant are intact segments of the Cherokee Trail, Pine Butte Variant of the Overland Pass Trail, and the Browns Park Wagon Road because they have significant historic, cultural, or scenic value. Even if these portions of the trails/road have some cultural or historical significance, BLM's finding that they also meet the importance criteria-i.e., are more than locally significant or warrant protection to satisfy national priorities-is doubtful. Indeed, none of these trail segments, unlike other trails in the Rock Springs RMP planning area, are designated as an NHT.6 The current Green River RMP does not designate any non-NHT trail or road as an ACEC, and BLM fails to explain why these trail segments, which have not received more than local significance and attention now require special management direction.7 Regardless of their designation as an ACEC, activities affecting these trail segments and road will be subject to National Historic Preservation Act Section 106 consultation obligations, which may result in special mitigation to protect the resources. BLM fails to explain why more protection is needed. Only the South Pass Historic Landscape ACEC (located in the northeast corner of the RMP area) has the objective of protecting NHT trails and roads. GR RMP at 33. The ACEC covers only 53,780 acres with a right-of-way exclusion zone limited to just 33,700 acres. Id. It also sits at the confluence of four NHT-designated trails (out of a total of twenty-one nationwide)-the Oregon, Mormon Pioneer, California, and Pony Express. This unique combination of NHT-trails justifies the South Pass Historic Landscape ACEC. The Salt Wells area contains nothing of the like. BLM's | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | claim that the Cherokee Trail, Pine Butte Variant of the Overland Trail, and Brown's Park Wagon Road are both relevant and important is also belied by the fact that these trails and roads continue to run through large swaths of the Rock Springs planning area outside of any current or proposed ACECs. BLM fails to explain what about this stretch of the named trails and road create significant historic, cultural, or scenic value while other stretches do not. Nor does BLM explain why special management is needed in this area, as opposed to other areas. And BLM makes no attempt to tie the proposed management prescriptions of the Salt Wells ACEC to the site-specific needs of the trails and road resources. Without claiming what special characteristic warrant special management, ACEC designation on the basis of the trails and road is not justified. | |
| 836.02 - Greater Red Creek ACEC | #13783-31 | In terms of relevant fish and wildlife resources, the Draft RMP cites as support for the Salt Wells ACEC the presence of raptor nesting areas without actually stating where within the proposed ACEC the raptor nesting areas are located. A map of raptor nesting sites (see Draft EIS Map 3-4) shows only two occupied raptor nests sites within the entire Salt Wells area, both prairie falcon nests. This relevance criterion calls for a "habitat for endangered, sensitive or threatened species, or habitat essential for maintaining species diversity." BLM ACEC Manual 1613.11(A)(2). Prairie falcons are not designated as endangered or threatened.8 And the prairie falcon's range spans from Canada to Southern Mexico and from the Pacific Ocean to Nebraska.9 So these two raptor nests are likely not essential for maintaining species diversity. Thus, the occupied prairie falcon nests do not qualify as a relevant wildlife resource. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-32 | The Draft RMP also generally identifies the Pine Mountain and the Four J Rim as significant raptor nesting areas, although no specific occupied nests are identified in the RMP. BLM claims these nesting sites are important with more than local significance. But to be more than locally significant, the resource must be so when "compared to any similar resource." BLM ACEC Manual 1613.11(B)(1). BLM does not address why these areas, compared to other nesting areas throughout the Rock Springs planning area, are unique or important. BLM's failure is evident from review of Map 3-4, which shows other areas of far greater concentration of raptor nesting sites than the Salt Wells ACEC. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-33 | Even if prairie-falcon-occupied nests and raptor nesting areas in the Pine Mountain and Four J Rim are relevant and important (which BLM concludes without any analysis whatsoever), BLM fails to state why special management is needed now when the area was rejected for ACEC designation in the Green River RMP. The Green River RMP specifically stated that the Pine Mountain management area is not an ACEC because it "does not contain the same sensitivity of resources found in Greater Red Creek[.]" GR RMP at 37-38. If something changed, BLM should clarify. | Management actions for all four alternatives of the Greater Red Creek ACEC are identified in the DEIS in management actions 7418-7445. Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. |
| 836.02 - Greater Red Creek ACEC | #13783-34 | Moreover, BLM fails to make a case for special management need. BLM must state specifically why existing buffers for occupied nests and other seasonal habitat stipulations are not sufficient to adequately protect raptor nests to the extent they are a relevant and important resource. And BLM must also explain why proposed restrictions in the Salt Wells ACEC-i.e., closing the area entirely to oil and gas leasing, excluding new rights of way, and applying a "no new net gain in road" restriction is necessary to protect raptor nesting areas. Indeed, in identifying restrictions for ACECs, BLM should "include more detail than prescriptions for other areas[.]" BLM ACEC Manual 1613.12. Nothing in the Draft RMP offers that information. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-35 | Sage-Grouse Core Area or Priority Habitat Management Area The Draft RMP also cites sage-grouse core areas (designated by the state) as a relevant wildlife resource. For importance, BLM cites the sage-grouse Salt Wells priority habitat management area (a federal designation and different from-though overlapping with-the core area) as more than locally significant; fragile, endangered, threatened, or vulnerable; and a national priority. The Draft RMP's opening chapter, however, provides that "[a]ll [sage-grouse] management actions … are outside the scope of this planning effort and are not analyzed," and BLM disclaims any management decisions based on sage-grouse. Draft EIS at 1-3. Indeed, BLM is currently considering changes to the sage-grouse PHMA as part of a separate regionwide planning process.10 BLM has not yet released its proposed sage-grouse RMP amendments, so BLM has not yet disclosed any alternatives with proposed maps, restrictions, and analysis. Outside of the sage-grouse RMP amendment process, accurate comment on a sage-grouse based ACEC is impossible. And "[a] decision made without adequate notice and comment is arbitrary or an abuse of discretion." NRDC v. EPA, 279 F.3d 1180, 1186 (9th Cir. 2002) (citing 5 U.S.C. § 706(2)(A)). BLM's current Wyoming Greater Sage-Grouse RMP11-which designates the PMHAs- and Wyoming's core area designations overlap in both geography and multiple-use purpose. They cover much of Wyoming and the Rock Springs area including Salt Wells.12 And they both seek a balanced, multiple-use strategy. The PHMA's "management priority is: to open to oil and gas leasing, but with restrictions; to exclude or avoid disturbance to sage-grouse and their habitat; and to minimize impacts to PHMA where they cannot be avoided."13 BLM and Wyoming's sage-grouse plans share the same message: multiple use in these areas is authorized, subject to reasonable restrictions for the benefit of sage-grouse. BLM fails to provide any justification for why management under the current PHMA framework is not sufficiently protective of sage-grouse in the Salt Wells area, or why the area must be entirely closed to further oil and gas leasing, rights-of-way, or new roads solely to protect sage-grouse. BLM's designation of an ACEC based on sage- | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | grouse presence or PHMA designation is thus without reason and contrary to BLM's disclaimer of management direction based on sage-grouse conservation. | |
| 836.02 - Greater Red Creek ACEC | #13783-37 | Big Game Ranges The final wildlife resource BLM cites as a basis for designating the Salt Wells ACEC is big game crucial winter ranges. Mule deer, pronghorn, and elk populate the ranges within the Salt Wells ACEC. The U.S. Fish and Wildlife Service has designated none of these species as endangered or threatened.14 And because the species lack federal designation, management of these big game species falls to the State of Wyoming, which has delineated seasonal ranges and implementation plans to protect them. Wyoming's management regime calls for balancing multiple-uses.15 Recommendations for management allow for seasonal drilling and even year- round drilling on a limited basis.16 But BLM now intends to use Wyoming's own habitat designations to flout Wyoming's corresponding habitat management plans. Foremost and discussed above, Wyoming-and not BLM-possesses the "unquestioned … 'broad trustee and police powers over wild animals[.]'" Andrus, 627 F.2d at 1248 (quoting Kleppe, 426 U.S. at 545). And FLPMA's regulations also direct BLM to consider "[s]pecific requirements and constraints to achieve consistency with policies, plans and programs of … State and local government agencies[.]" 43 C.F.R. § 1610.4- 4. The current Green River RMP states that big game crucial ranges "will be protected to ensure continued useability by limiting activities during critical seasons of use and by limiting the amount of habitat disturbed." GR RMP at 24. This echoes Wyoming's plan. But now BLM wishes to upend this arrangement in favor of "[p]rohibit[ing] surface disturbing or disruptive activities on big game crucial winter ranges … as identified by WGFD," without explaining why such measures are necessary to manage these habitats. Draft EIS at 2-69. Beyond this pivot towards jettisoning its own duty of multiple-use planning, BLM does not explain why these ranges within the Salt Wells ACEC are important. Demonstrating more than local significance requires comparison with other similar features, and comparing Map 2-30 and Map 3-3 reveals vast ranges outside of any current or proposed ACEC. BLM offers nothing to suggest that the ranges inside the Salt Wells ACEC are somehow unique when compared to ranges outside the proposed ACEC. This lack of distinction (and thus, lack of importance) contradicts any assertion that these areas are in need of special management beyond existing seasonal restrictions. In any case, BLM does not attempt to make the case for special management, failing to even address it. Thus, the presence of big game winter range or other range is not a sufficient basis for an ACEC. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 with the Salt Wells area detailed under C.5 on page 13. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-38 | Erodible or Erosive Soil The final resource that BLM highlights as both relevant and important is erodible (or erosive) soil, which may cause landslides. Draft EIS Appx. at C-14. BLM indicates that the soil resource meets the relevance criteria for ACEC designation because it is a natural hazard. Id. But the proposed RMP does not even describe where within the 249,326-acre ACEC the erodible soils are found. In terms of importance, BLM claims erosive soil meet the criteria as fragile or sensitive and are a national priority, again, without explaining where the resource is located or why, in comparison to other areas of erosive soil in the planning area, they warrant special protection here. Id. Though BLM does not say in its ACEC evaluation, the only apparent location the proposed Draft RMP mentions for erosive soils is the Four J Rim. Draft EIS at 2-167. However, the Green River RMP specifically withheld ACEC designation from Four J Rim because its resources were not sensitive enough. GR RMP at 37-38. And BLM fails to explain what has changed, or why existing management direction that restricts surface disturbance on steep slopes or erosive soils is insufficient to protect the resource, regardless of ACEC designation. Thus, erosive soils are not an adequate basis for designating the 249,326 acres as an ACEC. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13783-39 | Failure to Narrowly Tailor Scope and Management. Even if any of the resources discussed above met the relevance and importance criteria for ACEC designation, they do not justify the 249,326-acre size nor draconian restrictions on development across the area. If the trails and road segments demand an ACEC, the ACEC should be limited to the vicinity of the trails and road segments, and management prescriptions limited to protection of those cultural and historical resources. These restrictions would also be confined to preserving certain views and preventing future harm to those specific designated portions. In theory then, an ACEC based on the trails and road would be focused on those areas, covering only a few miles to each side of intact trail with restrictions tailored to the resource. Instead, BLM proposes to designate the vast Salt Wells ACEC, much of which is not even near the trails and road. To the extent BLM was to rely on raptor nesting areas and erosive soils for ACEC designation, the RMP suggests that the only area where those may be located is the Pine Mountain management area (which includes Four J Rim) is 64,200 acres-a quarter of the proposed ACEC. And neither of these qualities seem to implicate Four J Basin, only its rim. These resources might require habitat-based and soil-based management prescriptions, i.e., seasonally restrictions on disruptive activities within a short distance of active nesting sites (GR RMP at 24) or site-specific restrictions on disturbance of steep slopes to prevent further erosion (GR RMP at 21-23). But BLM's proposed ACEC extends far beyond the Pine Mountain and would entirely forbid oil and gas leasing, new rights-of-way, or new roads, far exceeding the management needed to protect the relevant and important resources. Similarly, even if big game ranges are found throughout much of the Salt Wells ACEC (as they are throughout most of the planning area), BLM's blanket prohibition on new activity across the entire ACEC is unsupported where seasonal restrictions may be adequate to protect seasonal wildlife use. BLM does not explain why NO development will be authorized, as opposed to controlled development. In sum, ACEC designation and management demands narrow delineation and tailored restrictions. BLM impermissibly paints with a broad | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |

|---|---|---|---|
| | | brush covering vast areas without adequate analysis or support. Wexpro strongly urges BLM to reject Alternative B and its proposed Salt Wells ACEC designation, which is contrary to FLPMA and BLM regulation and policy. | |
| 836.02 - Greater Red Creek ACEC | #13784-40 | MA#7423, Alt B: "Modify livestock grazing objectives and systems to manage for plant condition and composition most ecologically beneficial to identified wildlife species..." Comment: This Alternative conflicts with existing regulations for Wyoming Land Health Standards. BLM should only modify grazing management after a Standards Determination identifies livestock grazing as the significant causal factor. The RMP can not override BLM's existing regulations. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. The DEIS's adherence to applicable law, regulation, and policy is addressed in Chapter 1 under 1.4 Planning Criteria. |
| 836.02 - Greater Red Creek ACEC | #13784-41 | MA#7433, Alt. B: "Prohibit livestock grazing in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion (Map2-30)." Comment: The Alternative needs to identify the number of AUMs lost, as well as the number of acres in the grazing allotment the BLM would close. Additionally, there's no context as to what the intent behind removing livestock grazing would be in relation to benefiting the Sage Creek ACEC. | Section 4.16.3 of the EIS has been updated as appropriate. Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. |
| 836.02 - Greater Red Creek ACEC | #13784-42 | MA#7438, Alt B: "Prohibit livestock grazing in the Jane's Meadow ad Upper Current Creek Pastures within Sugarloaf Grazing Allotment." Comment: The Alternative needs to identify the number ofAUMs lost, as well as the number of acres in the grazing allotment the BLM would close. Additionally, there's no context as to what the intent behind removing livestock grazing would be in relation to benefiting the Current Creek ACEC. | Section 4.16.3 of the EIS has been updated as necessary. Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7 |
| 836.02 - Greater Red Creek ACEC | #13899-1 | We support maintaining the existing Greater Red Creek ACEC, with adjustments to exclude the checkerboard and renaming it the Little Mountain ACEC as identified in Alternative D, MA 7418. We also support the goals listed for that ACEC, including restoring healthy watershed conditions, and improving cutthroat trout habitat, and support Alternative D's MA 7421 to allow surface disturbing activities only if they protect or enhance ACEC values. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445 |
| 836.02 - Greater Red Creek ACEC | #13899-2 | 13 In the past, BLM has been overly narrow in interpreting the existing 1997 RMP management direction relative to what could be allowed for surface disturbance, even if it benefitted the ACEC goals. A grazing permittee was exploring drilling a new water well in the Currant Creek region of the ACEC, which would help redirect cattle to the uplands and reduce their use and impact in the riparian areas, but the BLM stated it would not be possible based on the existing management direction of surface disturbance. We ask that the final management direction in the[...] Rock Springs RMP ensures that future interpretation will not hamstring rangeland improvement projects that could benefit the ACEC habitats. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445 |
| 836.02 - Greater Red Creek ACEC | #13908-32 | 7421 D Designate as a ROW avoidance area. We recommend it be a ROW exclusion area. Designate as a ROW exclusion area. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445 |
| 836.02 - Greater Red Creek ACEC | #13911-4 | i. ACEC's Relevance and Importance Criteria The Coalition directs the BLM to the attached ACEC Table (Attach. 1) that specifically addresses the relevance and importance criteria for each proposed ACEC. In addition, one of the major failings in the BLM's analysis of an area's "relevance" and "importance" is the failure to explain why areas previously proposed for ACEC designation but rejected during the development of the Green River RMP now warrant protection as ACECs in the Preferred Alternative B in this Proposed RMP and DEIS. For example, the Pine Mountain Management Area was "not [previously] recommended as part of the Greater Red Creek ACEC because Pine Mountain does not contain the same sensitivity of resources found in Greater Red Creek, even though the watershed resources in this area are interconnected with those of Greater Red Creek. The area does not contain populations of the Colorado River cutthroat trout that the Greater Red Creek area has and thus would not need to receive the same management emphasis." DEIS at 2-163 (Mgmt. Action #7312). Pine Mountain was maintained as a geographic management unit. Id. The BLM provides no explanation or analysis indicating what has changed in the area to now warrant an ACEC designation, or why the Greater Red Creek area should be expanded to include the rest of the Proposed Salt Wells ACEC. See id. at Appendix C-13 - C-14. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13915-7 | Currant Creek Portion of the Red Creek ACEC Protecting the Currant Creek watershed is of the utmost importance, especially considering the relative scarcity of sensitive fish and wildlife values found here that are not present throughout the rest of the Rock Springs Field Office. Currant Creek is one of the numerous streams in the GLMA that provides an important stronghold for conservation populations of native Colorado River cutthroat trout (CRCT) as these populations are located in one of the driest regions of CRCT's historic range and are the only remaining population that still occupies this semi-arid zone5. Considerable habitat work has occurred in this watershed to improve and stabilize this sensitive stream. In addition, the area contains critical big game habitat for elk, mule deer, and pronghorn antelope. Maintaining current management will result in the continued improvement of healthy fish and wildlife habitat. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445 with Currant Creek management actions 7434 - 7438. |
| 836.02 - Greater Red Creek ACEC | #13915-8 | Management Recommendations (Management Action 7421): ? At a minimum, No Surface Occupancy (NSO) for Currant Creek ACEC of the Greater Red Creek ACEC ? Maintain ROW exclusion within Currant Creek ACEC for industrial ROW. ? No new leasing of contiguous blocks of land identified in December 2009 letter from BLM to Governor Freudenthal, that fall within the Currant Creek ACEC. Allow for retirement of expiring leases that are adjacent to these contiguous blocks.There are several large, contiguous blocks of unleased parcels including parcels in Marsh Creek, Currant Creek, Sage Creek and Trout Creek. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |

| 836.02 - Greater Red Creek ACEC | #13915-9 | Management Recommendations (Management Action 7421): ? At a minimum, No Surface Occupancy for the Sage Creek Portion of the Red Creek ACEC ? Upgrade Sage Creek ACEC from avoidance to exclusion for industrial ROW ? No new leasing of contiguous blocks of land identified in December 2009 letter from BLM to Governor Freudenthal, that fall within the Sage Creek ACEC. Allow for retirement of expiring leases that are adjacent to these contiguous blocks. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13915-10 | Red Creek Portion of the Greater Red Creek ACEC The existing Red Creek portion of the Red Creek Area of Environmental Concern (ACEC) has been in place since the BLM adopted the existing RMP in 1997. The original justification for conservation-focused management of these public lands included sage-grouse, raptor nesting habitat, Colorado River cutthroat trout streams, big game crucial winter range and parturition habitat, as well as paleontological resources. These resource values remain today, in part due to management prescriptions designed to retain and enhance fish and wildlife habitat. Management Recommendations (Management Actions 7421, 7439, and 7443) ? ROW: maintain exclusion area for industrial ROW. ? Maintain designated ACEC and fluid mineral withdrawal area. For the public lands encompassed by the existing ACEC, these lands should be unavailable for oil and gas leasing to protect these resource values. ? We also ask that management considerations for this area allow for continued grazing by the current special use permittee. This permittee, the sole private landowner in this area, has demonstrated a strong commitment to conservation stewardship that has benefited and protected the CRCT population in Red Creek, and the ability to continue to graze on a mosaic of private and BLM lands is important to their operations. Upholding this use into the future, which has been demonstrated to be compatible with the aquatic resource values of the area, would prevent any unintended consequences should the land ownership change in the future. Following management action 7443 (requiring the completion of a grazing management plan prior to any annual authorization for livestock use in the allotment is the best path to achieving the BLM and GLMC's goals. It will maintain the existing agreement between the BLM and the landowner that has been in place for 30 years. It will continue the public/private cooperative partnership of the BLM, the Wyoming Game and Fish Department and the landowner that has been so successful. It will provide the BLM with substantial control over grazing on both the public and the private lands in the Red Creek Basin. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13925-12 | there is no documentation supporting the expansion of this area by almost 7,000 acres since its previous designation in the 1997 Green River RMP. Cherokee Trail to the extent it still exists is currently protected under NHPA and rules so special management is not needed. The proposed designation of 30,220 acres is not necessary to protect the trail, most of which has lost its integrity. A much smaller ACEC may be appropriate for the visible segments. Designation for a presumed or hypothetical route would not be appropriate. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13925-13 | Deer and elk habitat Deer and elk habitat is plentiful and the deer and elk occupy diverse areas. There is no documentation of a need for special management. The 2012 ACEC Proposal Evaluation Form fails to document regional or national significance of deer and elk habitat in this particular area. The fact that WGFD supports an ACEC is not sufficient. Deer and elk habitat may be locally important but the BLM has not demonstrated that the habitat is regionally or nationally significant to warrant an ACEC designation. BLM rules do not support an ACEC simply to manage deer and elk habitat. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13925-14 | Jaynes Meadow is identified as conservation area but the form does not describe the need for special management. The 2012 ACEC Proposal Evaluation Form does not document importance. The 2012 ACEC Proposal Evaluation Form fails to explain the special management needed or the size. Presumably the area is much smaller than 30,220 acres. This area was never mentioned in Green River RMP. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13930-1 | [comment:13930-1; 836.02, 836.03]I don't think the B alternative was sufficiently analyzed in regards to the impacts tograzing with the NSO, no early summer grazing in parturition areas, and not grazingstreams not at PFC, and restrictions to fence/wells as tools to distribute cattle off ofriparian areas.[comment:13930-2; 836.02, 836.03][comment end] | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13930-2 | ? The closing of Janes Meadow and Upper Currant Creek pastures does not make sense, because these streams were likely weakened years ago by buffalo and it is not the current cattle numbers which are very minimal every three years. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13930-3 | ? Elk numbers in the Little Mountain area are extremely high, and the browsing pressure is heavy on woody species without cattle grazing. Unless elk numbers are decreased, the browsing levels will likely rarely if ever meet the browsing standards in the GMP for the allotment or be sustainable in the long run. | Chapter 1 Section 1.4 Planning Criteria of the DEIS recognizes the State's responsibility and authority to manage wildlife. |
| 836.02 - Greater Red Creek ACEC | #13930-4 | ? The lower Janes Meadow has slowly had invading Canada thistle issues. The BLM ought to look into studies instead of assumptions and have better rationale other than hypothesis before removing grazing as a way to limit invasive species. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13930-5 | ? This is primarily a no grazing alternative, because the streams are not at PFC requirement and the pastures can't be grazed due to stream condition. It wasn't thoroughly analyzed in the impacts section. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. |

|---|---|---|---|
| 836.02 - Greater Red Creek ACEC | #13930-6 | ? If cattle distribution around water sources was the issue, reducing stocking rates would not necessarily result in much better ecological conditions. So doing a 20% AUM reduction will not necessarily result in better ecological conditions. ? The one-size-fits-all approach may not be addressing issues in allotments of riparian areas and distribution, and removing the tools better at affecting cattle distribution, fence, and offsite water may actually promote decreases in rangeland health. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. |
| 836.02 - Greater Red Creek ACEC | #13943-9 | Protecting the Currant Creek watershed is of the utmost importance, especially considering the relative scarcity of sensitive fish and wildlife values found here that are not present throughout the rest of the Rock Springs Field Office. Currant Creek is one of the numerous streams in the GLMA that provides an important stronghold for conservation populations of native Colorado River cutthroat trout (CRCT) as these populations are located in one of the driest regions of CRCT's historic range and are the only remaining population that still occupies this semi-arid zone. Considerable habitat work has occurred in this watershed to improve and stabilize this sensitive stream. In addition, the area contains crucial big game habitat for elk, mule deer, and pronghorn antelope. Maintaining current management will result in the continued improvement of healthy fish and wildlife habitat. Management Recommendations (Management Action 7421): * At a minimum, No Surface Occupancy (NSO) for Currant Creek ACEC of the Greater Red Creek ACEC * Maintain ROW exclusion within Currant Creek ACEC for industrial ROW. * No new leasing of contiguous blocks of land identified in December 2009 letter from BLM to Governor Freudenthal, that fall within the Currant Creek ACEC. Allow for retirement of expiring leases that are adjacent to these contiguous blocks. There are several large, contiguous blocks of unleased parcels including parcels in Marsh Creek, Currant Creek, Sage Creek and Trout Creek. Sage Creek Portion of the Red Creek ACEC The Sage Creek Portion of the Red Creek ACEC is a rare Native trout stronghold for CRCT. The area contains highly erodible soils. Protecting this native trout population is a key conservation action to prevent further declines across the species range. The area is also crucial winter range and parturition habitat for mule deer and elk. | Management actions for all four alternatives for the Currant Creek Portion of the Greater Red Creek ACEC are identified in the DEIS in management actions 7434 - 7438. |
| 836.02 - Greater Red Creek ACEC | #13943-11 | Management Recommendations (Management Actions 7421, 7439, and 7443) * ROW: maintain exclusion area for industrial ROW. * Maintain designated ACEC and fluid mineral withdrawal area. For the public lands encompassed by the existing ACEC, these lands should be unavailable for oil and gas leasing to protect these resource values. * We also ask that management considerations for this area allow for continued grazing by the current special use permittee. This permittee, the sole private landowner in this area, has demonstrated a strong commitment to conservation stewardship that has benefited and protected the CRCT population in Red Creek, and the ability to continue to graze on a mosaic of private and BLM lands is important to their operations. Upholding this use into the future, which has been demonstrated to be compatible with the aquatic resource values of the area, would prevent any unintended consequences should the land ownership change in the future. Following managementvbaction 7443 (requiring the completion of a grazing management plan prior to any annual authorization for livestock use in the allotment is the best path to achieving the BLM and GLMC's goals. It will maintain the existing agreement between the BLM and the landowner that has been in place for 30 years. It will continue the public/private cooperative partnership of the BLM, the Wyoming Game and Fish Department and the landowner that has been so successful. It will provide the BLM with substantial control over grazing on both the public and the private lands in the Red Creek Basin. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13951-2 | Page 2-179; Management #7423 "Modify livestock grazing objectives and systems to manage for plant condition and composition most ecologically beneficial to identified wildlife species, while also considering the habitat of other species, in areas identified as habitat for Special Status Species, crucial winter range, or parturition habitat for big game." -Alternative A, which manages everything, is a much more rounded and balanced approach when considering plant condition and composition. Why single out a specific species? In this case big game when the elk herds on Aspen are so over-populated they are causing over grazing and the Wyoming Game and Fish are installing 8 ft tall fences around the aspen clones. Moreover, think about the ecological harm done by the excessive wild horses, especially during the winter months. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13951-3 | Page 2-181; Management #7433 "Prohibit livestock grazing in the portion of the Mellor Mountain grazing allotment that intersects the Sage Creek portion (Map 2- 30)." -Any alternative other than B is acceptable. Alternatives A, C, and or D would maintain rangeland health. The stream is at PFC and the sheep help suppress the cheatgrass by grazing in the early summer. So why remove the livestock? They are a tool in helping maintain healthy land conditions despite the disproportionate wild horse herds who dominate and damage riparian areas. It's a proven fact that the wild horses have greater forage needs, graze closer to the ground, use the range year-round, and add harmful impacts to sagebrush and other critical browse species. | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13951-7 | Page 2-177; Special Designations #7418 "Expand the Greater Red Creek ACEC to include Sugarloaf Management Area and Salt Wells Management Area (468,170 acres, Table 2-12, Appendix V and Map 2-30)." -I am against any expansion of ACEC's in the Greater Red Creek area or expansion of any VRM 2. Expansion of ACECs and increasing restrictions (VRM 2 areas, no surface occupancy) would further limit the tools grazing could use to meet rangeland health objectives (fence, types of fence, placement of range improvements like wells, reservoirs, troughs, etc.). Rangeland health objectives are already in place to see if management is meeting ecology goals, so why do we need more restrictions when elk have increased to the point they are overgrazing the | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |

| | | aspen clones to the point where they die off? If big game is thriving to the extent they are damaging their habitat, do they really need more protections than are there currently? | |
| 836.02 - Greater Red Creek ACEC | #13951-8 | Page 2-17; Special Designations #7419 "Manage the Sage Creek, Currant Creek, and Red Creek watersheds in support of watershed stability and Colorado River cutthroat trout habitat management objectives" -Management for watersheds only is shortsighted. Overbrowsing could affect the woody species along streams and actually decrease habitat quality for trout. Hasn't it been one of the goals for the area to improve stream and trout habitat? Limiting the tools livestock operators have (which an ACEC would do in conjunction with sage grouse fence avoidance) would work against improving stream or trout habitat; that's counter productive and works against the ACEC's current goals. In other words, not only is it double speak, but seems to be working against one of the goals of the ACEC while limiting the tools livestock operators have to achieve proper functioning condition (PFC) and rangeland health. | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.02 - Greater Red Creek ACEC | #13951-9 | Page 2-178; Special Designations #7421 "…Prohibit surface disturbing activities, except for activities intended to protect or enhance ACEC values." -I would prefer a different alternative than B that will not prohibit surface disturbing activities such as drilling a well and limiting the kind of fence that one would be allowed to use. Areas of our allotment that would be VRM 2 on the top of Mellor Mtn. and the Sage Creek pasture may, in the future need solar panels or some other means to supply water to a well for not only our livestock, but for all species who currently drink, and limiting that due to "visibility" does not seem logical nor humane; to say nothing of achieving and maintaining rangeland health. Wells can address livestock distribution in addition to the distribution of other species. Lastly, if only electric fences are allowed, then what do we do about the sage grouse running into it? A well- thought out alternative that takes into consideration the whole picture and all apparent factors would be a sensible approach. | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.03 - Greater Sand Dunes ACEC | #13210-115 | 7456 Alternative B Designate the Boars Tusk ACEC an exclusion area for ROWs. Close the area to mineral location, mineral material sales and leasable minerals. Pursue a withdrawal from entry under land laws and mineral location. Limit surface disturbing activities to actions that would preserve or enhance the values of the area. Boar's Tusk is a unique geological feature and important to Tribal nations. Alternative B is preferred with clarification that it only applies to the 90-acre Boar's Tusk portion of the Greater Sand Dunes ACEC. | Management actions for all four alternatives for the Boars Tusk Portion of the Greater Sand Dunes ACEC are identified in the DEIS in management actions 7455 - 7470. Management action acreage tables can be found in Appendix V. |
| 836.03 - Greater Sand Dunes ACEC | #13769-5 | We have previously expressed our concern about the permeance of an ACEC designation. Now we express our concern about the future actions of a neighboring landowner in response to the BLM's selection of alternative B especially proposed management action 7443 - prohibit livestock grazing in the Red Creek allotment. While we endorse the conservation intent of Alternative B, we urge the BLM to reconsider the decision to revoke the grazing permits near the Red Creek ACEC. We believe that the BLM has erred in its expressed conservation intent by adopting a management option (7443) that punishes a Department of the Interior landowner-of-the-year by revoking his (never used) grazing permits. This landowner has not only cooperated with the BLM and Wyoming Game and Fish, but he has matched conservation funds. These actions and the landowner's progressive management are restoring a severely degraded riparian area and a watershed that has the purest strain of Colorado River Cutthroat trout. This landowner's management approach should be promoted as a demonstration of compatible conservation and livestock production. The last thing we need on the edge of the Red Creek ACEC is for the landowner to sell to a developer. Then we will have a subdivision that undoes all the conservation work he has done in taking three decades of non-use. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |
| 836.03 - Greater Sand Dunes ACEC | #13878-11 | The agency should also explore ways to trade for or purchase the mineral rights under Boars Tusk that the state owns - that's a special, iconic landmark that no one thinks should be drilled. | Management actions for all four alternatives for the Boars Tusk Portion of the Geater Sand Dunes ACEC are identified in the DEIS in management actions 7455 - 7470. |
| 836.03 - Greater Sand Dunes ACEC | #13899-23 | Of the 16 new or expanded ACECs included in the preferred alternative, 12 are designated in part because of their significance to Tribal Nations. Of particular note, two ACEC nominations for the Rock Springs Field Office - one for the Boar's Tusk (included in the Greater Sand Dunes ACEC) and another for Indian Gap Trail (incorporated into the Steamboat Mountain ACEC) - were proposed by Tribal Members and deserve extra attention when determining if and how these are to be carried forward into the final resource management plan. As tools designed to protect values within the entirety of a landform, ecosystem, or landscape, ACECs have the potential to serve as effective frameworks for implementing Tribal co-stewardship, utilizing special management to holistically protect Tribal Cultural Sites therein. | MA#5200-5202 and H.R.#3, 4, & 14-16 address consultation and relationship with Native American tribes. Management actions for all four alternatives for the ACECs are identified in the DEIS in management actions 7400 - 7570. |
| 836.03 - Greater Sand Dunes ACEC | #13908-1 | In Alternative B, the Little Mountain Ecosystem is included within the 468,170 acre Greater Red Creek Area of Critical Environmental Concern (ACEC). In Alternative D, the Greater Red Creek ACEC would be renamed to the Little Mountain ACEC (108,010 acres). The Departments core recommendations for the Little Mountain Ecosystem include the following: * Make unavailable to fluid mineral leasing. * Manage for No Surface Occupancy. * Designate as a Right-Of-Way exclusion area. * Re-route the ½ mile preferred energy corridor outside of the Little Mountain Ecosystem or, at a minimum, adjacent to existing infrastructure. The Department recommends applying these management actions to the proposed Little Mountain ACEC (current Greater Red Creek ACEC) and the portions of the Sugarloaf Basin and Pine Mountain Special Management Areas that are within the Little Mountain | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7430. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | Ecosystem. Alternative B includes our primary recommendations but expands those protections to a much larger landscape, where the protections are not essential to sustain robust fish and wildlife populations. | |
| 836.03 - Greater Sand Dunes ACEC | #13925-15 | Bill Pigeon's grave is currently protected under Section 106 of the NHPA. ACEC designation is unnecessary. The grave site is too small to justify an ACEC spanning 104 square miles.Red Creek Wilderness Study Area (WSA) No special management is needed. The Red Creek ACEC is already designated as a WSA. Federal law closed all WSAs to mineral leasing and any mineral development is limited to what was occurring in Oct. 1976. The 2012 ACEC Proposal Evaluation Form adds 12000 acres without explanation. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. |
| 836.03 - Greater Sand Dunes ACEC | #13925-16 | Old Growth Juniper stands can be protected without sweeping ACEC designation. Moreover expanding or protecting old growth juniper may contradict other vegetation management for sage grouse. Junipers are viewed as natural invasives that can change an ecosystem, often to the detriment of other management objectives. Jackson et al. NSF-DEB-9815500- Final Report, Collaborative Research, "Late Holocene Expansion of Utah Juniper in Wyoming: a Modeling System for Studying Ecology of Natural Invasions". | Management actions for all four alternatives for ACECs are identified in the DEIS in management actions 7400 - 7570. Sagegrouse are beyond the scope of this DEIS. |
| 836.03 - Greater Sand Dunes ACEC | #13925-17 | The BLM previously stated that "fragile soils are extremely susceptible to adverse change" without any indication as to what is a "fragile soil", where those soils are, and what constitutes an "adverse change." Thus, the justification is insufficient on its fact to prove importance for designation as an ACEC. | This is addressed in Chapter 4 Page 4-18 Section 4.1.1 under Soil Resources. ACEC Evaluation can be found in Appendix C. |
| 836.03 - Greater Sand Dunes ACEC | #13925-19 | Malinda Armstrong's Grave, Surveyor Mike Gibbons Grave, Cherokee Trail, Logan School House Despite the fact that each of these particular sites are already protected under the NHPA, the draft RMP would layer additional restrictions with an unnecessary ACEC designation. BLM fails to explain why these sites are not adequately protected, especially given civil and criminal penalties. The Cherokee Trail is largely invisible or has been obscured by modern use. The Cherokee Trail does not appear to meet the NPS criteria for recognition. As such it cannot be used to justify the ACEC. These sites are also too small to support the 77,195 acre ACEC. Sage grouse habitat does not support the proposed ACEC designation | ACEC Evaluation can be found in Appendix C. Sagegrouse management actions are being evaluated under separate RMP Amendment (see Section 1.4). |
| 836.03 - Greater Sand Dunes ACEC | #13925-20 | RSGA agrees that wildfire is a threat but wildfire risks are not prevented by ACEC designation. To the contrary, ACEC designation perpetuates the risk of wildfire and this threat does not support ACEC protection. | ACEC Evaluation can be found in Appendix C |
| 836.03 - Greater Sand Dunes ACEC | #13925-21 | The Cherokee Trail and Pine Butte Trail variant have lost integrity and have been obscured by modern use. These segments no longer qualify for historic recognition. Browns Park Road remains a public road and has been largely if not entirely obliterated by modern use. Browns Park is a currently used R.S. 2477 right-of-way and must be treated as a valid existing right. The trail segments, visible or not, do not qualify for ACEC designation. As commented above, old growth juniper stands can be protected and managed without ACEC designation. | ACEC Evaluations can be found in Appendix C under C.2 and C.5 and for the Greater Red Creek ACEC and Salt Wells ACEC respectively. Management actions for all four alternatives for the Greater Red Creek ACEC is identified in the DEIS in management actions 7418 - 7430 (Salt Wells Management Area incorporated into the Greater Red Creek ACEC for Alternative B). |
| 836.03 - Greater Sand Dunes ACEC | #13930-1 | [comment:13930-1; 836.02, 836.03]I don't think the B alternative was sufficiently analyzed in regards to the impacts tograzing with the NSO, no early summer grazing in parturition areas, and not grazingstreams not at PFC, and restrictions to fence/wells as tools to distribute cattle off ofriparian areas.[comment:13930-2; 836.02, 836.03][comment end] | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.03 - Greater Sand Dunes ACEC | #13930-2 | ? The closing of Janes Meadow and Upper Currant Creek pastures does not make sense, because these streams were likely weakened years ago by buffalo and it is not the current cattle numbers which are very minimal every three years. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.03 - Greater Sand Dunes ACEC | #13930-3 | ? Elk numbers in the Little Mountain area are extremely high, and the browsing pressure is heavy on woody species without cattle grazing. Unless elk numbers are decreased, the browsing levels will likely rarely if ever meet the browsing standards in the GMP for the allotment or be sustainable in the long run. | Chapter 1 Section 1.4 Planning Criteria of the DEIS recognizes the State's responsibility and authority to manage wildlife. |
| 836.03 - Greater Sand Dunes ACEC | #13930-4 | ? The lower Janes Meadow has slowly had invading Canada thistle issues. The BLM ought to look into studies instead of assumptions and have better rationale other than hypothesis before removing grazing as a way to limit invasive species. | Management actions for all four alternatives for the Greater Red Creek ACEC are identified in the DEIS in management actions 7418 - 7445. |
| 836.03 - Greater Sand Dunes ACEC | #13930-5 | ? This is primarily a no grazing alternative, because the streams are not at PFC requirement and the pastures can't be grazed due to stream condition. It wasn't thoroughly analyzed in the impacts section. | Greater Red Creek ACEC Evaluation can be found in Appendix C under C.2 page C-7. Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. |
| 836.03 - Greater Sand Dunes ACEC | #13930-6 | ? If cattle distribution around water sources was the issue, reducing stocking rates would not necessarily result in much better ecological conditions. So doing a 20% AUM reduction will not necessarily result in better ecological conditions. ? The one-size-fits-all approach may not be addressing issues in allotments of riparian areas and distribution, and removing the tools better at affecting cattle distribution, fence, and offsite water may actually promote decreases in rangeland health. | Land Health Standards are summarized in Appendix G and Chapter 3 under 3.16 Livestock Grazing Management. |
| 836.04 - Natural Corrals ACEC | #13925-27 | The 1997 Green River RMP only identified 1,276 acres as an ACEC. The DEIS fails to document the expansion for the cultural and paleontological resources that are already within the boundaries of the current ACEC. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without ACEC designation. It should also be noted that Sage- Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected | The Natural Corrals ACEC Evaluation is located in Appendix C.12. The area met R&I criteria, see Appendix C. Greater Sage Grouse management actions are being evaluated under separate RMP Amendment process (see Section 1.4). Page 3-5 identifies the recharge area for the town of Superior being partially located on BLM-managed lands. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | from disturbances. The BLM's 2012 ACEC Proposal Evaluation Form states that the Town of Superior's water supply is recharged by this area. The potential for groundwater recharge is not sufficient given the state regulatory system and BLM's lack of jurisdiction over water quantity or water quality. | |
| 836.05 - Oregon Buttes ACEC | #13925-28 | the area is currently managed as a WSA which precludes any land use that impairs the resources, such as mineral development. Thus, the ACEC designation is unnecessary. The purpose of the ACEC should not duplicate 2015 GrSG ARMPA plus the State's earlier management. The CDNST is not a valid basis to designate the larger area as an ACEC, especially when the trail segment lies within the WSA and enjoys separate statutory protection. | The Oregon Buttes ACEC Evaluation is located in Appendix C.13. Greater Sage Grouse management is being evaluated under separate RMP Amendment (see Section 1.4). |
| 836.06 - Pine Springs ACEC | #539-7 | Another wildlife value the BLM is using to justify these ACEC designations is the fact that these areas are sage grouse PHMA. The science on this matter is not clear according to recent studies coming out of CSU and USU.28 However, early data shows that, if managed properly, grazing can actually be a positive for sage grouse populations. In addition, the BLM and USFWS, and scores of cooperators are currently working on a sage grouse plan for the western states that will address the sage grouse issues and therefore LSGA recommends that 25 RMP/DEIS, Vol. 2, Appendix C, C.17-C.19. It states in part that water related rangeland improvements were "installed to benefit livestock that graze the forage but many also benefit wildlife and generally promote improved rangeland health within the planning area." the BLM not use sage grouse as a reason to designate vast ACECs, but rather it should let the concurrent process work itself out first. | The Pine Springs ACEC Evaluation is located in Appendix C.14. The area met R&I criteria, see Appendix C. Greater Sage Grouse management is being evaluated under separate RMP Amendment (see Section 1.4). |
| 836.06 - Pine Springs ACEC | #13751-174 | MA #7490 SD-29 The 6,030 acres of BLM- administered public lands in the Pine Springs area are designated the Pine Springs ACEC (Table 2- 12, Appendix V and Map 2-29). Industry Position: Not Acceptable Reason: Follows the existing RMP, however the ACEC conflicts with the KSLA which is a higher value resource than the ACEC. Recommend do not retain the ACEC but revert to the original 90 ac ACEC. The ACEC designation would be retained (Table 2-12, Appendix V and Map 2-30). Industry Position: Not Acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. The ACEC would not be retained. Industry Position: Acceptable Reason: The ACEC conflicts with the KSLA and should be reduced to the original 90 acres. Same as Alternative B Retain the Pine Springs Expanded ACEC and rename to the Pine Springs ACEC. Industry Position: Not Acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. Alternative C is acceptable. | The Pine Springs ACEC Evaluation is located in Appendix C.14. |
| 836.06 - Pine Springs ACEC | #13751-175 | MA #7491#SD-29, HR-09, HR-16#The Pine Springs ACEC is expanded from 90 acres to 6,030 acres. Industry Position: Not Acceptable Reason: Follows the existing RMP, however the ACEC conflicts with the KSLA which is a higher value resource than the ACEC. Recommend do not retain the ACEC but revert to the original 90 ac ACEC.#Expand the Pine Springs ACEC from 6,030 to 6,480 acres. Industry Position: Not Acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained.#No similar action, the ACEC would not be retained. Industry Position: Acceptable Reason: The ACEC conflicts with the KSLA and should be reduced to the original 90 acres.#Same as Alternative B Industry Position: Not Acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained.#Alternative C is acceptable. | The Pine Springs ACEC Evaluation is located in Appendix C.14. The 90 acres refer to the lands withdrawn. |
| 836.06 - Pine Springs ACEC | #13751-176 | MA #7492#SD-29, HR-07, HR-2.1#The Pine Springs ACEC (6,030 acres) is closed to surface disturbing activities. About 2,000 acres in the area would be closed to exploration and development of locatable minerals and entry under the land laws. Withdrawal from these activities would be pursued. The existing 90-acre withdrawal would be retained. Cultural resource management plans may be written for the site, and interpretive and visitor management efforts may be allowed as necessary (see also Pine Springs ACEC, lands and Realty management and Minerals management discussions). (Surface disturbing activities may include activities associated with mineral exploration and development; construction of roads, pipelines, power lines; mineral material sales; etc.). Industry Position: Not Acceptable Reason: Follows the existing RMP, however the ACEC conflicts with the KSLA which is a higher value resource than the ACEC. Recommend do not retain the ACEC but revert to the original 90 ac ACEC.#Designate the ACEC an exclusion area for: 1) surface disturbing activities that could adversely affect resource values or preclude meeting ACEC management objectives; 2) ROWs. Pursue a withdrawal from mineral location and entry under the U.S. mining laws. Close the area to: 1) mineral material sales for sand, gravel, or other types of construction or building materials; 2) mineral leasing. Retain and petition to extend the withdrawal when it expires. Write cultural resource management plans for the site. Allow interpretive and visitor management efforts as necessary. Industry Position: Not Acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained.#Revoke the existing withdrawal, the ACEC would not be retained. Industry Position: Acceptable Reason: The ACEC conflicts with the KSLA and should be reduced to the original 90 acres.#Same as Alternative B Industry Position: Not Acceptable | The Pine Springs ACEC Evaluation is located in Appendix C.14. The 90 acres refer to the lands withdrawn. |

| | | Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained.#Alternative C is acceptable. | |
| 836.06 - Pine Springs ACEC | #13787-94 | MA #7491 SD-29, HR-09, HR-16 The Pine Springs ACEC is expanded from 90 acres to 6,030 acres. Industry Position: Not acceptable Reason: Follows the existing RMP, however the ACEC conflicts with the KSLA which is a higher value resource than the ACEC. Recommend do not retain the ACEC but revert to the original 90 ac ACEC. Expand the Pine Springs ACEC from 6,030 to 6,480 acres. Industry Position: Not acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. No similar action, the ACEC would not be retained. Industry Position: Acceptable Reason: The ACEC conflicts with the KSLA and should be reduced to the original 90 acres. Same as Alternative B Industry Position: Not acceptable Reason: Follows the existing RMP. As presented in C.14 the expansion from 6,030 ac to 6,480 ac adds no value beyond the original ACEC. The ACEC conflicts with the KSLA. The KSLA is a higher value resource. Only the original 90 ac ACEC should be retained. Alternative C is acceptable. | The Pine Springs ACEC Evaluation is located in Appendix C.14. The 90 acres refer to the lands withdrawn. |
| 836.06 - Pine Springs ACEC | #13925-29 | There is no indication that these resources are not adequately protected by the existing WSA management pursuant to 43 U.S.C. §1782, DM 6330. According to the National Park Service, TCP's are best identified by consulting directly with members of the traditional community. The 2012 Form fails to document such consultation. | The Pine Springs ACEC Evaluation is located in Appendix C.14. Section 5.1.3 describes Native American consultation. Wilderness Study Areas may be dismissed or designated as Wilderness by congress at any time and changing designations to these areas are outside of the scope of this DEIS. |
| 836.07 - South Pass Historic Landscape ACEC. Need to chat w/ Cultural. | #13651-20 | MA# HR-10, HR-11, HR12 Page 2-91: HR-10: Preserve and protect the historical remains and historical setting of the South Pass Historic Landscape ACEC. See the ACEC section for management alternatives for these resources. HR-11: Establish appropriate management prescriptions for the South Pass Historic Landscape ACEC. HR-12: Coordinate with recreation and other programs to provide opportunities for public visitation, interpretation, education, and appreciation of the South Pass Historic Landscape ACEC. These Management actions for the South Pass Historic Landscape ACEC are common to all alternatives. They need to link to the current management practices for the already designated South Pass Historic Landscape ACEC. Since these actions are common among alternatives, including no action, the current plan in all its alternatives should include a summary or reference to: 1. How the ACEC is currently protected (HR-10), 2. Specification of what are current management prescriptions (HR-11), 3. A current status of coordination with other programs, and 4. What "opportunities" are already met (HR-12). Documentation of the content of the 1990s RMP and an assessment of its strengths and weaknesses will allow the public and the BLM itself to judge past resource management performance. If management prescriptions were not established or if they were unsuccessful then it would seem that the BLM should address identified needs in the revised RMP.We do not find the material that would allow us to identify problems and judge past resource management performance within in the documents provided for review. Please give a reference to documentation of the current management measures undertaken. It is a contradiction that the no action alternative would require management prescriptions if such are not in place. It seems the alternatives (B, C, D) would need to specify different management prescriptions tied to the alternatives. | The South Pass Historic Landscape ACEC management actions include MA #7498 - MA# 7507. Alternative A describes current management. The South Pass Historic Landscape ACEC Evaluation is located in Appendix C.21. The area met R&I criteria, see Appendix C. The Analysis of Management Situation, Section 2.3.1 describes the current condition of the ACEC. |
| 836.07 - South Pass Historic Landscape ACEC | #13899-18 | South Pass itself, now in the northwestern corner of the Rock Springs Field Office, looks misleadingly commonplace66 for the weight of history it represents. The BLM has preserved the site itself and the experience of the landscape and viewshed around it since 1997. The proposed management in the draft plan's Alternative B appropriately expands upon those decades-old protections to include more of this important landscape. As noted above, we support the expansion of the South Pass Historical Landscape ACEC. | Goals to protect the ACEC are described under SD-30 and SD-31. |
| 836.07 - South Pass Historic Landscape ACEC | #13925-35 | RSGA questions the merit of South Pass Landscape ACEC. This area was part of a study to establish an historic landmark. The study identified lack of private landowner consent and Congress did not pursue designation. An ACEC designation appears to be an end run around the earlier determination not to proceed with landscape landmark, when BLM cannot exercise jurisdiction over the same private land. Many of the "historic" sites being studied for classification are located on private land, where BLM has no jurisdiction. In other cases, apparent trails are not historic but are old sheep herder trails and remnants of sheep camps that do not qualify for protection but are often mistaken for pioneer trails by untrained volunteers. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without expansive ACECs. | The South Pass Historic Landscape ACEC Evaluation is located in Appendix C.21. |
| 836.07 - South Pass Historic Landscape ACEC | #13940-5 | national historic trails and wagon roads are also protected by the NHPA and do not necessitate a large swath of land to be designated as an ACEC to protect the trails themselves. Pursuant to the National Register Bulletin #15, a trail must also retain its integrity to be considered in the National Register of Historic Places. For those that are visible, a ¼ mile buffer on each side of the trail is only warranted pursuant to the National Trails Act. See e.g. 16 U.S.C. § 1244(a)(3) ("The authority of the Federal Government to acquire fee title under this paragraph shall be limited to an average of not more than ¼ mile on either side of the trail."). The BLM provides no explanation why the National Historic Trails within the Proposed South Pass Historic Landscape ACEC would require an additional 100,000+ acres under the Preferred Alternative B to protect it. See DEIS at 2-195 (Mgmt. Action #7498 - expanding South Pass ACEC from 53,940 acres to 171,300 acres under Preferred Alternative B). | The South Pass Historic Landscape ACEC Evaluation is located in Appendix C.21. |
| 836.08 - Special Status | #13751-177 | MA #7508#SD-34, BR-27, BR-32#The 1,200 acres of BLM- administered public lands in Special Status Plant Species areas are designated an ACEC (Table 2-12, Appendix V and Map 2-29). Industry Position: Not | The Special Status Plant ACEC Evaluation is located in Appendix C.22. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Plant Species ACEC | | acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon that will be misunderstood.#Retain the Special Status Plant Species ACEC (Table 2-12, Appendix V and Map 2- 30). Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon.#The ACEC would not be retained. Industry Position: Acceptable Reasons, See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species- specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information.#Same as Alternative B Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon.#Alternative C is acceptable. See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species-specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. | |
| 836.08 - Special Status Plant Species ACEC | #13751-178 | MA #7509#SD-34, BR-27, BR-32#The BLM-administered public land areas occupied by four Special Status (candidate) plant species are included in the ACEC designation (making up about 66 sites involving about 1,200 acres of BLM- administered public lands). Additional acres may be added to the ACEC, if more of these Special Status (candidate) plant species or their essential habitat areas are found on BLM-administered public lands. Management and protection to actual plant locations is provided for Arabis pusilla, Astragalus proimanthus, Descurainia torulosa, and Thelesperma pubescens (Map 2- 29). Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon that will be misunderstood.#Expand the ACEC to include all BLM Special Status plant species on BLM-administered public land areas occupied by those species. Additional areas could be added to the ACEC, if more populations of these Special Status plant species are found on BLM-administered public lands (3,610 acres, Table 2-12, Appendix V, and Map 2- 30). Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon.#No similar action, the ACEC would not be retained. Industry Position: Acceptable Reasons, See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species- specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information.#Modify the ACEC to include the Cedar Mountain Easter daisy (Townsendia microcephala) and Green River greenthread (Thelesperma caespitosa) plant species on BLM-administered public land areas occupied by those species (1,120 acres, Table 2-12, Appendix V, and Map 2-32). Industry Position: Not acceptable. Reason: Habitat protection would be best achieved by following the ESA rather than establishing an ACEC with 66 separate polygons. Case-by-case analysis will achieve better performance than a complex ACEC polygon.#Alternative C is acceptable. See MA #4600. Require Special Status plant species review on identified or known vegetation communities on federal land | The Special Status Plant ACEC Evaluation is located in Appendix C.22. |

| | | surface before any project or activity is approved. If species are determined in the project area, species-specific protective measures would be developed and implemented. For Interrelated or Interdependent Actions and when necessary to comply with the ESA, require inventories for listed or proposed species on identified vegetation communities on split-estate lands before any project or activity is approved (see BLM Manual 6840). If species are found, species-specific protective measures would be developed and implemented in consultation with the USFWS. If Special Status plant species are found during construction, halt all disturbing activities in the inhabited area until species-specific protective measures are developed and implemented. Develop and implement protective measures for listed and proposed species in consultation with the USFWS. Identified vegetation communities may be based on Special Status Plant Species NRCS mapping, ESDs and existing vegetation information (such as NRCS) or site-specific vegetation information. | |
| 836.08 - Special Status Plant Species ACEC | #13925-36 | The areas where these plants occur have not been identified. This is an insufficient basis for a floating ACEC designation. | Appendix C.22 includes maps of the identified areas. |
| 836.09 - Steamboat Mountain ACEC | #13878-6 | As an example, your Steamboat Mt. ACEC goals state the following, but do not recognize that managing for human use is part of protection of other values: SD-35: Enhance and maintain the water quality, vegetation, soil, and wildlife resources to ensure biological diversity and a healthy ecosystem. Protect the unique geological and ecological features in the ACEC. SD-36: Maintain the unique diverse habitats (big sagebrush, aspen, limber pine, and mountain shrub communities) in the Steamboat Mountain area, especially on stabilized sand dunes along Steamboat Rim, Indian Gap, and in the Johnson, Lafonte, and Box Canyon areas. SD-37: Provide suitable habitat to maintain or improve the Steamboat elk herd, other big game populations. I recommend including a statement found in MA 6507, under recreational resources, Alternative A with special emphasis on the last statement (bolded.) The Oregon Buttes, Honeycomb Buttes, Steamboat Mountain, Leucite Hills, Red Creek, Pine Mountain, Little Mountain, and Cedar Canyon areas would be managed to assure their continuing value for recreational opportunities. Recreation area management plans would be prepared for these areas if necessary. | The Steamboat ACEC Evaluation is located in Appendix C.23. Management actions 7516 - 7529. Impact analysis is found in Section 4.21. |
| 836.09 - Steamboat Mountain ACEC | #13899-23 | Of the 16 new or expanded ACECs included in the preferred alternative, 12 are designated in part because of their significance to Tribal Nations. Of particular note, two ACEC nominations for the Rock Springs Field Office - one for the Boar's Tusk (included in the Greater Sand Dunes ACEC) and another for Indian Gap Trail (incorporated into the Steamboat Mountain ACEC) - were proposed by Tribal Members and deserve extra attention when determining if and how these are to be carried forward into the final resource management plan. As tools designed to protect values within the entirety of a landform, ecosystem, or landscape, ACECs have the potential to serve as effective frameworks for implementing Tribal co-stewardship, utilizing special management to holistically protect Tribal Cultural Sites therein. | Consultation with Native American Tribes is described in section 5.1.3 |
| 836.09 - Steamboat Mountain ACEC | #13923-2 | The Jack Morrow Hills CAP established a process for implementation, monitoring and evaluation of the plan's management in Appendix 2 (JMH CAP, A2-1, 2006). Baseline and indicator data were to be collected for monitoring and mitigation measures were to have been developed for plan decisions and management actions that could be evaluated to determine if objectives were being met. Sportsmen request that the BLM review whether these data were collected, cataloged, reviewed, and evaluated. If they were not completed and/or if they need additional evaluation and review, the BLM needs to make this a priority. The Final Rock Springs RMP should incorporate these processes with the findings of the baseline and indicator data as well. | See Section 1.4 Planning criteria and the Analysis of Management Situation (AMS). |
| 836.09 - Steamboat Mountain ACEC | #13923-3 | The Jack Morrow Hills area has high populations of feral horses. These feral horses need to be managed with population objective control. They are extremely territorial and part of that behavior includes competing for food among ungulates and grazers. Sportsmen recommend that the BLM reduce the number of feral horses to the standard population objectives. | Wild horse management for HMAs relating to the checkerboard, including the Great Divide Basin was completed in a separate RMP Amendment (see Section 1.4) and the 2023 Record of Decision. |
| 836.09 - Steamboat Mountain ACEC | #13923-17 | Steamboat Mountain is the highest point in Wyoming's Red Desert and offers crucial habitat for various species, including a rare desert elk herd. For this area, sportsmen support a hybrid of Alternative A (MA# 7516) and Alternative B, expanding the ACEC to the Red Desert Watershed Management Area. | The Steamboat Mountain ACEC Evaluation is located in Appendix C.23. The area met R&I criteria, see Appendix C. Alternative development including cooperating agency participation is described in 2.2.3. |
| 836.09 - Steamboat Mountain ACEC | #13925-37 | RSGA objects to the expansion of Steamboat Mountain ACEC from 43,270 acres to 282,330 acres on the basis of particular sites that cannot be blanketed under a single designation. These areas are better protected under existing law and regulation. The BLM must involve local governments, landowners, and permittees when determining whether special status plant species are present in an area. It should also be noted that Sage- Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected. Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without an ACEC designation. | The Steamboat Mountain ACEC Evaluation is located in Appendix C.23. The area met R&I criteria, see Appendix C. Alternative development including cooperating agency participation is described in 2.2.3. Greater Sage Grouse management is being evaluated under separate RMP Amendment (See Section 1.4) |
| 836.10 - White Mountain | #13210-116 | 7530 Alternative B Retain the ACEC designation (20 acres, Table 2-12, Appendix V, and Map 2-30). Alternative B is preferred because it protects the rock art found at this site. | Management actions for the White Mountain Petroglyphs ACEC are described in MA# 7530 - 7537. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Petroglyphs ACEC | | | |
| 836.10 - White Mountain Petroglyphs ACEC | #13784-43 | MA#7532, Alt. B: "Designate the ACEC an exclusion areas for: 1) surface disturbing activities that could adversely affect the resource values in the area..." Comment: Where livestock grazing overlaps the ACEC, this Alternative would prohibit livestock grazing permittees from implementing new range improvement projects such as water developments. The broad interpretation of surface disturbing activities is likely to cause significant negative impacts to the livestock grazing industry. | Impacts are described in Section 4.16 for all four alternatives for this White Mountain ACEC. |
| 836.10 - White Mountain Petroglyphs ACEC | #13878-4 | Another example at this site is the ability of the public to easily go up to the petroglyphs and touch them. I understand that the preservation standard for such sites is (quoted from a National Park Service website): "Preserve petroglyphs by not touching them in any way. Even a small amount of the oils from our hands can darken petroglyphs making them impossible to see." Here's an example of how the state of Wyoming has protected a large wall of petroglyphs at their Medicine Lodge Archeological Site. Notice the fencing so folks can't touch the rock art, but still have good access to viewing. The BLM needs to strengthen its wording in the ?nal RMP and also strengthen its actions. | Development of a petroglyphs protection plan would be an implementation level action and is outside the scope of this RMP planning effort. |
| 836.10 - White Mountain Petroglyphs ACEC | #13925-38 | White Mountain BLM cannot show the need for ACEC designation and this should be dropped. notes that this area has been expanded without documentation from the 20 acres identified in the 1997 Green River RMP. RSGA is unaware of additional petroglyph discoveries or other reasons for such an expansion. | The White Mountain Petroglyphs ACEC Evaluation is located in Appendix C.24. |
| 836.11 - South Wind River ACEC | #9793-7 | Explain how offsite mitigation will be used and where. Pages 2-209 South Wind River ACEC, 2210 East Sand Dunes ACEC, p 2-211 Big Game Migration Corridor, all mention "Manage a separate offsite mitigation area for biological impacts from energy development." Yet the Preferred Alternative will make these areas unavailable for leasing or energy development. Explain. Where will this offsite mitigation area be located? Is it within the RSFO? Page 4-73 states: "Managing lands as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Wildlife such as elk, prairie dogs, and northern harrier could benefit from the low, early seral areas of vegetation," from both the South Wind River ACEC as well as the Big Game Migration Corridors ACEC under Alternative B. Yet referring to the South Wind River ACES on p4-103 through p4-104 states "Managing land as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Special status wildlife such as mountain plover, white-tailed prairie dogs, and swift fox could benefit from the low, early seral areas of vegetation." These are different species than identified in the earlier pages. Why the inconsistency, and what is the specific plan for offsite mitigation? The claim that this off-site mitigation could result in benefits to swift fox is a bit concerning, since the swift fox is a species not known to occur in the RSFO. Please explain how offsite mitigation will work, and why this provision is specifically added to these three ACECs. | The specifics of offsite mitigation are out of scope for this RMP planning effort. This action would be an implementation level activity.<br>Page 3-8 identifies the swift fox as present within the planning area. |
| 836.11 - South Wind River ACEC | #13210-114 | 7452 Alternative B Manage to protect and improve the dunal ponds for bird, amphibian, and mammal habitat. These pools are one of the most ecologically rare features and important for big game. | The South Wind River ACEC Evaluation is located in Appendix C.17. |
| 836.11 - South Wind River ACEC | #13925-32 | The management objective emphasis for The Wind River Front "is for scenic, watershed, and wildlife values; recreation use; riparian and vegetation resources..." Similarly, the 1997 Green River RMP placed "management emphasis on enhancing recreation opportunities and to focus management on areas with high recreation values or areas where there are conflicts between recreation and other uses." Thus, it is unclear what benefit the ACEC designation will provide the trail and wild and scenic designations when this area is already managed as a SRMA for these objectives. | The South Wind River ACEC Evaluation is located in Appendix C.17. |
| 836.11 - South Wind River ACEC | #13925-33 | The Green River RMP provides that "[t]he 500 acres associated with the Arabis pusilla portion of the Special Status Plants ACEC, is closed to ORV use. In the remainder of the unit, off road vehicle (ORV) use is limited to designated roads and trails." Thus, under existing management, only 500 acres is identified as needing special status plant protection. The 2012 ACEC Proposal Evaluation Form fails to document the basis for additional land. | MA# 7509 identifies rationale for increasing acreage for this proposed ACEC. |
| 836.12 - East Sand Dunes—Red Lake ACEC | #9793-7 | Explain how offsite mitigation will be used and where. Pages 2-209 South Wind River ACEC, 2210 East Sand Dunes ACEC, p 2-211 Big Game Migration Corridor, all mention "Manage a separate offsite mitigation area for biological impacts from energy development." Yet the Preferred Alternative will make these areas unavailable for leasing or energy development. Explain. Where will this offsite mitigation area be located? Is it within the RSFO? Page 4-73 states: "Managing lands as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Wildlife such as elk, prairie dogs, and northern harrier could benefit from the low, early seral areas of vegetation," from both the South Wind River ACEC as well as the Big Game Migration Corridors ACEC under Alternative B. Yet referring to the South Wind River ACES on p4-103 through p4-104 states "Managing land as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Special status wildlife such as mountain plover, white-tailed prairie dogs, and swift fox could benefit from the low, early seral areas of vegetation." These are different species than identified in the earlier pages. Why the inconsistency, and what is the specific plan for offsite mitigation? The claim that this off-site mitigation could | The specifics of offsite mitigation are out of scope for this RMP planning effort. This action would be an implementation level activity.<br>Page 3-8 identifies the swift fox as present within the planning area. |

