U.S. Department of the Interior
Bureau of Land Management

March 2024

# Greater Sage-Grouse

Volume 3: Appendixes 2—19

## Draft Resource Management Plan Amendment and Environmental Impact Statement

The Bureau of Land Management's multiple-use mission is to sustain the health and productivity of the public lands for the use and enjoyment of present and future generations. The Bureau accomplishes this by managing such activities as outdoor recreation, livestock grazing, mineral development, and energy production, and by conserving natural, historical, cultural, and other resources on public lands.

## INTRODUCTION

This appendix includes the greater sage-grouse management goals, objectives and management decisions/actions added to the BLM's resource management plans (RMPs) during the 2014 and 2015 amendments/revisions and the 2019 amendments (as applicable). Each state has a separate section in this appendix with state-specific page numbering. In addition, the goals, objectives, and decisions/actions are numbered from their state-specific planning efforts. These actions apply to the following land use plans, which includes both RMPs, management framework plans, and other BLM planning-level documents, referred to collectively as RMPs. It is important to note that the language in these appendices may not be the exact language from the applicable 2015 or 2019 amendments. During the implementation process, some states have made subsequent amendments or maintenance actions to the language from the 2015 or 2019 ARMPAs. The language in this appendix presents the current management, inclusive of all such changes that have occurred subsequent to the original records of decision.

**California:**

- Altura RMP (2008)
- Eagle Lake RMP (2008)
- Surprise RMP (2008)

**Colorado:**

- Colorado River Valley RMP (2015), including Roan Plateau RMPA (2016)
- Grand Junction RMP (2015)
- Kremmling RMP (2015)
- Little Snake RMP (2011)
- White River RMP (1997) and associated amendments, including the White River Oil and Gas Amendment (2015)

**Idaho:**

- Bennett Hills/Timmerman Hills Management Framework Plan (MFP) (1980)
- Big Desert MFP (1981)
- Big Lost MFP (1983)
- Bruneau MFP (1983)
- Cassia RMP (1985)
- Challis RMP (1999)
- Craters of the Moon National Monument RMP (2006)
- Four Rivers RMP (2023)
- Jarbidge RMP (2015)
- Lemhi RMP (1987)
- Little Lost-Birch Creek MFP (1981)
- Magic MFP (1975)
- Medicine Lodge MFP (1981)

- Monument RMP (1985)
- Owyhee RMP (1999)
- Pocatello RMP (2012)
- Snake River Birds of Prey National Conservation Area RMP (2008)
- Sun Valley MFP (1981)
- Twin Falls MFP (1982)

**Montana/Dakotas:**

- Billings and Pompeys Pillar Nation Monument RMP (2015)
- Butte RMP (2009)
- Dillon RMP (2006)
- HiLine RMP (2015)
- Lewistown RMP (2021)
- Miles City RMP (2015)
- North Dakota RMP (1988)
- South Dakota RMP (2015)
- Upper Missouri River Breaks National Monument RMP (2008)

**Nevada:**

- Black Rock Desert-High Rock Canyon Emigrant Trails National Conservation Area RMP (2004)
- Carson City Field Office Consolidated RMP (2001)
- Elko RMP (1987)
- Ely RMP (2008)
- Shoshone-Eureka RMP (1986)
- Tonopah RMP (1997)
- Wells RMP (1985)
- Winnemucca District RMP (2015)

**Oregon:**

- Andrews RMP (2005)
- Baker RMP (1989)
- Brothers/La Pine RMP (1989)
- Lakeview RMP (2003)
- Southeastern Oregon RMP (2002)
- Steens Mountain Cooperative Management and Protection Area RMP (2005)
- Three Rivers RMP (1992)
- Upper Deschutes RMP (2005)

**Utah:**

- Vernal RMP (2008)
- Price RMP (2008)
- Richfield RMP (2008)
- Kanab RMP (2008)
- Kanab/Escalante Planning Area RMP (2020)
- Grand Staircase-Escalante National Monument – Grand Staircase Unit RMP (2020)

- Cedar/Beaver/Garfield/Antimony RMP (1986)
- Pinyon MFP (1978)
- Warm Springs RMP (1987)
- House Range RMP (1987)
- Pony Express RMP (1990)
- Box Elder RMP (1986)
- Randolph MFP (1980)
- Park City MFP (1975)
- Salt Lake District Isolated Tracts Planning Analysis (1985)

**Wyoming:**

- Buffalo RMP (2015)
- Casper RMP (2007
- Cody RMP (2015)
- Kemmerer RMP (2010)
- Lander RMP (2014)
- Newcastle RMP (2000)
- Pinedale RMP (2008)
- Rawlins RMP (2008)

## 2.1 COLORADO RMPS

This appendix presents the GRSG approved RMP amendment language from the 2015 and 2019 records of decision for Colorado. Changes between 2015 and 2019 are noted. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 and 2019 appendices that are listed in **Section 2.1.2** of this appendix.

### 2.1.1 Existing GRSG RMP Management – Colorado RMPs

**Table 1: Changes in Management from the 2015 Approved RMPA to the 2019 Approved RMPA**

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| ***SPECIAL STATUS SPECIES (SSS)*** | ***SPECIAL STATUS SPECIES (SSS)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective SSS-1:** Maintain and enhance populations and distribution of GRSG by protecting and improving sagebrush habitats and ecosystems that sustain GRSG populations. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD SSS-1:** Adaptive Management: Implement Adaptive Management Plan including soft and hard triggers as described in Appendix H (Guidelines for Implementation and Adaptive Management). The hard and soft trigger data will be analyzed as soon as it becomes available after the signing of the ROD and then at a minimum, analyzed annually thereafter. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS-2:** In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer distances identified in the U.S. Geological Survey Conservation Buffer Distance Estimates for Greater Sage-Grouse—A Review (Open File Report 2014-1239) in accordance with Appendix B. | **MD SSS-2:** In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will evaluate the lek buffer distances during project-specific NEPA analyses, in accordance with Appendix H (Guidelines for Implementation and Adaptive Management). Appendix B of the 2015 ROD/ARMPA will not be carried forward. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD SSS-3:** In all sage-grouse habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. | **MD SSS-3:** In all Greater Sage-Grouse habitat, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the following steps, in alignment with the Governor of Colorado's Executive Orders 2015-004 (May 15, 2015) and 2018-036 (December 2018), including avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions.<br>1. If the proponent has not already done so pursuant to Colorado Executive Order 2015-004 and 2018-036, and 2 CCR 404-1:1200 et seq. or other applicable law, policy or regulation, BLM will notify Colorado Parks and Wildlife to determine if the State requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>2. Incorporate state required or recommended mitigation into the BLM's NEPA and decisionmaking process, if the CPW determines that there are unacceptable residual impacts on Greater Sage-Grouse or its habitat and compensatory mitigation is required as a part of a State policy or authorization, or if a proponent voluntarily offers mitigation.<br>3. Analyze whether the compensatory mitigation:<br>• achieves measurable outcomes for Greater Sage-Grouse habitat function that are at least equal to the lost or degraded values<br>• provides benefits that are in place for at least the duration of the impacts<br>• accounts for a level of risk that the mitigation action may fail or not persist for the full duration of the impact<br>4. Verify that the project proponent has coordinated with the State of Colorado to ensure it complies with Executive Orders 2015-004 and 2018-036 and, when necessary, complies with 2 CCR 404-1:1200 et seq. or other applicable state law, policy or regulation relating to its proposal.<br>5. Through coordination with CPW, ensure mitigation outcomes are consistent with the State of Colorado's mitigation strategy and principles outlined in **Appendix H** (Guidelines for Implementation and Adaptive Management). | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| ***VEGETATION (VEG)*** | ***VEGETATION (VEG)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG-1:** (1) Use habitat restoration as a tool to create and/or maintain landscapes that benefit GRSG; (2) Use Integrated Vegetation Management to control, suppress, and eradicate, where possible, noxious and invasive species per BLM Handbook H-1740-2; and (3) In PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70 percent) with a minimum of 15 percent sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Technical Reference 1734-6). | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| ***Sagebrush Steppe (Habitat Restoration)*** | ***Sagebrush Steppe (Habitat Restoration)*** | — |
| **MD VEG-1:** (ADH) When planning restoration treatments in GRSG habitat, identify seasonal habitat availability, and prioritize treatments in areas that are thought to be limiting GRSG distribution and/or abundance.<br>The habitat objectives for GRSG (**Table 2**) are a list of indicators and values that describe GRSG seasonal habitat conditions. The values for the indicators were derived using a synthesis of current local and regional GRSG habitat research and data and reflect variability of ecological sites. The habitat cover indicators are consistent with existing indicators used by the BLM.<br>When determining if a site is meeting habitat objectives, the measurements from that particular site would be assessed based on the range of values for the indicators in **Table 2**. **Table 2** is one component of GRSG multi-scale habitat assessment (see **Appendix D**, Greater Sage-Grouse Monitoring Framework).<br>The results of the habitat assessment would be used during the land health evaluation to ascertain if the land health standard applicable to GRSG habitat (e.g., special status species habitat standard) is being met.<br>When authorizing activities in GRSG habitat, the BLM would consider if habitat objectives are being achieved. If the habitat objectives are not being achieved, and the site has the potential for achieving these objectives, the BLM would determine the causal factor(s) and make the necessary management adjustments to address the causal factor(s), following current BLM regulations and policy. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD VEG-2:** (PHMA) Include GRSG habitat parameters as defined by Connelly et al. (2000), Hagen et al. (2007), or, if available, state GRSG conservation plans and appropriate local information in habitat restoration objectives. Make meeting these objectives within GRSG PHMA areas a high restoration priority. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD VEG-3:** (ADH) Require use of native plant seeds that are beneficial for GRSG for vegetation treatments based on availability, adaptation (site potential), probability for success (Richards et al. 1998), and the vegetation management objectives for the area covered by the treatment. Where probability of success or native seed availability is low, use species that meet soil stability and hydrologic function objectives as well as vegetation and GRSG habitat objectives (Pyke 2011). | No changes made. | No changes proposed. |
| **MD VEG-4:** (PHMA) Design post restoration management to ensure long-term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, wild horse management, travel management, and other uses, to achieve and maintain the desired condition of emergency stabilization and rehabilitation (ESR) projects to benefit GRSG (Eiswerth and Shonkwiler 2006). | No changes made. | No changes proposed. |
| **MD VEG-5:** (ADH) Manage for a habitat objective that is primarily sagebrush with a mosaic of seral stages and sagebrush in all age classes. On a site-by-site basis, do not allow treatments that would adversely affect GRSG populations. | No changes made. | No changes proposed. |
| **MD VEG-6:** (ADH) Make reestablishment of sagebrush and desirable understory plant cover (relative to ecological site potential) the highest priority for restoration efforts. Consider GRSG habitat requirements in conjunction with all resource values managed by the BLM, and give preference to GRSG habitat unless site-specific circumstances warrant an exemption. | No changes made. | No changes proposed. |
| **MD VEG-7:** (ADH) Authorize local sagebrush seed collection to support local restoration efforts. | No changes made. | No changes proposed. |
| **MD VEG-8:** (ADH) Treat areas that contain *Bromus tectorum* and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| ***Conifer Encroachment*** | ***Conifer Encroachment*** | — |
| **MD VEG-8:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those September 2015 *Northwest Colorado Greater Sage-Grouse Approved RMP Amendment* 2-7 included in the Fire and Invasives Assessment Team report (Chambers et. al., 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. See **Appendix H**, Guidelines for Implementation and Adaptive Management. | No changes made. | No changes proposed. |
| ***FIRE AND FUELS MANAGEMENT (FIRE)*** | ***FIRE AND FUELS MANAGEMENT (FIRE)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective FIRE-1:** Manage fire to maintain and enhance large blocks of contiguous sagebrush. | No changes made. | No changes proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| ***Suppression (Fire Operations)*** | ***Suppression (Fire Operations)*** | — |
| **MD FIRE-1:** (PHMA) The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. Consider GRSG habitat requirements commensurate with all resource values at risk managed by the BLM. | No changes made. | No changes proposed. |
| **MD FIRE-2:** (GHMA) The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. Consider GRSG habitat requirements commensurate with all resource values at risk managed by the BLM. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD FIRE-3:** (PHMA/GHMA) Temporary closures would be considered in accordance with 43 CFR subparts 8364, 8351, 6302 and 8341. Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that off-highway vehicles are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence (43 CFR, Part 8341.2). A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No changes made. | No changes proposed. |
| **Objectives:** | **Objectives:** | — |
| **Objective FIRE-2:** Manage the fuels program to avoid GRSG habitat loss and restore damaged habitat. | No changes made. | No changes proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| ***Fuels Management*** | ***Fuels Management*** | — |
| **MD FIRE-4:** (PHMA) Do not reduce sagebrush canopy cover to less than 15 percent (Connelly et al. 2000; Hagen et al. 2007) in a project area unless a vegetation management objective requires additional reduction in sagebrush cover to meet strategic protection of GRSG PHMA and conserve habitat quality for the species, in consultation with the State of Colorado. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD FIRE-5:** (PHMA) Apply appropriate seasonal restrictions for implementing vegetation management treatments according to the type of seasonal habitats present in a Colorado management zone (MZ). | No changes made. | No changes proposed. |
| **MD FIRE-6:** (PHMA) Allow no treatments in known winter range unless the treatments are designed to strategically reduce wildfire risk around or in the winter range and will maintain winter range habitat quality, unless in consultation with the State of Colorado it is deemed necessary to reduce risk to life and property. | No changes made. | No changes proposed. |
| **MD FIRE-7:** (ADH) Do not use fire to treat sagebrush in less than 12-inch precipitation zones (e.g., Wyoming big sagebrush or other xeric sagebrush species) (Connelly et al. 2000; Hagen et al. 2007; Beck et al. 2009). However, if as a last resort and after all other treatment opportunities have been explored, and site-specific variables allow, the use of prescribed fire or natural ignition fire for fuels breaks that would disrupt fuel continuity or enhance land health could be considered where cheatgrass is deemed a minor threat.<br><br>If prescribed fire is used in GRSG habitat, the NEPA analysis for the burn plan will address:<br>• why alternative techniques were not selected as viable options<br>• how GRSG goals and objectives would be met by its use<br>• how the COT report objectives would be addressed and met<br>• a risk assessment to address how potential threats to GRSG habitat would be minimized<br><br>Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the burn plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that would protect GRSG habitat in PHMA (e.g., creating fuel designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality breaks that | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer-reduction treatments, or being used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the burn plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat would need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | *(See above.)* | *(See above.)* |
| **MD FIRE-8:** (ADH) Monitor and control invasive vegetation post treatment. | No changes made. | No changes proposed. |
| **MD FIRE-9:** (ADH) Require use of native plant seeds for vegetation treatments based on availability, adaptation (site potential), probability for success (Richards et al. 1998), and the vegetation management objectives for the area covered by the treatment. Where probability of success or native seed availability is low, use species that meet soil stability and hydrologic function objectives as well as vegetation and GRSG habitat objectives (Pyke 2011). | No changes made. | No changes proposed. |
| **MD FIRE-10:** (PHMA) Design post fuels management to ensure long-term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, wild horse management, travel management, and other uses, to achieve and maintain the desired condition of ESR projects to benefit GRSG (Eiswerth and Shonkwiler 2006). | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD FIRE-11:** (ADH) Design vegetation treatments in GRSG habitats to strategically facilitate firefighter safety, reduce wildfire threats, and extreme fire behavior. This may involve spatially arranging new vegetation treatments with past treatments, vegetation with fire-resistant serial stages, natural barriers, and roads in order to constrain fire spread and growth. This may require vegetation treatments to be implemented in a more linear versus block design (Launchbaugh et al. 2007). | No changes made. | No changes proposed. |
| **MD FIRE-12:** (PHMA) During fuels management project design, consider the utility of using livestock to strategically reduce fine fuels (Diamond at al. 2009), and implement grazing management that will accomplish this objective (Davies et al. 2011; Launchbaugh et al. 2007). Consult with ecologists to minimize impacts to native perennial grasses consistent with the objectives and conservation measures of the grazing section. | No changes made. | No changes proposed. |
| **Objectives:** | **Objectives:** | — |
| **Objective FIRE-3:** Use ESR to address post-wildfire threats to GRSG habitat. | No changes made. | No changes proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| ***Post-Fire Management (Emergency Stabilization and Rehabilitation)*** | ***Post-Fire Management (Emergency Stabilization and Rehabilitation)*** | — |
| **MD FIRE-13:** (ADH) Require use of native plant seeds that are beneficial for GRSG for vegetation treatments based on availability, adaptation (site potential), probability for success (Richards et al. 1998), and the vegetation management objectives for the area covered by the treatment. Where attempts to use native seeds have failed, or native seed availability is low, use species that meet soil stability and hydrologic function objectives, as well as vegetation and GRSG habitat objectives (Pyke 2011). | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD FIRE-14:** (ADH) Design post-fire ESR and Burn Area Emergency Rehabilitation management to ensure long-term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, wild horse management, travel management, and other uses to achieve and maintain the desired condition of ESR and Burn Area Emergency Rehabilitation projects to benefit GRSG (Eiswerth and Shonkwiler 2006). | No changes made. | No changes proposed. |
| **MD FIRE-15:** (ADH) Rest burned areas from grazing for two full growing seasons unless vegetation recovery dictates otherwise (Wyoming Game and Fish Department 2011). | — | No changes proposed. |
| ***RANGE MANAGEMENT (RM)*** | ***RANGE MANAGEMENT (RM)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective RM-1:** GRSG objectives and well-managed livestock operations are compatible because forage availability for livestock and hiding cover for GRSG are both dependent on healthy plant communities. Agreements with partners that promote sustainable GRSG populations concurrent with sustainable ranch operations offer long-term stability. In the context of sustainable range operations, manage the range program to: 1) maintain or enhance vigorous and productive plant communities; 2) maintain residual herbaceous cover to reduce predation during GRSG nesting and early brood-rearing; 3) avoid direct adverse impacts to GRSG-associated range project infrastructure; and 4) employ grazing management strategies that avoid concentrating animals on key GRSG habitats during key seasons. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD RM-1:** (ADH) Within ADH, incorporate GRSG habitat objectives and management considerations into all BLM grazing allotments through Allotment Management Plans. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-2:** (ADH) Work cooperatively on integrated ranch planning within GRSG habitat. Develop management strategies that are seamless with respect to actions on public and private lands within BLM grazing allotments. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD RM-3:** (PHMA) The BLM will prioritize:<br>1. the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and<br>2. the processing of grazing permits/leases in PHMA.<br><br>In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-4:** (ADH) Conduct land health assessments that include (at a minimum) indicators and measurements of vegetation structure/condition/composition specific to achieving GRSG habitat objectives (Doherty et al. 2011). If local/state seasonal habitat objectives are not available, use GRSG habitat recommendations from Connelly et al. 2000 and Hagen et al. 2007. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Implementing Management Actions after Land Health and Habitat Evaluations*** | ***Implementing Management Actions after Land Health and Habitat Evaluations*** | — |
| **MD RM-5:** (ADH) Develop specific objectives—through NEPA analysis conducted in accordance with the permit/lease renewal process—to conserve, enhance, or restore GRSG habitat. Base benchmarks on Ecological Site/Range Site Descriptions. When existing on Ecological Site/Range Site Descriptions have not been developed, or are too general to serve adequately as benchmarks, identify and document local reference sites for areas of similar potential that exemplify achievement of GRSG habitat objectives and use these sites as the benchmark reference. Establish measurable objectives related to GRSG habitat from baseline monitoring data, ecological site descriptions, or land health assessments/evaluations, or other habitat and successional stage objectives. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD RM-6:** (ADH) Manage for vegetation composition and structure consistent with ecological site potential and within the reference state subject to habitat objectives, including successional stages. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-7:** (ADH) Include terms and conditions on grazing permits and leases that address disruptive activities that affect GRSG and assure plant growth requirements are met and residual forage remains available for GRSG hiding cover.<br><br>Specify as necessary:<br>1. Season or timing of use<br>2. Numbers of livestock (include temporary non-use or livestock removal)<br>3. Distributions of livestock use<br>4. Intensity of use (utilization or stubble height objectives)<br>5. Kind of livestock (e.g., cattle, sheep, horse, llama, alpaca, and goat)<br>6. Class of livestock (e.g., yearlings versus cow/calf pairs)<br>7. Locations of bed grounds, sheep camps, trail routes, and the like | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-8:** (ADH) Develop drought contingency plans at the appropriate landscape unit that provide for a consistent/appropriate BLM response. Plans shall establish policy for addressing ongoing drought and post-drought recovery for GRSG habitat objectives. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-9:** The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA would include specific management thresholds based on Table 2.3 in the Proposed Plan, Land Health Standards (43 CFR, Part 4180.2), ecological site potential, and one or more defined responses that would allow the authorizing officer to make adjustments to livestock grazing that have already been subject to NEPA analysis. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-10:** Allotments within PHMA, focusing on those containing riparian areas, including wet meadows, would be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| ***Riparian Areas and Wet Meadows*** | ***Riparian Areas and Wet Meadows*** | |
| **MD RM-11:** (ADH) Manage riparian areas and wet meadows for proper functioning condition within ADH. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-12:** (ADH) Within ADH, manage wet meadows to maintain diverse species richness, including a component of perennial forbs, relative to site potential (i.e., reference state). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-13:** (ADH) Establish permit/lease terms and conditions in conjunction with grazing strategies to ensure that the timing and level of utilization results in wet meadows with diverse species richness, including a component of perennial forbs, relative to site potential (i.e., reference state). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-14:** (ADH) Authorize new water development only after determining that the project will not adversely impact GRSG from habitat loss. Ensure that adequate long-term grazing management is in effect before authorizing water developments that may increase levels of use or change season of use. Give specific consideration to adjacent or downstream wetland habitat when a project entails a diversion from a spring or seep. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-15:** (ADH) Analyze springs, seeps and associated pipelines to determine if modifications are necessary to maintain the continuity of the predevelopment riparian area. If necessary to maintain GRSG populations or reverse a downward population trend caused by habitat loss, modify the project as necessary to restore the applicable wetland habitat. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Treatments to Increase Forage for Livestock/Wild Ungulates*** | ***Treatments to Increase Forage for Livestock/Wild Ungulates*** | — |
| **MD RM-16:** (ADH) Manage for a habitat objective that is primarily sagebrush with a mosaic of seral stages and sagebrush in all age classes. On a site-by-site basis, do not allow treatments that would adversely affect GRSG populations. See Appendix H, Guidelines for Implementation and Adaptive Management. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD RM-17:** (PHMA) Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to GRSG PHMA to determine if they should be restored to sagebrush or habitat of higher quality for GRSG. If these seedings are part of an Allotment Management Plan/Conservation Plan or if they provide value in conserving or enhancing the rest of PHMA, then no restoration would be necessary. Assess the compatibility of these seedings for GRSG habitat or as a component of a grazing system during the land health assessments (Davies et al. 2011).<br><br>For example: Some introduced grass seedings are an integral part of a livestock management plan and reduce grazing pressure in important sagebrush habitats or serve as a strategic fuels management area. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Structural Range Improvements and Livestock Management Tools*** | ***Structural Range Improvements and Livestock Management Tools*** | — |
| **MD RM-18:** (ADH) Design new range improvement projects to enhance livestock distribution and to control the timing and intensity of utilization. Examples of structural range improvement projects are cattle guards, fences, corrals, pipelines, troughs, storage tanks, windmills, ponds/reservoirs, solar panels, and spring developments.<br><br>Include a plan to monitor and control invasive plant species following any related ground disturbance. Place mineral or salt supplements away from water sources and leks in locations that enhance livestock distribution. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-19:** (PHMA) Where conditions create the potential for impacts from West Nile virus from developments or modification of water developments, use preferred design features (PDFs)/RDFs to mitigate the potential impacts. See **Appendix C** (Required Design Features, Preferred Design Features, and Suggested Design Features). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD RM-20:** (PHMA) Evaluate existing structural range improvements to determine if modifications are necessary to maintain GRSG populations or reverse a downward population trend caused by habitat loss. Modify, relocate, or remove projects as necessary.<br><br>Place mineral and salt supplements away from water sources and leks in locations that enhance livestock distribution. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-21:** (ADH) Mark fences in high risk areas (Christiansen 2009; Stevens 2011).<br><br>(PHMA) Where marking fences does not reduce fence-related GRSG mortality, modify fences. Where modification does not reduce GRSG mortality and the fence-related mortality is sufficient to adversely affect GRSG populations, remove fences. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD RM-22:** (ADH) Monitor for and treat invasive species associated with existing range improvements (Gelbard and Belnap 2003; Bergquist et al. 2007). | — | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Retirement of Grazing Privileges*** | ***Retirement of Grazing Privileges*** | — |
| **MD RM-23:** (ADH) At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized shall remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR, Part 4110.2-3.<br><br>When a permittee or lessee voluntarily relinquishes grazing preference, consider conversion of the allotment to a reserve common allotment that will remain available for use on a temporary, nonrenewable basis for the benefit of GRSG habitat. Authorize temporary nonrenewal permits in Reserve Common Allotments to meet resource objectives elsewhere such as rest or deferment due to fire or vegetation treatments. Temporary use of reserve common allotments would not be allowed due to drought or overuse of customary allotments. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1).<br><br>To authorize expansion of existing leases, the environmental record of review must show no significant direct disturbance, displacement, or mortality of GRSG based on these criteria:<br>• Important GRSG habitat areas as identified by factors, including, but not limited to, average male lek attendance and/or important seasonal habitat<br>• An evaluation of the threats affecting the local population as compared to benefits that could be accomplished through compensatory or off-site mitigation<br>• An evaluation of terrain and habitat features. For example, within 4 miles from a lek, local terrain features such as ridges and ravines may reduce the habitat importance and shield nearby habitat from disruptive factors. | No changes made. | No changes proposed. |
| **MD MR-24:** No new surface coal mine leases would be allowed in PHMA. At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM would determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1). | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD MR-25:** *New Underground Coal Mine Leases would be subject to:* Special Stipulations:<br>• All surfaces disturbances will be placed more than 2 miles from active leks.<br>• No surface disturbance on remainder of PHMA subject to the following conditions:<br><br>If, after consultation with the State of Colorado, and in consideration of the following criteria, there is no significant direct disturbance, displacement, or mortality of GRSG or impact to GRSG habitat;<br>• 3 percent disturbance cap in PHMA with disturbances limited to 1 disturbance per 640 acres density calculated by Colorado MZ and proposed project analysis area would apply to new lease activities<br>• No new leasing in PHMA if disturbance cap exceeds 3 percent (see **Appendix E**, Methodology for Calculating Disturbance Caps) for the biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ) or 1 disturbance per 640 acres is exceeded | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD MR-26:** (ADH) Underground mining exemption criteria for new leases:<br><br>1. Federal lands with coal deposits that would be mined by underground mining methods shall not be assessed as unsuitable where there would be no surface coal mining operations, as defined in 43 CFR, Part 3400.0-5(mm) of this title, on any lease, if issued.<br><br>Where underground mining will include surface operations and surface impacts on federal lands to which a criterion applies, the lands shall be assessed as unsuitable unless the surface management agency find that a relevant exception or exemption applies. See 43 CFR, Part 3461.1(b). Where practicable, limit permitted disturbances as defined in Appendix H, Guidelines for Implementation and Adaptive Management, to 3 percent in any biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ). Where disturbance exceeds 3 percent in any biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ), make additional, effective mitigation necessary to offset the resulting loss of GRSG habitat. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD MR-27:** (PHMA) See 43 CFR, Part 3461.4 (a) and (b), Exploration. Authorized exploration activities may be conducted only if the Authorized Officer reviews any application for an exploration license on such lands to ensure that any exploration does not harm any value for which the area has been assessed as unsuitable and determines that the exploration will not adversely affect GRSG populations due to habitat loss or disruptive activities or that the impact can be fully mitigated. Where practicable, limit permitted disturbances as defined in **Appendix H**, Guidelines for Implementation and Adaptive Management, to 3 percent in PHMA any biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ). Where disturbance exceeds 3 percent in any biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ), make additional, effective mitigation necessary to offset the resulting loss of GRSG habitat. | No changes made. | No changes proposed. |
| **MD MR-28:** (PHMA) *Underground mining – lease renewals:*<br>• Require that all surface mining appurtenant facilities for underground mining be located outside of PHMA (unless the lessee establishes that that such location is not technically feasible).<br>• If surface mining facilities must be located in PHMA, require the facilities be located in areas of existing disturbance and to have the smallest footprint possible utilizing design strategies to minimize disturbance, such as those identified in the PDF section of this table.<br>• Apply as conditions of lease renewal all appropriate conservation measures, PDFs, and mitigation designed to avoid or minimize impacts to GRSG.<br><br>(ADH) *Surface mining – lease renewals/readjustments:* Apply as conditions of lease renewal all appropriate conservation measures, PDFs, and mitigation designed to avoid or minimize impacts to GRSG. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD MR-29:** (ADH) Recommend or require as appropriate during all relevant points of the coal leasing and authorization process, minimization of surface-disturbing or disrupting activities (including operations and maintenance) where needed to reduce the impacts of human activities on important seasonal GRSG habitats. Apply these measures during activity-level planning (jurisdiction is managed by the State). The Office of Surface Mining or a delegated State Regulatory authority under the Surface Mining Control and Reclamation Act of 1977 authorizes surface-disturbing activities of active coal mining operations on federal mineral estate. The BLM coordinates with the Surface Mining Control and Reclamation Act of 1977 in overseeing coal leasing and permitting on federal lands. The resource recovery and protection plan for which BLM recommends approval to the Secretary integrates the reclamation plan recommended by the Surface Mining Control and Reclamation Act of 1977 for active coal mines on federal mineral estate. Approval of coal mining plans on lands containing leased federal coal is reserved to the Secretary of the Interior (30 CFR, Part 740.4). BLM issues coal leases and exploration licenses for right of entry to promote development of minerals on federal lands. See the following in regards to BLM exploration: 43 CFR, Part 3461.4, Exploration. States with delegated authority on federal lands from the Office of Surface Mining may have their own GRSG guidance in association with state wildlife agencies and such guidance may differ from state to state. | No changes made. | No changes proposed. |
| **MD MR-30:** (ADH) (a) Assessment of any area as unsuitable for all or certain stipulated methods of coal mining operations pursuant to Section 522 of the Surface Mining Control and Reclamation Act of 1977 (30 US Code 1272) and the regulations of this subpart does not prohibit exploration of such area under 43 CFR, Parts 3410 and 3480, and 43 CFR, Part 3461.4(a) | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD MR-31:** (ADH) (b) An application for an exploration license on any lands assessed as unsuitable for all or certain stipulated methods of coal mining shall be reviewed by the BLM to ensure that exploration does not harm any value for which the area has been assessed as unsuitable (43 CFR, Part 3461.4(b)) | No changes made. | No changes proposed. |

|---|---|---|
| **MD LR-3:** No new roads or above-ground structures would be authorized within 1 mile of an active lek.<br><br>Above-ground structures are defined as structures that are located on or above the surface of the ground, including but not limited to: roads, fences, communication towers, and/or any structure that would provide perches.<br><br>Above-ground structures would only be authorized if:<br>1. It is consistent with the overall objective of the RMP Amendment;<br>2. The effect on GRSG populations or habitat is nominal or incidental;<br>3. Allowing the exception prevents implementation of an alternative more detrimental to GRSG or similar environmental concern, and;<br>4. Rigid adherence to the restriction would be the only reason for denying the action. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD LR-4:** PHMA and GHMA are designated as avoidance areas for high-voltage transmission line ROWs, except for the transmission projects specifically identified below. All authorizations in these areas, other than the following identified projects, must comply with the conservation measures outlined in this ARMPA, including the RDFs and avoidance criteria presented in this document. The BLM is currently processing applications for the TransWest and Energy Gateway South Transmission Line projects, and the NEPA review for these projects is well underway. Conservation measures for GRSG are being analyzed through the projects' NEPA review process, which should achieve a net conservation benefit for the GRSG.<br><br>***GRSG PHMA ROW Avoidance.** ROWs may be issued after documenting that the ROWs would not adversely affect GRSG populations based on the following criteria:<br>• Location of proposed activities in relation to critical GRSG habitat areas as identified by factors, including, but not limited to, average male lek attendance and/or important seasonal habitat.<br>• An evaluation of the potential threats from proposed activities that may affect the local population as compared to benefits that could be accomplished through compensatory or off-site mitigation<br><br>An evaluation of the proposed activities in relation to the site-specific terrain and habitat features. For example, within 4 miles from a lek, local terrain features such as ridges and ravines may reduce the habitat importance and shield nearby habitat from disruptive factors. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD LR-5:** Any new projects within PHMA would be subject to the 3 percent disturbance cap as described in **Appendix E**, Methodology for Calculating Disturbance Caps. If the 3 percent disturbance cap is exceeded in PHMA in any Colorado MZ, no new ROW would be authorized in PHMA within that biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ), unless site-specific analysis documents no impact to GRSG. Within existing designated utility corridors, the 3 percent disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR-6:** Prohibit surface occupancy and surface-disturbing activities associated with BLM ROW within 4 miles from active leks during lekking, nesting, and early brood-rearing (March 1 to July 15). (See special stipulations applicable to **GRSG PHMA ROW TL**.) | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR-7:** Construct new roads to the appropriate Gold Book standard and add the surface disturbance to the total disturbance in the PHMA. | No changes made. | No changes proposed. |
| **MD LR-8:** (PHMA) In PHMA, or within 4 miles of an active lek, for ROW renewals, where existing facilities cannot be removed, buried, or modified, require perch deterrents. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR-9:** (PHMA) Reclaim and restore ROWs considering GRSG habitat requirements. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR-10:** (PHMA) Designate new ROW corridors in GRSG PHMA only where there is a compelling reason to do so and location of the corridor within PHMA will not adversely affect GRSG populations due to habitat loss or disruptive activities. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD LR-11:** (PHMA) Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table D.2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Land Tenure Adjustment*** | ***Land Tenure Adjustment*** | — |
| **MD LR-11:** Retain public ownership of GRSG PHMA. Consider exceptions where:<br><br>It can be demonstrated that: 1) disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG; or 2) the disposal of the lands, including land exchanges, will have no direct or indirect adverse impact on GRSG conservation.<br><br>There is mixed ownership, and land exchanges would allow for additional or more contiguous federal ownership patterns within the GRSG PHMA. | No changes made. | No changes proposed. |
| **MD LR-12:** (PHMA) In isolated federal parcels, only allow tract disposals that are beneficial or neutral to long-term management of GRSG populations. | No changes made. | No changes proposed. |
| **MD LR-13:** (GHMA) For lands in GHMA that are identified for disposal, the BLM would only dispose of such lands consistent with the goals and objectives of this ARMPA, including, but not limited to, the ARMPA objective to maintain or increase GRSG abundance and distribution. | No changes made. | No changes proposed. |
| **MD LR-14:** (ADH) Consider GRSG habitat values in acquisitions. For example: Identify key GRSG habitats on private or state land, adjacent to existing BLM land, where acquisition and protection by BLM could substantially benefit the local GRSG population. This could be accomplished via purchase, exchange, or donation to satisfy mitigation requirements. | No changes made. | No changes proposed. |
| ***RECREATION (REC)*** | ***RECREATION (REC)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective REC-1:** Manage recreation to avoid activities that 1) disrupt GRSG, 2) fragment GRSG habitat, or 3) spread noxious weeds. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD REC-1:** (PHMA) Do not allow special recreation permits with the potential to adversely affect GRSG or GRSG habitat. | No changes made. | No changes proposed. |
| ***TRAVEL AND TRANSPORTATION (TTM)*** | ***TRAVEL AND TRANSPORTATION (TTM)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective TTM-1:** Manage travel and transportation to 1) reduce mortality from vehicle collisions, 2) limit change in GRSG behavior, 3) avoid, minimize, and compensate for habitat fragmentation, 4) limit the spread of noxious weeds, and 5) limit disruptive activity associated with human access. | No changes made. | No changes proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD TTM-1:** (PHMA) Limit off-highway vehicle (OHV) travel to existing roads, primitive roads, and trails at a minimum. Special Zone Provision: Colorado MZ 13 – Manage the Wolford Mountain open OHV area. | No changes made. | No changes proposed. |
| **MD TTM-2:** (PHMA) Evaluate and consider permanent or seasonal road or area closures as needed to address a current threat. | No changes made. | No changes proposed. |
| **MD TTM-3:** (PHMA) Complete activity level travel plans as soon as possible, subject to funding. During activity level planning, where appropriate, designate routes with current administrative/agency purpose or need to administrative access only. | No changes made. | No changes proposed. |
| **MD TTM-4:** (PHMA) Complete activity level travel plans as soon as possible, subject to funding. Limit route construction to routes that will not adversely affect GRSG populations due to habitat loss or disruptive activities. | No changes made. | No changes proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential Changes in 2023 Plan |
|---|---|---|
| **MD TTM-5:** (PHMA) Use existing roads or realignments whenever possible. If it is necessary to build a new road, and the use of existing roads would cause adverse impacts to GRSG, construct new roads to the appropriate minimum Gold Book standard and add the surface disturbance to the total disturbance in the PHMA if it meets the criteria in **Appendix H**, Guidelines for Implementation and Adaptive Management.<br><br>Construct no new roads if the biologically significant unit (Colorado populations) and proposed project analysis area (Colorado MZ) is over the 3 percent disturbance cap (see **Appendix E**, Methodology for Calculating Disturbance Caps), unless there is an immediate health and safety need, or to support valid existing rights that cannot be avoided. Evaluate and implement additional, effective mitigation necessary to offset the resulting loss of GRSG habitat. | No changes made. | No changes proposed. |
| **MD TTM-6:** (PHMA) Allow upgrades to existing routes after documenting that the upgrade will not adversely affect GRSG populations due to habitat loss or disruptive activities. | No changes made. | No changes proposed. |
| **MD TTM-7:** (PHMA) Conduct restoration of roads, primitive roads and trails not designated in travel management plans. This also includes primitive route/roads that were not designated in wilderness study areas and within lands with wilderness characteristics that have been selected for protection in previous LUPs. | No changes made. | No changes proposed. |
| **MD TTM-8:** (PHMA) When reseeding roads, primitive roads and trails, use appropriate seed mixes and consider the use of transplanted sagebrush. | No changes made. | No changes proposed. |

## Table 2. Seasonal Habitat Desired Conditions for GRSG

| Attribute | Indicators | Desired Condition |
|---|---|---|
| **BREEDING AND NESTING [1,2,3] (Seasonal Use Period March 1-June 15) Apply 4 miles from active leks.** [15] | | |
| Lek Security | Proximity of trees [4] | Trees or other tall structures are none to uncommon within 1.86 miles of leks [5,6] |
| | Proximity of sagebrush to leks [5] | Adjacent protective sagebrush cover within 328 feet of lek[5] |
| Cover | Seasonal habitat extent [6] | >80% of the breeding and nesting habitat |
| | Sagebrush canopy cover [5,6,7,17]<br>Arid sites<br>Mesic sites | 15 to 30%<br>20 to 30%17 |
| | Sagebrush height [6, 17]<br>Arid sites [5,6,9]<br>Mesic sites [5,6,10] | 11.8 to 31.5 inches (30-80 cm)<br>15.7 to 31.5 inches (40-80 cm) |
| | Predominant sagebrush shape [5] | >50% in spreading [11] |
| | Perennial grass canopy cover (such as native bunchgrasses) [5,6, 17]<br>Arid sites [6,9]<br>Mesic sites [6,10,17] | >10%<br>>20%[17] |
| | Perennial grass and forb height (includes residual grasses) [5,6,7] | >6 inches6, [16, 17] |
| | Perennial forb canopy cover [5,6,7]<br>Arid sites [9]<br>Mesic sites [10] | >5%[5,6,17]<br>>15%[5,6,17] |
| **BROOD-REARING/SUMMER[1] (Seasonal Use Period June 16-October 31)** | | |
| Cover | Seasonal habitat extent [6] | >40% of the brood-rearing/summer habitat |
| | Sagebrush canopy cover [5, 6,7, 17]<br>Arid sites<br>Mesic sites | 10 to 25%<br>10 to 25% |
| | Sagebrush height [6,7, 17]<br>Arid sites<br>Mesic sites | 11.8 to 31.5 inches (30 to 80 cm)<br>13.8 to 31.5 inches (35 to 80 cm) |
| | Perennial grass canopy cover and forbs [6,7,17]<br>Arid sites<br>Mesic sites | >15%[17]<br>>25%[17] |
| | Riparian areas (both lentic and lotic systems) | Proper Functioning Condition [13] |
| | Upland and riparian perennial forb availability [5,6] | Preferred forbs are common with several preferred species present [12] |

| Attribute | Indicators | Desired Condition |
|---|---|---|
| **WINTER[1] (Seasonal Use Period November 1-February 28)** | | |
| Cover and Food | Seasonal habitat extent [5,6,7] | >80% of the winter habitat |
| | Sagebrush canopy cover above snow [5,6,7,17] | >20% Arid, 25% Mesic[17] |
| | Sagebrush height above snow [5,6,7] | >10 inches [14] |

[1] Seasonal dates can be adjusted; that is, start and end dates may be shifted either earlier or later, but the amount of days cannot be shortened or lengthened by the local unit.
[2] Doherty 2008
[3] Holloran and Anderson 2005.
[4] Baruch-Mordo et al. 2013
[5] Stiver et. al. 2014
[6] Connelly et al. 2000
[7] Connelly et al. 2003
[9] 10–12 inch precipitation zone; *Artemisia tridentata wyomingensis* is a common big sagebrush sub-species for this type site (Stiver et. al. 2014).
[10] >12 inch precipitation zone; *Artemisia tridentata vaseyana* is a common big sagebrush sub-species for this type site (Stiver et. al. 2014).
[11] Sagebrush plants with a spreading shape provide more protective cover than sagebrush plants that are more tree or columnar shaped (Stiver et. al. 2014).
[12] Preferred forbs are listed in Habitat Assessment Framework Table III-2 (Stiver et. al. 2014). Overall, total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred in Table III-2.
[13] Existing land management plan desired conditions for riparian areas/wet meadows (spring seeps) may be used in place of properly functioning conditions, if appropriate for meeting GRSG habitat requirements.
[14] The height of sagebrush remaining above the snow depends upon snow depth in a particular year. Intent is to manage for tall, healthy, sagebrush stands.
[15] Buffer distance may be changed only if 3 out of 5 years of telemetry studies indicate the 4 miles is not appropriate.
[16] Measured as "droop height"; the highest naturally growing portion of the plant.
[17] Colorado Greater Sage-grouse Steering Committee 2008

### 2.1.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. Note that if 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The appendices can be found on the Colorado GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Approved RMP Amendment Maps | 2015 | Yes |
| B: Buffer Distances and Evaluation of Impacts on Leks | 2015 | No |
| C: Required Design Features, Preferred Design Features, and Suggested Design Features | 2015 | Yes |
| D: Greater Sage-Grouse Monitoring Framework | 2015 | No |
| E: Methodology for Calculating Disturbance Caps | 2015 | Yes |
| F: Greater Sage-Grouse Mitigation Strategy | 2015 | Yes |
| G: Stipulations Applicable to Fluid Mineral Leasing and Land Use Authorizations | 2015, 2019 | Yes |
| H: Guidelines for Implementation and Adaptive Management | 2015, 2019 | Yes |

## 2.2 IDAHO RMPS

This appendix presents the GRSG approved RMP amendment language from the 2015 and 2019 records of decision for Idaho. Changes between 2015 and 2019 are noted. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 and 2019 appendices that are listed in **Section 2.2.2** of this appendix.