|---|---|---|---|
| | | result in benefits to swift fox is a bit concerning, since the swift fox is a species not known to occur in the RSFO. Please explain how offsite mitigation will work, and why this provision is specifically added to these three ACECs. | |
| 836.12 - East Sand Dunes—Red Lake ACEC | #13925-39 | It is unclear how the DEIS can recommend an ACEC when the basic criteria for such a designation are admittedly absent. Elk and Antelope habitat are locally significant resources that can be protected and appropriately managed without expansive ACEC. The BLM does not explain how WGFD management are insufficient. The Evaluation Form admits that these dunes are only a portion of the larger system. Indeed, a very brief search shows that there are similar cold dune systems in several western states. Thus, the BLM must, and has not, disclosed why these dunes are regionally or nationally significant. Nor has the BLM identified the threat that requires some additional protection. These are fundamental failures and must be addressed. The area, while interesting, does not rise to the level of significance to satisfy a national priority. BLM admission suggests no basis for ACEC. | The East Sand Dunes ACEC Evaluation is located in Appendix C.25. |
| 836.13 - Big Game Migration Corridor ACEC | #539-2 | his protocol would actually be detrimental to wildlife (ironic because it is titled "big game migration corridor") and according to the BLM's own science in the DEIS, rangeland improvements help the local wildlife.22 LSGA would encourage the BLM to specifically allow grazing and rangeland improvements under these restrictions by listing them as an exception to these rules in the plan. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. Management is depicted by MA# 7555 - 7562. |
| 836.13 - Big Game Migration Corridor ACEC | #9793-2 | The EIS should explain how BLM has worked to harmonize this plan with Wyoming Executive Order 2020-1 which sets out how designated migration corridors are to be managed, and cite the "best available science" the BLM used in developing planning alternatives for this resource. | See Section 5.1 about consultation & coordination. Section 5.1.2 for a list of cooperating agencies that participated in development of he DEIS. See Table 5-1 for how those agencies coordinated and their responsibilities for developing the DEIS. |
| 836.13 - Big Game Migration Corridor ACEC | #9793-7 | Explain how offsite mitigation will be used and where. Pages 2-209 South Wind River ACEC, 2210 East Sand Dunes ACEC, p 2-211 Big Game Migration Corridor, all mention "Manage a separate offsite mitigation area for biological impacts from energy development." Yet the Preferred Alternative will make these areas unavailable for leasing or energy development. Explain. Where will this offsite mitigation area be located? Is it within the RSFO? Page 4-73 states: "Managing lands as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Wildlife such as elk, prairie dogs, and northern harrier could benefit from the low, early seral areas of vegetation," from both the South Wind River ACEC as well as the Big Game Migration Corridors ACEC under Alternative B. Yet referring to the South Wind River ACES on p4-103 through p4-104 states "Managing land as a separate offsite mitigation area could provide new seral stages of vegetation as new habitat regenerates. Special status wildlife such as mountain plover, white-tailed prairie dogs, and swift fox could benefit from the low, early seral areas of vegetation." These are different species than identified in the earlier pages. Why the inconsistency, and what is the specific plan for offsite mitigation? The claim that this off-site mitigation could result in benefits to swift fox is a bit concerning, since the swift fox is a species not known to occur in the RSFO. Please explain how offsite mitigation will work, and why this provision is specifically added to these three ACECs. | Offsite mitigation would be an implementation level activity and is outside the scope of this RMP planning document. |
| 836.13 - Big Game Migration Corridor ACEC | #13210-3 | 3. The Task Force supports Wyoming's collaborative efforts to conserve and maintain permeability of big game migration corridors. The BLM recognition of, support for, and management of migration corridors should be based on the management prescriptions within Wyoming's 2020-2 executive order and coordinate with the State of Wyoming's wildlife agency (the Wyoming Game and Fish Department). Adaptive management shall be utilized to solicit and include current science for these vital habitats. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. |
| 836.13 - Big Game Migration Corridor ACEC | #13244-1 | The Red Desert to Hoback migration corridor spans 150 miles and crosses private land, state trust land, United States National Forest land, and public land managed by the BLM. This migration corridor is the longest known mule deer migration corridor in the United States and is traveled by approximately 5,000 deer biannually. Alternative B would designate a new ACEC called the Big Game Migration Corridor ACEC. This ACEC would contain significant portions of the Red Desert to Hoback migration corridor. The Committee heard testimony from Wyoming's Game and Fish Department at our meeting on October 6, 2023 that Alternative B's inclusion of the Red Desert to Hoback migration corridor within the ACEC would be detrimental to the Wyoming Game and Fish Department's management of wildlife populations within the migration corridor. The Committee stands by the hard work the Wyoming Game and Fish Department has put into migration corridors. The Committee is committed to conserving these vital migration corridors to help maintain wildlife populations. The Committee believes that designating migration corridors within ACEC is not in the best interest of the state or the wildlife. The Committee believes that Alternative D, which does not include migration corridors in ACEC is the better approach. In addition, Alternative B would impose major restrictions along migration corridors. For example, Alternative B would "prohibit surface disturbing activities within ½ mile of big game migration corridors to avoid construction of a current or future identified big game corridors." In contrast, Alternative D would "allow fluid mineral surface occupancy and use within a Wyoming Game and Fish Department designated big game migration corridor if the fluid mineral operator and the BLM arrive at an acceptable conservation plan for avoidance, minimization, rectification and / or restoration within the migration corridor." | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. |
| 836.13 - Big Game | #13515-3 | RMEF appreciates coordination with the Wyoming Game & Fish Department (WGFD) and others to identify areas in need of special consideration, including big game migration corridors. Attention to these critical areas shows BLM's continued commitment to conserving these important corridors. However, RMEF does express concern about the perception of a federally designated migration corridor protection. Prior to finalizing the Big | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Migration Corridor ACEC | | Game Migration ACEC, additional conversations within the conservation community are needed to fully assess the larger impacts of this federal designation in relation to management of a state trust species. | |
| 836.13 - Big Game Migration Corridor ACEC | #13751-179 | MA #7555#SD-40, SD-41, SR-01#No similar action Industry Position: Not applicable#Designate the Big Game Migration Corridors as an ACEC (226,335 acres, Table 2-12, Appendix V, and Map 2-30). Industry Position: Not Acceptable Reason: Big game winter range and similar area have been appropriately managed according to season restrictions. Big game migration corridors should be managed in the same fashion without new ACEC designations. The science and corridors are only now being evaluated by WY G&F; premature action by BLM is not warranted at this time. Recommend BLM refer the WY Governor's Executive Order for actions.#No similar action, the Big Game Migration Corridors would not be designated as an ACEC. Industry Position: Acceptable#Same as Alternative C Industry Position: Acceptable#Alternatives A, C or D are acceptable. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. |
| 836.13 - Big Game Migration Corridor ACEC | #13751-180 | MA #7556#SD-40, SD-41, SR-01#No similar action Industry Position: Not applicable#Prohibit surface disturbing activities or facilities within the entire Big Game Migration Corridor ACEC. Industry Position: Not Acceptable Reason: See MA#7555#No similar action, the Big Game Migration Corridors would not be designated as an ACEC. Industry Position: Acceptable#Same as Alternative C Industry Position: Acceptable#Alternatives A, C or D are acceptable. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13751-181 | MA #7557#SD-40, SD-41, SR-01#No similar action Industry Position: Not applicable#Designate the area as VRM Class II objectives. Industry Position: Not Acceptable Reason: See MA#7555#No similar action, the Big Game Migration Corridors would not be designated as an ACEC. Appendix V Industry Position: Acceptable#Same as Alternative C Appendix V Industry Position: Acceptable#Alternatives A, C or D are acceptable. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. | 836.13 - Big Game Migration Corridor ACEC | #13845-3 | MA-7556: Prohibit surface disturbing activities or facilities within the entire Big Game Migration Corridor ACEC should be revised to prohibit surface disturbing activities or facilities within the Bottleneck, Stopover, and High-use habitats of the migration corridor. Limit surface disturbance with CSU and TLS stipulations to 3% in Medium and Low-Use habitats and avoid seasonal activity during migrations. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 836.13 - Big Game Migration Corridor ACEC | #13845-4 | MA-7558: Designate the ACEC as an exclusion area for right-of-way. Close the area to mineral material sales. Pursue a withdrawal from entry under land laws and mineral location. Close the area to mineral leasing. Existing mineral leases would not be offered for lease once they expire. * Revise to: For Bottleneck, Stopover, and High-use habitats: ROW exclusion area; close the area to mineral material sales; pursue a withdrawal from entry under land laws and mineral location; close the area to mineral leasing; existing mineral leases would not be offered for lease once they expire. For Medium and Low-Use habitats: ROW avoidance; open to mineral material sales and leasing with 3% disturbance cap. Grant no exceptions unless they benefit resource values. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13845-5 | MA-7561: Limit vehicle use to designated roads and trails, subject to seasonal restrictions. * Revise to: Travel Management Plans should be prioritized within migration corridors. Limit vehicle use to designated roads and trails, subject to seasonal restrictions. Designate areas as limited or closed to motorized travel. No new designated routes should be authorized in bottlenecks, stopovers, or high-use. Unauthorized routes should be closed and rehabilitated as soon as practicable. Limit or reduce the density of routes within migration corridors to maintain corridor functionality. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13845-6 | Additionally, as part of the stated intention of Alternative B to conserve the Big Game Migration Corridor, we request the following MAs be added to the ACEC: * Lands and Realty: Identify lands for acquisition through exchange and/or purchase prioritizing bottlenecks, stopovers, and high-use areas. No parcels within migration habitat should be identified for disposal unless it would benefit the corridor functionality. * Recreation: Manage for undeveloped recreation. Do not develop new recreation infrastructure that is surface disturbing, including campgrounds, trails, trailheads in bottleneck, stopover, and high-use habitats. Consider relocating existing sites if conflicts with migration functionality. * Livestock Grazing: BLM shall manage grazing to facilitate ecological conditions and habitat services crucial to migratory big game species. Remove or modify fences for allotment management to improve migration functionality. If new fences are necessary, build to reduce impacts to migrations. Design water developments to benefit wildlife and avoid those that will result in forage loss and disease transmission. * Wild Horses: Prioritize wild/feral horse gatherings in areas that overlap with migration corridors to achieve Appropriate wild/feral horse Management Levels. Time the gathers to avoid big game migration periods. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13880-6 | The first of these is wildlife management and migration corridors. The management of wildlife, with limited exceptions, lies solely with the State of Wyoming. The Big Game Migration Corridor ACEC thwarts the State's ability to implement the Mule Deer and Antelope Migration Corridor Protection Executive Order 2020-1 (MCEO) in conflict with the U.S. Department of Interior's Secretarial Order 3362 and Instruction Memorandum 2023-005. The State of Wyoming manages and designates big game migration corridors through the MCEO through informed contemporary research, flexibility for conditions on the ground, and utilization of a publicly informed process. The Rock Springs draft RMP includes restrictions not based on any given science, or uses studies that are woefully out of date. Because the federal lands in the planning area are intermixed with state and private lands, any federal decisions stemming from this RMP could have lasting and damning impacts to the State's ability to manage its wildlife and maintain healthy wildlife populations. Any special designation regarding migration or connectivity should follow the designations determined by the MCEO, not the other way around. The Wyoming Game and Fish Department stands ready to work in close partnership with the BLM and I request that close attention be paid to their comments and their collaborative work from throughout the cooperating agency process. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-24 | The BLM should ensure adequate protections for Big Game Migration Corridors We support the Big Game Migration Corridor ACEC for the Red Desert to Hoback mule deer migration corridor (a portion of the State of Wyoming's designated Sublette Mule Deer Herd Migration Corridor). We agree with BLM's ACEC evaluation that this remarkable migration corridor meets the relevance and importance criteria for an ACEC and requires the special management attention accorded to a designated ACEC. Federal and state policies, science on migration, and decisions on the ground all support the need to conserve this corridor. The importance of the Red Desert to Hoback mule deer migration corridor cannot be overemphasized. This is the longest mule deer migration on record, with deer traveling an average one-way distance of 150 miles. Research has shown that migratory herds show greater population abundance over non-migratory herds.81 This corridor enables the movement of 4,000 to 5,000 mule deer from their summer ranges around Jackson Hole to winter range in the Red Desert. While not every ungulate migration corridor needs to be designated as an ACEC, the Red Desert to Hoback is clearly unique and should be formally recognized. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-28 | The first management objective for the Big Game Migration Corridor ACEC should be: "Ensure connectivity and unimpeded movement of migratory animals during spring and fall to forage at optimal times and places as needed and allow for avoidance of harsh environmental factors between winter and summer ranges." | SD-44 prevents fragmentation of habitats. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-29 | SD-40: Provide protection and enhancement of the recreation opportunities, activities, and setting of the area. ? Strike SD-40 from the list of goals for the Big Game Migration Corridor ACEC. ? Justification: SD-40 does not contribute to the protection of the resource-mule deer migratory habitats-that this ACEC manages for. | SD-40 defines overall goals for the ACEC |

|---|---|---|---|
| 836.13 - Big Game Migration Corridor ACEC | #13899-30 | MA-7556: Prohibit surface disturbing activities or facilities within the entire Big Game Migration Corridor ACEC. ? Revise to: Prohibit surface disturbing activities or facilities within the Bottleneck, Stopover, and High-use habitats of the ACEC (including closures to oil and gas leasing, solid mineral leasing, pursue a locatable mineral withdrawal, and exclude rights-of-way). | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-31 | Limit oil and gas related surface disturbance at a 3% density disturbance cap with Controlled Surface Use and Timing Limitation Stipulations in Medium and Low-Use habitats and avoid activity seasonal during migrations. ? Justification: Research has shown that mule deer have a strong fidelity to these learned migration corridors from generation to generation that overrides the animal's potential to strike out and learn new routes93. Mule deer, unlike other large herbivores, appear to have little or no adaptability as to whether or where they migrate. In Wyoming, Sawyer et al. 2019 found that resident deer remained residents, and migrant deer remained migrants, regardless of age, reproductive status or number of years monitored94. They also found that migratory individuals showed strong fidelity (>80%) to their migration routes across seasons and year after year. Finally, the researchers reported the first direct evidence that a mammal's choice of migration route can influence its probability of survival and found that individual deer migrating outside of their traditional routes had 30% lower survival than individuals migrating along their traditional routes. Research has also shown deer mediate exposure to development by altering movements - both rates and timing/duration - rather than changing the routes they traverse. Wyckoff et al. 2018 concluded that mule deer in Wyoming increase their rate of movement, reduce time in stopovers, and shift stopovers in response to increasing development along migration routes, diminishing the benefits of migratory foraging95. A 14-year study on a mule deer herd south of Rawlins found the herd's ability to track springtime green-up forage -which supports antler growth, nursing of offspring and abundance - declined by 39% when energy development occurred in its migration corridor96. Clearly, it is far more reasonable to conserve animals' preferred habitat rather than expecting them to successfully navigate around obstacles. Use of migratory habitat by mule deer, excluding stopover areas, has been shown to decline as surface disturbance from energy development increases, with sharp declines observed when development crosses a 3% threshold97. Researchers cautioned against applying these findings to stopover habitats, which are disproportionately important for tracking vegetation green-up and characterized by low human disturbance. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-32 | MA-7558: Designate the ACEC as an exclusion area for right-of-way. Close the area to mineral material sales. Pursue a withdrawal from entry under land laws and mineral location. Close the area to mineral leasing. Existing mineral leases would not be offered for lease once they expire. ? Revise to: For Bottleneck, Stopover, and High-use habitats: exclusion area for right-of- way; close the area to mineral material sales; pursue a withdrawal from entry under land laws and mineral location; close the area to mineral leasing; existing mineral leases would not be offered for lease once they expire. For Medium and Low-Use habitats: avoidance for right-of-way; open to mineral material sales and limit surface disturbances from oil and gas with 3% density disturbance cap. Grant no exceptions unless they benefit resource values. ? Justification: See justification for MA 7556, above. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-33 | MA-7561: Limit vehicle use to designated roads and trails, subject to seasonal restrictions. ? Revise to: Travel Management Plans should be prioritized within migration corridors. Limit vehicle use to designated roads and trails, subject to seasonal restrictions. Designate areas as limited or closed to motorized travel. No new designated routes should be authorized in bottlenecks, stopovers, or high-use. Unauthorized routes should be closed and rehabilitated as soon as practicable. Limit or reduce the density of routes within migration corridors to maintain corridor functionality. ? Justification: While most migration research is focused on energy development, the same studies cited above can apply when evaluating surface disturbance of roads. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-34 | MA-7562: Manage a separate offsite mitigation area for biological impacts from energy development. ? Revision is not necessary but important to note that there is zero evidence to suggest we can mitigate impacts to migration corridors once they are impacted from development. Given that mule deer migrations generally occur along traditional routes that are learned and passed on from mother to young, it may be difficult to restore migratory landscapes by removing barriers once migratory subpopulations have dwindled98. | Section 4.7.3 describes how MA#7562 would benefit wildlife habitat. |
| 836.13 - Big Game Migration Corridor ACEC | #13899-35 | Additionally, we request these Management Actions be added to the Big Game Migration Corridor ACEC: ? Lands and Realty: Identify lands for acquisition through exchange and/or purchase prioritizing bottlenecks, stopovers, and high-use areas. No parcels within migration habitat should be identified for disposal unless it would benefit corridor functionality. ? Recreation: Manage for undeveloped recreation. Do not develop new recreation infrastructure that is surface disturbing, including campgrounds, trails, trailheads in Bottleneck, Stopover, and High-use habitats. Consider relocating existing sites in the case of conflicts with migration functionality. ? Livestock Grazing: BLM shall manage grazing to facilitate ecological conditions and habitat services crucial to migratory big game species. Remove or modify fences for allotment management to improve migration functionality. If new fences are necessary, build to reduce impacts to migrations. Design water developments to benefit wildlife and avoid those that will result in forage loss and disease transmission. ? Wild Horses: Prioritize wild/feral horse gatherings in areas that overlap with migration corridors to achieve Appropriate wild/feral horse Management Levels. Time wild horse gathers to avoid big game migration periods. | Lands & Realty: Appendix K identifies criteria for acquiring and disposing of lands. Lands identified for Disposal and Acquisition are found in Table K-1.<br>Recreation: Goals LR-10, 11, 12, 13 support consideration of other resources. See MA#6504 Alt B for protection of other resources.<br>Livestock Grazing: See Goal LR-09. MA#6400-6403, 6406, 6410. MA#6416 addresses range improvements.<br>Wild Horses: See Wild Horse Amendment ROD. |

|---|---|---|---|
| 836.13 - Big Game Migration Corridor ACEC | #13908-3 | The Department does not support the establishment of the Big Game Migration Corridor ACEC as it prevents the flexibility to implement the MCEO as intended and violates SO 3362 and IM 2023-005. The approach to migration corridor management provided in Alternative B will ultimately result in ineffective management of migrating big game. The Department recommends ensuring the future preferred alternative include language that acknowledges state-designated big game migration corridors, allows flexibility to properly manage animals using the corridors, and requires consultation and collaboration with the Department. | Section 2.2.3 identifies how Alternatives were developed in cooperation with other Federal, State and local agencies. |
| 836.13 - Big Game Migration Corridor ACEC | #13923-10 | Additionally, we request that BLM management of migration corridors should be based on the management prescriptions within EO 2020-1 and that the BLM coordinate with the WGFD. | Section 2.2.3 identifies how Alternatives were developed in cooperation with other Federal, State and local agencies. |
| 836.13 - Big Game Migration Corridor ACEC | #13925-40 | Significant migration corridors for big game habitat exist in nearly every state in the western U.S. The fact that this particular corridor also contains administrative designations for other wildlife (sage-grouse) actually works against the designation as an ACEC since PHMA and GHMA include prescriptions than the ACEC may include. And, therefore, the DEIS has not identified the need for designation. The SMA negates need for special management. ACEC should be rejected. The Evaluation Form has not identified the threat of which the ACEC would preclude. And, unless the ACEC designation would preclude that threat, then it is not required. As such, the BLM has failed to justify this ACEC on two accounts. ACEC fails on need for special management. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #13943-7 | The Sublette Mule Deer Migration Corridor should be recognized in the plan as a migration corridor and managed to maintain its conservation value. o Maintaining the functionality and permeability of this corridor is paramount for the health and longevity of the Sublette mule deer herd. Migration corridor functionality as defined in Executive Order 2020-1, Wyoming Mule Deer and Antelope Migration Corridor Protection (EO 2020-1) states, "Maintaining connectivity between summer and winter ranges to allow mule deer and antelope movements conducive to necessary foraging and rest during migration, based on best-available scientific data." o We ask the BLM to, at a minimum, support the management prescriptions outlined in EO 2020-1 and evaluate the need to include additional management to effectively conserve this corridor based on the best available science. | The DEIS analyzes the impacts of Special Designations in Section 4.21. MA#7555 through 7562 Identifies a Big Game Migration Corridor ACEC. The DEIS analyzes the impacts to wildlife in section 4.7. See Goal BR-20. MA#4421, Alt B addresses all migration corridors. MA#4424 addresses prohibits surface disturbing activities w/in big game migration corridors. |
| 836.13 - Big Game Migration Corridor ACEC | #13953-17 | The WCCA echoes the concern from the Governor's office that the Big Game Migration Corridor ACEC undermines the substantial leadership the State of Wyoming has taken in implementing the Mule Deer and Antelope Migration Corridor Protection Executive Order 2020- 1 (Executive Order). The Executive Order provides for community and local government buy-in and is based on extensive scientific research on the big game animals that are wholly managed by the State of Wyoming. While the BLM does manage habitat utilized by these ungulates, it should focus its efforts as a crucial partner in the state's process instead undermining and seriously derailing the work that is already being done in Wyoming. | Section 2.2.3 identifies how Alternatives were developed in cooperation with other Federal, State and local agencies. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.13 - Big Game Migration Corridor ACEC | #14022-14 | Creating a Big Game ACEC doesn't make economical sense. With the State of Wyoming managing the State's wildlife SCCD feels that BLM should deal with the ACEC process in a different planning effort. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 836.14 - Big Sandy Openings | #13925-34 | Water resources - The BLM's 2012 ACEC Evaluation Proposal states that this area "does not have more than locally significant qualities" yet it proceeds to recommend the area as an ACEC contrary to BLM rules and handbook. ESA protection negates lynx habitat as a basis for ACEC designation as there is no need for special management. Lynx, Elk, Mule Deer, Antelope, and Moose habitat are all locally significant resources that can be protected and appropriately managed without sweeping ACECs. It should also be noted that Sage- Grouse habitat, whether priority or general, largely overlaps crucial habitat for wintering mule deer and these areas are therefore already protected from pursuant to 2015 GrSG ARMPA. | The Big Game Migration Corridor ACEC Evaluation is located in Appendix C.26. A full range of alternatives, including whether or not to designate the ACEC and proposed management actions are included in MA 7555-7562. |
| 837 - Socioeconomic Resources– Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10225-1 | Sweetwater County and the City of Rock Springs subsidies make up a sizeable portion of our budget. We are dependent on these subsidies to provide many essential services to the aging and mobility challenged population as well as the youth of Sweetwater County. The services that Young at Heart provides are the following: Congregate meals for the community having served approximately 6,891 meals in 2022 This year to date we have recorded 10,836 meals. Home delivered meals totaling around 42,000 in 2022, and social entertainment totaling approximately 17,708 hours (pool, poker, card games, and dominoes). We offer In-Home Services which provides light housekeeping and small chores to more than 92 clients in the Rock Springs and Green River areas. Additionally, we provide In-Home Health services assisting more than 15 patients. And finally we have our Early Learning Center providing children with quality education which serves more than 100 families. Therefore reduction in any of these revenue streams would severely impact, if not totally eliminate some of all of these services. In fact, it could force the closure of the Center altogether. Historically and currently mineral extraction is a mainstay in our local economy. Monies from industrial impacts, mineral severance, sales taxes, etc. flow into the local government budgets to support essential services. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10225-2 | In addition the oil and gas industry provides income for not only local government but funding for schools. It provides 51% of all property taxes and 80% of all severance taxes. This industry also provides 58,980 jobs in Wyoming alone. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10324-10 | As a college student, I do not have a large disposable income, and with things like park passes and entry fees increasing on land that I recreate, that does provide me some stress. I think it is important that not only minority groups are represented in land changing plans, but also individuals who are unable to afford some of the universal experiences in the area. I think it would be beneficial to discuss how fees for trails, parking lots, and land use would be dispersed, and how they would be created with the mindset of use for the majority of people. Just last semester in my Federal Lands class we discussed how in order to visit Yellowstone in the winter, the fees and cost associated with it provides a barrier to the majority of people, and though Rock Springs isn't a National Park, it is still important to consider any fees that could be placed on recreational opportunities and how that may discourage those wanting to enjoy our state. | Fees for the National Park Service are outside the scope of this EIS. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10324-2 | With the threat of CWD becoming more present in the area, there is a threat to the wildlife in the area, and this should be addressed not only for the wildlife in the area but also for the community. Hunting is a large part of the economy, and as noted in the draft EIS, the total high value for hunting in the area was $7,306,388, which is notably higher than any other recreation consumer surplus value in 2016.5 When looking up things about Sweetwater County and Rock Springs, I found that many of the guides for the area brought up hunting as an activity that is popular in the area, and this is important as it is an activity that helps bring the community together, brings new people to the area, and brings in revenue both for the state but also for wildlife conservation through laws like the Pittman-Robertson Act. As CWD is a fatal disease that is easily transmissible, this puts entire herds of big game species at risk of dying out, which would severely impact the culture of the area and the economy. | Impacts from Chronic Wasting Disease are outside the scope of this RMP analysis. Economic impacts discussed in 4.22 and hunting is discussion in Section 4.17 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10452-2 | section 4.22.8 - Environmental Justice Impacts - the plan minimizes the devastating effect this plan with have in the surrounding communities. This alleged geographic proximity to populations were purportedly utilized to assert there is no impact to Uinta County for minority populations or populations in poverty. Such assertion, however, fails to recognize the impact that closure of surface access for pipelines, roadways, mineral exploration, recreational use and grazing has on the entire human habitat and economy in the region beyond the debilitating effect on its economy but, rather, day to day life of Wyoming citizens. Specifically, an example of impacts not considered from the limitation of further exploration and use of natural gas will inherently lead to limited availability of the resource for use. Limited supply of natural gas, with steady or, inevitably, increased demand will result in higher rates to end customers. The population that suffers the most from higher costs for basic needs, such as heat, electricity and water, are those populations that were identified for study~ those populations in poverty. Uinta County has one of the largest populations in poverty in the State of Wyoming now and this plan will lead to recession of the economy with greater need for government assistance for all basic human dignities and needs. | Uinta County is part of the socioeconomic analysis areas (See Appendix N). Economic impacts are provided in Chapter 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10468-5 | Specifically, an example of impacts not considered from the limitation of further exploration and use of natural gas will inherently lead to limited availability of the resource for use. Limited supply of natural gas, with steady or, inevitably, increased demand will result in higher rates to end customers. The population that suffers the most from higher costs for basic needs, such as heat, electricity and water, are those populations that were identified for study~ those populations in poverty. Uinta County has one of the largest populations in poverty in the State of Wyoming now and this plan will lead to recession of the economy with greater need for government assistance for all basic human dignities and needs. | Uinta County is part of the socioeconomic analysis areas (See Appendix N). Economic impacts are provided in Chapter 4.22. The complexity of global energy markets is outside the scope of this RMP. |
| 837 - Socioeconomic Resources– | #10517-3 | Similarly, the Plan and the selection of Alternative B appears to disregard the socioeconomic costs associated with the need for promoting energy security and stability for America. By removing nearly 2 million acres from potential energy development through the proffered selection of Alternative B, the Bureau is limiting America's | Section 4.22 discloses the predicted economic impact of the alternatives |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | flexibility to respond to rising energy prices and the ability to protect American consumers and businesses from depending on the vagaries of foreign producers and countries to meet our need for reliable and dispatchable energy. We also can't help but recognize how Alternative B stifles energy production as a whole, excluding or closing millions of acres more to other energy sources (including geothermal) than the other three alternatives do. This is another example of how we believe Alternative B misses the mark when it comes to managing public lands under principles of multiple use. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #10517-5 | While the Plan cites the Energy Policy and Conservation Act of 2000 (which, among other things, requires the creation of the Strategic Petroleum Reserve), it does not appear that the Plan accounts for America's energy security and the need for reliable, dispatchable energy in the selection of Alternative B. The United States is at a critical juncture in energy development. While the country is recklessly hurdling toward renewable energy sources, it does so without fully considering the costs that we will incur as a result of losing reliable and dispatchable electricity that will be needed to meet the demands of our residents and our industries. | Section 4.22 discloses the predicted economic impact of the alternatives. The complexity of global energy markets is outside the scope of this RMP. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #12574-1 | I am a Trona miner and the bread winner for my family. this proposal will impact my ability to provide for my family long term due to the limitations on new expansion for mining. my wife owns a small business in Rock springs and the majority of her clientele income is supported by oil, gas and mining. The snowball effect of eliminating jobs will be detrimental to my family and the community and region of Southwest Wyoming. It blatantly states in (4.22.5 Impacts of Alternative B) that alternative B is 52% - 56% less income for the region. Taking more than half the revenue from an already struggling community will devastate and create poverty across the region driving multi-generational family's out of the area. | Section 4.22 discloses the predicted economic impact of the alternatives including the ripple effect to those not directed employed in oil and gas, and mining. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13064-2 | Alternative B would greatly reduce mineral development and production in Wyoming. This reduction would decrease local and state revenue while, also harming the livelihoods of the local communities. The local communities depend on mineral development and production and Alternative B would be detrimental to these local communities and the economic well-being of individuals within those communities. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13064-8 | Most significantly, the total local and state revenues would decrease annually under Alternative B. For example, ad valorem taxes would decrease by 52.4%, severance taxes would decrease by 55.1%, and the state's share of federal mineral royalties would decrease by 52.7%.54 The total local and state revenues are "52% to 55% lower under Alternative B than Alternative A" and "all quantified economic and public revenue indicators for oil and gas development and production are approximately 74% lower under Alternative B than Alternative A."55 The reduction in revenues for oil and gas development is due to "the substantially lower number of wells drilled under Alternative B and corresponding reductions in oil and gas production."56 The Committee is greatly concerned that Alternative B would have a detrimental effect on Wyoming's economy. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous | #13094-1 | He works in the gas and oil industry and closing 2.1 million acres to oil and gas in Wyoming would severely impact our family's wellbeing. I have countless other friends and family who work in the oil and gas, mining, and ranching industries who would face negative impacts as well. It doesn't just stop there either, these changes would force families to move and impact the jobs of teachers and our entire economy. I am a teacher and have many teachers in my family and this would lead to less funding for schools and school closures. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |

| materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13132-1 | There are many beds or layers of Trona though out Sweetwater County and it is the largest natural deposit of Trona in the world. If there were new restrictions put on trona mines, that would mean the eventual shutdown of the trona mines due to decreased production. This would hurt many families in Uinta County, Lincoln County, and Sweetwater County specifically, but statewide as well. Our livelihood depends on the mining industry, and they cannot afford any more restrictions. This will not only have a lasting impact financially on my family, but the city economy, the state economy, and the country altogether. Trona is a great resource and is used in many things; such as baking soda, glass, and fertilizer. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13134-1 | Majority of our educational funds are in direct correlation with the Energy and Mineral Industries. Reducing the Wyoming State Gross Domestic Product by $1billion/year would be detrimental to our state, our educational system would not survive. Decreasing Oil and Gas development by 73% is astronomical. The surrounding Mines, Coal, Oil and Gas Industries are the backbone of our state and cannot be compromised any more than they have been. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13137-1 | If there were new restrictions put on trona leases, that would mean the eventual shutdown of the trona mines due to decreased production. This would hurt many families in Uinta, Lincoln, and Sweetwater Counties specifically, but statewide as well. Our livelihood depends on the mining industry, and they cannot afford any more restrictions. This will not only have a lasting impact financially on my family, but the city economy, the state economy, and the country altogether. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13210-10 | 10. Uphold the continued ability of local communities and visitors to use and enjoy the outstanding wildlife and ecological values of landscapes within the Rock Springs Field Office, by supporting healthy wildlife, aquatic, and plant communities through conservation of the intact ecosystems, landscapes, and water sources they rely on. | Wildlife and plant resources within the planning area are described in Chapter 3, with the impacts for all four proposed alternatives provided in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13210-17 | 17. Under the Act of Admission to the union, the Federal Government endowed the State of Wyoming with state trust lands for the purposes expressed therein including to support public schools and institutions. Wyoming has a Constitutional responsibility to generate revenue for its public school system and other institutions by encouraging productive uses on state trust lands. These lands are very often encompassed by federal and private lands and require access through those lands in order to be utilized. The BLM must respect this charge given to the state by its citizens and ensure that no actions taken within this RMP impede the state's ability to fund public education and other institutions. This is the highest form of the BLM's responsibility to defer to state policies. | Impacts to areas with private or state ownership are discussed in the cumulative impacts analysis section (Appendix T). Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13218-1 | I am concerned that Alternative B would have a detrimental effect on Wyoming's energy and mineral industries. Alternative B would substantially decrease the opportunity for oil and gas development, coal development, and other mineral development. Alternative B would close 2,122,282 acres to oil and gas development, 3,735,526 acres to coal development, 2,581,741 acres to mineral material sales and disposals, and 49,224 acres to trona leasing and development within the known sodium leasing area. The acres closed for oil and gas development is a 192% increase compared to Alternative A (the current management standard for the Rock Springs planning area); for coal development, a 433% increase compared to Alternative A; for mineral material sales and disposals, a 209% increase compared to Alternative A; and for trona leasing and development, a 101% increase compared to Alternative A. This is an extreme increase in the number of acres closed compared to Alternative A and this would have the greatest negative impact on solid mineral leasing and development, saleable mineral development, and trona development. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13241-1 | Alternative B would have a devasting overall economic impact on Wyoming. Under Alternative B, the estimated economic output is $12.6 billion dollars, the estimated total labor earnings are $2.3 billion dollars, and the estimated total local and state revenues from mineral production is $800 million dollars. This is an extreme decrease from the other alternatives. For example, under Alternative A, the estimated economic output is $29.9 billion dollars, the estimated total labor earnings are $5.4 billion dollars, and the estimated local and state revenues from mineral production is $2.3 billion dollars. The total economic output is 52.3% lower under Alternative B than Alternative A and the total labor earnings are 55.8% lower under Alternative B than Alternative A. In addition, the average annual jobs would also decrease as Alternative B would generate only 2,707 jobs compared to Alternative A generating 6,157 jobs. Most significantly, the total local and state revenues would decrease annually under Alternative B. For example, ad valorem taxes would decrease by 52.4%, severance taxes would decrease by 55.1%, and the state's share of federal mineral royalties would decrease by 52.7%. The total local and state revenues are "52% to 55% lower under Alternative B than Alternative A" and "all quantified economic and public revenue indicators for oil and gas development and production are approximately 74% lower under Alternative B than Alternative A." The reduction in revenues for oil and gas development is due to "the substantially lower number of wells drilled under Alternative B and corresponding reductions in oil and gas production." I am totally concerned that Alternative B would have a detrimental effect on Wyoming's economy. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13287-15 | A study of the Mount Milligan Mine's impacts to local First Nations communities found: The influx of workers resulted in strains on existing health services, impacts to health services in relation to an increase in industrial accidents and illness, increased vulnerability for women and youth in the area, increased pressure on a pre-existing housing crisis, and increased traffic. Community Health and Safety in the Nak'al Bun/Stuart Lake Region During the Construction Phase of the Mount Milligan Mine (Shandro et al.) at 5. Crime (including sexual assaults) and prostitution also increased. Id. at 30 and 29. Similarly, a 2017 study of the impacts of resource-extraction worker camps on the First Nations of western Canada found increased vulnerability for women and youth, increased road safety problems, increased sex trade and sex trafficking, increased amounts of drugs and alcohol being brought into indigenous communities, and increased strain on health services. In northern British Columbia, increases in rates of sexually transmitted diseases have been linked to influxes of oil and gas workers. Likewise, reservations in the United States have experienced serious health and safety impacts during the Bakken oil boom. On the Fort Berthold Indian Reservation in North Dakota, the Bakken oil boom has coincided with large increases in sex trafficking (Shandro et al. 2014: 26-27) sexual assault, and domestic violence (Finn et al. 2017:2-3, NIWRC at 13-17). The Fort Peck Assiniboine Sioux Tribe has also experienced increases in crime and violence during the Bakken oil boom. NIWRC at 18-19. In addition, according to the Montana Board of Crime Control, the four Montana counties nearest the Bakken oil patch reported higher crime increases than their surrounding counties. Wyoming has a serious existing problem of missing and murdered indigenous women, as has been recognized formally by the state. In April 2019, Wyoming Governor Mark Gordon announced that he would convene a task force "to address ways to combat the high rates of murdered and missing American Indian women in Wyoming." The Governor's announcement featured pictures of Jocelyn Watt, a Northern Arapaho woman who had been found murdered in her home in Riverton. The oil and gas development entailed under the Rock Springs RMP entails temporary, non-local workforce would be so large that large man camps may be necessary. At its peak, the total Project workforce could exceed thousands. This means the Rock Springs RMP-authorized minerals development would result in a large influx of oil and gas workers from outside the local area. Despite the close proximity of the Wind River Indian Reservation, the DEIS does a poor job of acknowledging Eastern Shoshone and Northern Arapaho environmental justice communities on the Reservation, and disclosing impacts of the potential large influx of oil and gas workers from outside the local area. The DEIS does not consider the Project's potential impacts to Indigenous communities related to a wide range of issues identified by the sources cited in this section. | Section 4.22 addresses concerns related to boom aspects of oil and gas development and 5.1.3 identifies discussions with Tribal Nations |
| 837 - Socioeconomic Resources–Economics and Public | #13330-18 | The table on page 644 of Volume 2 states that with Alternative B "there would be fewer designated recreation sites and developed recreation areas, which could reduce the availability of facilities for use by the public." Sweetwater County Farm Bureau opposes this closure of recreation sites because closure to the public is also closure to ag producers' access. These actions would negatively impact our economy and local tourism. | Section 4.22 discloses the predicted economic impact of the alternatives |

|---|---|---|---|
| Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13364-2 | the RMP's Quantitative Economics Impacts analysis as well as its Socioeconomic Impacts analysis do not address impact projections for the restriction of Minor Pipelines under Alt. B. There is little evidentiary basis for RMP's anecdotal finding that for "habitat and resource conservation stakeholders", "Alternative B [is] the most favorable of all the alternatives for their interests." No Stakeholders have provided a position on how, and to whom, natural gas service should be provided in the area or whether or not they are in favor of substantially increased costs for building infrastructure around, but not through, their public lands. It would be imprudent for the BLM to implement Alt. B without an extensive economic and socioeconomic impact analysis for natural gas lines (and other utility services, for that matter) as well as the collection of reliable data regarding Stakeholders' actual interests. | Rights-of-way management actions for all four alternatives can be found in actions 6000-6005, this would include linear rights-of-way for pipelines. Socioeconomic impacts for all four alternatives can be found in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13477-1 | Restrictive Land Use: The proposed ACECs and rights-of-way exclusion areas could severely hamper our ability to maintain and expand essential energy infrastructure, impacting service reliability and consumer costs. | Indirect impacts are disclosed in 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13477-2 | 3. Operational Challenges: The plan's restrictions could lead to higher operational costs and reduced service reliability, adversely impacting our consumers. | Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13477-3 | 1. Economic Implications: Restrictions on energy and industrial developments could lead to significant economic downturns, affecting local economies, job markets, and the broader community. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13477-4 | 3. Tourism Industry Impact: Reduced access to public lands could lead to a decline in tourism-related revenue, impacting the local economy. | Section 4.17 discussion changes in recreational tourism while Section 4.22 discusses related economic impacts under the various alternatives |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13477-5 | Impact on Energy Development: The plan restricts energy projects, including renewable energy projects, limiting our ability to strengthen our distribution and transmission power grids while hindering our ability to provide reliable, affordable, and clean energy sources and local economic growth in this sector. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13512-1 | This unique supply of natural soda ash, exclusively found in areas administered by the BLM's Rock Springs and Kemmerer Field Offices, is essential to the U.S. production of glass, electric vehicle ("EV") batteries, photovoltaic solar panels, and other prioritized domestic products. Without specific changes to the Draft RMP-especially those related to Rights-of-Way ("ROWs") and pre-existing Corridors-soda ash projects like Project West will be unable to proceed as planned. This is particularly impactful since our soda ash project will advance U.S. energy goals and the administration's priorities. | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13512-2 | Wyoming's natural soda ash, the largest source in the world, is the essential ingredient for many day-to-day items like glass, detergents, food products, and numerous household goods, along with products prioritized by both domestic and international markets, namely multiple types of EV batteries and photovoltaic solar panels. Soda ash is Wyoming's top export, and in 2022, soda ash production in Wyoming was 18,482,320 tons and employed 2,363 people.3 Even with existing production, it will take the development of several new projects like Project West to meet growing demand. | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13515-6 | For many hunter-conservationists, public lands provide the best opportunity to pursue their hunting heritage. These activities deliver economic benefits for local communities, as well as cultural and social benefits. We strongly encourage inclusion of hunting, fishing, trapping, and shooting sports as contributing to local economies and the well-being and quality of life of BLM land users. | Hunting is discussed in Section 4.17 and corresponding socioeconomic impacts in 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13519-1 | The BLM admits, projects, and acknowledges that its preferred management objective will result in the reduction of economic activity of $907 million dollars annually. An estimated 2,920 lost jobs that will equate to $211 million dollar loss to labor earnings per year in the described planning area. The viability of Sweetwater County simply cannot sustain the loss of nearly 3000 jobs. | The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic | #13527-4 | We believe that watchable wildlife, heritage tourism, and the economic benefits of unimpaired wild lands will prove to be more valuable and more sustainable than the alternatives that would expand OHV routes and development | Recreation is discussion in Section 4.17 and corresponding socioeconomic impacts in 4.22 |

|---|---|---|---|
| Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | of minerals and fossil fuels. We favor preserving local natural resource-based economies and generations-old traditions in southwestern Wyoming. With careful planning and execution, these industries can remain an integral and essential part of evolving tourism-based economic development, and both sectors can flourish. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-100 | Appendix T. T.1.3. Socioeconomics. T-29 The RMP states, "None of the alternatives would impact coal and trona production in ways that significantly exacerbate or counter the larger forces acting on industries." However, Alternative B, and different components of Alternatives C and D would restrict areas that trona mines already have leases for to be closed to trona mining, which would significantly impact the facility's ability to mine on BLM lands in shallow trona beds and access private and state leases through existing shafts due to the checkerboard pattern of land ownership. Further, this analysis relies upon outdated sales models for coal to imply that trona will follow the same economic patterns. There is no factual or logical connection between either commodity. The BLM's actions will have an outsized impact on the industry in many ways which the agency has failed to analyze or disclose to the public. These analytical failures severely undermine the credibility and reliability of the agency's entire construct for managing the resources in the area under all the Alternatives. | Trona mining impacts under the alternatives are discussed in Chapter 4.11; The combination of coal/trona numbers in Chapter 4.22 economic impacts was done to hide proprietary values, the methodology differed as explained in Appendix N. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-54 | 3-31 The Socioeconomic Baseline Report was prepared in 2013, which is 10 years ago. The area has significantly changed since 2015 with the downturn of the oil and gas industry, and since the 2020 global pandemic and resulting economic downturn. A newer baseline report with current socioeconomic data should be generated and used. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-55 | 3-32 The socioeconomic study area uses the 2010 Census population and population density data. The 2020 Census data should be used, as the currently used data is 13 years old. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-77 | Appendix N. Footnote 1. N-3 The source for the definitions references the Minnesota IMPLAN group, which sold IMPLAN in 2013, so these definitions are not current and are over 10 years old. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | They were valid at the time of analysis. See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. |
| 837 - Socioeconomic Resources–Economics and Public Safety | #13542-78 | Appendix N. Timeframe of the Analyses. N-4 Due to the global pandemic and the economic downturn of 2020, this model that was re-run in 2019 is outdated and already "models" several years that have already passed since it is 2023. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |

| (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-79 | Appendix N. Base Year Dollars and Discounting. N-4 The dollar figures in the economic analysis are in constant 2014 dollars. Is that the same baseline for IMPLAN currently? Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-80 | Appendix N. Base Year Dollars and Discounting. N-4 The base year for the economic analysis is 7 years ago (2016). Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-81 | Appendix N. Trona (Soda Ash) Introduction. N-10 The soda ash production values used in the analysis were from 2007 to 2014. Many of the operators have increased production over the last 9 years, and thus these numbers do not reflect the current impact of soda ash production nor are an accurate indication of future soda ash production, as assumed in this section for analysis. Please use more recent data in the environmental impact statement before implementation. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-82 | Appendix N. N.2.3. Trona (Soda Ash) Introduction. N-10 The soda ash price used in the analysis was from 2014 (of which sales prices have increased) and is projected in the analysis to be consistent during the duration of the study period (ending in 2031). Please use more recent data in this analysis before implementation. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13542-83 | Appendix N. N.2.3. Trona (Soda Ash) IMPLAN Model Modifications. N-11 Why did the BLM use Sector 33 and Sector 164 for soda ash? The current Sector to use in IMPLAN is Sector 31, which Ciner Wyoming LLC used during their Unit 8 Wyoming Department of Environmental Quality Industrial Siting Application for their Unit 8 expansion project. Since this whole section deals with trona, Sector 164 is not applicable. Please provide details as to why or correct if it is an error. Please revise and update the agency's analysis to include the correct data and disclose the same to the public. | The methodology in Appendix N was peer reviewed among economic specialist. The economic analysis is sufficient for the purpose of comparing alternatives. |

| mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-84 | Appendix N. N.2.3. Trona (Soda Ash) IMPLAN Model Modifications. N-11 The year of the Wyoming State Inspector of Mines data and BLS data for employment that were used in the IMPLAN analysis is not cited in the analysis. Please disclose to the public. | 2014 was selected to be consistent with the other baseline values. Text has been updated. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-85 | Appendix N. N.2.3. Trona (Soda Ash) Production Impacts. N-11 Ciner Wyoming LLC used during their Unit 8 Wyoming Department of Environmental Quality Industrial Siting Application for their Unit 8 expansion project's IMPLAN model, the sectors for soda ash impacts included: Sector 507, Hotels, and motels, including casino hotels; Sector 56, Construction of other new nonresidential structures; Sector 31, Potash, soda, and borate mineral mining; Sector 406, Retail - Food and beverage stores. All of these would be impacted by soda ash mining in the area. Without including these sectors, the BLM is minimizing the impact that the soda ash industry including operations and construction projects has on the local economy. Please revise and update the agency's analysis to include the latest, correct data and disclose the same to the public. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The economic analysis is valid for the purposes of comparing impacts among alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-86 | Appendix N. N.2.5. Recreation. Table N-6 Source. N-16 The source of the recreation data is over 10 years old. Tere has been an increase in recreational activities since the global pandemic in 2020, which would not be accounted for in the analysis by using data from 2013. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-87 | Appendix N. N.2.5. Recreation Impacts. N-18 The analysis in IMPLAN is old and does not follow the current sectors available. For example, in the list on page N-18, Sector 400 is Retail - Food and Beverages, but this is currently Sector 406 in IMPLAN. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | They were valid at the time of analysis. See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-88 | Appendix O. O.4.3. Coal and Trona (Soda Ash) Production. O-10 The NAICS code for soda ash manufacturing (trona) is not 325180 as stated in the RMP, which is an input to the REMI model. The NAICS code is 212390. The model should be updated and rerun to include the proper industrial codes, then disclosed to the public for evaluation before being finalized. | Appendix O was conducted by a cooperator and its results not being used by BLM in its Section 4.22 results discussion |

| Comment Category | Comment ID # | Comment Text | BLM Response |

| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-89 | Appendix O. O.6.1. Coal and Trona (Soda Ash) Production. O-24 This section refers to Sector 164, which is not the proper sector for soda ash manufacturing. Please revise and update the agency's analysis to include the latest, correct data and disclose the same to the public. | Appendix O was conducted by a cooperator and its results not being used by BLM in its Section 4.22 results discussion |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13542-90 | Appendix O. O.6.1. Coal and Trona (Soda Ash) Production. O-24 This section refers to 325180 for the NAICS code for soda ash manufacturing, which should actually be 212390. Please revise and update the agency's analysis to include the latest, correct data and disclose the same to the public. | Appendix O was conducted by a cooperator and its results not being used by BLM in its Section 4.22 results discussion |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13557-1 | For years the industries in Southwest Wyoming such as, agriculture, mining, and oil and gas, have worked hand in hand with the BLM in crafting a plan that allows for multiple use of public lands. The preferred plan of the BLM, Alternative B, goes against this approach with has been used for years. Alternative B allows too many constraints to be placed on the industries that not only support Southwest Wyoming, but the entire State. If this alternative were to be put in place, thousands of people in Wyoming from agriculture, oil and gas, and mining would be out of a job, not to mention the auxiliary businesses that service these industries. While I believe that conservation of certain areas is also important, all of this must be, and can be, balanced. The economy of Southwest Wyoming and the jobs of thousands of people cannot be decimated so most of the land can be conserved. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13564-5 | The data collected and used to calculate the economic impacts of this RMP ranges up to 15 years old and does not reflect the current economic environment of the area. Additionally, the agency's preferred choice does not reflect the community, as it eliminates the largest amount of industry. This comes at a time when the US is under unprecedented inflation rates that are affecting everyone across the country on all levels. It is vital that the BLM focuses on using data that is relevant to the current state of the community to adequately determine the over all impact of each Alternative. The implementation of Alternative B puts the economic state of the surrounding communities into disarray. Furthermore, this impacts the entire state in the long term, as tax dollars from extraction industries under the RMP are collected and distributed among the state with the highest percentage going to the counties. County and City taxes are also collected from tourists visiting the area for its resources and recreation. The loss of this income can impact community welfare. | Section 4.22 discloses the predicted economic impact of the altern. Additionally, the socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives including the ripple effects |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-24 | The BLM then states that impact on overall oil and gas development may not be as high as the large reduction in BLM-managed well counts would indicate because development may shift from the federal surface and mineral estates to non-federal surface and mineral estates. Id. at 4-259. However, this statement fails to recognize that development on private and state lands is unlikely to proceed, especially in the Checkerboard, where ROWs across federal lands are necessary for development to occur. In addition, closure of so many areas to development could also adversely impact the development of existing leases when the play or unit area is not fully leased and will never be fully leased due to Preferred Alternative B's proposed closures. | The underlying RFD captures impacts to non-federal development and Section 4.17 discusses indirect impacts. The economic modeling is designed to help compare among alternatives. |
| 837 - Socioeconomic Resources–Economics | #13585-25 | e. Economic Impact o(Designating Over 1.6 Million Acres as ACECs Preferred Alternative B proposes about 1.6 million acres of ACECs. DEIS at 4-230. Within the management actions for each associated proposed ACEC, Preferred Alternative B proposes to withdraw all lands within the ACEC from mineral location, close the majority of ACEC lands to fluid mineral leasing and solid leasable minerals, and identify almost all ACECs as right-of-way | Section 4.22 discloses the predicted economic impact of the alternatives |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | (ROW) exclusion areas. See id. at Append. V-1 - V-10, V-14 - V-24. The impact this will have on both non-renewable and renewable resource development is significant as little to no development would be allowed within over a third of the public lands and additional private lands within the checkerboard in the County due to ACEC designation alone. In addition, the impact to development will double as the BLM has proposed over 2.1 million acres for designation as Visual Resource Management ("VRM") Class II and 225,785 acres of VRM Class I under the Preferred Alternative B, which includes ACECs and expands out to an additional 500,000 plus acres. Id. at ES-3, Maps 2-18 and 2-29, Append. V-22; see also id. at 4-136, 4-223 (discussing impact ofVRM Class II designations on development). This will devastate Sweetwater County's economy and remove multiple use from the Rock Springs Field Office. The DEIS recognizes the following quantified economic impacts for Alternative B: * Total economic output attributable to BLM-administered land in the RSFO across all programs totals $827 million annually in 2016 in Alternative B. Earnings total $168 million annually. Employment totals 2,515 jobs annually. These values are approximately 56%, 52%, and 56% lower, respectively, than the comparable values for Alternative A. * Total quantified public revenues in 2016 range from approximately 52% to 55% lower under Alternative B than Alternative A. The state redistributes a small portion of total severance taxes and federal mineral royalties directly to the local communities where the revenues are generated.... * All quantified economic and public revenue indicators for oil and gas development and production are approximately 74% lower under Alternative B than Alternative A. This is due to the substantially lower number of wells drilled under Alternative B and corresponding reductions in oil and gas production as projected by the RFD scenario. Id. at 4-258 - 4-259 (emphasis added). | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-28 | The 74% anticipation of a reduction in oil and gas development, as indicated in Section 4.22.2.5 of the DEIS, will have detrimental effects on local economies and public services. Over 55% of Sweetwater County's valuation comes from natural gas, oil, and trona so the ramifications of a loss in valuation will affect a diverse spectrum of services county-wide. The BLM "Economic Impact Comparison Analysis" was cursory in nature and failed to take in account, inter alia, production ad-valorem taxes in their economic modeling. The BLM has failed to adequately consider or calculate the cost benefit analyses as they pertain to ACECs as well as other values/resources and special designations. Rather, the BLM limited their consideration to tax losses, while using outdated data and failing to consider other methods of obtaining cost-benefit analysis. The failure to consider data includes the fact that lease terms typically end in ten (10) years while the RMP process has gone beyond that time frame and thus, the data is beyond that term. There is further insufficient analysis of the impacts to the state and to renewable development as it relates to ACEC's (as well as other values, resources, and special designations). Rather than doing an in-depth cost benefit analysis, the BLM merely states at Section 4.22.5 of the Draft RMP "[h]owever, it is also possible that the low levels of oil and gas development under Alternative B could have negative community impacts. Many communities and residents in the planning area have experienced high rates of this development in the recent past, may expect such rates again in the future, and may have made plans or investments that depend on resumption of high rates of development. To the extent this is true for some of the communities and residents, the reduced rates of development under Alternative B could reduce their ability to achieve desired levels of community development and individual economic well being." | NEPA does not require a cost-benefit analysis |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-29 | Sweetwater County received $16,897,535.73 in oil and gas production ad valorem taxes in 2023. A 74% reduction would result in $12,204.176.44 less revenue, which will decrease revenue amounts down to $4,333,359.29. The biggest revenue hit will be to local school districts, which would decrease their revenue amount from $8,502,839.98 down to $2,946,684.32. The reduction in jobs and earnings will also impact schools through the loss of student enrollment and, as a result, reduction in funding from the School Foundation Program. What complicates the projection from below is that the estimates pertain to the County and not solely to Sweetwater #1 or specifically Sweetwater #2. In lieu of this, we examined the cost from the loss of students based on the average daily membership ("ADM"). Said differently, ADM generates how the funding is provided to Sweetwater #1 from the State. Specifically for Sweetwater #1, the funding for one ADM is estimated at $12,683.00. This amount is budgeted from the Board of Education Fiscal Update dated July 19, 2023. Therefore, a loss of 100 ADMs would be $1,268,300.00. A loss of200 ADMs would be $2,536,600.00. A loss of 250 ADMs would be $3,170,750.00. Using this projection, significant cuts to school funding would affect workforce reductions, capital improvements, building maintenance, extracurricular activities and programming, and staff salaries. | Chapter 4.22 discloses impact to public revenues under the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13585-30 | Furthermore, this could necessitate the closing of schools, particularly those in remote areas. In addition to school impacts, the Sweetwater County Public Works Department will also see impacts related to reduced revenues. When you exclude capital construction budgets, the Sweetwater County Public Works budget is the second largest budget within the Sweetwater County Government. The Public Works Department maintains thirteen county parks, 1,200 miles of county roads, and is responsible for maintaining and cleaning twelve county buildings, and employs approximately 52 full-time employees who work, live, and recreate within Sweetwater County.If the Rock Springs RMP Alternative B becomes a reality, Sweetwater County will see a loss in valuation that will affect all the facets of the Public Works Department. To highlight the magnitude of this loss it is important to understand that the Public Works Department's total budget is just over $12 million for FY2024. If the 74% reduction in ad valorem taxes becomes a reality that budget will be cut to approximately $3 million. Sweetwater County would only be able to | Section 4.22 discloses the economic impacts of alternatives and public services |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| mine lands) (8000- 8012) | | fund 93% of our 2024 facility maintenance and custodial budget. This reduction will not even cover the FY2024 anticipated payroll of $5,469,994 let alone pay for the anticipated maintenance of the roads, parks, and buildings. This loss in valuation would be so severe that Sweetwater County would need to choose if they maintained 932 miles of roadway and/or performed routine maintenance and cleaning of the county buildings. All while not maintaining our county parks and vehicles (including the Sheriffs patrol and search and rescue) in safe working order. We wouldn't be able to maintain the full 1,200 miles of roadway because the total budget for Road and Bridge currently exceeds the RMP's estimated loss in budget by 12%. Ultimately these cuts would be so deep that the Public Works Department would be left with a skeleton crew of 13 employees to manage the public infrastructure that the citizens of Sweetwater County have come to rely on within the vast 10,500 square miles that we call home. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-31 | Furthermore, public safety will see impacts on both personnel and capital budgets with a projection of public revenue reductions. The Sheriffs Office comprises approximately 28% of the core county government budget. Thus, a 74% reduction in ad valorem and revenue would equate to a $3,653,807 reduction in the Sheriffs Office budget. At an average cost per sworn deputy of $134,407, we would be forced to attrition 15 sworn positions to meet this budget reduction. For perspective, we currently employ a total of 21 deputies on patrol and 28 deputies to staff the main operations at the detention center. Due to the number of duty stations and mandatory staffing minimums for accreditation, we would be able to reduce our sworn staff in the detention center by a total of four deputies, but only if we also closed our dedicated juvenile detention section of the facility. We are currently only 1 of 4 certified facilities in the state of Wyoming qualified to house juveniles. On the patrol/operations side of our organization, we would be forced to cut 11 sworn positions to meet this budget reduction. These staffing cuts would make it logistically impossible to provide 24-hour law enforcement services to the County and would force further cuts to services currently provided. Additionally, these cuts would create a frequently dangerous situation due to understaffing that would leave our patrol deputies alone to address and resolve calls-for-service that normally require a two-deputy response. Additionally, the Sheriffs Office capital budget for this fiscal year is $186,715, approximately 1.5% of their total budget. These figures do not account for fleet vehicles recently purchased via federal ARPA funds. Our sheriffs vehicles cost $72,000 apiece, with vehicle and up-fit purchase costs increasing year-to-year. On average, the Sheriffs require approximately five vehicles yearly to maintain the strategic rotation requirements of our fleet plan, at an approximate cost of $360,000 per year. If factored as their only capital line item, this accounts for 2.7% of their total budget. In a hypothetical 74% loss in ad valorem and revenue to the County, the Sheriffs Office would likely have to cut our vehicle purchase requests to one vehicle per year, representing a reduced capital budget of $93,600 per annum. These cuts would force the Sheriffs Office to extend the rotation/service times of their existing fleet, rendering many of the vehicles in their fleet unsafe to operate as emergency response vehicles, representing an undue danger to their employees, incurring added maintenance expenses, and creating added liability to the County. | Section 4.22 discloses the economic impacts of alternatives and public services |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-32 | In addition to the severe impacts to the energy industry and local services that support our local economy, Alternative B de-emphasizes recreation as stated in Section 4.22.5 of the DEIS RMP, "particularly developed recreation, relative to Alternative A. For instance, no SRMAs would be retained in Alternative B. Areas for OHV rallies, cross-country races, and other organized events would not be provided. Certain areas that would have recreation project plans developed under Alternative A would not have such plans under Alternative B. Certain areas that would be managed for recreation values under Alternative A would be managed for other values under Alternative B." DEIS at 4-260. Events such as the "Run the Red," which is dedicated to celebrating and conserving the Red Desert, would be in jeopardy ofreceiving approval for future races. These events provide important tourist dollars within the County and surrounding Counties that are spent in local hotels, restaurants, and other retail establishments. The BLM cursory "Economic Impact Comparison Analysis" economic modeling fails to take in to account recreation and revenues from tourism. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13585-35 | All of these negative effects would also be felt with by the existing communities within the Growth Management Area. The purpose of the Growth Management Area, which encompasses the areas surrounding the most populous areas in Sweetwater County consisting of checkerboard ownership, is to promote orderly growth. The ROW exclusion areas shown in Map 2-22 will restrict city growth by prohibiting infrastructure expansion of water, sewer, transmission lines, pipelines, and access roads within the most developable lands in Sweetwater County. Serious limitations on developable properties will constrain opportunities to address housing needs that support future industrial development projects. Again, the BLM cursory "Economic Impact Comparison Analysis" economic modeling fails to take into account these effects. | Indirect impacts are disclosed in 4.19 |
| 837 - Socioeconomic Resources–Economics | #13585-54 | Alternative BROW exclusion areas will also impact an economic diversification project in Sweetwater County. The County has been developing a large industrial complex south of the airport that will help to diversify the County's economy. The site requires access and development of infrastructure across federal lands that are currently proposed for ROW exclusion, including: Sections 22, 26, 28, 32, and 34 of Township 19 North, Range 108 West; | Indirect impacts are disclosed in 4.19; See special management designation section for actions driving the right-of-way exclusion proposals. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | and Sections 2, 6, 8, 10, and 14 of Township 19 North, Range 108 West. The ROW exclusion will prohibit construction of this future industrial complex. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13590-3 | In addition to crippling new economic development, these management actions would also damage existing residential home values in certain areas. There are homeowners in the planning area who must cross BLM land to a reach a county road. Many of these homeowners have obtained state-law based rights to cross private and state lands, but may not have a recorded right of way granted from the BLM. For those homeowners, Alternative B would effectively landlock them, thus diminishing the value of their homes. | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13618-1 | 1. Economic Implications: Restrictions on energy and industrial developments could lead to significant economic downturns, affecting local economies, job markets, and the broader community. | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13618-2 | Tourism Industry Impact: Reduced access to public lands could lead to a decline in tourism-related revenue, impacting the local economy. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13618-3 | Impact on Energy Development: The plan restricts energy projects, including renewable energy projects, limiting our ability to strengthen our distribution and transmission power grids while hindering our ability to provide reliable, affordable, and clean energy sources and local economic growth in this sector. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; | #13624-39 | Solid and Hazardous Waste WDEQ has primacy for permitting hazardous waste treatment, storage, and disposal facilities. To comply with Resource Conservation and Recovery Act (RCRA), facilities in Wyoming subject to the RCRA must comply with the authorized State requirements instead of equivalent federal requirements. The Draft RMP/EIS should acknowledge that operators and BLM would have to coordinate with WDEQ for activities that are subject to RCRA. For example, Goal/Objective SR-01 on page 2-213 of the Draft RMP/EIS, does not reference WDEQ's authority. BLM needs to clearly identify WDEQ's primary authority to regulate solid and hazardous waste. | See Section 1.4 for the Planning Criteria for the RMP and Appendix E for a list of laws, regulations and policies that are applicable to the plan. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13624-40 | Coordination and Consistency In the Draft RMP/EIS, Key Coordination Actions only lists coordinating with WDEQ for water quality, development of monitoring for visibility standards and guidelines, and collecting air quality data. Draft RMP/EIS, Table 5-2 Key Coordination Actions, § 5.1.2, p. 5-4. Key Coordination Actions should include all applications of WDEQ's primacy including, but not limited to, solid and hazardous waste, carbon sequestration, mining and minerals development. Id. This fails to acknowledge all the areas where WDEQ has authority to regulate protection of human health and the environment. | Table 5-2 summarizes coordination actions undertaken by various federal, state, and local agencies for the RMP development process. This table is not intended to be an all inclusive list of WDEQ authorities. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-15 | On page 4-7, BLM discusses the monetization of impacts from greenhouse gases (GHG). BLM says these are used as a measure of the benefits of GHG emissions reductions to inform agency decision-making. Nowhere in this document does BLM analyze or measure the social cost of eliminating oil and gas activity and production. The elimination or reduction of oil and gas production will have an immediate socioeconomic impact on local communities, the state, the nation and the world by eliminating supply, increasing costs, eliminating jobs, and decimating local communities. | NEPA does not require a cost-benefit analysis; Socioeconomic impacts are disclosed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-17 | On page 4-8, BLM states they followed the Interagency Working Group (IWG) recommendation on running various analyses of social cost of GHGs, including running an analysis of "higher than expected" economic impact from climate change. BLM and IWG state that this analysis must be run due to "uncertainties." Surely these "uncertainties" could result in less than predicted damages resulting in lower costs or lower than expected impacts from climate change. The costs of implementing a conservation alternative will surely result in actual irreparable damages to jobs, businesses, local communities, and the state. BLM must analyze this lower than expected economic impact from climate change scenario to ensure a full and complete consideration of all proposed alternatives. In addition, nowhere in the RMP does it appear that BLM ran an economic analysis related to the elimination of most of the economic drivers for jobs and revenue in the communities within the RSFO or the analyzed area. A true accounting of all social costs must be completed, not just social costs of GHGs. | Social cost analysis follows the guidance on the Interagency Working Group. NEPA does not require a cost benefit analysis, though some economic impacts are determined as discussed in Sect. 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-18 | On page, 4-11 and 4-12, BLM presents calculations of direct emissions expected from oil and gas development. As previously mentioned, since BLM used an inappropriate RFD for oil and gas in this evaluation these emissions are likely grossly overstated (based on facts that the expected development and production used by BLM was much higher than the actual oil and gas development and production). BLM also did not rely on the recently issued EPA methane emissions rule in its evaluation of the emissions from oil and gas development. Using EPA's emissions estimating tool for fugitive emissions, which was created in 1995, is inappropriate when EPA's methane emissions rule was updated in 2023. These emissions calculations must be updated using more accurate data so that representative emissions are presented for consideration. | The RFD and the AQ analysis are not goals or intended outcomes; but rather baseline measurement tools for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-25 | In section 4.22 Socioeconomics, BLM states that social impacts may be judged differently by different stakeholders. While this is true, there are also likely some scenarios where different stakeholders would judge them the same. For example, if most jobs in a community are tied to natural resources development and BLM restricts that natural resource development so severely that the communities themselves are at risk, then everyone likely agrees that the BLM restriction was contrary to their community's interest. | Socioeconomic analysis is covered in Appendix N. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-26 | BLM's assumption that the pace and timing of mineral development activities is based on a variety of factors outside of management decisions of BLM is not entirely true. BLM's processing times of permits, EIS, EA and other reviews surely impacts the pace and timing of mineral development. In some cases, such as the Normally Pressured Lance gas development, BLM's process took so long that the economic factors are now different and these external factors are now impacting the pace and timing of the project. If BLM's review had been completed in a timely manner the project may have seen a more rapid pace of development, creating jobs and revenue for people and communities. | BLM's permitting process for mineral development is outside the scope of this RMP. Refer to Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-27 | On page 4-235 BLM describes the methods for its analysis of oil and gas economic impacts. BLM is utilizing the royalty rate for existing oil and gas production for all existing and potential future oil and gas production. BLM should revise this analysis to accurately capture the current royalty rate for new leases. The quantified economic output for oil and gas would significantly increase in Alternatives A, C, and D if BLM were to use the current royalty rate. This would be an accurate analysis of the significant economic reliance this region has on oil and gas to sustain itself and would accurately report the severe impact the agency's preferred alternative (Alt B) will have on the socioeconomics of the region. | Out of scope - There is insufficient information to determine how the royalty rate increase will impact federal oil and gas development given how dynamic and complex the global oil market is. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-28 | On page 572 BLM lists various social impacts due to the "boom" of oil and gas, but nowhere is a list of the real potential social impacts that the selection of Alternative B will have on communities in the area by eliminating more than half the jobs available in the communities and removal of over $1 billion in economic activity in the communities. BLM only mentions the undesirable impacts like pressure on inflation, housing, infrastructure, etc. but makes no mention of the desirable impacts such as significantly more jobs, much higher wages, more taxes and revenue in the communities, opportunities for new infrastructure like libraries, recreation centers, and schools that can be built with these funds. This socioeconomic analysis is woefully inadequate in its attempt to analyze oil and gas impacts. BLM must reanalyze the socioeconomics of the management actions in this RMP and report accurately the impacts the selection of Alternative B would present. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-29 | In the socioeconomic section of Alternative B, BLM tries to minimize the significant impacts Alternative B would have on communities due to the reduction of oil and gas allowed in Alternative B by stating the following. "It is possible that overall oil and gas development may not be as affected by BLM's actions under Alternative Bas the large reduction in BLM managed well counts would seem to indicate." The problem with this statement is that Alternative B is likely overestimating the number of wells that will be drilled in the future, as was previously detailed in these comments. The economic benefits contribution from oil and gas for Alternative B is most likely overestimated by BLM. This is due to the incorrect analysis of the impact of the ROW exclusion on existing leases. BLM assumes wells can still be drilled on existing leases, but the problem is man of these locations will be undrillable since roads and/or pipelines will be able to reach the well pads. Many additional wells that BLM assumed will be drilled and therefore quantified an economic benefit from, will actually not be drilled and so the economic benefit will be lost. Alternative B will actually provide much less economic output than the $827 million annually reported by BLM. This analysis by BLM is flawed and must be re-completed. | Appendix N provides the methodology for the economic impact analysis, which also includes indirect impacts. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13658-9 | The Reasonably Foreseeable Development Scenario (RFD) used in this EIS is severely outdated. The analysis itself states, 10 years ago, "It is difficult to predict what will occur a few years into the future, but it is even more difficult to predict 20 years ahead. (Pg 92)" Despite this self-admission by the BLM, the appropriateness of the timeframe for the RFD is not addressed. The BLM simply states that the economic impacts were estimated from 2016-2031 (page N-4) a mere 8 years into the 20 year planning period. It appears the decision to not update the RFD was arbitrary in nature as no discussion appears related to the appropriateness of the RFD or the difference between the RFD and what had actually happened in the 12 years since the RFD was completed. According to WOGCC records oil production in 2022 was approximately 815,000 bbls compared to the RFDs prediction of 4.8 million bbls. Similarly, WOGCC records have approximately 66 BCF of gas production in 2022 compared to the predicted 197 BCF. BLM also appears to have redone the analysis in 2016 leading to changes in the Table with no explanation for the changes. There is no discussion of the vast ROW exclusions of Alternative Bin the RFD. In order for BLM to have articulated a legitimate connection between the facts and their ultimate decision, the underlying facts must be reasonably correct. It is not reasonable to use a twelve-year-old analysis that has already been shown to be completely erroneous. | The RFD is a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-24 | See 2023-2038 National Outer Continental Shelf Oil and Gas Leasing Program at 212-213.22 By severely reducing the potential for oil-and-gas development in one of the most mineral-rich states in a mineral-rich nation, BLM's favored alternative would constrain domestic oil-and-gas production, hence increasing the United States' and its allies' dependence on foreign sources of oil-and-gas, produced in countries hostile to the United States and with far fewer considerations of environmental or human-rights factors. | The global energy market analysis and the US reliance on foreign oil is outside the scope of this RMP. Impacts for fluid mineral development for all four alternatives can be found in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-26 | BLM states in passing that its preferred alternative could be characterized as "providing the least support to long-standing mining customs and culture in the planning area" and as "fail[ing] to take adequate advantage of the planning area's mineral resources to reduce reliance on foreign energy sources." RMP Draft EIS at 4-262. And that's exactly what Alternative B would do. But to be clear, "long-standing mining customs and culture" is not relegated to "the planning area." Twenty-one of Wyoming's 23 counties produce oil and/or natural gas. See Petroleum Association of Wyoming, Oil and Gas Facts and Figures.25 For over 140 years, mining and oil-and-gas development have sustained Wyoming's economy and the livelihood of its residents. The oil-and-gas industry provides crucial revenue for virtually every public service offered by the state. | Socioeconomic impacts are disclosed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-27 | In 2022, for example, the oil-and-gas industry was the largest economic driver in Wyoming, generating about $9 billion in economic activity and employing close to 60,000 people. Id. By comparison, the second largest industry in Wyoming that year-travel and tourism-contributed only about $2.5 billion. Id. Wyoming's oil-and-gas industry paid over $5.7 billion in labor income that year. Id. That same year, Wyoming's oil-and-gas industry contributed $2.72 billion to state and local governments in the form of various taxes, royalties, and levies. Id. Around $1.39 billion of that money went to K-12 education, followed by $623 million to the state's general fund and $208 million to public infrastructure. Id. Oil-and-gas production, by itself, accounted for over 40% of the total property taxes levied in Wyoming and nearly 80% of the property taxes levied on all minerals. | Section 4.22 discloses the predicted economic impact of the alternatives including impacts to public services |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-28 | Moreover, although Wyoming is also home to many renewable-energy projects, if oil-and-gas production in Wyoming were interrupted, the alternative energy sources that remained would not meet local energy needs. In 2022, renewable-energy sources generated 24% of the electricity in Wyoming, with wind power accounting for more than nine-tenths of this figure | The analysis for local energy needs within WY or the US is outside the scope of the RMP. See Section 1.4 for the Planning criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-29 | Although BLM acknowledges that "the reduced rates of development under Alternative B could reduce [Wyomingites'] ability to achieve desired levels of community development and individual economic well-being," id. at 2-262, the agency does not fully consider the chain of secondary economic opportunities (vendors, hotels, rentals, restaurants, service workers, and a host of other service industries or contractor jobs) that oiland- gas industry both sparks and depends on-none of which would be possible under Alternative B. | As discussed in Appendix N, the economic impact modeling does include indirect and induced jobs; and social ripple impacts are disclosed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics | #13665-31 | Alternative C. On the other, it fails to analyze the true and complete costs of restricting oil-and-gas development under Alternative B. In fact, BLM singles out the oil-and-gas sector and states: "Oil and gas development presents the highest likelihood for impacts within the planning area and in southwest Wyoming as a whole." RMP Draft EIS at T-3. With respect to air-quality impacts, for example, BLM states that "[t]he magnitude of estimated emissions of | NEPA does not require a cost-benefit analysis |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | air pollutants from BLM authorized activities and management actions is predicted to be greatest under Alternative C[,] which includes the highest level of energy development actions." Id. at 4-6. But "Alternative B, with oil and gas development levels about half of Alternative C, would be expected to result in the least impacts to air quality." Id. Even though the Draft EIS notes-correctly-that BLM's analyses of the social cost of greenhouse-gas production "do not constitute a complete cost-benefit analysis, nor do the SC-GHG numbers present a direct comparison with other impacts," id. at 4-7, it nonetheless identifies the development-friendly Alterative C as having the highest social cost and Alternative B as having the lowest social cost. See id. at 4-9. That is intellectually dishonest. In arriving at that conclusion, BLM has ignored the brute-force socioeconomic impacts that Alternative B would cause. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13665-4 | BLM's preferred alternative also could constrict renewable-energy development such as wind and solar projects. And, if oil-and-gas production in Wyoming is interrupted by selection of BLM's preferred Alternative B, then the renewable energy sources that remained would not meet local energy needs. | The analysis for local energy needs within WY or the US is outside the scope of the RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13669-1 | In addition, with the drought which has plagued the west in recent years, total cattle population numbers are reduced which in turn has created a demand situation for cattle in the total food supply. Prices for beef have increased dramatically in recent years and with increases in the world population, the demand for protein in beef will increase accordingly further exacerbating the problem of world hunger. | The analysis for world hunger and/or beef prices is outside the scope of this RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13680-1 | Alternative B would greatly reduce mineral development and production in Wyoming. This reduction would decrease local and state revenue while also harming the livelihoods of the local communities. The local communities depend on mineral development and production as a huge source of employment as the majority of the people living in SW Wyoming work for the energy and mineral industries. Alternative B would be detrimental to these local communities and the economic well-being of individuals and their families that depend on them. Not only is this detrimental to the state of Wyoming, but the country as a whole, as Wyoming is the third highest producer of fossil fuels in the country, and the largest producer of coal in the country, according to “Statista” in 2020. These resources contribute to 60% of the electricity produced in the United States. Approximately 40% of that coming from natural gas, and about 20% coming from coal, according to the U.S. Energy Information Administration in 2022. Restricting energy and mineral development on hundreds of thousands of acres in our state would affect the entire country. The country NEEDS these resources from Wyoming to be able to generate the electricity needed on a daily basis. | Section 4.22 discloses the predicted economic impact of the alternatives. The analysis for local energy needs within WY or the US is outside the scope of the RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13691-1 | Approximately 10%(2) of breeding cows with a home base in Duchesne County, go to the range within the Rock Springs Field Office (RSFO) management area near Farson, Wyoming. This represents a significant portion of the economy to not only Duchesne County, but also to Sweetwater County Wyoming and other surrounding counties in Wyoming. Needless to say, any reduction in cattle numbers permitted to graze on areas within the jurisdiction of the RSFO of the BLM, may be detrimental, if not catastrophic to the economies of both areas. In addition, with the drought which has plagued the west in recent years, total cattle population numbers are reduced which in turn has created a demand situation for cattle in the total food supply. Prices for beef have increased dramatically in recent years and with increases in the world population, the demand for protein in beef will increase accordingly further exacerbating the problem of world hunger. | The analysis for world hunger and/or beef prices is outside the scope of this RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public | #13702-3 | Management Actions in the preferred alternative (Alternative B) will negatively impact both the fluid and solid minerals industries including trona, coal, uranium, sand and gravel, and oil and gas are as follows; (MA) MA 1107, MA 1313, MA 1502, MA 4421, MA 4424, MA 4426, MA 4430, MA 4431, MA 4435, MA 4602, MA 5112, MA 5400, MA 5405, MA 5411, MA 6000, MA 6001, MA 6201, MA 6209, MA 7002, MA 7003, MA 7490, MA 7491, MA 7492, MA 7509, MA 7555, MA 7556, and MA 7558 These will have serious negative socioeconomic impacts including | Section 4.22 discloses the predicted economic impact of the alternatives |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | fewer jobs, less business for the support and service businesses for the minerals industries, and a reduced tax base,both state and locally, which will reduce funding for infrastructure and social services. Overall, a major detriment to Sweetwater County and to the State of Wyoming. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13706-2 | 3. Tourism Industry Impact: Reduced access to public lands could lead to a decline in tourism-related revenue, impacting the local economy. Energy Infrastructure and Rural Development Concerns: | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13706-3 | Economic Implications: Restrictions on energy and industrial developments could lead to significant economic downturns, affecting local economies, job markets, and the broader community. Agriculture contributes greatly to the economy of many small towns in Wyoming and would be detrimental to these small towns. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13715-1 | EPP collectively owns over 300 miles of pipelines within the Rock Springs Field Office area, and has identified additional possibilities for the expansion of its networks within the RSFO area. In additional to providing critical infrastructure for the transmission of natural gas and liquids from producers to consumers, EPP and its affiliates provide almost 100 direct jobs in Wyoming, and pay over $7 million in state taxes annually. The BLM's proposed choice of Alternative B - the most environmentally-restrictive alternative - will place literally millions of acres of currently-available public lands off limits to responsible oil and gas production, directly harming EPP's ability to provide necessary expansion of services, and imposing substantial additional operating expenses and inefficiencies for EPP's existing network. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13715-6 | BLM Failed to Consider Reduced Land Needs Associated With New Drilling Technologies. By using the outdated 2013 RFD as the basis for its management decisions, BLM also erred by failing to recognize that new drilling technologies in the interval have substantially reduced the 2 Executive Summary at 6 (Environmental Consequences). surface disturbance associated with new oil and gas drilling. The RFD assumed that all new drilling within the RFSO would occur on one-well pads, due to the then-speculative nature of use of multi-well pads.3 As technology has developed, multiple wells can be drilled from single pads, and long horizontal laterals mean that far more oil and gas can be extracted from each well.4 The results of the BLM's failure to consider current oil & gas technology existing as of the date of the DEIS is that BLM greatly overstated the surface effects of future oil and gas production, and understated the socioeconomic loss in worker income, business revenues, and state taxes and royalties, from its proposed elimination of millions of acres of public lands from availability for leasing. | Assumptions about energy and mineral development are provided in 4.11 and is based on what was considered economically recoverable. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13721-11 | The 2021 Wyoming ORV Report shows that OHV riding generates over $365 million per year in overall economic activity across Wyoming. Use data is provided for both visitor days and visitor trips. In particular, the 'Southwestern Wyoming' area - of which the RSFO is a predominate portion of - accounted for 10.6% of all Wyoming Resident trips and 7.6% of all Resident riding days. Nonresident trips to this area were 4.7% of the statewide total and 4.1% of Nonresident riding days in Wyoming. Residents spent an average of $55.57 per day and averaged 37.8 riding days per year - with total Resident ORV riding days totaling 2.2 million. Comparatively, Nonresidents spent an average of $87.27 per day while riding an average of 14.3 days per year in Wyoming - with Nonresidents riding days totaling 455,000 in the state. Consequently, there were approximately 167,200 Resident riding days and 18,655 Nonresident riding days within this particular area of Wyoming - totaling 185,855 recreation use days just | The importance of OHV is provided in 3.18.1 and the higher spending profile of OHV is discussed in N.2.5; Economic impacts from alternatives is in Section 4.22 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| mine lands) (8000- 8012) | | from OHV recreation. ORV visitor spending from 15.3% of total statewide ORV trips in this area equates to over $55.8 million annually. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13726-1 | The top ten property taxpayers in the county pay roughly 109 million of the 200 million in property taxes. If the proposed preferred Alternative B is used, we could see severe devastation to our local entities that rely on property tax based off your economic analysis. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13726-2 | Lastly, the social impacts driven by economic changes, such as stresses on community resources and cohesiveness, would be significantly reduced under Alternative B. This is attributed to the much lower levels of oil and gas development compared to Alternative A . However, this reduction in development might not align with the expectations and economic plans of local communities, which have historically adapted to higher rates of resource development | Section 4.22 discloses the predicted social impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13727-2 | Our business are car washes and we operate businesses that are service providers to the many businesses that work and operate on BLM leases or have to cross BLM land in order to reach private property so that they can operate. By decreasing Natural Gas production from Alternative D 82,005,381 to Alternative B 21,947,512 the BLM will decrease the ad valorem tax revenue by two thirds. The decrease is even more severe for crude oil production. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13734-1 | The studies performed by this DRMP are outdated. The span of time from the original studies (2011) to the current draft (2023) is excessive. The economics and socioeconomics of the State of Wyoming and Sweetwater County have changed in the last decade, especially considering the lifestyle changes of so many people during the pandemic and should be reevaluated. This DRMP should be reevaluated using new studies, and up to date data. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The RFD and socioeconomics analysis are not goals or intended outcomes; but rather baseline measurement tools for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13750-1 | Without the critical tax revenue derived from the mineral industry in Converse County along with all the participating counties in southwest Wyoming, there would be insufficient funds to provide basic services at a level needed for the protection of the county residents' health, safety, and security. Funding derived from mineral exploration and development, grazing, agriculture, recreation, and tourism constitutes a significant portion of revenue used to pay for essential services, including roads, fire protection, courthouses and judicial systems, libraries, landfills, hospitals, law enforcement, airports, recreation, public health, and senior citizen centers. Any curtailment of leasing and development activity significantly impacts the socioeconomics of the communities and eliminates a critical funding stream for not just Converse County, but all counties, the State of Wyoming, and its residents, which will cause reductions to budgets for human services, education, infrastructure and law enforcement. | See Chapter 1 for a description of the planning area, which does not include Converse County. Section 4.22 discloses the predicted economic impact of the alternatives including impacts to public services within the planning area. |
| 837 - Socioeconomic | #13751-2 | As a result, any BLM management actions that limit the development of new production or cause the decline of existing natural soda ash production in the Green River basin would, in effect, prevent that soda ash production | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | from happening anywhere in the United States. Because soda ash is critical for the production of other essential products, production that cannot occur in the US will almost certainly move to foreign nations, most likely China, and will likely be produced using synthetic soda ash production technology. Over 40% of the worlds soda ash production already occurs in China and given the rarity of trona resources worldwide, the vast majority of that is synthetic soda ash production. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-3 | Synthetic soda ash production uses salt, limestone, and ammonia to produce soda ash, rather than trona. This process is much more complicated and more energy intensive compared to natural soda ash production trona. US natural soda ash production from trona uses less than 50% of the energy and results in 37% less greenhouse gas emissions for each ton produced compared to synthetic soda ash production. Any reduction in ability to produce natural soda ash in the KSLA will not only move that production to foreign nations but will result in higher energy consumption and greenhouse gas emissions. | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-42 | As an example, Table 4-13 shows a steady increase in gas production through 2011 up to a maximum of 246,813,957 MCF in Sweetwater County (source WOGCC data). However, gas production has actually decreased in the period since the socioeconomic report, as an example WOGCC data indicates Sweetwater County gas production in 2022 was 165,156,569 MCF. In other words, the gas production trend has plummeted, and is not increasing as presented by BLM. This is just one example, but the data throughout the report is flawed because it is outdated and misses key economic factors that have occurred over the past decade. In many cases, the trends are completely different from what is presented in the draft RMP/DEIS. | The fluid minerals drilling projection prepared for the Rock Springs RMP Draft EIS was based upon two factors, a) historical drilling levels and b) industry future drilling projections. At the time the drilling projections were prepared, natural gas prices were very robust which led to high levels of drilling and optimistic projections of future drilling. Subsequent to development of the RMP, natural gas prices have been much lower than projected and drilling activity has slowed significantly to reflect that low price. That being said, the reasonable foreseeable development (RFD) scenario is still adequate to use for quantification of the impact analysis in the Draft EIS." |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-43 | Table U-1 Summary of Impacts, (in particular page 2-19) regarding emissions for the various years is meaningless because the baseline data is very outdated and because the base year is not defined. Therefore year 10 and year 20 are meaningless. BLM must revise the analysis and provide a base year (like 2024) which will then describe year 10 and 20 (i.e. 2034, 2044). | See Appendix T for the Air Quality Technical Support document. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-45 | There is no way to use trend data to correct this type of outdated information. | The RFD is a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety | #13751-54 | The plan, in particular Alternative B, but also the other Alternatives will result in economic impacts to the region, state, and nation. It may eliminate jobs (livestock grazing as an example). Also, as an example, Alternative B closes many acres to sand and gravel. That will increase the cost of highways, home foundations, industrial facilities, etc. This must be considered in the socioeconomics and will have an amplified trickle-down effect on social justice and minority groups (which BLM has not considered but must per their own rules and E.O.). Specific examples of how the plan's economics and socioeconomics are flawed are as follows: | This impacts are discussed qualitatively in Chapter 4 given the speculative nature of the demand and availability of alternatives sources. |

| (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-55 | The Socioeconomic baseline report is dated July 2013 and as such is over 10 years old and is no longer accurate. The socioeconomic report must be updated. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-56 | The Socioeconomic baseline report, Section 1.1 provides the Regulatory and Policy basis for the socioeconomic report. The report fails to reference the required EO 12906 which requires the information to meet Federal Geographic Data Committee (FGDC) standards. Again, the RMP must not hand pick and choose which EO's it follows, and which it does not. Since 2013 several Federal EO's and regulations have been issued, such as EO 13985 and EO14008 and must now be incorporated into the analysis of this draft RMP/DEIS. | As reported in Section 1.4, BLM is following EO 12906. BLM follows our EJ guidance provided in IM 2022-059 as also appropriate for the more recent EOs. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-57 | Section 4.1 of the Socioeconomic baseline report presents unemployment using data through 2010. This information must be updated because it is outdated. The data doesn't include any COVID-19 period information. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-58 | The socioeconomic report is outdated as it utilized Census Bureau information and must be updated. The socioeconomic report details oil and gas production and economic information in Section 4.5.2. This information is outdated and as such creates an economic assumption in the socioeconomic report that is no longer factual. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13751-59 | As an example, Table 4-13 shows a steady increase in gas production through 2011 up to a maximum of 246,813,957 MCF in Sweetwater County (source WOGCC data). However, gas production has actually decreased in the period since the socioeconomic report, as an example WOGCC data indicates Sweetwater County gas production in 2022 was 165,156,569 MCF. In other words, gas production has plummeted, and is not increasing as presented by BLM. This is just one example, but the data throughout the socioeconomic report is flawed because it is outdated and misses key economic factors and trends that have occurred over the past decade. As a similar example, the IMPLAN model was based on outdated census information and assumes school district enrollment numbers to increase. However, according to Wyoming the Department of Education (reference: https://edu.wyoming.gov/data/statisticalreportseries-2) total school enrollment in Uinta, Sweetwater and Lincoln Counties has decreased by 522 students from 2011 to 2022. As such, the basic input factors in the socioeconomic | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| mine lands) (8000- 8012) | | report (refer to Appendix E) must be updated and the socioeconomic report re-issued. Once it is re-issued, the RMP assumptions and planning must then be updated accordingly. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-60 | RMP/DEIS and described in more detail in a technical supplement or RMP appendix. The disclosure must include the fact that the data is significantly outdated and is no longer applicable to the current socioeconomic condition. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-61 | On October 5, 2023 the Sweetwater Economic Development Coalition held a panel meeting regarding Southwest Wyoming Growth and Expansion (https://www.youtube.com/watch?v=lmlX7O9TIHI); five local projects were discussed that will have a significant socioeconomic impact on the RMP area. The RMP and its socioeconomic impact study are out-of-date and flawed because it does not include any of these important projects, nor their cumulative impacts even though the BLM is already well into the NEPA analysis for these projects. BLM must not choose to ignore these projects in the RMP analysis. | Cumulative impacts are discussed in Appendix T. The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-62 | The cooperating agencies, in particular Sweetwater County, the City of Rock Springs and the City of Green River along with the BLM must consider alternatives for land adjustments in order to accomplish the housing needs for the future expansion and growth of the community. The future socioeconomics of the area depends on the agencies to make these proper public land tenure adjustments which must be added to Appendix K. Lacking this collaboration and required decision making, southwest Wyoming may never see these projects, which will have a long-term negative impact on the local, state and national economy, and ultimately go against the goal of E.O. 14008. | Impacts of realty actions are discussed in Section 4.19. See also Section 1.4 for the Planning Criteria for the RMP, which does not include a housing needs assessment. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-63 | Page T-29: "Levels of coal and trona production in the RSFO over the planning period will be determined largely by market conditions, including commodity prices and costs of production. It is possible that coal production and attendant economic activity could decline over time due to price competition from other energy sources or broader (non-BLM) regulatory factors. None of the alternatives would impact coal and trona production in ways that significantly exacerbate or counter the larger forces acting on these industries." A remarkable statement given the acreage chart at V-18 under the title "Closed to Trona Leasing and Development" shows total acres for Alternative B of 2,119,920. This has not been properly evaluated in the outdated socioeconomic report. | See discussion in N.2.3 for rationale. Valid existing leases will not be impacted. Also note, the socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13751-71 | To be transparent, the BLM must publish the cost to administer the Rock Springs RMP under each alternative. The public should understand the cost of each alternative. | BLM administration costs are outside the scope of this RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic | #13751-77 | Mineral Resources. The preferred alternative (Alternative B) will negatively impact both the fluid and solid minerals industries including trona, coal, uranium, sand and gravel, and oil and gas. Subsequently it will have serious | Section 4.22 discloses the predicted economic impact of the alternatives and its indirect impacts |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | negative socioeconomic impacts including fewer jobs, less business for the support and service businesses for the minerals industries, and a reduced tax base, both state and locally, which will reduce funding for infrastructure and social services. These negative impacts of Alternative B occur primarily through Management Action (MA) MA#1107, MA#1313, MA#1502, MA#4421, MA#4424, MA#4426, MA#4430, MA#4431, MA#4435, MA#4602, MA#5112, MA#5400, MA#5405, MA#5411, MA#6000, MA#6001, MA#6201, MA#6209, MA#7002, MA#7003, MA#7004, MA#7005, MA#7006, MA#7014, MA#7490, MA#7491, MA#7492, MA#7509, MA#7555, MA#7556, and MA#7558. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13752-4 | The BLM did not include a detailed analysis of socioeconomic impacts when considering the elimination of approximately 1.7 million acres of land currently available for renewable energy development in the updated Management Plan. Excluding development from large portions of the management area will have significant negative impacts on local residents' career and ancillary support opportunities, as well as lost revenues associated with city, county, and state taxes and fees. The severe restrictions proposed under BLM's preferred alternative would result in an approximately 56% decrease in economic output and would decrease the available jobs by 56%. That amounts to the direct loss of nearly 3,000 jobs. | Impacts to renewable energy development are discussed in 4.19; It is too speculative to indicate what projects would be developed to calculate economic impacts. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13755-1 | Tata is one of five major soda ash/trona producers that holds leases in the Known Sodium Leasing Area ("KSLA") of southwestern Wyoming. The trona resource in this area is recognized as the world's largest commercial source of natural soda ash, which is used in a variety of commercial and household goods. This unique resource is of international and national importance. As the only sizable deposit of domestic trona, decisions that diminish the supply or ability to produce trona from this area could result in price volatility with a shift in investment to Chinese sources and away from domestic companies. | The global trona market analysis and the US reliance on foreign supply is outside the scope of this RMP. Impacts for solid mineral development for all four alternatives can be found in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13757-1 | Because of the huge revenue Wyoming receives from oil and gas, trona and coal it has been estimated the state would lose 1 billion dollars in revenue, 3500 jobs in the oil and gas industries with their associated business and more in the soda ash(trona) industry Alternative B is a very bad option on its own. Alternative B would impose (Appendix U at 5) "no surface occupancy" restrictions on 813,354 acres and controlled surface use restriction s on 99,674 acres for fluid development. The result could possibly slow down or even prohibit future development for mineral fluid extraction. Additionally Alternative B under (Volume 2, Appendix U at 6-7) would close 3,737,526 acres to coal development, 2,581,741 acres to mineral sales and disposals, and 49,224 acres to trona leasing and development… How can any of these restrictions under Alternative B benefit the state economically and lead to more growth? | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13757-2 | It is my understanding that Alternative B would remove 8576 acres for livestock grazing. (Vol 1, ch 3at 2-59) This alternative would "rest all treated areas a minimum of five growing seasons from livestock grazing." (Vol 1 ch2 @2-2-57) This amount of time and acreage removal would put some ranchers in Wyoming out of business. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety | #13776-4 | Emphasizing conservation and pristine experiences may limit the type of visitor able to enjoy public lands. Several places in Volume I mention the value of "pristine" experiences, with Alternative B's conservation focus offering the most of those opportunities. However, the ability to access such pristine areas may be limited by socioeconomic factors and physical limitations. | Recreation impacts are discussed in sect. 4.17 |

| (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13783-40 | Total economic output from oil and gas development and production would drop to less than a third, and industry jobs would drop from approximately 4,000 to about 1,000. While BLM cites these figures in its EIS, it fails to translate these enormous losses to actual effects to the people and communities of southwest Wyoming. What does the loss of 3,000 good paying, reliable industry jobs mean for the communities of Rock Springs and Green River, and surrounding smaller communities, which have a total population around 35,000? | The socioeconomic analysis is not a goal or intended outcome; but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives and its indirect impacts. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13783-41 | BLM also predicts that Alternative B will result in about a 50% drop in severance taxes and federal mineral royalties for local communities. But what does that mean for local governments, schools, and emergency services that rely on these income sources? Will declines in good paying jobs and local services lead to greater population loss and a general decline in the quality of living and health in local communities? BLM fails entirely to take on these questions. | Section 4.22 discloses the predicted economic impact of the alternatives and its indirect impacts |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13783-42 | If BLM's proposed Alternative B shuts down new development because Wexpro cannot drill new wells without access to rights-of-way, for instance, Wexpro could be forced to lay off employees and cancel dozens of contracts with local service and supply companies. These are real people who would lose their livelihoods as a result of BLM's short-sighted and unnecessarily restrictive management regime. Federal royalty revenue and property tax revenues will decline over time as production tails off and new drilling is not permitted. The trickle-down effect would extend outside of the Rock Springs planning area since the produced natural gas is delivered to DEUWI customers, most of whom reside in Utah's population centers. Without Wexpro's continued production, heating and energy costs will are likely to increase for average consumers because Wexpro's ability to act as a physical hedge against natural gas price volatility will be diminished. BLM fails to discuss these tangible and reasonably foreseeable socioeconomic consequences. | Section 4.22 discloses the predicted economic impact of the alternatives and its indirect impacts |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13784-25 | * MA#4420, Alt B: "Prohibit livestock grazing in big game parturition habitat during the birthing season (usualy from May 1 through June 30)." Comment: Most BLM livestock grazing permits overlap with big game habitat and the dates indicated. For those livestock grazing permittees in the prohibited areas, this would likely cause significant economic impacts to their operations. Additionally, BLM must incorporate the Wyoming Land Health Standards to ensure livestock grazing is a significant causal factor for not providing adequate forage and habitat in the parturition areas. | Economic impacts are disclosed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13784-29 | MA#4610, Alt. B: "Prohibit surface disturbing activities in potential habitat areas of Special Status plant species." Comment: MA#4610 goes even further than known locations and will have devastating impacts to industries utilizing the project area for development given the unknown "potential habitats." | See Chapter 3.8 for a description of Special Status species for the RMP. Management of Special Status Species is included for all alternatives in actions 4600 - 4624 and the analysis can be found in Chapter 4. |

| mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13784-31 | * MA#5305, Alt. B: "Prohibit surface disturbing activities in Adobe Town and Desolation Flat/Desolation Point Areas." Comment: It remains unclear of all activities considered and prohibited as a surface disturbing activity. The total number of prohibited acres from surface disturbing activities when compiled is incredibly high and will undoubtedly cause harm to the industries using the project area and those employed in the local communities. | See Glossary for a definition of 'surface disturbing activities'. Also, Socioeconomic impacts are disclosed in Section 4.33 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13784-75 | 4.22.3 Summary of the Quantitative Economic Impact Analysis: "Total labor earnings attribute to BLM-administered land in the RSFO total $379 million annually in 2016 in Alternative A, $168 million in Alternative B, $388 million in Alternative C, and $377 million in Alternative D." ((p. 4-243) "Annual total employment attributable to BLM-administered land in the RSFO totals 5,435 jobs annually in 2016 in Alternative A, 2,515 jobs in Alternative B, 5,549 jobs in Alternative C, and 5,399 jobs in Alternative D." (p. 4-244) "Many ranchers work elsewhere part-time and rely on the ranch for only 20% of their income (Hanus 2011), relying instead on outside jobs or other savings to support their ranching lifestyle. (p. 4-253) "In addition to its role in supporting lifestyle values for ranchers, livestock grazing on BLM-administered land supports the publicly and privately held open space that is a key component of the landscape of the west." (p. 4-253) Comment: The statements above regarding the economic impacts from BLM selecting Alternative B are greatly concerning. The fallout of selecting and implementing Alternative B extends well outside of the project area. Specific to local ranchers in the Sweetwater County area who work off the ranch part or full time, could get hit financially in a number of ways, As an example, if ranchers using BLM lands for livestock grazing loses AUMs through Wyoming Land Health Standards evaluations and reductions, closures of grazing areas, or simply the inability to graze due to the numerous factors under Alternative B, these could impact their overall ranching operation. For those ranchers who also work off the ranch in the project area, which may include oil and gas, trona, coal, trucking, excavation, reclamation, etc. all of those jobs are likely impacted and reduced or eliminated by Alternative B. The BLM's decision to select Alternative B in the Final Record of Decision would economically devastate the community and county. | Section 4.22 discloses the predicted socioeconomic impacts for all four proposed alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13784-76 | 4.22.5 Impacts of Alternative B, Quantified Economic Impacts: "The quantified impacts of livestock grazing, coal and soda ash production, and recreation are the same under Alternative B as Alternative A." (p. 4-258) Comment: The economic impacts analysis for livestock grazing is solely based on the difference between AUMs, which is 6,202. While this seems relatively benign in relation to the total AUMs in the project area, the economic impacts analysis neglects to include the cumulative impacts and subsequent economic effect Alternative B will have. The economic impacts left out of this analysis include the predator losses to livestock producers who no longer can lethally remove predators. The death loss of livestock without lethal control is likely to increase significantly. Additional economic effects the impact analysis neglects to calculate is the loss of AUMs from implementing the management actions which reduce AUMs by 20% where Wyoming Land Health Standards are not met. Regardless if livestock grazing is the significant causal factor, up to 60% ofAUMs could be removed. This could dramatically change the economic impacts analysis if BLM provided the information based on existing standards evaluations. | Appendix N, Estimation of Forage Utilization describes that BLM conducted an economic analysis on two different AUM scenarios, with the historical billed AUMs resulting in no difference among management alternatives. Alt B's decrease is related to changes in authorized use and those economic impacts are found in Appendix N. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13785-1 | Alternatives lack attention to water quantity and should all be revised to be inclusive of the value of Wyoming's water. Some obvious examples are the impacts beneficial use has on Wyoming socioeconomics, and the impacts unwarranted phreatophyte additions have on return flows, conveyance and transit losses, and that consumptive use and conserved consumptive use is important for compliance to the 1948 Upper Colorado River Compact and the North Platte Decree. The Wyoming State Engineer's Office should be a direct collaborator to evaluate the alternatives for these amendments. | Impacts to water resources is discussed in Section 4.5; Water resources are discussed in the nonmarket value of Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public | #13785-19 | Socioeconomic 315 3.23 Water in Wyoming has a significant impact to the socioeconomics across the Green River and North Platte River basins. A description of the value of water in Wyoming needs to be included in Chapter 3 | The value of Water is discussed in the nonmarket value of Section 4.22 |

| Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13787-15 | Trona mined and processed in the Known Sodium Leasing Area (KSLA) in the Green River Basin is used to produce approximately 12 million tons of natural soda ash, with the industry providing 2,300 direct jobs, nearly $400 million in payroll, and about $100 million in local, state, and federal taxes and royalties. Soda ash is a critical input for the manufacture of many other essential products including glass, lithium carbonate for batteries, and baking soda for foodstuff. Trona resources of a substantial quantity and purity to support commercial natural soda ash production are rare worldwide, including the rest of the United States outside of the KSLA. There is no other location in the US that contains trona resources in the quantity and purity necessary for the development of new substantial production of natural soda ash. As a result, any BLM management actions that limit the development of new production or cause the decline of existing natural soda ash production in the Green River Basin would, in effect, prevent that soda ash production from happening anywhere in the United States. Because soda ash is critical for the production of other essential products, production that cannot occur in the US will almost certainly move to foreign nations, most likely China, and will likely be produced using synthetic soda ash production technology. Over 40% of the worlds soda ash production already occurs in China and given the rarity of trona resources worldwide, the vast majority of that is synthetic soda ash production. Synthetic soda ash production uses salt, limestone, and ammonia to produce soda ash, rather than trona. | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13787-3 | Trona mined and processed in the Known Sodium Leasing Area (KSLA) in the Green River Basin is used to produce approximately 12 million tons of natural soda ash, with the industry providing 2300 direct jobs, nearly $400 million in payroll, and about $100M in local, state, and federal taxes and royalties. Soda ash is a critical input for the manufacture of many other essential products including glass, lithium carbonate for batteries, and baking soda for foodstuff. Trona resources of a substantial quantity and purity to support commercial natural soda ash production are rare worldwide, including the rest of the United States outside of the KSLA. There is no other location in the US that contains trona resources in the quantity and purity necessary for the development of new substantial production of natural soda ash. BLM management actions that limit the development of new production or cause the decline of existing natural soda ash production in the Green River basin would, in effect, prevent that soda ash production from happening anywhere in the United States. | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13787-5 | Wyoming is the also the top coal producing state in the nation, and coal remains critical to the state's economy. In 2022, the financial contribution from coal to state and local governments in the form of taxes, royalties and fees was over $562.7 million. Wyoming's share of federal mineral royalties - royalties paid on mining the leased federal coal - was over $184 million (with a $229.7 million share paid to the federal government). Revenues generated from the federal coal resource fund federal, state and local governments, highways and roads, schools and community colleges, and the University of Wyoming. Billions of dollars in revenues from Coal Lease Bonus Bids have built new schools and facilities in every county in Wyoming over the last 3 decades. | Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13787-6 | Coal remains the only abundant, consistently low-cost, and reliable source of electricity generation in the United States at a time when grid reliability is rapidly deteriorating due to the hasty build-out of heavily subsidized, highly unreliable wind and solar. And coal fired base load generation remains critical as the nation moves ever further down the path of over- reliance on unreliable alternative energy sources such as wind and solar, and volatile natural gas subject to price swings. Efforts to restrict the federal coal resource will have a negative effect on Americans not only in terms of reliability, but significantly higher energy prices as well. | The global energy market analysis and the US reliance on foreign sources is outside the scope of this RMP. Impacts for all mineral development for all four alternatives can be found in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public | #13793-6 | The widespread removal of federal land from productive economic uses as proposed by Alternative B will chill investment and the accompanying employment and rural economic contributions that come from private investment. For example, Alternative B would lower the potential for future investment in carbon capture and storage related to natural gas production in the management area, and limit Wyoming's ability to keep leading the nation in advancement of this critical tool for decarbonization at scale - one supported by the Biden Administration. | Section 4.22 discloses the predicted economic impacts of the alternatives |

| Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13795-6 | In real world terms, the stability of the industry translates to a median income of ~$82,000 and a poverty rate of ~5%, well below the national average, particularly when accounting for the size of this rural community. The impact of the industry in Green River is measured by 2,300 direct jobs, ~$400 million in payroll, and ~$100 million in various taxes and royalties. | Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13795-7 | As mentioned previously, the global demand for soda ash is spurring increased investment in Green River. There have been several announcements of expansions within the KSLA over the past few years, including Solvay's 2022 announcement of a $200 million expansion. The company, like our competitors, continues to weigh options for producing more soda ash from Wyoming's plentiful natural trona reserves. The ongoing investments in the KSLA promise steady economic growth and job opportunities for Wyomingites. This growth will yield additional tax revenue and royalties for the state, local, and federal governments. However, the growth of the domestic soda ash industry relies on the ability to access the natural resources in a cost effective manner. Should BLM-WY move forward with policy changes that impede continued or future development of the KSLA it will handicap the domestic soda ash industry and encourage Chinese competitors to work towards further market consolidation. | The global trona market analysis and the US reliance on foreign supply is outside the scope of this RMP. Impacts for solid mineral development for all four alternatives can be found in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #138-1 | Table N.7 and everything is based from 2016, | Appendix N is designed to have consistent baseline to allow for comparison across alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13811-14 | Limitations on Natural Soda Ash Production and the Potential Shift to Synthetic Trona Production Soda ash is a critical component in the production of many essential products in the United States, including glass (for bottles, containers, flat glass, and for solar panels), the production and recycling of lithium carbonate for batteries, chemicals, soaps and detergents, flue-gas desulfurization, pulp and paper, and municipal water treatment, among others. Under the Green River RMP, the trona-mining industry produces approximately 12 million tons of natural soda ash from the Green River Basin. The Green River Basin industry provides approximately 2,300 jobs, nearly $400 million in payroll, and approximately $100 million in federal, state, and local taxes annually. BLM did not adequately analyze or consider the socioeconomic effects of the four alternatives on the Planning Area. If implemented, Alternative B would limit infrastructure development and restrict trona mining and processing in the Green River Basin, where the world's largest trona resources of the quantity and purity necessary to produce natural soda ash exists. But, limiting access to natural trona reserves will not reduce commercial and industrial demands for soda ash. Alternative B could therefore facilitate a shift in production from natural, domestic soda ash to synthetic, foreign soda ash. This shift will have three significant effects. First, the shift will negatively impact local and state economies in and around the Green River Basin. Second, the supply of American natural soda ash available for export will decline, and it will be filled by foreign sources of natural soda ash-specifically Chinese produced natural soda ash. For instance, by the end of 2022, worldwide soda ash production reached a total capacity of 58 million metric tons, 16 million of which was natural. Of those 16 million metric tons of natural soda ash, 11.6 million are American, while the remaining 4.4 million are Turkish. In 2023, Inner Mongolia (China) Berun Yingen ("China Berun") added 5.0 million metric tons of natural soda ash capacity, with an additional 2.8 million tons expected by 2026. If Alternative B is implemented, Pacific's and Sisecam's production of natural soda ash cannot be fully developed, and the difference in the natural soda ash economy will instead be supplied by Chinese | Section 4.22 discloses the predicted economic impact of the alternatives and Appendix N.2.3 is focused on trona |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | Berun. Third, because foreign sources of soda ash cannot fill the gap that the reduction in American natural soda ash resulting from Alternative B, there will be a partial shift toward synthetic soda ash. Synthetic soda ash production is significantly more energy-intensive than natural production,37 it will exacerbate the global climate crisis that BLM management plans are designed, in part, to mitigate against. In short, the implementation of Alternative B would harm Wyoming's 37 U.S.-based natural soda ash production uses less than 50% of the energy and results in 37% fewer greenhouse-gas emissions per ton produced than synthetic production. Pacific Soda, LLC 20 Shoshone Avenue Green River, WY 82935 Page 10 of 10 4884-4214-2618\7 economy and undermine BLM's own conservation goals. BLM could better achieve those important economic and conservation goals by ensuring that natural soda ash production can continue in the KSLA while retaining the Green River RMP's discretion to limit production on a case-by-case basis in consultation with stakeholders. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #138-2 | The Economic Output % from oil and gas should start in the 2006! During the oil bum in Rock Springs then those number would go from 74% to 92% lower! | Appendix N describes methodologies. The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-15 | I am concerned with the BLM Draft Rock Springs RMP Alternative B proposals and the impacts this plan would have on the state of Wyoming. I believe that these will not be a benefit to the residents of southwest Wyoming many of whom are my former classmates, friends and neighbors as well as numerous relatives. The BLM preferred Alternative B, will have ruinous economic outcomes. An article about the draft RMP that I recently read mentioned that the Wyoming Legislature's Joint Agriculture, State and Public Lands & Water Resources Committee met and during that meeting they determined that, "The RMP, and its preferred alternative B, highlights a broken federal National Environmental Policy Act (NEPA) process, … NEPA was designed to ensure that environmental and socioeconomic considerations are weighed in the decision-making process. Unfortunately, Alternative B, the BLM's preferred alternative, will have catastrophic economic consequences should it move forward." … "The socioeconomic study area had a 2010 Census population of more than 133,400, which is 23.6% of the total Wyoming population." A near- quarter of Wyoming's population will be impacted by this plan …". This suggests that Alternative B, the plan currently chosen by BLM will not ensure socioeconomic considerations but will actually create economic devastation to the population of the Rock Springs BLM Management area. I personally believe that this impact will go beyond Sweetwater County, Southwestern Wyoming and even Wyoming's border, as I will explain in my comments. I have been told that it is estimated that approximately 3,000 job losses will happen because of the proposed Alternative B plan and that this will equal a loss of about $40 billion per year. This would be destructive to not only these workers and their families but it would devastate our Wyoming state tax system and our economy. I actually believe this is drastically underestimated. Recently, Sweetwater County Commissioner Taylor said … "Sweetwater County will likely lose about 2,500 oil and gas field jobs. … " Another article said "… Tourism and visitor spending alone … supports hundreds of local businesses and employing over 1,400 residents, … would have a devastating effect on tourism, economic development and resident quality of life." This is approximately 3, 900 lost jobs and this doesn't include jobs lost in the Trona and Coalmining industries. Also this doesn't include the loss of possible increases in job opportunities offered by the expansion of these plants. These industries are the core of the economy that keeps these communities functioning. Not only do they provide jobs, they provide grants and other amenities to the communities they are affiliated with. | Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-16 | Even more alarming is that this number doesn't include the devastation to the jobs and livelihoods that will be lost in our local agricultural industry. When a rancher or farmer looses his business again it is his family, his employees that lose their income and financial support. This was even noted in the proposed Alternative B that it would cause ranchers to go out of business. I don't recall that it quoted a given number that would be negatively affected because of this chosen plan but from other articles I have the impression it will devastate agriculture in the affected areas. | Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources– | #13826-17 | I question that when planning and choosing the Alternative Plan B it was accurately estimated the total loss of jobs and businesses this will affect in Sweetwater, Sublette, Uinta and even the counties of Fremont and Lincoln. This enormous amount of job loss through the industries mentioned above will have a domino affect on other | Section 4.22 discloses the predicted economic impacts of the alternatives |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | forms of employment within the region. These 3,000+ jobs support households with spouses and children. If these workers can't find employment after losing their jobs these families will have to relocate. This will impact the local school district employment, local grocery stores, hair salons, and basically all the businesses that sustain these populations. These jobs are often multiple generational families especially in the Hispanic and lower economic households such as the south side of the railroad tracks in Green River, Granger, Jamestown, Superior, Reliance, McKinnon, Lyman, Mt. View and Fort Bridger. I am a former Title One Teacher in the state of Wyoming and I know multiple family members often rely on the income of these jobs. An article I recently read in the 'Cowboy State Daily' suggested that about 41,000 residents live in the Sweetwater County not including the populations the other counties that will be affected. This county has nearly as much area as the entire state of Massachusetts. According to the author of the article half of residents live in Rock Springs. These job loses will impact the whole community, county, region, and state of Wyoming but it will reach beyond our state borders to the residents of Utah. It will not only impact the agriculture economy of Manila, Utah but it will impact recreational users, tourism and hunting that helps to sustain the communities of Manila, Dutch John, Daggett County and even the river floating businesses in Vernal to some extent. This is where many of the people of northern Utah go to recreate. Wyoming and Utah help each other's economies in other ways as well, most of the people of southwestern Wyoming travel to northern Utah for medical needs, shopping and entertainment as well as numerous other reasons. This BLM Alternative B may sound like it is only affecting the residents of Sweetwater County but many of the residents of the neighboring counties, for example Uinta County, work in many of the trona plants this will affect. These people who live closer to Evanston than Green River do most of their shopping and business in the Evanston area. So if they relocate then this will adversely affect this community as well. The limitation placed on the growth of the trona industry will have resounding affects not only locally but to the economy and tax base of the state of Wyoming as well as security and well-being or our nation since it is the number one producer of Trona within the nation and even it's production in the world's supply chain. It will basically make us more reliant on countries such as China to provide this product that is used in many products used in America and the world. The impacts of this alone I believe will have consequences that are far beyond our understanding and unknown at this point in time. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-19 | I recently read an article in the 'Cowboy State Daily' and the author stated that "The BLM's plan sets out the agency's goals (I believe it is referring to BLM's Mission Statement given previously) for socioeconomic resources (economics and public safety), including: * Provide sustainable economic development opportunities for a diversity of multiple-use resources including energy, mineral extraction, grazing, agriculture, and recreation, including sightseeing, hunting, fishing, tourism, hiking and others. * Provide resources and necessary access, consistent with multiple and sustainable use, for economic, cultural, and social viability at the national, regional and local levels. * Recognize the importance of mineral and oil and gas extraction as an important component to sustaining the economy of the region. * Consider local and regional economic development and land use plans in BLM decision making. Provide opportunities for economic and social sustainability at the national, regional, and local level. * Consider the impact of BLM management actions on community health, safety, welfare, infrastructure, services, housing, employment, custom, and culture." After looking at this article, I looked closer at the Socioeconomic Resources (SR) - Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) Goals and Objectives - Source: Volume 1 Rock Springs RMP Revision Draft EIS, page 283 & 284. (2-212 & 2-213) SR-01: Consider the total effect of BLM actions on adjacent, non-BLM lands. (My question: Wouldn't this apply to ranch lands, grazing, private property, mining and industry? Again isn't the chosen BLM Alternative B is opposition of this BLM Goal and Objective?) | Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-20 | SR-02: Provide sustainable economic development opportunities for a diversity of multiple-use resources including energy, mineral extraction, grazing, agriculture, and recreation, including sightseeing, hunting, fishing, tourism, hiking and others. (My question: The chosen Alternative B chosen BLM plan is in direct opposition to this BLM Goal and Objective.) | See discussion in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; | #13826-21 | SR-02.1: Provide resources and necessary access, consistent with multiple and sustainable use, for economic, cultural, and social viability at the national, regional and local levels. (My question: Doesn't the chosen BLM Alternative B not consistently allow consistent access to multiple and sustainable economic and cultural use at the local level if it will cause the loss of approximately 3000+ jobs in this location?) | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |

| abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-22 | SR-02.2: Recognize the importance of mineral and oil and gas extraction as an important component to sustaining the economy of the region. SR-02.3: Recognize the state and regional economic importance of the Flaming Gorge National Recreation Area (NRA). Consider resources necessary to enhance the fisheries, wildlife, and recreational opportunities connected and related to the NRA. (My Question: If the BLM chosen Alternative B plan is restricting the use of these lands, shorelines, road use, off-road use and trails around the Flaming Gorge National Recreation Area which includes the Green River isn't it also not recognizing the regional, state and inter-state economic importance of the this region?) | The Flaming Gorge NRA is managed by the US Forest Service and is outside the scope of this DEIS. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-23 | SR-03: Consider local and regional economic development and land use plans in BLM decision-making. Provide opportunities for economic and social sustainability at the national, regional, and local level. (My Question: If the chosen BLM Alternative B plan affects the ability of the Trona, oil, gas and coal industries, the utilities and recreation industry to provide job opportunities for the residents within the residence within the Rock Springs BLM area and it impacts the ability of local ranchers and farmers to be profitable then wouldn't that mean that the BLM decision making for this land use plan does not carefully consider the local and regional economic negative consequences. This alone should disqualify this as an effective choice. I recommend and request that BLM not consider Alternative B and go back to Alternative A and work with the local and state people to create a plan that does accomplish this goal and objective.) | See discussion in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-24 | SR: 03.1 Consider the impact of BLM management actions on community health, safety, welfare, infrastructure, services, housing, employment, custom, and culture. (My Question: The chosen BLM Management Alternative B will create a massive reduction in job security in southwestern Wyoming and Daggett County Utah. It will as the plan admits, more than likely put local ranchers out of business. It will put this area and more than likely since it will affect the tax base of the state of Wyoming impact the rest of the state of Wyoming. Isn't this in direct opposition of this goal and objective to consider the impact of this chosen BLM management actions on community health, safety, welfare, infrastructure, services, housing, employment, custom, and culture? The culture and customs of Wyoming of the residents of Wyoming is to recreate, hunt, fish and work in and on the public lands (BLM) in the great outdoors.)This in fact is literally written into the State of Wyoming Constitution. The Wyoming State Constitution guarantees these privileges in Article 1 Sec. 39. "Opportunity to hunt, fish and trap. The opportunity to fish, hunt and trap wildlife is a heritage that shall forever be preserved to the individual citizens of the state, subject to regulation as prescribed by law, and does not create a right to trespass on private property, diminish other private rights or alter the duty of the state to manage wildlife." The rights for citizens of Wyoming to use the land for recreation, hunting and fishing are extremely limited through Alternative B. | See discussion in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13826-25 | SR-04: Respect, recognize, and support public health and safety needs. (My Question: BLM Alternative B could cause a massive lose in jobs and create an economic crisis, potentially causing the residence of southwestern Wyoming, those who live in areas impacted by this change, to be adversely affected, both physically and mentally. If people don't have incomes or homes ,their physical health and safety needs will not be met. This BLM chosen Alternative B should be rejected. The BLM needs to look into the current Alternative A and work with local and state people to create a plan that is a good compromise for the people who live in the 5 counties that will be affected by this management plan. ) | Please refer to Section 1.4 for the Planning Criteria for this RMP. Section 4.22 discloses the predicted socioeconomic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13826-26 | By going through these individual BLM Socioeconomic Resource (SR) Economics and Public Safety Goals and Objectives it is apparent that this Rock Springs RMP chosen Alternative B plan does not meet it's own goals and objectives. This should automatically disqualify this chosen plan. I suggest this is evidence that this plan should be eliminated. The BLM should go back to the current Alternative A and work with Governor Gordan, our state legislatures, the local community and county governments to create a new plan that better meets the BLM Socioeconomic Resources (SR) - Economics and Public Safety goals and objects (8000- 8012). | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |