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***SPECIAL STATUS SPECIES (SSS)*** | ***SPECIAL STATUS SPECIES (SSS)*** | — |
| **GOAL:** | **GOAL:** | — |
| **Goal SSS 1:** Maintain and/or increase the abundance, distribution and connectivity of GRSG by conserving, enhancing or restoring GRSG habitat to maintain resilient populations by reducing, eliminating or minimizing threats to GRSG habitats. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **Goal SSS 2:** Provide for the needs of GRSG and their habitat while also providing for resource uses in accordance with BLM's direction for multiple use and sustained yield as described in FLPMA. | No changes made. | No change proposed. |
| **Goal SSS 3:** Manage anthropogenic development and human disturbance to minimize the likelihood of adverse population level effects on GRSG. | No changes made. | No change proposed. |
| **Goal SSS 4:** Reduce the risk of West Nile Virus or other disease outbreaks from BLM management actions. | No changes made. | No change proposed. |
| **Goal SSS 5:** Conserve, enhance, and restore the sagebrush ecosystem upon which GRSG populations depend on in an effort to maintain and/or increase their abundance and distribution, in cooperation with other conservation partners. | No changes made. | No change proposed. |
| **Objectives:** | **Objectives:** | — |
| **Objective SSS 1:** Maintain or make progress toward all lands within PHMA and IHMA (at least 70%) capable of producing sagebrush so there is a minimum of 15 percent sagebrush cover and conifers absent to uncommon within 1.86 miles of occupied leks. | No changes made. | No change proposed. |
| **Objective SSS 2:** Incorporate GRSG Seasonal Habitat Objectives (**Table 2**), into the design of projects or activities, as appropriate, based on site conditions and ecological potential, unless achievement of fuels management objectives require additional reduction in sagebrush cover to meet strategic protection of GRSG habitat and conserve habitat quality for the species or at least one of the following conditions can be demonstrated and documented in the NEPA analysis associated with the specific project:<br>• A specific objective is not applicable to the site-specific conditions of the project or activity;<br>• An alternative objective is determined to provide equal or better protection for GRSG or its habitat (based on appropriate scientific findings); or<br>• Analysis concludes that following a specific objective will provide no more protection to | **Objective SSS 2:** Within PHMA and IHMA, maintain large intact sagebrush steppe communities with vegetative characteristics consistent with their ecological potential such that GRSG can select suitable seasonal habitats for breeding, nesting, rearing young, and wintering. GRSG actively select suitable use areas within large intact sagebrush ecosystems. Not every site will provide for every GRSG need, which is why they require large intact sagebrush ecosystems.<br>The desired conditions for GRSG (the Desired Conditions table (Table 2-2) in the 2015 Final EIS) are a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that GRSG select. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| GRSG or its habitat than not following it, for the project being proposed**.**<br>• These habitat objectives in **Table 2** summarize the characteristics that research has found represent the seasonal habitat needs for GRSG. The specific seasonal components identified in the table were adjusted based on local science and monitoring data to define the range of characteristics used in this subregion. Thus, the habitat objectives provide the broad vegetative conditions we strive to obtain across the landscape that indicate the seasonal habitats used by GRSG. These habitat indicators are consistent with the rangeland health indicators used by the BLM.<br>• The habitat objectives will be part of the GRSG habitat assessment to be used during land health evaluations (see **Appendix D**, Monitoring Framework). These habitat objectives are not obtainable on every acre within the designated GRSG habitat management areas. Therefore, the determination on whether the objectives have been met will be based on the specific site's ecological ability to meet the desired condition identified in the table.<br>• All BLM use authorizations will contain terms and conditions regarding the actions needed to meet or progress toward meeting the habitat objectives. If monitoring data show the habitat objectives have not been met nor progress being made towards meeting them, there will be an evaluation and a determination made as to the cause. If it is determined that the authorized use is a cause, the use will be adjusted by the response specified in the instrument that authorized the use. | While the desired conditions are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, the BLM **shall** consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2-2 [the Desired Conditions table in the 2015 Final EIS] vary across the range of GRSG, within a sub-region, and between sites. They are not land health standards but are quantitative measures that **help** inform the Special Status Species Habitat Land Health Standard for GRSG. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing GRSG habitat selection. Local data or recent science may indicate that GRSG select for vegetation structure and composition in seasonal habitats not characterized by the values in the desired conditions table. In these cases, it may be appropriate to adjust the values. Desired Conditions should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for GRSG. As appropriate**,** they may be used to demonstrate trends over time, during plan evaluations for effectiveness of GRSG conservation, or when identifying limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values, and desired seasonal habitat conditions in the GRSG Plan Desired Conditions Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support the BLM in land use authorization processes and during development of appropriate objectives for management actions such as vegetation treatments.<br><br>The Desired Conditions Tables are to be used as follows:<br>a. To assess habitat suitability, as defined by BLM policy and the Habitat Assessment | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| *(See above.)* | Framework, for GRSG at the appropriate scale<br>b. To describe desired conditions that provide habitat at multiple spatial scales, as defined by the best available science<br>c. To evaluate land use plan effectiveness for GRSG conservation<br>d. To develop measurable project objectives for actions in BLM-designated GRSG habitat management areas, as needed, when considered alongside land health standards, ecological potential and local information. | *(See above.)* |
| **Table 2 Habitat Objectives** (full table on following this table)<br>For nesting/early brood rearing habitat:<br>Indicator: Perennial grass (and forb) height (includes residual grasses)<br>Desired Condition: ≥ 7 inches | **Table 3 Desired Conditions** (full table following this table; same as 2015 except)<br>For nesting/early brood rearing habitat:<br>Indicator: Perennial grass (and forb) height (includes residual grasses)<br>Desired Condition: - Adequate Nesting Cover<br>References (add): Hausleitner 2005; Holloran et al. 2005; Gibson et al. 2016; Smith et al. 2017; Smith et al. 2018 | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Greater Sage-Grouse Management Areas*** | **2.3 GREATER SAGE-GROUSE MANAGEMENT AREAS**<br>The boundaries of the habitat designations have been adjusted to correct administrative mapping errors that occurred when PHMA was designated in 2015. Habitat management area boundary changes also include removing some areas of non-habitat that were added to PHMA by the 2015 ROD/ARMPA as part of the SFA designations. Additionally, in the West Owyhee Conservation Area, the circle of 60,706 acres of PHMA (Brown's Creek area) that is surrounded by IHMA will be re-designated as IHMA (see Map 1); 11,828 acres of non-Greater Sage-Grouse habitat managed as PHMA, in the Mountain Valleys Conservation Area, would be changed to non-habitat (Donkey Hills ACEC and mapping errors). (See Appendix A). | Potential change in Alternatives 3, 4, 5 and 6. |
| **Objective SSS 3:** Maintain a resilient population of GRSG in Idaho. | No changes made. | No change proposed. |
| **Objective SSS 4:** Designate GRSG management areas and associated management to maintain a resilient population and to designate strategically located adjacent areas to provide a buffer from unpredictable habitat loss such as wildfire to the resilient population areas. | No changes made. | No change proposed. |
| **Objective SSS 5:** Identify and strategically protect larger intact sagebrush areas and areas of lower fragmentation to maintain GRSG population persistence. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD SSS-1:** Designate four GRSG Conservation Areas (see Glossary) within the subregion to form the geographic basis for achieving population objectives; evaluating the disturbance density and adaptive regulatory triggers; and tailor adaptive management responses. These conservation areas are depicted in **Figure 2-14**. These areas are referred to as Mountain Valleys, Desert, West Owyhee, and Southern Conservation Areas.<br><br><u>Conservation Area Description</u><br>Mountain Valleys Conservation Area – generally located north of the Snake River Plain, including GRSG habitat in the Salmon and Challis areas, and habitat in west-central population area. It extends west from Rexburg, north and west of Highway 33 to Howe, north and west of Highway 33/22 to Arco, north and west of Highway 26/20/93 to Carey, north and west of Highway 20 west to Hill City, north and west of Highway 20 to the Dylan Karaus Road, west to Canyon Creek. Canyon Creek to the confluence with the Snake River form the western boundary.<br><br>Desert Conservation Area – located north of the Snake River and south of the Mountain Valleys Conservation Area. It extends from the confluence of Canyon Creek and the Snake River, eastward to Idaho Falls. The Snake River and Henry's Fork form the eastern boundary.<br><br>West Owyhee Conservation Area – located south of the Snake River and west of the Bruneau River.<br><br>Southern Conservation Area – located south of the Snake River and east of the Bruneau River, including East Idaho uplands and Bear Lake Plateau, and the Utah portion of the Sawtooth National Forest in Box Elder County.<br><br>In general, GRSG habitats in the Desert and West Owyhee CAs are relatively contiguous, while those in the Mountain Valleys and Southern CAs tend to be more fragmented due to more complex topography, and elevational differences and/or effects from wildfires, agriculture, urbanization or other factors. | No changes made. | Potential change in Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 2:** Within each Conservation Area designate GRSG Habitat Management Areas: Priority, Important and General Habitat Management Areas (**Figure 2-1**). **Priority Habitat Management Areas (PHMA**) focus on conserving the two key meta-populations in the subregion. PHMA encompasses areas with the highest conservation value to GRSG, based on the presence of larger leks, habitat extent, important movement and connectivity corridors and winter habitat. PHMA include adequate area to accommodate continuation of existing land uses and landowner activities. **Important Habitat Management Areas (IHMA)** contain additional habitat and populations that provide a management buffer for the PHMA and to connect patches of PHMA. IHMA encompasses areas of generally moderate to high conservation value habitat and/or populations and in some Conservation Areas includes areas beyond those identified by USFWS as necessary to maintain redundant, representative and resilient populations (Priority Areas for Conservation (PACs)). IHMA are typically adjacent to PHMA but generally reflect somewhat lower GRSG population status and/or reduced habitat value due to disturbance, habitat fragmentation or other factors. **General Habitat Management Areas (GHMA)** encompass habitat that is outside of PHMA or IHMA. GHMA contain approximately 10 percent of the occupied leks that are also of relatively low male attendance compared to leks in PHMA or IHMA. GHMA are generally characterized by lower quality disturbed or patchy habitat of low lek connectivity. | No changes made. | Potential change in Alternatives 3, 4, 5 and 6. |
| **MD SSS 3**: Designate PHMA and IHMA to encompass 90 percent of the breeding males in Idaho. | No changes made. | No change proposed. |
| **MD SSS 4**: Annually prioritize Conservation Areas at the state scale considering results of the annual adaptive regulatory trigger evaluations relative to implementation of restoration and mitigation activities. | No changes made. | Potential change in Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 5**: Prioritize activities and mitigation to conserve, enhance and restore GRSG habitats (i.e., fire suppression activities, fuels management activities, vegetation treatments, invasive species treatments etc.) first by Conservation Area, if appropriate (Conservation Area under adaptive management or at risk of meeting an adaptive management soft or hard trigger), followed by PHMA, then IHMA then GHMA within the Conservation Areas. Local priority areas within these areas will be further refined as a result of completing the GRSG Wildfire and Invasive Species Habitat Assessments as described in **Appendix H**. This can include projects outside GRSG habitat when those projects will provide a benefit to GRSG habitat. | No changes made. | Potential change in Alternatives 3, 4, 5 and 6. |
| **MD SSS 6:** The management area map and Biologically Significant Unit (BSU) baseline map will be re- evaluated in conjunction with plan evaluation processes (i.e. approximately every 5 years). This re- evaluation can indicate the need to adjust PHMA, IHMA or GHMA or the habitat baseline. These adjustments can occur upon completion of the appropriate analysis and process (e.g., plan amendment) to review the allocation decisions based on the map. Results from the Wildfire and Invasive Species Assessments, such as identified focal or emphasis areas will also be used to help inform mapping adjustments during this evaluation. | **MD SSS 6:** The management area map and Biologically Significant Unit (BSU) baseline map will be re- evaluated in conjunction with plan evaluation processes (i.e. approximately every 5 years). This re- evaluation can indicate the need to adjust Conservation Area Boundaries, PHMA, IHMA or GHMA or the habitat or the population baselines. These adjustments can occur upon completion of the appropriate analysis and process (e.g., plan maintenance in coordination with the teams identified in MD SSS 44) to review the allocation decisions based on the map. Results from the Wildfire and Invasive Species Assessments, such as identified focal or emphasis areas will also be used to help inform mapping adjustments during this evaluation. | No change proposed. |
| **MD SSS 7**: GRSG habitat within the project area will be assessed during project-level NEPA analysis within the management area designations (PHMA, IHMA, GHMA). Project proposals and their effects will be evaluated based on the habitat and values affected. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 8**: Idaho BLM will annually update the Key Habitat map, in order to reflect habitat changes resulting from wildfire, succession, and vegetation treatments that occurred or were observed since the last update. Key habitat includes areas of generally intact sagebrush that provide sage-grouse habitat during some portion of the year. This map also identifies potential restoration areas (perennial grassland annual grasslands, conifer encroachment and recent burns). This map a broad scale current vegetation map that changes as habitat is lost or restored. The Key Habitat Map is not an allocation decision such as PHMA, IHMA, and GHMA. Updates to the map will also occur if it is determined that mapping errors or omissions have occurred, or that radio-telemetry studies indicate that GRSG are consistently utilizing an area. Updates are also intended to capture recommendations by the field offices, GRSG Local Working Groups, or agency partners in GRSG conservation. Project-level evaluations of GRSG habitat during the NEPA process can also be used to inform the annual update. | No changes made. | No change proposed. |
| **MD SSS 9**: Areas of habitat outside of delineated habitat management areas identified during the Key habitat update process will be evaluated during site specific NEPA for project level activities and GRSG required design features (**Appendix C**) and buffers (**Appendix B**) will be included as part of project design. These areas will be further evaluated during plan evaluation and the 5-year update to the management areas, to determine whether they should be included as PHMA, IHMA, or GHMA. | This decision has been deleted. | No change proposed. |
| **MD SSS 10**: Designate Sagebrush Focal Areas (SFA) as shown on **Figure 1-2**. SFA will be managed as PHMA, with the following additional management<br>• Recommended for withdrawal from the General Mining Act of 1872, as amended, subject to valid existing rights.<br>• Managed as NSO, without waiver, exception, or modification, for fluid mineral leasing.<br>Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | This decision has been deleted. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***Adaptive Management*** | ***Adaptive Management*** | — |
| **MD SSS 11:** Use hard and soft population and habitat triggers to determine an appropriate management response as described in MD SSS 16 to MD SSS 26. Hard and soft triggers responses are applied at the Conservation Area (MD SSS-1) scale (**Appendix E**). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 12:** Utilize monitoring information collected through the Monitoring Framework (**Appendix D**) to determine when adaptive regulatory triggers have been met. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 13:** BLM will maintain GRSG habitat information, through use of the Key Habitat map or latest sagebrush/vegetation map, which will be used to track and identify habitat changes to assess the habitat trigger in the adaptive management approach. Key habitat map updates are made each winter by BLM in coordination with the Forest Service and IDFG, using the process described in Appendix F of the FEIS. | No changes made. | No change proposed. |
| **MD SSS 14:** BLM will coordinate with the IDFG regarding population information collected and maintained by the IDFG to track and identify population changes to assess the population trigger in the adaptive management approach. | No changes made. | No change proposed. |
| **MD SSS 15:** The hard and soft trigger data will be analyzed as soon as it becomes available after the signing of the ROD, and twice each year thereafter the applicable monitoring information will be reviewed to determine if any adaptive management triggers have been met. | **MD SSS 15:** The data from the lek counts and the key habitat map update will be reviewed annually to determine if any hard or soft adaptive management triggers have been met. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 16:** Adaptive habitat triggers will be individually calculated across all ownerships within the BSUs (**Appendix E**). The BSU is defined as the IDFG modeled nesting and wintering habitat (IDFG 2013, unpublished data) within PHMA and IHMA within a Conservation Area. The sagebrush component of the BSU is represented by the Key habitat within the BSU present during the 2011 baseline and as mapped during subsequent annual Key habitat map updates. Key habitat is defined as areas of generally intact sagebrush that provide GRSG habitat during some portion of the year (ISAC 2006). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 17:** Habitat Hard Triggers are defined as:<br>• A 20 percent loss of Key Habitat within the BSU of the PHMA of a Conservation Area when compared to the 2011 baseline, inclusive of all land ownerships or<br>• A 20 percent loss of Key Habitat within the BSU of the IHMA of a Conservation Area when compared to the 2011 baseline. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 18:** Habitat Soft Triggers are defined as:<br>• A 10 percent loss of Key Habitat within the BSU of the PHMA of a Conservation Area when compared to the 2011 baseline; or<br>• A 10 percent loss of Key Habitat within the BSU of the IHMA of a Conservation Area when compared to the 2011 baseline. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 19:** Population Hard Triggers are defined as:<br>• A 20 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) significantly below 1.0 within PHMA within a Conservation Area over the same 3-year period; or<br>• A 20 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) significantly below 1.0 within IHMA within a Conservation Area over the same 3-year period.<br>• Significance is defined by the 90 percent confidence interval around the current 3-year finite rate of change. If the 90 percent confidence interval is less than, and does not include 1.0, then the finite rate of change is considered significant. The finite rate of change and variance will be calculated following Garton et al. (2011). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 20:** Population Soft Triggers are defined as:<br>• A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) below 1.0 within PHMA within a Conservation Area over the same 3-year period; or<br>• A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) below 1.0 within IHMA within a Conservation Area over the same 3-year period. | **MD SSS 20:** Population Soft Triggers are defined as:<br>A. A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) below 1.0 within PHMA within a Conservation Area over the same 3-year period; or<br>B. A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change (λ) below 1.0 within IHMA within a Conservation Area over the same 3-year period.<br><br>Significance for soft triggers is defined by the 90 percent confidence interval around the current 3-year finite rate of change. If the 80 percent confidence interval is less than and does not include 1.0, then the finite rate of change is considered significant. The finite rate of change and variance will be calculated following Garton et al. (2011). | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 21:** When any of the Criteria for Soft Triggers have been met the Implementation Team will evaluate causal factors and recommend additional potential implementation level activities (**Appendix E**). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 22:** When any of the Criteria for Hard Triggers have been met then all PHMA management actions will be applied to the IHMA within that Conservation Area and the Implementation Team will evaluate causal factors and recommend additional potential implementation level activities. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 23:** If an adaptive regulatory trigger is tripped and livestock grazing is identified as a probable limiting factor then adjustments will follow the Adaptive Grazing Management Response described in **Appendix E**. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 24:** Remove any adaptive management response when the habitat or maximum male population count (i.e., 3-year average) returns to or exceeds the 2011 baseline levels within the associated Conservation Area in accordance with the Adaptive Management Strategy (**Appendix E**). In such a case, changes in management allocations resulting from a tripped trigger will revert back to the original allocation (MD SSS 22). | **MD SSS 24:** Remove the automatic hard trigger adaptive management response when the habitat or maximum male population count (i.e., 3-year average) returns to or exceeds the 2011 baseline levels within the associated Conservation Area, in accordance with the Adaptive Management Strategy (**Appendix E**). In such a case, changes in management allocations resulting from a tripped trigger will revert to the original allocation (MD SSS 22). | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 26:** When a hard trigger is hit in a BSU within a PAC that has multiple BSUs, including those that cross state lines, the WAFWA Management Zone Greater Sage-Grouse Conservation Team will convene to determine the causal factor, put project-level responses in place, as appropriate and discuss further appropriate actions to be applied. The team will also investigate the status of the hard triggers in other BSUs within the PAC and will invoke the appropriate plan response. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***Anthropogenic Disturbance*** | ***Anthropogenic Disturbance*** | — |
| **MD SSS 27:** If the 3 percent anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA (or IHMA in Idaho) Habitat Management Areas in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the General Mining Law of 1872, as amended, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA and IHMA in any given BSU until the disturbance has been reduced to less than the cap, as measured according to the Disturbance and Adaptive Management Appendix (**Appendix E**) for the intermediate scale.<br><br>For Idaho, if the 3 percent disturbance cap is exceeded on all lands (regardless of land ownership) within a proposed project analysis area (**Appendix E**) in a PHMA (or IHMA in Idaho), then no further anthropogenic disturbance will be permitted by BLM until disturbance in the proposed project analysis area has been reduced to maintain the area under the cap (subject to applicable laws and regulations, such as the General Mining Law of 1872, as amended, valid existing rights, etc.).<br><br>Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br><br>The BSU (**Figure 2-2**) is defined as the currently mapped nesting and wintering habitat within PHMA and IHMA within a Conservation Area, | **MD SSS 27:** If the 3 percent anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA (or IHMA in Idaho) Habitat Management Areas in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the General Mining Law of 1872, as amended, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA and IHMA in any given BSU until the disturbance has been reduced to less than the cap, as measured according to the Disturbance and Adaptive Management Appendix (**Appendix E**) for the intermediate scale.<br><br>For Idaho, the BSU (**Figure 2-2**) is defined as the currently mapped nesting and wintering habitat within PHMA and IHMA within a Conservation Area, inclusive of all ownerships. Anthropogenic disturbance excludes habitat disturbance from wildfire and fuels management activities and includes the following developments (see **Appendix E** for further details):<br>• Oil and Gas Wells and Development Facilities<br>• Coal Mines<br>• Wind Towers<br>• Solar Fields<br>• Geothermal Development Facilities<br>• Mining (Active Locatable, Non-Energy Leasable and Salable Developments)<br>• Roads<br>• Railroads<br>• Power lines<br>• Communication Towers<br>• Other Vertical Structures<br>• Coal bed Methane Ponds | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| inclusive of all ownerships. Anthropogenic disturbance excludes habitat disturbance from wildfire and fuels management activities and includes the following developments (see **Appendix E** for further details):<br>• Oil and Gas Wells and Development Facilities<br>• Coal Mines<br>• Wind Towers<br>• Solar Fields<br>• Geothermal Development Facilities<br>• Mining (Active Locatable, Non-Energy Leasable and Saleable Developments)<br>• Roads<br>• Railroads<br>• Power lines<br>• Communication Towers<br>• Other Vertical Structures<br>• Coal bed Methane Ponds<br>• Meteorological Towers (e.g., wind energy testing)<br>• Nuclear Energy Facilities<br>• Airport Facilities and Infrastructure<br>• Military Range Facilities and Infrastructure<br>• Hydroelectric Plants<br>• Recreation Areas Facilities and infrastructure<br>For Idaho this disturbance is measured by direct footprint or by ROW width for linear features (power lines, pipelines and roads). For Montana disturbance is measured similar to the Wyoming Disturbance Density Calculation Tool process described in **Appendix E**.<br>Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the Priority Habitat Management Area within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. | • Meteorological Towers (e.g., wind energy testing)<br>• Nuclear Energy Facilities<br>• Airport Facilities and Infrastructure<br>• Military Range Facilities and Infrastructure<br>• Hydroelectric Plants<br>• Recreation Areas Facilities and infrastructure<br>This disturbance is measured by direct footprint or by the distance between the outermost lines on transmission lines (Leu et al. 2008). | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 28:** New anthropogenic disturbances within PHMA or IHMA within a Conservation Area where the disturbance cap is already exceeded from any source or where the proposed development will result in the cap being exceeded will not be allowed in within that Conservation Area until enough habitat has been restored within that Conservation Area to maintain the area under this cap (subject to valid existing rights). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD SSS 29:** New anthropogenic disturbances within PHMA (Idaho only): Anthropogenic Disturbance Screening Criteria. In order to avoid surface-disturbing activities in PHMA, priority will be given to development (including ROWs, fluid minerals and other mineral resources subject to applicable stipulations) outside of PHMA. When authorizing development in PHMA, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. In addition to the PHMA and IHMA Anthropogenic Disturbance Development Criteria (MD SSS 30), the following criteria must all be met in the project screening and assessment process:<br>a. The population trend for the GRSG within the associated Conservation Area is stable or increasing over a three-year period and the population levels are not currently engaging the adaptive management triggers (this applies strictly to new authorizations; renewals and amendments of existing authorizations will not be subject to this criteria when it can be shown that long-term impacts from those renewals or amendments will be substantially the same as the existing development);<br>b. The development with associated mitigation will not result in a net loss of GRSG Key habitat and mitigation will provide a net conservation benefit to the respective PHMA;<br>c. The project and associated impacts will not result in a net loss of GRSG Key habitat or habitat fragmentation or other impacts causing a decline in the population of the species within the relevant Conservation Area (the project will be outside Key habitat in areas not meeting desired habitat conditions or the project will provide a benefit to habitat areas that are functioning in a limited way as habitat);<br>d. The development cannot be reasonably accomplished outside of the PHMA; or can be either: 1) developed pursuant to a valid existing authorization; or 2) is co-located within the | **MD SSS 29**: Subject to valid existing rights, new anthropogenic disturbances in PHMA: Anthropogenic Disturbance Screening Criteria. In order to avoid surface-disturbing activities in PHMA, priority will be given to development of rights-of-way (ROWs), fluid minerals, and other mineral resources subject to applicable stipulations outside of PHMA. When authorizing development in PHMA, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. In addition to the PHMA and IHMA anthropogenic disturbance development criteria (MD SSS 30), the BLM will ensure an applicant has worked with the State of Idaho to submit a proposal that meets the following criteria:<br>a. The population trend for the Greater Sage-Grouse in the associated conservation area is stable or increasing over a 3-year period and the population levels are not currently engaging the adaptive management triggers (this applies strictly to new authorizations; renewals and amendments of existing authorizations will not be subject to this criteria when it can be shown that long-term impacts from those renewals or amendments will be substantially the same as the existing development).<br>b. The development with associated design features, avoidance, minimization, or mitigation actions will not result in a net loss of Greater Sage-Grouse key habitat or of the respective PHMA.<br>c. The project, its design features, avoidance and minimization actions, and associated impacts will not result in a net loss of Greater Sage-Grouse key habitat or habitat fragmentation or other impacts causing a decline in the population of the species in the relevant conservation area.<br>d. The development cannot be reasonably accomplished outside of the PHMA or can be | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| footprint of existing infrastructure (proposed actions will not increase the 2011 authorized footprint and associated impacts more than 50 percent, depending on industry practice).<br>e. Development will be implemented adhering to the required design features (RDF) described in **Appendix C**;<br>f. The project will not exceed the disturbance cap (MD SSS 27)<br>g. The project has been reviewed by the State Implementation Team and recommended for consideration by the Idaho Governor. | either developed pursuant to a valid existing authorization or collocated within the footprint of existing infrastructure. Proposed actions will not increase the 2011 authorized footprint and associated impacts more than 50 percent, depending on industry practice.<br>e. Development will adhere to the RDFs described in **Appendix C**.<br>f. The project will not exceed the disturbance cap (MD SSS 27).<br>g. Large-scale anthropogenic disturbances in PHMA will be reviewed by the technical and policy teams, as described in MD SSS 44. (See the glossary for definition of large-scale anthropogenic disturbances.) | *(See above.)* |
| **MD SSS 30:** The following Anthropogenic Disturbance Development Criteria must be met in the screening and assessment process for proposals in PHMA and IHMA to discourage additional disturbance in PHMA and IHMA (as described in MD LR 2 and MD RE 1; applies to Idaho only):<br>a. Through coordination with the USFWS and State of Idaho (as described in MD CC 1), it is determined that the project cannot be achieved, technically or economically, outside of this management area; and<br>b. The project siting and/or design should best reduce cumulative impacts and/or impacts on GRSG and other high value natural, cultural, or societal resources; this may include co-location within the footprint for existing infrastructure, to the extent practicable; and<br>c. The project results in a net conservation gain to GRSG Key habitat or with beneficial mitigation actions reduces habitat fragmentation or other threats within the Conservation Area; and<br>d. The project design mitigates unavoidable impacts through appropriate compensatory mitigation; and<br>e. Development will be implemented adhering to the RDFs described in **Appendix C**.<br>f. The project will not exceed the disturbance cap (MD SSS 27). | **MD SSS 30:** The applicant will work with the State of Idaho to submit a proposal that meets all of the following anthropogenic disturbance development criteria in the screening and assessment process for proposals in PHMA and IHMA. This is to discourage additional disturbance in PHMA and IHMA (as described in MD LR 2 and MD RE 1):<br>a. Through coordination with the State of Idaho (as described in MD CC 1), it is determined that the project cannot be achieved, technically or economically, outside of this management area<br>b. The project siting and/or design should best reduce cumulative impacts and/or impacts on Greater Sage-Grouse and other high value natural, cultural, or societal resources; this may include collocation in the footprint for existing infrastructure, to the extent practicable<br>c. The State of Idaho determines in coordination with BLM the project results in no net loss to Greater Sage-Grouse key habitat or, with mitigation actions, reduces habitat fragmentation or other threats in the conservation area;<br>d. Development will adhere to the RDFs described in **Appendix C**<br>e. The project will not exceed the disturbance cap (MD SSS 27)<br>f. Large-scale anthropogenic disturbances in PHMA and IHMA will be reviewed by the technical and policy teams, as described in MD SSS 44. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 31:** Co-locating new infrastructure within existing ROWs and maintaining and upgrading ROWs is preferred over the creation of new ROWs or the construction of new facilities in all management area. Colocation for various activities is defined as:<br>• Communication Sites – The installation of new equipment/facilities on or within or adjacent to existing authorized equipment/facilities or within a communication site boundary as designated in the Communication Site Plan.<br>• Electrical Lines – Installation of new ROWs adjacent to current ROWs boundaries, not necessarily placed on the same power poles.<br>• Other Rights-of-Way – The installation of new ROWs within the existing footprint of an approved ROW boundary or adjacent to an approved ROW boundary.<br>• Designated Corridors – The installation of new rights-of-way within the existing corridor or adjacent to the existing corridor. | No changes made. | No change proposed. |
| **MD SSS 32:** Incorporate RDFs as described in **Appendix C** in the development of project or proposal implementation, reauthorizations or new authorizations and suppression activities, as conditions of approval (COAs) into any post-lease activities and as best management practices for locatable minerals activities, to the extent allowable by law, unless at least one of the following conditions can be demonstrated and documented in the NEPA analysis associated with the specific project:<br>a. A specific RDF is not applicable to the site-specific conditions of the project or activity;<br>b. A proposed design feature or BMP is determined to provide equal or better protection for GRSG or its habitat; or<br>c. Analysis concludes that following a specific RDF will provide no more protection to GRSG or its habitat than not following it, for the project being proposed. | **MD SSS 32:** In PHMA and IHMA, incorporate RDFs as described in **Appendix C**, in developing the project or proposal implementation, reauthorizations or new authorizations, as conditions of approval (COAs) into any post-lease activities and as BMPs for locatable minerals activities, to the extent allowable by law, unless at least one of the following conditions can be demonstrated and documented in the NEPA analysis associated with the specific project:<br>a. A specific RDF is not applicable to the site-specific conditions of the project or activity;<br>b. A proposed design feature or BMP is determined to provide equal or better protection for GRSG or its habitat; or<br>c. Analysis concludes that following a specific RDF will provide no more protection to GRSG or its habitat than not following it, for the project being proposed.<br><br>In GHMA, the RDFs are considered BMPs that should be considered and applied, unless the proponent can show that applying the BMP is technically or economically impracticable. | No change proposed. |
| **MD SSS 33:** Conduct implementation and project activities, including construction and short-term anthropogenic disturbances consistent with seasonal habitat restrictions described in **Appendix C**. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 34:** RDFs and seasonal habitat restrictions will not be required for emergency or short-term activities necessary to protect and preserve human life or property. | No changes made. | No change proposed. |
| **MD SSS 35:** In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the USGS Report Conservation Buffer Distance Estimates for Greater Sage-Grouse – A Review (Open File Report 2014-1239) in accordance with **Appendix B**. | **MD SSS 35:** In undertaking BLM management actions in PHMA, IHMA, and GHMA, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances in accordance with **Appendix B**. The buffers do not apply to vegetation treatments specifically designed to improve or protect Greater Sage-Grouse habitat; however, impacts on leks should be analyzed and those impacts should be minimized to the extent practicable. | No change proposed. |
| **MD SSS 36:** Incorporate appropriate conservation measures for slickspot peppergrass (*Lepidium papilliferum*) as described in the 2014 Conservation Agreement (as updated, amended or reauthorized) into implementation and project design within slickspot peppergrass habitat in the Jarbidge and Four Rivers Field Offices to avoid and minimize impacts on slickspot peppergrass. | No changes made. | No change proposed. |
| ***Monitoring*** | ***Monitoring*** | — |
| **MD SSS 37:** Once FIAT Assessments are complete, annually complete a review of FIAT Assessment implementation efforts within GRSG habitat with appropriate USFWS and state agency personnel. | No changes made. | No change proposed. |
| **MD SSS 38:** Monitor the effectiveness of projects (e.g., fuel breaks. fuels treatments) until objectives have been met or until it is determined that objectives cannot be met, according to the monitoring schedule identified for project implementation. | No changes made. | No change proposed. |
| **MD SSS 39:** Monitor invasive vegetation post vegetation management treatment. | No changes made. | No change proposed. |
| **MD SSS 40:** Monitor project construction areas for noxious weed and invasive species for at least 3 years, unless control is achieved earlier. | No changes made. | No change proposed. |
| **MD SSS 41:** Use lek, nesting and winter habitat maps and key habitat map (updates) to annually assess GRSG population and habitat status in the context of the adaptive management triggers. | No changes made. | No change proposed. |
| **MD SSS 42:** Continue to support updates to the Key Habitat map to track vegetation changes in relation to GRSG habitat on a yearly basis, until such a time this process is replaced. The process used to update the Key Habitat Map is described in Appendix F of the FEIS. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 43:** Monitor GRSG habitat as described in the monitoring framework plan (**Appendix D**) in coordination with IDFG. | No changes made. | No change proposed. |
| — | **MD SSS 44:** In collaboration with the Idaho Governor's Office of Species Conservation, Idaho Department of Fish and Game, US Fish and Wildlife Service, and potentially other state and federal agencies, the BLM will form two teams (a technical team and a policy team) through a memorandum of understanding. These teams will be responsible for reviewing proposed infrastructure developments, exceptions, variances, adaptive management triggers and responses, habitat management area adjustments, and mitigation, as described in detail in **Appendix K**. | No change proposed. |
| ***VEGETATION (VEG)*** | ***VEGETATION (VEG)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG 1:** Reconnect and expand areas of higher native plant community integrity/rangeland health to increase the extent of high quality habitat and, where possible, to accommodate the future effects of climate change. | No changes made. | No change proposed. |
| **Objective VEG 2:** Increase the amount and functionality of seasonal habitats by:<br>a. Increasing or enhancing canopy cover and average patch size of sagebrush.<br>b. Increasing the amount, condition and connectivity of seasonal habitats.<br>c. Protecting or improving GRSG migration/movement corridors.<br>d. Reducing conifer encroachment within GRSG seasonal habitats.<br>e. Improving understory (grass, forb) and/or riparian condition within breeding and late brood- rearing habitats.<br>f. Reducing the extent of annual grasslands within and adjacent to PHMA and IHMA.<br><br>Decadal treatment objectives by population area are identified in **Table 2-3**, Estimated Acres of Treatment Needed within a 10-Year Period to Achieve Vegetation Objectives on BLM-Administered Lands1. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Objective VEG 3:** In all SFA and PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush canopy cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | This decision has been deleted. | No change proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| Sagebrush Steppe: | Sagebrush Steppe: | — |
| **MD VEG 1:** Implement habitat rehabilitation or restoration projects in areas that have potential to improve GRSG habitat using a full array of treatment activities as appropriate, including chemical, mechanical and seeding treatments. | No changes made. | No change proposed. |
| **MD VEG 2:** Implement vegetation rehabilitation or manipulation projects to enhance sagebrush cover or to promote diverse and healthy grass and forb understory to achieve the greatest improvement in GRSG habitat based on FIAT Assessments, HAF assessments, other vegetative assessment data and local, site specific factors that indicate sagebrush canopy cover or herbaceous conditions do not meet habitat management objectives (i.e. is minimal or exceeds optimal characteristics). This may necessitate the use of prescribed fire as a site preparation technique to remove annual grass residual growth prior to the use of herbicides in the restoration of certain lower elevation sites (e.g., Wyoming big sagebrush) but such efforts will be carefully planned and coordinated to minimize impacts on GRSG seasonal habitats. | No changes made. | No change proposed. |
| **MD VEG 3:** Require use of native seeds for restoration based on availability, adaptation (ecological site potential), and probability of success (Richards et al. 1998). Non-native seeds may be used as long as they support GRSG habitat objectives (Pyke 2011) to increase probability of success, when adapted seed availability is low or to compete with invasive species especially on harsher sites. | No changes made. | No change proposed. |
| **MD VEG 4:** Implement management changes in restoration and rehabilitation areas, as necessary, to maintain suitable GRSG habitat, improve unsuitable GRSG habitat and to ensure long-term persistence of improved GRSG habitat (Eiswerth and Shonkwiler 2006). Management changes can be considered during livestock grazing permit renewals, travel management planning, and renewal or reauthorization of ROWs. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 5:** Consider establishing seed harvest areas that are managed for seed production (Armstrong 2007) to provide a reliable source of locally adapted seed to use during rehabilitation and restoration activities. | No changes made. | No change proposed. |
| **MD VEG 6:** Allocate use of native seed to GRSG or ESA listed species habitat in years when preferred native seed is in short supply. This may require reallocation of native seed from ESR projects outside of PHMA or IHMA to those inside it. Where probability of success or native seed availability is low, nonnative seeds may be used as long as they meet GRSG habitat conservation objectives (Pyke 2011). Re-establishment of appropriate sagebrush species/subspecies and important understory plants, relative to site potential, shall be the highest priority for rehabilitation efforts. | No changes made. | No change proposed. |
| **MD VEG 7:** During land health assessments, evaluate the relative value of existing nonnative seeding within GRSG habitat as: 1) a component of a grazing system allowing improvement of adjacent native vegetation, 2) development of a forage reserve, 3) incorporation into a fuel break system (Davies et al. 2011) or 4) restoration/diversification for GRSG habitat improvement. Where appropriate and feasible, diversify seedings, or restore to native vegetation when potential benefits to GRSG habitat outweigh the other potential uses of the non-native seeding, with emphasis on PHMA and IHMA. Allow recolonization of seedings by sagebrush and other native vegetation. | No changes made. | No change proposed. |
| Conifer Encroachment: | Conifer Encroachment: | — |
| **MD VEG 8:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and tools like the FIAT report (Chambers et. al., 2014) will help refine the location for specific areas to be treated. | No changes made. | No change proposed. |
| Invasive Species: | Invasive Species: | — |
| **MD VEG 9:** Incorporate results of the FIAT Assessments into projects and activities addressing invasive species as appropriate. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 10:** Implement noxious weed and invasive species control using integrated vegetation management actions per national guidance and local weed management plans for Cooperative Weed Management Areas in cooperation with State and Federal agencies, affected counties, and adjoining private lands owners. | No changes made. | No change proposed. |
| **MD VEG 11:** Conduct integrated weed management actions for noxious and invasive weed populations that are impacting or threatening GRSG habitat quality using a variety of eradication and control techniques including chemical, mechanical and other appropriate means. | No changes made. | No change proposed. |
| **MD VEG 12:** Require project proponent (projects described in MD SSS 27 and which are included in the anthropogenic disturbance cap evaluation) to ensure that noxious weeds and invasive species caused as a result of the project are treated to eliminate establishment on the disturbed project construction areas for at least 3 years and monitored and treated during the life of the project. | No changes made. | No change proposed. |
| **MD VEG 13:** Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | No change proposed. |
| ***FIRE AND FUELS MANAGEMENT* (FIRE)** | ***FIRE AND FUELS MANAGEMENT* (FIRE)** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective FIRE 1:** Design fuel treatments to restore, enhance, or maintain GRSG habitat. | No changes made. | No change proposed. |
| **Objective FIRE 2:** Manage wildfires to minimize loss of sagebrush and protect GRSG habitat. | No changes made. | No change proposed. |
| **Management Decisions:** | **Management Decisions:** | — |
| Pre-Suppression: | Pre-Suppression: | — |
| **MD FIRE 1:** (Wildfire Preparedness): Support development and implementation of Rangeland Fire Protection Associations (RFPAs) in coordination with the State of Idaho. | No changes made. | No change proposed. |
| **MD FIRE 2:** Develop a consistent approach to fire restrictions within GRSG habitat through the existing coordinated inter-agency approach to fire restrictions based upon National Fire Danger Rating System thresholds (fuel conditions, drought conditions, and predicted weather patterns). | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 3:** Annually incorporate into existing fire management plans results and updates from the Wildfire and Invasive Species Habitat Assessments (FIAT Assessments) described in **Appendix H**, to communicate/explain the resource value of GRSG habitat, including fire prevention messages and actions to reduce human-caused ignitions. | No changes made. | No change proposed. |
| **MD FIRE 4:** Continue to participate with the Wildland Fire Leadership Council, a cooperative, interagency organization dedicated to achieving consistent implementation of the goals, actions, and policies in the National Fire Plan and the Federal Wildland Fire Management Policy. | No changes made. | No change proposed. |
| **MD FIRE 5:** Continue annual coordination meetings held between cooperating agencies that have fire suppression responsibilities. Incorporate Rangeland Fire Protection Associations and other stakeholders into this coordination. Discuss priority suppression areas and distribute maps showing priority suppression areas at both the Conservation Area and the local office levels as based on the adaptive management strategy and FIAT Assessments. | No changes made. | No change proposed. |
| **MD FIRE 6:** Ensure firefighter personnel receive annual orientation regarding GRSG habitat and sagebrush management issues as related to wildfire suppression. | No changes made. | No change proposed. |
| **MD FIRE 7**: As part of the FIAT Assessments, identify roads, trails, and recreational use areas with high frequency of human caused fires within or adjacent to the PHMA or IHMA. Consider these areas during annual fire restriction evaluations, and as appropriate, through site specific management. | No changes made. | No change proposed. |
| **MD FIRE 8:** Coordinate with Federal, State and local jurisdictions on fire and litter prevention programs to reduce human caused ignitions. | No changes made. | No change proposed. |
| **MD FIRE 9**: Implement activities identified within the FIAT Assessments. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| Suppression: | Suppression: | — |
| **MD FIRE 10**: Complete Wildland Fire and Invasive Species Assessments (FIAT Assessments) as described within **Appendix H** and incorporate results into appropriate Fire Management Plans as they are completed. FIAT Assessments are interdisciplinary evaluations of the threats posed by wildfire and invasive species, as well as identification of focal and emphasis habitats/treatment opportunities for fuels management, fire management, and restoration. These FIAT Assessments identify focal and emphasis habitats and describe strategies for fuels management, suppression and restoration activities. Focal and Emphasis Habitats identified through the FIAT Assessment to further refine priority areas for treatments to reduce the threats posed by wildfire, invasive annual grass and conifer expansion. | No changes made. | No change proposed. |
| **MD FIRE 11:** As part of the FIAT Assessments incorporate a wildfire response time analysis focusing on response time to identified priority areas within PHMA and IHMA or on those fires that have the potential to impact PHMA and IHMA. Incorporate findings into Unit Initial Attack program that determines initial attack resources. | No changes made. | No change proposed. |
| **MD FIRE 12**: As part of the FIAT Assessment incorporate a water capacity analysis for suppression purposes, including potential private water sources. Utilized the analysis to ensure water availability for response to fire in or threatening PHMA and IHMA during initial attack. | No changes made. | No change proposed. |
| **MD FIRE 13**: During high fire danger conditions, stage initial attack and secure additional resources closer to priority areas identified in the FIAT Assessments, based on anticipated fires and weather conditions, with particular consideration of the West Owyhee, Southern and Desert Conservation Areas to ensure quicker response times in or near GRSG habitat after considerations and placement of resources to protect human life and property. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 14**: Utilize a full range of fire management strategies and tactics through strategic wildfire suppression planning consistent with appropriate management response and within acceptable risk levels, to achieve resource objectives for GRSG habitat consistent with land use plan direction. Utilizing both direct and indirect attack as appropriate to limit the overall amount of GRSG habitat burned. This can include suppressing fires in intact sagebrush habitats; limiting fire growth in GHMA when suppression resources are available or managing wildfire for resource benefit in areas of conifer (juniper) encroachment. | No changes made. | No change proposed. |
| **MD FIRE 15**: Suppression priorities: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. Maintaining GRSG habitat will be the highest natural resources priority immediately after human life and property, commensurate with threatened and endangered species habitat or other critical habitats to be protected. | No changes made. | No change proposed. |
| **MD FIRE 16**: Ensure close coordination with federal and state firefighters including the Rangeland Fire Protection Associations during suppression activities. | No changes made. | No change proposed. |
| Fuels Management: | Fuels Management: | — |
| **MD FIRE 17**: Design and implement fuels treatments that will reduce the potential start and spread of unwanted wildfires and provide anchor points or control lines for the containment of wildfires during suppression activities with an emphasis on maintaining, protecting, and expanding sagebrush ecosystems and successfully rehabilitated areas and strategically and effectively reduce wildfire threats in the greatest area. | No changes made. | No change proposed. |
| **MD FIRE 18:** Enhance (or maintain/retain) sagebrush canopy cover and community structure to match expected potential for the ecological site and consistent with GRSG habitat objectives unless fuels management objectives requires additional reduction in sagebrush cover to meet strategic protection of GRSG habitat. Closely evaluate the benefits of the fuel management treatments against the additional loss of sagebrush cover on the local landscape in the NEPA process. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 19:** Apply appropriate seasonal restrictions for implementing vegetation and fuels management treatments according to the type of seasonal habitats present. Allow no treatments in known winter range unless the treatments are designed to strategically reduce wildfire risk around and/or in the winter range and will protect, maintain, increase, or enhance winter range habitat quality. Ensure chemical applications are utilized where they will assist in success of fuels treatments. Strategically place treatments on a landscape scale to prevent fire from spreading into PHMA or WUI. | No changes made. | No change proposed. |
| **MD FIRE 20**: Develop a fuels continuity and management strategy to expand, enhance, maintain and protect GRSG habitat informed by the FIAT Assessments completed as described in **Appendix H**. | No changes made. | No change proposed. |
| **MD FIRE 21**: When developing the fuels management strategy as part of the FIAT Assessment described in **Appendix H** consider up-to-date fuels profiles; land use plan direction; current and potential habitat fragmentation; sagebrush and GRSG ecological factors; active vegetation management steps to provide critical breaks in fuel continuity where appropriate; incorporate a comparative risk analysis with regard to the risk of increased habitat fragmentation from a proposed action versus the risk of large scale fragmentation posed by wildfires if the action is not taken. | No changes made. | No change proposed. |
| **MD FIRE 22:** Fuel treatments will be designed through an interdisciplinary process to expand, enhance, maintain, and protect GRSG habitat which considers a full range of cost effective fuel reduction techniques, including: chemical, biological (including grazing and targeted grazing), mechanical and prescribed fire treatments. | No changes made. | No change proposed. |
| **MD FIRE 23:** Existing and proposed linear ROWs can be considered for use and maintenance as vegetated fuel breaks in appropriate areas (this activity may or may not be part of the ROW permit or the responsibility of the permit holder, in cases where this activity is considered part of mitigation for project design then it will be appropriately included as part of the ROW permit and the responsibility of the permit holder for development and maintenance). | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 24:** Fuel breaks will incorporate existing vegetation treatments (seedings), rocky areas or other appropriate topography or features or be located adjacent to existing linear disturbance areas where appropriate. Fuel breaks should be placed in areas with the greatest likelihood of compartmentalizing a fire and/or to foster suppression options to protect existing intact habitat. | No changes made. | No change proposed. |
| **MD FIRE 25:** Strategically pre-treat areas to reduce fine fuels consistent with areas and results identified within the Wildfire and Invasive Species Assessments. | No changes made. | No change proposed. |
| **MD FIRE 26:** Protect vegetation restoration and rehabilitation efforts/projects from subsequent fire events. | No changes made. | No change proposed. |
| **MD FIRE 27:** Targeted grazing as a fuels treatment to adjust the vegetation conditions to reduce the potential start and spread of wildfires may be implemented within existing grazing authorizations if feasible such as through temporary non-renewable authorizations, or through contracts, agreements or other appropriate means separate from existing grazing authorizations and permits. | No changes made. | No change proposed. |
| **MD FIRE 28:** Targeted grazing to achieve fuels management objectives should conform to the following criteria:<br>a. Targeted grazing should be implemented strategically on the landscape, and directly involve the minimum footprint and grazing intensity required to meet fuels management objectives.<br>b. Conform to the applicable Standards for Rangeland Health and Guidelines for Livestock Grazing Management at the assessment scale (pasture/watershed).<br>c. Where feasible and applicable coordinate with the grazing permittee to strategically reduce fuels through livestock management within the Mandatory Terms and Conditions of the applicable grazing authorizations | No changes made. | No change proposed. |
| **MD FIRE 29:** Prioritize the use of native seeds for fuels management treatment based on availability, adaptation (site potential), and probability of success. Where probability of success or native seed availability is low or non-economical, nonnative seeds may be used to meet GRSG habitat objectives to trend toward restoring the fire regime. When reseeding, use fire resistant native and nonnative species, as appropriate, to provide for fuel breaks. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 30:** Maintain effectiveness of fuels projects, including fuel breaks, to ensure long-term success, including persistence of seeded species and/or other treatment components while maintaining the integrity of adjacent vegetation. | No changes made. | No change proposed. |
| **MD FIRE 31:** If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plan will address:<br>• why alternative techniques were not selected as a viable options;<br>• how GRSG goals and objectives will be met by its use;<br>• how the COT Report objectives will be addressed and met;<br>• a risk assessment to address how potential threats to GRSG habitat will be minimized.<br><br>Allow prescribed fire as a vegetation or fuels treatment in Wyoming big sagebrush sites or other xeric sagebrush species sites, or in areas with a potential for post-fire exotic annual dominance only after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect Greater Sage-Grouse habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Allow prescribed fire in known sage-grouse winter range only after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | No changes made. | No change proposed. |
| Post Fire Management: | Post Fire Management: | — |
| **MD FIRE 32:** Utilize the findings and Restoration/Rehabilitation Strategy developed as part of the FIAT Assessment process described in **Appendix H** to determine if GRSG rehabilitation actions are needed, based on ecological potential, and direct emergency stabilization and rehabilitation (ESR) (BLM) actions after fire. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 33:** Incorporate GRSG Habitat Management Objectives into ESR/BAER plans based on site potential and in accordance with the Restoration/Rehabilitation Strategy developed as a result of the FIAT Assessments. | No changes made. | No change proposed. |
| **MD FIRE 34:** Provide adequate rest from livestock grazing to allow natural recovery of existing vegetation and successful establishment of seeded species within burned/ESR areas. All new seedings of grasses and forbs should not be grazed until at least the end of the second growing season, and longer as needed to allow plants to mature and develop robust root systems which will stabilize the site, compete effectively against cheatgrass and other invasive annuals, and remain sustainable under long-term grazing management. Adjust other management activities, as appropriate, to meet ESR objectives. | No changes made. | No change proposed. |
| **MD FIRE 35:** Adjust, as appropriate, livestock management on adjacent unburned areas to mitigate the effect of the burn on local GRSG populations. | No changes made. | No change proposed. |
| **MD FIRE 36:** Following seedling establishment, modify grazing management practices if needed to achieve long-term vegetation and habitat objectives. | No changes made. | No change proposed. |
| ***LIVESTOCK GRAZING (LG)*** | ***LIVESTOCK GRAZING (LG)*** | — |
| **Management Decisions:** | **Management Decisions:** | — |
| **MD LG 1**: Maintain existing areas designated as available or unavailable for livestock grazing. Existing active AUMs for livestock grazing within the planning area will not be changed at the broad scale, though the number of AUMs available on an allotment may be adjusted based on site-specific conditions to meet management objectives during term permit renewals, AMP development, or other appropriate implementation planning. Additionally, temporary adjustments can be made annually to livestock numbers, the number of AUMs, and season of use in accordance with applicable regulations. | No changes made. | Potential change under Alternative 3. |
| **MD LG 2**: Prioritize BLM land health assessments and processing of BLM grazing permits consistent with management area prioritization (MD SSS 4), unless other higher priority considerations exist (MD LG 15) or other factors such as threatened, endangered and proposed species habitat that livestock grazing can affect. Where possible, conduct land health assessments at the watershed, or other meaningful landscape-scale. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 3**: Where opportunities exist, coordinate with other land managers to encourage livestock operations that utilize mixed federal, private and/or state land to be managed at the landscape scale to benefit GRSG and their habitat across land ownerships. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 4**: PHMA & IHMA: During the land health assessment process, identify the type(s) of seasonal habitat the assessed areas are capable of supporting. Utilize the habitat assessment framework, (Stiver et al. 2015) or other BLM approved methodology, in accordance with current policy and guidance to determine whether vegetation structure, condition and composition are meeting GRSG habitat objectives including riparian and lentic areas (Objective SSS 2; Table 2-2). Use appropriate Ecological Site Descriptions, reference sheets and state and transition models to inform desired habitat conditions and expected responses to management changes for the land unit being assessed. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 5**: When modifying grazing management, analyze indirect impacts on habitat, including changes in fuel loading and wildfire behavior. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 6:** When livestock management practices are determined to not be compatible with meeting or making progress towards achievable habitat objectives following appropriate consultation, cooperation and coordination, implement changes in grazing management through grazing authorization modifications, or allotment management plan implementation. Potential modifications include, but are not limited to, changes in:<br>• Season or timing of use;<br>• Numbers of livestock;<br>• Distribution of livestock use;<br>• Duration and/or level of use;<br>• Kind of livestock (e.g., cattle, sheep, horses, or goats) (Briske et al. 2011); and<br>• Grazing schedules (including rest or deferment).<br>*Not in Priority Order | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 7**: Where opportunities exist, establish forage reserves to facilitate restoration and rehabilitation efforts in GRSG habitat areas. A forage reserve is an area that is set aside for use as needed by various permittees who might be displaced by wildfire, ESR, restoration efforts, etc. rather than having a term permit issued for grazing like a regular allotment. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 8:** PHMA & IHMA - Where practical, design pasture rotations to utilize non-native perennial grass seedings and/or annual grasslands, during GRSG nesting season annually or periodically. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 9:** Evaluate the locations where salt/supplements are placed, coordinate salt/supplements placement to reduce impacts on GRSG habitat (e.g., existing disturbed areas). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 10**: Incorporate RDFs into Terms and Conditions for crossing permits to limit disturbance of occupied leks when trailing livestock across BLM administered lands in the spring. Work with permittees in locating over-nighting, watering and bedding locations to minimize impacts on seasonal habitats. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 11:** Design any new structural range improvements, following appropriate cooperation, consultation and coordination, to minimize and/or mitigate impacts on GRSG habitat. Any new structural range improvements should be placed along existing disturbance corridors or in unsuitable habitat, to the extent practical, and are subject to RDFs (**Appendix C**). Structural range improvement in this context, include, but are not limited to: fences, exclosures, corrals or other livestock handling structures; pipelines, troughs, storage tanks (including moveable tanks used in livestock water hauling), windmills, ponds/reservoirs, solar panels and spring developments. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 12:** During the land health assessment and grazing permit renewal process, evaluate existing livestock management range improvements with respect to their effect on GRSG habitat. Consider removal of projects that are not needed for effective livestock management, are no longer in working condition, and/or negatively affect GRSG habitat, with the exception of functional projects needed for management of habitat for other threatened, endangered or proposed species or other sensitive resources. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 13**: Prioritize removal, modification or marking of fences or other structures in areas of high collision risk following appropriate cooperation, consultation and coordination to reduce the incidence of GRSG mortality due to fence strikes (Stevens et al. 2012). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 14**: In response to weather conditions (i.e. drought) adjust grazing management (i.e., delay turnout, adjust pasture rotations, adjust the amount and/or duration of grazing) as appropriate to provide for adequate food and cover for GRSG. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 15**: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in Sagebrush Focal Areas (SFA) followed by PHMA outside of the SFA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. Management and conservation action prioritization will occur at the Conservation Area (CA) scale and be based on GRSG population and habitat trends: Focusing management and conservation actions first in SFA followed by areas of PHMA outside SFA. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations. | **MD LG 15:** Generally, the BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases based on land health conditions or concerns related to rangeland health standards. If similar issues are found in both PHMA and IHMA, then those in PHMA should be addressed first. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting land health standards and that have declining Greater Sage-Grouse populations, defined by a soft or hard population adaptive management trigger being engaged. Greater Sage-Grouse populations that are stable or trending upward will be a lower priority for permit renewal and the assessment process. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns, such as fire, and legal obligations. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 16**: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within SFA and PHMA will include specific management thresholds, based on GRSG Habitat Objectives Table, Land Health Standards (43 CFR 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | **MD LG 16:** Grazing in the PHMA and IHMA will be managed according to the process outlined in the text below, and the grazing permit renewal process will be managed according to 43 CFR 4100, Subpart 4180, and as outlined in the process below. Incorporate the Greater Sage-Grouse desired conditions in Table 2.2 [of the 2015 Final EIS] and management considerations as desired conditions, and manage livestock grazing, recognizing that these conditions may not be achievable: (1) due to the existing ecological condition, ecological potential, or existing vegetation; or (2) due to causal events unrelated to existing livestock grazing; and 3) that they are not intended to be prescriptive at the allotment level.<br>a. Conduct habitat assessments using | Potential change under Alternatives 3, 4, 5 and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| *(See above.)* | appropriate monitoring methods. Where appropriate, make a determination of factors causing any failure to achieve the desired conditions in Table 2.2 [of the 2015 Final EIS]. The assessment will be conducted at a resolution and scale sufficient to document the habitat condition and will include local, spatial, and interannual variability. Any determination relative to the habitat characteristics (Table 2.2 [of the 2015 Final EIS]) will be based on existing ecological condition, ecological potential, and existing vegetation information. This is to ensure the assessment recognizes whether these habitat characteristics are achievable.<br>b. The assessment will rely on published characteristics of Greater Sage-Grouse habitat and the ecological site descriptions, on Table 2.2 [of the 2015 Final EIS as amended], and where available and applicable, rangeland health determinations made in accordance with 43 CFR 4180.2(c).<br>c. After conducting the assessment in (b), above, if the current grazing system achieves applicable Idaho rangeland health standards, absent substantial and compelling information, no further grazing management changes are necessary to achieve desired conditions for Greater Sage-Grouse habitat.<br>d. If the process and conditions outlined in (b), above demonstrate that livestock grazing is limiting achievement of the desired conditions (Table 2.2 [of the 2015 Final EIS]), renewed permits will include measures, including but not limited to the actions outlined in **Appendix C** to achieve desired habitat conditions. These measures must be tailored to address the specific management issues.<br>e. Adaptive management changes related to existing grazing permits should be undertaken only where improper grazing is determined to be the causal factor in not meeting habitat characteristics, specific to site capability, based on monitoring, with appropriate spatial variability. See **Appendix C**.<br>f. Where management changes are needed and necessary pursuant to (f), above, implement management actions that are narrowly tailored to address the specific habitat objective applied at the allotment or activity plan level, including the actions outlined in **Appendix C**, Grazing Section of BMPs. (The | *(See above.)* |