|---|---|---|---|
| mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13831-3 | The Plan and Draft EIS's Preferred Alternative as written create significant regional socioeconomic impacts that would have an adverse impact on our local economy and the airport. Any negative pressures on existing and/or future industrial/commercial development and tourism will have an adverse impact on the airport's ability to maintain services. For instance, if existing industry were to reduce employment over time as a result of this preferred alternative, it would likely result in fewer air carrier passengers, potentially causing cessation of commercial air service in the community. Reduced aeronautical activity driven by reduced industrial development would have a significant adverse impact on the financial health of the airport, driving our dependency on local tax dollars higher. | Economic impacts including ripple effects are discussed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13848-4 | The socioeconomic analysis in the DEIS fails to adequately analyze the direct economic effect of limitations on development of renewable energy resources within the checkboard area, including with respect to local economic development (jobs, local multiplier effects, etc.), state and federal taxes, and regional availability of renewable energy. | Impacts to renewable energy development are discussed in 4.19; It is too speculative to indicate what projects would be developed to calculate economic impacts. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13859-4 | In Section 3.1, greenhouse gas (GHG) emissions are grouped with Air Resources, however the description of affected environment provides no context of GHG emissions from existing and reasonably expected future resource uses. Section 4.3.2 describes the methodology for determining the monetized "social impacts" of greenhouse gas emissions under each of the alternatives. The DEIS states that this methodology is "provided only as a useful measure of the benefits of GHG emissions reductions to inform agency decision-making." However, the assessment of alternatives only considers emissions from each resource area. The BLM should more broadly consider the potential changes in emissions, including potential improvement in conditions, for each alternative. | See Appendix P for the Air Quality Technical Report. Impacts from all alternatives are described in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-20 | E. MA #4426 Alternative B of MA #4426 closes areas that are near winter ranges and parturition areas to further development considerations including coal leasing. The effects of development on big game populations can be mitigated and a balance maintained through currently employed practices. The BLM should have the flexibility to consider further development and whether impacts of future projects could be mitigated. An outright closure of the winter ranges and parturition areas without consideration of other impacts or if the impacts from development could be mitigated appears to be at odds with the BLM mission to "...sustain the health, diversity, and productivity of the public lands for the use and enjoyment of present and future generations." Coal leasing and development are significant sources of revenue to the local economy and to local and state governments and closing areas to future development and coal leasing would likely impact this revenue source. PacifiCorp recommends that the BLM adopt Alternative A or D (both are the same), as this would provide flexibility to consider each project on a case-by-case basis, rather than a blanket closure. | Section 4.22 discloses the predicted economic impacts of the alternatives. Impacts to big game for all four alternatives are also included in Chapter 4. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-41 | B. MA #7456 Alternative B of MA #7456 will designate the Boars Tusk ACEC as an exclusion area for ROWs. This increase of exclusion area associated with the Boars Tusk ACEC reduces the ability to transmit energy to previously identified customers, thereby increasing future costs of energy grid delivery and reliability. Alternative A of MA # 7456 is preferred because it maintains the approved activities within this ACEC. | Impacts relating to all four proposed alternatives are discussed in Section 4.19 |
| 837 - Socioeconomic | #13865-42 | C. MA #7498 and #7502 Alternative B of MA # 7498 will expand the South Pass Historic Landscape ACEC to 171,300 acres (from 53,940 acres). This, paired with Alternative B of MA # 7502 making the South Pass Historic | Impacts relating to all four proposed alternatives are discussed in Section 4.19 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | Landscape ACEC a ROW Exclusion Area, greatly reduces and/or prohibits the potential development of new electric transmission lines across South Pass to deliver cost-efficient energy. Alternative B would negatively impact the West-Wide Energy Corridor (WWEC) by reducing the area available to develop new ROWs. Specifically, Pg. 2-116 or the EIS states"[E]liminate the existing corridor identified in the WWEC ARMPA/ROD (2009) east of Flaming Gorge in the planning area (126-218). Corridor widths would be 3,500 feet wide. Designate no new corridors." The ability to site new transmission in this energy corridor is critical to renewable energy development in the west and reducing widespread impacts by line siting around areas considered exclusion zones in Alternative B. Alternative A of MA # 7498 is preferred in order to maintain the existing size of the South Pass Historic Landscape ACEC that will allow for the communities separated by the pass to grow and be delivered power reliably and cost effectively. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-43 | 13. Socioeconomics The BLM did not include a detailed analysis of the socioeconomic impacts when considering the elimination of approximately 1.7 million acres of land available for electric utility ROWs or renewable energy development in the DEIS. Excluding large portions of areas available development will have significant negative impacts on local residents' career and ancillary support opportunities, as well as lost revenues associated with city, county, and state taxes and fees. Under the quantified impacts of Alternative B based on analysis done in 2016, the economic output attributable to BLM administered lands totals $1.734 billion annually under the current Alternative A and directly accounted for 5,435 jobs in 2016 under Alternative A. The severe restrictions proposed under Alternative B would result in an approximately 56% decrease in economic output and would decrease the available jobs by 56% to 2,515. That is a loss of nearly 3,000 jobs. The numbers are directly attributed to the proposed plans and fail to take into account the ripple effects that will be felt across the State of Wyoming. For example, some of the socioeconomic benefits that will be incurred from the approved Rock Creek I/II wind projects (Jacobs, 2021) are: (1) nearly 500 additional construction jobs, with wages varying from $38k to $114k annually; (2) approximately 150 construction support jobs; (3) approximately 112 direct and secondary operational jobs, with wages varying from ~$50k to ~$90k annually; (4) local impact assistance payments; (5) real property taxes for construction at approximately $1.7m; (6) sales and use taxes for purchase of construction materials at approximately $31.8m; (7) ad valorem taxes during operational phase at approximately $83m over life of the project; and (8) wind electricity Generation Excise Tax at approximately $51.5m over the life of the project.1 If the BLM reduces the available area for renewable development as proposed in Alternative B, these benefits would be greatly reduced or eliminated by the prohibition of future projects in current buildable areas. Another example relates to mineral development and extraction. Mineral development and extraction, including coal mining, provide the greatest source of revenue for funding schools in the State of Wyoming between ad velarium, severance, and federal mineral royalties taxes. These operations are a significant 1 Jacobs, Final Rock Creek Wind Energy Project, Wyoming Industrial Development Information and Siting Act Section 109 Permit Application; Pages 5-1 to 5-145, December 2021. source of income for local and county governments that provide services to residents in the area. The decreased funding for schools and other important services in the communities will make the communities less attractive to other businesses and potential employees. The declining population and economic situation would likely negatively impact the ability to recruit and retain qualified employees for all businesses including BCC. A socioeconomic analysis should be completed by the BLM to understand the potentially devastating impacts that could occur by excluding significant areas of developable land. As part of the Wyoming Industrial Siting Development Information and Siting Act, all jurisdictional projects must obtain a Section 109 Permit to operate in Wyoming. All pending and approved permits are located online at the Industrial Siting Division website (https://deq.wyoming.gov/industrial-siting-2/permitting-process/) and can be utilized in the BLM's socioeconomic review for the Management Plan. Additionally, the Division has staff available that can assist in understanding real and meaningful socioeconomic impacts and methodologies for undertaking a study. | Impacts to renewable energy development are discussed in 4.19; It is too speculative to indicate what projects would be developed to calculate economic impacts. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-48 | In addition, Alternative B will conflict with mandates from public service commissions and national energy policy related electric transmission. PacifiCorp is mandated by public service commissions in the six states it operates to provide reliable, safe, and cost-effective electricity to its customers. Alternative B is in conflict with those state mandates. Similarly, part of national energy policy is the construction of new transmission lines. PacifiCorp, which serves portions of Wyoming is part of the Western Electricity Coordinating Council (www.wecc.org), the Federal Energy Regulatory Commission's Regional Entity for the Western Interconnection. Areas of eastern and northern Wyoming have surpluses of energy resources (resources that produce electricity) and those surpluses must be transmitted to the western U.S. to serve load in other PacifiCorp service areas, which include Native and industrial customers in central Wyoming and the Trona area. To transport this surplus electricity, additional transmission lines are required. As electricity travels the path of least resistance, it is in the best interest to build the transmission lines through the shortest path possible. Expanding the amount of restricted area as proposed in Alternative B, may result in much longer transmission lines which increases the amount of electricity losses across longer transmission lines reducing the effectiveness of the transmission line to move power. This in-turn can reduce the effectiveness of the resource projects making them more expensive or even uneconomical and unbuildable and potentially impacting economic growth of Wyoming and the western U.S. For these reasons, the inability to build transmission in the areas excluded by Alternative B will interfere with PacifiCorp's ability to provide safe, reliable, and cost-effective energy and is inconsistent with national energy policy to build new transmission. Another potential constraint created by Alternative B is related to maintaining the reliability of service provided to | Impacts relating to all four proposed alternatives are discussed in Section 4.19 |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | existing and future customers while anticipating future load growth. PacifiCorp performs reliability analysis annually in the form of North American Electric Reliability Corporation compliance (TPL-001-5) to ensure that the reliability of the transmission system in the Wyoming area is maintained with the expected load growth and resource additions analyzing load growth within the next 1-10 years in the future. These reliability assessments may identify reliability concerns that require mitigation. As mitigation, PacifiCorp might propose additional transmission (i.e. new transmission lines) and/or expansion of substations to install transmission devices (shunt capacitors/ reactors) that help resolve the reliability concerns and ensure the future load growth is served reliably. Alternative B could potentially restrict transmission improvements that may be required to serve the future load growth reliably. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-50 | As mentioned above, Alternative B also conflicts with regulatory requirements associated with thermal generation and coal mining. PacifiCorp co-owns and operates the Jim Bridger Power Plant located approximately seven miles north of Point of Rocks in Sweetwater County, Wyoming, which is within the boundaries of the area addressed by the RMP and DEIS. The continued operation of the plant may be negatively impacted by the selection of Alternative B. Increased restrictions outlined in proposed Alternative B addressing soil and geologic resources, water resources, and hydrogeologic investigations could pose difficulty for the plant in complying with requirements of the Environmental Protection Agency's coal combustion residual (CCR) requirements. | Pacificorp's compliance with environmental laws is outside the scope of this RMP (see Section 1.4 for the Planning Criteria). See also Appendix E for a list of laws, regulations, and policies that govern this RMP. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13865-59 | "Restrict the construction of tall facilities, distribution power lines, and fences to the minimum number and amount needed." As stated previously, power lines are sited and constructed to serve customers. By this nature, lines are already built only when necessary and cannot further be restricted without impacting our ability to serve customers. In addition, this stipulation conflicts with other resource stipulations throughout the draft RMP, as the length of lines and number of structures is often increased by routing around sensitive resources. Because this stipulation is contradictory with utility requirements to serve customers and BLM's other resource stipulations, PacifiCorp recommends that it be removed from the Appendix. | Pacificorp's compliance with environmental laws is outside the scope of this RMP (see Section 1.4 for the Planning Criteria). See also Appendix E for a list of laws, regulations, and policies that govern this RMP. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-10 | Finally, it is worth noting that Alternative B's impact on renewable development is at odds with existing federal priorities. Specifically, new tax incentives under the Inflation Reduction Act and the Bipartisan Infrastructure Law contain provisions designed to channel investment into communities that are historically disadvantaged and/or likely to be negatively impacted by a large-scale transition away from fossil fuels. While the BLM's analysis does discuss the former (EPA's Environmental Justice Communities) it does not consider the latter (DOE's Energy Communities), which may be much more relevant for the RSFO. In fact, all 8 census tracts in Sweetwater County, in addition to Census Tract 56013000301 in Fremont County, all qualify as "Energy Communities," making them eligible for additional federal support for renewable energy. At a high level, this puts the BLM's preference for Alternative Bat odds with crucial federal initiatives. More to the point, any commercial wind or solar projects in these 9 census tracts would qualify for a "stackable" 10% increase in the Production Tax Credit or a 10-percentage point increase in the Investment Tax Credit.11 This calls into question the BLM's assumption that wind development in the RSFO is unlikely, as well as gives credence to the scenarios projected by Wu et al. (2023). | BLM's EJ analysis followed the guidance found in IM 2022-059. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-11 | Third, the socioeconomic analysis included in this draft RMP is sorely lacking. While the BLM is very careful to say that their analysis does not include a formal benefit-cost analysis, they do attempt to estimate both the economic impacts (costs) of each alternative, as well as the social costs of greenhouse gas (GHG) emissions under each alternative. Hence, it is possible to compare the GHG benefits of each alternative-measured as terms of foregone production. Again, this is not a complete cost-benefit analysis, but it does give useful reductions in emissions damages relative to Alternative A-with the costs in sense of the orders of magnitude differences between each scenario. A variety of non-emissions benefits may accrue from each alternative. While it is infeasible to conduct a full cost-benefit analysis before the comment period ends, comparison of emissions and mineral costs and benefits of each alternative makes it possible to estimate how large these other benefits would have to be for each alternative to pass a cost-benefit test. Table 1 below lists the avoided emissions damages and the lost economic value for Alternatives B and D, relative to Alternative A using a 3% discount rate. It also reports the benefit-cost ratio and net present value of these alternatives under the (restrictive) assumption that only emissions benefits and energy related costs reported by the BLM are considered. Table 1: Rough Comparison of Benefits and Costs from Fluid Mineral Provisions Foregone Economic Activity Relative to Alt. A Approximate Benefit-Cost Ratio Approximate Net Present Value Alt. B $29,117,753,000 0.258 $(21,614,814,000) Alt. D $226,000,000 0.633 $(82,965,000) Two points are worth highlighting. First, while neither alternative yields a positive net present value, the net losses associated with Alternative Bare over 260 times those from Alternative D. Second, another way of reading the net present value in the final Column of Table 1 is as an estimate of how large other, non-emissions | NEPA does not require a cost-benefit analysis |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | benefits would have to be for each alternative to yield a positive net present value (or a benefit-cost ratio greater than one). For Alternative B to yield a positive net present value, the un-measured benefits would have to exceed $21.6 billion, or roughly 4 times the measured GHG reduction benefits. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-12 | Production forecasts are more nuanced in that they are specific to the RSFO, and the data for how these were produced are not directly available in any of the BLM documentation. If we had access to well-level data for Rock Springs, one might be able to develop some more accurate sense of new wells and annual production that could, in principle, offset the lower-than-expected prices. But, given the overall production trends for the Rocky Mountain Region over this period relative to the 2015 forecast, the RSFO would have to be a significant outlier for this to be the case. It does appear that the number of new wells spudded in the RSFO in recent years was lower than forecasted in 2015, so the same is likely true for production.12 | The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-13 | Fiscal Implications for the State. The BLM's analysis makes a cursory recognition of the tax revenue implications of the RMP and reports the estimated impacts in Appendix N, but provides no substantive discussion of the broader impacts this might have for the state. While it is difficult to precisely determine how reduced revenues will affect Wyoming's economy without a much more in-depth analysis, it is possible to at least characterize the importance of these revenues for the state budget. The specific taxes in question are locally collected ad valorem taxes, state severance taxes, and Wyoming's share of federal mineral royalties. Table 2 reports the estimated annual tax implications of Alternatives B and D, relative to Alternative A. Table 2: Estimate Reduction in Annual Tax Revenues Relative to Alternative A Local Ad Valorem Severance WY's Share of Federal Royalties Alt. B $16,957,000 $15,323,000 $18,923,000 Alt. D $228,000 $207,000 $255,000 As Table 2 indicates, foregone tax revenues under Alternative Bare roughly 74 times those under Alternative D across each category. Comparing these magnitudes to average tax revenues over 2018 to 2022, Alternative B would cause a 4.4% decrease in severance tax revenue and an 8.3% decrease in royalty revenue for the state as a whole.13 | Economics impacts and potential ripple effect impacts are discussed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-14 | Spillovers onto Private Land. The RSFO has highly fragmented surface and mineral ownership: the railroad "checkerboard" where alternating PLSS sections are owned by the BLM and private parties passes right through its center. This intertwined public and private ownership creates the scope for significant spillovers whereby public land management decisions can and usually do impact the ability to develop and use resources on private land. Although the BLM recognizes this possibility in the draft RMP, the economic impact analysis completely ignores possible impacts on private land. Withdrawal of federal minerals may create direct spillovers that render development on adjacent private lands infeasible, but identifying these impacts would require well and project-level data on oil and gas development. In general, it appears that most spacing units within the RSFO are less than a square mile, so these spillovers may be somewhat limited, but without more analysis that is difficult to predict. | Indirect impacts on private lands are part of the RFD. Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including addressing in footnote 6 that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-15 | Another important implication of the proposed alternatives concerns changes to rules governing rights of way (ROWs) across BLM land to develop projects. Alternative B significantly expands "exclusion" classifications for ROWs, essentially precluding access across implicated lands (see Figure 1 below). Analysis of the GIS layers made available by the BLM makes it possible to identify privately owned surface and mineral tracts that would be rendered inaccessible under Alternative B by identifying private parcels that: (i) are completely surrounded by BLM parcels designated for ROW exclusions; and (ii) lack existing road access. Table 3 reports the quantity of these "stranded" surface and mineral acres with vs. without road access under Alternative B. Table 3: Impacts of Alternative BROW Exclusions on Private Lands and Minerals Total Area Area Lacking Existing Roads Acres % Change vs. Alt B Mineral Exclusions Acres % Change vs. Alt B Mineral Exclusions Surface 502,926 23% 341,078 15% Minerals 231,475 10.5% 180,770 8% Table 3 indicates that the ROW exclusions under Alternative B would block access to hundreds of thousands of surface and mineral acres, even under restrictive assumptions. Surface impacts represent 15-23% of the fluid mineral acres withdrawn under Alternative B, and the mineral impacts are roughly 10% of the BLM withdrawals. In other words, if oil and gas development was roughly equivalent on private and public lands, the BLM's estimated economic impacts should be scaled up by approximately 10% ($82 million) to account for impacts to private mineral owners. If anything, this is a conservative estimate, as GIS data on well locations used in the RMP indicates that, on average, there are 2.77 more wells per acre on private land than on BLM land in the RSFO. | Importance of right of ways to oil and gas development are disclosed in Section 3.20.6 |
| 837 - Socioeconomic Resources–Economics and Public | #13880-16 | Solid Mineral Impacts. The draft RMP assumes no impacts to coal or trona mining within the RSFO because existing leases will not be affected, as additional leasing is not expected even under Alternative A. Evaluating the reasonableness of this assumption, without considering the effect of the other management actions is questionable and would require additional research and coordination with private developers. | See Appendix N |

|---|---|---|---|
| Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-17 | The Economic Impact Analysis in the RMP estimates the value of recreation in the RSFO under Alternative A under several assumptions about representative visitation. However, the BLM makes no attempt to estimate the impact of Alternatives B through D on recreation in the RSFO, significantly underestimating the overall cost of Alternative B in particular. Ultimately, more work is necessary to accurately assess the recreational impacts of the RMP, and the BLM needs to provide significantly more detail about specific management actions and the likely locations associated with those actions for such an analysis to even be possible. | See section 4.17 for discussion of recreation impacts |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-18 | Unrealistic Assumptions in Economic Analysis and the Need for Further Study. The BLM has data on various types of recreational visits to BLM lands within the RSFO over several years, though these data are not publicly available. To estimate the economic value and impact of these visits, the BLM uses "benefits transfer" methods: they take advantage of a study of recreational values in a nearby USFS management area and assume similar values prevail on a per-trip basis in RSFO. This methodology is fairly standard and is not problematic per se. The problem is that the BLM only estimates the value of recreation in Alternative A, arguing that it is infeasible to predict recreational impacts under any of the other alternatives. There are well established survey-based techniques for estimating the projected impacts of potential policy and management changes on recreation. Specifically, the BLM can conduct a contingent valuation analysis, whereby "choice experiment" surveys are designed to elicit consumer preferences and willingness to pay for different management scenarios. | See Appendix N.2.5 about the lack of credible methodology for determining changes to recreation, which is mostly dispersed. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-19 | High vs. Low Visitation Scenario. The BLM estimates the value of recreation using a "low visitation" estimate based on average visitation over 2011-2013 and a "high visitation" estimate based on significantly higher visitation in 2014. The difference in the estimated value of recreation is significant: $21.4 million vs. $42.5 million annually in 2014 dollars (Table N-7). The BLM says that it is impossible to tell whether the significant uptick in visitation observed in 2015 was an anomaly or would continue. However, in 2023, it is now possible to determine which estimate is more plausible. While the BLM's visitation data specific to the RSFO are not publicly available, trends in visitation to state parks across Wyoming and in the RSFO suggest a sustained increase in visitation relative to the 2011-2013 period that more than matches the 2014 uptick in BLM visitation (Figure 2). The BLM should update their estimates of recreational impacts with a more detailed analysis (or withdraw the plan until such an analysis can be completed by the state). But at a minimum, they should use the "High Visitation" scenario when considering potential recreation impacts. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-20 | The first is the significant increase in Areas of Critical Environmental Concern, which can impact the regulations governing OHV use and access. Specifically, Alternative B significantly expands the area within which OHV users are restricted to designated routes. Second, as written, Alternative B will remove some 15,000 miles of roads and OHV roads in unspecified locations. Though the BLM has indicated this was included in error, the impacts of such a scenario would likely be significant. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. See updates to Chapter 4.17 removing erroneous text on route designations. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned | #13880-21 | Finally, Alternative B removes existing Special Recreation Management Areas. BLM has argued that this will not impact recreation in any meaningful way, but officials from Wyoming Parks and Recreation have indicated that these Management Areas are a critical tool for managing recreation on the landscape. Specifically, these Management Areas help the state guide and disperse recreational activity to protect sensitive sites and wildlife while limiting congestion. In other words, Alternative B could actually result in adverse conservation impacts across large swaths of the RSFO under the BLM's stated scenario that Management Areas will be removed but recreation will not be limited. This seems fundamentally at odds with the "conservation" theme of Alternative B, raising questions about whether the BLM intends to pursue subsequent closures to recreation after removing the | See DEIS Chapter 2.2.6 Land Resources - Recreation Management Actions 6521-6557 for a full range of alternatives analyzed regarding Special Recreation Management Areas. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| mine lands) (8000- 8012) | | Management Areas. Clarification and further study on these points are essential, given that the impacts could be as large as $40 million dollars annually in an extreme scenario where recreation is severely curtailed. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13880-9 | Overlaying projected wind projects from Wu et al. (2023) with the Alternative BROW exclusions suggests that Alternative B would preclude the development of 509,000 to 3.2 million acres worth of potential wind projects in the RSFO, representing 5,760 to 36,790 MW of installed capacity.9 A full accounting of the economic impacts of wind development is beyond the scope of this comment, but some estimates suggest that wind projects generate a 1% increase in ongoing local employment for every 100 MW increase in installed wind capacity, as well as $7,000/MW in local property taxes and $3,000/MW in lease payments to landowners.10 Alternative B could lead to $56.7 million to $368 million worth of foregone local benefits annually from wind development. While these are rough estimates, they underscore the need to carefully consider and analyze potential renewable energy impacts in any serious impact analysis of the RMP. | Impacts to renewable energy development are discussed in 4.19; It is too speculative to indicate what projects would be developed to calculate economic impacts. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13892-12 | when it came time for the action items to meet these sustainability goals, none are listed. This is a huge deficiency in the DEIS. Of the nine actions under socioeconomics, all deal with hazardous substances, waste or abandoned mines. {See DEIS page 2-213.} There are no action items for sustainable economic development. There are no action items for social sustainability. There are no action items for "economic, cultural and social viability." The plan does not comply with plans adopted by county governments. "Any use of the natural resources within the planning area is likely to adversely impact long-term productivity of these natural resources," according to the DEIS. The BLM did not provide any scientific reference for making such an unsupported claim. | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13892-4 | The DEIS socio-economic analysis uses the 10-year average (2006-2015) for estimates of authorized AUMs, but does not mention that during that period, Wyoming was suffering through a historic megadrought in which livestock grazing was reduced by livestock producers in the region. The DEIS fails to provide an adequate assessment of the economic viability of the alternatives on livestock production (the production of food and fiber) | Appendix N discusses the methodology used to value an AUM to produce cattle and sheep. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13892-5 | The DEIS fails to examine how livestock production within the RSFO is linked to private lands, state lands, US Forest Service lands and seasonal production of vegetative resources on all these lands as well in adjacent areas outside the field office area. The socioeconomic impact specifically did not include this larger view that would provide information about the total impact of the BLM plan. | See Appendix T for discussion on this topic |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13892-6 | the DEIS does not discuss the positive benefits to people, land, and ecosystem services provided by pastoralism and transhumance. It does not mention how these practices are an important component of biodiversity and climate solutions, or how they are valued cultural traditions. It doesn't mention how livestock grazing reduces wildfires, or how grazing the RSFO allows the production of both high-quality food and fiber in an arid rangeland that is otherwise unsuitable for food production. | See impacts on nonmarket values in Section 4.22. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13892-7 | H-2A foreign workers rely on sheepherding jobs in America and are not reflected in socio-economic section. The analysis does not weigh the recent Department of Labor-mandated increase in pay to H-2A workers which has substantially impacted the economic sustainability of livestock producers in the RSFO. | Analysis regarding H-2A workers and Dept of Labor requirements are outside the scope of this RMP. See Section 1.4 for Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13899-104 | As discussed above, we support choosing Alternative B's fluid mineral management actions that will address multiple oil and gas leasing programmatic deficiencies, reduce the number of conflicts between oil and gas and other multiple uses, and reduce greenhouse gas emissions. However, BLM's Reasonable Foreseeable Development (RFD) scenarios and subsequent socio- economic impact analysis presented in the draft Rock Springs RMP and EIS significantly overstate the socio-economic impacts of oil and gas development. These flawed figures should be treated as an extremely conservative estimate of the impacts from the protective management called for in Alternative B and they cannot serve as a basis for departing from Alternative B. | The RFD and the socioeconomic analysis are not goals or intended outcomes; but rather baseline measurement tools for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impacts of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13899-105 | BLM's RFD significantly overestimates business-as-usual (Alternative A) oil and gas development in the Rock Springs Field Office. BLM's socioeconomic impact analysis estimates changes to local government revenue and jobs due to different fluid mineral management actions, in large part, based on an assumed level of business-as-usual oil and gas development for the 2016-2031 analysis period in the study area.266,267 BLM uses the BLM RFD 2016 to project expected rates of oil and gas well drilling and future production volumes for each alternative.268 Given that BLM's RFD was conducted in 2012/2013, we now have over a decade of actual drilling and production data to evaluate the degree to which BLM's RFD assumed numbers of annual wells drilled have reflected reality up to 2023. As shown in Figure 3, BLM's projections far overestimated future development for the business-as-usual scenario. To conduct the socioeconomic impact analysis BLM assumed that an average of 287 conventional oil and gas wells (232 BLM-managed and 55 non-BLM) and 10 coalbed natural gas wells (6 BLM and 4 non- BLM) would be drilled/year under Alternative A in the Rock Springs Field Office between 2016- 2031.269 In reality, oil and gas development has been far lower than the RFD projected for 2016-2022 even though the management plan has not changed. Between 2016 and 2022 Wyoming Oil and Gas Conservation Commission data show an average of 178 oil and gas wells drilled per year across all five counties that overlap the planning area.270 Indeed the relevant wells, the portion that is within the Rock Springs Field Office and the portion that are just BLM-administered, would likely be substantially smaller. In addition, no new coalbed natural gas wells were drilled in any of the five counties that overlay portions of the planning area since prior to 2012.271 Given historic annual drilling rates in the Field Office not even exceeding 150 wells per year, BLM's RFD decision to assume an annual average of 287 new conventional oil and gas wells (BLM and non-BLM) drilled per year (or 232 new wells per year for just the BLM-managed wells) for the 2016-2031 study period appears unjustified. | The fluid minerals drilling projection prepared for the Rock Springs RMP Draft EIS was based upon two factors, a) historical drilling levels and b) industry future drilling projections. At the time the drilling projections were prepared, natural gas prices were very robust which led to high levels of drilling and optimistic projections of future drilling. Subsequent to development of the RMP, natural gas prices have been much lower than projected and drilling activity has slowed significantly to reflect that low price. That being said, the reasonable foreseeable development (RFD) scenario is still adequate to use for quantification of the impact analysis in the Draft EIS. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13899-107 | Input-output models are known to greatly exaggerate the employment and labor income impacts, especially those related to changes in resource extraction. In addition to BLM using significantly overestimated baseline oil and gas activity projections, BLM's use of input-output models to estimate employment, labor income, and gross regional economic output significantly overstates socio-economic impacts. While commonly used by government and industry, input-output models are well known to greatly overestimate employment and labor income impacts related to changes in resource extraction.280Using input-output models that rely on assumed economic multipliers significantly overestimate impacts because they fail to account for how markets work in reality by assuming fixed prices and no substitution between factor inputs, often resulting in misleading and biased claims. | Appendix N discusses the methodology for the economic impact calculations. The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous | #13899-108 | BLM should not depart from the fluid mineral closures in Alternative B based on the flawed socio-economic analysis in the draft RMP and EIS. | Appendix N discusses the methodology for the economic impact calculations. The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives |

| materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13899-75 | The draft EIS's socioeconomic analysis reflects the lack of existing or prospective oil shale development in the planning area: it does not even mention oil shale[...] when discussing socioeconomic impacts of different alternatives192 Thus, the draft EIS indicates that Alternative B's closure of 2.1 million acres to oil shale will not result in adverse socioeconomic impacts. That closure should be adopted. | See discussion in 3.15 about oil shale |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13900-2 | The 2021 Wyoming ORV Report estimates that OHV recreation alone contributes over $365 million per year to Wyoming's economy. Over 10% of all Wyoming Resident trips occurred within the southwestern Wyoming area which includes a significant portion of the Rock Springs Field Office. Limiting recreation opportunities, motorized and other, will have long-lasting, negative economic effects on these areas and communities. | The importance of OHV is provided in 3.18.1 and the higher spending profile of OHV is discussed in N.2.5; Economic impacts from alternatives is in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13912-1 | As the major private surface and mineral estate owner within the checkerboard in the Rock Springs Field Office management area and Known Sodium Leasing Area ("KSLA"), BLM's proposed restrictions will interfere with and potentially foreclose Sweetwater Royalties' efforts to develop new trona mines, renewable energy projects, carbon capture and sequestration projects, infrastructure, and other projects such as lithium mining on its private lands in the RMP checkerboard area and in adjacent field office areas. At a minimum, it will close off Sweetwater's ability to access large parts of its land and mineral estates. Specific comments on, and objections to, the Draft RMP and EIS for the Rock Springs Field Office area are below, but suffice it to say that if BLM implements the aspects of its Preferred Alternative B that are in the checkerboard, Sweetwater Royalties stands to lose hundreds of millions to billions of dollars in land value and lost revenues from both projects already under development and future development projects in the Rock Springs Field Office and adjacent field office areas. | Economic impacts are disclosed in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13912-4 | The Draft EIS fails to analyze and address the negative effects, including socioeconomic, that the imposition of new Rights-of-Way restrictions within the Rock Springs Field Office checkerboard area would have on private and public lands in neighboring areas, Southwestern Wyoming and Wyoming as a whole. An EIS must analyze all impacts, direct and indirect, caused by an action, and the measurement area cannot be limited to an arbitrarily determined 'field office' boundary line. The full effects of any action taken along or within the RSFO boundary lines, must be analyzed in the EIS. BLM cannot ignore, fail to investigate, or decline to address these issues because they are across an artificial boundary line. The EIS made no investigations, analyses, or conclusions of the various alternatives and their broader socioeconomic impacts. | Economic impacts including indirect impacts are discussed in Section 4.19 and 4.22. Appendix N described the selection of scope of analysis |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13912-5 | The Draft EIS fails to analyze and address the negative effects that the imposition of new ACECs within the Rock Springs Field Office checkerboard area will have on the access to, and the economic development and or use of, private lands within, and affected by, the checkerboard pattern of the ACECs. | Economic impacts including indirect impacts are discussed in Section 4.19 and 4.22. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13940-1 | The BLM then incorrectly assumes that the "quantified impacts of livestock grazing . . . and recreation are the same under Alternative B as Alternative A" when it recognizes elsewhere that adverse impacts to grazing will occur. Compare id. at 4-178 - 4-179 with id. at 4-259. This statement fails to recognize the impact ACEC designations, ROW exclusion areas, and other specific management actions will have on grazing operations and their potential to prevent grazing all together. | Appendix N, Estimation of Forage Utilization describes that BLM conducted an economic analysis on two different AUM scenarios, with the historical billed AUMs resulting in no difference among management alternatives. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13953-11 | Nevertheless, Alternative B poses a drastic shift from the existing productive harmony between man and his environment. While Alternative B backs away from stating it is a complete closure to fluid mineral leasing, it all but closes an overwhelming portion of the RMP area by overlapping the withdrawal of future leasing with development restrictions like no surface occupancy and excluding right of way (ROW) access for 2.5 million acres. These overlapping restrictions have created a substantial void in the economic analysis, as the BLM failed to analyze the economic impacts that will result from ROW closures on oil and gas revenue. | Please see Glossary for a definition of 'withdrawal', which does not apply to fluid mineral leasing. Indirect impacts are disclosed in 4.19 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13953-12 | In Wyoming, oil and gas wells are only allowed to vent or flare in very limited circumstances. Consequently, without pipeline access to well sites, development is impossible. This reality will substantially reduce the economic output of oil and gas inside the RMP area that are isolated by ROW restrictions. Additionally, BLM ROW restrictions do not only impact federal leases, but private and state lands as well. This is primarily because federal surface and mineral ownership is dispersed with private and state ownership throughout the RMP area. Therefore, restricting ROW access across federal lands has an additional consequence to other lands that the BLM did not analyze. | Importance of right of ways to oil and gas development are disclosed in Section 3.20.6 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13953-13 | The Draft RMP is nonchalant in its description of the socioeconomic impacts associated with the preferred alternative's restrictions, stating "it is possible that the low levels of oil and gas development under Alternative B could have negative community impacts." When evaluating the preferred alternative's reduction in economic output for oil and gas development in Table N-7 and the labor earnings in Table N-9, it is clear that the negative community impacts are not possible, but certain. The Draft RMP states that Alternative B would reduce oil and gas revenue by nearly 74%. That revenue, in large part, is used by local governments to fund essential services throughout Wyoming. The WCCA requests the BLM thoughtfully read Sweetwater County's comments regarding the anticipated impacts on local government operations from the reduction in revenue expected from the Draft RMP. | Section 4.22 discloses the predicted economic impacts of the alternatives and the ripple effects on the community |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13953-18 | While the WCCA can appreciate the BLM's authority in designating ACECs the substantial acreage proposed would triple the acreage designated as ACECs and would pose a substantial economic burden on the people and industry in the Rock Spring RMP area. Without belaboring the point, the socioeconomic impact analysis present in the Draft RMP is lacking a comprehensive view of overlapping restrictions. It is therefore highly likely that the impacts to our communities will be substantially more severe than described. | The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics | #13955-1 | According to the most recent report from the 2022 Bureau of Economic Analysis Report on Outdoor Recreation, "Wyoming outdoor recreation employment increased from 15,285 to 16,202 jobs, accounting for 5.6% of the state's total employment." Wyoming's outdoor recreation economy increased to $2.02 billion according to the U.S. Department of Commerce's Bureau of Economic Analysis. According to the Bureau of Economic Analysis, in 2022 | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | Wyoming's top three industries are oil and gas at $8.99 billion, $2.5 billion for travel and tourism, $1.12 billion for agriculture, and $5.7 Billion in labor income for oil and gas1 The data also shows that $1.712 billion in Wyoming is generated from agriculture and a total of 58,780 jobs for oil and gas. Oil and gas is also the leading industry in Wyoming producing $2.72 billion. The ACEC designations and Alternatives B and D would greatly hinder the economic opportunities throughout the state. Recreation alone is nationally a trillion dollar a year industry and any alternative other than Alternative C would deprive Wyoming from capitalizing on this growing industry. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-10 | We have already seen an increase in closing dispersed camping across public lands across the nation. The desire and need for outdoor recreation has grown tremendously the past few years with no end in sight. The BLM should recognize the value that connecting with nature through dispersed camping and recreation brings. Restricting this form of recreation and limiting areas of use will only increase impact. We recommend adopting dispersed camping standards within this plan to require public input for any dispersed camping closures. Allowing dispersed camping should also be seen as a management tool for offsetting the socioeconomic inequities that are taking root as ultra-wealthy residents displace lower- and middle-income individuals and families from accessing monument areas. Many areas that are proposed for camping restrictions are used by visitors, locals and businesses such as guides and ranchers. Youth and educational groups also benefit from dispersed camping throughout the entire monument. Prohibiting wood gathering would negatively impact dispersed camping opportunities. There is a culture of camping and survival that needs to be protected through this management plan. | Socioeconomic impacts are disclosed in Section 4.2. See also Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-2 | According to the most recent report from the 2022 Bureau of Economic Analysis Report on Outdoor Recreation, "Wyoming outdoor recreation employment increased from 15,285 to 16,202 jobs, accounting for 5.6% of the state's total employment." Wyoming's outdoor recreation economy increased to $2.02 billion according to the U.S. Department of Commerce's Bureau of Economic Analysis. According to the Bureau of Economic Analysis, in 2022 Wyoming's top three industries are oil and gas at $8.99 billion, $2.5 billion for travel and tourism, $1.12 billion for agriculture, and $5.7 Billion in labor income for oil and gas1 The data also shows that $1.712 billion in Wyoming is generated from agriculture and a total of 58,780 jobs for oil and gas. Oil and gas is also the leading industry in Wyoming producing $2.72 billion. The ACEC designations and Alternatives B and D would greatly hinder the economic opportunities throughout the state. Recreation alone is nationally a trillion dollar a year industry and any alternative other than Alternative C would deprive Wyoming from capitalizing on this growing industry. | See DEIS Executive Summary Introduction paragraph 5 for validation of data age based on equal baseline. See Chapter 4.22 for a breakdown of socioeconomic impact analyzed by alternative. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-3 | Historically, there has been no group more greatly marginalized and excluded by public land management policies, and motorized travel management policies in particular, than people with disabilities. Outdoor enthusiasts with ambulatory disabilities frequently rely on motorized travel as their sole means to enjoy recreating on public lands. Not everyone has the ability to hike into a remote wilderness area, but many such people are still able to drive Jeeps, side-by-sides, and ATVs, which are restricted to the designated motorized route network. Management policies focused on "minimizing" the environmental impacts of motorized recreation have resulted in a dramatic decrease in motorized recreation opportunities on public lands over the last 20 years, which has disproportionately impacted people with disabilities. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. Accessibility equipment that is credibly assured to be in use in assisting a disability does not fall under the definition of 'OHV'. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-4 | The Biden Administration's focus on equity, however, changes the equation. While the ADA focuses only on equality of opportunity, equity inherently focuses on equality of outcome. Any policy that is facially neutral but disproportionately harms a disadvantaged or marginalized group is considered inequitable. The BLM is therefore required by this executive order and others mandating that federal agencies consider "environmental justice" in NEPA proceedings to consider whether any route closures in the Rock Springs Resource Management Plan would disproportionately harm disabled users' ability to access public lands. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. Accessibility equipment that is credibly assured to be in use in assisting a disability does not fall under the definition of 'OHV'. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; | #13955-5 | It should also be acknowledged that it is also entirely possible that many of the tribal members who wish to access sacred and cultural sites within the planning area currently or will at some point suffer from mobility impairment disabilities. Since the elimination of motorized access from the planning area would prevent disabled tribal members from accessing sacred and cultural sites, motorized restrictions would likely be contrary to EO 13007, EO 13985, and the American Indian Religious Freedom Act. | As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. Accessibility equipment that is credibly assured to be in use in assisting a disability does not fall under the definition of 'OHV'. |

|---|---|---|---|
| abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-6 | Balancing conservation goals with cultural significance is crucial for the sustainable management of these areas. Managed motorized access can facilitate educational programs, allowing visitors to learn about the significance of the area and the importance of conservation efforts. This educational aspect can foster a deeper understanding and appreciation for the environment, potentially leading to more responsible behaviors among visitors. "ACEC can also provide tangible benefits, such as tourism dollars, for local communities."2 BLM should analyze how many tourism dollars are brought in due to the existing motorized routes that are being proposed for non-motorized trails. | Importance of OHV is discussed in 3.18.1 and Appendix N discussion the economic impact methodology |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-7 | The Executive Order on Advancing Equity also recognizes that poverty and inequality can lead to systematic discrimination against historically underserved and marginalized communities. We strongly encourage the BLM to incorporate into their planning the findings of The Slums of Aspen: Immigrants vs. the Environment in America's Eden by Lisa Sun-Hee Park and David Pellow and Billionaire Wilderness: The Ultra-Wealthy and the Remaking of the American West by Justin Farrell. Both of these works document extensively how Western communities surrounded by public land are undergoing significant socioeconomic changes that result in skyrocketing housing costs, use of conservation and land-use restrictions to limit development, and displacement of the local middle and lower classes from Western Communities. | The societal impacts, including systematic discrimination, of poverty and inequity are outside the scope of this RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13955-8 | First, conservation has directly and indirectly intensified wealth inequality by making the area uniquely attractive to the ultra-wealthy, creating intense housing demand and land scarcity that has dramatically reshaped who lives in the community, and how people make their money. [...] As more and more ultra-wealthy people move to the area for natural amenities (for example, protected lands, abundant wildlife), it dramatically restructured the socioeconomic hierarchy - becoming both a cause, and a consequence, of conservation values. Conservation became a form of elite cultural currency, and conservation organizations benefited from the financial flow down, all while it became harder for middle- and lower-income people to survive there (pp. 96-97). | Wealth inequality and socioeconomic hierarchy of societies is outside the scope of this RMP analysis. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #13974-5 | Emphasizing conservation and pristine experiences may limit the type of visitor able to enjoy public lands. Several places in Volume I mention the value of"pristine" experiences, with Alternative B's conservation focus offering the most of those opportunities. However, the ability to access such pristine areas may be limited by socioeconomic factors and physical limitations. Individuals with different abilities may not be able to access resources because of a lack of formal development or ADA accessibility. It is therefore important to consider roads and other access routes to key areas in this plan which provide a diverse representation of natural, cultural, and historically significant areas within the Field Office, ideally with varying levels of solitude and disturbance. | Recreation impacts are discussed in sect. 4.17. Route specific Travel and Transportation Management decisions are outside of the scope of this DEIS. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14022-14 | Creating a Big Game ACEC doesn't make economical sense. With the State of Wyoming managing the State's wildlife SCCD feels that BLM should deal with the ACEC process in a different planning effort. | See Appendix C and Chapter 3.22 for a description of ACEC designations and the nomination criteria. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14026-6 | Adding unnecessary complexity, cost, and mandates on electricity infrastructure may chill investment in grid hardening and expansion, at a time of high wildfire risk and increased electrification of the nation. NRECA urges BLM to refrain from imposing any such requirements on electrical infrastructure in the final RMP/EIS. | Impacts to right of ways for electricity infrastructure are disclosed in Section 4.19 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14032-11 | 3 The EPA notes that BLM did not appear to utilize an initial analysis of environmental factors on these communities as provided through EPA's EJScreen tool when developing the Draft EIS.14 The EPA's nationally consistent EJ screening and mapping tool is a useful first step in highlighting locations that may be candidates for further analysis. The tool can help identify potential community vulnerabilities by calculating EJ Indexes and displaying other environmental and socioeconomic information in color-coded maps and standard data reports (e.g., pollution sources, health disparities, critical service gaps, climate change data). EJScreen can also help focus EJ outreach efforts in the planning area by identifying potential language barriers, meeting locations, Tribal lands and indigenous areas, and lack of broadband access and allow BLM to meet the intended goals of this new and other executive orders aimed at the protection of overburdened, minority, and low-income communities potentially at risk from BLM decisions in the planning area. | BLM followed its BLM EJ guidance as discussed in the Socioeconomic Baseline Report |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14032-12 | EPA strongly encourages BLM to address EJ in the Final RMP/EIS by including desired outcomes (goals and objectives) and related management direction(s) that would be applied to land management decisions in the planning area over the planning timeframe. EJ goals and/or objectives could be focused on avoiding disproportionate impacts to communities with EJ concerns by managing community risks to health (e.g., from air emissions and climate change) and potential conflicts with resource access or use (e.g., rights guaranteed to Tribes through existing treaties with the federal government) arising from BLM-approved land use activities. To ensure that BLM-administered lands are managed in such ways that disproportionate impacts to overburdened and underrepresented communities (such as subsistence economies) in the planning area are avoided or minimized, a management direction could include meaningful outreach, education, and early and consistent coordination and collaboration with Tribes, community members and groups, local government organizations, academic institutions, not-for-profit organizations, and other stakeholders in the planning area. Such meaningful engagement is important to identifying and addressing community- specific concerns, environmental risks, and disproportionate risks to human health. | BLM followed its BLM EJ guidance as discussed in the Socioeconomic Baseline Report |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14032-13 | we recommend considering a management direction related to consideration of mitigation of disproportionate and adverse effects to Tribes and other communities with EJ concerns during early stages of project planning and design. Inclusion of goals, objectives, and management directions in Table 2-1 in Final RMP/EIS specific to EJ impacts (as with other resources considered in the Draft RMP/EIS) associated with BLM land use decisions in the planning area would make BLM RSFO's management activities more consistent with EOs 12898, 13985, and 14096, as well as the CEQ's EJ Guidance under NEPA. | Project level decisions are implementation actions and are beyond the scope of this land use planning EIS. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #14038-3 | In April 2022 the Department of Interior released it's Equity Action Plan which addresses the lack of access on public lands. In order to advance equity of access on public land for those with mobility impairment disabilities, it is important to recognize that discrimination towards Americans with disabilities within federal land management agencies is deeply rooted and hidden in plain sight. Recreation, primarily motorized recreation, has taken a backseat to conservation and protection. Motorized recreation is often the only way those with mobility impairment disabilities are able to access public lands. BLM should ensure that the plan complies with the Department of Interior's Equity Action Plan, which recognizes that restrictions on motorized access to public land create barriers of access to those with disabilities. | Recreation impacts are discussed in sect. 4.17. See Glossary for a definition of OHV as described in the management actions. |

| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #188-1 | in inflation is out of control and now inflicting more on us. Please take a hard look at this the blm is trying to do to us. We. The People won't be able to survive. With fuel costs. Electricity…please reconsider all these actions the blm is wanting to take | An analysis of US and global inflation is outside the scope of this RMP. Please see Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #229-1 | plan b will fundamentally change the way of life in a signicant portion of WY. it will increase beef prices, | An analysis of beef prices is outside the scope of the analysis. Quality of life is discussed in the social impacts section of each alternatives analysis. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #257-1 | At a time when citizens around our nation are experiencing some of the highest food prices ever seen in our lifetime, the BLM is proposing to drastically reduce the amount of AUMs in many allotments, or in some cases even revoke grazing leases altogether. How does a reduction in the amount of AU Ms in these allotments have an effect on the price of food? This reduction in grazing utilization will put many ranchers out of business; therefore, there will be less cattle to bring to market for public consumption. We are already at historically low cattle inventory in 2023. We have not seen inventory this low in the United States in over 60 years. In a market that is driven by the amount of cattle in the United States, low inventory means less cattle in the market and higher prices for the consumer. Like I said, at a time when U.S. citizens are battling not only significantly higher food prices, but also rising inflation and higher costs in every facet of their lives, the BLM is proposing to reduce grazing utilization, which in turn would put many ranchers out of business, and consequently cause food prices to climb even higher. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #257-3 | Finally, and perhaps the most frightening thing about the potential reduction in BLM grazing, is the effect that it will have on the ranchers that have been in these areas for well over a century. Many ranchers in these small Wyoming communities will go out of business and will perish. This is a horrible proposition for not only these small town communities that depend on these ranchers to bring dollars into their economies, but it is also a terrible proposition for the country as a whole. It would be a shame to lose some of these ranches that started these small town communities in which we call home. | Section 4.22 discloses the predicted economic impact of the alternatives and connected social impacts to the community |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #298-1 | Our state is already facing deficits. Our schools, roads, and health care depend on the royalties of the minerals that our state produces. Without those, we have lost millions of dollars of funding for Sweetwater County. Our school district in 2021 faced challenges of closing schools, and letting teachers go because of the lack of funding. Wyoming's mineral royalties give schools, roads, and health care over $729 million dollars to the budget each year (Wyoming Government Revenue Forecast 2023-2028). How is Wyoming going to supplement that income?? | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics | #298-3 | You are closing many areas of recreation off, which in turn kills our tourism. In 2021 tourism in Sweetwater County brought in over 160.6 million dollars, which brought in 10.1 million dollars in taxes (TourWyoming.com, 2021). Let's take half of that away as well 5.05 million dollars. | Section 4.17 discussion changes in recreational tourism while Section 4.22 discusses related economic impacts under the various alternatives |

|---|---|---|---|
| abandoned mine lands) (8000- 8012) | | residents, which will cause reductions to budgets for human services, education, infrastructure and law enforcement. | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #353-1 | here is one obvious flaw in the EIS: The stated socioeconomic resource goals are to: Provide sustainable economic development opportunities for a diversity of multiple-use resources including energy, mineral extraction, grazing, agriculture, and recreation, including sightseeing, hunting, fishing, tourism, hiking and others. • Provide resources and necessary access, consistent with multiple and sustainable use, for economic, cultural, and social viability at the national, regional and local levels. • Recognize the importance of mineral and oil and gas extraction as an important component to sustaining the economy of the region. • Consider local and regional economic development and land use plans in BLM decision making. Provide opportunities for economic and social sustainability at the national, regional, and local level. • Consider the impact of BLM management actions on community health, safety, welfare, infrastructure, services, housing, employment, custom, and culture. Yet absolutely none of the action items for any of the alternatives addresses any of these goals. This is a colossal failure to fulfill the purpose of this study. | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #363-1 | Without the critical tax revenue derived from the mineral industry in Crook County along with all of the participating counties in southwest Wyoming, there would be insufficient funds to provide basic services at a level needed for the protection of the county residents' health, safety and security. Funding derived from mineral exploration and development, grazing, agriculture, recreation, and tourism constitutes a significant portion of revenue used to pay for essential services, including roads, fire protection, courthouses and judicial systems, libraries, landfills, hospitals, law enforcement, airports, recreation, public health, and senior citizen centers. Any curtailment of leasing and development activity significantly impacts the socio-economics of the communities and eliminates a critical funding stream for not just Crook County, but all counties, the State of Wyoming and its residents, which will cause reductions to budgets for human services, education, infrastructure and law enforcement. | See Chapter 1 for a description of the planning area, which does not include Crook County. Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted within the planning area. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #400-1 | Without the critical tax revenue derived from the mineral industry in Converse County along with all of the participating counties in southwest Wyoming, there would be insufficient funds to provide basic services at a level needed for the protection of the county residents' health, safety and security. Funding derived from mineral exploration and development, grazing, agriculture, recreation and tourism constitutes a significant portion of revenue used to pay for essential services, including roads, fire protection, courthouses and judicial systems, libraries, landfills, hospitals, law enforcement, airports, recreation, public health, and senior citizen centers. Any curtailment of leasing and development activity significantly impacts the socio-economics of the communities and eliminates a critical funding stream for not just Converse County, but all counties, the State of Wyoming and its residents, which will cause reductions to budgets for human services, education, infrastructure and law enforcement. | See Chapter 1 for a description of the planning area, which does not include Converse County. Section 4.22 discloses the predicted economic impact of the alternatives including that public services could be impacted within the planning area. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #527-1 | he ACEC designation will effectively prohibit energy development, and primarily development of the mineral estate, on over 50% of the resource management area. This prohibition will negatively impact the State of Wyoming through loss of the State's portion of federal mineral royalties as well as increasing our nation's dependence on foreign or unreliable and unproven energy sources. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #544-1 | This plan also has the potential to affect my income. As an insurance professional I have clients in the agricultural industry, outdoor recreation industry (outfitters), and energy industry. • I have agricultural clients that run cattle within the management area. I am an associate member of the Wyoming Stock Growers Association, a group which has expressed considerable concern over this plan. If the WSGA is concerned, I am also concerned. If my clients' operations and subsequent income are affected, potential downsizing would have a direct effect on insurance premiums and my compensation. • I have outfitter clients that guide hunters within the management area. If they are forced to downsize it would have a direct effect on insurance premiums and my compensation. • My energy industry clients are not typically working in the proposed area. However, the energy industry has a tendency to "lift all ships" so a strong energy sector is preferred. Anything that would be deleterious to Wyoming's energy industry can have a direct impact on my compensation. | Section 4.22 discloses the predicted economic impact of the alternatives including ripple effects to those not directly employed in ag, rec and energy. |

|---|---|---|---|
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #550-2 | Public lands are one of the most vital resources to businesses in the State. Almost half of the land in Wyoming (48%) is under federal ownership and management. And in the Rock Springs Field Office management area, the number is much higher, with about 3.9 million acres of land subject to federal control in an area covering 5.7 million acres (or about 83%). Activities on these public lands are indispensable economic drivers for the region, including grazing by Wyoming ranchers; off-highway vehicle, hunting, and other recreational uses that support the tourism and guided industry; trona and coal mining; oil and gas development; solar and wind energy projects; and critical infrastructure. Decisions about how to manage these federal lands have enormous consequences on the local, regional, and State economy. Indeed, the BLM acknowledges the strong socioeconomic linkage between the federally managed lands and the communities in the socioeconomic study area, such as Rock Springs, Green River, and Pinedale. | See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #550-3 | Overall, the BLM's proposed Alternative B would severely harm southwestern Wyoming. Total economic output just from the oil and gas industry would drop to less than a third of current levels, and industry jobs would drop from approximately 4,000 to about 1,000. Local governments and the State would see substantial declines in tax and royalty income. Supporting midstream and service companies will be adversely impacted in turn. In short, Alternative B fails to balance multiple uses and would instead put at risk hundreds of businesses and thousands of jobs in southwestern Wyoming. | Section 4.22 discloses the predicted economic impact of the alternatives including ripple effects |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #550-4 | If implemented, Alternative B would have dramatic consequences for businesses in southwestern Wyoming, particularly those supporting oil and gas exploration and production and infrastructure development. Of the 3.7 million acres of mineral estate, currently only about 540,000 acres are closed to oil and gas leasing and 159,000 acres are subject to no surface occupancy stipulation. Alternative B would close almost 2.2 million acres to leasing. Of the remaining 1.5 million acres in the management area, over 800,000 would be subject to no surface occupancy stipulations. In other words, areas open to leasing under standard terms and conditions would decrease from about 3 million acres under current management to about 700,000 acres under Alternative B. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #550-8 | Access for OHV users supports local tourism and limitations may push OHV users to Utah, Colorado, and other lands with fewer restrictions. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #8761-3 | The U.S. Bureau of Economic Analysis showed that in 2021 the outdoor recreation industry brought in $821 billion nationwide. By limiting access to the monument or decommissioning trails the BLM could be harming the local economy and robbing them of potential income. | See Chapter 1 for a description of the planning area, which does not include any National Monuments. Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics | #9448-1 | The county's annual total oil and gas tax revenues could shrink from $16.9 million to $4.3 million, he said. Revenue for local school districts could shrink from $8.5 million to about $2. 9 million, and the county government's share is estimated to drop from $2. 9 million to $736,000. | Section 4.22 discloses the predicted economic impact of the alternatives |

|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9545-1 | A conservation-focused management plan, such as the preferred alternative, should lead to more jobs over the long-term not less. I am an avid member of the non-motorized outdoors recreation crowd (biking, hiking, hunting, fishing, you name it and I do it) and the Red Desert is getting more and more press as an amazing place to visit. I do not doubt that if it is left unspoiled it will become a greater tourist draw over time. Thus, preserving the land represents a greater investment in our state's future, as compared to the short-term gains obtained through energy development. Nobody travels across the country to do a bike tour of an area filled with gas wells, but a lot of folks travel to see novel geological features, abundant wildlife and flora, and ancient rock art. | Section 4.22 discloses the predicted economic impact of the alternatives |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9792-12 | The DEIS's socioeconomic and cumulative impact analyses are deficient. The socioeconomic baseline report was prepared a decade ago and is not reflective of the current situation in the region. The economic boom and population growth that were reflected during the baseline are not the current conditions in the region. | The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Section 4.22 discloses the predicted economic impact of the alternatives. The cumulative impact analysis can be found in Appendix T. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9792-13 | We are especially concerned about the lack of comprehensive and fair treatment of the impacts to livestock grazing. We request that the EIS be revised to incorporate the assessment methodology and practices as described by: Brymer, Amanda L. Bentley, et al. "Economic and social impact assessment of ranching on public lands: A guide to concepts, methods, and applications." Journal of Rangeland Applications 4 (2018). {See Attachment A to this letter.} As noted in Brymer, et al, "A problem with the average AUM scenario is that federal grazing is not typically used in isolation but rather as part of an individual ranch's overall grazing operation. If a ranch is seasonally dependent on federal grazing, as is the case for many western ranches in northern climates, a reduction in federal AUMs can create forage imbalances that produce greater reductions in grazing capacities than just the change in federal AUMs. This suggests that a production scenario based on the changes in the overall ranch production results from a change in federal grazing policy and would be an appropriate scenario to consider in the economic impact analysis." Bremer, et al, also point to the need to provide an overview of resource amenities, the need to account for the social impacts of projects and policies to rural communities, and understanding the social context, of policy shifts in federal land management decisions. | Similar discussion to Brymer et al is captured in the nonmarket value discussion in Section 4.22 |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9792-14 | The DEIS proposes major shifts in livestock grazing management policies, but only assesses the economic impact of the direct loss of AUMs from areas where grazing will be excluded. That is a deficient assessment. The document needs revised to reflect both relevant literature on public land grazing permits, and to include an allotment-specific assessment of not just the change in AUMs but in the economic cost of the policy shifts under each alternative. We request the BLM use the Pinedale Field Office Greater Sage-Grouse/Grazing Economic Analysis 2012 as the model for such an analysis. {See Attachment G to this letter.} and Tanaka, J. A., Rimbey, N. R., Torell, L.A., Bailey, D., DelCurto, T., Walburger, K., & Welling, B. (2007), Grazing distribution: the quest for the silver bullet. Rangelands, 29(4), 38-46, which found: "{I}n terms of profit, total elimination of the permit causes about the same level of lost profits (-$11,526) as does losing the early summer grazing season (-$11,005) even though the herd size impacts are markedly different." In addition, H2-A foreign workers rely on sheepherding jobs in America and are not reflected in socio-economic section. The analysis doesn't weigh the recent Department of Labor-mandated increase in pay to H2-A workers which has substantially impacted the economic sustainability of livestock producers in the RSFO. | Analysis regarding H-2A workers and Dept of Labor requirements are outside the scope of this RMP. See Section 1.4 for Planning Criteria. Appendix N discusses the methodology selected. |
| 837 - Socioeconomic Resources–Economics | #9792-2 | The DEIS fails to provide a description of the amount of food produced from these public lands, an examination of the customs and culture of ranching in the area, ranching as a historic and continued use of the district, and the local dependence on resources from public lands. | Appendix N discusses the methodology for estimating the economic value of forage use; social impacts are discussed in Section 4.22 |