|---|---|---|
| *(See above.)* | Governor's plan is attached as **Appendix I** for references to this section.) | *(See above.)* |
| **MD LG 17**: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. Management and conservation action prioritization will occur at the Conservation Area (CA) scale and be based on GRSG population and habitat trends: Focusing management and conservation actions first in SFA followed by areas of PHMA outside SFA. | **MD LG 17:** Allotments within PHMA with declining Greater Sage-Grouse populations, defined by a soft or hard adaptive management trigger being engaged and/or with land health concerns, will be prioritized for field checks. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LG 18**: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| ***WILD HORSES AND BURROS (WHB)*** | ***WILD HORSES AND BURROS (WHB)*** | — |
| **Management Decisions:** | — | — |
| **WHB-1**: Manage herd management areas (HMAs) in GRSG habitat within established AML ranges to achieve and maintain GRSG habitat objectives (Table 2-2). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **WHB-2**: Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g. range, wildlife, and riparian). The priorities for conducting assessments are: 1) HMAs Containing SFA; 2) HMAs containing PHMA; 3) HMAs containing IHMA; 4) HMAs containing GHMA; 5) HMAs containing sagebrush habitat outside of PHMA, IHMA, and GHMA mapped habitat; 6) HMAs without GRSG Habitat. | **WHB-2**: Complete rangeland health assessments for herd management areas containing GRSG habitat using an interdisciplinary team of range, wildlife, and riparian specialists. The priority for conducting assessments is herd management areas with known land health issues and where local populations of GRSG are in decline according to the adaptive management trigger standards. When similar issues are found in multiple herd management areas, then the priority should be: 1) herd management areas containing PHMA; 2) herd management areas containing IHMA; 3) herd management areas containing GHMA; 4) herd management areas containing GRSG habitat outside of PHMA, IHMA, and GHMA mapped habitat; 6) herd management areas without GRSG Habitat. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **WHB-3**: Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on Herd Areas not allocated as HMAs and occupied by wild horses and burros in SFA followed by PHMA. | **WHB-3**: Prioritize gathers and population growth suppression techniques in herd management areas in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on Herd Areas not allocated as herd management areas and occupied by wild horses and burros in PHMA. | Potential change under Alternative 3. |
| **WHB-4**: In SFA and PHMA outside of SFA, assess and adjust AMLs through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting land health standards, even if current AML is not being exceeded. | **WHB-4**: In PHMA, assess and adjust appropriate management levels (AMLs) through the NEPA process within herd management areas when wild horses or burros are identified as a significant causal factor in not meeting land health standards, even if current AML is not being exceeded. | Potential change under Alternatives 3, 4, 5 and 6. |
| **WHB-5:** In SFA and PHMA outside of SFA, monitor the effects of wild horse and burro use in relation to GRSG seasonal habitat objectives on an annual basis to help determine future management actions. | **WHB-5:** In PHMA, monitor the effects of wild horse and burro use in relation to GRSG seasonal habitat objectives to help determine future management actions. | Potential change under Alternative 3. |
| **WHB-6**: Develop or amend herd management area plans (HMAPs) to incorporate GRSG habitat objectives and management considerations for all HMAs within GRSG habitat, with emphasis placed on SFA and other PHMA. | **WHB-6**: Develop or amend herd management area plans to incorporate GRSG habitat objectives and management considerations for all herd management areas in GRSG habitat, with emphasis placed on PHMA. | Potential change under Alternative 3. |
| **WHB-7:** Consider removals or exclusion of wild horse and burros during or immediately following emergency situations (such as fire, floods, and drought) to facilitate meeting GRSG habitat objectives where HMAs overlap with GRSG habitat. | No changes made. | Potential change under Alternative 3. |
| **WHB-8**: When conducting NEPA analysis for wild horse and burro management activities, water developments, or other rangeland improvements for wild horses, address the direct and indirect impacts on GRSG populations and habitat. Implement any water developments or rangeland improvements using the criteria identified for domestic livestock. | No changes made. | Potential change under Alternative 3. |
| **WHB-9:** Coordinate with professionals from other federal and state agencies, researchers at universities, and others to utilize and evaluate new management tools (e.g., population growth suppression, inventory techniques, and telemetry) for implementing the wild horse and burro program. | No changes made. | Potential change under Alternative 3. |

|---|---|---|
| ***MINERAL RESOURCES (MR)*** | ***MINERAL RESOURCES (MR)*** | — |
| ***Fluid Minerals*** | ***Fluid Minerals*** | — |
| **Objective MR 1:** Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA, IHMA, and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA, IHMA, and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 USC 226(p) and 43 CFR 3162.3-1(h). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **Objective MR 2:** Where a proposed fluid mineral development project on an existing lease can adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize and apply compensatory mitigation to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD or Geothermal Drilling Permit (GDP) for the lease to avoid, minimize, and apply compensatory mitigation to impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | **Objective MR 2:** Where a proposed fluid mineral development project on an existing lease can adversely affect GRSG populations or habitat in PHMA, IHMA, and GHMA, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD or Geothermal Drilling Permit (GDP) for the lease. This would be apply the mitigation hierarchy to impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | No change proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD MR 1**: Idaho and Montana: Areas within SFA will be open to fluid mineral leasing and development and geophysical exploration subject to NSO without waiver, exception, or modification. Areas within PHMA (outside SFA) and IHMA will be open to mineral leasing and development and geophysical exploration subject to NSO with a limited exception (MD MR 3). GHMA will be open to mineral leasing and development and geophysical exploration subject to CSU which includes buffers and standard stipulations. | **MD MR 1**: Areas within PHMA and IHMA will be open to mineral leasing and development and geophysical exploration subject to NSO with a limited exception (MD MR 3). GHMA will be open to mineral leasing and development and geophysical exploration subject to CSU which includes buffers and standard stipulations and best management practices as identified in Appendix C (Required Design Features). | Potential change under Alternative 3. |
| **MD MR 2:** In Idaho, parcels nominated for lease in PHMA or IHMA will be evaluated prior to lease offering to determine if development is feasible. In GHMA, parcels will not be offered for lease if buffers and restrictions (including RDFs) preclude development in the leasing area. | **MD MR 2:** Parcels nominated for lease in PHMA, IHMA, or GHMA will be evaluated prior to lease offering to determine if development is feasible. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD MR 3:** PHMA and IHMA: No waivers or modifications to a fluid mineral lease NSO stipulation will be granted. The Authorized Officer may grant an exception to a fluid mineral lease NSO stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and will provide a clear conservation gain to GRSG.<br><br>Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP amendment. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br><br>Any exceptions to this lease stipulation may be approved by the Authorized Officer only with the concurrence of the State Director. The Authorized Officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publically available at least quarterly. | **MD MR 3:** PHMA and IHMA: No waivers or modifications to a fluid mineral lease NSO stipulation will be granted. The Authorized Officer may grant an exception to a fluid mineral lease NSO stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and would provide no net loss to GRSG.<br><br>Exceptions based on no net loss (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP amendment. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br><br>Any exceptions to this lease stipulation may be approved by the Authorized Officer only with the concurrence of the State Director and in coordination with the Technical and Policy Team. Approved exceptions will be made publically available at least quarterly. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD MR 4:** Incorporate required design features and best management practices appropriate to the management area as COAs when post leasing activity is proposed into any post-lease authorizations. | No changes made. | No change proposed. |

| Nonenergy Leasable Minerals | Nonenergy Leasable Minerals | — |
| **MD MR 15:** PHMA are closed to leasing. IHMA and GHMA: Areas within Known Phosphate Leasing Areas (KPLAs) will remain open to leasing subject to standard stipulations. IHMA areas outside of KPLAs are open to prospecting and subsequent leasing provided the Anthropogenic Disturbance Development Criteria (MD SSS 30) and the anthropogenic disturbance cap (MD SSS 27) can be met. RDFs and buffers shall be applied to prospecting permits. GHMA: Lands outside KPLAs are available for prospecting and subsequent leasing and initial mine development subject to RDFs, buffers, and standard stipulations. | **MD MR 15:** PHMA are closed to leasing. IHMA and GHMA: Areas within Known Phosphate Leasing Areas (KPLAs) will remain open to leasing subject to standard stipulations. IHMA areas outside of KPLAs are open to prospecting and subsequent leasing provided the Anthropogenic Disturbance Development Criteria (MD SSS 30) and the anthropogenic disturbance cap (MD SSS 27) can be met. RDFs and buffers shall be applied to prospecting permits.<br><br>GHMA: Lands outside KPLAs are available for prospecting and subsequent leasing and initial mine development subject to standard stipulations and best management practices as described in Appendix C. | Proposed change under Alternatives 3 and 6. |
| **MD MR 16:** Require seasonal and daily timing restrictions (**Appendix C**) in undeveloped nonenergy mineral leases when exploration activities or initial mine development is proposed (e.g. exploration drilling, timber removal, shrub clearing, etc.) as COAs. | No changes made. | Proposed change under Alternatives 3 and 6. |
| **MD MR 17:** Include RDFs as COAs to mine plans in undeveloped non-energy mineral leases for exploration activities or initial mine development. | No changes made. | Proposed change under Alternatives 3 and 6. |
| Mineral Split Estate | Mineral Split Estate | — |
| **MD MR 19:** BLM Owns Mineral Estate – non-federal surface owner: Where the federal government owns the mineral estate in PHMA, IHMA, and GHMA, and the surface is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No changes made. | Proposed change under Alternative 3. |
| **MD MR 20:** BLM owns surface – non-federal mineral estate owner: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA, IHMA, and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No changes made. | Proposed change under Alternative 3. |

| ***LANDS AND REALTY (LR)*** | ***LANDS AND REALTY (LR)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objectives LR 1:** Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |
| **Management Decisions:** | **Management Decisions:** | — |
| Utility Corridors and Communication Sites | Utility Corridors and Communication Sites | — |
| **MD LR 1:** Existing designated corridors, including Section 368 Corridors, will remain Open in all habitat management areas (subject to the ongoing settlement agreement).<br><br>Also see **MD LR 10** and **MD SSS 31** | No changes made. | No change proposed. |
| Land Use Authorizations | Land Use Authorizations | — |
| **MD LR 2**: PHMA: Designate and manage PHMA as ROW avoidance areas, consistent with MD SSS 29 and subject to RDFs and buffers (Appendices B and C). IHMA: Designate and manage IHMA as ROW avoidance areas, consistent with MD SSS 30 and subject to RDFs and buffers. GHMA **(Idaho and Montana)**: Designate and manage GHMA as open with proposals subject to RDFs and buffers. | **MD LR 2**: PHMA: Designate and manage PHMA as ROW avoidance areas, consistent with MD SSS 29 and subject to RDFs and buffers (Appendices B and C). IHMA: Designate and manage IHMA as ROW avoidance areas, consistent with MD SSS 30 and subject to RDFs and buffers. GHMA: Designate and manage GHMA as open with proposals subject to best management practices as described in Appendix C. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR 3**: PHMA: Development of commercial service airports and facilities (as defined by FAA 2014 – publically owned airports that have at least 2,500 passenger boardings each calendar year and receive scheduled passenger service) will not be allowed within PHMA. IHMA and GHMA are Avoidance and Open respectively for these types of ROW applications as described in MD LR 2. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 4**: PHMA: Development of new or expansion of existing landfills will not be allowed within PHMA. IHMA and GHMA are Avoidance and Open respectively for these types of ROW applications as described in MD LR 2. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR 5**: Consistent with MD LR 3, MD LR 4, and MD RE 1, Rights-of-way for development of new or amended ROWs and land use authorizations (including permits and leases) in PHMA will only be considered when consistent with the Anthropogenic Disturbance Screening Criteria (MD SSS 29); Rights-of-way for development of new or amended ROWs and land use authorizations (including permits and leases) in IHMA can be considered consistent with the IHMA Anthropogenic Disturbance Development Criteria (MD SSS 30). GHMA: New ROW and land use authorizations can be considered. | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD LR 6**: In PHMA, if a higher voltage transmission line is required adjacent to an existing line (i.e. the project is an incremental upgrade/capacity increase of existing development (i.e. power line capacity upgrade):<br>• the existing transmission line must be removed and area rehabilitated within a specified amount of time after the new line is installed and energized; and<br>• the new line must be constructed in the same alignment as the existing line unless an alternate route will benefit GRSG or GRSG habitat. | No changes made. | No change proposed. |
| **MD LR 7**: Process unauthorized use. If the unauthorized use is subsequently authorized, it will be authorized consistent with direction from this plan including RDFs and buffers. If the use is not subsequently authorized the site will be reclaimed by removing these unauthorized (trespass) features and rehabilitating the habitat. | No changes made. | No change proposed. |
| **MD LR 8**: Land use authorizations that are temporary (less than 3 years) in nature and are not otherwise excluded or restricted will be subject to seasonal or timing restrictions (**Appendix C**) and mitigation requirements regarding habitat loss as needed. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 9**: New ROW applications for water facilities (ditches, canals, pipelines), or amendments to existing water facilities which include additional structures to improve fish passage or benefits to fisheries (new diversions, fish screens) will be allowed on a case-by-case basis subject to RDFs to reduce impacts on GRSG habitat and mitigation requirements regarding GRSG habitat loss as needed. | No changes made. | No change proposed. |
| **MD LR 10**: When a ROW grant expires and is not requested to be renewed, is relinquished, or terminated, the lease holder will be required to reclaim the site by removing overhead lines and other infrastructure and to eliminate avian predator nesting opportunities provided by anthropogenic development on public lands associated with the now void ROW grant (e.g., remove power line and communication facilities no longer in service). | No changes made. | No change proposed. |
| **MD LR 11**: As opportunities and priorities indicate work with existing ROW holders to retrofit existing towers and structures consistent with RDFs described in **Appendix C**. | No changes made. | No change proposed. |
| **MD LR 12**: PHMA and IHMA are designated as avoidance areas for high voltage transmission line and large pipeline ROWs, except for Gateway West and Boardman to Hemingway Transmission Projects. All authorizations in these areas, other than the following identified projects, must comply with the conservation measures outlined in this proposed plan, including the RDFs and avoidance criteria presented in MD SSS 29 and MD SSS 30 of this document. The BLM is currently processing an application for Gateway West and Boardman to Hemingway Transmission Projects and the NEPA review for this project is well underway. Conservation measures for GRSG are being analyzed through the project's NEPA review process, which should achieve a net conservation benefit for the GRSG. | No changes made. | No change proposed. |
| **MD LR 13:** Consider the likelihood of development of not-yet-constructed surface disturbing activities<br>– as defined in Table 2 of the Monitoring Framework (**Appendix D**) – under valid existing rights. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| Land Tenure | Land Tenure | — |
| **MD LR 14**: Lands classified as PHMA, IHMA, and GHMA for GRSG will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG. Land tenure adjustments will be subject to the following disposal, exchange, and acquisition criteria, which include retaining lands with GRSG habitat. Retention of areas with GRSG will reduce the likelihood of habitat conversion to agriculture, urbanization, or other uses that will remove sagebrush habitat and potentially impact sensitive plants. Criteria:<br>a. Acquire habitat within PHMA and IHMA, when possible (i.e. willing landowner), and retain ownership of habitat within all Areas, except if disposal will allow for additional or more contiguous federal ownership patterns.<br>b. Lands within PHMA, IHMA and GHMA will be retained unless disposal of those lands will increase the extent or provide for connectivity of PHMA, IHMA or GHMA.<br>c. Evaluate potential land exchanges containing historically low-quality GRSG habitat that may be too costly to restore in exchange for lands of higher quality habitat, lands that connect seasonal GRSG habitats or lands providing for threatened and endangered species. These potential exchanges should lead to an increase in the extent or continuity of or provide for improved connectivity of PHMA. Higher priority will be given to exchanges for those in-tact areas of sagebrush that will contribute to the expansion of sagebrush areas within PHMA currently in public ownership. Lower priority will be given to other lands that will promote enhancement in the PHMA and IHMA (i.e., areas with fragmented or less in-tact sagebrush).<br>d. Identify lands for acquisition that increase the extent of or provide for connectivity of PHMA. | **MD LR 14**: Lands classified as PHMA, IHMA, and GHMA for GRSG will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide no net loss to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG. Land tenure adjustments will be subject to the following disposal, exchange, and acquisition criteria, which include retaining lands with GRSG habitat. Retention of areas with GRSG will reduce the likelihood of habitat conversion to agriculture, urbanization, or other uses that will remove sagebrush habitat and potentially impact sensitive plants.<br>Criteria:<br>a. |---|---|---|
| ***RECREATION AND VISITOR SERVICES (REC)*** | ***RECREATION AND VISITOR SERVICES (REC)*** | — |
| **Management Decisions:** | **Management Decisions:** | — |
| **REC-1**: Manage existing recreation uses and sites to minimize adverse effects on GRSG or their habitat through incorporation of RDFs, buffers and seasonal restrictions. | No changes made. | No change proposed. |
| **REC-2**: In PHMA and IHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from critical areas, etc.), or unless the development is required for visitor health and safety or resource protection. | **REC-2**: In PHMA and IHMA, do not construct new recreation facilities (campgrounds, parking lots, trailheads, and staging areas) larger than 0.25 acres unless subject to appropriate buffers and RDFs and appropriate mitigation. Locate and design new facilities to avoid or minimize impacts on GRSG habitat. New trails in PHMA and IHMA should be designed to avoid or minimize impacts on GRSG habitat. New non-motorized trails would not be subject to buffers but may be subject to timing restrictions to avoid impacts on GRSG during the lekking/nesting season. Motorized trails would also be subject to buffers and seasonal timing restrictions. | No change proposed. |
| ***TRAVEL AND TRANSPORTATION (TMM)*** | ***TRAVEL AND TRANSPORTATION (TMM)*** | — |
| **Management Decisions:** | **Management Decisions:** | — |
| **MD TTM 1:** Limit off-highway vehicle travel within Idaho BLM Field Offices to existing roads, primitive roads, and trails in areas where travel management planning has not been completed or is in progress. This excludes areas previously designated as open through a land use plan decision or currently under review for designation as open, currently being analyzed in ongoing RMP revision efforts in the Four Rivers, Jarbidge and Upper Snake Field Offices. | No changes made. | No change proposed. |
| **MD TTM 2:** In PHMA, IHMA, and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use) and other applicable law and policy. | No changes made. | No change proposed. |
| **MD TTM 3:** Develop Travel Management Plans for each Field Office as described in the BLM Travel Management Handbook 8342.1 and according to the travel management planning guidelines (Appendix L of FEIS). | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD TTM 4:** During subsequent travel management planning design and designate a travel system to minimize adverse effects on GRSG. Locate areas and trails to minimize disturbance of GRSG and/or to have a neural or positive effect on GRSG habitat and populations. Give special attention to protect endangered or threatened species and their habitats. Allow for route upgrade, closure of existing routes, timing restrictions, seasonal closures, and creation of new routes to help protect habitat and meet user group needs, thereby reducing the potential for pioneering unauthorized routes. The emphasis of the comprehensive travel and transportation planning within PHMA will be placed on having a neutral or positive effect on GRSG habitat. Individual route designations will occur during subsequent travel management planning efforts. | No changes made. | No change proposed. |
| **MD TTM 5:** Conduct road construction, upgrades, and maintenance activities to avoid disturbance during the lekking season – see **Appendix C**. | No changes made. | No change proposed. |
| ***MITIGATION (IDAHO AND MONTANA)*** | ***MITIGATION (MIT)*** | — |
| (Also see **Appendix F** and **J**) | **See 2.12 Mitigation section below** | — |
| **Management Decisions:** | **Management Decisions:** | — |
| **MD MIT 1**: BLM will establish an inter-agency State GRSG Conservation Team at the state level to help guide conservation of GRSG through compensatory mitigation, within 90 days of the issuance of the Record of Decision. | No changes made. | No change proposed. |
| **MD MIT 2**: The BLM, in coordination with the GRSG Conservation Team will develop a Mitigation Strategy within one year of the issuance of the Record of Decision. In Idaho this strategy will be consistent with the Idaho Mitigation Framework (**Appendix F**). | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD MIT 3**: In all GRSG habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation (**Appendix E**, Table E-1), the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. | **MD MIT 3**: In PHMA, IHMA, and GHMA, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation (**Appendix E**, Table E-1), the BLM will Achieve the planning-level GRSG management goals and objectives through implementation of mitigation and management actions. Under this Proposed Plan Amendment, the BLM's GRSG management would be consistent with the GRSG goals and objectives, and in conformance with BLM Manual 6840 – Special Status Species Management, undertake planning decisions, actions, and authorizations to "minimize or eliminate threats affecting the status of GRSG or to improve the condition of GRSG habitat" across the planning area. Further the BLM will require and ensure mitigation that provides no net loss to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by ensuring GRSG habitat impacts are addressed by implementing mitigating sections consistent with the State of Idaho and the Proposed Plan Amendment. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD MIT 4**: Mitigate anthropogenic development (**Appendix E**, Table E-1) impacts on GRSG habitat through application of appropriate mitigation in accordance with the Mitigation Framework (**Appendix F** and **L**). | No changes made. | Potential change under Alternatives 3, 4, 5 and 6. |
| **MD MIT 5**: Consistent with regulations for minerals activities, require a full reclamation bond specific to the site when surface disturbing activities are proposed. Ensure reclamation bonds are sufficient to cover costs to fully rehabilitate lost GRSG habitat. Base the reclamation costs on the assumption that contractors for the BLM will perform the work. Areas are considered fully rehabilitated when they meet the conditions described in Table 2-2. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***COORDINATION (CC)*** | ***COORDINATION (CC)*** | — |
| **Management Decisions:** | **Management Decisions:** | — |
| **MD CC 1:** Collaborate, coordinate and utilize cooperative planning efforts to implement and monitor activities to achieve desired conditions and to maximize the utilization of available funding opportunities. Coordination efforts can include: adjacent landowners, federal and state agencies, local governments, tribes, communities, other agencies, resource advisory groups, public lands permit holders and non- governmental organizations. | No changes made. | No change proposed. |
| **MD CC 2:** Develop a cooperative MOU between the BLM, Forest Service and State of Idaho to establish the State of Idaho as a cooperating agency during implementation of the final decision. The MOU will identify responsibilities, role and interaction of the BLM, Forest Service and State of Idaho. | No changes made. | No change proposed. |
| **MD CC 3:** The BLM will consider any recommendations from the Governor of Idaho as a result of evaluation completed by the Sage-Grouse Implementation Task Force. | No changes made. | No change proposed. |
| **MD CC 4:** Idaho: The BLM will coordinate with the State of Idaho and the Idaho Sage-Grouse Implementation Task Force regarding proposed management changes, the implementation of conservation measures, mitigation, and site-specific monitoring, related to adaptive management, anthropogenic disturbance and livestock grazing. | No changes made. | No change proposed. |
| **MD CC 6:** Upon completion of the Record of Decision the BLM will develop an initial Implementation Guide for BLM District and Field Offices within a year of issuance of the Record of Decision. This Guide will define and describe consistent application of the allocations, management actions, required design features, and etc. that are contained within the final plan and will be updated and expanded as needed to respond to issues and concerns. | No changes made. | No change proposed. |
| **MD CC 7**: At the state level, BLM will coordinate with IDFG, USFWS, and other conservation partners in collaborative efforts with adjacent states (Oregon, Nevada, Utah, Montana, Wyoming) in GRSG MZs IV and II to evaluate GRSG habitat and population status and trends and make appropriate regional recommendations for GRSG conservation at broader scales. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD CC 8:** At the state level, BLM will coordinate with the appropriate WAFWA Sage-grouse Technical Committee to develop consistent population and habitat monitoring approaches that facilitate GRSG conservation at the MZ scale. | No changes made. | No change proposed. |
| **MD CC 9:** All prescribed burning will be coordinated with state and local air quality agencies to ensure that local air quality is not significantly impacted by BLM activities. | No changes made. | No change proposed. |

## Table 2: Habitat Objectives for GRSG, 2015 ARMPA

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **LEK HABITAT (Seasonal Use Period March 1 – May 15)[1]** | | | |
| Lek Security | Proximity of trees | Trees (i.e., mainly juniper, conifers, and does not include old-growth juniper, pinyon pine and mountain mahogany) absent or uncommon on shrub/grassland ecological sites within 1.86 miles (3 km) of occupied leks. | Baruch-Mordo et al. 2013[7]<br><br>Stiver et al. 2015[13] |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 ft. (100 m) of an occupied lek | Stiver et al. 2015[13] |
| **NESTING/EARLY BROOD REARING [1,5,10,12,13,14] (Seasonal Use Period May 1 – June 30) [1]** | | | |
| Cover and Food | Seasonal habitat extent (Percent of Seasonal Habitat Meeting Desired Conditions) | >80% of the nesting habitat meets the recommended vegetation characteristics, where appropriate (relative to ecological site potential, etc.). | Connelly et al. 2000[8] |
| | Sagebrush cover [2] | 15-25% | Connelly et al. 2000[8]<br>Connelly et al. 2003[9]<br>Hagen et al. 2007[11] |

| | Predominant sagebrush shape | Predominantly spreading shape[5] | Stiver et al. 2015[13] |
| | Perennial grass cover (such as native bunchgrasses) [2]<br><br>Arid sites[3]<br>Mesic sites[4] | <br><br>≥10%<br>≥15% | Connelly et al. 2000[8]<br>Stiver et al. 2015[13] |
| | Perennial grass (and forb) height (includes residual grasses) | ≥ 7 inches | Connelly et al. 2000[8]<br>Connelly et al. 2003[9]<br>Hagen et al. 2007[11]<br>Stiver et al. 2015[13] |
| | Perennial forb cover [2]<br>Arid sites[3]<br>Mesic sites[4] | <br>≥5%<br>≥10% | Connelly et al. 2000[8] |
| | Perennial forb availability | Preferred forbs are common with several species present[6] | Stiver et al. 2015[13] |

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **LATE BROOD-REARING/SUMMER[1, 15] (July-October)[1] Late brood-rearing areas, such as riparian, meadows, springs, higher elevation mesic uplands, etc. may occur within other mapped seasonal habitat areas. Apply late brood rearing/summer habitat desired conditions locally as appropriate.** | | | |
| Cover and Food | Seasonal habitat extent (Percent of Seasonal Habitat Meeting Desired Condition) | >40% of the summer/brood habitat meets recommended brood habitat characteristics where appropriate (relative to ecological site potential, etc.) | Connelly et al. 2000[8] |
| | Sagebrush cover[2] | Uplands 10-25%<br>Riparian/Meadow: Sagebrush cover within 100 m | Connelly et al. 2000[8] |
| | Sagebrush height | 16 to 32 inches (40-80cm) | Connelly et al. 2000[8] |
| | Perennial grass and forb cover [2] | >15% | — |
| | Upland and riparian perennial forb availability 2 | Preferred forbs are common with appropriate numbers of species present[6] | Stiver et al. 2015[13] |
| | Riparian and/or meadow habitat condition | Proper Functioning Condition | Stiver et al. 2015[13] |
| **WINTER[1] November-March[1] (Apply to areas of known or likely winter-use)** | | | |
| Cover and Food | Seasonal habitat extent (Percent of Seasonal Habitat Meeting Desired Condition) | >80% of the wintering habitat meets winter habitat characteristics where appropriate (relative to ecological site, etc.). | Connelly et al. 2000[8] |
| | Sagebrush cover and height above snow | Sagebrush is at least 10 inches (25 cm) above snow and ≥10% cover[16] | Connelly et al. 2000[8]<br>Stiver et al. 2015[13] |

Notes and references:

[1] Seasonal dates can be adjusted by local unit according to geographic region.

[2] Since plant species and/or life forms may overlap, total vegetative cover, inclusive of shrubs, forbs and grasses may exceed 100%.

[3] Arid corresponds to the 10 – 12 inch precipitation zone; *Artemisia tridentata wyomingensis* is a common big sagebrush sub-species for this type site (Stiver et al. 2015).

[4] Mesic corresponds to the ≥12 inch precipitation zone; *Artemisia tridentata vaseyana* is a common big sagebrush sub-species for this type site (Stiver et al. 2015).

[5] Collectively the indicators for sagebrush (cover, height, and shape), perennial grass and perennial forb (cover, height and/or availability) represent the desired condition range for nesting/early brood rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. *2015*. Sagebrush plants that are more tree or columnar-shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.

[6] Preferred forbs are listed in Stiver et al. 2015. Overall total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred.

| | Perennial forb availability | Preferred forbs are common with several species present[6] | Stiver et al. 2015[13] |

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **LATE BROOD-REARING/SUMMER[1, 15] (July-October)[1] Late brood-rearing areas, such as riparian, meadows, springs, higher elevation mesic uplands, etc. may occur within other mapped seasonal habitat areas. Apply late brood rearing/summer habitat desired conditions locally as appropriate.** | | | |
| Cover and Food | Seasonal habitat extent (Percent of Seasonal Habitat Meeting Desired Condition) | >40% of the summer/brood habitat meets recommended brood habitat characteristics where appropriate (relative to ecological site potential, etc.) | Connelly et al. 2000[8] |
| | Sagebrush cover[2] | Uplands 10-25%<br>Riparian/Meadow: Sagebrush cover within 100 m | Connelly et al. 2000[8] |
| | Sagebrush height | 16 to 32 inches (40-80cm) | Connelly et al. 2000[8] |
| | Perennial grass and forb cover [2] | >15% | |
| | Upland and riparian perennial forb availability [2] | Preferred forbs are common with appropriate numbers of species present[6] | Stiver et al. 2015[13] |
| | Riparian and/or meadow habitat condition | Proper Functioning Condition | Stiver et al. 2015[13] |
| **WINTER[1] November-March[1] (Apply to areas of known or likely winter-use)** | | | |
| Cover and Food | Seasonal habitat extent (Percent of Seasonal Habitat Meeting Desired Condition) | >80% of the wintering habitat meets winter habitat characteristics where appropriate (relative to ecological site, etc.). | Connelly et al. 2000[8] |
| | Sagebrush cover and height above snow | Sagebrush is at least 10 inches (25 cm) above snow and ≥10% cover[16] | Connelly et al. 2000[8]<br>Stiver et al. 2015[13] |

Notes and references:

[1] Seasonal dates can be adjusted by local unit according to geographic region.

[2] Since plant species and/or life forms may overlap, total vegetative cover, inclusive of shrubs, forbs and grasses may exceed 100%.

[3] Arid corresponds to the 10 – 12 inch precipitation zone; *Artemisia tridentata wyomingensis* is a common big sagebrush sub-species for this type site (Stiver et al. 2015).

[4] Mesic corresponds to the ≥12 inch precipitation zone; *Artemisia tridentata vaseyana* is a common big sagebrush sub-species for this type site (Stiver et al. 2015).

[5] Collectively the indicators for sagebrush (cover, height, and shape), perennial grass and perennial forb (cover, height and/or availability) represent the desired condition range for nesting/early brood rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. *2015*. Sagebrush plants that are more tree or columnar-shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.

[6] Preferred forbs are listed in Stiver et al. 2015. Overall total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred.

[14] Connelly, J.W., A. Moser, and D. Kemner. 2013. Greater Sage-Grouse breeding habitats: Landscape-based comparisons. Grouse News 45. Research Reports.
[15] Some late brood habitat occurs at higher elevations outside of mapped nesting habitat and some is embedded within nesting landscapes especially areas such as wet meadows, riparian areas, springs and seeps.
[16] Winter habitat metrics are a guideline but snow depths and habitat availability may vary widely depending on winter severity, topography and elevation.