|---|---|---|---|
| and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | | | |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9792-7 | The DEIS fails to provide an adequate assessment of the economic viability of the alternatives on livestock production (the production of food and fiber), and impacts management changes could provide if sustainable livestock production is undermined by the BLM's management actions, including the reduction in the ability for producers to utilize their allotments due to the various restrictions imposed under each alternative. | Appendix N discusses the methodology to determine economic impacts and Section 4.22 discloses the predicted economics impacts |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9792-8 | The DEIS fails to examine how livestock production within the RSFO is linked to private lands, state lands, US Forest Service lands and seasonal production of vegetative resources on all these lands as well in adjacent areas outside the field office area. The socioeconomic impact specifically did not include this larger view that would provide information about the total impact of the BLM plan. Since livestock production on these lands are linked, livestock grazing management in the area involves the seasonal movement of livestock by ranches inside and outside the RSFO, with impacts within Wyoming as well as in neighboring areas of Idaho, Utah, and Colorado. This seasonal movement, called transhumance, is an important and internationally recognized practice of sustainable agriculture - providing for sustainable food and fiber production. | An analysis of regional livestock grazing is outside the scope of this RMP. See Section 1.4 for the Planning Criteria. |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9793-1 | This is a huge deficiency in the DEIS. Of the nine actions under socioeconomics, all deal with hazardous substances, waste or abandoned mines. {See DEIS page 2-213.} There are no action items for sustainable economic development. There are no action items for social sustainability. There are no action items for "economic, cultural and social viability." | See discuss in Chapter 1 about planning criteria and Chapter 2 alternatives development |
| 837 - Socioeconomic Resources–Economics and Public Safety (hazardous materials; abandoned mine lands) (8000- 8012) | #9846-1 | Page 2 of my comments, that didn't appear in the first on....With all that said and done, there are no action items listed to meet sustainability goals. Of the nine actions under socioeconomics, all deal with protecting the public from hazardous substances, waste or mines that are abandoned. No action items for sustainable economic development. No action items for social sustainability. No action items for “economic, cultural and social viability.” Page 2-213 of the draft. | See Section 1.4 for the Planning Criteria for this RMP. Chapter 2 includes a description and details for the alternatives development. |
| 838 - General-NEPA Compliance | #37-2 | However, despite my strong support for Alternative B, I do not believe that it represents a meaningful enough difference among the other action alternatives on at least three crucial subjects: commercial livestock grazing, fossil fuel development, and transportation planning. On these subjects, the action alternatives appear to be highly similar. It would have been better and fairer for this NEPA analysis and public involvement if Alternative B recommended a meaningful reduction in commercial livestock grazing pressure on natural resources, much less area available for potential fossil fuel leasing and development, and much more area closed to future OHV recreation. All three of these subjects are directly relevant and contribute to both the climate and extinction crises. For example, please review the attachment on the climate change related impacts from commercial livestock | The range of alternatives is sufficient. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See also Appendix E for a summary of all laws and regulations that guided the DEIS. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | grazing on public lands. I am disappointed that BLM's preferred alternative, that professes to be the most conservation oriented, was improperly skewed to largely favor the status quo on these three subjects. If implemented, these deficiencies would undermine the potential benefits from other components of Alternative B. I urge BLM to strengthen Alternative B with respect to these subjects in preparing the proposed RMP and final EIS. | |
| 838 - General-NEPA Compliance | #223-1 | the RMP did not consider the Sweetwater County Land Resource Use Plan and Policy as required by Federal law. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3). |
| 838 - General-NEPA Compliance | #244-1 | It is our considered opinion that the Bureau of Land Management should withdraw this draft, reconsider the alternatives making use of the considerable stakeholder and public comment over a number of years, and issue a fully supported and considered preferred alternative. It is Wyoming's intent to make sure that this RMP stands up to careful public and legal scrutiny. Issuing a thought through draft preferred alternative rather than "building the plane as we try to fly it" may actually result in something that could fly. What is before us to consider will not. As this draft stands it will lack Wyoming's support, local community support, and will surely be challenged on rigor. | See section 2.2.3 regarding Alternatives Development Process and Chapter 5 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #244-2 | More to the point, this draft does not accurately reflect the 12-year cooperative process undertaken during my entire time in office as Governor and as State Treasurer, three presidential administrations, a multitude of public meetings, cooperating agency input, technological and scientific advancements, and millions of taxpayer dollars. So, it is completely incomprehensible that the BLM selected for its Agency Preferred Alternative, Alternative B, one considered an outlier in previous attempts at issuing an RMP one that was meant to serve initially as a bookend - an alternative with the most resource use restrictions and concomitantly with the largest socioeconomic impacts. Over a decade's worth of contributions from local stakeholders, cooperators, counties, and state agencies are either falling on deaf ears or disingenuously being thrown by the wayside with this decision. | See Section 5.1 regarding public involvement and government consultation and coordination in developing all alternatives. See Executive Summary Introduction (page ES-1) and Section 3 regarding the sufficiency of AMS summary and baseline data. |
| 838 - General-NEPA Compliance | #244-3 | The BLM's RMP and Preferred Alternative threaten to eliminate all the hard work accomplished by bulldozing over state executive orders, stakeholder engagement, and interagency agreements. Simply put, existing and future partnerships are in jeopardy. A federal fiat won't run efficiently or well over such a bumpy road. | See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #244-4 | I request that this hastily constructed hamfisted draft, as written and including the insincere and impractical choice of Alternative B as the Agency's Preferred Alternative, be completely withdrawn and resubmitted to the public with a newly crafted Preferred Alternative using the years of work by the local field office and cooperators. A realistic and constructive conversation and public input process can occur with a pragmatic Alternative. | See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #250-1 | The National Environmental Policy Act states that local land use plans from the counties in effect area must be evaluated and a statement of identifying why the alternative is inconsistent with the current land use plans of the county and why it cannot be implemented must be made for all alternatives. This is not available in the RMP. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3). See Section 2.2.3 regarding BLM compliance with NEPA and CEQ compliance in developing alternatives for the DEIS, including seeking public input and analyzing reasonable alternatives. |
| 838 - General-NEPA Compliance | #297-1 | Your work product was largely free of footnotes. A quick survey of the bio indicates that you predominantly relied on USGS,BLM, and EPA publications to the exclusion of any data or analysis that might have contrary views. | See Literature Cited section of the DEIS for a list of sources referenced in the document. |
| 838 - General-NEPA Compliance | #305-3 | Does the BLM consider working with the State and Industries on alternatives for the greater good? By greater good I mean, preserve the environment and at the same time prevent negative impact of the communities prosperity and people well being. | See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #315-2 | There has been minimal public participation as one three-hour "open house" in 140 months is not broad-based public participation. | See Table 5-1 for a list of public involvement events and section 5.2 for details of public participation in the RMP process. |
| 838 - General-NEPA Compliance | #315-3 | As presented, the preferred Alternative B does not recognize valid and existing rights. (There are many examples, but as one example, Alternative B proposes to prohibit surface occupancy within one mile of historic raptor nest locations, not just active raptor nest locations; this has the potential to suddenly close many current operations that have valid existing rights to operate where a historic nest may have existed). | The RMP will recognize valid and existing rights (see Section 1.4). See also Section 2.2.2 which states "this plan does not propose any implementation-level decisions" (pg. 2-1). |
| 838 - General-NEPA Compliance | #315-4 | The planning team has not worked cooperatively with interested groups; as an example, trona occurs on approximately 10% of the RMP area, yet there hasn't been a single cooperative meeting between the BLM and trona operators (or any other mining industry group for that matter). BLM should hold meetings with interested groups and consider their input in drafting the alternatives. | See Chapter 5 for details of public involvement, consultation, and coordination. Industry groups do not have cooperating agency status and "jurisdiction by law" but are welcome to participate as members of the public. |
| 838 - General-NEPA Compliance | #315-5 | Publication of this RMP seems to be rushed. There was no information and no public participation for years and then suddenly, the RMP and Draft EIS went to public notice. It is interesting timing considering the National Environmental Policy Act, Implementing Regulatory Revisions Phase 2 was published in the Federal Register on | The NEPA revisions would only apply if the EIS was begun after their publication. See Executive Summary: "Because the EIS was begun prior to September 14, 2020, the CEQ's 1978 NEPA regulations govern the preparation of this EIS. Any references to the CEQ's NEPA regulations at 40 CFR 1500-1508 refer to the 1978 regulations in effect prior to the 2020 update." |

|---|---|---|---|
| | | July 31, 2023. This RMP and DRAFT EIS should be paused to meet and incorporate those newly proposed NEPA revisions. | |
| 838 - General-NEPA Compliance | #315-6 | The RMP is flawed at the outset, both substantively and procedurally. Most of the baseline data is at least a decade old. The BLM doesn't even include recent EIS information for mineral development. The RMP completely ignores sage grouse even though the agency is aggressively working to expand sage grouse areas and protections, many of which will directly impact the RMP area. The RMP explicitly disregards the wild horse management issue. The decision to ignore these matters is inconsistent with NEPA and the BLM planning regulations. The RMP should be paused until these important matters can be included in this RMP. | See Chapter 3 (page 3-1) regarding adequacy of baseline data for comparative analysis purposes. Sage grouse Land Use Plans are being addressed under separate ongoing Amendments (see Sections 1.3 and 2.2.5). Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern and are subject to the 2013 Consent Decree are being addressed under a separate ongoing RMP Amendment and EIS (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." |
| 838 - General-NEPA Compliance | #315-7 | Given the numerous concerns with the process used to draft and submit the proposed RMP for public comment, WMA respectfully requests the following: * The BLM should withdraw the draft RMP and expand the opportunities for the public, stakeholders, and cooperating agencies to voice their concerns. * The BLM should complete its planning for sage grouse and wild horses and incorporate those matters into the RMP and Draft EIS. * The BLM should take that additional public input and incorporate it into a new recommended alternative that recognizes existing rights AND meets the objective of multiple uses and sustained yield. * Once the updated draft RMP is published, the BLM should open up a public comment period for at least 180 days. 90 days is simply not enough to digest a document of this magnitude and complexity. | See Chapter 5 for details regarding opportunities for the public, stakeholders, and cooperating agencies to voice concerns and be involved in the planning process. See Sections 1.3 and 2.2.5 regarding sage grouse and wild horses being addressed under separate ongoing processes. See also Sections 3.9 and 4.9 for "Affected Environment" and analysis of "Environmental Consequences" for Wild Horses and Burros not subject to the 2013 Consent Decree. The RMP is in compliance with FLPMA and will recognize valid and existing rights (see Section 1.4). |
| 838 - General-NEPA Compliance | #342-2 | Although billed as an "open house," Wednesday's meeting did not accept any input or comments from those most deeply affected by the proposed plan and the BLM's preferred alternative: the public. Castigating the public's input as "misinformation" and then refusing to take any input in person is not how we do things in Wyoming. In itself, this warrants a withdrawal of the Draft Plan and a restart of the process. | Public involvement has been part of the RMP process from the start. See chapter 5 for details of public involvement opportunities |
| 838 - General-NEPA Compliance | #345-3 | Two key requirements of NEPA are that agencies consider alternatives and that the public officials and citizens are involved in the decision-making process. NEPA established a Council on Environmental Quality (42 US Code[USC] 4321 t19701), which issued regulations for implementing provisions of the law (40 Code of Federal Regulations [CFR] 1500-1508 [1970]). In these regulations is the requirement that federal agencies consider and use local planning documents during their decision making and planning efforts (40 CFR 1s06.2 [1978] and 43 CFR 1610.3-2(a) [1983]). | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 838 - General-NEPA Compliance | #345-5 | According to the Sweetwater County Federal Lands and Resource Plan dated June 7,2022 and certified through Resolution 2022-06-CC-01: "Over 73 percent of the land within Sweetwater County is owned by the United States and managed by several federal agencies, including the Bureau of Land Management (BLM), U.S. Forest Service, U.S. Fish and Wildlife Service, and the Bureau of Reclamation...Due to the County historical use of these lands and the accompanying resources, decisions made by federal land agencies directly impact County residents and the economy. With respect to "federal land management," the County continues to support "multiple-use" management practices, public land resource use and development, and improved public and private access to and across public lands. The abundance and availability of natural resources within the region provide a variety of economic development opportunities including, but not limited to, mining and mineral production, gas, oil, trona, potash, lithium, and uranium development; timber produdion; agriculture and grazing; and tourism and outdoor recreation." BLM must better align with local natural resource plans. | See updated Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2. |
| 838 - General-NEPA Compliance | #345-7 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #345-8 | Furthermore, the County strongly urges BLM to review all of the local county natural resource plans (Fremont, Lincoln, Sweetwater, Sublette and Uinta Counties) affected by this decision and coordinate with the state and local county cooperating agencies that work, recreate and earn a livelihood in this area. Only then can the agency develop a preferred alternative that is consistent with those local plans as allowed by law and provides for a balance between conservation and protection and economic growth. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #348-3 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #348-4 | Furthermore, the County strongly urges BLM to review all of the local county natural resource plans (Fremont, Lincoln, Sweetwater, Sublette and Uinta Counties) affected by this decision and coordinate with the state and local county cooperating agencies that work, recreate and earn a livelihood in this area. Only then can the agency develop a preferred alternative that is consistent with those local plans as allowed by law and provides for a balance between conservation and protection and economic growth. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #361-1 | The Agency needs to consider the impact of the recent change in preferred alternative from the 2020 version to the 2023 preferred alternative on the local cooperators and their stakeholders and fully consider their input in the important planning process. | Impacts of the four alternatives are analyzed in detail in Chapter 4. See section 2.2.3 regarding Alternatives Development Process and Sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

|---|---|---|---|
| 838 - General-NEPA Compliance | #363-2 | Furthermore, the National Environmental Policy Act (NEPA) establishes a national policy and goals for the protection, maintenance, and enhancement of the environment. Two key requirements of NEPA are that agencies consider alternatives and that the public officials and citizens are involved in the decision-making process. NEPA established a Council on Environmental Quality (42 US Code [USC] 4321 [1970]), which issued regulations for implementing provisions of the law (40 Code of Federal Regulations [CFR] 1500-1508 [1970]). In these regulations is the requirement that federal agencies consider and use local planning documents during their decision making and planning efforts (40 CFR 1506.2 (1978] and 43 CFR 1610.3-2(a) (1983]). | Refer to Appendix E for a list of all laws and regulations guiding this DEIS. See section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3), Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #363-4 | BLM must better align with local natural resource plans. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 838 - General-NEPA Compliance | #400-2 | Two key requirements of NEPA are that agencies consider alternatives and that the public officials and citizens are involved in the decision-making process. NEPA established a Council on Environmental Quality (42 US Code [USC] 4321 (19701), which issued regulations for implementing provisions of the law (40 Code of Federal Regulations (CFR] 1500-1508 [1970]). In these regulations is the requirement that federal agencies to consider and use local planning documents during their decision making and planning efforts {40 CFR 1506.2 (1978] and 43 CFR 1610.3-2(a) [1983)). | See section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3), Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #400-3 | BLM must better align with local natural resource plans. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2. |
| 838 - General-NEPA Compliance | #400-4 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | See section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3), Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #537-2 | This Draft EIS doesn't look at Travel Management or Grouse Management. However, both of these will follow as a "connected action". It is important to see the bigger picture as to which roads will be open or closed and what the restrictions the grouse management will bring. With out the travel plan and grouse plan, the BLM cannot outline the full impacts. | Travel and transportation management provide implementation level actions outside the scope of this land use planning document. Greater sage-grouse management is being analyzed under a separate amendment process. See Sections 1.3 and 2.2.5. |
| 838 - General-NEPA Compliance | #539-4 | Appendix N of Volume 2 outlines the economic analysis of the plan. However, this analysis is lacking and has failed to take a "hard look" at what economic disruption the management prescriptions in this plan would have on the livestock industry. For example, as discussed supra, grazing could be reduced by 20% in riparian areas within the ACEC if the BLM determines an allotment is not meeting the BLM's rangeland health standards, or due to restrictions related to the ACEC itself, AUMs or rangeland improvement projects could be hamstrung which could significantly affect our grazing operations and these kinds of affects were not looked into under Alternative B. We attest that significant reductions in AUMs would run our operation out of business and a further economic analysis should be done under the circumstances presented under Alternative B. | In addition to the complete technical socioeconomic report included in Appendix N, Chapter 4.22 contains a full analysis of the various management actions proposed under each alternative (including livestock grazing). |
| 838 - General-NEPA Compliance | #539-17 | Sweetwater County believes that the objectives of special designations can be met by well-planned and managed development of natural resources. For this reason, special designations established in a plan need to be based on identified need and supported by verifiable scientific data available to the public. A special designation must show that protection cannot be provided by other means and that the area in question is truly unique compared to other area lands. The area classified shall be the smallest area necessary. | Existing special designations are discussed in Chapter 3.22 and analysis for all four alternatives, including all proposed special designations can be found in Chapter 4. Management actions for special management areas are outlined in MA#7300-7348. |
| 838 - General-NEPA Compliance | #539-18 | Inconsistencies with Sweetwater County Land Use Plan Under Volume 1, Chapter 5, of the RMP/DEIS, the BLM explains how it completed coordination, consultation, cooperation, and consistency. These are all separate and different things under the NEPA regulations and FLPMA. For purposes of this comment letter, we will focus on how the BLM has failed to keep its preferred alternative "consistent" with the Sweetwater County Resource Management Plan ("CRMP") as required under FLPMA. | See Section 2.2.3 regarding BLM compliance with NEPA and CEQ compliance in developing alternatives for the DEIS, including seeking public input and analyzing reasonable alternatives. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #551-1 | I am the representative for the Wyoming House of Representatives for House District 48 (Rock Springs), a state elected official for purposes of the Federal Land Policy Management Act of 1976. Under Section 202(c)(9) of FLPMA, the Secretary of the Interior, in developing a land use plan, is to "provide for meaningful public involvement of State and local government officials, both elected and appointed, in the development of land use programs, land use regulations, and land use decisions for public lands, including early public notice of proposed decisions which may have a significant impact on non-Federal lands. Such officials in each State are authorized to furnish advice to the Secretary with respect to the development and revision of land use plans, land use guidelines, land use rules, and land use regulations for the public lands within such State and with respect to such other land use matters as may be referred to them by [the Secretary]." 43 U.S.C. §l 712(c)(9). | See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #551-2 | The Secretary, acting through the U.S. Bureau of Land Management ("BLM"), has not adequately consulted state and local government officials with respect to its preferred Alternative B of the BLM's proposed Resource Management Plan for the Rock Springs district. For several years the BLM has led state and local officials to believe that its preferred alternative would be Alternative D, which, although not perfect, does allow for multiple use of public lands. Prior to August 18, 2023, state and local officials had no reason to believe that the BLM was seriously considering Alternative B. As a result, state and local officials, including myself, have not had opportunity to have meaningful involvement with respect to the development of Alternative B. As result, I request that the BLM withdraw the proposed RMP and re-engage in a meaningful consulting process with state and local governmental officials and stakeholders. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #789-1 | The BLM has been working on this draft RMP since 2011, 140 months, and to offer a 150-day public comment period for residents, cooperating agencies and stakeholders to digest and respond to a document of this size, although better than 90-days, is simply unreasonable. | Public involvement has been part of the RMP process. See chapter 5 for details of public involvement opportunities |
| 838 - General-NEPA Compliance | #4026-10 | Chapter 4.2.2 Availability of Data and Incomplete Information. In addition to the incomplete data elements listed (soils, geohydrological, range condition, forest resources), I feel the BLM needs to also add there are incomplete data on potentially significant cultural sites, potentially significant paleontological resources, critical wildlife migration routes, rare plant populations, and a comprehensive spring and wetland inventory. At the present time, intensive inventories appear to occur on a project-by-project basis relating to specific surface-disturbing actions that can be well into the planning and design phases. The absence of data makes it very difficult when it comes to accurate resource management decisions, and can result in an inefficient use of both staff time and money. This lack of resource data is a very good reason Alternative B should remain the preferred alternative. | Section 4.2.2 presents impacts for Socioeconomics from each of the four alternatives analyzed. A summary of resources existing in the field office can be found in Chapter 3 (Affected Environment), with analysis for each of those resources provided in Chapter 4 for each of the four alternatives analyzed. |
| 838 - General-NEPA Compliance | #8914-1 | This RMP violates the National Environmental Policy Act. The purpose of NEPA is to ensure that environmental factors are weighted equally when compared to other factors in the decision-making process undertaken by federal agencies and to establish a national environmental policy. There is nothing equal when you factor in Wyoming's economy, citizens, industrial base, livestock industry, and ability to access and use the lands within Wyoming borders. | The DEIS is in compliance with NEPA and FLPMA (see Section 1.4 "Planning Criteria"). Additionally, Chapter 3 of the DEIS provides a summary of existing resource conditions, Chapter 4 provides an analysis for all resources for each of the four alternatives, and Chapter 2 provides an in-depth list of every management action proposed for each of the four alternatives. See Chapter 5 for a information about public involvement and consultations, and Chapter 1.3 for the planning criteria. |
| 838 - General-NEPA Compliance | #9684-7 | Sweetwater County Weed and Pest District appreciates the BLM for considering and including the impacts of invasive and noxious weeds and pest into their Rock Springs RMP. We would recommend that Weed and Pest Districts be included as cooperating agencies in resource management planning. We are not a department of the county and, like conservation districts, we are special districts with boundaries that match those of the county. Our purpose is to help with collaborative invasive species management activities within our districts, which includes the public lands. Sweetwater County Weed and Pest is a partner on projects within the RSFO. Sweetwater County Weed and Pest currently has a noxious weeds agreement for treatment on lands within the RSFO. | The BLM will consider whether to invite Sweetwater Weed and Pest to participate as a Cooperating Agency for this RMP and other actions in the field office. |
| 838 - General-NEPA Compliance | #9792-27 | The BLM's proposed ROW Exclusion area violates the Sublette County Federal & State Land Use Policy: "Discourage the prioritization of any one land use until after the impacts to other multiple uses are fully quantified and mitigated. Any proposal to close federal lands to a multiple use must be approved by Sublette County after a public hearing." | See Glossary for a definition of a Right-of-way exclusion area. Also, see Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 838 - General-NEPA Compliance | #9792-28 | Alternative B does not comply with many other portions of the Sublette County policy, including any provision of the county policy pertaining to rights-of-way and corridors, as well as provisions for designations of ACECs, recreational uses, visual resource management, fire management, forest, rangeland, and vegetation management, cultural, historic, geological, and paleontological resources, energy, mining and mineral resources, wildlife, predator control, socioeconomics, and livestock and grazing. The BLM should not use Alternative B as its preferred alternative since it fails to comply with these provisions in the county policy. | See glossary for definitions of special management designations such as ACEC and for right-of-way exclusion areas. See section 5.1.2 "The interdisciplinary team reviewed county land use plans to ensure consistency" (pg. 5-3), Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 838 - General-NEPA Compliance | #9792-35 | Redefine "disruptive activities" from the DEIS definition that includes provisions that declare "an activity is 'disruptive' if the activity would require people and/or the structure or activity to be present in these habitats for a duration of more than one hour during any one 24-hour period during the applicable season in the site-specific area." Replace with the definition used in the Green River ROD & RMP, October 1997: "Disruptive pertains primarily to human presence and related activities that may cause displacement of or excessive stress to wildlife during critical life-cycle periods." | This definition was redefined in the 2015 and 2019 Greater Sage Grouse Amendments that amended the 1997 Green River RMP. |
| 838 - General-NEPA Compliance | #9792-36 | Redefine "Surface Disturbance" from the DEIS's long definition that includes short-term removal of vegetation. Replace with the definition used in the Green River ROD & RMP, October 1997: "Defined as human activities, including traffic and motorized activities often associated with surface disturbance activities that affect wildlife species, particularly in crucial ranges." | This definition was redefined in the 2015 and 2019 Greater Sage Grouse Amendments that amended the 1997 Green River RMP. |
| 838 - General-NEPA Compliance | #9793-3 | How the BLM's glossary defines words will dictate how resource use is restricted. For example, Alternative B proposes to "prohibit livestock grazing in big game parturition habitat during the birthing season." The glossary defines big game to include elk, deer, bighorn sheep, moose and pronghorn. That means that livestock grazing is prohibited even in pronghorn antelope fawning habitat during the birthing season, so no domestic sheep or cattle on grazing allotments through June 30. Really? Did the BLM only mean to apply this term to specific designated birthing areas and only for certain big game species like elk, or only in certain designated areas? As written, the | Glossary updated to clarify definition of 'parturition'. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | document would prohibit any livestock grazing on most of the district through June 30. This would substantially impact livestock producers, making them unable to use the AUMs the BLM states are authorized under this alternative. This outcome is not disclosed in the DEIS. Alternative B says the BLM will "Seasonally close vehicular travel in crucial and important wildlife habitats and during crucial and important periods (big game crucial winter ranges 11/154/30, deer parturition areas 5/1-6/30, elk calving areas 5/1-6/30, moose calving areas 5/1-6/30, raptor nesting areas 2/1-7/31)." Again, did the BLM mean vehicle closures would only apply in certain designated birthing areas, or wherever in the district these areas occur? Right now, the document state's that it's wherever in the district these areas are located. When all these restrictions are overlaid, it would close a large portion of the RSFO to vehicular traffic for a large part of the year. There are hundreds of raptor nests scattered throughout the sagebrush ecosystem when all raptor species are considered, so vehicles would be unable to use these areas from February 1 to August 1, under the plain reading of BLM's plan. That information isn't readily disclosed to the public in the DEIS. The BLM defines "disruptive activities" as activities that "would require people and/or the structure or activity to be present in these habitats for a duration of more than one hour during any one 24-hour period during the applicable season in the site-specific area." It's important to note that this definition can apply to any use of public lands - not just energy development. So when the BLM proposes (Page 2-69) to "Prohibit surface disturbing or disruptive activities on big game crucial winter ranges, parturition areas, migration corridors and transitional habitats, as identified by WGFD" it means any human use for more than one hour in a 24-hour period within these areas would be prohibited. That's what the DEIS says, meaning: People would be prohibited from camping within these habitats during that time. Sheepherder camps would be prohibited. Anything that involved people being present for more than one hour would be prohibited. But this time the BLM noted the restriction would apply in these habitats as identified by the Wyoming Game & Fish Department. But the BLM did not include maps of these areas in the DEIS (another significant failure by the federal agency). By not providing the maps, BLM is not providing a fair and comprehensive document for our assessment. | |
| 838 - General-NEPA Compliance | #9846-2 | Definition of words/phrases are not provided or explained-ie “surface disruption,” “organized event,” “sustainability,” etc. | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. |
| 838 - General-NEPA Compliance | #9846-5 | TP defines “animal damage control” as “The control of animals that are causing economic losses to agriculture, damage to property, or hazards to human health. Such control usually results in the killing of the offending animal(s).(See also Wildlife Services.)” TP definition misinforms rather than states facts. USDA Wildlife Services practices “integrated wildlife damage management” using goth lethal and non-lethal control and deterrence methods. For FY 2022, approximately 21.5 million animals causing damage or threatening to cause damage were encountered by the agency; dispersed almost 20 million of these animals unharmed (91.4 %), while lethally removing 8.6 %. | Glossary terms reviews and updated as needed per APHIS consultation |
| 838 - General-NEPA Compliance | #10452-1 | What is equally as evident, however, is that until this draft RMP was released with Alternative B as the "preferred" option, those involved in this process viewed Alternatives B and C as "bookend" outliers of extremes. Rather, Alternative D was the work of negotiation, compromise, data driven analysis to effectuate balanced, sustainable conservation that placed a balanced value on cultural and historical artifacts, plant-life, fish and wildlife with human need for use and expansion of resources, including mining, maintenance and construction of pipelines, roadways and other surface use to co1111ect resources, recreation and use. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #10468-1 | BLM’s issues of the preservation driven “preferred” Alternative B which blatantly disregards stakeholder work, comment and assistance in direct contradiction to Chapter 5 “consultation and coordination,” | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #10468-6 | Rather than honor a decade worth of cooperation, work and development of a balanced approach, Alternative D, the BLM has chosen to issue this draft RMP with a direct, haphazard, impractical and insincere preference of Alternative B. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13032-1 | The purpose and need as defined by the BLM in the Draft RMP Amendment does not align with mandated laws which govern the BLMs authority. In truth it constitutes a blatant abuse of authority and discretion. | The BLM's purpose and need for the Rock Springs RMP revision is provided in Sections 1.2.1 and 1.2.2. See also Appendix E. |
| 838 - General-NEPA Compliance | #13064-1 | The Committee does not understand how the United States Secretary of Interior has identified Alternative B as the preferred alternative when it was developed with minimal, if any, cooperating agency input or public comment, and was completed within one week. At this time, the Committee does not support one of the other alternatives, but the Committee recognizes that the cooperating agencies worked tirelessly on Alternative D to provide a resource-management approach that would best serve Wyoming and its competing interests. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13210-23 | 23. The BLM has not meaningfully met with cooperating agencies in over two years. The task force requests that the BLM reengage with the Rock Springs RMP cooperating agencies and hold regular meetings between draft and the completion of the Record of Decision. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13217-1 | After some research I see the Select Committee on Federal Natural Resource Management (Committee) of Wyoming heard testimony during the October 6, 2023 meeting in Casper from a retired BLM Rock Springs Field Office employee. The retired employee testified that Alternatives B and C were both developed in one week, while Alternative D was developed over twelve years with significant input from cooperating agencies. The Committee does not understand how the United States Secretary of Interior has identified Alternative B as the preferred alternative, and neither do I, when it was developed with minimal, if any, cooperating agency input or public comment, and was completed within one week. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13287-1 | For example, wilderness inventories have identified lands with wilderness characteristics that do not qualify for protection solely because they are consolidated into 640-acre units, and which would fully qualify for wilderness (and Wilderness Study Area) protections if they were in consolidated federal ownership. A National Conservation Area proposed for the Red Desert (Attachment 1) includes checkerboard lands, whose management would be complicated by intermixed private lands and minerals. Sage grouse Priority Habitat Management Areas exist in checkerboard lands, and it is difficult to apply the full level of prescribed protections to these checkerboard portions due to fragmented land ownership patterns. Wildlife migration corridors cross the checkerboard, and their conservation is impeded by the presence of private inholdings. Alternative B considers providing public access to public lands across private property at the landowner's request (DEIS at 2-109); if access is to be granted only on a request basis, it should be at the public's request rather than the landowner's. | MA#6000 on pg. 2-109 addresses access to public lands, including private landowner requests for access across public lands. |
| 838 - General-NEPA Compliance | #13287-10 | Thus, NEPA's mandate is that all federal agencies analyze the likely effects of their actions, as well as address the potential alternatives. "Agencies are to perform this hard look before committing themselves irretrievably to a given course of action so that the action can be shaped to account for environmental values. NEPA § 102(2)(c) requires the agency to consider numerous factors [including] irreversible commitments of resources called for by the proposal." Sierra Club v. Hodel, 848 F.2d 1068 (10th Cir. 1988) (rev'd on other grounds)(emphasis added). NEPA provides procedural protections for resources at risk by requiring analysis of impacts before substantial decisions are made that set development in motion. See Conservation Law Foundation v. Watt, 560 F. Supp. 561, 581 (D. Mass. 1983), aff'd by Massachusetts v. Watt, 716 F. 2d 946 (1st Cir. 1983). While the Draft EIS provides lists of different categories of impact by resource, it fails to quantify the direct and cumulative impact of the multiple types of impacts authorized under the plan. See, e.g., effects on water quality at 4-33. It is not enough to provide a laundry list of impacts; cumulative effects on individual resources must be analyzed and disclosed. | The DEIS discloses cumulative impacts, as discussed in the Executive Summary "Environmental Consequences" (pg. ES-6). These cumulative impacts are detailed in Appendix T. |
| 838 - General-NEPA Compliance | #13287-26 | The direction for riparian areas under Alternative D is a violation of BLM regulations, because it requires lands to meet or move toward meeting Land Health standards within 10 years; if lands are not currently meeting or moving toward these standards, then corrective action must be taken prior to "the start of the next grazing year" (not within 10 years), under federal regulations. 43 CFR § 4180. | The proposed RMP will be in compliance with FLPMA and all other applicable laws, regulations, and policies (see Section 1.4). See also Appendix E. |
| 838 - General-NEPA Compliance | #13330-8 | * MA # 4430: Sweetwater County Farm Bureau prefers alternative A. The least adequate is alternative B to "prohibit surface occupancy within one mile of occupied and historic raptor nests and associated feeding grounds." This is excessive restriction of multiple use. Including "historical" raptor nests is especially ambiguous and sets a dangerous precedent to restrict access of a changed habitat with no current proof of viability. Alternative B is grasping at straws to restrict access on inaccurate (old) data incongruent with the science of present-day raptor sites. | Proposed management actions for raptors are provided for each alternative in MA#4428-4434. |
| 838 - General-NEPA Compliance | #13353-6 | The most recent Sublette County policy was adopted by motion and approval on 9/7/20211, nearly two years before the release of the Draft RMP/DEIS, and over ten years after the "the scoping period [which] began on February 1, 2011 and ended on April 4, 2011" per page ES-7 of the Draft. Under the "Needs" statement (page ES-2), the document reads, "The need for revising the Green River RMP (1997) is the result of considerable changes withing the planning area…new data has become available, new policies established, and old policies revised." Surely our 2021 policy adoption should fall under the "new policies established, and old policies revised" that are purported to be the causal agent, or "need," for the new RMP. The Federal Land Policy and Management Act of 1976 ("FLPMA") specifically directs the BLM to coordinate with state, local, and tribal governments to assist in resolving inconsistencies between BLM's land-use plans and local land-use plans. However, there is no acknowledgement in the Draft of our updated land use plan. In fact, on page 1-6, the document refers to the Sublette County Federal and State Land Use Policy of 2009. As such, we feel that the BLM has not, "to the maximum extent," determined that the plan is consistent with our 2021 Federal and State Land Use Policies. We urge the BLM to properly review such issues! | See updates to Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 838 - General-NEPA Compliance | #13353-14 | The 2023 Draft RMP/DEIS Glossary of Terms (page GL-30) includes numerous outdated de?nitions that have been revised since the Draft RMP/DEIS was ?rst written. Consistency and clarity are important and de?nitions matter in the Record of Decision. Please consider revising the 2023 Draft RMP/DEIS Glossary of Terms to re?ect nationally accepted best practices. Speci?cally, please update all terms related to wildland ?re and incident management in accordance with the approved de?nitions contained within the NWCG Glossary of Wildland Fire, PMS 205. The NWCG Glossary of Wildland Fire provides an extensive listing of approved terms and de?nitions used by the NWCG community. | Glossary terms were reviewed and updated as needed per BLM wildfire policy. |