**Table 4:* Estimated Acres of Treatment Needed within a 10-Year Period to Achieve Vegetation Objectives on BLM-Administered Lands[1]**

| Population Area | Mechanical[2] | Prescribed Fire (MD FIRE 31) [3] | Grass Restoration (MD VEG 2) [4] |
|---|---|---|---|
| Bear Lake Plateau | 1,000 | 0 | 0 |
| East Idaho Uplands | 6,000 | 9,000 | 1,000 |
| S Central Idaho/N Snake River and Mountain Valleys | 18,000 | 11,000 | 162,000 |
| Weiser | 0 | 0 | 13,000 |
| SW Idaho | 52,000 | 10,000 | 444,000 |

Notes:
[1] These are estimates of treatments required to achieve and/or maintain desired habitat conditions over a period of ten years. There are many dynamic and highly variable disturbances that may happen over that period of time that can have a significant effect on the amount, type, and timing of treatment needed. Those disturbances are factored into the ten-year simulation using stochastic, not predictive, techniques. Probabilities of events such as large wildfires are used in the model to make the simulation as realistic as possible, given empirical data about such events in the past, but the results of the simulation cannot be used to predict the future occurrence of such events, including their timing, size, or location, which are essentially random.
[2] Removal of conifers that have invaded sagebrush including phase one juniper that is 10 percent or less and reducing sagebrush cover in areas over 30 percent canopy cover
[3] Acres are those that are greater than 30 percent sagebrush canopy cover and/or invaded by 10 percent or greater conifer.
[4] Acres presently dominated by annual grasses that can be improved by herbicide application and seeding of perennial vegetation.

*Table 2-3 (2015 GRSG Approved RMP Amendment)

Note there was no change to Table 2-3 in the 2019 GRSG Approved RMP Amendment.

### 2.2.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The appendices can be found on the Idaho GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Approved RMP Amendment Maps | 2015, 2019 | Yes |
| B: Buffers | 2015, 2019 | Yes |
| C: Required Design Features | 2015, 2019 | No |
| D: Monitoring Framework | 2015 | Yes |
| E: Anthropogenic Disturbance and Adaptive Management | 2015, 2019 | Yes |
| F: Mitigation | 2015, 2019 | Yes |
| G: Fluid Mineral Lease Stipulations, Waivers, Modifications, and Exceptions | 2015 | Yes |
| H: Fire and Invasives Assessment Tool (FIAT) | 2015 | No |
| I: US Fish and Wildlife Service Concurrence Letter | 2015 | No |
| J: Montana Action Screen and Mitigation Process | 2015 | Yes |
| K: Technical and Policy Teams | 2019 | No |

## 2.3 BILLINGS RMP REVISION

This appendix presents the GRSG approved RMP amendment language from the 2015 record of decision for the Billings RMP. The Billings RMP was not amended in 2019. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 appendices that are listed in **Section 2.3.2** of this appendix.

### 2.3.1 Existing GRSG RMP Management – Billings RMP Revision

**Table 1: Summary of Goals, Objectives, and Management Actions in Billings 2015 RMP Revision**

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| MD Veg/R&S-7: In all PHMA the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6).<br><br>MD WLH & SSS-80: In all PHMA the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD Veg/F&W-8: Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied sage-grouse habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in the FIAT report (Chambers et. al., 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD Veg/R&S-6: Within Greater Sage-Grouse PHMA, only treatments that conserve, enhance, or restore Greater Sage-Grouse habitat will be allowed. Treatment methods, including prescribed burning and mechanical treatments will be used to eliminate conifer encroachment and stimulate vegetative re-growth in grassland/shrub land habitats; and to reduce fuels, thin under-stories, recycle nutrients, and create small openings in forested vegetation types. | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal WLH & SSS 10: To maintain or improve Greater Sage-Grouse populations by maintaining Greater Sage-Grouse habitat in good condition. | Potential change under Alternatives 3, 4, 5, and 6. |
| Goal WLH & SSS 12: BLM will maintain habitat for viable Greater Sage-Grouse populations to promote movement and genetic diversity. Maintain, restore or enhance Greater Sage-Grouse habitat and connectivity between sagebrush habitats, with emphasis on those habitats occupied by Greater Sage-Grouse. | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| Goal WLH & SSS 8: Provide for the long-term conservation, enhancement, and restoration of the sagebrush steppe/mixed-grass prairie complex in a manner that supports sustainable Greater Sage-Grouse populations and a healthy diversity and abundance of wildlife species. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-79: Establish Greater Sage-Grouse PHMA (158,926 acres of BLM-administered lands and 205,254 acres of federal minerals). These PHMA are generally consistent with MTFWP Greater Sage-Grouse core area designations, with the exception of one small area in southern Carbon County near Elk Basin Oil field (Map 2-1). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-96: Establish GHMA (176,734 acres of BLM-administered lands and 299,166 acres of federal mineral estate). These areas include a 3 mile buffer around Greater Sage-Grouse leks, outside of the PHMA and RHMA areas (Map 2-1). | Potential change under Alternatives 3, 4, 5, and 6. |
| Goal WLH & SSS 11: In these areas, BLM will manage habitat so that Greater Sage-Grouse populations can be restored over the long-term. BLM will strive to restore historical Greater Sage-Grouse habitat functionality, or at a minimum, have no net loss of Greater Sage-Grouse habitat, to support Greater Sage-Grouse populations. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-88: Establish RHMAs (78,927 acres of BLM-administered lands and 88,642 acres of federal mineral estate). These areas will include one small polygon of core habitat in Carbon County near Elk Basin Oil Field, as well as other areas (Map 2-1). | Potential change under Alternatives 3, 4, 5, and 6. |
| Objectives: Sagebrush, native grasslands, seasonal or crucial wildlife ranges, special status species habitat, fisheries, cottonwood galleries, and riparian/wetlands will be priority habitats. All wildlife habitats will be managed to meet Rangeland Health Standards (Standards 1 and 5). BLM is responsible for managing habitats, whereas state and federal wildlife management agencies (e.g., MT FWP, USFWS) oversee management of wildlife species. BLM will coordinate with and support the conservation plans of those agencies on BLM administered lands. Priority wildlife species for management are described in Chapter 3.<br><br>In 2010, the USFWS determined that the Greater Sage-Grouse is a Candidate species and Warranted, but precluded, by other priorities, for listing under the ESA. In 2009, the MT/DAKs BLM delineated three types of Greater Sage-Grouse habitat areas as part of the planning process (Map 2-1):<br>• Greater Sage-Grouse Habitat - PHMA,<br>• Greater Sage-Grouse Habitat - RHMA, and<br>• Greater Sage-Grouse Habitat -– GHMA<br><br>Each area will have varying degrees of management in order to achieve the goals or objectives for each Greater Sage-Grouse habitat area. The Greater Sage-Grouse habitat delineations may be modified as needed as local site conditions change or as new information becomes available. Refer to the Glossary for definitions of the three Greater Sage-Grouse habitat areas, Appendix F for mitigation measures and conservation actions for Greater Sage-Grouse habitat, and Appendix D for monitoring of Greater Sage-Grouse and Sagebrush Habitats. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 81: In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the USGS Report Conservation Buffer Distance Estimates for Greater Sage-Grouse – A Review (Open File Report 2014-1239) in accordance with Appendix B. | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2.3-2 [varies by plan] vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br><br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD WLH & SSS-76: Special Status Species: Greater Sage-Grouse – All BLM use authorizations will contain terms and conditions regarding the actions needed to meet or progress toward meeting the habitat objectives. If monitoring data show the habitat objectives have not been met nor progress being made towards meeting them, there will be an evaluation and a determination made as to the cause. If it is determined that the authorized use is a cause, the use will be adjusted by the response specified in the instrument that authorized the use. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-75: Special Status Species: Greater Sage-Grouse – In addition to the references identified in the following table, the Conservation Plans developed for each of the Wyoming Local Sage-Grouse Working Groups will be consulted to identify specific habitat objectives appropriate for site-specific conditions. The Conservation Plans, updated in March 2014, are available on the Wyoming Game and Fish Department (WGFD) website at: https://wgfd.wyo.gov/web2011/wildlife-1000817.aspx. | No change proposed. |
| ***Management Decisions: Disturbance*** | |
| MD WLH & SSS-78: Special Status Species – Greater Sage-Grouse – If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 Mining Law, valid existing rights, etc.) will be permitted by BLM within PHMA in a project analysis area until the disturbance has been reduced to less than the cap.<br>• If the BLM determines that the State of Montana has adopted a GRSG Habitat Conservation Program that contains comparable components to those found in the State of Wyoming's Core Area Strategy including an all lands approach for calculating anthropogenic disturbances, a clear methodology for measuring the density of operations, and a fully operational Density Disturbance Calculation Tool, the 3% disturbance cap will be converted to a 5% cap for all sources of habitat alteration within a project analysis area.<br><br>If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 hard rock mining law, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA in any given BSU until the disturbance has been reduced to less than the cap. Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br><br>[Management action clarified in 2018 to reflect State of Montana process, under DOI-BLM-MT-2018-0005-CX. RMP Maintenance Action Language: This maintenance action is to clarify that the BLM has determined that the State's all lands approach to analyzing disturbance is operational and effective. Therefore, the BLM will adopt and implement the State's approach as identified in Attachments D (Stipulations for Uses and Activities) and H (definitions) of Montana Executive Order 12-2015.] | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| Management Direction WLH & SSS-83: Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-71: In all sage-grouse habitat, in undertaking BLM management actions, and consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. Actions which result in habitat loss and degradation" include those identified as threats which contribute to Greater Sage-Grouse disturbance as identified by the USFWS in its 2010 listing decision (75 FR 13910) and shown in Table 2 in the attached Monitoring Framework (Appendix D). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| Action FIRE-8: If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plans will address:<br>*why alternative techniques were not selected as a viable options;<br>*how GRSG goals and objectives will be met by its use;<br>*how the COT report objectives will be addressed and met; and<br>*a risk assessment to address how potential threats to GRSG habitat will be minimized.<br><br>Prescribed fire as vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect GRSG habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD FIRE-14: Prescribed fire will be allowed on up to 5 percent of the percent of BLM administered acres within the planning area to achieve measurable landscape level objectives from (1) other resources, including, but not limited to, forestry, wildlife, range, vegetation, and watershed; (2) the reduction of hazardous fuels; and (3) the introduction of fire into fire-adapted ecosystems.<br><br>Within Greater Sage-Grouse PHMA and RHMAs, only treatments that conserve, enhance, or restore Greater Sage-Grouse habitat will be allowed.<br><br>Treatment methods, including prescribed burning and mechanical treatments will be used to eliminate conifer encroachment and stimulate vegetative re-growth in grassland/shrub land habitats; and to reduce fuels, thin under-stories, recycle nutrients, and create small openings in forested vegetation types.<br><br>A fire risk assessment will be completed for implementation of prescribed fire in relation to GRSG goals and objectives.<br><br>When prescribed fire is used for vegetation treatments, the burn plan will clearly indicate how COT objectives will be addressed and met by use of prescribed fire and why alternative techniques for vegetation treatment were not selected. | No change proposed. |
| ***Management Decisions: Lands and Realty*** | |
| MD R/LT-14: Lands classified as priority habitat and general habitat (or habitat classification appropriate for the sub-region) for Greater Sage-Grouse will be retained in federal management unless:<br><br>1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the Greater Sage-Grouse or<br><br>2) the agency can demonstrate that the disposal of the lands, including land exchanges, will have no direct or indirect adverse impact on conservation of the Greater Sage-Grouse. (Map 2-11) | No change proposed. |
| MD WLH & SSS-87: Avoidance area [PHMA] for major and minor ROWs. However ROWs will only be allowed in GRSG PHMA where habitat functionality will be maintained. [(Cross-listed in the RMP as R/RLP-15 where it states "PHMA" and also references Maps 2-9 & 2-10)]<br><br>MD WLH & SSS-95: Avoidance area [RHMA] for major and minor ROWs. However ROWs will only be allowed in GRSG RHMAs where habitat functionality will be maintained.<br><br>MD WLH & SSS-102: GRSG GHMA will be avoidance areas for major ROWs. GRSG GHMA will be open to minor ROWs. Utilities and similar facilities will be located adjacent to other facilities where practical and only when habitat can be maintained.<br><br>MD R/RLP-18: GHMA open to minor ROWs.<br><br>Utilities and similar facilities will be located adjacent to other facilities where practical and only when habitat can be maintained. | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD WLH & SSS-86: Exclusion area [PHMA] for renewable and solar energy exploration and facility development.<br><br>MD WLH & SSS-93: GRSG RHMAs outside of Elk Basin will be avoidance areas for renewable and solar energy exploration, development and facilities with approved mitigation.<br><br>MD WLH & SSS-94: The Elk Basin GRSG RHMA will be an exclusion area for renewable and solar energy exploration, development and facilities with approved mitigation.<br><br>MD WLH & SSS-101: Avoidance area [GHMA] for renewable and solar energy exploration, development and facilities with approved mitigation. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD R/RLP-21: Silver Tip Road in Carbon County will be designated as a ROW corridor (1,750 feet on either side of the center line of Silver Tip Road). This corridor will have a total width of 3,500 feet and 6 miles in length on public land, with the exception of the portion of this corridor occurring in the Elk Basin GRSG RHMA which will be 1,320 feet on either side of the center line of Silver Tip Road (total width of 2,640 feet) (Map 2-8). | No change proposed. |
| MD WLH & SSS-103: Consider the potential for the development of not-yet-constructed valid existing rights of surface disturbing activities as defined in Table 2 of the Monitoring Framework (Appendix D) prior to authorizing new projects in PHMA. | No change proposed. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| Fluids 18: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| Fluids 17: Where the federal government owns the mineral estate in PHMA and GHMA, and the surface estate is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| All HMA:<br><br>MD WLH & SSS-92: Geophysical exploration will be allowed on existing roads and trails with surface use prohibited from March 1 to June 15 within 4 miles of a lek (TL). | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD FLUIDS-15: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse (Map 2-4). The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 C.F.R. 3162.3-1(h).<br><br>MD FLUIDS-16: Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts on sage-grouse or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WLH & SSS-85: Open to fluid mineral leasing and development (including geophysical exploration). To protect Greater Sage-grouse, a priority species for management, surface occupancy and use for oil and gas exploration and development will be prohibited within Greater Sage-Grouse PHMA (NSO). | Potential change under Alternatives 3 and 6. |
| MD WLH & SSS-98: Surface occupancy and use for oil and gas exploration and development will be prohibited within 0.6 miles of the perimeter of Greater Sage-Grouse leks (NSO). [GHMA] | Potential change under Alternative 3. |
| MD WLH & SSS-77: Surface occupancy and use for oil and gas exploration and development will be prohibited within Greater Sage-Grouse crucial winter range (NSO). | Potential change under Alternative 3. |
| MD WLH & SSS-99: To protect nesting Greater Sage-grouse [GHMA], surface occupancy and use within 2 miles of a lek may be restricted or prohibited. Prior to such activities, a plan to mitigate impacts on nesting Greater Sage-grouse and Greater Sage-grouse nesting habitat will be prepared by the proponent and implemented upon approval by the AO (CSU). | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD WLH & SSS-82: No waivers or modifications to a fluid mineral lease no-surface-occupancy stipulation will be granted. The AO may grant an exception to a fluid mineral lease no-surface-occupancy stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and will provide a clear conservation gain to GRSG.<br><br>Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP revision. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br><br>Any exceptions to this lease stipulation may be approved by the AO only with the concurrence of the State Director. The AO may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publicly available at least quarterly. | Potential change under Alternatives 3, 4, 5, and 6. |
| RHMA:<br><br>MD WLH & SSS-89: Surface occupancy and use for oil and gas exploration and development will be prohibited within 0.6 miles of Greater Sage-Grouse leks (NSO). | Potential change under Alternative 3. |
| RHMA:<br><br>MD WLH & SSS-90: Surface use for oil and gas exploration and development will be prohibited from March 1 to June 15 in Greater Sage-Grouse nesting habitat within 3 miles of a lek (TL). | Potential change under Alternatives 3, 4, 5, and 6. |
| RHMA:<br><br>MD WLH & SSS-91: Surface occupancy and use for oil and gas exploration and development will be subject to the following special operating constraints that will maintain Greater Sage-Grouse habitat: surface disturbance density and mitigation plan (CSU). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Solid Leasable Minerals*** | |
| Action MR-1.3: At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1). | Potential change under Alternatives 3, 4, 5, and 6. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| MD SL-COAL-8: Within Greater Sage-Grouse PHMA (Map 3-5) and RHMAs solid mineral leasing (coal) will only be allowed with the following lease stipulations:<br>• Mining may only occur via subsurface methods<br>• All mine related appurtenant facilities will be placed outside of the PHMA | No change proposed. |
| ***Management Decisions: Mineral Materials*** | |
| MD SALE_MIN-4: The following areas are closed to mineral material disposals (281,597 acres)<br><br>Greater Sage-Grouse PHMA - closed to new salable minerals sales; existing permits will be renewed with no increase in the permitted boundary. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br>• the activity is within the BSU and project area disturbance cap;<br>• the activity is subject to the provisions set forth in the mitigation framework (Appendix F);<br>• all applicable required design features are applied; and [if applicable] the activity is permissible under the specific sub-regional screening criteria | Potential change under Alternatives 3 and 6. |
| ***Management Decisions: Recreation*** | |
| MD REC-27: The BLM will issue special recreation use permits as appropriate for commercial, competitive, and special events subject to guidelines in BLM Handbook 2930, resource capabilities, social conflict concerns, professional qualifications, public safety, and public needs. SRPs will only be allowed in priority habitat if they are consistent with the goals and objectives for that habitat or species. | No change proposed. |
| Management Direction REC-15 In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, and staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from important areas, etc.), or unless the development is required for visitor health and safety or resource protection. | No change proposed. |
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| MD TTM-24: Site specific travel planning within Greater Sage-Grouse PHMA will be completed within a five (5) year period after the ROD is signed where it hasn't already been completed as part of this plan. | No change proposed. |
| MD TTM-25: In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6320 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use). | No change proposed. |

| Billings RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Livestock Grazing*** | |
| MD LG-13: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds based on GRSG Habitat Objectives Table (Table 2-6) and Land Health Standards (43 CFR, Part4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis.<br><br>MD LG-15: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds based on GRSG Habitat Objectives Table (Table 2-6) and Land Health Standards (43 CFR, Part4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG-12: Site specific Greater Sage-Grouse habitat and management objectives will be developed for BLM land within Greater Sage-Grouse PHMA. These objectives will be incorporated into the respective allotment management plans (AMPs) or livestock grazing permits as appropriate. (Map 2-1) | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG-14: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (ex., fire) and legal obligations. | Potential change under Alternatives 3, 4, 5, and 6. |
| LG-16: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.4: In PHMA, work cooperatively on integrated ranch planning within GRSG habitat so operations with deeded/BLM allotments can be planned as single units. | Potential change under Alternatives 3, 4, and 5. |
| Management Direction LG-17: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3.<br><br>MD LG-11: All allotments wholly located in Greater Sage-Grouse PHMA will be considered for retirement, where the base property owner relinquishes their preference. | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2: Billings Habitat Objectives for GRSG**

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **Breeding, Nesting, and Early Brood-Rearing (Seasonal Use Period: March 1 – June 15)** | | | |
| Lek Security | Proximity of trees | .65-$Km^2$ (.388 miles) avoidance of coniferous habitats | Doherty 2008 |
| | Collision Risks | Fences and other structures that pose a high collision risk are absent or mitigated with visual markers within 1.25 miles of leks active within 5 years. | Connelly et al. 2000<br>Stiver et al. 2015 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 100 m (328 ft.) of an active lek | Stiver et al. 2015 |

### 2.3.2 Relevant Appendices

The following table shows which appendices from the 2015 plan have management direction that may change through this RMP amendment. The appendices can be found on the Billings RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Maps | Yes |
| B: Greater Sage-Grouse: Applying Lek Buffers | No |
| C: Greater Sage-Grouse Required Design Features | Yes |
| D: The Greater Sage-Grouse Monitoring Framework | No |
| E: Greater Sage-Grouse (GRSG) Disturbance Caps | Yes |
| F: Greater Sage-Grouse - Mitigation and Mitigation Measures | Yes |
| G: Adaptive Management Strategy for GRSG Habitat Management | Yes |
| H: Best Management Practices | Yes |
| I: Incorporating GRSG RMP Decisions into Grazing Authorizations | No |
| J: Fluid Minerals: Procedures in Oil and Gas Recovery and Operations and Summary of the Billings Reasonably Foreseeable Development Scenario | No |
| K: Biological Opinion | No |
| L: Wildlife Resources | No |
| M: Coal Resources: Coal Development Potential and Unsuitability Criteria | No |
| N: SRMA and ERMA Tables | No |
| O: Visual Resource Management Program | No |
| P: Air Quality Resource Management Plan: Adaptive Management Strategy for Oil and Gas Resources | No |
| Q: Implementation and Monitoring | No |
| R: Bureau of Land Management Billings Field Office and Pompeys Pillar National Monument Sign Plan | No |
| S: Oil and Gas Lease Stipulations | Yes |
| T: Areas of Critical Environmental Concern | No |
| U: Cultural and Heritage Resources | No |
| V: Recreational Setting Characteristics | No |
| W: Realty, Cadastral Survey, and Lands | No |
| X: Lands with Wilderness Characteristics | No |
| Y: Screening Criteria Checklist for Ten Year Grazing Permit / Lease Renewal and Transfers | No |
| Z: PFC – Proper Functioning Condition | No |
| AA: 1975 Memorandum between Montana and Wyoming - Administration of the Pryor Mountain Wild Horse Range | No |
| AB: Summary of Eligibility, Suitability, and Tentative Classification Determinations for Rivers in the Billings Field Office | No |
| AC: Land Health Standards | No |

## 2.4 BUTTE RMP REVISION

This appendix presents the approved RMP revision language from the 2009 record of decision for the Butte RMP that relate to GRSG management. The Butte RMP was not amended with GRSG decisions in 2015 or 2019 due to the limited extent and quality of GRSG habitat present within the Butte Field Office (see 2015 Idaho and Southwestern Montana GRSG Plan). The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2009 appendices that are listed in **Section 2.4.2** of this appendix.

### 2.4.1 Existing GRSG RMP Management – 2009 Butte RMP Revision

**Table 1. Summary of Goals, Objectives, and Management Actions in Butte RMP**

| Butte RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| **Wildlife. MA 27.** Vegetation altering activities could occur in sage grouse habitat where they do not result in long-term loss of habitats or contribute to the need to federally list sage grouse. Sufficient sagebrush densities and cover will be retained in sage grouse habitat. (Goals WF5, WF7, SE4) | Potential change under Alternatives 3, 4, 5, and 6. |
| **Grassland and Shrubland Vegetation. MA 1:** When necessary, sagebrush and grassland distribution and vigor will be restored through vegetative treatments such as reducing conifer encroachment, reducing noxious weeds, and ensuring proper grazing practices (season of use or intensity). (Goals GS1, LG2, FM2, NW1, WF1, WF2) | No change proposed. |
| **Grassland and Shrubland Vegetation. MA 2:** Management of sagebrush habitats will be a priority based on concerns over the conservation status of sage grouse, pygmy rabbit, and other species associated with sagebrush and grassland habitats. (Goals GS1, GS2, WF1, WF2, WF5, WF7). | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| **Wildlife. Goal WF7 –** Protect, maintain, restore, and rehabilitate sagebrush habitat in occupied or historic sage grouse habitat (as mapped by MFWP). | Potential change under Alternatives 3, 4, 5, and 6. |
| **Wildlife. MA 25.** Sage grouse management activities will be designed and implemented to be consistent with adopted conservation strategies such as the Bureau of Land Management National Sage-Grouse Habitat Conservation Strategy (USDI-BLM 2004) and Management Plan and Conservation Strategies for Sage Grouse in Montana – Final (MSGWG 2005) and current, accepted science. (Goals WF6, WF7, GS1, GS2, SE4) | Potential change under Alternatives 3, 4, 5, and 6. |
| **Grassland and Shrubland Vegetation. Goal 1:** Management of sagebrush habitats will be a priority based on concerns over the conservation status of sage grouse, pygmy rabbit, and other species associated with sagebrush and grassland habitats. (Goals GS1, GS2, WF1, WF2, WF5, WF7) | No change proposed. |

| Butte RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **Wildlife. MA 26.** To the extent possible, BLM will: maintain large patches of high quality sagebrush in occupied or historic sage grouse habitat (as mapped by MFWP); maintain connections between sagebrush habitats; and enlarge the size of sagebrush patches in occupied or historic sage grouse habitat. (Goals GS2, WF2, WF5, WF6, WF7, SE4) | No change proposed. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| Fluid Leaseable Minerals Table 23 Lease Terms and Stipulations.<br>Sage Grouse Strutting Grounds (leks) NSO ¼ | Potential change under Alternatives 3, 4, 5, and 6. |
| Fluid Leaseable Minerals Table 23 Lease Terms and Stipulations.<br>Sage Grouse Winter/Spring Range TL 12/1-5/15 | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2. Dillon and Butte Habitat Objectives of GRSG**

| Attribute | Indicator | Habitat Condition | Reference |
|---|---|---|---|
| **LEK HABITAT (Seasonal Use Period March 1 – May 15)1** | | | |
| Lek Security | Proximity of trees | Trees (i.e., in Idaho mainly juniper, conifers, and does not include old-growth juniper, pinyon pine and mountain mahogany; in Montana mainly Douglas-fir) absent or uncommon on shrub/grassland ecological sites within 1.86 miles (3 km) of occupied leks. | Baruch-Mordo et al.2013<br>Stiver et al. 2015 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 ft. (100 m) of an occupied lek | Stiver et al. 2015 |
| **NESTING/EARLY BROOD REARING (Seasonal Use Period May 1 – June 30) 1** | | | |
| Cover and Food | Sagebrush cover [2] | 15-25% | Connelly et al. 2000<br>Connelly et al. 2003<br>Hagen et al. 2007 |
| | Sagebrush height<br>Arid sites[3]<br>Mesic sites[4] | <br>12-31 inches (30-80cm)<br>16-31 inches (40-80cm) | Connelly et al. 2000 |
| | Predominant sagebrush shape | Predominantly spreading shape[5] | Stiver et al. 2015 |
| | Perennial grass cover (such as native bunchgrasses) [2]<br>Arid sites[3]<br>Mesic sites[4] | <br><br><br>>10%<br>>15% | Connelly et al. 2000<br>Stiver et al. 2015 |
| | Perennial grass (and forb) height (includes residual grasses) | ≥ 7 inches | Connelly et al. 2000<br>Connelly et al. 2003<br>Hagen et al. 2007<br>Stiver et al. 2015 |
| | Perennial forb cover [2]<br>Arid sites[3]<br>Mesic sites[4] | <br>>5%<br>>10% | Connelly et al. 2000 |
| | Perennial forb availability | Preferred forbs are common with several species present6 | Stiver et al. 2015 |

| Attribute | Indicator | Habitat Condition | Reference |
|---|---|---|---|
| **LATE BROOD-REARING/SUMMER (July-October)1 Late brood-rearing areas, such as riparia** | | | |
| Cover and Food | Sagebrush cover[2] | Uplands 10-25%<br>Riparian/Meadow: Sagebrush cover within 100 m | Connelly et al. 2000 |
| | Sagebrush height | 16 to 32 inches (40-80cm) | Connelly et al. 2000 |
| | Perennial grass and forb cover [2] | >15% | |
| | Upland and riparian perennial forb availability [2] | Preferred forbs are common with appropriate numbers of species present,6 | Stiver et al. 2015 |
| | Riparian and/or meadow habitat condition | Proper Functioning Condition | Stiver et al. 2015 |
| **WINTER November-March1 (Apply to areas of known or likely winter-use)** | | | |
| Cover and Food | Sagebrush cover and height above snow, | Sagebrush is at least 10 inches (25 cm) above snow and ≥10% cover[16] | Connelly et al. 2000<br>Stiver et al. 2015 |

Notes:

[1] Seasonal dates can be adjusted by local unit according to geographic region.

[2] Since plant species and/or life forms may overlap, total vegetative cover, inclusive of shrubs, forbs and grasses may exceed 100%.

[3] Arid corresponds to the 10 – 12 inch precipitation zone; Artemisia tridentata wyomingensis is a common big sagebrush subspecies for this type site (Stiver et al. 2015).

[4] Mesic corresponds to the >12 inch precipitation zone; Artemisia tridentata vaseyana is a common big sagebrush sub-species for this type site (Stiver et al. 2015).

[5] Collectively the indicators for sagebrush (cover, height, and shape), perennial grass and perennial forb (cover, height and/or availability) represent the desired condition range for nesting/early brood rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. 2015. Sagebrush plants that are more tree or columnar-shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.

[6] Preferred forbs are listed in Stiver et al. 2015. Overall total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred.

[15] Some late brood habitat occurs at higher elevations outside of mapped nesting habitat and some is embedded within nesting landscapes especially areas such as wet meadows, riparian areas, springs and seeps.

[16] Winter habitat metrics are a guideline but snow depths and habitat availability may vary widely depending on winter severity, topography and elevation.

### 2.4.2 Relevant Appendices

The following table shows which appendices from 2009 plan have management direction that may change through this RMP amendment. The appendices can be found on the Butte RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Travel Planning | No |
| B: Laws | No |
| C: Visual Resource Management (VRM) | No |
| D: SIMPPLLE Model | No |
| E: Best Management Practices | Yes |
| F: Land Health Standards | No |
| G: Wildlife | No |
| H: Recreation Opportunity Spectrum (ROS) | No |
| I: Areas of Critical Environmental Concern (ACEC) | No |
| J: Wild and Scenic Rivers (WSR) | No |
| K: Cultural | No |
| L: Lands and Realty | No |
| M: Fluid Minerals | Yes |
| N: Implementation and Monitoring | No |

# Appendix 2.5
# Dillon RMP Amendment

This page intentionally left blank.

## 2.5 DILLON RMP AMENDMENT

This appendix presents the GRSG approved RMP amendment language from the 2015 record of decision for the Dillon RMP. The Dillon RMP was not amended in 2019. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 appendices that are listed in **Section 2.5.2** of this appendix.