|---|---|---|---|
| 838 - General-NEPA Compliance | #13402-1 | We strongly urge the BLM to abandon the proposals to eliminate all wild horses in the Salt Wells and Great Divide Basin Herd Management Areas (HMAs) and to sterilize wild horses in the White Mountain HMA. The EIS fails to (1) take a hard look at the cumulative negative impacts of the proposed actions on wild horses in Wyoming, (2) consider and incorporate prevailing public opinion which opposes these actions and (3) consider reasonable alternatives to address claimed concerns regarding the current wild horse populations." From a petition from The Cloud Foundation | Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate RMP Amendment (2023) (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." |
| 838 - General-NEPA Compliance | #13415-1 | The Committee does not understand how the United States Secretary of Interior has identified Alternative B as the preferred alternative, and neither do I, when it was developed with minimal, if any, cooperating agency input or public comment, | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13446-2 | According to the USDA 2021 ranking statistics, Wyoming ranks nationally as number two for lamb and wool production respectfully and ranks number four overall. For all cattle, Wyoming ranks 23. These alone are strong contributors to the national and international textile and food production pipelines and should not be so easily dismissed.(https://www.nass.usda.gov/Statistics_by_State/Wyoming/Publications/Annual_Statistical_Bulletin/WY-2021-Bulletin.pdf) | Livestock grazing management impacts are analyzed in Section 4.16 and socioeconomic impacts are analyzed in Section 4.22. |
| 838 - General-NEPA Compliance | #13514-1 | this is 2024 the the numbers and data are from 2012 and earlier | See Chapter 3 (page 3-1) regarding adequacy of baseline data for comparative analysis purposes. |
| 838 - General-NEPA Compliance | #13521-1 | BLM failed to follow proper procedures in the implementation and choosing of plans for this proposal without consulting state agencies, boards, or committees before the final choice of plans was made. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13527-5 | Co-Stewardship: We urge BLM to include direction in the final plan to foster collaboration between BLM and Tribal Nations in the stewardship of their homelands. | BLM has conducted Nation-to-Nation consultation with a variety of Tribes throughout the RMP planning process. See Chapter 5. |
| 838 - General-NEPA Compliance | #13542-2 | Cooperative federalism-the BLM's preferred alternative overrides principles of cooperative federalism and asserts BLM authority over matters already designated by law to other expert agencies both in state and federal governments. The BLM is a prominent land and use management agency. However, the Wyoming Department of Environmental Quality's Land Quality, Air Quality, Water Quality, and Hazardous Waste Divisions, and the US EPA have specific legal authority over several matters that the BLM is seeking to regulate in a very different way. This creates unnecessary confusion and the potential for contradictory regulations for the same activities. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 regarding coordination and cooperative efforts with Wyoming DEQ and US EPA. |
| 838 - General-NEPA Compliance | #13542-5 | Section 1.1. 1-1 Table 1-1 acreages do not match Table 1 in ES. | Table 1 in Executive Summary compares land use restrictions and allocations across all four alternatives. Table 1-1 in Section 1.1 shows land and mineral ownership and administrative jurisdictions within the Rock Springs planning area. |
| 838 - General-NEPA Compliance | #13542-7 | Section 1.3. Alternatives A, B, C, and D. 1-3 Planning Issues notes that Greater sage grouse Priority Habitat Management Areas and General Habitat Management Areas and management actions including mineral development restrictions under earlier amendments are outside the scope of this planning effort and are not analyzed. Excluding these items in the analysis contradicts the expressed purpose and need for the amendment. Moreover, these are changes from Alternative A that represent additional uncertainty as to the impacts of Alternatives B, C, and D that the agency has not adequately analyzed or disclosed to the public as required by the National Environmental Policy Act (NEPA). More restrictions on mineral development and rights of way are very possible in the future and represent more risk to mineral development. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. See Planning Criteria in Section 1.3. |
| 838 - General-NEPA Compliance | #13542-56 | 4.2.3 Analysis Assumptions 4-3 When BLM refers to "expected trends, expected demands, and the likelihood of resource development" are these statistically significant and will the research be shared publicly? Please provide the method with which these will be determined. | Examples of trends, demands, and potential development are explained in Section 4.2.3 and are referenced in the analysis for each alternative when utilized, provided in the Appendices (Ex. Appendix N) or are provided in the Refenced in the 'Literature Cited' section. |
| 838 - General-NEPA Compliance | #13542-57 | 4.2.3 Analysis Assumptions 4-3 BLM should address employee onboarding and retention issues. The Rock Springs BLM office currently cannot fully implement the current RMP which is less stringent. Additional staff will be necessary to implement any new Alternatives that are put in place. How does BLM plan to address this issue? | Staffing of BLM personnel is outside the scope of this Resource Management Plan revision. See Section 1.3 for Planning Criteria of this land use planning process. |
| 838 - General-NEPA Compliance | #13542-94 | Appendix T. T.1.3. Cumulative Impacts by Resource. T-7 Estimations of future BLM and non-BLM lands uses 2014 Wyoming statewide data from the 2014 National Emissions Inventory (NEI) Data released by the EPA. This data is 9 years old now and newer data should be used. The emissions inventory is required annually for all Title V facilities that would have the largest amounts of emissions. The NEI is released by the EPA every 3 years, so there is a 2017 and a 2020 dataset that could have been used in the analysis instead of 2014 data. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | The air quality analysis baseline data is adequate for analysis purposes to compare the four alternatives. This EIS is a not a reporting document for total emissions, but rather a comparative analysis for proposed BLM management actions. |
| 838 - General-NEPA Compliance | #13542-95 | Appendix T. T.1.3. Cumulative Impacts by Resource. T-7 Trona and soda ash manufacturing is not included in the list of activities occurring the RSFO that were compared to the NEI 2014 data; however, all trona mines/soda ash manufacturers are major sources and have Title V operating permits. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | Trona emissions are included in Table T-7 of Appendix T. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13542-96 | Appendix T. T.1.3. Greenhouse Gas Emissions. T-13 The source of the Greenhouse Gas Emissions data is 2018. These are reported annually, and newer data should be used in the analysis. Please revise and update the agency's analysis to include the latest data and disclose the same to the public. | The air quality analysis baseline data is adequate for analysis purposes to compare the four alternatives. This EIS is a not a reporting document for total emissions, but rather a comparative analysis for proposed BLM management actions. |
| 838 - General-NEPA Compliance | #13542-97 | Appendix T. T.1.3. Greenhouse Gas Emissions. Table T-7. T-16 "Trona Transport" needs to be defined. | Appendix T has been clarified for 'trona transport' |
| 838 - General-NEPA Compliance | #13564-5 | The data collected and used to calculate the economic impacts of this RMP ranges up to 15 years old and does not reflect the current economic environment of the area. Additionally, the agency's preferred choice does not reflect the community, as it eliminates the largest amount of industry. This comes at a time when the US is under unprecedented inflation rates that are affecting everyone across the country on all levels. It is vital that the BLM focuses on using data that is relevant to the current state of the community to adequately determine the over all impact of each Alternative. The implementation of Alternative B puts the economic state of the surrounding communities into disarray. Furthermore, this impacts the entire state in the long term, as tax dollars from extraction industries under the RMP are collected and distributed among the state with the highest percentage going to the counties. County and City taxes are also collected from tourists visiting the area for its resources and recreation. The loss of this income can impact community welfare. | "The socioeconomic model is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. Socioeconomic analysis is covered in Appendix N, including data assumptions and the timeframe of the analyses. See Chapter 3 (page 3-1) regarding adequacy of baseline data for comparative analysis purposes. |
| 838 - General-NEPA Compliance | #13571-1 | The Current RMP was initiated in 2011. Most of the data and analysis being used is from 2013 (pg. ES-1) Other data used from earlier dates can be found through out the RMP. Up to date and current Data should be used before finalization of the RMP. Using outdated data (greater than 10 years in some cases) indicates the RMP is not accurate and therefore not complete. | See Chapter 3 (page 3-1) regarding adequacy of baseline data for comparative analysis purposes. |
| 838 - General-NEPA Compliance | #13574-1 | MA #4421 Alternatives C and D have language that meets big game habitat needs while providing specific dates which allow land users to plan their activities, and on a case-by-case basis apply appropriate mitigation practices and obtain exceptions where no undue impacts to big game will occur. Big game migration corridors also need protections and their locations are a matter of research and on-going monitoring by WGFD. Accurate evaluation of the impact of these migration corridors is very difficult until WGFD releases the latest migration corridors map. | Impacts to wildlife and fisheries are analyzed in Section 4.7, including acknowledgement that big game habitat will be managed in coordination with WGFD. See also proposed Big Game Migration Corridors ACEC actions at 7555 through 7562. |
| 838 - General-NEPA Compliance | #13585-2 | The Federal Land Policy and Management Act ("FLPMA") requires the BLM to "coordinate the land use inventory, planning, and management activities of or for [public] lands with the land use planning and management programs ... of the States and local governments within which the lands are located." 43 U.S.C. § 1712(c)(9). As part of this coordination, the BLM is to provide "meaningful public involvement of State and local government officials, both elected and appointed, in the development of land use programs, land use regulations, and land use decisions for public lands." Id. This includes the requirement to "develop resource management plans collaboratively with cooperating agencies" and with"meaningful public involvement of other Federal agencies, State and local government officials." 43 C.F.R. § 1610.3-l(a)(4) - (5); see International Snowmobile Mfrs. Ass'n v. Norton, 340 F. Supp. 2d 1249, 1261-62 (D. Wyo. 2004). Local governments must be provided with an "opportunity for review, advice, and suggestion on issues and topics which may affect or influence other agency or other government programs." 43 C.F.R. § 1610.3-l(c). In addition, "Field Managers should also collaborate with cooperating agencies in evaluating the alternatives and developing a preferred alternative." BLM Handbook 1601, Section l.E.2.c; see id. at Section 9.2.7.3 ("Whereas the BLM must work with cooperators and other interested parties to encourage consensus on a preferred alternative "). The National Environmental Policy Act ("NEPA") and its implementing regulations also recognize the importance of cooperation with State and local governments early in the NEPA process. 42 U.S.C. § 433 l(a); 40 C.F.R. § 1501.8(a), (b)(l) (2020); see also Department oflnterior, 516 DM 11, Section 1l.4(C) (Dec. 10, 2020). During the long history of the RMP revision process, the BLM focused early on in the 2012 cooperating agency meetings on editing the BLM's proposed Alternatives Band C. See DEIS at Table 5-1. However, after these discussions and revisions were made, the BLM made few, if any, substantive changes to these Alternatives after 2013. Alternative B was conveyed as representing a bookend or placeholder versus being functional or reasonable. The BLM and the cooperating agencies instead put all their focus on developing Alternative D, which was referred to as the Balanced Alternative, starting in 2015. It was at this point that the focus of all cooperating agency meetings was on developing Alternative D and the analysis associated with that alternative. See e.g. Attach. 1, Field Manager Email (May 20, 2019). By April 3, 2017, the Field Manager had identified Alternative Das the agency's preliminary preferred alternative. Attach. 2, Field Manager Letter (April 3, 2017). When the Administrative DEIS was released to cooperating agencies at the end of 2019, Alternative D continued to be identified as the agency's Preferred Alternative and was the focus of cooperating agency comments. See Attach. 3, Field Manager Email (March 15, 2018). At the direction of the BLM, because Alternative B was communicated as not a realistic conclusion, and due to Alternative D becoming the agency's preferred alternative by at least early 2017, the cooperating agencies spent a majority of their time and efforts on working with the BLM to develop Alternative D, refine this alternative, and focus their comments on this alternative. Cooperators were explicitly directed not to focus on Alternative B. With this focus, the cooperators were not provided with meaningful participation in developing Alternative B since 2013, nor did Alternative B receive much attention after 2013. It has been about 10 years since the BLM or the cooperators spent any time on refining or | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | adjusting Alternative B, even after working on the environmental impact sections of the DEIS. The cooperators were not provided with meaningful involvement in developing Alternative B. See 43 C.F.R. § 1610.3-l(a)(4) - (5); see also International Snowmobile Mfrs. Ass'n v. Norton, 340 F. Supp. 2d at 1261-62. In addition, the cooperators had zero involvement with the selection of Alternative B as the Preferred Alternative. At one of the last cooperating agency meetings on July 14, 2020 (see DEIS at Table 5-1) and after receiving comments on the Administrative DEIS, the BLM continued to identify Alternative D as the Preferred Alternative. Then again on June 22, 2022, after two years of not meeting with cooperating agencies, the BLM provided an update on the status of review of the DEIS and amendments that were made to the Preferred Alternative D to reflect current BLM policy and direction. It was not until the release of the Proposed RMP and DEIS to the public a year later, in August of 2023, where Sweetwater County and other cooperating agencies were made aware of the BLM's dramatic shift in its preferred alternative to the most conservative of all alternatives, Alternative B, which was neither reasonable nor ready for submission. The dramatic shift from Alternative D to Alternative B negates the decade long collaboration and efforts of both BLM and cooperating agencies in developing the Alternative D. It further goes against BLM's own policy to work collaboratively with cooperating agencies in developing and working to reach consensus on a preferred alternative. See BLM Handbook 1601, Section l.E.2.c; see id at Section 9.2.7.3. All the cooperating agencies' focus, and commenting was directed to Alternative D and emphasized to them that this was going to be the Preferred. | |
| 838 - General-NEPA Compliance | #13585-3 | This shift in the preferred alternative was done behind closed doors, without cooperator involvement, and occurred after having limited communications with cooperative agencies for about three years. The BLM must take a step back and work collaboratively with the cooperating agencies in developing the Preferred Alternative for the Rocks Springs Proposed RMP between now and the release of the FEIS. It cannot continue to push forward in this new direction without providing meaningful involvement of the cooperating agencies in developing the Preferred Alternative. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13585-4 | The regulations currently state that to ensure NEPA reviews are conducted "as efficiently and expeditiously as practicable," an EIS must be completed within two years of issuing a notice of intent. 40 C.F.R. § 1501.10(b)(2) (2020). While the 2020 revisions to the NEPA regulations apply to processes started after September 14, 2020, the BLM could apply the new regulations to ongoing activities and environmental documents started before that date. 40 C.F.R. § 1506.13. In addition, the 2023 Fiscal Responsibility Act requires an EIS to be completed within two years. | See Executive Summary page ES-1 for explanation of the CEQ's 1978 NEPA regulations governing the preparation of this EIS because it was begun prior to September 14, 2020. |
| 838 - General-NEPA Compliance | #13585-5 | The BLM's 13+ years of work on this RMP revision far exceeds the BLM's newer mandates to complete an EIS within two years. It also places into question the currentness of the data and inventories the BLM relies on for this revision and environmental analysis. Most of the baseline data was from 2013 or earlier. DEIS at ES-1. Due to the length of time this RMP and DEIS have sat, the information relied upon is largely outdated and must be updated before the RMP goes final. 43 U.S.C. § 171 l(a); see also 40 C.F.R. § 1502.23 (2020). | See Chapter 3 (page 3-1) regarding adequacy of baseline data for comparative analysis purposes. |
| 838 - General-NEPA Compliance | #13585-44 | b. Inadequate Discussions and Mapping for Mileage of Roads Open/Closed/Limited Under the DEIS Throughout Chapter 4 the DEIS provides information on the mileage of roads either opened, closed, or limited under each Alternative. See e.g. DEIS at 4-25 (Alternative B's OHV management includes: ""12,831 acres open, 225,537 acres closed, and 3,367,576 acres limited to designated roads and trails, including 2,352 miles of open routes, 4,505 miles of closed routes, 67 miles of Limited routes (routes limited to either non-motorized vehicles (e.g., bicycles) or to foot traffic), and l 0.006 miles of transportation linear disturbance (routes that are not part of the BLM transportation network and would be identified for decommissioning)."). The BLM has continued to state that this language will be removed from the DEIS and that Travel Management Planning will occur at a later date. The County supports removal of this information considering that no lists of the proposed roads' status or mapping of roads has been provided in the DEIS. | Chapter 4 has been updated to remove the erroneous references to Travel Management results. |
| 838 - General-NEPA Compliance | #13585-45 | The County would also respond to the BLM's statements that travel management planning has not occurred. This is disingenuous and ignores the work the County completed and provided to the BLM on inventorying public roads, routes, and other linear features in the Rock Springs Field Office over the last decade. The BLM had also developed a range of alternatives for the proposed transportation network as is evidenced by the identification of numbers of miles open, closed or limited under each alternative in the DEIS. In fact, a travel management plan has essentially been developed but has not been fully released to the public at this time. | See updates to Chapter 4.17 removing erroneous text on route designations. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 838 - General-NEPA Compliance | #13585-46 | The County does not support the reduction of access as currently proposed by the Preferred Alternative B through road closures. In addition, the proposed closures may impact roads that the County claims title over. | See updates to Chapter 4.17 removing erroneous text on route designations. As stated in Management action 6607, see maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |
| 838 - General-NEPA Compliance | #13585-47 | Even if travel management planning will occur at a later date, the BLM is still required to "document [within the RMP] the decision-making process used to develop the initial network; provide[] the basis for future management decisions; and set[] guidelines for making transportation network adjustments throughout the life of the plan." BLM Handbook 8242 at p. 17 (Mar. 16, 2012). This includes assessing the current ground transportation linear feature database during the pre-planning stage and producing a "map of the known and existing network of transportation | As stated in MA#6607, see Maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route-specific travel and transportation management decisions are outside the scope of this DEIS. Route specific Travel and Transportation Management decisions are outside of the scope of this RMP and will be evaluated separately. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | linear features, includes modes of travel." Id. at 9, 17; BLM Manual 1626, Section 3.5 (Sept. 27, 2016). The BLM must provide maps of the existing transportation network with the DEIS and allow for the public and cooperating agencies to comment on OHV area designations in light of the existing network. In the DEIS's current state, it is impossible to determine the effect of the proposed OHV area designations where there is no baseline data provided or mapping of even the known existing roads, routes, and other linear features. | |
| 838 - General-NEPA Compliance | #13585-57 | NEPA further requires the BLM to discuss within the EIS any inconsistencies of a proposed action with State and local plans, and the extent to which such inconsistencies could be reconciled. 40 C.F.R. §§ 1502.16(a)(5), 1506.2(d). It is not enough for the BLM Field Manager to state that the consistency review will occur after the FEIS has been filed, because NEPA requires that the consistency discussion be included within the EIS. See Quechan Tribe of Ft. Yuman Indian Reservation v. US. Dep't of the Interior, 927 F. Supp. 2d 921, 946 (D. Cal. 2013) (BLM's consistency analysis was sufficient due to the FEIS containing a "General Plan Policy Consistency Analysis which addresses the consistency between the Project and local regulations and law."). | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See Section 2.2.3 regarding BLM compliance with NEPA and CEQ compliance in developing alternatives for the DEIS, including seeking public input and analyzing reasonable alternatives. |
| 838 - General-NEPA Compliance | #13585-58 | The DEIS currently lists the Local, State, and Federal Management Plans, but excludes Sweetwater County's Federal Lands and Resources Plan that was adopted by the County in June of 2022. DEIS at 1-6. While this County Plan is newer, the County did provide it to the Field Manager months before the Proposed RMP and DEIS was released to the public. In addition, the DEIS provides no discussion on how the Preferred Alternative Bis consistent or inconsistent with local, state or federal land use plans, let alone explain how it attempts to resolve any inconsistencies. | See updated Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 838 - General-NEPA Compliance | #13585-59 | The County provides the Sweetwater County Federal Lands and Resource Plan (Attach. 14) and the attached table (Attach. 8, Consistency Analysis Table) to explain ways in which the Preferred Alternative B is consistent or inconsistent with its local land use plans. Overall, Alternative B is largely inconsistent with Sweetwater County's Comprehensive Plan and the Federal Lands and Resources Plan. The County supports managing federal lands for multiple use and sustained yield, and specifically managed for the primary multiple uses of "domestic grazing, minerals, timber, wildlife, recreation, and rights-of-way." Sweetwater County's Federal Lands and Resources Plan at Section 2.1.1 (June 2022). The County also "discourages and vigorously opposes federal land use restrictions or special designations that eliminate multiple uses and constrain economic growth and activity." Id at Section 2.2.2; see id at Section 21.4.2 (County "opposes broad-scale ACEC classifications"). Instead, the County "encourages growth and development to continue in location that contribute to the economic social well-being of County residents." Sweetwater County Comprehensive Plan at p. 2.4 (2002). The Preferred Alternative B is replete with management actions that move away from multiple use, over utilizes special designations to restrict multiple use of public lands and deters economic growth and activity throughout the County. See DEIS at 4-258 - 4-260 (describing the extensive economic impact of Alternative B). | Please see proposed management actions for all four alternatives in Chapter 2, with analysis results for all four alternatives presented in Chapter 4 of the Draft EIS. Final proposed decisions will be presented in the Final EIS and authorized through a future Record of Decision. See updated Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 838 - General-NEPA Compliance | #13585-60 | Not only does Preferred Alternative B's management action overall conflict with the County's land use objectives and policies, but it also has the potential to conflict with the County's plans for development of its neighboring lands and resources. This is a serious concern within the Wyoming Checkerboard, where private, state and federal lands alternate section to section. For example, Alternative B's ROW exclusion area and VRM Class II designation neighbors the County's economic diversification project. Compare DEIS at Maps 2-18 and 2-22 with Attach. 9, Economic Diversification Project "SWC Industrial Development Plan". The County has been working on developing a large industrial complex south of the airport to diversify its economy, and due to its location within the Checkerboard, it requires access and infrastructure across federal lands. However, the Preferred Alternative Bis proposing a ROW exclusion area and VRM Class II designations in the federal lands surrounding this County project area that will prevent the development and construction of the industrial complex. The BLM must address the inconsistencies between Preferred Alternative B and local, state and other federal land use plans before the release of the FEIS. The BLM must also work with cooperators in resolving the vast amount of inconsistencies before moving forward with this planning effort. | Please see proposed management actions for all four alternatives in Chapter 2, with analysis results for all four alternatives presented in Chapter 4 of the Draft EIS. Final proposed decisions will be presented in the Final EIS and authorized through a future Record of Decision. See updated Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 838 - General-NEPA Compliance | #13624-1 | Preferred Alternative B Does Not Reflect Cooperating Agency Input In 2019, BLM provided a briefing presentation that clearly identified Alternative D as the preferred alternative. Rock Springs Draft RMP/EIS, Briefing Presentation (November 1, 2019). The presentation stated that Alternative D provides a "variety of actions identified by public comments and cooperating agency input, and based on balancing ecosystem health and public use of the land." Id. at 67. The presentation also states that Alternative D provides "similar levels of protection, restoration, enhancements, and use of resources as to existing management, with focus on less prescriptive actions to allow more flexibility." Id. Although BLM identified Alternative D as the preferred alternative in 2019, it has since changed the preferred alternative to Alternative B without consultation with WDEQ, a leading cooperating agency that maintains primacy over almost all environmental issues in Wyoming. Because BLM has changed the preferred alternative from D to B without consultation from cooperating agencies and any scientific and regulatory basis, BLM should defer to WDEQ's primacy and expertise in addressing environmental issues in Wyoming. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13624-2 | Acknowledgement of Cooperative Federalism BLM has identified Alternative B as having the greatest opportunity for conservation. However, the Draft RMP/EIS ignores Wyoming's primacy and WDEQ's role and authority in protecting public health and the environment. To assume that the only option to protect human health and the | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | environment is to establish a federal fiat of maximum conservation is dismissive of WDEQ's statutory and regulatory authority. It fails to honor the role of cooperating agencies, their expertise in local resource management and devalues the importance of cooperative federalism and engaging with state partners. | |
| 838 - General-NEPA Compliance | #13624-3 | Unclear Cumulative Impacts The Draft RMP/EIS details the impacts of management practices for numerous resource areas such as Areas of Critical Environmental Concern (ACEC), Wilderness Study Areas and right-of-way exclusions. However, information regarding those areas is presented as individual resource areas only. There is no analysis nor detailed description of the overall effect of applying the proposed management actions and any cumulative impacts within the RMP. WDEQ developed a GIS map to display the interrelationship between the application of various management actions and their effect within the Draft RMP area. See Maps 1 to 8. Map 1 includes overlays of proposed actions such as ACEC, wilderness study areas, right-of-way exclusions, Visibility Management Classes I and II, lands with wilderness characteristics, wild and scenic river designations, rivers with wild and scenic values, etc. Based on Map 1, application of the proposed management actions will have significant overlap. Unfortunately, the Draft RMP did not include a map to reflect the cumulative effect if all proposed management actions under Alternative B were applied. Map 1 reflects the cumulative impacts based on WDEQ's understanding of the Draft RMP. | Cumulative impacts are discussed in Appendix T and a comparative summary of impacts for each alternative is provided in Appendix U. |
| 838 - General-NEPA Compliance | #13624-4 | Factual Errors and Incorrect References The Draft RMP/EIS contains numerous incorrect references or misstates WDEQ's statutory authority. See Water Quality Division Comments. Additionally, several documents referenced in the Draft RMP/EIS are incorrect or outdated. For example, there are statements addressing Section 1.4.2 of the Draft RMP/EIS but the Draft RMP/EIS does not include a Section 1.4.2. The failure to accurately identify such details brings into question the overall accuracy of the Draft RMP/EIS and any resulting recommendations. | Error reference to Section 1.4.2 has been corrected. |
| 838 - General-NEPA Compliance | #13624-5 | Proposed Action Without Scientific or Environmental Basis BLM failed to provide scientific or environmental basis for its proposed action, in Alternative B, for trona leasing and carbon sequestration. For example, the Draft EIS states that 2,119,920 acres would be closed to trona leasing. Draft EIS, App'x. V, p. V-18. This is a significant increase of 1,730,368 above what was presented for Alternative D; the previously identified preferred alternative. Draft EIS, Ch. 4, p. 4-109. Furthermore, regarding carbon sequestration, Alternative B proposes to "[l]imit geologic carbon sequestration exploration and site characterization projects and commercial sequestration projects and facilities to the Rock Springs Uplift". Draft EIS, Ch. 2, p. 2-109. This is in contrast to Alternative D which would not have limited those activities to the Rock Springs uplift. Id. BLM did not provide a scientific, factual, or regulatory reason to support or explain these proposed actions. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13624-6 | In addition, the Council on Environmental Quality released a proposed rule on July 31, 2023, that states an "[e]arly identification and consideration of issues using high-quality information have long been fundamental to the NEPA process, particularly because this facilitates comprehensive analysis of alternatives and timely and efficient decision making, and the Council on Environmental Quality considers it important to emphasize these considerations in this section. The proposed changes also emphasize that the environmental information that agencies use in the NEPA process should be high-quality, science-based and accessible." National Environmental Policy Act Implementing Regulations Revisions Phase 2, p. 49930, 88 Fed. Reg. 49924 (July 31, 2023). Again, the Draft RMP/EIS failed to provide the scientific or regulatory basis for choosing Alternative B and the management actions proposed. BLM's proposed action must provide this information and sufficient time for meaningful review. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13624-7 | Unsuccessful Cooperating Agency Process The basic underpinnings for successful cooperating agency processes are trust and active engagement. There must be confidence that well thought out and reasoned input from cooperating agencies, such as WDEQ, will be given full consideration by federal agencies. The development of alternatives began by compiling Alternatives A, B and C. Alternative D was developed last, after consideration of the information and conclusions contained in the analysis of the first three alternatives. Draft EIS, Ch. 2, § 2.2.3 p. 2-2. Most notably, Section 2.2.3 states that "public input received during the scoping process was considered to ensure that all issues and concerns would be addressed, as appropriate in developing the alternatives." Id. Based on this language it appears the BLM developed Alternative D after considering public input and information received during the public engagement process, including the input provided by cooperating agencies such as WDEQ, stakeholders and the public. Alternative D was considered, at that time, the preferred alternative because it represented the consensus of all parties, including BLM and WDEQ, and struck a reasonable and thoughtful balance between multiple use and conservation. Rock Springs RMP Draft EIS, Briefing Presentation (November 1, 2019). It is concerning that BLM unilaterally decided to accept Alternative B as the preferred alternative without further consultation with cooperating agencies, including WDEQ. Alternative B dismisses the multiple use requirements, as articulated in Alternative D, and identifies conservation as the priority for the majority of the land within the RMP. Endorsement of a last-minute Alternative B erodes the trust that BLM will fully engage with cooperating agencies in the future. The selection of Alternative B does not reflect the principles of cooperative federalism because it has excluded cooperating parties and agencies with primacy and local expertise from providing thoughtful and meaningful input in the decision-making process. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13624-8 | Reengagement with Cooperating Agencies and Cooperative Federalism WDEQ recommends BLM re-engage cooperating agencies and conduct public hearings to consider the significance of changing the preferred alternative. Executive Order 11514 stated that the "heads of agencies shall consult with appropriate Federal, State and local agencies in carrying out their activities as they affect the quality of the environment." Executive Order 11514, § 2(a). As noted in Executive Order 11514, "procedures shall include, whenever appropriate, provisions for public hearings, and shall provide the public with relevant information, including information on alternative courses of action." Executive Order 11514, § 2(b). "Relevant information" to be provided to the public would include an explanation and scientific and regulatory basis for why Alternative D was established with input from stakeholders, the public and cooperating agencies, but is no longer the preferred alternative. Based on the direction of Executive Order 11514, BLM should have consulted with WDEQ as a cooperating state agency before proposing a major shift in policy from Alternative D to Alternative B. WDEQ formally requests the BLM re-engage the cooperating agencies and, considering the significance of the change, we also recommend that BLM conduct public hearings to receive adequate state agency and public input. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13624-9 | The last meeting with the Rock Springs Field Office regarding revisions to the Draft RMP/EIS was held on May 23, 2019. In a letter to Kimberlee Foster, BLM Rock Springs Field Office Manager, Governor Gordon stated the meeting included a detailed discussion of land use restriction changes for cooperators to consider in order to broaden the scope of analysis for a modified Alternative D, "per the directive of the BLM Washington D.C. Office". Governor's Letter (December 6, 2019). During the discussion, BLM emphasized the review and completion of Alternative D, not Alternative B. Governor Gordon specifically asked BLM to "[p]lease consider scheduling a follow-up meeting with State of Wyoming cooperators to discuss how our feedback has been addressed before you publish the draft EIS for public comment." Id. However, WDEQ was not afforded the opportunity for further comment until the Draft RMP/EIS were published. Governor Gordon also sent a letter to Mr. David Bernhardt, Interior Secretary requesting BLM engage with cooperating agencies before the Draft RMP/EIS was released to the public. Letter (May 21, 2020). To WDEQ's knowledge, such consultation with cooperating agencies did not occur. WDEQ is concerned that BLM's failure to engage in consultation with WDEQ violates the principles of cooperative federalism as required by NEPA and ignores WDEQ's role as a cooperating agency with primacy over human health and the environment protection programs. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13624-11 | State Primacy WDEQ has primacy or agreement state status for the majority of federal environmental programs and is charged with protecting human health and the environment. Alternative D recognized that activities that require permitting by WDEQ could be done while protecting human health and the environment. Alternative D also recognized multiple use could be accomplished in a responsible manner. Under the concept of primacy, a state obtains primary authority to enforce environmental controls through a federally approved state program. As a practical matter, primacy means that citizens and industry located within that state deal with state regulators in the first instance. BLM should be advised that Wyoming, acting through WDEQ has primacy over water, air, solid and hazardous waste, abandoned mine land reclamation, and coal mining (with the exception of drinking water) within Wyoming. Because Congress has not authorized the BLM to regulate the same matters, BLM must defer to Wyoming's WDEQ on all primacy subjects and matters. Management Actions 1507, 1509 and 1511 state that lands within the RMP will be managed for multiple use under Alternative D. Draft EIS, pp. 2-23 to 2-24. Management for multiple use appears to recognize that responsible development can occur with appropriate environmental controls managed by WDEQ. Alternative C also aligns with Alternative D, stating that for the same Management Actions "all lands identified as having wilderness characteristics would not be managed to protect those characteristics". Id. Alternatives C and D properly recognize WDEQ's primacy by recognizing that it is possible and acceptable for multiple use to occur within the RMP. In contrast, Alternative B focuses singularly on conservation and does not allow multiple use, stating that BLM will "manage all lands identified as having wilderness characteristics specifically to preserve those characteristics." Draft EIS, CH. 2, p. 2-23. BLM's unilateral decision to adopt Alternative B, ignores Wyoming's primacy and ignores WDEQ expertise to permit, regulate and engage in enforcement action (when necessary) to protect human health and the environment. Alternative B fails to recognize WDEQ primacy and the role that Wyoming and WDEQ have played in successfully protecting human health and the environment. WDEQ recommends BLM clearly recognize the role that WDEQ permitting, regulation and enforcement has in ensuring the protection of human health and the environment as it was previously recognized in Alternative D. | The Draft EIS analyzed four valid alternatives, including Alternatives B and D. See Section 1.3 for the Planning Criteria and Appendix E for a list of laws and regulations that are compliant for all four alternatives. |
| 838 - General-NEPA Compliance | #13624-33 | Typographical Corrections The DEQ/AQD suggests that BLM correct references from "WDEP-AQD" to "WDEQ-AQD" (Ex. Pg P-9). | See changes to page P-9 and P-15 |
| 838 - General-NEPA Compliance | #13624-44 | Mineral Withdrawals Alternative B has significant implications for development and extraction of fluid and solid mineral reserves within the RMP boundary. The proposed mineral leasing restrictions, rights-of-way exclusions and management of lands to protect wilderness characteristics (or values) would effectively withdraw mineral reserves within defined resource boundaries, including the KSLA and the Coal Development Potential Area. This proposed action appears to be an incorrect application of the Federal Land Policy Management Act of 1976, as amended, (FLPMA) and ignores the requirements for lawful withdrawal of minerals under the Federal Mineral | See Glossary for definition of 'withdrawal', which applies to general land laws such as the Mining Law of 1872 and does not apply to fluid minerals or solid mineral leasing activities. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | Leasing Act of 1920, as amended, (FMLA). The withdrawal of minerals by implementation of the proposed management actions appear to exceed BLM's statutory authority under FLPMA and FMLA. In addition, WDEQ has primacy authority over solid mineral mining activities in Wyoming and BLM should have communicated its intent to withdraw solid mineral reserves and extraction opportunities, and coordinate any such actions, with WDEQ as a cooperating agency. | |
| 838 - General-NEPA Compliance | #13624-45 | Rock Springs Field Office Planning Area Pursuant to proposed Alternative B, the planning area will include approximately 278,000 acres that are located outside of but adjacent to the RMP boundary. Map 7. The proposed action would include approximately 10,000 acres within Carbon County, Wyoming. Id. BLM should identify whether that the area outside of the RMP is included in the Draft RMP/EIS and, if not, what management actions will apply to that area. | The RMP pertains only to the planning area within the Rock Springs Field Office boundaries (See Section 1.1 and Map 1-1). |
| 838 - General-NEPA Compliance | #13624-48 | General####The draft RMP is poorly organized and does not provide sufficient information or rationale, particularly as it relates to water quality. The Rock Springs Field Office (RSFO) should refer to the 2013 Lander RMP as an example of a well-written and organized RMP and should consider using this RMP as a template for revisions. The Wyoming Department of Environmental Quality Water Quality Division (WDEQ/WQD) has provided phrases and sections from the 2013 Lander RMP to help facilitate potential revisions. | Watershed and water quality affected environment is adequately covered in Section 3.4 of the DEIS and the analysis of water resources is covered in Section 4.5 |
| 838 - General-NEPA Compliance | #13624-49 | General####WDEQ/WQD is concerned that the RSFO did not do their due diligence collaborating with cooperating agencies. Table 1-5 indicates the last meeting with cooperating agencies was July 14, 2020, three years prior to the release of the Draft RMP/EIS. In addition to the following comments, WQD suggests the RSFO collaborate with WDEQ/WQD to ensure that water resources are sufficiently identified, potential impacts to water quality are sufficiently analyzed, and Wyoming Water Quality Rules are accurately represented. | Table 5-1 has been updated to include cooperating agency involvement since 2020. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. Watershed and water quality affected environment is covered in Section 3.4 of the DEIS and the analysis of water resources is covered in Section 4.5 |
| 838 - General-NEPA Compliance | #13624-54 | Glossary##General#Revise definitions and clarify terms that may have multiple meanings.#The RMP should only use defined terms where the context aligns with the definition. For example, the terms "discharge" and "runoff" are defined in the glossary as they relate to water quantity but are used when discussing both water quality and water quantity. For the glossary to be useful, both contexts should be addressed in the definition. Alternatively, the definitions should be removed to eliminate potential confusion. | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. |
| 838 - General-NEPA Compliance | #13624-55 | Glossary###Addition#The RMP Glossary should describe SDWA Underground Injection Control (UIC) well classes, as outlined in Wyoming Water Quality Rules, Chapters 24 (Class VI Injection Wells and Facilities Underground Injection Control Program) and Chapter 27 (Underground Injection Control Program Class I and V Wells). | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. If the terms are not used in proposed management actions within any of the four alternatives, no definition is provided. |
| 838 - General-NEPA Compliance | #13624-57 | Ch. 2#2-2#2.2.3#Alternatives Development Process.#The RMP Alternatives section does not include a thorough evaluation of the alternatives development process, nor does it identify the agency's preferred alternative. However, to be consistent with 40 CFR 1502.14, the RMP Alternatives section must provide a thorough evaluation of the alternatives development process and identify the agency's preferred alternative. | Section 2.2 presents an overview of the alternative development process. An overview of the alternatives is provided in Section 2.2.5, and the Agency Preferred Alternative is identified as Alternative B in the Abstract of the DEIS. |
| 838 - General-NEPA Compliance | #13624-58 | Ch. 2#General#2.2.3#Table Formatting.#To increase readability, the resource tables should be labeled and added to the list of tables. | Table of Contents has been updated as appropriate. |
| 838 - General-NEPA Compliance | #13624-59 | Ch. 2#General#2.2.3#Formatting.#The draft RMP does not clearly articulate priority goals and objectives. To increase readability, the RMP should: 1) Establish a priority goal with clear objectives of how the RSFO plans to meet that goal; 2) Incorporate headings to the management action section of the tables, such as "Actions Consistent Across All Alternatives" and "Actions That Are Different Across All Alternatives" to clearly articulate what management actions are the same or different across alternatives. An example of this format can be seen in Chapter 2, Table 2.11 of the 2013 Lander Field Office RMP. | Goals and objectives are discussed in Sections 2.2.2 and 2.2.5. Management actions consistent across alternatives are indicated individually in Table 2-1 |
| 838 - General-NEPA Compliance | #13624-100 | Ch. 4#4-29#4.5.1#General.#The draft RMP does not utilize a consistent format for each resource evaluated. To increase readability, WDEQ/WQD recommends the resource discussions follow the format established in the Air Quality section. Each resource should include: 1) summary of impacts, 2) methods and assumptions, 3) effects common to all alternatives, and 4) summary of impacts by alternative. | Methods and assumptions, and summary of impacts for each alternative are adequately covered for each individual resource in Section 4. |
| 838 - General-NEPA Compliance | #13651-1 | We pay particular attention to Alternative B (conservation), as it addresses the climate crisis and the federal responsibility to transition away from non-renewable resource extraction. The conservation proposed in Alternative B addresses piecemeal fragmentation and cumulative damage to important cultural and other resources but does not go far enough. The same topic is an issue the BLM should explicitly address for each proposed course of action. A hard look at the landscape-scale, climate-change and energy-transition issues it expects in each alternative should include quantitative assessments of impacts. In fact we believe BLM would do well to develop an alternative that provides an optimal approach to address landscape conservation and energy transition issues. | Cumulative impacts are discussed in Appendix T. Renewable energy is analyzed in Section 4.20. See also Air Quality Impacts for climate change analysis. |
| 838 - General-NEPA Compliance | #13651-7 | Historic trails, but also some other cultural, natural and recreational resources, extend across and beyond Field Office boundaries, county and even state boundaries. The EIS should discuss and the RMP should include commitments on coordination with other agencies and tribal governments to ensure management consistency and resource protection. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13651-11 | The plan is deficient in that it does not include recognition of climate change, landscape scale and a transition from non-renewable to renewable resources as national priorities (refer to EO 14008 January 27, 2021 "Tackling the Climate Crisis at Home and Abroad"). | Refer to the Executive Summary for adequate coverage of how BLM's planning within the DEIS will support guidance outlined in Executive Order 13990 on "Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis." Greenhouse gas emissions analysis is covered in Section 4.3 (Air Quality) of the document, and renewable energy is covered in Section 4.20. |
| 838 - General-NEPA Compliance | #13651-41 | Tribal interests are not restricted to "cultural resources." The entire discussion of tribal interests should be moved to Chapter 5 "Consultation and Coordination." We recommend a change in the title of Chapter 5.1.3 from "Native American Interests" to "Federally Recognized Tribal Government-to-Government Coordination." Tribes have interests in resource allocations other than those under NHPA, ARPA, NTSA and NAGPRA. BLM has responsibilities to federally recognized tribes that go far beyond cultural resource laws and regulations. | BLM has updated language as appropriate to be consistent with policy. |
| 838 - General-NEPA Compliance | #13658-1 | It is clear that BLM is attempting to use the RSFO RMP and the agency preferred alternative to focus solely on land preservation, eliminating oil and gas and other uses within the RSFO. In doing so, BLM fails to fulfill its statutory requirements to manage lands for multiple use and neglects its duty under NEPA to conduct complete and accurate analyses of the alternatives and the impacts. Instead of a reasonable approach that follows BLM's mandate for multiple use, the agency preferred alternative shifts future management of these lands to a single use. | Proposed management actions for oil and gas are covered under management actions 2200-2222. Analysis for oil and gas under each alternative is provided in Section 4.11. |
| 838 - General-NEPA Compliance | #13658-4 | The BLM must select an alternative that focuses on the multiple use mandate that protects truly sensitive areas through the use of various management actions such as timing restrictions, best management practices, no surface occupancy (NSO), or other available methods. BLM must also correct the inadequate, incomplete, and omitted analyses of various management actions within the EIS. In order to provide for required public comments, BLM must complete these through a supplemental EIS process. | See Section 1.4 for a list of planning criteria. Availability of data and incomplete information is adequately addressed in Section 4.2.2. See Table 5-1 for a list of public involvement events and section 5.2 for details of public participation in the RMP process. |
| 838 - General-NEPA Compliance | #13658-5 | On page ES-6, BLM states the primary impact to the landscape and associated resources and resource uses analyzed in the RMP would be from future proposed mineral development including oil and gas development and mining. This statement appears to discount the impacts that could occur from renewable energy development and alludes to the fact that the Reasonable Foreseeable Development Scenario (RFD) used in the EIS is severely outdated and is likely no longer appropriate for use in future decision-making. If future energy needs are fulfilled by renewable energy development, and especially solar development, they will have significantly more impact on the landscape than does oil and gas or other mineral development. A single 40-acre well pad, which could contain 24 or more oil/gas wells could develop 3,840 acres of minerals, with only a small amount of additional associated disturbance for roads or pipelines that could serve multiple well pads. There are single solar energy developments being considered currently in Wyoming that will utilize 4,000 acres or more for the solar panels, not including additional associated disturbance for roads, transmission lines, etc. BLM's comment on page ES-6 is an example of the inadequacy of the impact analyses completed by BLM in this RMP and EIS. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. Oil and gas affected environment is analysis is adequately covered in Section 3.15.1, with analysis for each alternative provided in Section 4.11. The existing affected environment for renewable energy is available in Section 3.21 and analysis for this resource under each alternative is detailed in Section 4.20. For existing conditions related to visual resource management, refer to Section 3.14, and for analysis of visual resource management under each alternative, refer to Section 4.15. |
| 838 - General-NEPA Compliance | #13658-6 | On page 1-4, one of BLM's planning criteria indicates that no decisions will be made relative to non-BLM administered lands. Unfortunately, due to Wyoming's land ownership patterns and especially in the area. of the checkerboard, any BLM decision will have significant impacts on non-BLM administered lands. BLM should acknowledge this fact and include or at least acknowledge this in the discussion of impacts related to management actions. The proposed ROW exclusion presents significant impacts to state and private lands throughout the RSFO. Especially in the checkerboard area, it will be nearly impossible to build a road, pipeline, or other infrastructure to access well locations, even if the wells are located on private or state lands. BLM must analyze these impacts to private and state lands created by BLM's proposed management actions, even if the ROW exclusion and the RMP does not apply to these lands. | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including addressing in footnote 6 that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). |
| 838 - General-NEPA Compliance | #13658-7 | On page 1-5 BLM indicates all proposed management actions will be based on current scientific information, research and technology, and existing inventory and monitoring information. BLM goes further to say a Mineral Potential Report, Cultural Resources Overview Report, Biological Assessment, Socioeconomic Baseline Report, and Reasonable Foreseeable Development Scenario for Oil and Gas will be completed and used as part of the RMP revision process. The BLM should include an RFD for Renewable Energy as any analysis of impacts is incomplete without understanding the potential for wind and solar energy projects within the RSFO. | Renewable Energy is authorized by BLM under a right-of-way and; therefore, impacts related to renewable energy can be found in the right-of-way analysis and proposed management action for all four alternatives. |
| 838 - General-NEPA Compliance | #13658-10 | On page 2-3, BLM states that closing the planning area to new leasing of federal minerals, specifically fluid minerals, was considered as a method for resolving conflicts with other resource values and leases. BLM further states that this action is not reasonable in light of the BLM's multiple use mandate outlined in FLPMA and the MLA and is inconsistent with policy objectives. Yet, this is exactly what the agency's preferred alternative is doing. The agency preferred alternative includes significant ROW exclusions, which results in BLM is effectively closing the entire area to new leasing of federal minerals. No operator would lease lands that are physically undevelopable due to the management actions proposed by BLM in Alternative B. With the ROW exclusions, BLM is not only closing federal lands from leasing, but will be significantly impacting state and private lands and also will be effectively eliminating oil and gas development on previously leased but undeveloped federal minerals. The ROW exclusion does so by eliminating the ability of any oil and gas operator to build infrastructure across federal lands where the ROW exclusion is applied. This ROW exclusion in the agency preferred alternative (Alt B) will almost entirely exclude any new ROWs in the north and south areas of the RSFO and will create isolated areas in the | BLM is in compliance with applicable laws, regulations and policies as covered in Section 1.4. Rights-of-way analysis is discussed for all four alternatives can be found in Section 4.19. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | checkerboard where infrastructure could be built within an isolated area, but exclusion areas would make it difficult to connect the isolated area to the outside world. These exclusions would eliminate the ability for oil and gas operators to utilize existing rights on currently leased lands and state or private lands because without a road to access the lease or pipelines to move produced oil and gas they cannot drill the well. BLM has created a management scenario that will result in no new leasing of federal minerals and will remove the ability to develop currently leased federal minerals. In their own words this violates BLM's multiple use mandate and is not a reasonable alternative. NEPA requires the analysis of reasonable alternatives and BLM must exclude Alternative Band re-analyze a new alternative in this Draft RMP. Management for preservation purposes is not managing for multiple use when you close all unleased areas to new leasing and ROW. | |
| 838 - General-NEPA Compliance | #13658-11 | The BLM creates management action 6001 related to carbon sequestration (CCS) in Table 2-1 but this is the only place in the document CCS is discussed. While there is a discussion about the Rock Springs uplift being suitable for CCS in the RFD, there is no explanation anywhere that provides reasoning for why Alternative B limits sequestration activities to the Rock Springs uplift. The RFD is also 13 years old and there have been significant advancements in knowledge and development of markets related to CCS since that time. BLM did not coordinate with the WDEQ or WOGCC in relation to CCS. Relatedly, there does not seem to be discussion of the effects of CCS projects or CO2 enhanced recovery projects on GHG emissions. While outdated, the RFD does identify 26 billion tons of CO2 storage potential. The Monell Unit CO2 flood in the project area also sequesters a significant volume of CO2 through enhanced oil recovery (EOR). It is estimated that approximately 90% of CO2 injected during tertiary recovery operations (EOR) remains in the ground. This does not appear to be accounted for in the GHG analysis. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. Management actions related to carbon sequestration are provided under Lands and Realty, as BLM currently authorizes carbon sequestration through the right-of-way process. |
| 838 - General-NEPA Compliance | #13658-12 | To cure the deficiencies related to CCS, the RSFO should prepare a supplemental EIS ensuring the following are completed: 1) coordinate with WDEO/WQD and WOGCC regarding CCS proposed management actions in the RMP; 2) if BLM decides to retain any management action that may limit CCS, provide justification for how limiting sequestration helps meet management objectives and how CCS potential in the management area will be impacted; 3) if RSFO decides to retain the Rock Springs Uplift as the sole area available for such activities, include a description and map illustrating the area designated as open to CCS; and 4) Evaluate and assess the impacts of the different alternatives on CCS projects, especially as it related to ROW exclusions preventing projects both inside and outside of the RSFO planning area by preventing roads and pipelines; and 5) Include the effects of enhanced recovery projects and CCS projects on GHG emissions for each alternative. | Management actions related to carbon sequestration are provided under Lands and Realty, as BLM currently authorizes carbon sequestration through the right-of-way process. |
| 838 - General-NEPA Compliance | #13658-20 | On page 4-11, BLM states that Alternative B most closely aligns with the Department of Interior's climate change priorities among all the alternatives. BLM should not be attempting to align its selection of alternatives with the DOI or this administration's climate change priorities, but with FLPMA and the MLA. These laws have multiple use mandates, which BLM is ignoring in its selection of Alternative B. | BLM is an agency of the Department of Interior. The Draft EIS, including all four alternatives, are in compliance with FLPMA and all other applicable laws, regulations, and policies (see Section 1.4 and Appendix E). |
| 838 - General-NEPA Compliance | #13665-3 | BLM's Draft RMP improperly does not contain sufficient substitution analysis-the analysis by which agencies provide full and complete information on environmental and socioeconomic impacts that would result from obtaining substitute oil and gas from elsewhere, if the production could not occur under the preferred alternative, to meet the public's existing and future energy demands. Although the agency in the Draft EIS boldly identifies the adverse consequences of oil-and-gas development under the development-friendly Alternative C, BLM fails to apply that critical thinking to its preferred Alternative B: it simply does not candidly analyze the true and complete costs of restricting oil-and-gas development under that alternative. | Impacts for each alternative relating to energy development are discussed adequately in Section 4.11, and socioeconomic impacts for each alternative are outlined in Section 4.22. Cumulative impacts for both resources can be found in Appendix T, with a full socioeconomic technical report in Appendix N. |
| 838 - General-NEPA Compliance | #13665-30 | Governor Gordon wrote that BLM's "hastily constructed" and "hamfisted" plan undermines a spirit of cooperation that has existed for years between the federal agency and the state. Id. at 2. The Governor said that it is "entirely incomprehensible" that BLM has chosen Alternative B-the alternative with the "most resource use restrictions and concomitantly with the largest socioeconomic impacts"-as the preferred alternative, even though it was "considered an outlier in previous attempts at issuing an RMP." | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13665-34 | Although BLM candidly acknowledges that Alternative B would severely constrain energy development projects-from both traditional and renewable sources-BLM's rationale for favoring that alternative does not support such a radical departure from current policy. For example, even though "[i]mpacts to wildlife and fisheries habitat from … renewable energy …would be the same as those described under Alternative A," id. at 4-67, Alterative B nonetheless restricts over two-million acres from renewable energy development-four to five times as many as are currently off-limits under Alternative A. See id. at ES-5. But if the "[i]mpacts to wildlife and fisheries" would be largely the same under Alterative B "as described under Alternative A"-the less-restrictive, "no action" alterative-then why close-off hundreds of thousands additional acres just to reach the same environmental outcome? Not only is BLM's "preferred alternative" illogical, but the agency's preference for that alternative is "arbitrary, capricious, an abuse of discretion" or "unsupported by substantial evidence" and therefore violates the Administrative Procedure Act. 5 U.S.C. §§ 706(2)(A), (E) | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13665-35 | To the extent that there are "small, but important, ecosystems" that "serve as a biological oasis … relative to the vast expanses of sagebrush and prairie grass that dominate the landscape," as already discussed, BLM can-and should-carefully curate site-specific mitigation or restriction measures to avoid impacts to those limited areas. | Proposals for riparian and wetland resources under each alternative are outlined in management actions 4300-4303. |
| 838 - General-NEPA Compliance | #13665-38 | the benefits of technological advancements in horizontal drilling and hydraulic fracturing, would radically change the economic analysis in the Draft RMP and tip the scales in favor of more development-friendly solutions. The vast energy potential, if unleashed, would additionally economically benefit the State and American taxpayers, as well as enhance the nation's energy independence. Moreover, modern horizontal-drilling and hydraulic-fracturing technology allow larger areas to be developed with far-less overall surface impact (i.e., fewer well locations, facilities, roads, pipelines, etc.) than conventional vertical wells, which are no longer commonly used. Thus, reliance on data from past vertical-well drilling practices fails to account for the environmental benefits of modern development practices. | A full socioeconomic technical report is available in Appendix N. Impacts to energy and minerals, including the use of directional drilling, is covered in Section 4.11 of the DEIS. |
| 838 - General-NEPA Compliance | #13669-2 | According to the preliminary information given in the Draft RMP, the process to develop a new RMP began in 2011 with the initial scoping for a new, updated RMP. Given the timeframe between 20113 and 2023, the overall focus of commenting entities early in the process, we can see the potential for priority changes to have occurred from initial scoping to the release of the draft RMP. We recognize that with any development of an updated RMP, that significant factors that take large amounts of research, studies, and fieldwork, will by necessity take large amounts of time to complete. DCFB believes in this case, that too much time was involved in the development of the draft RMP | See Chapter 3 for description of adequacy of baseline data gathered in 2013. The purpose and need outlined in the Executive Summary and Section 1.2 adequately explain the planning objectives for the RMP. For a list of public engagement opportunities see Table 5-1. |
| 838 - General-NEPA Compliance | #13672-5 | The broad-brush approach of applying standard buffers to all sections of non-NHT trails found in management actions #7017-7022 goes against the Protocol already established between the BLM and Wyoming SHPO for management of cultural resources. | Wyoming SHPO was a cooperating agency involved in the development of the DEIS and all alternatives (see Section 5 for more details). BLM has the authority to manage public lands in accordance with FLPMA and all other applicable laws (see Appendix E). |
| 838 - General-NEPA Compliance | #13672-6 | The Executive Summary on pages ES-2 and ES-3 and in Planning Issues Page 1-3, Section 1.3 indicates that Greater Sage Grouse Resource management and Wild Horse management have not been incorporated into the Draft RMP. Also, the Purpose and Need section (Sections 1.2, 1.2.1, and 1.2.2) addresses "Numerous Records of Decision (ROD) for Programmatic EISs that have been completed or are ongoing," but omits greater sage grouse and wild horses. The Draft RMP has been in development since 2011 and the Greater Sage Grouse Management Plan has been in development since 2014. Both of these plans represent the management actions to be taken on large BLM land areas within the planning area. These plans should be evaluated together and not separately or separated in time. The public has the right to review the total impact of both of these plans. Ample time has passed for both of these plans to be part of the same Draft RMP. The public, including users of BLM lands cannot accurately evaluate the impacts of these plans in this way. A BLM News Release on February 3, 2014 indicated that work on the draft RMP would be put on temporary hold until the Wyoming Greater Sage-Grouse Land Use Plan Amendment and EIS could be completed and incorporated into the Rock Springs RMP. This omission is serious and not to be overlooked. FLPMA and NEPA provide the public with the right to review these plans and their benefits and impacts. Since this cannot be done in anything close to a comprehensive way, the Draft RMP is incomplete and should be withdrawn until both the Greater Sage Grouse Management plan and the Wild Horse Management Plan are incorporated into it. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). The RMP will be in compliance with NEPA and FLPMA (Section 1.4). |
| 838 - General-NEPA Compliance | #13681-5 | The EIS fails to consider the cumulative impact of eliminating additional wild horse HMAs in the state. Fifty percent (50%) of the original Congressionally designated wild horse habitat in Wyoming has been zeroed out or eliminated for wild horse use. Yet, the BLM continues to permit livestock grazing in these same areas. The EIS proposes to reduce by another 43% the public lands available to wild horses in the state. The cumulative impact of the proposal results in the BLM eliminating 71% of all public lands originally designated by Congress for wild horse use in the state of Wyoming. The proposed removal of wild horses from 1,554,282 acres of public lands represents removing wild horses from 6% of all public lands where BLM currently manages wild horses and burros. Currently, BLM only manages wild horses and burros on 64% of the original public lands identified by Congress for wild horse and burro habitat. That means since 1971 the BLM has cumulatively reduced wild horse and burro habitat by 37%. BLM has wiped out wild horses and burros from more than 1 of every 3 acres of public lands which Congress designated "principally" for wild horse and burro usage. The EIS fails to consider these cumulative negative impacts on wild horses and fails to take actions to mitigate these negative impacts. | Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate RMP Amendment and EIS (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." |
| 838 - General-NEPA Compliance | #13691-2 | According to the preliminary information given in the Draft RMP, the process to develop a new RMP began in 2011 with the initial scoping for a new, updated RMP. Given the timeframe between 20113 and 2023, the overall focus of commenting entities early in the process, we can see the potential for priority changes to have occurred from initial scoping to the release of the draft RMP. We recognize that with any development of an updated RMP, that significant factors that take large amounts of research, studies, and fieldwork, will by necessity take large amounts of time to complete. DCFB believes in this case, that too much time was involved in the development of the draft RMP. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. The purpose and need outlined in the Executive Summary and Section 1.2 adequately explain the planning objectives for the RMP. For a list of public engagement opportunities see Table 5-1. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13691-4 | Alternative A seems to be localized to the "JMH Planning area". However, with the proposed new RSFO preferred Alternative B and Proposed Alternative D, hydrogeologic investigations would be required "where there is a reasonable expectation that surface waters are connected with geologic formations being dewatered." This situation being proposed for the entire EIS managed area is beyond the scope of the average resource user and beyond the capability of most natural resource professionals. | Management Actions 1323 addresses hydrogeologic investigations for water resources. Impacts to water resource impacts are further analyzed in Section 4.5. |
| 838 - General-NEPA Compliance | #13702-1 | Sage grouse management plan is not incorporated in the Draft RMP. The Executive Summary pages ES-2 and ES-3 and Planning Issues Page 1-3, Section 1.3 indicate that Greater Sage Grouse Resource management and Wild Horse management have not been incorporated into the Draft Resource Management Plan (RMP). Also, the Purpose and Need section (Sections 1.2, 1.2.1, and 1.2.2) address "Numerous RODs for Programmatic EISs that have been completed or are ongoing," but omit greater sage grouse and wild horses. Both resources represent potential significant risks and impacts to various groups of land users that cannot be evaluated accurately for this RMP when they have not been incorporated. Land users should have the right to evaluate these risks and impacts in aggregate as well as evaluate whether the multiple use principles of the Federal Land Policy and Management Act (FLPMA) are being upheld given that these planning efforts have been in development for over 10 years. As a case in point, a BLM News Release on February 3, 2014 indicated that work on the draft RMP would be put on temporary hold until the Wyoming Greater Sage-Grouse Land Use Plan Amendment and EIS could be completed and incorporated into the Rock Springs RMP. By not incorporating these two resources the BLM has changed course to the detriment of informed public participation. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). The RMP will be in compliance with NEPA and FLPMA (Section 1.4). |
| 838 - General-NEPA Compliance | #13702-2 | Much of the baseline data, analysis, and information dates to 2013 as stated on page ES-1. Examples of even earlier data can be found throughout the RMP. We recommend that BLM use more current data and analysis and bring the RMP up to date before it is finalized. Use of outdated information means that the RMP is neither accurate nor complete. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13702-16 | Importantly, the BLM's reasonably foreseeable development (RFD) forecast projects that during the 20-year life of the RMP, 6,719 new wells would be drilled in the RSFO, or an average of 336 wells per year. * This forecast is then used as the underpinning analysis3 to project outcomes from management actions enacted through the RMP, including air quality, surface disturbance, water quality, surface and ground water usage, cultural resources, ACEC relevance and importance criteria, invasive species, wildlife habitat, visual resources and others. Simply put, the RFD supported the assumptions of impacts for almost every resource analyzed in the DRMP. * In fact, only 18 wells were spud in FY2022. With this actual data, one would reasonably assume 360 wells would be drilled over the 20-year life of the RMP. * Assuming the 18 wells spud in FY2022 representation of an annual average, the BLM's outdated projection causes a severe overestimation of oil and natural gas development by 1,867 percent.* The BLM attempts to revise RMPs on a 20-year rotation, as data, techniques and priorities evolve. The foundation of this DRMP is vintage 2010 that is far off the mark and as such, it is evident the data and projections it incorporates are egregiously off and in need of an update. | See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 838 - General-NEPA Compliance | #13715-3 | 1. BLM's Use of Outdated Data Overstates Impacts of Oil & Gas Development, and Drove Adoption of Unnecessarily Restrictive Conditions. The proposed revisions to the RSFO Resource Management Plan have been in process for more than 12 years. Much of the underlying data and assumptions utilized in the pending Draft Environmental Impact Statement ("DEIS") were gathered early in this process, rendering it outdated and unreliable with the passage of many years. This is particularly true with respect to fluid minerals development. Section 3.15.1 of the DEIS reflects the dated nature of the data; the last drilling/leasing data is from 2010. The BLM's reasonably foreseeable development scenario ("RFD") forecast is a decade old, dating to 2013,1 and based on data from years before the publication date. Section 4.2.2 of the DEIS states that the best available information pertinent to 1 BLM Rock Springs, Field Office, Reasonably Foreseeable Development Scenario for Oil and Gas (September 25, 2013). | See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 838 - General-NEPA Compliance | #13715-4 | In other words, BLM based its actions across the range of alternatives on assumed future proposed mineral development for oil and gas. Those assumptions dated from 2013 for a document issued in 2023. This outdated RFD scenario used by BLM in these decisions had been proven entirely mistaken by actual events well prior to the date of the DEIS. Based off 2013 BLM RFD, all analyses in the DEIS were based upon an average of 336 new wells being drilled every year in the RSFO. In fact, only 18 wells were spudded in FY2022. With this actual data, one would reasonably assume 360 wells would be drilled over the 20-year life of the RMP, not the 6,700 wells projected in the RFD. Assuming the 18 wells spudded in FY2022 representation of an annual average, the BLM's outdated projection overestimates oil and natural gas development in the RSFO by 1,867 percent. BLM of course had this data available to it as of the DEIS, but did not use it. | The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years since the RFD, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13715-8 | The DEIS relies almost exclusively on closing areas to leasing as the means of protecting resource values. The BLM has at its disposal many tools to protect resource values well short of closing lands to oil and natural gas leasing. The BLM should instead specify appropriate lease stipulations, tailored to the resource values in the particular area, rather than imposing blanket closures. By failing to analyze whether tailored lease stipulations could protect such resource values, BLM has violated NEPA, and its decision to adopt the most rather than least restrictive means places it in violation of EPACT. | Specific management actions for each alternative, including various fluid mineral restrictions, are outlined in Table 2-1. Each of the four alternatives proposes a range of actions to protect various resource values, as indicated in the management action. The results of the analysis for all four alternatives can be found in Chapter 4. |

|---|---|---|---|
| 838 - General-NEPA Compliance | #13720-1 | It is therefore necessary that the DRMP DEIS glossary provides a definition that is specific to, focuses on, or provides management direction for priority big game or other wildlife migration corridor habitats and the core, winter habitats they connect. We respectfully request that BLM adds to the Glossary a section we identify here in italics: "Ecological Corridor: An ecological corridor is a clearly defined geographical space that is governed and managed over the long term to maintain or restore effective ecological connectivity." (Hilty, 2020) | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. |
| 838 - General-NEPA Compliance | #13720-2 | We respectfully request that BLM adds to the Glossary a section we identify here in italics: "Ecological Connectivity: 'Ecological connectivity' is the unimpeded movement of species and the flow of natural processes that sustain life on Earth. Without connectivity, ecosystems cannot function properly, and without well-functioning ecosystems, biodiversity and other fundamentals of life are at risk." (Hilty, 2020) | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. |
| 838 - General-NEPA Compliance | #13720-3 | We respectfully request that BLM adds to the Glossary a section we identify here in italics: "Ecological network: A system of core habitats connected by ecological corridors, which is established, restored as needed and maintained to conserve biological diversity." (Hilty, 2020) | Definitions of terms in the Glossary are provided to indicate how BLM interprets the terms as used in the EIS document. |
| 838 - General-NEPA Compliance | #13720-7 | Chapter 4 Headers The headers on pages 4-6 through 4-180 are incorrectly labeled "Chapter 4 - Recreation." We request that Chapter 4 headers be edited and corrected according to the resource they refer to. | Chapter 4 headers have been corrected. |
| 838 - General-NEPA Compliance | #13721-10 | This section of the Draft RMP/EIS is very poorly done and quite inadequate since it used recreation visits from 2011 through 2015. This is an extremely small, very outdated sampling that does not reflect current recreation trends. Table N-5 on page N-15 of Volume 2 shows that Recreation visits in 2015 were 847,318 - nearly double what they were in the first three years of this 5-year period and 64% greater than the fourth year which was used for these recreation usage calculations. This particular outdated sampling range results in an artificially low 5-year average. The document also improperly minimizes the 2015 increase by stating "it is unknown if this trend will continue." Reality is that recreation visits to public lands have continued to grow since 2015 - and exploded to new highs during and following the COVID-19 pandemic. Additionally, it states on page N-16 of Volume 2 that the RSFO recreation specialist who estimated recreation visitation patterns in the area deemed FY 2013 visitation data as "sufficiently representative for the overall analysis." This is wrong. Data that is a decade old does not reflect 2020-era recreation visitation patterns on these or any public lands in Wyoming. This entire recreation usage and impact analysis must be thrown out and be redone. Page N-17 of Volume 2 specifically notes that the economic impact of OHV riding has received considerable attention. Yet, it summarily dismisses relevant OHV studies that have been conducted by the University of Wyoming (Foulke et al. 2006 and Nagler et al. 2013). It also fails to consider the newer 2021 Wyoming Comprehensive Off-Road Vehicle (ORV) Recreation Report (Bastian et al. 2022). Instead of using Wyoming data from these reports, the BLM wrongly used National Forest NVUM modeling with the Ashley National Forest, which is an inappropriate proxy. | The socioeconomic report not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 838 - General-NEPA Compliance | #13728-2 | 1) Fremont County Wyoming Land Use Plan 2004, 2) Lincoln County Comprehensive Plan 2006, 3) Sublette County Federal and State Land Use Policy 2009, 4) Sweetwater County Comprehensive Plan 2002 and 5) Uinta County Comprehensive Plan 2011. However, there is no meaningful discussion presented anywhere in the document that describes the management actions in detail nor did the BLM utilize the most recent county plans that were approved as follows: 1) Fremont County Natural Resource Management Plan 2021, 2) Lincoln County Natural Resource Management Plan 2021, 3) Sublette County Federal and State Land Use Policy 2021, 4) Sweetwater County Federal Lands and Resources Plan 2022 and 5) Uinta County Comprehensive Plan 2021. | See updated Table 1-2. |
| 838 - General-NEPA Compliance | #13729-1 | Alternative B with respect to rights of way (management actions 6200-6210) and its associated preferred map (Map 2-22) would essentially prohibit granting new rights of way in the planning area. It would also eliminate part of the existing energy corridor that Congress mandated be designated in Section 368 of the Energy Policy Act of 2005. See Management Action 6206 (which would "eliminate the existing corridor identified in WWEC ARMPA/ROD (2009) east of the Flaming Gorge I the planning area"). | See management actions 6200-6210 for those related to rights-of-way and corridors. Impacts to rights-of-way are analyzed in Section 4.19 "Lands and Realty." |
| 838 - General-NEPA Compliance | #13738-1 | The potential impacts of a 305% decrease in fluid mineral leases could have unknown impacts not only to the state of Wyoming but to the United States. The studies that were performed in 2011 are now far outdated and new economic and socioeconomic evaluations should be performed. For this reason, Alternative B should be discarded as the preferred alternative. Additionally this DRMP should be reevaluated with updated studies and evaluations of the current socioeconomic and economic impacts before any changes to the current RMP are made. | Appendix N provides a full socioeconomic technical report. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13750-4 | By BLMs own admission, on page 1-5 under "Relationship to Other Plans," they declare that the " ... land use plans and amendments must be consistent with officially approved or adopted resource- related plans, and the policies and programs contained therein, of other federal agencies, state and local governments, and Native American tribes, so long as the guidance and RMPs are also consistent with the purposes, policies, and programs of federal laws and regulations applicable to public lands." BLM further explains on page 1-6 they acknowledge reviewing the following county plans for consistency: 1) Fremont County Wyoming Land Use Plan 2004, 2) Lincoln County Comprehensive Plan 2006, 3) Sublette County Federal and State Land Use Policy 2009, 4) Sweetwater County Comprehensive Plan 2002 and 5) Uinta County Comprehensive Plan 2011. However, there is no meaningful discussion presented anywhere in the document that describes the management actions in detail nor | See updated Table 1-2. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | did the BLM utilize the most recent county plans that were approved as follows: 1) Fremont County Natural Resource Management Plan 2021, 2) Lincoln County Natural Resource Management Plan 2021, 3) Sublette County Federal and State Land Use Policy 2021, 4) Sweetwater County Federal Lands and Resources Plan 2022 and S) Uinta County Comprehensive Plan 2021. | |
| 838 - General-NEPA Compliance | #13751-9 | The Draft RMP/DEIS is excessively vague and utilizes pervasive language that makes the evaluation nearly impossible. Due to this vague and pervasive language the BLM is granting themselves vast authority despite lack of legal authority. As an example, in the Draft RMP/DEIS Volume 1, words such as "may, could, should, would, and might" are used 8,404 times, whereas words like "will, must, and shall" are only used 501 times. Another example is that many of the management actions in Table 2 use 'would be applied' or 'would be applied as necessary.' There are many other examples of this type of pervasive language used throughout the document. For the reader and evaluator, this is unacceptable because there is no way to understand what the management action entails. Further, it allows BLM complete discretion in how to interpret and enforce the management action. These vague terms must be re-evaluated and more direct words must be used in order for a proper evaluation of the planning document. At a minimum BLM should do two things. First, clearly define the legal basis for the authority to take such actions. Second, clearly define the circumstances and conditions necessary to invoke these vague extensions of authority. In essence, BLM should identify the authority for including these terms and illustrate the "on the ground conditions' that would justify the exercise of the alleged authority. Otherwise, the reader has no basis to understand the consequences of the loose language employed. | BLM's statutory authority for land use plans is established under Sections 201 and 202 of FLPMA, as explained in the Purpose section of the DEIS Executive Summary. See the Introduction (Section 1) of the DEIS for further explanation of the purpose and need for the RMP, as well as a summary of land and mineral ownership and administrative jurisdictions within the planning area. |
| 838 - General-NEPA Compliance | #13751-10 | With this draft RMP/DEIS, BLM is applying management actions nearly universally across the entire RMP. BLM has heard from the public, cooperating agencies, and interested parties that this broad-brush approach does not meet the needs for the unique situations across the vast RMP area. The broad-brush tactic employed in the RMP is contrary to the rules, policy and guidance. The broad mandates of the RMP destroy the need for consultation and site-specific evaluation. The BLM needs to re-think the broad-brush approach of this RMP, go back to the planning stage and evaluate land planning and management decisions on a site-specific approach. As an example, the KSLA area should not be managed in the same way as the Greater Little Mountain Area (GLMA). Disregarding all special management areas, and just thinking about these two areas and comparing them, one would think the GLMA should have greater restrictions than lands inside the KSLA. However, under Alternative B, they are both right-of-way exclusion areas, under Alternative D, they are both right-of-way avoidance areas. Under both Alternative B and D, the GLMA is a Class III VRM, whereas the KSLA is a Class II VRM. Does this really make sense? With think not, and this provides a good example of how the broad-brush approach results in incorrect management in specific areas like the KSLA | See Section 2.2.2 for explanation of difference between management actions and implementation decisions. Note that this plan does not propose any implementation-level decisions. A comparison for rights-of-way management actions under each alternative can be found in MA#6200-6210. See also Appendix E and FLPMA for BLM's authority to prepare a land use plan. |
| 838 - General-NEPA Compliance | #13751-24 | No advance notice of the change to a greatly expanded Alternative B was provided to cooperators or the public. With publication of the Draft roughly 4 years later, we were confronted with a document with significant errors, insufficient analysis to support the new Preferred Alternative, etc. Cooperators were lulled into believing Alternative D would be the Agency's preferred option. BLM never involved the cooperators or anyone else for several years while knowing the original communication in 2019 fundamentally misled everyone. No analysis was undertaken to justify this new selection of an expanded Alternative B. Such action violates BLM's own procedural obligations and substantively violates FLPMA's multiple use analysis mandates. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. BLM will be in compliance with applicable laws, regulations and policies as covered in Section 1.4, including FLPMA. Adequate analysis for the impacts of each alternative is provided in Section 4. |
| 838 - General-NEPA Compliance | #13751-25 | BLM's Land Use Planning Handbook (H-1601-1), outlines 'collaboration' as "a process in which interested parties, often with widely varied interests, work together to seek solutions with broad support for managing public and other lands." Further, the Planning Handbook, Appendix F, Page 19 includes "Interested Groups" under Consultation and Coordination. The RMP fails to include any Consultation and Coordination with Interested Groups. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13751-26 | Genesis Alkali represent a significant interested party to the RMP but have never been consulted by the BLM regarding the RMP as an interested party. To our knowledge this is consistent with all mineral developers, in other words, BLM has never collaborated during this RMP process with its interested parties as required. The RMP Draft EIS Table 5-1. Public Involvement, Coordination, and Consultation Events lists several meetings and other events, but fails to list even one collaboration event. Per the Planning Handbook, BLM should collaborate with interested groups, and further the RMP must list which interested groups it did meet with in developing the RMP. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See Table 5-1 for a list of public involvement events and section 5.2 for details of public participation in the RMP process. Industry groups do not have cooperating agency status or "jurisdiction by law" but are welcome to participate in public scoping and public commenting. |
| 838 - General-NEPA Compliance | #13751-27 | There is no mention of when Alternative B was selected as the Preferred Alternative or how the alternative was discussed with any cooperating agencies, collaborators or key stakeholders. The BLM needs to revise this section to include how and when the Preferred Alternative was selected. This information must be included in the RMP. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. |
| 838 - General-NEPA Compliance | #13751-31 | The RMP is flawed at the outset, both substantively and procedurally. The RMP and DEIS completely ignores sage grouse even though the agency is aggressively working to expand sage grouse areas and protections. Many of which will directly impact the RMP area. The RMP explicitly disregards the wild horse management issue. Wild horses impact significant portions of the RMP. BLM's decision to ignore these matters seems inconsistent with NEPA and FLPMA and the BLM planning regulations. This is unacceptable because NEPA requires a comprehensive analysis with all cumulative issues and impacts. By pulling these important items out of the RMP there is no way to evaluate the cumulative impacts, restrictions, closures, withdrawals, and actions properly. BLM | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). The RMP will be in compliance with NEPA and FLPMA (Section 1.4). |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | needs to finish its work on sage grouse and wild horses and then incorporate those actions into the RMP, not the other way around because the RMP is the umbrella planning document that must consider all other resources, impacts and actions. | |
| 838 - General-NEPA Compliance | #13751-37 | Most of the baseline data is significantly out of date. Page ES-1 of the Draft RMP/DEIS states "The summary of the Analysis of the Management Situation (AMS) was prepared in accordance with 43 CFR 1610 and was completed in August 2013. The AMS is accurate with the analyses of the inventory, and for the basis of formulating reasonable alternatives as described in 43 CFR 1610.4-4. Although some data has been updated in response to changing conditions (ex. air quality emissions and reasonably foreseeable development), most of the baseline data gathered from 2013 has been kept static for comparative analysis purposes. Even if minor conditions have changed for an individual resource in the intervening years since the AMS, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives." Similarly, per Page P-11 baseline emissions are over 10 years old. The baseline condition has changed significantly for most resources in the past 10 plus years. BLM admits the RMP/DEIS data is out-of-date but they plan to use trend analysis to justify the data is still appropriate. A few specific examples of how the plan is out of date and how trends are not appropriate are as follows: | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13751-40 | The RMP and DEIS fails to include significant projects. To be complete, these projects must be included in the analysis, for example: Sweetwater Solar DOI-BLM-WY-D04002017-0008-EA, Dry Creek Trona Project DOI-BLM-WY-D090-2022-0003-EIS and associated Project West, Transwest Express Transmission Line Project DOI-BLM-WY-0000-2010-001-EIS, Jackalope Wind Project DOI-BLM-WY-D040-2023-0132-EIS, Section 368 Energy Corridors DOI-HQ- 3500-2023-0001-RMP-EIS, Rock Springs Comprehensive Travel Rock Springs Wyoming RMP Revision & Transportation Management Plan (CTTMP). | See Appendix T for the cumulative impacts analysis for all four alternatives. The RMP does not propose any project level implementation actions, but comprehensive land use planning level management actions (See Planning Criteria in Section 1.4). |
| 838 - General-NEPA Compliance | #13751-44 | The Draft RMP/DEIS include the term "compensatory mitigation" in the glossary, although it is not used anywhere in the document. According to BLM https://www.blm.gov/policy/im-2019- 018, the compensatory mitigation policy is inactive. It is also no longer found at 40 CFR 1508.20 as referenced in the glossary. This is another example of how the Draft RMP/DEIS is out-of- date. | The definition provided in the Glossary is the CEQ definition (40 CFR 1508.20). See Management Action #13 in Chapter 2 for reference to BLM actions. |
| 838 - General-NEPA Compliance | #13751-45 | There is no way to use trend data to correct this type of outdated information. | See Section 1.4 for the Planning Criteria for this RMP level document. Also, see Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13751-47 | With the announcement of the BLM RMP, a geographic file (Google Earth, kmz file) was provided for Alternative B. The only kmz file provided is for Alternative B. In September 2023 and again in October 2023 BLM posted various mapping files (GIS file types such as gdb files and shapefiles). There have been no kmz files provided for the other Alternatives, and as such it is impossible to properly analyze the restrictions geographically for all alternatives. BLM must post the kmz files for all alternatives and provide adequate review time of those files for the public. | BLM posted the entire GIS database for the Draft EIS, including all four alternatives to the ePlanning website. Additionally, the Draft EIS contains more than 30 maps that cover all four alternative proposals. |
| 838 - General-NEPA Compliance | #13751-52 | Per the RMP Final Scoping Report, January 2012, Page 23"Lands covered in the RMP will consist of public land and split estate lands managed that BLM manages. No decisions will be made relative to non-BLM administered lands… The RMP will recognize valid and existing rights." The southern Wyoming RMPs (Rawlins, Rock Springs, and Kemmerer RMPs), present a unique situation with the checkerboard lands. Nationwide, BLM federal properties tend to be large blocks of federal land without comingled private and state estates. In contrast, the Rock Springs RMP is notably comprised of lands that are in a checkered pattern of ownership on every other section. As such, this RMP has a significant impact on the private and State estates because the land management plan and its restrictions inadvertently apply to the adjacent lands. This locks out private surface and mineral owners from their valid and existing rights. In the RMP, the BLM must address this conflict and provide the means for access to these existing estate holders. As stated in the 2013 Socioeconomic baseline report on Page 2-7 "Restrictions on development of federal mineral rights pertain to split estate as well as federal surface lands. Private surface landowners may lose surface lease revenue if the underlying federal mineral estate is closed or restricted." Loss of revenue on fee estate due to BLM restrictions is simply not acceptable. Further, per BLM Manual 6280 BLM must include provisions "to minimize adverse impacts, to the extent practicable, on adjacent landowners, users, and operations." in the land planning process. Adverse impacts to adjacent landowners, users, and operators in the checkerboard land ownership areas if access cannot be gained to those parcels due to right of way restrictions on the adjacent federal lands. | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including footnote 6 which states that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). |
| 838 - General-NEPA Compliance | #13751-70 | According to the RMP Final Scoping Report, January 2012, "How will funding be addressed? BLM's response - "Funding to implement decisions contained in the RMP is not part of the RMP process but is instead managed through congressional budget decisions, followed by BLM state and local field office yearly budget planning." In reality BLM can't even maintain the needed staff to operate the current RMP, let alone an RMP with this many new stipulations. A recent review on Zip Recruiter (September 2023) indicates BLM has 20 open positions in Wyoming, of which at least 7 are in the Rock Springs Field Office. In addition to the RMP, the Department of Interior | Staffing of BLM personnel is outside the scope of this Resource Management Plan revision. See Section 1.3 for Planning Criteria of this land use planning process. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | published a proposed rule that will require BLM to act as a policing agency on public lands. This proposed rule will result in the need for even more BLM staff resources. The RMP needs to take these resources into account | |
| 838 - General-NEPA Compliance | #13751-73 | Appendix A--Project Design Features and Best Management Practices should not be mandatoryThe next to last sentence in A.1.1. states "The following would be applied as project design features for all solid minerals." Although the introductory section (A.1.1) does reference some opportunity for relief under certain conditions if the need is demonstrated in a NEPA compliant document. However, the first bullet in this section states: "Economic considerations, such as increased costs, do not necessarily require that a project design feature be varied or rendered inapplicable." BMPs should be applied on a case-by-case basis. They should not be mandated with a broad-brush approach. | See management action #4 "Apply best management practices (BMP) to authorized BLM activities on a case-by-case basis," and Appendix A. |
| 838 - General-NEPA Compliance | #13751-75 | Public Involvement. BLM has not involved the public in development of the RMP since 2020. The public had no involvement in developing or selecting the preferred alternative, as required by the FLPMA. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13751-76 | Stagnant Data: The RMP has been in preparation since 2011. Much of the baseline data, analysis, and information dates back to 2013 as stated on page ES-1. Examples of even earlier data can be found throughout the RMP. We recommend that BLM use more current data and analysis and bring the RMP up to date before it is finalized. Use of outdated information means that the RMP is neither accurate nor complete. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13751-97 | BLM has relied on outdated and inaccurate information. In the rush to complete the document BLM failed to rely on best science and current information. All of which is contrary to NEPA and BLM's own guidance. BLM acknowledges the underlying data analysis is dated but proceeds to rely on it based on trend data. As noted in our comments, current trends do not support the conclusions being made in the RMP/DEIS. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13751-99 | The document fails to fully inform the public and affected parties as to what the plan means on the ground. Either by design or due to a rushed timeframe, this document is: (1) vaguely written as to its implementation impacts on the public and affected parties and (2) poorly presented in terms of clear mapping and delineation of areas and applicable management actions. | Maps are provided in the Maps section of Volume 1 of the DEIS. See Section 2.2.2 for explanation of difference between management actions and implementation decisions. Note that this plan does not propose any implementation-level decisions. A comparison for proposed management under each alternative can be found in Table 2-1. |
| 838 - General-NEPA Compliance | #13751-100 | The document is inherently flawed based on the decisions to: (1) completely ignore pending sage grouse plans, even though BLM had previously announced it was delaying development of the RMP pending development of the sage grouse RMP amendments and (2) entirely ignore the impact of wild horses within the area as well as pending administrative actions related to the wild horse population. These two items are determinative of the treatment of wide expanses of the area covered by this EIS/Draft Management plan. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). |
| 838 - General-NEPA Compliance | #13751-101 | BLM did not meet the standard of "hard look" in preparing the Draft RMP. A "hard look" requires reliance on the best, most current data available. The "hard look" standard was intended not only to make sure the agency made an informed decision but to assure the public and affected parties were provided a clear understanding of the impacts of the Draft RMP. BLM has not taken a "hard look" at wilderness study areas and as a result those areas remain in limbo. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. Section 1.4 adequately addresses the planning criteria for Wilderness Study Areas (WSAs) and lands with wilderness characteristics. WSAs are congressionally-designated and their designation is therefore outside the scope of this RMP. Management actions for lands with wilderness characteristics are covered under MA#1500-1517. Additionally, Chapter 4 includes a thoroughly adequate analysis for all four alternatives. |
| 838 - General-NEPA Compliance | #13754-9 | Wyoming has a Constitutional responsibility to generate revenue for its public school system and state institutions by encouraging productive uses on state lands. These lands are very often encompassed by federal lands (very much so in the RSFO) and require access through those lands in order to be utilized. The BLM must respect this charge given to the state by its citizens and ensure that no actions taken within this RMP impede the state's ability to fund these activities. 43 C.F.R. § 1610.3-2 outlines the discretion afforded to states and a Governor's ability to make state policies known to the BLM through a consistency review. | See Section 1 for adequate coverage of what lands are and are not included in the planning area that would be affected by the proposed RMP. In accordance with NEPA and BLM policy, the Governor's Consistency review period will be initiated upon the publication of the Final EIS. |
| 838 - General-NEPA Compliance | #13776-1 | To be useful, this plan must be based on current visitation numbers with the best possible growth trends being used to plan for future impacts. The numbers in Table 4-11 (Volume 1, pages 4-233 and 4-234) assume a constant annual activity level, and the data used to develop this draft of the Rock Springs RMP appears to reflect a percentage increase in estimated visitation rather than an accurately recorded visitation statistic. Furthermore, the report appears to be based on data from 2014, before the COVID-19 pandemic which spurred the latest increase in visitation. Statewide, recreation visitation has increased significantly and continues to trend upward. We disagree, as is suggested on page ES-1, that visitation is a "minor condition" or that the "baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives." | The socioeconomic report not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. |
| 838 - General-NEPA Compliance | #13776-9 | The well-preserved condition and number of intact historic trail and wagon road miles in this Field Office warrant serious protection. Ideally and for continuity, the Rock Springs RMP would match the National Historic Trails protections outlined in the Lander Field Office RMP, with similar viewshed protections and NSO conditions. For Management Actions 7001-7006, Alternative D provides the most balanced approach, acknowledging that viewshed in certain parts of the National Historic Trails has been compromised. | Proposed management for National Historic Trails are covered in MA#5000-5013. Congressionally-designated National Historic and Scenic Trail management actions are described in MA#7000-7022. |

|---|---|---|---|
| 838 - General-NEPA Compliance | #13776-12 | Other suggestions and edits to this draft EIS include: * The bookmark in the PDF of Volume 1 for Section 2.2.6 has Alternative misspelled. * Page 1-4, second to last sentence of 1.4 paragraph appears to be missing a space between planning and criteria. * Page 4-146, fourth full paragraph appears to be missing a space between potentially and reduce. * Page 4-197, fifth full paragraph appears to be missing a space between Oregon and "and." | The document will be edited for minor typos and grammatical corrections as needed. |
| 838 - General-NEPA Compliance | #13787-7 | Additionally, restricting access to the federal coal resource negatively impacts ongoing efforts of the University of Wyoming and numerous Wyoming companies working in the emerging coal-to-products field. General Comments on the Draft RMP State agencies have primacy under other federal agencies to regulate mining and management of many of the resource areas with Management Actions in Chapter 2, Table 2. For example, the WDEQ-LQD has jurisdiction over mining and mine permits, WDEQ-AQD has jurisdiction over air quality standards, WDEQ-WQD has jurisdiction over surface water and groundwater, and WDEQ-HSWD has jurisdiction over hazardous waste. BLM requirements in the Management Actions must not be in conflict with the jurisdiction of other state and federal agencies enforcing other laws. | Refer to the Federal Land Policy Management Act for information about BLM's jurisdiction over public lands. See Appendix E for additional information about laws and regulations. |
| 838 - General-NEPA Compliance | #13787-8 | The Draft RMP has been in preparation since 2011. Much of the baseline data and analysis is based on data and information that is in some cases over a decade old. After spending nearly $9 million dollars it seems that an RMP citing stagnant data will need to be updated in less than a decade. We suggest the BLM make the effort to bring the Draft RMP up to date prior to finalizing. Page ES-1 of the Draft RMP/DEIS states "The summary of the Analysis of the Management Situation (AMS) was prepared in accordance with 43 CFR 1610 and was completed in August 2013. The AMS is accurate with the analyses of the inventory, and for the basis of formulating reasonable alternatives as described in 43 CFR 1610.4-4. Although some data has been updated in response to changing conditions (ex. air quality emissions and reasonably foreseeable development), most of the baseline data gathered from 2013 has been kept static for comparative analysis purposes. Even if minor conditions have changed for an individual resource in the intervening years since the AMS, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives." Similarly, per page P-11 baseline emissions are over 10 years old. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13787-9 | Similarly, the Solid Mineral Occurrence and Development Potential Report is dated August 2012. Further, much of the data in the report is even older. For example, page 5-18 states that "The occurrence of REEs in the RSPA is described in Chapter 3.2.7. There are no known deposits of REE in the RSPA. To date there has been no systematic sampling for or evaluation of REE in the RSPA. However, the WSGS is currently conducting a statewide study, scheduled for completion in mid-2013, to identify, characterize and catalog REE deposits throughout the state." This report and several others related to REEs has been completed and must be incorporated into the RMP for completeness. Finally, as another example, the Solid Mineral Occurrence and Development Potential Report is dated August 2012. Page 5-24 states that "Although trona (soda ash) market demand decreased during the global economic slowdown starting in 2008, causing decreased prices and production, the global soda ash industry is showing positive signs of recovery. The 2010 production level at more than 16.5 million tons was up by more than 2 million tons over the 2009 level. In addition, several substantial soda ash price increases have already occurred in 2012. Along with the recovery has come interest by several producers in the possibility of future additional leasing adjacent to existing mines although no firm proposals have been submitted to date. It is expected that during the planning period, current mines or expansions to those mines could accommodate currently projected future demand increases and no new mines will be proposed. However, if the soda ash market undergoes a significant rebound during this time, the situation could change. In addition to new leasing to expand existing mines, new leasing and proposals for in situ recovery could be submitted for BLM consideration." This information is like reading from a history book. The information is outdated on all accounts and must be updated before the RMP can be considered complete or accurate. | The socioeconomic report not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013, which can be used for comparison purposes among the different alternatives. |
| 838 - General-NEPA Compliance | #13787-10 | BLM was going one direction on Greater sage-grouse and then with this draft RMP/DEIS they completely switched directions. This was a complete surprise to the public and is unacceptable. All news releases from the BLM regarding this RMP indicated it was going to incorporate Greater sage-grouse planning into the RMP, but with this recent August 2023 release have now indicated no Greater sage-grouse planning will be incorporated into the RMP. This is unacceptable and BLM must incorporate Greater sage-grouse planning and restrictions into this RMP. In particular, Appendix T, the cumulative impacts analysis section is flawed by not including Greater sage-grouse. The plan cannot be adequately reviewed without having Greater sage-grouse planning included. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. |
| 838 - General-NEPA Compliance | #13791-3 | the economic analysis is based on a very dated reasonable foreseeable development analysis which was released in 2014 with minor updates in 2016. The RFD has a ten-year study period commencing in 2016; as of the date of availability of the draft EIS, this "study period" is two-thirds over. There is no attempt to compare the development that was "foreseen" with what actually happened. This is a fatal flaw given that the period of 2014 to the present day saw wild fluctuations in the global oil and gas market, global demand, and the incredible rise of electric vehicles and renewable energy. This out-of-date analysis1 should not form the basis of any decision. | The socioeconomic report not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013, which can be used for comparison purposes among the different alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13791-4 | The only basis for rejecting the protections available under Alternative B is the potential for adverse economic impacts. However, given the lack of defensible economic data and analysis, decisions based on economic grounds are entirely speculative and would render the decision arbitrary and capricious, something that planning guidance and court decisions prohibit. | The socioeconomic report not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if conditions have changed in one sector in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013, which can be used for comparison purposes among the different alternatives. |
| 838 - General-NEPA Compliance | #13793-5 | Alternative B would limit the domestic ability to support responsible natural resource development, and it does so predicated on a flawed and out-of-date Reasonable Foreseeable Development analysis. This analysis that overestimates emissions levels drastically by relying on historic levels of production that are barely a tenth of current production. | The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13794-1 | Page ES-1 Last paragraph: "baseline data gathered from 2013 has been kept static." This data does not reference the data available through the Wyoming Landscape Conservation Initiative. The USGS Geological Survey Science for the "Wyoming Landscape Conservation Initiative-2011 Annual Report, Open-File Report 2013-1033 is available and should be reviewed and referenced along with subsequent reports. These reports are available through the WLCI website and the WLCI coordination team. Therefore, this document did not use the best available data. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13795-2 | Solvay believes the Draft RMP sets another negative precedent in the process of developing a Resource Management Plan. As WMA, and others have correctly noted, the BLM-WY relied on outdated studies, analysis, and data to inform the Draft RMP. Solvay echoes concerns with BLM-WY's use of information that is over a decade old and in some cases noticeably inaccurate to justify and guide the Draft RMP. When developing plans for responsible land use it is crucial for the government to use information that is as current as possible. Noticeably inaccurate data, such as the state of the soda ash industry, calls into question whether the other materials are still accurate and relevant. Solvay believes that the decision not to update the studies sets a dangerous precedent for future plans. | See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13795-5 | The Preferred Alternative is further weakened by serious legal questions around BLM-WY's authority to alter portions of the energy corridors to exclusion areas as the corridors were designated on federal lands under Section 368 of the Energy Policy Act of 2005. Solvay concurs with WMA's comments on the legality of the BLM-WY Preferred Alternative and urges BLM-WY to withdraw it in favor of continuing exclusions under Alternative A. | Please refer to the Federal Land Policy Management Act for BLM's authority to manage public lands. See Section 1.4 for a list of planning criteria, including compliance with FLPMA and all other applicable laws, regulations, and policies. |
| 838 - General-NEPA Compliance | #13795-8 | The lack of consistent engagement with stakeholders since 2020, further erodes trust in BLM-WY's ability to honor the state's perspective on land and resource management. Solvay believes BLM-WY's approach to the Draft RMP would drastically, and inappropriately, expand the federal role in managing Wyoming's key resources without a commitment to transparent collaboration. This precedent naturally raises concerns over the approach to future Resource Management Plans, specifically when considering the implications on the neighboring Kemmerer Field Office. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. BLM will be in compliance with applicable laws, regulations and policies as covered in Section 1.4. Decisions regarding the Kemmerer RMP planning process are outside the scope of this EIS. |
| 838 - General-NEPA Compliance | #13806-4 | To improve upon the language proposed in the draft, and in support of my Tribal member friends and colleagues, I recommend the BLM include improved direction on collaborating with Tribal Governments in co-managing important landscapes, as opposed to simply considering Tribal perspectives. This is in alignment with recent national-level direction from both the Executive Office and the BLM. (In reference to Management Goals HR-03, 14, 15, & 16 and any associated Management Actions including but not limited to MA's 5000, 5001, 5010, and 5200 as per BLM Permanent Instruction Memorandum 2022-011). This collaboration should extend to knowledge sharing. Traditional knowledge is not to be shared or incorporated into BLM databases unless done so in collaboration with Tribal Nations, with their approval, and in a manner such that it is "utilized to advance Indigenous aspirations for collective and individual wellbeing". (In reference to RMP Management Goals HR-14 & 15 and ssociated MA 5200 under Alternative B as per 2022 OSTP-CEQ Memorandum on Indigenous Knowledge). | Any proposals for co-management with Tribal Nations is an implementation action that would not be precluded by any of the four alternatives in this EIS. See section 5 regarding public involvement and government consultation and coordination in developing all alternatives, including government-to-government consultation with Native American tribes. |
| 838 - General-NEPA Compliance | #13811-1 | All of these efforts culminated in BLM publishing a "Notice of Intent to prepare an Environmental Impact Statement for the Dry Creek Trona Mine Project" in April 2022.1 Since that time, Pacific has been working closely with the BLM and its third party contractor to prepare the Dry Creek Project EIS. Pacific anticipates the publication of the Dry Creek Project Draft EIS for public comment in the first quarter of 2024. Throughout all of this close coordination, Pacific was never alerted to the potential that the BLM was considering a resource management plan alternative that would be so restrictive that Pacific could be forced to reevaluate the placement of key infrastructure for the Dry Creek Project. | The Draft EIS has been under development since 2011. The BLM is aware of ongoing review of all rights-of-way applications that have been received by the BLM for the RSFO area and has identified any conflicts with the four alternatives proposed, notifying applicants as appropriate. |
| 838 - General-NEPA Compliance | #13826-3 | The Draft Rock Springs RMP is ambiguous and difficult to totally understand the impact this would have on these lands and waterfronts of the Green River and Flaming Gorge Lake Recreational areas as well as the areas southwest of Green River near McKinnon, Burntfork, and Cedar Mtn. The lack of information on actual roads or areas to be closed or restricted and their locations makes it impossible to fully understand how this will impact these areas. This needs to be not only clarified but the local people need to have a larger say on this issue. | As stated in MA#6607, see Maps 2-25, 2-26, 2-27, and 2-28 for OHV area designations by alternative. Map 2-25 shows existing designations under the current Green River RMP. Route-specific travel and transportation management decisions are outside the scope of this DEIS. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 838 - General-NEPA Compliance | #13826-30 | I do not feel that the Rock Springs RMP is written clearly or that it defines what restrictions to "Right- of-Ways', or 'Off Road Use' will be for these types of residential uses. It seems to detail more the restrictions to oil and gas, utilities, building new roads, disturbing the soil or use of equipment and building structures than it does to residential, recreational and agricultural uses. Maybe it does but the plan is set up such that this is not clearly conveyed. The only thing I located that helps me see what might affect the land and roads that are my main concern for me to access the land I am interested in is the maps that show 'Right of Way' restrictions. This source doesn't include the actual roads or property that will be restricted. Again, it is incomplete and needs more information so this is another reason to reject Alternative B. | The Draft EIS evaluates four full alternatives that detail management actions for all resources and resources uses within the field office jurisdiction. There is no Travel Management Plan proposed and specific travel and transportation management decisions are outside the scope of this Draft EIS. |
| 838 - General-NEPA Compliance | #13839-3 | Since the vast majority of public input took place nearly 10 years before the BLM issued its Conservation and Landscape Health proposed rule which indicates that dramatic changes are forthcoming to the management of ACECs, we ask - how could the Draft EIS adequately reflect the current comments and sentiment of the public? Even in the extremely unlikely event that comments urged the FO to designate more than 1.5 million acres as ACEC, they couldn't have known that the BLM would seek to change how ACEC are managed a decade later. | The specifics of the new Conservation and Landscape Health Rule are outside the scope of this Draft EIS; however, the ACEC analysis and proposals in the Draft EIS are compliant with all BLM policy and regulations. ACEC reports for each individual ACEC are provided in Appendix C. |
| 838 - General-NEPA Compliance | #13848-7 | Alternative B's imposition of ROW exclusion areas and other restrictions on BLM lands within the checkerboard, thus preventing renewable energy development on both public and private lands, directly contradicts Executive Order 14008 (January 27, 2021), in which President Biden directed BLM to "increase renewable energy production on (public) lands." | Analysis of impacts to renewable energy are addressed in Section 4.20 including analysis assumptions that take into account BLM's policy to encourage development of renewable energy in acceptable areas. |
| 838 - General-NEPA Compliance | #13848-8 | Alternative B's imposition of ROW exclusion areas and other restrictions on BLM lands within established Section 368 energy corridors, which may limit the ability of Overland to obtain gen-tie transmission siting to serve its potential customers, violates the Enery Policy Act of 2005, which directed the establishment and maintenance of such corridors, and which are present in the RSFO pursuant to prior final RMP. | Analysis of impacts to renewable energy are addressed in Section 4.20 including analysis assumptions that take into account the Energy Policy Act of 2005. |
| 838 - General-NEPA Compliance | #13859-5 | Section 4.22.2 of the DEIS describes the methodology for determining the direct economic impacts of resource uses on BLM-administered land. Table 4-11 details the potential outputs from resources including livestock grazing, extractable material development, and recreation. BLM should include assessment of the positive economic impact of renewable energy development, including transmission lines, for each of the alternatives. | Renewable Energy is authorized by BLM under a right-of-way and; therefore, impacts related to renewable energy can be found in the right-of-way analysis and proposed management action for all four alternatives. |
| 838 - General-NEPA Compliance | #13859-6 | While the Draft RMP acknowledges several regulatory changes to implementation of the National Environmental Policy Act, it fails to acknowledge the changes in public law, which were signed into law by the President on June 3, 2023 - months prior to the publication of the draft plan. Aspects of these changes in law directly impact the BLM's programmatic effort - namely 42 USC 4336b relating to time periods. The scoping period for this draft RMP began on February 1, 2011 and ended on April 4, 2011. The law states that when an agency prepares a programmatic environmental document for which judicial review is available, the agency may rely on analysis included in the programmatic environmental document in a subsequent environmental document for related actions within 5 years without additional review of the analysis, unless there are substantial new circumstances or information. After 5 years, the law states that an agency may rely on analysis "so long as the agency reevaluates the analysis in the programmatic document" to ensure reliance on the analysis remains valid. | The BLM is in compliance with all applicable laws and regulations. See Appendix E. |
| 838 - General-NEPA Compliance | #13859-7 | BLM should expand the cumulative effects analysis to be more comprehensive and include the potential contribution of renewable and carbon-free energy development, generation, and transmission. | A full cumulative impacts analysis is available in Appendix T. |
| 838 - General-NEPA Compliance | #13859-8 | BLM should expand the assessment of potential irreversible and irretrievable commitment of resources and comprehensively consider the benefits of renewable energy development and its associated infrastructure with respect to of the preservation-focused land management under alternatives B, C, and D. | See Appendix T.2 for a discussion of irreversible and irretrievable commitments of resources. |
| 838 - General-NEPA Compliance | #13880-7 | The second item is the need for an updated Reasonably Foreseeable Development (RFD) analysis for oil and gas operations. The data to be analyzed under any alternative in the EIS is grievously out of date, and thus just plain wrong. To borrow from the Wyoming Oil and Gas Conservation Commission (WOGCC) comments, "The analysis itself states, 10 years ago, 'It is difficult to predict what will occur a few years into the future, but it is even more difficult to predict 20 years ahead.' (Pg 92)". We cannot support a document that attempts to make such broad policy decisions based on outdated and easily refuted data. WOGCC data recorded oil production in the RSFO to be approximately 815,000 bbls in 2022, compared to the RFD's prediction of 4,800,000 bbls. There are no general trend lines that are acceptable for the BLM's analysis of this scale when the data used is so far removed from reality. The technical advances in drilling practices, such as horizontal drilling and, consequently, less surface disturbance, should not be ignored. I direct BLM to the WOGCC and industry comments for further detail on the discrepancy of this analysis | The RFD is not a goal or intended outcome, but rather a baseline measurement tool for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13880-23 | It is also important that the BLM respects valid and existing rights within the RSFO. While this has been stated as being the status quo multiple times, it is worth repeating. Indirect management actions can easily hinder the full potential of the state to utilize our state trust lands, for private developers to fulfill their leases, and grazing permittees to support their operations. Existing Records of Decisions from the BLM or other federal agencies, | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including addressing in footnote 6 that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | which have already undergone the NEPA process, need to be allowed to proceed unobstructed and unchanged by the completion of this RMP. | |
| 838 - General-NEPA Compliance | #13880-24 | Similarly, state lands are constitutionally required to provide the highest and best use for the benefit of the State's beneficiaries. This requirement was a condition to Wyoming's admission into the Union. Alternative Bis in stark contrast to this directive. Existing and future uses are a matter of state direction, through the legislature and the Board of Land Commissioners. Designations of surrounding, adjoining, or nearby BLM lands may impede that mission or prevent the State from meeting its fiduciary duties with respect to its state trust lands.Inconsistent management practices could displace existing state lessees, permittees, and easement holders, leading to the Wyoming Office of State Lands and Investments' (OSLI) decreased ability to optimize revenue generation for current and future generations. Reviewing OSLI's comments in detail is critical to the State of Wyoming and our ongoing partnerships with the BLM. | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including footnote 6 which states that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). |
| 838 - General-NEPA Compliance | #13880-25 | In addition to achieving consistency with other federal decisions and State policies, the BLM must align with local county natural resource management plans more closely. Counties, conservation districts, municipalities, and other local government entities cannot support management actions that have negative impacts to their services and communities. These are the local partners that assist the BLM on a day-to-day basis and ensure beneficial relationships continue from administration to administration. The BLM states on page 1-5, regarding their "Relationship to Other Plans" that, " ... land use plans and amendments must be consistent with officially approved or adopted resource-related plans, and the policies and programs contained therein, of other federal agencies, state and local governments, and Native American tribes, so long as the guidance and RMPs are also consistent with the purposes, policies, and programs of federal laws and regulations applicable to public lands." However, all five of the affected county land use plans listed are well over a decade out of date. The Wyoming County Commissioners Association assisted these five counties in analyzing the draft RMP against the current county land use plans and have submitted those as comments to the BLM. The BLM must take the necessary time to review its consistency with the provided data. | See updates to Table 1-2. |
| 838 - General-NEPA Compliance | #13880-26 | I understand the timeline and the work that has been devoted to developing this RMP, but the desire to proceed should not overshadow the need for good data. There is a definite need to update BLM RMPs to include changing technologies and updated methodology. However, given the gaps in analysis and the need to incorporate the latest science regarding wildlife, reasonable foreseeable development, and socioeconomic impacts, it is necessary for me to request the BLM issue a supplemental EIS for this draft RMP. The success of the efforts of everyone involved, from 2011, through this comment period, and onto the development of the Record of Decision, is dependent on the quality of this draft document. This RMP is too important to have its impacts go unexamined. If it is worth doing, it is worth doing well. The BLM will find many interested and committed cooperators and partners in developing a worthwhile product. | Neither the RFD nor the Socioeconomic report are goals or intended outcomes, but rather baseline measurement tools for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |
| 838 - General-NEPA Compliance | #13900-1 | "address changing needs of the planning area by updating information" and that the need for revising the Green River RMP is the "result of considerable changes within the planning area since 1997." The public scoping process was performed over 11 years ago. Wyoming's outdoor recreation needs have drastically changed since that time. Motorized recreation has experienced unprecedented growth and a surge in popularity. With the incredible changes to recreation needs and awareness that have taken place in just the past 3 years because of a worldwide pandemic which led to a renewed interest in outdoor recreation by the American public, data collected over a decade ago cannot appropriately or effectively inform a resource management plan revision. | A recreation report for analysis is provided in Appendix S of Volume 2. See Chapter 3 for a description of adequacy of baseline data for comparison analysis purposes. |
| 838 - General-NEPA Compliance | #13905-2 | While the Draft EIS provides lists of different categories of impact by resource, it fails to quantify the direct and cumulative impact of the multiple types of impacts authorized under the plan. See, e.g., effects on water quality at 4-33. It is not enough to provide a list of impacts; cumulative effects on individual resources must be analyzed and disclosed. | A full cumulative impacts analysis is available in Appendix T. |
| 838 - General-NEPA Compliance | #13906-1 | BLM further explains on page 1-6 they acknowledge reviewing the following county plans for consistency: 1) Fremont County Wyoming Land Use Plan 2004, 2) Lincoln County Comprehensive Plan 2006, 3) Sublette County Federal and State Land Use Policy 2009, 4) Sweetwater County Comprehensive Plan 2002 and 5) Uinta County Comprehensive Plan 2011. However, there is no meaningful discussion presented anywhere in the document that describes the management actions in detail nor did the BLM utilize the most recent county plans that were approved as follows: 1) Fremont County Natural Resource Management Plan 2021, 2) Lincoln County Natural Resource Management Plan 2021, 3) Sublette _County Federal and State Land Use Policy 2021, 4) Sweetwater County Federal Lands and Resources Plan 2022 and 5) Uinta County Comprehensive Plan 2021. | See updates to Table 1-2. |
| 838 - General-NEPA Compliance | #13910-3 | BLM should allow other organiztions to be involved on a contract basis for both field evaluations (a factor that seems to have very limited personnel) and carrying out any aproved projects that come out of them. | Implementation actions, including site specific field evaluations, are outside the scope of this Draft EIS for land use planning. |
| 838 - General-NEPA Compliance | #13910-6 | More educational opportunities should be developed by the BLM to allow the pubic to understand why certain things are needed and done in regards to habitat and wildlife needs. | The development of educational programming is outside the scope of this Draft EIS. Management actions for wildlife and fisheries are covered in MA#4400-4436. Affected environment for wildlife and fisheries habitat is |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | | adequately explained in Section 3.7, and a detailed analysis of the impacts of each alternative on wildlife and fisheries habitat is provided in Section 4.7. |
| 838 - General-NEPA Compliance | #13911-16 | DEIS Fails to Address Consistency with Local Plans Pursuant to FLPMA, the BLM must ensure that "land use plans of the Secretary under this section shall be consistent with State and local plans to the maximum extent he finds consistent with Federal law and the purposes of this Act." 43 U.S.C. 1712(c)(9) (emphasis added). BLM must keep apprised of state and local land use plans, give consideration to such plans, and to assist in resolving inconsistencies between Federal plans and local government plans. 43 C.F.R. §§ 1610.3-1(a)(1)-(3), 1610.3-2(a). The regulations require federal agencies to address how inconsistencies between a proposed action and local lands use plans are addressed and resolved. Am. Motorcyclist Ass'n v. Watt, 534 F. Supp. 923, 936 (D. Cal. 1981). NEPA further requires the BLM to discuss within the EIS any inconsistencies of a proposed action with State and local plans, and the extent to which such inconsistencies could be reconciled. 40 C.F.R. §§ 1502.16(a)(5), 1506.2(d). It is not enough for the BLM Field Manager to state that the consistency review will occur after the FEIS has been filed, because NEPA requires that the consistency discussion be included within the EIS. See Quechan Tribe of Ft. Yuman Indian Reservation v. U.S. Dep't of the Interior, 927 F. Supp. 2d 921, 946 (D. Cal. 2013) (BLM's consistency analysis was sufficient due to the FEIS containing a "General Plan Policy Consistency Analysis which addresses the consistency between the Project and local regulations and law."). | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 838 - General-NEPA Compliance | #13912-2 | The Draft EIS fails to analyze and address the impacts that the proposed federal actions within the checkerboard would have on the rights of private surface and mineral estate owners to access, develop, and or use, their surface and mineral estates and whether the BLM's proposed restrictions within the checkerboard amounts to a taking without just compensation in violation of the U.S. Constitution. | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including footnote 6 which states that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). |
| 838 - General-NEPA Compliance | #13912-4 | The Draft EIS fails to analyze and address the negative effects, including socioeconomic, that the imposition of new Rights-of-Way restrictions within the Rock Springs Field Office checkerboard area would have on private and public lands in neighboring areas, Southwestern Wyoming and Wyoming as a whole. An EIS must analyze all impacts, direct and indirect, caused by an action, and the measurement area cannot be limited to an arbitrarily determined 'field office' boundary line. The full effects of any action taken along or within the RSFO boundary lines, must be analyzed in the EIS. BLM cannot ignore, fail to investigate, or decline to address these issues because they are across an artificial boundary line. The EIS made no investigations, analyses, or conclusions of the various alternatives and their broader socioeconomic impacts. | Table 1-1 describes land and mineral ownership and jurisdictions within the Rock Springs planning area, including footnote 6 which states that impacts to areas with private or state ownership will be discussed in the cumulative impacts analysis section (Appendix T). As noted in the DEIS, valid existing rights will be maintained (Section 1.2.1, 1.2.2, 1.4, etc.). For a full socioeconomic report, see Appendix N. |
| 838 - General-NEPA Compliance | #13918-2 | We vehemently disagree with the BLM's selection of Alternative B as the Preferred Alternative and fail to understand why the BLM selected an alternative that differs so substantially from the compromise that interested parties worked toward for years. While the Utah Farm Bureau has not been involved in development of the RMP until now, we closely watched the efforts of the State of Wyoming, affected Wyoming communities, the Wyoming Farm Bureau Federation, and the Wyoming Stock Growers Association throughout the process. Promoting the most extreme and restrictive alternative after 12 years of discussions sends the message that BLM ignores local voices and that there is little value in states and local governments being actively involved in planning processes. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13919-2 | The Draft RMP rightfully acknowledges on page 1-5 that "land use plans and amendments must be consistent with officially approved or adopted resource- related plans, and the policies and programs contained therein, of other federal agencies, state and local governments, and Native American tribes, so long as the guidance and RMPs are also consistent with the purposes, policies, and programs of federal laws and regulations applicable to public lands." Unfortunately, Table 1-2, which provides the "Related Local, State, and Federal Management Plans" for the Rock Springs planning area contains outdated local plans for each of the five counties listed. | See updates to Table 1-2. |
| 838 - General-NEPA Compliance | #13919-3 | Each of the five counties updated their plans within the last three years. Fremont County's Natural Resource Management Plan was approved in 2021; Lincoln County's Natural Resource Management Plan was approved in 2021; Sublette County's Federal and State Land Use Policy was approved in 2021; Sweetwater County's Federal Lands and Resources Plan was approved in 2022; and Uinta County's Comprehensive Plan was approved in 2021. Counties provided their updated plans to the BLM, and some even solicitated the BLM provide comments on their draft plans during the amendment process. | See updates to Table 1-2. |
| 838 - General-NEPA Compliance | #13919-4 | Chapter 5.1 details the efforts undertaken by the BLM for consultation. coordination, and consistency while developing the Draft RMP revision and EIS. Specifically, the Draft RMP states the "interdisciplinary team reviewed county land use plans to ensure consistency." It is assumed that the plans reviewed to ensure consistency were the wrong plans identified in Table 1-2. Unfortunately, there is no discussion or report from the interdisciplinary team to understand what inconsistencies they may have discovered in their review or how they ensured consistency with local plans. The statement in the Draft RMP by itself, without any discussion of "possible conflicts," suggests that the interdisciplinary team did not find any inconsistencies. | See updates to Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13919-5 | The RMP also provides that "consistency for the draft EIS w[as] accomplished primarily through the assistance of cooperating agencies formally involved in the project." This statement appears to conflate the requirements for cooperation with consistency. Although consistency is best achieved through cooperation with local governments in the NEPA process, consistency and cooperation are distinct requirements. A federal agency cannot accomplish | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | consistency simply because local governments formally participated as cooperating agencies. The BLM does not provide any further detail of the opportunities it provided to cooperating agencies or what assistance it was given from cooperators regarding consistency. There is no further discussion of consistency with county plans in the remainder of the Draft RMP. | |
| 838 - General-NEPA Compliance | #13919-6 | The remainder of this document contains a side-by-side comparison of the management prescriptions for the preferred alternative (Alternative B) in the Draft RMP and citations to the appropriate Fremont, Lincoln, Sublette, Sweetwater, and Uinta Counties' resource plans. The tables identify apparent inconsistencies between each county's resource plans and the Draft RMP and provides the BLM an opportunity to discuss and/or resolve inconsistencies. | See updates to Table 1-2. |
| 838 - General-NEPA Compliance | #13919-7 | A similar approach has been successfully used by other federal land management agencies to ensure compliance with NEPA's requirement to discuss and resolve inconsistencies with approved local government plans.5 While NEPA does not require this specific format, it does require a meaningful and detailed discussion of consistency with local plans. Substantial effort has been put forth to create these documents to assist the BLM in its consistency review and discussion. This document may also serve as the basis for the BLM's required disclosures to the Governor for consistency review. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13951-1 | To begin, I take real issue with how this all come about - in the dark of night, without bringing in the major stakeholders, industry leaders from the mining, agriculture, renewable and non-renewable resources, etc., and cooperating agencies such as the cities, counties, and the state; breaking laws and overstepping their authority, ignoring their own research…all in the name of preservation under guise of conservation. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-1 | As described in detail below, the WCCA believes that the Rock Springs Draft RMP will necessarily need to be supported by a supplemental EIS to revise the decades old data and analysis, provide updated reasonably foreseeable development scenarios that account for recent technological developments, accurately assess the socioeconomic impacts of overlapping resource restrictions, and to fully evaluate environmental impacts currently lacking in the document. Additionally, our hope is that by working with cooperating agencies on a supplemental EIS the BLM can rebuild some of the trust lost in this process, work with counties to resolve inconsistencies between the Draft RMP and approved county plans, and ultimately bolster management for the betterment of the land, its resources, and the public. | See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. Appendix N provides a full socioeconomic report. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 838 - General-NEPA Compliance | #13953-3 | This is not to say that the existing Green River RMP has substantial issues that needed resolved. In fact, one general conclusion that should be gleaned from the Rock Springs Task Force report is that many of the management actions for the RMP area do not need to change. | Section 1.2 adequately explains the purpose and need for the Rock Springs RMP revision. |
| 838 - General-NEPA Compliance | #13953-4 | Another substantial effort the WCCA undertook for the Draft RMP was the creation of a Consistency Evaluation Table for each of the five counties, which compares the preferred alternative to approved county natural resource plans. We have invested hundreds of hours of work, in good faith, to make the BLM's job of performing its required consistency review easier. Without repeating the entire letter (submission ID: DEIS-1-500626417), we again request that the BLM complete this exercise to meaningfully discuss inconsistencies with local plans. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-5 | The Draft RMP currently lacks any meaningful discussion regarding consistency with local government plans. The Draft RMP simply states, without any description or detail, that the "interdisciplinary team reviewed county land use plans to ensure consistency." Without questioning that the interdisciplinary team actually reviewed county land use plans, there is no evidence within the Draft RMP that they ensured consistency. On the contrary, Alternative B, is by and large, inconsistent with all five of the counties' approved plans. For example, compare the following statement from the approved Sweetwater County plan to the Draft RMP's summary for its preferred alternative. "Sweetwater County discourages and vigorously opposes federal land use restrictions or special designations that eliminate multiple uses and constrain economic growth and activity." 2.2.2. Sweetwater County Federal Lands and Resource Plan (2022). vs. "Alternative B protects the greatest amount oflands through mineral leasing restrictions, management of ACECs, and lands with wilderness characteristics. Habitat for wildlife, vegetation, natural resources, and cultural resources would receive the greatest protection. Socioeconomic impacts would be the largest due to reduced mineral development." Table 2. ES-7. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-6 | The county's approved plans and the preferred alternative are fundamentally at odds. While inconsistencies can exist under the law, efforts are required to be made to resolve inconsistencies and there should be a discussion of possible conflicts between the proposed action and local plans. It is disingenuous to suggest that the BLM's interdisciplinary team reviewed county plans to ensure consistency without providing any description of what the team actually did. The Draft RMP does at least provide a citation to the county plans that it reviewed. Unfortunately, every one of the county plans contained in Table 1-2 are no longer valid, as they have each been supplanted by amended plans. | See updates to Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-7 | Fremont, Lincoln, Sublette and Uinta all updated their plans in 2021 and Sweetwater updated their county plan in early 2022. Just like an RMP amendment, the process to update county plans is substantial in both time and effort. At least a few of the counties within the RMP area specifically requested the BLM provide comments on their draft county plans; however, BLM did not provide a response to the counties' request. As a final step, once plans were | See updates to Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | approved, counties provided updated copies of their plans to all federal agencies and posted them on applicable county websites. | |
| 838 - General-NEPA Compliance | #13953-8 | Under FLPMA, the BLM has a responsibility to stay apprised of local government plans and give them consideration during the development or amendment of a BLM land use plan. Specifically, FLPMA provides: To the extent practical, the BLM must stay apprised oflocal land use plans. The BLM must assure that local land use plans germane to the development ofBLM land use plans are given consideration. To the extent practical, the BLM must assist in resolving inconsistencies between local and BLM land use plans. The BLM must provide for the meaningful involvement of local governments in the development of BLM land use programs, regulations, and decisions. 43 U.S.C. § 1712(c)(9). More detrimental than failing to stay apprised of the approved local land use plans in the RMP area, is the failure to "assist in resolving inconsistencies between local and BLM land use plans." Based on the information in the Draft RMP, the only consideration given to resolving inconsistencies appears to be BLM's involvement of cooperating agencies in the project. The Draft RMP states that "consistency for the draft EIS w[as] accomplished primarily through the assistance of cooperating agencies formally involved in the project." However, this statement is not correct in principle nor practice. First, as discussed above, the preferred alternative in the Draft RMP is largely inconsistent with local plans. The statement from the Draft RMP reads as if consistency with county plans has already been achieved. Second, the BLM's requirement to cooperate with local governments as cooperating agencies is not the same as BLM's requirement to resolve inconsistencies. While the BLM should provide cooperating agencies with an opportunity to discuss inconsistencies throughout the cooperating agency process, BLM's requirement for consistency with local plans stands alone. For example, if one of the five impacted counties opted to not participate under NEPA as a cooperating agency, the BLM would still be required to stay apprised of their approved local land use plan, assure it is given consideration in the development of the BLM's Draft RMP, and assist in resolving inconsistencies. Finally, as the BLM knows, cooperator meetings are protected by MOUs signed with cooperating agencies prohibiting the sharing of pre-decisional documents. To the extent that documents from within those meetings were generated, reviewed, or commented on, there is no way for the general public to see that information without the BLM sharing it in the Draft RMP. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-9 | Outside of these two references that plans were reviewed by the interdisciplinary team and consistency accomplished from cooperator meetings, there is nothing else in the Draft RMP describing the extent to which the BLM would reconcile its proposed action with the plan or law. 40 C.F.R. § 1506.2(d). Without any meaningful attempt to discuss inconsistencies in the Draft RMP, our concern is that the BLM's required consistency review report with the Governor of Wyoming will also be lacking. The Governor's consistency review is predicated on the State Director submitting known inconsistencies with local plans, policies, or programs. 43 C.F.R. § 1610.3-2(e). As the Draft RMP is currently written, it wrongly suggests that the Draft RMP and approved county plans are consistent. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #13953-10 | While NEPA is designed to take a hard look at environmental impacts, it does not require that federal agencies select actions that have the least environmental consequences. In fact, selecting actions that are perceived to have the least environmental consequences may very well violate other laws that the federal agency is bound to uphold. For example, the Draft RMP explains in section 2.2.4 that the BLM considered closure to livestock grazing, closure to fluid mineral leasing, and closure to coal leasing within the RMP area as a method for resolving conflicts with other resource values and uses, but ultimately eliminated closures from further analysis as not reasonable in light of the BLM's multiple use, sustained yield mandate outlined in FLPMA, the Mineral Leasing Act, and the fact that complete closure is inconsistent with policy objectives. | See Section 1.4 for a list of planning criteria, including compliance with FLPMA and all other applicable laws, regulations, and policies. |
| 838 - General-NEPA Compliance | #13953-19 | The WCCA is hopeful that the BLM moves drastically off the substantial resource restrictions present in its preferred alternative and proposed ACEC's. To update the reasonably foreseeable development scenarios, socioeconomics, discussion concerning consistency with approved county plans, and to consider environmental impacts not examined in the Draft RMP, it is likely necessary to produce a supplemental EIS. While further extending the resolution of the RMP amendment process may not be popular within the agency, the BLM has our full support | See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. A technical socioeconomic report is included in Appendix N. |
| 838 - General-NEPA Compliance | #14019-1 | BLM failed to coordinate with county natural resource management plans. BLM must coordinate with local governments to ensure that management actions are consistent with these plans and if not, provide a detailed explanation as to why based on federal laws, regulations, rules or policies. In choosing not to do so, BLM violated this requirement. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #14019-3 | WACD maintains that the economic analysis conducted over a decade ago at the beginning of the RMP process is no longer valid | Neither the RFD nor the Socioeconomic report are goals or intended outcomes, but rather baseline measurement tools for analysis comparison among the alternatives that have differing management restrictions. Additionally, even if market conditions have changed in the intervening years, the baseline data is adequate to compare conditions and differentiate resource impacts among the alternatives. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. See Section 4.2.3 regarding the adequacy of the RFD scenario for the purpose of equitably comparing alternatives. See Chapter 3 for description of adequacy of baseline data gathered in 2013. |

|---|---|---|---|
| 838 - General-NEPA Compliance | #14022-1 | SCCD is concerned that the process used by the Bureau of Land Management (BLM) to roll out the RMP to the Cooperating Agencies (CA) is in direct violation of Federal Land Policy and Management Act of 1976 (FLPMA), specifically regarding the involvement of local governments, for many reasons including: 1) Skipping the CA process for an "internal" review prior to the release to the public 2) BLM's lack of CA involvement, highlighted on page ES-7. 3) Lack of collaboration with CA's in Table 1.2 on page 1-6. The plans associated with SCCD are out of date and would have been corrected if the CA's had been communicated with prior to the release of the RMP. SCCD has updated our Long-Range Plan in 2020. | See updates to Table 1-2. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5 for details on public involvement, coordination, and consultation. |
| 838 - General-NEPA Compliance | #14027-1 | As an overarching matter, however, the NMA urges BLM to go back to the drawing board and restart the Rock Springs RMP process with a new scoping period. Reliance on outdated information gathered during the 2011 scoping period is a disservice to the potentially affected stakeholders. Given the passage of over a decade, BLM should collect updated information properly through a new scoping period. While we sympathize with the agency's struggles to address its RMP backlog, BLM cannot ignore the obligation to make planning decisions based on current information. As the agency broadly acknowledges "sound land management decisions require knowledge of the resources affected by those decisions. | See Section 5.1 regarding public involvement and government consultation and coordination in developing all alternatives. See Executive Summary Introduction (page ES-1) and Section 3 regarding the sufficiency of AMS summary and baseline data. |
| 839 - General-FLPMA / Multiple Use | #302-3 | Despite the BLM's acknowledgement of the harm to these bedrock industries of the State of Wyoming and the resulting damage to local communities as well as to the entire State of Wyoming, the agency still proposes to select Alternative B as their preferred alternative. This disregard for the multiple use of BLM lands within the Rock Springs District's RMP EIS is in clear contradiction to the BLM's mission statement and charge from Congress: "A Multiple-Use and Sustained Yield Mission Congress tasked the BLM with a mandate of managing public lands for a variety of uses such as energy development, livestock grazing, recreation, and timber harvesting while ensuring natural, cultural, and historic resources are maintained for present and future use. To do this, we manage public lands to maximize opportunities for commercial, recreational, and conservation activities. This promotes healthy and productive public lands that create jobs in local communities while supporting traditional land uses such as responsible energy development, timber harvesting, grazing, and recreation, including hunting and fishing." | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. |
| 839 - General-FLPMA / Multiple Use | #305-3 | Does the BLM consider working with the State and Industries on alternatives for the greater good? By greater good I mean, preserve the environment and at the same time prevent negative impact of the communities prosperity and people well being. | See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #315-1 | Alternative B, the agency's preferred alternative, certainly does not meet the mandate of multiple use and sustainable yield. Rather, it appears to be a plan solely based on conservation and will limit the potential for multiple use on BLM lands going forward. | The Draft EIS is in compliance with NEPA and FLPMA (see Section 1.4 "Planning Criteria"). |
| 839 - General-FLPMA / Multiple Use | #317-1 | Accompanying the long-anticipated release of the Rock Springs RMP, the BLM has selected as its preferred alternative one that does not reflect the multiple use mandate in the Federal Land Management and Policy Act (FLPMA). Alternative B, the conservation alternative, would close for fluid leasing 2,186,218 acres of the 3.7 million subsurface acres managed in the field office. It would leave oil and gas development available only where valid existing rights occur, closing every other acre in the field office. Currently, any lands not specifically closed are available for development (as well as every other available use). FLPMA directs that public lands be managed with recognition of the nation's need for domestic sources of minerals2 and has thus identified mineral development as a primary use of public lands. Removing that potential from every acre not already leased is, in effect, a withdrawal of federal lands for a specified purpose, an action which can only be taken by Congress3. | See Section 2.2.4 for alternatives considered but eliminated from detailed analysis, including closing the planning area to new leasing of federal minerals, specifically fluid minerals. Table 1 in the Executive Summary compares lands open and closed to mineral resource restrictions, and a detailed analysis of impacts to fluid minerals under each alternative is provided in Section 4.11. See also Section 1.4 for a list of Planning Criteria for the RMP, including adherence to FLPMA. |
| 839 - General-FLPMA / Multiple Use | #332-2 | The intended purpose of the release of a draft plan is to provide a wide spectrum of options while identifying as a Preferred Alternative a balanced approach that meets the BLM multiple use mandate. This approach then enables all interests to recommend meaningful substantive changes to that alternative. The current Alternative B is so completely detrimental to multiple use, including livestock grazing, that it does not even lend itself to constructive comment. It completely fails to recognize the importance of the expertise and commitment of local interests, including local BLM personnel, to management of these lands. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. |
| 839 - General-FLPMA / Multiple Use | #345-1 | It is absurd that the BLM would consider this alternative as the preferred when the Rock Springs area is rich in mineral and energy reserves, the gateway for electric generation transmission, offers significant grazing opportunities, allows for all forms of recreation and multiple use. | See Section 1.4 for a list of Planning Criteria for the RMP, including adherence to FLPMA. |
| 839 - General-FLPMA / Multiple Use | #345-4 | Moreover, the Federal Land Policy and Management Act (FLPMA) provides a framework for managing public lands that requires a systematic, interdisciplinary approach and requires coordination in land use planning with other state and federal agencies. Under FLPMA (43 USC l7l2 11976)), the BLM is required to stay apprised of local land use plans, assure consideration is given to local land use plans, assist in resolving inconsistencies with state and local land use plans, and provide meaningful opportunities for local government officials to participate in the development of land use programs, regulations, and decisions for public lands that may have a significant impact on non-federal lands such as state or private property. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 839 - General-FLPMA / Multiple Use | #345-6 | Preferred Alternative "B" does not meet the mandate of multiple use and sustained yield as provided in FLPMA and it appears to solely support the management of conservation or preservation of lands in the RMP area through special designations including a historic level of Areas of Critical Environmental Concern (ACECs), limited or no leasing of minerals and land use allocations, restrictions for access to federal lands, along with other restrictive management prescriptions. This is unacceptable and our County clearly cannot support such a document that has negative impacts on our local communities and the State. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. |
| 839 - General-FLPMA / Multiple Use | #345-7 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #348-2 | BLM must better align with local natural resource plans. The Preferred Alternative "B" does not meet the mandate of multiple use and sustained yield as provided in FLPMA and it appears to solely support the management of conservation or preservation of lands in the RMP area through special designations including a historic level of Areas of Critical Environmental Concern (ACECs), limited or no leasing of minerals and land use allocations, restrictions for access to federal lands, along with other restrictive management prescriptions. This is unacceptable and our County clearly cannot support such a document that has negative impacts on our local communities and the State. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 839 - General-FLPMA / Multiple Use | #348-3 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 839 - General-FLPMA / Multiple Use | #363-3 | Moreover, the Federal Land Policy and Management Act (FLPMA) provides a framework for managing public lands that requires a systematic, interdisciplinary approach and requires coordination in land-use planning with other state and federal agencies. Under FLPMA (43 USC 1712 (1976]), the BLM is required to stay apprised of local land use plans, assure consideration is given to local land use plans, assist in resolving inconsistencies with state and local land use plans, and provide meaningful opportunities for local government officials to participate in the development of land use programs, regulations, and decisions for public lands that may have a significant impact on non-federal lands such as state or private property. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 839 - General-FLPMA / Multiple Use | #363-5 | The Preferred Alternative "B" does not meet the mandate of multiple use and sustained yield as provided in FLPMA and it appears to solely support the management of conservation or preservation of lands in the RMP area through special designations including a historic level of Areas of Critical Environmental Concern (ACECs), limited or no leasing of minerals and land use allocations, restrictions for access to federal lands, along with other restrictive management prescriptions. This is unacceptable and our County clearly cannot support such a document that has negative impacts on our local communities and the State. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. See Section 1.4 for a list of Planning Criteria for the RMP, including adherence to FLPMA. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #363-6 | Currently the federal agency is not in any way consistent with the local county land use plans either substantively or procedurally which violates FLPMPA and NEPA. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). See also section 5.1.2 . |
| 839 - General-FLPMA / Multiple Use | #363-7 | Furthermore, the County strongly urges BLM to review all of the local county natural resource plans (Fremont, Lincoln, Sweetwater, Sublette and Uinta Counties) affected by this decision and coordinate with the state and local county cooperating agencies that work, recreate and earn a livelihood in this area. Only then can the agency develop a preferred alternative that is consistent with those local plans as allowed by law and provides for a balance between conservation and protection and economic growth. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #507-1 | So, it is completely incomprehensible that the BLM selected for its Agency Preferred Alternative, Alternative B, one considered an outlier in previous attempts at issuing an RMP one that was meant to serve initially as a bookend - an alternative with the most resource use restrictions and concomitantly with the largest socioeconomic impacts. Over a decade's worth of contributions from local stakeholders, cooperators, counties, and state agencies are either falling on deaf ears or disingenuously being thrown by the wayside with this decision." | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. See Section 1.4 for a list of Planning Criteria for the RMP, including adherence to FLPMA. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #550-1 | While the WBA understands the difficult task the BLM faces in managing millions of acres of public lands across Wyoming, it is essential that in doing so the BLM balance the interests of all stakeholders in furtherance of its Federal Land Policy and Management Act's (FLPMA) multiple-use objective. Here, the BLM has failed to meet that challenge, preferring to choose an alternative - Alternative B - that represents a seismic shift in public land management away from public access and use for recreation, mineral development, rights-of-way, and agriculture, and toward unnecessary and unjustified restrictions at the expense of the people and businesses of Wyoming. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. See Section 1.4 for a list of Planning Criteria for the RMP, including adherence to FLPMA. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #8454-1 | Closing off of PUBLIC lands to all resource development goes against the Federal Land Policy and Management Act FLPMA. Congress charged the BLM with managing public lands according to the principles of multiple use and sustained yield. | Please refer to Chapter 2 for a detailed description of all four alternatives and proposed management actions. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | | amendments, including consistency with FLPMA and NEPA. See also Section 2.2.4 for alternatives considered but eliminated from detailed analysis, including closing the planning area to fluid minerals leasing or livestock grazing. |
| 839 - General-FLPMA / Multiple Use | #8761-1 | The analysis should adequately consider the human environment. Adequate consideration of the human environment is woven into many of our significant issues. The agency should avoid decisions that make relatively insignificant improvements to natural resources at a cost of significant impacts to the human environment. The agency's decisions should be based on impartial consideration of all issues. The agency's decisions should be made with a reasonable sense of magnitude. The public will be significantly impacted if the agency only considers natural resources without reasonable consideration of the human environment. One-sided consideration of issues is not acceptable for public lands and especially for those designated for multiple-use. | As stated in the Executive Summary, "the purpose of the analysis of environmental consequences is to determine the potential for significant impact of the 'federal action' on the 'human environment'" (pg. ES-6). Adequate analysis of impacts to the human environment is provided in Section 4. |
| 839 - General-FLPMA / Multiple Use | #8761-14 | The agency's project team should adequately consider that NEPA 1969 directed consideration of the human environment and the natural environment. The agency should adequately consider the value of motorized recreation opportunities on the human environment using site-specific data and analysis addressing social and economic values and impacts; the need for recreation and healthy activities; the need to experience "flow" and nirvana; the need to exercise our culture; and the need to address obesity and suicide issues, and the need to address physical and mental health needs. NEPA 1969 was intended to protect and promote We are a locally supported association whose purpose is to preserve trails for all environments equally. The depth and breadth of site-specific data and analysis of the human environment should be equal to that of the natural environment. | Obesity, suicide, and mental health problem solving are outside the scope of this Draft EIS and RMP. See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. For a list of management actions specific to off-highway vehicles, see Table 2-1 #6600-6620. |
| 839 - General-FLPMA / Multiple Use | #8851-1 | BLM's preferred Alternative B violates the National Environmental Policy Act and the Federal Land Policy and Management Act. This proposal will destroy Wyoming's economy for the sake of "conserving" large swaths of land, thereby placing off limits millions of acres of land the primary utility of which is recreation, grazing, and resource development. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). For a socioeconomic report, see Appendix N. |
| 839 - General-FLPMA / Multiple Use | #9721-3 | Removing mineral exploration and development from 83% of the land covered by this proposal hardly satisfies the 1976 FLPMA, which specifically states "management be on the basis of multiple use and sustained yield." | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 839 - General-FLPMA / Multiple Use | #9721-4 | Alternative B conserves "the most land for physical, biological and cultural resources," yet the FLPMA and MMA requires the lands to be analyzed and made available for sustainable development and multiple use. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 839 - General-FLPMA / Multiple Use | #9774-7 | Instead, we focus on oil and gas development, particularly regarding examining CO2 emissions and contributions to climate change. According to the US Geological Survey (USGS) and US Department of the Interior (DOI), "the CO2 emissions attributed to Federal lands in Wyoming are 57 percent of the total from the Federal lands in all States and offshore areas combined." The figure below visually depicts the amount of CO2 emissions in Wyoming on public land alone. Furthermore, this pie chart draws attention to the fact that the BLM should be pursuing a conservation approach, given the evidence. It should be noted that the BLM considered alternatives to completely close fluid mineral leasing and coal leasing. However, that alternative was eliminated by the BLM as they stated that "this action is not reasonable in light of the BLM's multiple-use mandate outlined in FLPMA or the Mineral Leasing Act of 1920, and is inconsistent with policy objectives." We challenge this reading of the statute. The term "multiple use" means "the management of public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people...the use of some land for less than all of resources...tak[ing] into account the long-term needs of future generations for renewable and nonrenewable resources." As such, multiple-use does not have the narrow definition as defined by the BLM in this draft plan. | See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). For a list of alternatives not carried forward for detailed analysis, see Section 2.2.4. |
| 839 - General-FLPMA / Multiple Use | #9792-1 | This plan neglects to provide for the BLM's legal obligations as set by Congress in ensuring that public lands are managed according to the principles of multiple use and sustained yield as identified in the Federal Land Policy and Management Act (FLPMA) of 1976. The DEIS barely mentions "sustained yield" in its 1,330 pages, doesn't define the term, and does not provide for sustained yield as a goal, measurable objective, or action. FLPMA mandates that "the public lands be managed in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the public lands." Yet the DEIS fails to mention food for humans at all (all references to food are to meeting the needs of wildlife, with the exception to expenditures made by recreation users). Likewise, the production of fiber from our public lands is also not mentioned - despite that Wyoming ranks #2 in the nation for wool production, with a substantial portion of this wool produced from ranches operating in the Rock Springs District. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 839 - General-FLPMA / Multiple Use | #9792-19 | The preferred alternative expressly contemplates actions that elevates wildlife and "natural" processes over other resources uses and human-initiated action, without any explanation of why the agency would have such a preference. It's certainly not supported by science. | The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See also Appendix E and the Federal Land Policy Management Act. |
| 839 - General-FLPMA / Multiple Use | #9792-20 | Under Alternative B, water developments for livestock could be made "only if wildlife habitat and resource conditions would be improved or maintained." That livestock grazing is one of the multiple uses that results in sustained yields while producing food and fiber isn't treated equally to wildlife in this alternative, so actions to | Livestock grazing management actions can be found in Table 2-1 #6400-64170. For the definition of multiple use, please see the Glossary section. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | benefit livestock management would only be allowed if wildlife habitat is benefited. This demonstrates the BLM's bias. | |
| 839 - General-FLPMA / Multiple Use | #9792-23 | In light of the negative economic consequences for livestock permittees, as well as harm to traditions and economies of local communities, please explain how and/or why this alternative is the BLM's Preferred Alternative. Please explain how such a proposal that admittedly would harm resource users and communities complies with the land management goals stated by Congress. | The rationale for any future decisions will be made available in the Record of Decision and are outside the scope of this Draft EIS analysis. A socioeconomic report is provided in Appendix N. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. |
| 839 - General-FLPMA / Multiple Use | #9847-1 | In addition to the flaws of TP, the BLM process did not appropriately consider state and local government policies as required by the Federal Land Policy and Management Act. The Sweetwater County Land Resource Use Plan and Policy is one of the local community's standing policies for governing the management of private, state and federal land and the rangeland, soil, water, and wildlife resources. This all discounts and discredits local policies that place a great significance on protecting agricultural land, ensuring access to natural resources on federal and state lands, provides for reduced regulatory costs for small businesses, encourage mineral and energy resource exploration development and recovery, protecting the rights of landowners and surface owners, and supporting beneficial mining efforts and their economic impacts. BLM is obligated to consider and incorporate, to the fullest extent possible, the local policies; which TP does the opposite of in almost all accounts. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and NEPA, and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). |
| 839 - General-FLPMA / Multiple Use | #9893-1 | I am opposed to the proposed preferred option. It does not appear to be consistent with FLPMA's multiple use mandate. I would like clarification on the metrics used to designate this option as preferred. When were the criteria most recently evaluated? | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 839 - General-FLPMA / Multiple Use | #10468-2 | Quantified" impacts on grazing, coal and soda ash production and recreation are asserted to be the same; however, this is not accurate. The plan changes the identified use of millions of acres to prohibit surface use of lands, terminate use of roadways for motorized vehicles, and other significant impacts that will eliminate use of state and private lands due to the checkerboard of federal, state and private lands. | Quantified economic impacts are provided in Appendix N.4. Methodologies for the socioeconomic analysis of each resource is provided in Appendix N.2. In addition, see Section 1.4 for clarification that the RMP and all alternatives will recognize valid and existing rights. |
| 839 - General-FLPMA / Multiple Use | #10468-6 | Rather than honor a decade worth of cooperation, work and development of a balanced approach, Alternative D, the BLM has chosen to issue this draft RMP with a direct, haphazard, impractical and insincere preference of Alternative B. | BLM adequately consulted stakeholders in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #10494-4 | WSGA finds the extensive use of special designations to be in direct conflict with the multiple use mandate. These designations complicate and can serve to preclude livestock grazing that has been authorized for decades and that is currently meeting or moving toward Wyoming Land Health Standards. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). Livestock grazing management actions can be found in Table 2-1 #6400-64170. |
| 839 - General-FLPMA / Multiple Use | #10517-1 | * The Federal Land Policy and Management Act of 1976 (FLPMA) requires the Secretary of the Interior to "manage the public lands under principles of multiple use and sustained yield."1 * The FLPMA also requires the Secretary of the Interior to "use and observe the principles of multiple use" when developing or revising land use plans.2 This requirement is the very first requirement in a long list of requirements for the Secretary to consider in developing and revising land use plans. * The Plan's first listed goal for mineral resources is to "[p]rovide opportunities to explore, locate, and develop locatable minerals while protecting other resource values."3 We struggle to see how withdrawing nearly 2 million acres from mineral development is consistent with the requirement of multiple use and the goal of development opportunities. While we appreciate the need to protect other resource values, the Bureau cannot reconcile multiple use while withdrawing at least 1.5 million acres more compared to Alternative C and Alternative D. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). |
| 839 - General-FLPMA / Multiple Use | #10517-3 | Similarly, the Plan and the selection of Alternative B appears to disregard the socioeconomic costs associated with the need for promoting energy security and stability for America. By removing nearly 2 million acres from potential energy development through the proffered selection of Alternative B, the Bureau is limiting America's flexibility to respond to rising energy prices and the ability to protect American consumers and businesses from depending on the vagaries of foreign producers and countries to meet our need for reliable and dispatchable energy. We also can't help but recognize how Alternative B stifles energy production as a whole, excluding or closing millions of acres more to other energy sources (including geothermal) than the other three alternatives do. This is another example of how we believe Alternative B misses the mark when it comes to managing public lands under principles of multiple use. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Relative to all alternatives, Alternative B emphasizes conservation of resource values with constraints on resource uses (see Executive Summary "Alternatives" [pg. ES-3] and Table 1 for summary of comparison between all alternatives). See Section 1.2.1 Purpose, and Sections 1.4-1.5 Planning Criteria and Relationship to Other Plans (including FLPMA and NEPA). A socioeconomic analysis for all four alternatives can be found in Appendix N and Chapter 4. |
| 839 - General-FLPMA / Multiple Use | #10517-6 | The work of cooperating agencies and parties should not be so easily dismissed. We are mystified at how the Bureau landed on the most extreme alternative while disregarding Alternative D, an alternative that came about during a cooperative process that has now exceeded a decade. The FLPMA requires "public involvement" when revising land use plans.7 Under federal law, that public involvement is not just a process the Bureau must complete to check a box, and it is not a process where comments and input can just be summarily disregarded with the stroke of a pen. On the contrary, the FLPMA requires the Secretary of the Interior to provide "for meaningful public involvement of State and local government officials," among others.8 Selecting the extreme case of Alternative B renders years of input from state and local agencies, officials, and citizens meaningless. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 839 - General-FLPMA / Multiple Use | #10517-7 | The last time formal meetings were held were in 2019 (with a virtual meeting in 2020 simply described as "alternative review"). The last formal meetings are characterized as an invitation "to develop and finalize Alternative D." We wonder why an invitation to finalize Alternative D would be necessary if the Bureau would then turn around and disregard that alternative and the years of work that cooperating agencies poured into the development of Alternative D. As we further explain below, meaningful public involvement must include further formal consultation and coordination to account for intervening changes in federal policy before the Bureau can select a preferred alternative (whether the extreme Alternative B or otherwise) and proceed. | BLM adequately consulted stakeholders in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See Sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13032-1 | The purpose and need as defined by the BLM in the Draft RMP Amendment does not align with mandated laws which govern the BLMs authority. In truth it constitutes a blatant abuse of authority and discretion. | The Draft EIS is in compliance with all laws and regulations (see Appendix E, FLPMA, and NEPA). The purpose and need for this RMP revision are provide in the Executive Summary and in Sections 1.2.1 and 1.2.2. See also Section 1.4 for a list of planning criteria that guided and directed the planning effort. |
| 839 - General-FLPMA / Multiple Use | #13064-11 | Alternative B completely disregards the Federal Land Policy and Management Act. As described above, Alternative B would significantly affect Wyoming's energy, mineral, agriculture, and recreation industries. Alternative B would close vast amounts of acreage to mineral development and production, livestock grazing, and recreation. These acreage closures imposed by Alternative B are extreme and completely disregards the Federal Land Policy and Management Act (FLPMA). The FLPMA requires the BLM to "manage the public lands under principles of multiple use and sustained yield." | The Draft EIS, including all four alternatives, are in compliance with FLPMA. For the definition of multiple use, please see the Glossary section. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13153-1 | Not only does “Alternative B” constitute the most restrictive of the agency’s possible alternatives– your agency admits in its Environmental Impact Statement that this alternative creates the largest socioeconomic impact due to reduced mineral development on the 3.6 million acres subject to your control. Under the Multiple Use-Sustained Yield Act of 1960, your agency is required to manage federal lands in accordance with the principles of multiple use and sustained yield. This means that all possible uses and benefits of the lands be treated equally by your agency when promulgating land use plans. Clearly, you and your agency have ignored the deeply enshrined principles of multiple use and sustained yield. “Alternative B” removes over 7,000 animal unit months of grazing, removes over 60,000 acres from any and all use to “protect wilderness characteristics,” and “de-emphasizes recreation” in favor of “conservation of resource values with constraints on resource use.” Your preferred plan withdraws millions of acres from mineral extraction, leasing, exploration, and development. Your plan will obliterate the tax revenue derived from mineral, agricultural, recreation and tourism industries in southwest Wyoming | The Draft EIS, including all four alternatives, are in compliance with FLPMA. For the definition of multiple use, please see the Glossary section. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13210-1 | 1. The task force believes that current use, industrial development, recreation, livestock grazing, wildlife habitat, and open spaces within the BLM's Rock Springs field office should be managed to provide a balance of our natural resources and a vibrant economy for southwest Wyoming. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. |
| 839 - General-FLPMA / Multiple Use | #13247-1 | b. Section 7.4.4.1: Consultation and coordination with Fremont County should occur at the earliest time possible for any proposed action, change of existing activities, newly permitted activities, or changes in regulations that may affect the economic basis of the County. This coordination should be used to determine the full scope of potential social and economic effects of activities proposed on public lands, including impacts to circulating dollars when access and use of federal land is proposed. | BLM adequately consulted stakeholders in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See Sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13249-1 | Alternative B would significantly affect Wyoming's energy, mineral, agriculture, and recreation industries. Alternative B would close vast amounts of acreage to mineral development and production, livestock grazing, and recreation. These acreage closures imposed by Alternative B are extreme and completely disregards the Federal Land Policy and Management Act (FLPMA). The FLPMA requires the BLM to "manage the public lands under principles of multiple use and sustained yield." The United States Supreme Court has stated that '"multiple use management' is a deceptively simple term that describes the enormously complicated task of striking a balance among the many competing uses to which land can be put." These competing uses are outlined in the definition of multiple use under the FLPMA as "including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and uses serving natural scenic, scientific and historical values." The definition requires managing these uses "without permanent impairment of the productivity of the land and the quality of the environment with consideration being given to the relative values of the resources." Alternative B fails to manage the Rock Springs planning area under principles of multiple use as the FLPMA requires. Alternative B nearly eliminates mineral development and production, recreation, and livestock grazing in favor of "natural scenic, scientific and historical values." Alternative B emphasizes a conservation-only approach. I am strongly opposed to preferred Alternative B, as it represents a stark departure from the collaborative land management approach required by the FLPMA under multiple use. Alternative B would negatively impact Wyoming's mineral, agriculture, and recreation industries resulting in a detrimental overall negative economic impact to the state, while imposing permanent impairment of the productivity of the land. The best choice for the BLM RMP is alternative A. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and recognition of valid and existing rights. For the definition of multiple use, please see the Glossary section. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13287-42 | It will be necessary to manage WSAs as VRM Class I in order to maintain wilderness characteristics as required by FLPMA (DEIS at 2-152); by failing to do this outside the JMH planning area, Alternatives A and C are FLPMA noncompliant. We also applaud the decision to extend VRM Class II within 3 miles of WSA boundaries. DEIS at 2-152. | All WSAs are proposed VRM I in all alternatives (see Maps 2-17 through 2-20). |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 839 - General-FLPMA / Multiple Use | #13330-1 | Alternative B is in direct violation of the Federal Land Policy and Management Act of 1976, as amended, multiple-use and sustained yield mandate to serve present and future generations. Sweetwater County Farm Bureau opposition to Alternative B is reflected by the quote from Page 4-260 of the BLM RMP. "A number of livestock grazing management actions under Alternative B could reduce the number of AUMs available for grazing, increase expenses, or alter management practices of operators." A supporting quote on page 4-261 further explains that, "To the extent that some ranchers cannot adjust their operations to make up for the losses of the forage on BLM administered land, the nonmarket values associated with some of the ranches in the planning area, including provision of nonmarket lifestyle values to ranchers and open space amenity values to other residents and tourists, could be negatively impacted." | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. For the definition of multiple use, please see the Glossary section. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. |
| 839 - General-FLPMA / Multiple Use | #13330-17 | * Sweetwater County Farm Bureau is opposed to the Alternative B proposed withdrawal of 258% lands from more land from any potential mineral extraction and 305% more lands from oil and gas extraction. Many of our members hold jobs in these sectors to provide supplemental income. Agriculture producers value mineral and oil and gas production in our area. Additionally, such withdrawals would decimate our local economy and the Alternative B proposal directly violates the Domestic Minerals Program Extension Act of 1953, The Mining and Minerals Policy Act of 1970, the Federal Land Policy and Management Act of 1976, and the Energy Policy Act of 2005. | Refer to the Glossary for a definition of 'withdrawal'. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13381-4 | 5. FLPMA FLPMA requires that USFS “balance wild horse and burro use with other resources” which equates at minimum to a 50-50 allocation of available forage between horses and livestock on WHTs. The EIS fails to address this. The EIS fails to address that FLPMA highlights the importance of the non-market value within its definition of the term “multiple-use.” FLPMA requires that: “(c) . . . consideration being given to the relative values of the resources and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output.” The intrinsic value of wild horses and burros falls under the non-market definition specified by both laws (Sec. 302 of FLPMA). | Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate RMP Amendment and EIS (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. |
| 839 - General-FLPMA / Multiple Use | #13411-1 | Currently, the Rock Springs area has ten areas for critical environmental concern (ACEC) totaling 286,450 acres, thirteen wilderness study areas totaling 227,960 acres, and six management areas totaling 580,010 acres. Alternative B would significantly increase to 16 ACEC totaling 1,605,660 acres. As a result of this increase, designated management areas would decrease to 183,938 acres because "the existing management areas would be designated as ACECs under this alternative." The Committee is greatly concerned with Alternative B increasing ACEC by 460%. There is no evidence to support a 460% increase in ACEC in the draft Rock Springs RMP. Alternative B is simply increasing areas to "protect important historic, cultural, wildlife and scenic values" while negatively impacting multiple use of these lands. I strongly disagrees with increasing ACEC by 460% and would recommend that the ACECs either remain at the current acreage amount or decrease. Alternative A is the choice for Wyoming. | The ACEC report can be found in Appendix C. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13412-1 | In addition, Alternative B would impose major restrictions along migration corridors. For example, Alternative B would "prohibit surface disturbing activities within ½ mile of big game migration corridors to avoid construction of a current or future identified big game corridors." In contrast, Alternative D would "allow fluid mineral surface occupancy and use within a Wyoming Game and Fish Department designated big game migration corridor if the fluid mineral operator and the BLM arrive at an acceptable conservation plan for avoidance, minimization, rectification and / or restoration within the migration corridor." I am concerned the alternative B is unnecessary and is a compromised approach between mineral development and production and protection of wildlife. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Management actions proposed for fish and wildlife under each alternative can be found in Table 2-1 #4400-4436. |
| 839 - General-FLPMA / Multiple Use | #13414-1 | Alternative B would significantly affect Wyoming's energy, mineral, agriculture, and recreation industries. Alternative B would close vast amounts of acreage to mineral development and production, livestock grazing, and recreation. These acreage closures imposed by Alternative B are extreme and completely disregards the Federal Land Policy and Management Act (FLPMA). The FLPMA requires the BLM to "manage the public lands under principles of multiple use and sustained yield." The United States Supreme Court has stated that "'multiple use management' is a deceptively simple term that describes the enormously complicated task of striking a balance among the many competing uses to which land can be put." These competing uses are outlined in the definition of multiple use under the FLPMA as "including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and uses serving natural scenic, scientific and historical values." The definition requires managing these uses "without permanent impairment of the productivity of the land and the quality of the environment with consideration being given to the relative values of the resources." Alternative B fails to manage the Rock Springs planning area under principles of multiple use as the FLPMA requires. Alternative B nearly eliminates mineral development and production, recreation, and livestock grazing in favor of "natural scenic, scientific and historical values." Alternative B emphasizes a conservation-only approach. I | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and recognition of valid and existing rights. For the definition of multiple use, please see the Glossary section. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13493-3 | FLPMA requirements state that “balance wild horse and burro use with other resources” should be done, which equates to at least a 50-50 allocation of available forage between horses and livestock on WHTs. The EIS fails to address this. The EIS fails to address that FLPMA highlights the importance of the non-market value within its definition of the term “multiple-use.” FLPMA requires that: “(c) . . . consideration being given to the relative values of the resources, and not necessarily to the combination of uses that will give the greatest economic return, or the | Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate RMP Amendment and EIS (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | greatest unit output." The intrinsic value of wild horses and burros falls under the non-market definition specified by both laws (Sec. 302 of FLPMA). | |
| 839 - General-FLPMA / Multiple Use | #13494-3 | The EIS fails to consider the cumulative impact of eliminating additional wild horse HMAs in the state. Fifty percent (50%) of the original Congressionally designated wild horse habitat in Wyoming has been zeroed out or eliminated for wild horse use. Yet, the BLM continues to permit livestock grazing in these same areas. The EIS proposes to reduce by another 43% the public lands available to wild horses in the state. The cumulative impact of the proposal results in the BLM eliminating 71% of all public lands originally designated by Congress for wild horse use in the state of Wyoming. The proposed removal of wild horses from 1,554,282 acres of public lands represents removing wild horses from 6% of all public lands where BLM currently manages wild horses and burros. Currently, BLM only manages wild horses and burros on 64% of the original public lands identified by Congress for wild horse and burro habitat. That means since 1971 the BLM has cumulatively reduced wild horse and burro habitat by 37%. BLM has wiped out wild horses and burros from more than 1 of every 3 acres of public lands which Congress designated "principally" for wild horse and burro usage. The EIS fails to consider these cumulative negative impacts on wild horses and fails to take actions to mitigate these negative impacts. | Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate RMP Amendment and EIS (see Sections 1.3 and 2.2.5). See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. |
| 839 - General-FLPMA / Multiple Use | #13512-4 | Alternative A or Alternative D Alternative A and D both adhere to the multiple-use mandate under FLPMA. In Alternative B, elimination of the WWEC corridor conflicts with Section 368 of the Energy Policy Act of 2005, and MA 6206 cannot be read consistently with MA 6201. See also MA 6201, 7017, Map 2-22. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and the Energy Policy Act of 2005. Proposed management actions for right of way corridors can be found in Table 2-1 #6200-6210. |
| 839 - General-FLPMA / Multiple Use | #13512-5 | MA 6201 (ROW Exclusion Areas) Alternative A Alternative A complies with the multiple-use mandate under FLPMA by considering the production of soda ash and allowing responsible development within established routes and corridors in previously disturbed areas. In Alternative B, MA 6201 cannot be read consistently with MA 6206 and 6210. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and recognition of valid and existing rights. Proposed management actions for right of way corridors can be found in Table 2-1 #6200-6210. |
| 839 - General-FLPMA / Multiple Use | #13512-8 | MA 7017 (Overland Trail) Alternative A or Alternative D with the addition of the Overland Trail Alternative A and D both adhere to the multiple-use mandate under FLPMA. If Alterative D is adopted, it should be revised to include the Overland Trail, so the historic context is carried forward. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Management actions proposed for congressional designated trails under each alternative can be found in Table 2-1 #7000-7022. |
| 839 - General-FLPMA / Multiple Use | #13512-10 | A. BLM's Proposed Alternative B ROW Exclusion Areas Directly Conflict with BLM's Existing ROW Corridors and ROW Policies and Objectives. Alternative B's ROW Exclusion Areas are materially at odds with BLM's policies and objectives. As a threshold matter, BLM's expressly stated objective from the BLM Rights-of-Way Manual 2801 (the "BLM ROW Manual") is to "[r]ecognize that ROWs are a principal or major use of the public lands."4 The BLM ROW Manual further provides policy and program direction for BLM's management of ROW grants under the multiple-use mandate5 of the Federal Land Management Policy Act ("FLPMA"). BLM's ROW objectives and policy thoughtfully encourage the co-location of ROWs and the use of ROW corridors. | The Draft EIS, including all four alternatives, are in compliance with BLM policy for rights-of way management. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and recognition of valid and existing rights. Proposed management actions for right of way corridors can be found in Table 2-1 #6200-6210. |
| 839 - General-FLPMA / Multiple Use | #13557-1 | For years the industries in Southwest Wyoming such as, agriculture, mining, and oil and gas, have worked hand in hand with the BLM in crafting a plan that allows for multiple use of public lands. The preferred plan of the BLM, Alternative B, goes against this approach with has been used for years. Alternative B allows too many constraints to be placed on the industries that not only support Southwest Wyoming, but the entire State. If this alternative were to be put in place, thousands of people in Wyoming from agriculture, oil and gas, and mining would be out of a job, not to mention the auxiliary businesses that service these industries. While I believe that conservation of certain areas is also important, all of this must be, and can be, balanced. The economy of Southwest Wyoming and the jobs of thousands of people cannot be decimated so most of the land can be conserved. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. |
| 839 - General-FLPMA / Multiple Use | #13572-1 | The heavy impact to Mineral and Fluid leasing does not seem to be in alignment with the Federal Land Policy and Management Act in regard to multi use | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. Proposed management actions for oil and gas under each alternative can be found in Table 2-1 #2200-2222. |
| 839 - General-FLPMA / Multiple Use | #13585-1 | Through these years, the County had thought there was some collaboration with the Bureau of Land Management ("BLM") and other cooperators in developing an alternative that was not completely finalized but headed in the direction of a more balanced alternative that recognized the BLM's obligation of managing federal lands for multiple use and sustained yield. However, behind closed doors and without any coordination with the County or other cooperating agencies, the BLM has taken a complete politically driven reversal from its original direction, and released a proposed RMP and DEIS that eliminates multiple use within the RSFO and in turn, Sweetwater County. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13585-2 | The Federal Land Policy and Management Act ("FLPMA") requires the BLM to "coordinate the land use inventory, planning, and management activities of or for [public] lands with the land use planning and management programs ... of the States and local governments within which the lands are located." 43 U.S.C. § 1712(c)(9). As part of this coordination, the BLM is to provide "meaningful public involvement of State and local government officials, both | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | elected and appointed, in the development of land use programs, land use regulations, and land use decisions for public lands." Id. This includes the requirement to "develop resource management plans collaboratively with cooperating agencies" and with"meaningful public involvement of other Federal agencies, State and local government officials." 43 C.F.R. § 1610.3-l(a)(4) - (5); see International Snowmobile Mfrs. Ass'n v. Norton, 340 F. Supp. 2d 1249, 1261-62 (D. Wyo. 2004). Local governments must be provided with an "opportunity for review, advice, and suggestion on issues and topics which may affect or influence other agency or other government programs." 43 C.F.R. § 1610.3-l(c). In addition, "Field Managers should also collaborate with cooperating agencies in evaluating the alternatives and developing a preferred alternative." BLM Handbook 1601, Section l.E.2.c; see id. at Section 9.2.7.3 ("Whereas the BLM must work with cooperators and other interested parties to encourage consensus on a preferred alternative "). The National Environmental Policy Act ("NEPA") and its implementing regulations also recognize the importance of cooperation with State and local governments early in the NEPA process. 42 U.S.C. § 433 l(a); 40 C.F.R. § 1501.8(a), (b)(l) (2020); see also Department oflnterior, 516 DM 11, Section 1l.4(C) (Dec. 10, 2020). During the long history of the RMP revision process, the BLM focused early on in the 2012 cooperating agency meetings on editing the BLM's proposed Alternatives Band C. See DEIS at Table 5-1. However, after these discussions and revisions were made, the BLM made few, if any, substantive changes to these Alternatives after 2013. Alternative B was conveyed as representing a bookend or placeholder versus being functional or reasonable. The BLM and the cooperating agencies instead put all their focus on developing Alternative D, which was referred to as the Balanced Alternative, starting in 2015. It was at this point that the focus of all cooperating agency meetings was on developing Alternative D and the analysis associated with that alternative. See e.g. Attach. 1, Field Manager Email (May 20, 2019). By April 3, 2017, the Field Manager had identified Alternative Das the agency's preliminary preferred alternative. Attach. 2, Field Manager Letter (April 3, 2017). When the Administrative DEIS was released to cooperating agencies at the end of 2019, Alternative D continued to be identified as the agency's Preferred Alternative and was the focus of cooperating agency comments. See Attach. 3, Field Manager Email (March 15, 2018). At the direction of the BLM, because Alternative B was communicated as not a realistic conclusion, and due to Alternative D becoming the agency's preferred alternative by at least early 2017, the cooperating agencies spent a majority of their time and efforts on working with the BLM to develop Alternative D, refine this alternative, and focus their comments on this alternative. Cooperators were explicitly directed not to focus on Alternative B. With this focus, the cooperators were not provided with meaningful participation in developing Alternative B since 2013, nor did Alternative B receive much attention after 2013. It has been about 10 years since the BLM or the cooperators spent any time on refining or adjusting Alternative B, even after working on the environmental impact sections of the DEIS. The cooperators were not provided with meaningful involvement in developing Alternative B. See 43 C.F.R. § 1610.3-l(a)(4) - (5); see also International Snowmobile Mfrs. Ass'n v. Norton, 340 F. Supp. 2d at 1261-62. In addition, the cooperators had zero involvement with the selection of Alternative B as the Preferred Alternative. At one of the last cooperating agency meetings on July 14, 2020 (see DEIS at Table 5-1) and after receiving comments on the Administrative DEIS, the BLM continued to identify Alternative D as the Preferred Alternative. Then again on June 22, 2022, after two years of not meeting with cooperating agencies, the BLM provided an update on the status of review of the DEIS and amendments that were made to the Preferred Alternative D to reflect current BLM policy and direction. It was not until the release of the Proposed RMP and DEIS to the public a year later, in August of 2023, where Sweetwater County and other cooperating agencies were made aware of the BLM's dramatic shift in its preferred alternative to the most conservative of all alternatives, Alternative B, which was neither reasonable nor ready for submission. The dramatic shift from Alternative D to Alternative B negates the decade long collaboration and efforts of both BLM and cooperating agencies in developing the Alternative D. It further goes against BLM's own policy to work collaboratively with cooperating agencies in developing and working to reach consensus on a preferred alternative. See BLM Handbook 1601, Section l.E.2.c; see id at Section 9.2.7.3. All the cooperating agencies' focus, and commenting was directed to Alternative D and emphasized to them that this was going to be the Preferred. | with FLPMA and state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. |
| 839 - General-FLPMA / Multiple Use | #13605-2 | In Volume 1, Appendix E, pg. 219 of the DRMP/EIS: BLM land use planning and multiple-use management decisions will recognize that, with few exceptions, mineral exploration and development can occur concurrently or sequentially with other resource uses. The least restrictive stipulations that effectively accomplish the resource objectives or uses will be used. The BLM will coordinate with surface owners when the Federal minerals estate under their surface ownership is proposed for development. Alternative B restricts mineral and oil and gas land use by 258% ('Withdrawal from Mineral Location') and 305% ('Closed to Fluid Mineral Leasing') respectively without including the additional restrictions caused by 'No Surface Occupation', 'Controlled Surface Use', and 'Seasonal Restrictions'. These restrictions appear to be very skewed and in direct contradiction of the BLM's statutory assigned purpose as seen above. | Please see Glossary for a definition of 'withdrawal'. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and recognition of valid and existing rights. The definition of "multiple use" can be found in the Glossary section. Proposed management actions for oil and gas (fluid minerals) under each alternative can be found in Table 2-1 #2200-2222 and locatable mineral management actions can be found in #2000-2001. |
| 839 - General-FLPMA / Multiple Use | #13624-44 | Mineral Withdrawals Alternative B has significant implications for development and extraction of fluid and solid mineral reserves within the RMP boundary. The proposed mineral leasing restrictions, rights-of-way exclusions and management of lands to protect wilderness characteristics (or values) would effectively withdraw mineral reserves within defined resource boundaries, including the KSLA and the Coal Development Potential Area. This proposed action appears to be an incorrect application of the Federal Land Policy Management Act of 1976, as | Please see Glossary for a definition of 'withdrawal'. The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | amended, (FLPMA) and ignores the requirements for lawful withdrawal of minerals under the Federal Mineral Leasing Act of 1920, as amended, (FMLA). The withdrawal of minerals by implementation of the proposed management actions appear to exceed BLM's statutory authority under FLPMA and FMLA. In addition, WDEQ has primacy authority over solid mineral mining activities in Wyoming and BLM should have communicated its intent to withdraw solid mineral reserves and extraction opportunities, and coordinate any such actions, with WDEQ as a cooperating agency. | |
| 839 - General-FLPMA / Multiple Use | #13651-12 | Of particular concern is the need to consider landscape scale conservation, particularly in the checkerboard of the railroad corridor which is central to the Rock Springs RMP. The exclusion of the checkerboard from plans to address landscape issues is unacceptable. BLM has statutory authority under the Federal Land Policy and Management Act (FLPMA) to promote conservation measures in coordination with other federal and non-federal entities and private landowners. The Bureau's proposed Public Lands Rule will further clarify these responsibilities. The Rock Springs RMP rightfully should recognize landscape conservation as a primary issue for consideration and propose management actions to coordinate conservation at a landscape scale. | BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and acknowledgment that no decisions will be made relative to non-BLM administered lands. |
| 839 - General-FLPMA / Multiple Use | #13651-13 | This management plan and impact statement can make a meaningful contribution to agency goals under FLPMA. To do so it should avoid an error of a too narrow view of direct and cumulative impacts. We note that all actions the documents describe seem to stop at the public land boundaries within the planning area and at the boundaries of the planning area. This matches the legally insufficient practice in EISs for grazing management in which direct, indirect and cumulative impacts on other resources were given insufficient consideration. | Types of impacts are discussed in Section 4.2.1. Adequate analysis of direct and indirect impacts for each resource under each alternative is provided in Section 4 and cumulative impacts are provided in Appendix T. |
| 839 - General-FLPMA / Multiple Use | #13658-1 | It is clear that BLM is attempting to use the RSFO RMP and the agency preferred alternative to focus solely on land preservation, eliminating oil and gas and other uses within the RSFO. In doing so, BLM fails to fulfill its statutory requirements to manage lands for multiple use and neglects its duty under NEPA to conduct complete and accurate analyses of the alternatives and the impacts. Instead of a reasonable approach that follows BLM's mandate for multiple use, the agency preferred alternative shifts future management of these lands to a single use. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13658-2 | BLM will say the preferred alternative focuses on conservation, but this really is not true. The definition of conservation in this context is protecting natural resources for use by current and future generations. This indicates that conservation would allow lands to be used for responsible development of the resources such as oil and gas, mining, and recreation. The agency preferred alternative does not meet the definition of conservation as it will eliminate the ability to use lands for these purposes. BLM's preferred alternative is really preservation, which as defined in this context means preventing use of the lands for responsible development of the natural resources. This is exactly what is proposed in Alternative 8. | The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and NEPA, and recognition of valid and existing rights. |
| 839 - General-FLPMA / Multiple Use | #13658-20 | On page 4-11, BLM states that Alternative B most closely aligns with the Department of Interior's climate change priorities among all the alternatives. BLM should not be attempting to align its selection of alternatives with the DOI or this administration's climate change priorities, but with FLPMA and the MLA. These laws have multiple use mandates, which BLM is ignoring in its selection of Alternative B. | The BLM is an agency within the Department of Interior. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13663-2 | The Agency's preferred Option B is anything but balanced and diverse focusing on multiple use as it overwhelmingly and heavily favors conservation above all else, in direct opposition to its directive from the Federal Land Policy and Management Act of 1976. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13665-6 | BLM contends that "[t]he Rock Springs RMP will address changing needs of the planning area … while ensuring that public lands are managed according to the principles of multiple use identified in FLPMA … . " RMP Draft EIS at 1-2 (emphasis added). It even identifies "maintain[ing] or enhance[ing] opportunities for mineral exploration and development while protecting other resource values" as one of its goals. Id. at 2-26 (emphasis added). But this could not be further from the truth. BLM's preferred alternative, Alternative B, prioritizes conservation at the cost of everything else. Under FLPMA, Congress instructed BLM to manage public lands "on the basis of multiple use and sustained yield," 43 U.S.C. § 1701(a)(7)-not based on an environmentally protective framework to the exclusion of other uses. Thus, "[t]he objective of resource management planning by [BLM] is to maximize resource values for the public through a rational, consistently applied set of regulations and procedures which promote the concept of multiple use management." 43 C.F.R. § 1601.0-2. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13665-9 | Similarly, in the Mining and Minerals Policy Act of 1970, 30 U.S.C. § 21a, "Congress declare[d] that it is the continuing policy of the Federal Government in the national interest to foster and encourage private enterprise in … the orderly and economic development of domestic mineral resources … to help assure satisfaction of industrial, security and environmental needs."5 As such, Congress expressly stated that "[i]t shall be the responsibility of the Secretary of the Interior to carry out this policy when exercising his authority under such programs as may be authorized by law other than this Act." Id. (emphasis added). In other words, BLM (through its authority delegated from the Secretary) must follow this express policy of fostering the development of domestic mineral resources when engaging in land-planning exercises and authorizations under FLPMA and the MLA. BLM's initial description of its preference, Alternative B, does not even acknowledge resource development as one | The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies; and recognition of valid and existing rights. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | of the agency's primary considerations, let alone one of the priorities set out by Congress. It simply states: "Alternative B emphasizes conservation of resource values with constraints on resource uses. | |
| 839 - General-FLPMA / Multiple Use | #13665-10 | As illustrated by FLPMA's legislative history,6 ACECs were intended to be narrow designations with management prescriptions tailored to protection of the specific resource requiring the designation. As one Senate Report states, [The ACEC] category is not designed to be a 'no growth' category. Only uncontrolled development is unwanted. The adjective 'incompatible' is present to make certain that development is to be allowed which is compatible with the basic environmental or renewable resources values or safety problems of the land in question. In short, multiple use, when planned, is clearly expected. Secondly, the category has been subdivided into subcategories to pinpoint the basic values of the land involved so as to better provide opportunities for development which can demonstrate its compatibility with such values. S. Rep. 95-734 O, at 128 (1973). This language demonstrates that Congress never intended the designation of ACECs to override multiple-use management. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies; and recognition of valid and existing rights. Proposed management actions for individual ACECs under each alternative can be found in Table 2-1 #7400-7570, and ACEC eligibility reports can be found in Appendix C. |
| 839 - General-FLPMA / Multiple Use | #13672-6 | The Executive Summary on pages ES-2 and ES-3 and in Planning Issues Page 1-3, Section 1.3 indicates that Greater Sage Grouse Resource management and Wild Horse management have not been incorporated into the Draft RMP. Also, the Purpose and Need section (Sections 1.2, 1.2.1, and 1.2.2) addresses "Numerous Records of Decision (ROD) for Programmatic EISs that have been completed or are ongoing," but omits greater sage grouse and wild horses. The Draft RMP has been in development since 2011 and the Greater Sage Grouse Management Plan has been in development since 2014. Both of these plans represent the management actions to be taken on large BLM land areas within the planning area. These plans should be evaluated together and not separately or separated in time. The public has the right to review the total impact of both of these plans. Ample time has passed for both of these plans to be part of the same Draft RMP. The public, including users of BLM lands cannot accurately evaluate the impacts of these plans in this way. A BLM News Release on February 3, 2014 indicated that work on the draft RMP would be put on temporary hold until the Wyoming Greater Sage-Grouse Land Use Plan Amendment and EIS could be completed and incorporated into the Rock Springs RMP. This omission is serious and not to be overlooked. FLPMA and NEPA provide the public with the right to review these plans and their benefits and impacts. Since this cannot be done in anything close to a comprehensive way, the Draft RMP is incomplete and should be withdrawn until both the Greater Sage Grouse Management plan and the Wild Horse Management Plan are incorporated into it. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). |
| 839 - General-FLPMA / Multiple Use | #13680-2 | These acreage closures imposed by Alternative B are extreme without proven reason, and completely disregards the Federal Land Policy and Management Act (FLPMA). The FLPMA requires the BLM to “manage the public lands under principles of multiple use and sustained yield” which Alternative B does not comply with. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13702-1 | Sage grouse management plan is not incorporated in the Draft RMP. The Executive Summary pages ES-2 and ES-3 and Planning Issues Page 1-3, Section 1.3 indicate that Greater Sage Grouse Resource management and Wild Horse management have not been incorporated into the Draft Resource Management Plan (RMP). Also, the Purpose and Need section (Sections 1.2, 1.2.1, and 1.2.2) address "Numerous RODs for Programmatic EISs that have been completed or are ongoing," but omit greater sage grouse and wild horses. Both resources represent potential significant risks and impacts to various groups of land users that cannot be evaluated accurately for this RMP when they have not been incorporated. Land users should have the right to evaluate these risks and impacts in aggregate as well as evaluate whether the multiple use principles of the Federal Land Policy and Management Act (FLPMA) are being upheld given that these planning efforts have been in development for over 10 years. As a case in point, a BLM News Release on February 3, 2014 indicated that work on the draft RMP would be put on temporary hold until the Wyoming Greater Sage-Grouse Land Use Plan Amendment and EIS could be completed and incorporated into the Rock Springs RMP. By not incorporating these two resources the BLM has changed course to the detriment of informed public participation. | The ongoing Greater Sage-Grouse Amendment will amend the RMP for the Rock Springs Field Office. The previous Greater Sage-Grouse Amendments in 2015 and 2019 amended the 1997 Green River RMP and are in effect today as part of the No Action alternative (Alt A) of this document. Additionally, the 2023 Wild Horse Amendment relating to the four checkerboard HMAs is also now part of the No Action Alternative (Alt A). |
| 839 - General-FLPMA / Multiple Use | #13706-4 | A balanced approach that accommodates sustainable energy development, economic growth, recreational access, and conservation efforts is vital. We advocate for a revised plan that respects the interests of all stakeholders, including agriculturalists, electric utilities, local communities, recreational users, and conservationists. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13721-12 | Preferred Alternative B appears to conflict with and likely be in violation of BLM's statutorily assigned multiple purposes: ? The Federal Land Policy and Management Act of 1976, as amended, is the Bureau of Land Management's "organic act" that establishes the agency's multiple-use and sustained yield mandate to serve present and future generations. It reiterates that the 1970 Mining and Minerals Policy Act shall be implemented and directs that those public lands be managed in a manner that provides multiple uses this includes motorized access that benefits both recreation and industry both of which are large economic drivers in the state. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |

|---|---|---|---|
| 839 - General-FLPMA / Multiple Use | #13727-1 | We are concerned that you have failed to listen to your cooperating partners who have been meeting with BLM for over a decade and up until August of this year were all negotiating Alternative D as the acceptable alternative. By neglecting to take in to account the concerns of your cooperating agencies you have violated your own rules. The CA role derives from the National Environmental Policy Act of 1969, which calls on Federal, State, and local governments to cooperate with the goal of achieving “productive harmony” between humans and their environment (42 U.S.C. 4321–4347). The regulations of the Council on Environmental Quality (CEQ) that implement NEPA (40 CFR Parts 1500–1508) allow Federal agencies— as lead agencies—to invite State, local, and tribal governments, as well as other Federal agencies, to serve as CAs in the preparation of EISs. Additionally, in accordance with the Federal Land Policy and Management Act (FLPMA) of 1976, in the development and revision of land use plans, the BLM has an independent responsibility to coordinate with other units of government (43 U.S.C. 1712(c)(9)) The local agencies have been implicit that alternative B would be devastating to the local communities | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13728-1 | nder FLPMA (43 USC 1712 (1976]), the BLM is required to stay apprised of local land use plans, assure consideration is given to local land use plans, assist in resolving inconsistencies with state and local land use plans, and provide meaningful opportunities for local government officials to participate in the development of land use programs, regulations, and decisions for public lands that may have a significant impact on non-federal lands such as state or private property. BLM must better align with local county natural resource management plans. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13750-3 | The National Environmental Policy Act (NEP) establishes a national policy and goals for the protection, maintenance, and enhancement of the environment. Two key requirements of NEPA are that agencies consider alternatives and that the public officials and citizens are involved in the decision-making process. NEPA established a Council on Environmental Quality (42 US Code [USC] 4321 (1970)), which issued regulations for implementing provisions of the law (40 Code of Federal Regulations [CFR] 1500-1508 (19701). In these regulations is the requirement that federal agencies to consider and use local planning documents during their decision making and planning efforts (40 CFR 1506.2 (1978) and 43 CFR 1610.3-2(a) (19831). Furthermore, the Federal Land Policy and Management Act (FLPMA) provides a framework for managing public lands that requires a systematic, interdisciplinary approach and requires coordination in land-use planning with other state and federal agencies. Under FLPMA (43 USC 1712 [19761), the BLM is required to stay apprised of local land use plans, assure consideration is given to local land use plans, assist in resolving inconsistencies with state and local land use plans, and provide meaningful opportunities for local government officials to participate in the development of land use programs, regulations, and decisions for public lands that may have a significant impact on non-federal lands such as state or private property. BLM must better align with local county natural resource management plans. The Preferred Alternative "B" does not meet the mandate of multiple use and sustained yield as provided in FLPMA and it appears to solely support the management of conservation or preservation of lands in the RMP area through special designations including a historic level of Areas of Critical Environmental Concern (ACECs), limited or no leasing of minerals and land use allocations, restrictions for access to federal lands, along with other restrictive management prescriptions. This is unacceptable and our County clearly cannot support such a document that has negative impacts on our local communities and the State. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and NEPA, and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13751-5 | Further, the Draft RMP/DEIS provides a definition in the glossary for Multiple Use. The definition is an apparent reference to the Multiple Use Sustained Yield Act of 1960 (MUSYA). MUSYA was directed to the US Forest Service with a clear emphasis on "…renewable surface resources…" The reference to MUSYA reflects a narrowing of perspective brought to development of this Draft RMP/DEIS. This narrowing of perspective ignores what Congress mandated to the BLM under 43 CFR (Federal Land Policy and Management Act of 1976, FLPMA) that the BLM will manage the public lands under principles of multiple use. The term multiple use is defined in the FLPMA as "…the management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people." This narrowing of perspective ignores the FLPMA definitions inclusion of "…various resources…" which in part explains the Preferred Alternative emphasis on preservation of "surface resources" which are the focus of the MUSYA. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13751-6 | In the transmittal letter Director Archuleta states the BLM has "prepared this document in consultation with cooperating agencies, and in accordance with the National Environmental Policy Act of 1969, as amended, the Federal Land Policy and Management Act of 1976, as amended, implementing regulations, the BLM's Land Use Planning Handbook (H-1601-1), and other applicable law and policy." BLM has chosen to ignore parts of FLPMA and NEPA and its planning regulations and implement MUSYA (a Forest Service directive) and an EO as the guiding principle for this RMP update. Executive Orders must not override existing statutes and rules. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13751-24 | No advance notice of the change to a greatly expanded Alternative B was provided to cooperators or the public. With publication of the Draft roughly 4 years later, we were confronted with a document with significant errors, insufficient analysis to support the new Preferred Alternative, etc. Cooperators were lulled into believing Alternative D would be the Agency's preferred option. BLM never involved the cooperators or anyone else for several years while knowing the original communication in 2019 fundamentally misled everyone. No analysis was undertaken to | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and NEPA, and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | justify this new selection of an expanded Alternative B. Such action violates BLM's own procedural obligations and substantively violates FLPMA's multiple use analysis mandates. | |
| 839 - General-FLPMA / Multiple Use | #13751-98 | BLM has substituted Executive Orders for the mandates of FLPMA. It is not unusual for a federal administration to tilt the interpretation of FLPMA in preferred policy directions as reflected in Presidential Executive Orders. In the context of this Draft RMP, BLM has admitted that adherence to Executive Orders overrides FLPMA. BLM has failed to meet it mandate of multiple use with the proposed plan. Engagement with stakeholders, interested parties and cooperators is nearly a decade old. The decision to hastily complete the document without further engagement/consultation defeats the mandates and spirit of both NEPA and BLM's own guidance. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13754-5 | The Associations remind the BLM that the requirements of the Energy Policy Act of 2005, as well as the Energy Policy Conservation Act Amendments of 2000, that require federal land management agencies to use the least restrictive means necessary to protect other resource values. Blanket closure to a principal use of public lands is not the least restrictive means.12 Moreover, blanket closure is inconsistent with the BLM's own Land Use Planning Handbook. The Land Use Planning Handbook provides that areas should only be closed to leasing when "other land or resource values cannot be adequately protected with even the most restrictive lease stipulations." BLM Handbook H-1601, App. C at 24 | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. See Section 2.2.4 for alternatives considered but eliminated from detailed analysis, including closing the planning area to new leasing of federal minerals, livestock grazing, and coal leasing. |
| 839 - General-FLPMA / Multiple Use | #13755-7 | Further, blanket prohibitions on surface use in wildlife habitat is at odds with Wyoming Game and Fish Department management planning. In matters of wildlife management, the federal government must yield to the jurisdiction of the state.3 Here, Wyoming has applied conservative approaches to managing big game throughout the State and within the Rock Springs planning area, including seasonal restrictions. For instance, the Wyoming Game and Fish's Recommendations for Development of Oil and Gas Resources Within Important Wildlife Habitat, Version 6.0, Table 1 (Apr. 2010), recommends seasonal closures, rather than wholesale exclusion areas, in crucial big game habitat. BLM's proposal to override the State's balanced wildlife management scheme is contrary to multiple use management and the federal government's FLPMA obligation to follow the State's lead on wildlife protection. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA, as well as BLM's recognition of the State's responsibility and authority to manage wildlife. Proposed fish and wildlife management actions for each alternative are provided in Table 2-1 #4400-4436. |
| 839 - General-FLPMA / Multiple Use | #13759-2 | I would like the RSFO to go deeper with perceived threats and changes from climate change and adjust management goals accordingly. To show good example, the Redding and Arcata Field Offices in California are establishing a new RMP and Draft EIS as well. On the Federal Register notice of availability, it states, "Management would maintain habitat connectivity and resiliency, promote carbon sequestration by providing for the long-term health and productivity of vegetation communities, and implement best management practices to reduce emissions of greenhouse gases for authorized activities in accordance with regional and state climate goals," (BLM & DOI, 2023). It would behoove the RSFO to approach climate change with this level of detail as the planning area is not immune to any changes related to climate. | See BLM's commitment to bolster resilience to the impacts to climate change under Executive Order 13990 on page ES-1. Analysis for impacts to air quality from each proposed alternative can be found in Section 4.3 of the DEIS. Cumulative impacts to air quality, including greenhouse gases and climate change are found in Appendix T.1.3. |
| 839 - General-FLPMA / Multiple Use | #13779-2 | The preferred alternative maximizes conservation values, largely to the exclusion of other uses of public lands. This outcome is not only counter to the Federal Lands Policy Management Act but also to the current administration's stated renewable energy and climate goals | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13779-16 | Given the need for rapid expansion of development to meet the national renewable energy production goals for public lands, ACP strongly encourages BLM to evaluate ways in which Alternative C may be revised (specifically considering the projections for renewable energy development and the current state of the science on renewable energy interactions with wildlife and their habitats) to align with the agency's conservation efforts and adopted as the preferred alternative. Such an alternative would meet BLM's obligations under FLPMA, align with the Biden-Harris Administration's climate policy, and support progress toward renewable energy production goals for public lands. This alternative would also be consistent with Executive Order 13990 to reduce the impacts of climate change from federal agency actions. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. Four alternatives have been analyzed (See Chapter 2 for specific actions and Chapter 4 for analysis). Analysis of impacts to renewable energy resources under each alternative is provided in Section 4.20. |
| 839 - General-FLPMA / Multiple Use | #13779-17 | BLM must manage lands in a way that protects important ecological, historical, environmental, and archaeological values, while at the same time recognizing the Nation's need for, among other things energy.43 Renewable energy development falls squarely within this mandate; not only does it meet today's energy needs, but it will meet the needs of future generations, while at the same time helping to prevent the worst impacts of climate change. Indeed, without a transition to renewable energy, climate change could jeopardize the ability of public lands to meet the needs of future generations. According to the BLM the preferred alternative "maximizes conservation goals." While ACP agrees that lands can be managed for conservation, management must still allow for multiple other uses. The proposed alternative maximizes conservation to such an extent that it effectively bars multiple other uses- including renewable energy development. Such an outcome is not consistent with BLM's obligations under FLPMA. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13783-4 | BLM's preferred Alternative B fails to represent a balanced approach to land use planning and fails to meet BLM's statutory obligation to manage for multiple uses. BLM proposes to close over half of the planning area (2.2 million acres) to oil and gas leasing and assign almost as much land (800,000 acres) to the No Surface Occupancy ("NSO") leasing category. Draft EIS at 4-23. By contrast, the current Green River RMP designates only 540,000 | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | acres as closed to leasing and a tiny fraction of the area (159,000 acres) as NSO. Draft EIS at ES-4. Alternative B would also increase right-of-way exclusion areas (necessary for pipelines, transmission, and roads to support all types of development, including oil and gas) from about 427,000 to 2,481,000 acres-an incredible increase of over two million acres. Draft EIS at 4-24. This massive restructuring of land use priorities is anathema to multiple use, and elevates environmental conservation (non-use) and the Administration's climate change agenda above local and stakeholder needs. Indeed, the Draft RMP provides that its "purpose … is to provide an updated, comprehensive and environmentally adequate framework for managing and allocating uses of public lands and resources[.]" Draft EIS at 1-2 (emphasis added). | |
| 839 - General-FLPMA / Multiple Use | #13783-5 | BLM admits that President Biden's Executive Order ("EO") 13990 is driving the proposed shift toward environmental protection as the preeminent "use" of the Rock Springs planning area to the exclusion of multiple uses. EIS at ES-1; see Executive Order 13990, Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis. EO 13990 directs agencies to prioritize, among other things, actions to "protect our environment, … reduce greenhouse gas emissions, identify steps to accelerate responsible development of renewable energy on public lands, … bolster resilience to the impacts of climate change, and center equity and environmental justice." Id. And, these prescriptions match Alternative B's outcomes. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and NEPA, and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. |
| 839 - General-FLPMA / Multiple Use | #13783-6 | BLM's tunnel vision also contradicts Congress's mandate that BLM take into account the effects of planning efforts on local stakeholders. While FLPMA's regulations do permit BLM to consider national-level policy like EO 13990, the regulations do not allow BLM to disregard nearly all uses that benefit local economies. 43 C.F.R. §§ 1601.0-8; 1610.1(a)(1). Alternative B effectively forecloses economic use-oil and gas, mining, renewable energy development, and others-on half of the Rock Springs planning area, and severely restricts it over much of the remaining areas. Neglect of economic uses is also neglect of more specific considerations such as "the impact on local economies," and the "[d]egree of local dependence on resources from public land[.]" 43 C.F.R. §§ 1601.0-8, 1610.4-4. Disregard for these economic considerations and their adverse effect on local communities cannot meet FLPMA's multiple-use mandate. BLM accomplishes its protectionist goals primarily through draconian land use restrictions in Alternative B, including designation of vast ACECS, placement of giant buffers limiting rights-of-way and other uses near historic trails, and exclusion of surface uses in wildlife habitats. None of these actions is sufficiently supported in the Draft RMP and the restrictions singularly, and in concert, violate BLM's obligation to allow for multiple uses and sustained yield. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. Proposed management actions for individual ACECs under each alternative can be found in Table 2-1 #7400-7570, and ACEC eligibility reports can be found in Appendix C. Proposed management actions for rights-of-way and corridors can be found in Table 2-1 #6200-6210, management actions proposed for fish and wildlife under each alternative can be found in Table 2-1 #4400-4436, and management actions for congressionally designated National Historic Trails can be found in Table 2-1 #7000-7022. |
| 839 - General-FLPMA / Multiple Use | #13787-74 | MA #6000 LR-06, LR-07, LR-02, BR- 24 Access to public lands would be provided throughout the planning area. Where necessary and consistent with off-road vehicle (ORV) designations, access would be closed, or restricted in specific areas to protect public health and safety, and to protect significant resource values. Easements would be pursued where practical, to provide access to public lands for recreational, wildlife, range, cultural/historical, mineral, special management area, and other resource management needs (about 300 acres) Appendix K. Industry Position: Acceptable Evaluate, on a case-by-case basis, access needs to public, state, and private land within the planning area. Restrict access where necessary to protect public health or safety and sensitive resources. Consider, when requested by the land owner, access across public land to isolated private and state land consistent with the guidelines and objectives set forth in FLPMA and existing regulatory requirements. Industry Position: Not acceptable Reason: The RMP area is a checkerboard so reference to isolated private and state sections is not accurate. Restriction of access goes against FLPMA. Same as Alternative A Industry Position: Acceptable Restrict or close access where necessary and consistent with OHV designations: 1) in specific areas to protect public health and safety; and 2) to protect significant resource values. Pursue easements where practical, to provide access to public lands for recreational, wildlife, range, cultural/historical, mineral, special management area, and other resource management needs (Appendix K). Industry Position: Not acceptable Reason: Restriction of access goes against FLPMA. Access to minerals and other values must continue to be available. Alternatives A and C are acceptable. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. For a list of management actions specific to off-highway vehicles, see Table 2-1 #6600-6620. |
| 839 - General-FLPMA / Multiple Use | #13811-3 | Alternative B also ignores BLM's inherent discretion in granting ROWs, and in requiring mitigation for potentially damaging activities. Moreover, Alternative B's dramatic shift to exclusion areas runs contrary to what BLM and stakeholders have been discussing throughout the entire RMP/DEIS development process. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. |
| 839 - General-FLPMA / Multiple Use | #13811-4 | In contrast, Alternative A restricts 0.4 million acres, Alternative C restricts 0.25 million acres, and Alternative D restricts 0.4 million acres from trona leasing.12 And in the KSLA specifically, Alternative B removes 49,224 more acres from trona leasing in comparison to the currently available acreage for lease in the Green River RMP, which is a reduction of 101%. The Green River RMP grants BLM discretion to decide whether or not to grant leases and what restrictions to impose upon them. BLM could retain this discretion and achieve significant conservation goals without categorically removing millions of acres from trona leasing. BLM could use its discretion to balance the economic interests in trona development with its long-term conservation interests. Alternative B's categorical restrictions would not achieve that balance. | See Table 1 in the Executive Summary for a comparison of land use restrictions and allocations under each proposed alternative. Management actions for trona are provided in Table 2-1 #2408-2411, and analysis of impacts to trona under each alternative can be found in Section 4. 11. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| 839 - General-FLPMA / Multiple Use | #13826-18 | My understanding is that "The BLM is mandated by the 'Federal Land Policy and Management Act' to manage public lands in a manner that not only protects natural resources but "which recognizes the nation's need for domestic sources of minerals, food, timber, and fiber from the public lands" while providing for "outdoor recreation and human occupancy and use," and that management be on "the basis of multiple use and sustained yield." I believe that the proposed BLM Alternative B doesn't do this and in fact will do the exact opposite in its purpose and is in violation of this mandate. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13827-2 | We have concerns that meaningful consultation on this draft RMP has not occurred nor appropriate "capacity building" such as adequate compensation or formats and timelines that are conducive to representatives of Tribal Governments. The BLM should conduct follow-up consultation with at least the Tribal Government entities listed above, should they so desire, and strive to format that consultation to best meet the needs of Tribal Government representatives prior to the final record of decision on this document. | Tribal consultation has been ongoing throughout the EIS process and will continue. See updates to Section 5.3 as appropriate. |
| 839 - General-FLPMA / Multiple Use | #13829-1 | Furthermore, the Federal Land Policy and Management Act (FLPMA) provides a framework for managing public lands that requires a systematic, interdisciplinary approach and requires coordination in land-use planning with other state and federal agencies. Under FLPMA (43 USC 1712 [1976]), the BLM is required to stay apprised of local land use plans, assure consideration is given to local land use plans, assist in resolving inconsistencies with state and local land use plans, and provide meaningful opportunities for local government officials to participate in the development of land use programs, regulations, and decisions for public lands that may have a significant impact on non-federal lands such as state or private property. BLM must better align with local county natural resource management plans. The Preferred Alternative "B" does not meet the mandate of multiple use and sustained yield as provided in FLPMA and it appears to solely support the management of conservation or preservation of lands in the RMP area through special designations including a historic level of Areas of Critical Environmental Concern (ACECs), limited or no leasing of minerals and land use allocations, restrictions for access to federal lands, along with other restrictive management prescriptions. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and NEPA, and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. Proposed management actions for individual ACECs under each alternative can be found in Table 2-1 #7400-7570, and ACEC eligibility reports can be found in Appendix C. Proposed management actions for oil and gas (fluid minerals) under each alternative can be found in Table 2-1 #2200-2222. For a comparison of resource restrictions, closures, and allocations under each alternative, see Table 1 in the Executive Summary. |
| 839 - General-FLPMA / Multiple Use | #13829-2 | However, there is no meaningful discussion presented anywhere in the document that describes the management actions in detail nor did the BLM utilize the most recent county plans that were approved as follows: 1) Fremont County Natural Resource Management Plan 2021, 2) Lincoln County Natural Resource Management Plan 2021, 3) Sublette County Federal and State Land Use Policy 2021, 4) Sweetwater County Federal Lands and Resources Plan 2022 and S) Uinta County Comprehensive Plan 2021. | See updates to Table 1-2. All management actions proposed for each resource under each alternative can be found in Table 2-1. |
| 839 - General-FLPMA / Multiple Use | #13859-2 | While the DEIS alternatives represent the spectrum of issues and resource uses, the alternatives do not adequately reflect the complex and interrelated nature of resource management. BLM's development of alternatives should consider full integration of renewable energy development as an element of conservation of resource value. Alternative B, BLM's preferred alternative does not comply with Federal Land and Policy Management Act (FLPMA), which requires that all resource management plans observe multiple use principles. The preferred alternative effectively eliminates the opportunity for the development of renewables in the planning area because it fails to fully integrate multiple resource uses. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13859-3 | The FLPMA also provides no statutory context that either directs or authorizes the Secretary of the Interior nor the Bureau of Land Management to manage our nation's public lands for visual resources. This law does provide a specific definition for "public lands" which are defined as "…any land and interest in land owned by the United States within the several States and administered by the Secretary of the Interior through the Bureau of Land Management, without regard to how the United States acquired ownership, except- (1) lands located on the Outer Continental Shelf; and (2) lands held for the benefit of Indians, Aleuts, and Eskimos. Nor has the Secretary of the Interior or the Bureau of Land Management promulgated a rulemaking in accordance with FLPMA Section 102 (a)(5) to better define their ambitions in planning for and regulating visual resources | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and all other applicable laws, regulations, and policies. |
| 839 - General-FLPMA / Multiple Use | #13865-68 | "Remove roads, unimproved roads, two-tracks, and restore sagebrush habitat." As discussed previously, the need for utilities to access power lines is critical to the safe operation of the electrical grid. This access may include the use of improved or unimproved roads, or two-tracks. It is a violation of FLPMA to arbitrarily restrict or remove public access without notice or input. In order to prevent safety issues by restricting access, PacifiCorp recommends that the BLM modify the above stipulation to read: "Remove roads, unimproved roads, two-tracks, and restore sagebrush habitat, where this will not interfere with access to authorized ROWs or for safety purposes. The BLM will notify authorized users, including ROW holders, in the RSFO for any access road removal proposals, and provide adequate opportunity for public comment." | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and all other applicable laws, regulations, and policies. Travel and Transportation Management Planning, including specific route designations are implementation level actions and are outside the scope of this document. |
| 839 - General-FLPMA / Multiple Use | #13880-1 | To prevent future abuses of executive authority, Congress reserved to itself the authority to make permanent withdrawals of large tracts (of 5,000 acres or more),4 limiting BLM' s authority to enact unilateral withdrawals of large tracts only on a temporary basis of up to twenty years.5 If such withdrawals are intended, BLM must notify Congress, describing the parcel proposed to be withdrawn, explaining its mineral value, identifying stakeholder interests, and indicating whether any suitable alternative sites are available for the uses the withdrawal would displace.6 Under the preferred alternative, not only does BLM's proposal prioritize preservation at the sacrifice of nearly all other uses, ignoring the multiple-use mandate, but under all alternatives BLM proposes the withdrawal of | Please refer to the Glossary for a definition of 'withdrawal', which does not apply to fluid mineral leasing, solid mineral leasing, or mineral material sales (only General Land Laws such as the 1872 Mining Law). Please refer to the proposed management actions for all four alternatives that are described in Table 2.1. Expected impacts from each of the four alternatives can be found in Chapter 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | millions of acres from productive use for mineral development. While the State of Wyoming shares BLM's goal of maintaining healthy lands, the BLM's multiple use mandate must allow for the development of oil, gas, coal, trona, and other minerals essential as required under two key pieces of mineral legislation -- the Mining Law of 1872 and the Mineral Leasing Act of 1920. | |
| 839 - General-FLPMA / Multiple Use | #13880-2 | In a state with rich mineral resources like Wyoming, which also includes an abundance of productive public lands, limiting the development of mineral resources contravenes the clear purpose of the Mining Law of 1872, and the Mineral Leasing Act of 1920. Uses of BLM land for the mining of coal, critical minerals, and for oil and gas extraction are essential for America to expand emerging technologies and ensure national energy security. There is no genuine argument that rendering millions of acres of land unusable, either directly or indirectly, for not only mineral development-but also recreation, hunting, fishing, and grazing, "meet[s] the present and future needs of the American people." | Please refer to the Glossary for a definition of 'withdrawal', which does not apply to fluid mineral leasing, solid mineral leasing, or mineral material sales (only General Land Laws such as the 1872 Mining Law). Please refer to the proposed management actions for all four alternatives that are described in Table 2.1. Expected impacts from each of the four alternatives can be found in Chapter 4. |
| 839 - General-FLPMA / Multiple Use | #13880-5 | Severely restricting development or productive use of federal lands shifts the development to State and private lands, which do not have undue restrictions, to the detriment of the landscape and the people as a whole. Whether restrictions within this draft RMP come in the form of ROW exclusions, ACECs, other special designations, or inconsistent trail corridors, within or without the checkerboard, the impacts of these actions must be fully analyzed utilizing existing science and data. | Impacts to areas with private or state ownership are discussed in the cumulative impacts analysis section (Appendix T). |
| 839 - General-FLPMA / Multiple Use | #13892-1 | The Rock Springs RMP neglects to provide for the BLM's legal obligations as set by Congress in ensuring that public lands are managed according to the principles of multiple use and sustained yield as identified in the Federal Land Policy and Management Act (FLPMA) of 1976. The DEIS barely mentions "sustained yield" in its 1,330 pages, does not define the term, and does not provide for sustained yield as a goal, measurable objective, or action. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. The definition of "multiple use" can be found in the Glossary section. |
| 839 - General-FLPMA / Multiple Use | #13892-2 | FLPMA mandates that "the public lands be managed in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the public lands." Yet the DEIS fails to mention food for humans at all (all references to food are to meeting the needs of wildlife, with the exception to expenditures made by recreation users). Likewise, the production of fiber from our public lands is also not mentioned - despite that Wyoming ranks #2 in the nation for wool production, with a substantial portion of this wool produced from ranches operating in the Rock Springs District. The DEIS fails to provide a description of the amount of food produced from these public lands | Please refer to Section 1.4 for the Planning Criteria governing this RMP process. |
| 839 - General-FLPMA / Multiple Use | #13912-10 | While BLM's refusal to permit activity on federal lands has inescapable implications for projects that span both private and federal lands, BLM most certainly cannot condition use of the federal lands by 1 The Federal Land Policy and Management Act ("FLPMA") requires that public lands be managed on the basis of multiple use and sustained yield. 43 U.S.C. § 1701(a)(7). FLPMA defines "multiple use" as "the management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people." 43 U.S.C. § 1702(c). It "include[s], but [is] not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific and historical values." | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. |
| 839 - General-FLPMA / Multiple Use | #13912-16 | Big Game Crucial Habitats. BLM proposes to close all "big game crucial winter ranges, parturition areas, migration corridors, and transitional habitats" to surface disturbance or disruptive activities (MA# 4421). As shown in Map 3-3, these important big game ranges encompass vast areas throughout the RMP, including much of the checkerboard lands north of Interstate 80 and along the western edge of the RMP area, which also happens to overlap with the Known Sodium Leasing Area ("KSLA"). If implemented, these severe restrictions would hamstring project development throughout the checkerboard, in violation of BLM's obligation to allow for multiple uses. | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. See management action #4421 in Table 2-1 for proposed management for all four alternatives relating to big game habitats. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and all other applicable laws, regulations, and policies. |
| 839 - General-FLPMA / Multiple Use | #13912-18 | The Fifth Amendment provides that private property shall not "be taken for public use, without just compensation." U.S. CONST. amend. V. The Takings Clause "does not bar government from interfering with property rights, but rather requires compensation in the event of otherwise proper interference amounting to a taking." Lingle v. Chevron U.S.A., Inc., 544 U.S. 528, 543 (2005) (citation and quotations omitted). The first, and most obvious form of taking, is the physical invasion of private property. Id. at 537. A physical invasion is a "direct appropriation of property, or the functional equivalent of a practical ouster of the owner's possession." Id. (quotations and citation omitted). But takings are not always physical-they can also be regulatory. If regulation of property is "so onerous that its effect is tantamount to a direct appropriation or ouster," that regulation may be compensable as a regulatory taking. Id. A regulatory taking may be total and "deprive[] [the] property of all value," or partial, "less than a 'complete elimination of value.'" Tahoe-Sierra Pres. Council v. Tahoe Reg'l Planning Agency, 535 U.S. 302, 330, 330, 332 (2002) (citation omitted). To prove a taking, a property owner must show that the agency regulation or decision deprives the owner of "economically beneficial or productive use of" the property. Lucas v. S. Car. Coastal Council, 505 U.S. 1003, 1015 (1992). "[W]hen the owner of real property has been called upon to sacrifice all economically beneficial uses in the name of the common good, that is, to leave his property economically idle, he has suffered a taking." Id. at 1019. Under these circumstances, the taking is "categorical." Id. at 1015. Even where property maintains some economic value after its use is restricted, "if regulation goes too far it will be recognized as a taking." Mahon, 260 U.S. at 415. To determine what type of regulation goes "too far," courts consider factors such as "[t]he economic impact of the regulation on the claimant," interference "with distinct investment backed | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and all other applicable laws, regulations, and policies. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | expectations," and "the character of the governmental action." Penn Cent. Transp. Co. v. City of New York, 438 U.S. 104, 124 (1978). Sweetwater Royalties has numerous projects in development across its holdings that could be stalled or completely cancelled as a result of BLM's management regime. Some of these projects are discussed in the site-specific comments above. BLM's restriction of private land use through regulation of the checkerboard lands amounts to a taking of billions of dollars worth of projects in the works that benefit not only Sweetwater Royalties, but local communities, state and federal taxpayers, and far-reaching markets for clean energy and minerals. | |
| 839 - General-FLPMA / Multiple Use | #13953-2 | Since its release, the BLM has attempted to soften concerns over the detrimental impacts of the preferred alternative by reminding people that the RMP is only a draft, and the language can change before the final record of decision is signed. While this is true, it begs the question of why the BLM abandoned years of work on its previously preferred Alternative D without notifying cooperating agencies. The most readily drawn conclusion is that the BLM's preferred alternative is politically motivated3, far removed from the multiple-use and sustained yield mandate set forth in the Federal Land Policy and Management Act of 1976 (FLPMA). | Alternative B has been identified in the Draft EIS as the "Agency Preferred Alternative". The BLM has the authority to select elements of any of the four alternatives analyzed as the final Proposed RMP in the Final EIS in response to public comment and further review. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. |
| 839 - General-FLPMA / Multiple Use | #14020-1 | A. This RMP Revision should consider wild horse management as one of the various resource values that must be evaluated to ensure compliance with the BLM's multiple-use directive. 43 USC § 1702 (c) defines the term "multiple use" as "the management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future need of the American people." Notwithstanding the Rawlins and Rock Springs Wild Horse RMP Amendment and pending litigation, true assessment of the various resourcevalues and how they are utilized to meet the present and future needs of the American people requires that this amendment be contextualized and examined during current revision planning. | See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations, and policies. Wild horse management for the four herd management areas that contain portions of the mixed private/public checkerboard land pattern were addressed under a separate 2023 RMP Amendment and EIS (see Sections 1.3 and 2.2.5). This Amendment is a part of the No Action alternative (Alt A) of this EIS. See also Sections 3.9 and 4.9 for Wild Horses and Burros "Affected Environment" and analysis of "Environmental Consequences." |
| 839 - General-FLPMA / Multiple Use | #14022-1 | SCCD is concerned that the process used by the Bureau of Land Management (BLM) to roll out the RMP to the Cooperating Agencies (CA) is in direct violation of Federal Land Policy and Management Act of 1976 (FLPMA), specifically regarding the involvement of local governments, for many reasons including: 1) Skipping the CA process for an "internal" review prior to the release to the public 2) BLM's lack of CA involvement, highlighted on page ES-7. 3) Lack of collaboration with CA's in Table 1.2 on page 1-6. The plans associated with SCCD are out of date and would have been corrected if the CA's had been communicated with prior to the release of the RMP. SCCD has updated our Long-Range Plan in 2020. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA and NEPA, and consistency with state and local government resource-related plans (see table 1-2 for a list of related local, state, and federal management plans that may pertain to the Rock Springs planning area). BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. See also updates to Table 1-2. |
| 839 - General-FLPMA / Multiple Use | #14024-1 | SCI encourages the BLM to adopt Alternative D, the "moderate approach," as the Preferred Alternative. Alternative D would advance conservation purposes, while also implementing a number of actions identified and requested by public comments and cooperating agency input and utilizing fewer special area designations and prescriptive actions than Alternative B. In short, Alterative D is more balanced and flexible, and protects public access for recreational purposes, including regulated hunting. That direction is far more consistent with the BLM's statutory obligations in the Federal Land Policy and Management Act of 1976, 43 U.S.C. §§ 1701 et seq. ("FLPMA"), than Alternative B. Therefore, the BLM should reconsider its Preferred Alternative and select Alternative D. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. See Sections 1.4-1.5 for adequate coverage of the planning criteria and requirements of BLM land use plans and amendments, including consistency with FLPMA and all other applicable laws, regulations and policies. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. |
| 839 - General-FLPMA / Multiple Use | #14024-2 | Alternative D is more consistent with FLMPA for a number of reasons, including two reasons that stand out. First, Alternative D is balanced. It protects the land, habitat, wildlife, and other resources while also providing recreational and other use opportunities. For instance, Alternative B would remove the current Wind River Special Resource Management Designation, an area exceeding 250,000 acres that provides hunting, wildlife viewing, boating, and motorized recreational access. Alternative D would reduce the size of this area to preserve greater habitat and reduce conflicts. But it would preserve over 80,000 acres for these recreational uses, including hunting and motorized access. Draft RMP, p. 2-135. This balanced position is most consistent with FLPMA and the general understanding that public lands should be for public use-not for strict preservation. As explained above, providing recreational use also protects the public interest and support for these BLM lands and, ultimately, for wildlife and habitat conservation as a whole. | The Draft EIS, including all four alternatives, are in compliance with FLPMA. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. Specific proposed management actions for recreation under each alternative can be found in Table 2-1 #6500-6557. |
| 839 - General-FLPMA / Multiple Use | #14024-3 | Second, Alternative D was developed based on public input.2 FLMPA's Congressional Declaration of Policy explicitly provides that the BLM establish its rules and regulations "after considering the views of the general public." 43 U.S.C. § 1701. Adopting the alternative with the greatest public input and support-Alternative D-is consistent with this policy directive and would recognize the importance of public lands access. On the other hand, the proposed selection of Alternative B has raised significant public concern, including among the Wyoming Governor and legislators.3 This proposal is inconsistent with the BLM's obligations. See, e.g., 43 U.S.C. §§ 1701(a)(2), 1712(c)(9). | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. BLM adequately consulted cooperating agencies in the development of all alternatives. See section 2.2.3 regarding Alternatives Development Process. See sections 5.1.1-5.1.2 regarding public involvement and government consultation and coordination in developing all alternatives. The agency preferred alternative is identified in the Executive Summary (pg. ES-3) and adequately meets the purpose and need outlined on ES-2 and in Sections 1.2.1 and 1.2.2. |
| 839 - General-FLPMA / Multiple Use | #14026-2 | BLM's preferred alternative, which maximizes conservation at the expense of other uses, could have devastating effects on electric reliability and affordability; public health and safety; and the well-being of communities throughout the west and may set detrimental precedent for BLM public land management across the nation. It is critical that BLM conducts its due diligence on the potential effects of this proposed alternative, including undertaking a thorough Regulatory Flexibility Act analysis, and by issuing a detailed Statement of Energy Effects.6 NRECA encourages BLM to work with stakeholders in the electricity sector and throughout communities in the | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. A full analysis of impacts to specific resources for each alternative is found in Section 4. |

| Comment Category | Comment ID # | Comment Text | BLM Response |
|---|---|---|---|
| | | region to understand the real-world impacts of each alternative, and to best balance those impacts and the goals of the preferred alternative under the existing mandate of Multiple Use and Sustained Yield under FLPMA.7 | |
| 839 - General-FLPMA / Multiple Use | #14026-9 | The Proposed Rule Exceeds BLM's Statutory Authority Congress enacted FLPMA in 1976 with the unambiguous, expressly stated purpose of managing our public lands "in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the public lands."13 It mandated that BLM "shall manage the public lands under principles of multiple use and sustained yield" which means the "management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people."14 Importantly, Congress specified that "domestic livestock grazing, fish and wildlife development and utilization, mineral exploration and production, rights-of-way, outdoor recreation, and timber production" are principal or major uses of public lands under FLPMA.15 Facilitating these specific principal or major uses under the doctrine of Multiple Use and Sustained Yield is the primary reason for FLPMA and the BLM's existence. | The statutory authority of any proposed rules are outside the scope of this Draft EIS covering the Rock Springs Field Office resource area. Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. See Section 1.3 for a list of planning issues for the RMP. |
| 839 - General-FLPMA / Multiple Use | #14026-11 | Further, Congress included a provision in FLPMA that requires BLM to refer to Congress any management decisions which would "exclude one or more principal or major uses [. . . ] for two years or more on areas in excess of 100,000 acres" and reserves the right for either house of Congress to veto such decisions.18 Congress also unambiguously required BLM to seek congressional approval to withdraw parcels of over 5,000 acres from major or principal uses, and placed limitations on withdrawals of fewer acres.19 BLM's proposal to designate 1.65 million natural resource-rich acres as ACECs and to close off over 2.4 million acres to ROWs in Wyoming results in the effective withdrawal of millions acres of public land in from major or principal uses under FLPMA, including electricity generation, transmission, and distribution. Congress specifically made clear its intention to retain sole authority to remove large swaths of public lands from major or principal uses. Should BLM proceed with this ill-advised RMP/EIS process, NRECA urges it to abide by its statutory obligations and seek approval of Congress for this sweeping land withdrawal in Wyoming. | Please refer to the Glossary for a definition of 'withdrawal', which does not apply to fluid mineral leasing, solid mineral leasing, or mineral material sales (only General Land Laws such as the 1872 Mining Law). Please refer to the proposed management actions for all four alternatives that are described in Table 2.1. Expected impacts from each of the four alternatives can be found in Chapter 4. |
| 839 - General-FLPMA / Multiple Use | #14038-1 | ll current roads and trails need to remain open. These roads provide access for recreation, managing allotments, emergency response, hunting, mineral production, and many other uses. In an area of 3.7 million acres, there should be a substantial amount of roads that are permitted as well as maintained. Proposed ACEC's threaten routes and access for various user groups. These areas have a historical use and closing them is shutting the local communities off from their history. The environmental impact of the current transportation network is mitigated by the small number of current routes and open OHV areas. These roads, trails and recreation areas are crucial for the local economy for communities such as Lyman and Sweetwater County and other small communities that rely on access to the planning area. The U.S. Bureau of Economic Analysis showed that in 2021 the outdoor recreation industry brought in $821 billion nationwide. By limiting access to this area the BLM could be harming the local economy and robbing them of potential income. Giving preferential treatment to one user groups over another is against the BLM's multiple use mandate and permit. | Sections 1.4- 1.5 of the DEIS cover the planning criteria and requirements of BLM land use plans and amendments, including adherence to FLPMA. Socioeconomic impacts under each alternative are analyzed in Section 4.22 and a socioeconomic report can be found in Appendix N. Impacts to recreation under each alternative are analyzed in Section 4.17. Specific route designations are implementation level actions and are outside the scope of this document. |
| 182.01 - Cultural, Hist., Anthro. Mgmt | #11-1 | I encourage you to involve tribal members closely in all stages of research, protection, policy development, and management | See Chapter 5 for consultation information. |