### 2.5.1 Existing GRSG RMP Management – Dillon RMP Amendment

**Table 1. Summary of Goals, Objectives, and Management Actions in Dillion 2015 ARMPs/Amendments**

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| **Objective SSS 1:** Maintain or make progress toward all lands within PHMA and IHMA (at least 70%) capable of producing sagebrush so there is a minimum of 15 percent sagebrush cover and conifers absent to uncommon within 1.86 miles of occupied leks. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective VEG 3:** In all SFA and PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush canopy cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | No change proposed. |
| **MD VEG 8:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and tools like the FIAT report (Chambers et. al., 2014) will help refine the location for specific areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **Objective VEG 2:** Increase the amount and functionality of seasonal habitats by:<br>a. Increasing or enhancing canopy cover and average patch size of sagebrush.<br>b. Increasing the amount, condition and connectivity of seasonal habitats.<br>c. Protecting or improving GRSG migration/movement corridors.<br>d. Reducing conifer encroachment within GRSG seasonal habitats.<br>e. Improving understory (grass, forb) and/or riparian condition within breeding and late broodrearing habitats.<br>f. Reducing the extent of annual grasslands within and adjacent to PHMA and IHMA. Decadal treatment objectives by population area are identified in Table 2-3, Estimated Acres of Treatment Needed within a 10-Year Period to Achieve Vegetation Objectives on BLM Administered Lands1. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective VEG 1:** Reconnect and expand areas of higher native plant community integrity/rangeland health to increase the extent of high quality habitat and, where possible, to accommodate the future effects of climate change. | No change proposed. |
| **MD VEG 1:** Implement habitat rehabilitation or restoration projects in areas that have potential to improve GRSG habitat using a full array of treatment activities as appropriate, including chemical, mechanical and seeding treatments. | No change proposed. |
| **MD VEG 2:** Implement vegetation rehabilitation or manipulation projects to enhance sagebrush cover or to promote diverse and healthy grass and forb understory to achieve the greatest improvement in GRSG habitat based on FIAT Assessments, HAF assessments, other vegetative assessment data and local, site specific factors that indicate sagebrush canopy cover or herbaceous conditions do not meet habitat management objectives (i.e. is minimal or exceeds optimal characteristics). This may necessitate the use of prescribed fire as a site preparation technique to remove annual grass residual growth prior to the use of herbicides in the restoration of certain lower elevation sites (e.g., Wyoming big sagebrush) but such efforts will be carefully planned and coordinated to minimize impacts on GRSG seasonal habitats. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 3:** Require use of native seeds for restoration based on availability, adaptation (ecological site potential), and probability of success (Richards et al. 1998). Non-native seeds may be used as long as they support GRSG habitat objectives (Pyke 2011) to increase probability of success, when adapted seed availability is low or to compete with invasive species especially on harsher sites. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD VEG 4:** Implement management changes in restoration and rehabilitation areas, as necessary, to maintain suitable GRSG habitat, improve unsuitable GRSG habitat and to ensure long-term persistence of improved GRSG habitat (Eiswerth and Shonkwiler 2006). Management changes can be considered during livestock grazing permit renewals, travel management planning, and renewal or reauthorization of ROWs. | No change proposed. |
| **MD VEG 5:** Consider establishing seed harvest areas that are managed for seed production (Armstrong 2007) to provide a reliable source of locally adapted seed to use during rehabilitation and restoration activities. | No change proposed. |
| **MD VEG 9:** Incorporate results of the FIAT Assessments into projects and activities addressing invasive species as appropriate. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 10:** Implement noxious weed and invasive species control using integrated vegetation management actions per national guidance and local weed management plans for Cooperative Weed Management Areas in cooperation with State and Federal agencies, affected counties, and adjoining private lands owners. | No change proposed. |
| **MD VEG 11:** Conduct integrated weed management actions for noxious and invasive weed populations that are impacting or threatening GRSG habitat quality using a variety of eradication and control techniques including chemical, mechanical and other appropriate means. | No change proposed. |
| **MD VEG 12:** Require project proponent (projects described in MD SSS 27 and which are included in the anthropogenic disturbance cap evaluation) to ensure that noxious weeds and invasive species caused as a result of the project are treated to eliminate establishment on the disturbed project construction areas for at least 3 years and monitored and treated during the life of the project. | No change proposed. |
| **MD VEG 13:** Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No change proposed. |
| **MD VEG 6:** Allocate use of native seed to GRSG or ESA listed species habitat in years when preferred native seed is in short supply. This may require reallocation of native seed from ESR projects outside of PHMA or IHMA to those inside it. Where probability of success or native seed availability is low, nonnative seeds may be used as long as they meet GRSG habitat conservation objectives (Pyke 2011). Re-establishment of appropriate sagebrush species/subspecies and important understory plants, relative to site potential, shall be the highest priority for rehabilitation efforts. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD VEG 7:** During land health assessments, evaluate the relative value of existing nonnative seeding within GRSG habitat as: 1) a component of a grazing system allowing improvement of adjacent native vegetation, 2) development of a forage reserve, 3) incorporation into a fuel break system (Davies et al. 2011) or 4) restoration/diversification for GRSG habitat improvement. Where appropriate and feasible, diversify seedings, or restore to native vegetation when potential benefits to GRSG habitat outweigh the other potential uses of the non-native seeding, with emphasis on PHMA and IHMA. Allow recolonization of seedings by sagebrush and other native vegetation. | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| **Goal SSS 1:** Maintain and/or increase the abundance, distribution and connectivity of GRSG by conserving, enhancing and restoring GRSG habitat to maintain resilient populations by reducing, eliminating or minimizing threats to GRSG habitats. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Goal SSS 2:** Provide for the needs of GRSG and their habitat while also providing for resource uses in accordance with BLM's direction for multiple use and sustained yield as described in FLPMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective SSS 3:** Maintain a resilient population of GRSG in Idaho and Southwestern Montana. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Goal SSS 5:** Conserve, enhance, and restore the sagebrush ecosystem upon which GRSG populations depend in an effort to maintain and/or increase their abundance and distribution, in cooperation with other conservation partners. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Goal SSS 4:** Reduce the risk of West Nile Virus or other disease outbreaks from BLM management actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS - 5:** Prioritize activities and mitigation to conserve, enhance and restore GRSG habitats (i.e., fire suppression activities, fuels management activities, vegetation treatments, invasive species treatments etc.) first by Conservation Area, if appropriate (Conservation Area under adaptive management or at risk of meeting an adaptive management soft or hard trigger), followed by PHMA, then IHMA then GHMA within the Conservation Areas. Local priority areas within these areas will be further refined as a result of completing the GRSG Wildfire and Invasive Species Habitat Assessments as described in Appendix H. This can include projects outside GRSG habitat when those projects will provide a benefit to GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 2:** Within each Conservation Area designate GRSG Habitat Management Areas: Priority, Important and General Habitat Management Areas (Figure 2-1). Priority Habitat Management Areas (PHMA) focus on conserving the two key meta-populations in the subregion. PHMA encompasses areas with the highest conservation value to GRSG, based on the presence of larger leks, habitat extent, important movement and connectivity corridors and winter habitat. PHMA include adequate area to accommodate continuation of existing land uses and landowner activities. Important Habitat Management Areas (IHMA) contain additional habitat and populations that provide a management buffer for the PHMA and to connect patches of PHMA. IHMA encompasses areas of generally moderate to high conservation value habitat and/or populations and in some Conservation Areas includes areas beyond those identified by USFWS as necessary to maintain redundant, representative and resilient populations (Priority Areas for Conservation (PACs)). IHMA are typically adjacent to PHMA but generally reflect somewhat lower GRSG population status and/or reduced habitat value due to disturbance, habitat fragmentation or other factors. There are no IHMA designated within the Southwestern Montana Conservation Area. General Habitat Management Areas (GHMA) encompass habitat that is outside of PHMA or IHMA. GHMA contain approximately 10 percent of the occupied leks that are also of relatively low male attendance compared to leks in PHMA or IHMA. GHMA are generally characterized by lower quality disturbed or patchy habitat of low lek connectivity. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS- 3:** In Montana, designate PHMA to encompass Montana Fish, Wildlife, and Parks 2009 Greater Sage Grouse Core Area designations. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 10 -** Designate Sagebrush Focal Areas (SFA) as shown on Figure 1-2. SFA will be managed as PHMA, with the following additional management:<br>* Recommended for withdrawal from the General Mining Act of 1872, as amended, subject to valid existing rights.<br>* Managed as NSO, without waiver, exception, or modification, for fluid mineral leasing.<br>* Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective SSS 4:** Designate GRSG management areas and associated management to maintain a resilient population and to designate strategically located adjacent areas to provide a buffer from unpredictable habitat loss such as wildfire to the resilient population areas. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **Objective SSS 5:** Identify and strategically protect larger intact sagebrush areas and areas of lower fragmentation to maintain GRSG population persistence. | No change proposed. |
| **MD SSS-1:** Designate five GRSG Conservation Areas (see Glossary) within the subregion to form the geographic basis for achieving population objectives; evaluating the disturbance density and adaptive regulatory triggers; and tailor adaptive management responses. These conservation areas are depicted in Figure 2-13. These areas are referred to as Mountain Valleys, Desert, West Owyhee, Southern and Southwestern Montana Conservation Areas.<br><br>Conservation Area Description<br><br>[….]<br><br>Southwestern Montana – located in southwestern Montana - encompassing the Dillon Butte BLM Field Office and Beaverhead-Deerlodge National Forest boundaries (the Butte RMP is not being amended and since there are limited GRSG federal GHMA, management actions do not apply in the Butte Field Office). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 6 -** The management area map and Biologically Significant Unit (BSU) baseline map will be reevaluated in conjunction with plan evaluation processes (i.e. approximately every 5 years). This reevaluation can indicate the need to adjust PHMA, IHMA or GHMA or the habitat baseline. These adjustments can occur upon completion of the appropriate analysis and process (e.g., plan amendment) to review the allocation decisions based on the map. Results from the Wildfire and Invasive Species Assessments, such as identified focal or emphasis areas will also be used to help inform mapping adjustments during this evaluation. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 7 -** GRSG habitat within the project area will be assessed during project-level NEPA analysis within the management area designations (PHMA, IHMA, GHMA). Project proposals and their effects will be evaluated based on the habitat and values affected. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 8** - Idaho BLM will annually update the Key Habitat map, in order to reflect habitat changes resulting from wildfire, succession, and vegetation treatments that occurred or were observed since the last update. Key habitat includes areas of generally intact sagebrush that provide sage-grouse habitat during some portion of the year. This map also identifies potential restoration areas (perennial grassland annual grasslands, conifer encroachment and recent burns). This map a broad scale current vegetation map that changes as habitat is lost or restored. The Key Habitat Map is not an allocation decision such as PHMA, IHMA, and GHMA. Updates to the map will also occur if it is determined that mapping errors or omissions have occurred, or that radio-telemetry studies indicate that GRSG are consistently utilizing an area. Updates are also intended to capture recommendations by the field offices, GRSG Local Working Groups, or agency partners in GRSG conservation. Project-level evaluations of GRSG habitat during the NEPA process can also be used to inform the annual update. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 9 -** Areas of habitat outside of delineated habitat management areas identified during the Key habitat update process will be evaluated during site specific NEPA for project level activities and GRSG required design features (Appendix C) and buffers (Appendix B) will be included as part of project design. These areas will be further evaluated during plan evaluation and the 5-year update to the management areas, to determine whether they should be included as PHMA, IHMA, or GHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 32 -** Incorporate RDFs as described in Appendix C in the development of project or proposal implementation, reauthorizations or new authorizations and suppression activities, as conditions of approval (COAs) into any post-lease activities and as best management practices for locatable minerals activities, to the extent allowable by law, unless at least one of the following conditions can be demonstrated and documented in the NEPA analysis associated with the specific project:<br>a. A specific RDF is not applicable to the site-specific conditions of the project or activity;<br>b. A proposed design feature or BMP is determined to provide equal or better protection for GRSG or its habitat; or<br>c. Analysis concludes that following a specific RDF will provide no more protection to GRSG or its habitat than not following it, for the project being proposed. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 33 -** Conduct implementation and project activities, including construction and short-term anthropogenic disturbances consistent with seasonal habitat restrictions described in Appendix C. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 34 -** RDFs and seasonal habitat restrictions will not be required for emergency or short-term activities necessary to protect and preserve human life or property. | No change proposed. |
| **MD SSS 35 -** In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the USGS Report Conservation Buffer Distance Estimates for Greater Sage-Grouse – A Review (Open File Report 2014-1239) in accordance with Appendix B. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 38:** Monitor the effectiveness of projects (e.g., fuel breaks. fuels treatments) until objectives have been met or until it is determined that objectives cannot be met, according to the monitoring schedule identified for project implementation. | No change proposed. |
| **MD SSS 43:** Monitor GRSG habitat as described in the monitoring framework plan (Appendix D) in coordination with IDFG and Montana FWP**.** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 37 -** Once FIAT Assessments are complete, annually complete a review of FIAT Assessment implementation efforts within GRSG habitat with appropriate USFWS and state agency personnel. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 41:** Use lek, nesting and winter habitat maps and key habitat map (updates) to annually assess GRSG population and habitat status in the context of the adaptive management triggers. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 42:** Continue to support updates to the Key Habitat map to track vegetation changes in relation to GRSG habitat on a yearly basis, until such a time this process is replaced. The process used to update the Key Habitat Map is described in Appendix F of the FEIS. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Coordination*** | |
| **MD CC 1**: Collaborate, coordinate and utilize cooperative planning efforts to implement and monitor activities to achieve desired conditions and to maximize the utilization of available funding opportunities. Coordination efforts can include: adjacent landowners, federal and state agencies, local governments, tribes, communities, other agencies, resource advisory groups, public lands permit holders and nongovernmental organizations. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 2:** Develop a cooperative MOU between the BLM, Forest Service and State of Idaho to establish the State of Idaho as a cooperating agency during implementation of the final decision. The MOU will identify responsibilities, role and interaction of the BLM, Forest Service and State of Idaho. Montana BLM will participate as appropriate on Montana's Sage-grouse Oversight Team to facilitate coordination and implementation of BLM's final decision and Montana's Executive Order No. 10-2014. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD CC 3:** The BLM will consider any recommendations from the Governor of Idaho as a result of evaluation completed by the Sage-Grouse Implementation Task Force. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 4:** Idaho: The BLM will coordinate with the State of Idaho and the Idaho Sage-Grouse Implementation Task Force regarding proposed management changes, the implementation of conservation measures, mitigation, and site-specific monitoring, related to adaptive management, anthropogenic disturbance and livestock grazing. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 5:** Montana: The BLM will coordinate with the State of Montana and the Montana Sage-grouse Oversight Team regarding proposed management changes, the implementation of conservation measures, mitigation, and site-specific monitoring, related to adaptive management and anthropogenic disturbance. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 6:** Upon completion of the Record of Decision the BLM will develop an initial Implementation Guide for BLM District and Field Offices within a year of issuance of the Record of Decision. This Guide will define and describe consistent application of the allocations, management actions, required design features, and etc. that are contained within the final plan and will be updated and expanded as needed to respond to issues and concerns. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 7:** At the state level, BLM will coordinate with IDFG, MFWP, USFWS, and other conservation partners in collaborative efforts with adjacent states (Oregon, Nevada, Utah, Montana, Wyoming) in GRSG MZs IV and II to evaluate GRSG habitat and population status and trends and make appropriate regional recommendations for GRSG conservation at broader scales. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 8**: At the state level, BLM will coordinate with the appropriate WAFWA Sage-grouse Technical Committee to develop consistent population and habitat monitoring approaches that facilitate GRSG conservation at the MZ scale. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD CC 9:** All prescribed burning will be coordinated with state and local air quality agencies to ensure that local air quality is not significantly impacted by BLM activities. | No change proposed. |
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>● To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>● To evaluate land use plan effectiveness for sage-grouse conservation, and<br>● As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Disturbance*** | |
| **Goal SSS 3:** Manage anthropogenic development and human disturbance to minimize the likelihood of adverse population level effects on GRSG. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 27 -** For Idaho and Montana, if the 3 percent anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA (or IHMA in Idaho) Habitat Management Areas in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the General Mining Law of 1872, as amended, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA and IHMA in any given BSU until the disturbance has been reduced to less than the cap, as measured according to the Disturbance and Adaptive Management Appendix (Appendix E) for the intermediate scale.<br><br>For Montana, if the 3 percent disturbance cap is exceeded on lands (regardless of land ownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 Mining Law, valid existing rights, etc.) will be permitted by BLM within PHMA in a project analysis area until the disturbance has been reduced to less than the cap. If the BLM determines that the State of Montana has adopted a GRSG Habitat Conservation Program that contains comparable components to those found in the State of Wyoming's Core Area Strategy including an all lands approach for calculating anthropogenic disturbances, a clear methodology for measuring the density of operations, and a fully operational Density Disturbance Calculation Tool, the 3% disturbance cap will be converted to a 5% cap for all sources of habitat alteration within a project analysis area.<br><br>In both Idaho and Montana, within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br><br>[Management action clarified in 2018 to reflect State of Montana process, under DOI-BLM-MT-2018-0005-CX. RMP Maintenance Action Language: This maintenance action is to clarify that the BLM has determined that the State's all lands approach to analyzing disturbance is operational and effective. Therefore, the BLM will adopt and implement the State's approach as identified in Attachments D (Stipulations for Uses and Activities) and H (definitions) of Montana Executive Order 12-2015.] | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 28 -** New anthropogenic disturbances within PHMA or IHMA within a Conservation Area where the disturbance cap is already exceeded from any source or where the proposed development will result in the cap being exceeded will not be allowed in within that Conservation Area until enough habitat has been restored within that Conservation Area to maintain the area under this cap (subject to valid existing rights). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 30 -** In Montana, the BLM will apply the project/action screen and mitigation process (Appendix J). | Potential change under Alternatives 3, 4, 5, and 6. |
| **Montana 1:** BLM will establish an inter-agency State GRSG Conservation Team at the state level (both Idaho and Montana) to help guide conservation of GRSG through compensatory mitigation, within 90 days of the issuance of the Record of Decision. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Montana 2:** The BLM, in coordination with the GRSG Conservation Team will develop a Mitigation Strategy within one year of the issuance of the Record of Decision. In Idaho this strategy will be consistent with the Idaho Mitigation Framework (Appendix F). | Potential change under Alternatives 3, 4, 5, and 6. |
| **Montana 3:** In all GRSG habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation (Appendix E, Table E-1), the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Montana 4:** Mitigate anthropogenic development (Appendix E, Table E-1) impacts on GRSG habitat through application of appropriate mitigation in accordance with the Mitigation Framework (Appendix F and L). | Potential change under Alternatives 3, 4, 5, and 6. |
| **Montana 5:** Consistent with regulations for minerals activities, require a full reclamation bond specific to the site when surface disturbing activities are proposed. Ensure reclamation bonds are sufficient to cover costs to fully rehabilitate lost GRSG habitat. Base the reclamation costs on the assumption that contractors for the BLM will perform the work. Areas are considered fully rehabilitated when they meet the conditions described in Table 2-2. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 17 -** Habitat Hard Triggers are defined as:<br>- A 20 percent loss of Key Habitat within the BSU of the PHMA of a Conservation Area when compared to the 2011 baseline, inclusive of all land ownerships or<br>- A 20 percent loss of Key Habitat within the BSU of the IHMA of a Conservation Area when compared to the 2011 baseline. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 18 -** Habitat Soft Triggers are defined as:<br>- A 10 percent loss of Key Habitat within the BSU of the PHMA of a Conservation Area when compared to the 2011 baseline; or<br>- A 10 percent loss of Key Habitat within the BSU of the IHMA of a Conservation Area when compared to the 2011 baseline. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 19 -**Population Hard Triggers are defined as:<br>- A 20 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change significantly below 1.0 within PHMA within a Conservation Area over the same 3-year period; or<br>- A 20 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change significantly below 1.0 within IHMA within a Conservation Area over the same 3-year period.<br>- Significance is defined by the 90 percent confidence interval around the current 3-year finite rate of change. If the 90 percent confidence interval is less than, and does not include 1.0, then the finite rate of change is considered significant. The finite rate of change and variance will be calculated following Garton et al. (2011). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 20 -**Population Soft Triggers are defined as:<br>- A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change below 1.0 within PHMA within a Conservation Area over the same 3-year period; or<br>- A 10 percent decline in the current 3-year average of total maximum number of males counted compared to the 2011 maximum male baseline and a finite rate of change below 1.0 within IHMA within a Conservation Area over the same 3-year period. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 21 -** When any of the Criteria for Soft Triggers have been met the Implementation Team will evaluate causal factors and recommend additional potential implementation level activities (Appendix E). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 22 -** When any of the Criteria for Hard Triggers have been met then all PHMA management actions will be applied to the IHMA within that Conservation Area and the Implementation Team will evaluate causal factors and recommend additional potential implementation level activities. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 23 -** If an adaptive regulatory trigger is tripped and livestock grazing is identified as a probable limiting factor then adjustments will follow the Adaptive Grazing Management Response described in Appendix E. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 24 -** Remove any adaptive management response when the habitat or maximum male population count (i.e., 3-year average) returns to or exceeds the 2011 baseline levels within the associated Conservation Area in accordance with the Adaptive Management Strategy (Appendix E). In such a case, changes in management allocations resulting from a tripped trigger will revert back to the original allocation (MD SSS 22). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 25:** Montana: Follow the NPT Adaptive Management Guidance and Sideboards. When a hard trigger is hit in a BSU, the designated response will be put in place in that BSU. Triggers and responses have been developed with local state and USFWS experts (Appendix E). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 26 -** Idaho and Montana: When a hard trigger is hit in a BSU within a PAC that has multiple BSUs, including those that cross state lines, the WAFWA Management Zone Greater Sage-Grouse Conservation Team will convene to determine the causal factor, put project-level responses in place, as appropriate and discuss further appropriate actions to be applied. The team will also investigate the status of the hard triggers in other BSUs within the PAC and will invoke the appropriate plan response. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 12 -** Utilize monitoring information collected through the Monitoring Framework (Appendix D) to determine when adaptive regulatory triggers have been met. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS- 4:** Annually prioritize Conservation Areas at the state scale considering results of the annual adaptive regulatory trigger evaluations relative to implementation of restoration and mitigation activities. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| **Objective FIRE 2:** Manage wildfires to minimize loss of sagebrush and protect GRSG habitat. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 31:** If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plan will address:<br>· why alternative techniques were not selected as a viable options;<br>· how GRSG goals and objectives will be met by its use;<br>· how the COT Report objectives will be addressed and met;<br>· a risk assessment to address how potential threats to GRSG habitat will be minimized.<br><br>Allow prescribed fire as a vegetation or fuels treatment in Wyoming big sagebrush sites or other xeric sagebrush species sites, or in areas with a potential for post-fire exotic annual dominance only after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect Greater Sage-Grouse habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Allow prescribed fire in known sage-grouse winter range only after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | No change proposed. |
| **MD FIRE 15:** Suppression priorities: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. Maintaining GRSG habitat will be the highest natural resources priority immediately after human life and property, commensurate with threatened and endangered species habitat or other critical habitats to be protected. | No change proposed. |
| **Objective FIRE 1:** Design fuel treatments to restore, enhance, or maintain GRSG habitat. | No change proposed. |
| **MD FIRE 29:** Prioritize the use of native seeds for fuels management treatment based on availability, adaptation (site potential), and probability of success. Where probability of success or native seed availability is low or non-economical, nonnative seeds may be used to meet GRSG habitat objectives to trend toward restoring the fire regime. When reseeding, use fire resistant native and nonnative species, as appropriate, to provide for fuel breaks. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 1**: (Wildfire Preparedness): Support development and implementation of Rangeland Fire Protection Associations (RFPAs) in coordination with the State of Idaho. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 2:** Develop a consistent approach to fire restrictions within GRSG habitat through the existing coordinated inter-agency approach to fire restrictions based upon National Fire Danger Rating System thresholds (fuel conditions, drought conditions, and predicted weather patterns). | No change proposed. |
| **MD FIRE 3:** Annually incorporate into existing fire management plans results and updates from the Wildfire and Invasive Species Habitat Assessments (FIAT Assessments) described in Appendix H, to communicate/explain the resource value of GRSG habitat, including fire prevention messages and actions to reduce human-caused ignitions. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 4**: Continue to participate with the Wildland Fire Leadership Council, a cooperative, interagency organization dedicated to achieving consistent implementation of the goals, actions, and policies in the National Fire Plan and the Federal Wildland Fire Management Policy. | No change proposed. |
| **MD FIRE 5:** Continue annual coordination meetings held between cooperating agencies that have fire suppression responsibilities. Incorporate Rangeland Fire Protection Associations and other stakeholders into this coordination. Discuss priority suppression areas and distribute maps showing priority suppression areas at both the Conservation Area and the local office levels as based on the adaptive management strategy and FIAT Assessments. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 6:** Ensure firefighter personnel receive annual orientation regarding GRSG habitat and sagebrush management issues as related to wildfire suppression. | No change proposed. |
| **MD FIRE 7:** As part of the FIAT Assessments, identify roads, trails, and recreational use areas with high frequency of human caused fires within or adjacent to the PHMA or IHMA. Consider these areas during annual fire restriction evaluations, and as appropriate, through site specific management. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 8:** Coordinate with Federal, State and local jurisdictions on fire and litter prevention programs to reduce human caused ignitions. | No change proposed. |
| **MD FIRE 9:** Implement activities identified within the FIAT Assessments. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 10:** Complete Wildland Fire and Invasive Species Assessments (FIAT Assessments) as described within Appendix H and incorporate results into appropriate Fire Management Plans as they are completed. FIAT Assessments are interdisciplinary evaluations of the threats posed by wildfire and invasive species, as well as identification of focal and emphasis habitats/treatment opportunities for fuels management, fire management, and restoration. These FIAT Assessments identify focal and emphasis habitats and describe strategies for fuels management, suppression and restoration activities. Focal and Emphasis Habitats identified through the FIAT Assessment to further refine priority areas for treatments to reduce the threats posed by wildfire, invasive annual grass and conifer expansion**.** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 11:** As part of the FIAT Assessments incorporate a wildfire response time analysis focusing on response time to identified priority areas within PHMA and IHMA or on those fires that have the potential to impact PHMA and IHMA. Incorporate findings into Unit Initial Attack program that determines initial attack resources. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 12:** As part of the FIAT Assessment incorporate a water capacity analysis for suppression purposes, including potential private water sources. Utilized the analysis to ensure water availability for response to fire in or threatening PHMA and IHMA during initial attack. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 13:** During high fire danger conditions, stage initial attack and secure additional resources closer to priority areas identified in the FIAT Assessments, based on anticipated fires and weather conditions, with particular consideration of the West Owyhee, Southern and Desert Conservation Areas to ensure quicker response times in or near GRSG habitat after considerations and placement of resources to protect human life and property. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 14:** Utilize a full range of fire management strategies and tactics through strategic wildfire suppression planning consistent with appropriate management response and within acceptable risk levels, to achieve resource objectives for GRSG habitat consistent with land use plan direction. Utilizing both direct and indirect attack as appropriate to limit the overall amount of GRSG habitat burned. This can include suppressing fires in intact sagebrush habitats; limiting fire growth in GHMA when suppression resources are available or managing wildfire for resource benefit in areas of conifer (juniper) encroachment. | No change proposed. |
| **MD FIRE 16:** Ensure close coordination with federal and state firefighters including the Rangeland Fire Protection Associations during suppression activities. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 17:** Design and implement fuels treatments that will reduce the potential start and spread of unwanted wildfires and provide anchor points or control lines for the containment of wildfires during suppression activities with an emphasis on maintaining, protecting, and expanding sagebrush ecosystems and successfully rehabilitated areas and strategically and effectively reduce wildfire threats in the greatest area. | No change proposed. |
| **MD FIRE 18:** Enhance (or maintain/retain) sagebrush canopy cover and community structure to match expected potential for the ecological site and consistent with GRSG habitat objectives unless fuels management objectives requires additional reduction in sagebrush cover to meet strategic protection of GRSG habitat. Closely evaluate the benefits of the fuel management treatments against the additional loss of sagebrush cover on the local landscape in the NEPA process. | No change proposed. |
| **MD FIRE 19:** Apply appropriate seasonal restrictions for implementing vegetation and fuels management treatments according to the type of seasonal habitats present. Allow no treatments in known winter range unless the treatments are designed to strategically reduce wildfire risk around and/or in the winter range and will protect, maintain, increase, or enhance winter range habitat quality.<br><br>Ensure chemical applications are utilized where they will assist in success of fuels treatments.<br><br>Strategically place treatments on a landscape scale to prevent fire from spreading into PHMA or WUI. | No change proposed. |
| **MD FIRE 20:** Develop a fuels continuity and management strategy to expand, enhance, maintain and protect GRSG habitat informed by the FIAT Assessments completed as described in Appendix H. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 21:** When developing the fuels management strategy as part of the FIAT Assessment described in Appendix H consider up-to-date fuels profiles; land use plan direction; current and potential habitat fragmentation; sagebrush and GRSG ecological factors; active vegetation management steps to provide critical breaks in fuel continuity where appropriate; incorporate a comparative risk analysis with regard to the risk of increased habitat fragmentation from a proposed action versus the risk of large scale fragmentation posed by wildfires if the action is not taken. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 22:** Fuel treatments will be designed through an interdisciplinary process to expand, enhance, maintain, and protect GRSG habitat which considers a full range of cost-effective fuel reduction techniques, including: chemical, biological (including grazing and targeted grazing), mechanical and prescribed fire treatments. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 23:** Existing and proposed linear ROWs can be considered for use and maintenance as vegetated fuel breaks in appropriate areas (this activity may or may not be part of the ROW permit or the responsibility of the permit holder, in cases where this activity is considered part of mitigation for project design then it will be appropriately included as part of the ROW permit and the responsibility of the permit holder for development and maintenance). | No change proposed. |
| **MD FIRE 24:** Fuel breaks will incorporate existing vegetation treatments (seedings), rocky areas or other appropriate topography or features or be located adjacent to existing linear disturbance areas where appropriate. Fuel breaks should be placed in areas with the greatest likelihood of compartmentalizing a fire and/or to foster suppression options to protect existing intact habitat. | No change proposed. |
| **MD FIRE 25:** Strategically pre-treat areas to reduce fine fuels consistent with areas and results identified within the Wildfire and Invasive Species Assessments. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 26:** Protect vegetation restoration and rehabilitation efforts/projects from subsequent fire events. | No change proposed. |
| **MD FIRE 27:** Targeted grazing as a fuels treatment to adjust the vegetation conditions to reduce the potential start and spread of wildfires may be implemented within existing grazing authorizations if feasible such as through temporary non-renewable authorizations, or through contracts, agreements or other appropriate means separate from existing grazing authorizations and permits**.** | No change proposed. |
| **MD FIRE 28:** Targeted grazing to achieve fuels management objectives should conform to the following criteria:<br>a. Targeted grazing should be implemented strategically on the landscape, and directly involve the minimum footprint and grazing intensity required to meet fuels management objectives.<br>b. Conform to the applicable Standards for Rangeland Health and Guidelines for Livestock Grazing Management (Idaho or Montana) at the assessment scale (pasture/watershed).<br>c. Where feasible and applicable coordinate with the grazing permittee to strategically reduce fuels through livestock management within the Mandatory Terms and Conditions of the applicable grazing authorizations. | No change proposed. |
| **MD FIRE 30:** Maintain effectiveness of fuels projects, including fuel breaks, to ensure long-term success, including persistence of seeded species and/or other treatment components while maintaining the integrity of adjacent vegetation. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD FIRE 32:** Utilize the findings and Restoration/Rehabilitation Strategy developed as part of the FIAT Assessment process described in Appendix H to determine if GRSG rehabilitation actions are needed, based on ecological potential, and direct emergency stabilization and rehabilitation (ESR) (BLM) actions after fire. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 33:** Incorporate GRSG Habitat Management Objectives into ESR/BAER plans based on site potential and in accordance with the Restoration/Rehabilitation Strategy developed as a result of the FIAT Assessments. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 34:** Provide adequate rest from livestock grazing to allow natural recovery of existing vegetation and successful establishment of seeded species within burned/ESR areas. All new seedings of grasses and forbs should not be grazed until at least the end of the second growing season, and longer as needed to allow plants to mature and develop robust root systems which will stabilize the site, compete effectively against cheatgrass and other invasive annuals, and remain sustainable under long-term grazing management. Adjust other management activities, as appropriate, to meet ESR objectives. | No change proposed. |
| **MD FIRE 35:** Adjust, as appropriate, livestock management on adjacent unburned areas to mitigate the effect of the burn on local GRSG populations. | No change proposed. |
| **MD FIRE 36:** Following seedling establishment, modify grazing management practices if needed to achieve long-term vegetation and habitat objectives. | No change proposed. |
| ***Management Decisions: Lands and Realty*** | |
| **Objectives LR 1:** Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 5:** Consistent with MD LR 3, MD LR 4, and MD RE 1, Rights-of-way for development of new or amended ROWs and land use authorizations (including permits and leases) in PHMA will only be considered when consistent with the Anthropogenic Disturbance Screening Criteria (MD SSS 29);<br><br>Rights-of-way for development of new or amended ROWs and land use authorizations (including permits and leases) in IHMA can be considered consistent with the IHMA Anthropogenic Disturbance Development Criteria (MD SSS 30). GHMA: New ROW and land use authorizations can be considered. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD SSS 31 -** Co-locating new infrastructure within existing ROWs and maintaining and upgrading ROWs is preferred over the creation of new ROWs or the construction of new facilities in all management area. Colocation for various activities is defined as:<br>* Communication Sites – The installation of new equipment/facilities on or within or adjacent to existing authorized equipment/facilities or within a communication site boundary as designated in the Communication Site Plan.<br>* Electrical Lines – Installation of new ROWs adjacent to current ROWs boundaries, not necessarily placed on the same power poles<br>* Other Rights-of-Way – The installation of new ROWs within the existing footprint of an approved ROW boundary or adjacent to an approved ROW boundary.<br>* Designated Corridors – The installation of new rights-of-way within the existing corridor or adjacent to the existing corridor. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LR 14:** Lands classified as PHMA, IHMA, and GHMA for GRSG will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG. Land tenure adjustments will be subject to the following disposal, exchange, and acquisition criteria, which include retaining lands with GRSG habitat. Retention of areas with GRSG will reduce the likelihood of habitat conversion to agriculture, urbanization, or other uses that will remove sagebrush habitat and potentially impact sensitive plants.<br><br>Criteria:<br>a. Acquire habitat within PHMA and IHMA, when possible (i.e. willing landowner), and retain ownership of habitat within all Areas, except if disposal will allow for additional or more contiguous federal ownership patterns.<br>b. Lands within PHMA, IHMA and GHMA will be retained unless disposal of those lands will increase the extent or provide for connectivity of PHMA, IHMA or GHMA.<br>c. Evaluate potential land exchanges containing historically low-quality GRSG habitat that may be too costly to restore in exchange for lands of higher quality habitat, lands that connect seasonal GRSG habitats or lands providing for threatened and endangered species. These potential exchanges should lead to an increase in the extent or continuity of or provide for improved connectivity of PHMA. Higher priority will be given to exchanges for those in-tact areas of sagebrush that will contribute to the expansion of sagebrush areas within PHMA currently in public ownership. Lower priority will be given to other lands that will promote enhancement in the PHMA and IHMA (i.e., areas with fragmented or less in-tact sagebrush).<br>d. Identify lands for acquisition that increase the extent of or provide for connectivity of PHMA. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LR 2:** PHMA: Designate and manage PHMA as ROW avoidance areas, consistent with MD SSS 29 and subject to RDFs and buffers (Appendices B and C). IHMA: Designate and manage IHMA as ROW avoidance areas, consistent with MD SSS 30 and subject to RDFs and buffers. GHMA (Idaho and Montana): Designate and manage GHMA as open with proposals subject to RDFs and buffers.<br><br>**MD LR 12:** PHMA (Idaho and Montana) and IHMA (Idaho), and GHMA (Montana only) are designated as avoidance areas for high voltage transmission line and large pipeline ROWs, except for Gateway West and Boardman to Hemingway Transmission Projects. All authorizations in these areas, other than the following identified projects, must comply with the conservation measures outlined in this proposed plan, including the RDFs and avoidance criteria presented in MD SSS 29 and MD SSS 30 of this document. The BLM is currently processing an application for Gateway West and Boardman to Hemingway Transmission Projects and the NEPA review for this project is well underway. Conservation measures for GRSG are being analyzed through the project's NEPA review process, which should achieve a net conservation benefit for the GRSG. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Industrial Solar, Wind, Nuclear, and Hydropower Development**<br>**MD RE 1:** PHMA: Designate and manage PHMA as exclusion areas for utility scale (20 MW) wind and solar testing and development, nuclear and hydropower energy development. IHMA: Designate and manage IHMA as avoidance areas for wind and solar testing and development, nuclear and hydropower development. GHMA (Idaho): Designate and manage GHMA as open for wind and solar testing and development and nuclear and hydropower development subject to RDFs and buffers. GHMA (Montana): Designate and manage GHMA as avoidance for wind and solar testing and development and nuclear and hydropower development. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 13:** Consider the likelihood of development of not-yet-constructed surface disturbing activities – as defined in Table 2 of the Monitoring Framework (Appendix D) – under valid existing rights. | No change proposed. |
| **MD LR 10:** When a ROW grant expires and is not requested to be renewed, is relinquished, or terminated, the lease holder will be required to reclaim the site by removing overhead lines and other infrastructure and to eliminate avian predator nesting opportunities provided by anthropogenic development on public lands associated with the now void ROW grant (e.g., remove power line and communication facilities no longer in service). | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LR 1:** Existing designated corridors, including Section 368 Corridors, will remain Open in all habitat management areas (subject to the ongoing settlement agreement).<br>Also see MD LR 10 and MD SSS 31 | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 3:** PHMA: Development of commercial service airports and facilities (as defined by FAA 2014 – publically owned airports that have at least 2,500 passenger boardings each calendar year and receive scheduled passenger service) will not be allowed within PHMA. IHMA and GHMA are Avoidance and Open respectively for these types of ROW applications as described in MD LR 2. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 4:** PHMA: Development of new or expansion of existing landfills will not be allowed within PHMA. IHMA and GHMA are Avoidance and Open respectively for these types of ROW applications as described in MD LR 2. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 6:** In PHMA, if a higher voltage transmission line is required adjacent to an existing line (i.e. the project is an incremental upgrade/capacity increase of existing development (i.e. power line capacity upgrade):<br>· the existing transmission line must be removed and area rehabilitated within a specified<br>amount of time after the new line is installed and energized; and<br>· the new line must be constructed in the same alignment as the existing line unless an<br>alternate route will benefit GRSG or GRSG habitat. | No change proposed. |
| **MD LR 7:** Process unauthorized use. If the unauthorized use is subsequently authorized, it will be authorized consistent with direction from this plan including RDFs and buffers. If the use is not subsequently authorized the site will be reclaimed by removing these unauthorized (trespass) features and rehabilitating the habitat. | No change proposed. |
| **MD LR 8:** Land use authorizations that are temporary (less than 3 years) in nature and are not otherwise excluded or restricted will be subject to seasonal or timing restrictions (Appendix C) and mitigation requirements regarding habitat loss as needed. | No change proposed. |
| **MD LR 9:** New ROW applications for water facilities (ditches, canals, pipelines), or amendments to existing water facilities which include additional structures to improve fish passage or benefits to fisheries (new diversions, fish screens) will be allowed on a case-by-case basis subject to RDFs to reduce impacts on GRSG habitat and mitigation requirements regarding GRSG habitat loss as needed. | Potential change under Alternative 3. |
| **MD LR 11:** As opportunities and priorities indicate work with existing ROW holders to retrofit<br>existing towers and structures consistent with RDFs described in Appendix C. | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Fluid Mineral Resources*** | |
| **MD MR 20:** BLM owns surface – non-federal mineral estate owner: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA, IHMA, and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| **MD MR 19:** BLM Owns Mineral Estate – non-federal surface owner: Where the federal government owns the mineral estate in PHMA, IHMA, and GHMA, and the surface is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| *Fluid Minerals*<br>**Objective MR 1:** Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA, IHMA, and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA, IHMA, and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 USC 226(p) and 43 CFR 3162.3-1(h). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD MR 1:** Idaho and Montana: Areas within SFA will be open to fluid mineral leasing and development and geophysical exploration subject to NSO without waiver, exception, or modification. Areas within PHMA (outside SFA) and IHMA will be open to mineral leasing and development and geophysical exploration subject to NSO with a limited exception (MD MR 3). GHMA will be open to mineral leasing and development and geophysical exploration subject to CSU which includes buffers and standard stipulations. | Potential change under Alternatives 3 and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD MR 3:** PHMA and IHMA: No waivers or modifications to a fluid mineral lease NSO stipulation will be granted. The Authorized Officer may grant an exception to a fluid mineral lease NSO stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and will provide a clear conservation gain to GRSG. Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP amendment. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br>Any exceptions to this lease stipulation may be approved by the Authorized Officer only with the concurrence of the State Director. The Authorized Officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publically available at least quarterly. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective MR 2:** Where a proposed fluid mineral development project on an existing lease can adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize and apply compensatory mitigation to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD or Geothermal Drilling Permit (GDP) for the lease to avoid, minimize, and apply compensatory mitigation to impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD MR 4:** Incorporate required design features and best management practices appropriate to the management area as COAs when post leasing activity is proposed into any post-lease authorizations. | No change proposed. |
| **MD MR 5:** In Montana, prior to leasing conduct a Master Leasing Plan process when all four of the following criteria are met:<br>· A substantial portion of the area to be analyzed in the MLP is not currently leased.<br>· There is a majority Federal mineral interest.<br>· The oil and gas industry has expressed a specific interest in leasing, and there is a moderate or high potential for oil and gas confirmed by the discovery of oil and gas in the general area.<br>· Additional analysis or information is needed to address likely resource or cumulative impacts if oil and gas development were to occur where there are:<br>– multiple-use or natural/cultural resource conflicts;<br>– impacts on air quality;<br>– impacts on the resources or values of any unit of the National Park System, national wildlife refuge, or National Forest wilderness area, as determined after consultation or coordination with the NPS, the USFWS, or the Forest Service; or<br>– impacts on other specially designated areas. – analyzing likely development scenarios and varying mitigation levels. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD MR 7:** Encourage unitization when deemed necessary for proper development and operation of an area (with strong oversight and monitoring). The unitization must be designed in a manner to minimize adverse impacts on GRSG according to the Federal Lease Form, 3100-11, Sections 4 and 6. | No change proposed. |
| **MD MR 8:** Issue Written Orders of the Authorized Officer (43 CFR 3161.2) requiring reasonable protective measures consistent with the lease terms where necessary to avoid or minimize impacts on GRSG populations or habitat. | No change proposed. |
| ***Management Decisions: Solid Leasable Minerals*** | |
| **MD MR 15:** PHMA are closed to leasing. IHMA and GHMA: Areas within Known Phosphate Leasing Areas (KPLAs) will remain open to leasing subject to standard stipulations. IHMA areas outside of KPLAs are open to prospecting and subsequent leasing provided the Anthropogenic Disturbance Development Criteria (MD SSS 30) and the anthropogenic disturbance cap (MD SSS 27) can be met. RDFs and buffers shall be applied to prospecting permits. GHMA: Lands outside KPLAs are available for prospecting and subsequent leasing and initial mine development subject to RDFs, buffers, and standard stipulations. | Potential change under Alternatives 3 and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD MR 16:** Require seasonal and daily timing restrictions (Appendix C) in undeveloped nonenergy mineral leases when exploration activities or initial mine development is proposed (e.g. exploration drilling, timber removal, shrub clearing, etc.) as COAs. | Potential change under Alternatives 3 and 6. |
| **MD MR 17:** Include RDFs as COAs to mine plans in undeveloped non-energy mineral leases for exploration activities or initial mine development. | Potential change under Alternatives 3 and 6. |
| **MD MR 18:** At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR 3461.5(o)(1). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Locatable Materials*** | |
| **MD MR 10:** Recommend SFA for withdrawal from the General Mining Act of 1872, as amended, subject to valid existing rights. | Potential change under Alternative 3. |
| **MD MR 9:** Apply reasonable and appropriate RDFs to locatable minerals, to the extent consistent with applicable law to prevent unnecessary or undue degradation of GRSG habitat when a Plan of Operations is submitted for BLM approval, in accordance with 43 CFR 3809.411(d)(2). | Potential change under Alternative 3. |
| ***Management Decisions: Mineral Materials*** | |
| **MD MR 11**: PHMA: All PHMA will be closed to mineral materials development. However, existing freeuse permits and the expansion of existing free use permits may be considered only if the following criteria are met:<br>· the project area disturbance cap is not exceeded within a BSU;<br>· the activity is subject to the provisions set forth in the mitigation framework [Appendix F];<br>· all applicable required design features are applied; and<br>· the activity is permissible under the Idaho exception and development criteria (MD SSS 29 and MD SSS 30)<br>– IHMA: All IHMA will be open to mineral materials development, consistent with the Idaho Anthropogenic Disturbance Criteria (MD SSS 30), and subject to RDFs, and buffers. Sales from existing community pits within IHMA will be subject to seasonal timing restrictions (Appendix C).<br>– GHMA: All GHMA will be open to mineral materials development, subject to RDFs and buffers. Sales from existing community pits within GHMA will be subject to seasonal timing restrictions (Appendix C). | Potential change under Alternatives 3 and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD MR 14:** Montana: PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br>· the activity is within the BSU and project area disturbance cap;<br>· the activity is subject to the provisions set forth in the mitigation framework [Appendix F];<br>· all applicable required design features are applied; and<br>· the activity is permissible under the Montana screening criteria (MD SSS 30) Appendix J. | Potential change under Alternatives 3 and 6. |
| **MD MR 12:** Restore salable mineral pits no longer in use to meet GRSG habitat management objectives. | No change proposed. |
| **MD MR 13:** Require reclamation bonding that will require restoration of GRSG habitat on new site authorizations for mineral material pits in IHMA (this will not apply to free use permits issued to a government entity such as a county road district, but will apply to non-profit entities). | Potential change under Alternatives 3 and 6. |
| ***Management Decisions: Recreation*** | |
| **REC-2:** In PHMA and IHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from critical areas, etc.), or unless the development is required for visitor health and safety or resource protection. | No change proposed. |
| **REC-1:** Manage existing recreation uses and sites to minimize adverse effects on GRSG or their habitat through incorporation of RDFs, buffers and seasonal restrictions. | No change proposed. |
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| **MD TTM 3:** Develop Travel Management Plans for each Field Office as described in the BLM Travel Management Handbook 8342.1 and according to the travel management planning guidelines (Appendix L of FEIS). | No change proposed. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD TTM 4:** During subsequent travel management planning design and designate a travel system to minimize adverse effects on GRSG. Locate areas and trails to minimize disturbance of GRSG and/or to have a neural or positive effect on GRSG habitat and populations. Give special attention to protect endangered or threatened species and their habitats. Allow for route upgrade, closure of existing routes, timing restrictions, seasonal closures, and creation of new routes to help protect habitat and meet user group needs, thereby reducing the potential for pioneering unauthorized routes. The emphasis of the comprehensive travel and transportation planning within PHMA will be placed on having a neutral or positive effect on GRSG habitat. Individual route designations will occur during subsequent travel management planning efforts**.** | No change proposed. |
| **MD TTM 2:** In PHMA, IHMA, and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use) and other applicable law and policy. | No change proposed. |
| **MD TTM 5:** Conduct road construction, upgrades, and maintenance activities to avoid disturbance during the lekking season – see Appendix C. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| **MD LG 16:** The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within SFA and PHMA will include specific management thresholds, based on GRSG Habitat Objectives Table, Land Health Standards (43 CFR 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 1:** Maintain existing areas designated as available or unavailable for livestock grazing. Existing active AUMs for livestock grazing within the planning area will not be changed at the broad scale, though the number of AUMs available on an allotment may be adjusted based on site-specific conditions to meet management objectives during term permit renewals, AMP development, or other appropriate implementation planning. Additional temporary adjustments can be made annually to livestock numbers, the number of AUMs, and season of use in accordance with applicable regulations. | Potential change under Alternative 3. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LG 4**: PHMA & IHMA: During the land health assessment process, identify the type(s) of seasonal habitat the assessed areas are capable of supporting. Utilize the habitat assessment framework, (Stiver et al. 2015) or other BLM approved methodology, in accordance with current policy and guidance to determine whether vegetation structure, condition and composition are meeting GRSG habitat objectives including riparian and lentic areas (Objective SSS 2; Table 2-2). Use appropriate Ecological Site Descriptions, reference sheets and state and transition models to inform desired habitat conditions and Expected responses to management changes for the land unit being assessed. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 2:** Prioritize BLM land health assessments and processing of BLM grazing permits consistent with management area prioritization (MD SSS 4), unless other higher priority considerations exist (MD LG 15) or other factors such as threatened, endangered and proposed species habitat that livestock grazing can affect. Where possible, conduct land health assessments at the watershed, or other meaningful landscape-scale. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 15:** The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in Sagebrush Focal Areas (SFA) followed by PHMA outside of the SFA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. Management and conservation action prioritization will occur at the Conservation Area (CA) scale and be based on GRSG population and habitat trends: Focusing management and conservation actions first in SFA followed by areas of PHMA outside SFA. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 17:** Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. Management and conservation action prioritization will occur at the Conservation Area (CA) scale and be based on GRSG population and habitat trends: Focusing management and conservation actions first in SFA followed by areas of PHMA outside SFA. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LG 12:** During the land health assessment and grazing permit renewal process, evaluate existing livestock management range improvements with respect to their effect on GRSG habitat. Consider removal of projects that are not needed for effective livestock management, are no longer in working condition, and/or negatively affect GRSG habitat, with the exception of functional projects needed for management of habitat for other threatened, endangered or proposed species or other sensitive resources. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 13:** Prioritize removal, modification or marking of fences or other structures in areas of high collision risk following appropriate cooperation, consultation and coordination to reduce the incidence of GRSG mortality due to fence strikes (Stevens et al. 2012). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 9:** Evaluate the locations where salt/supplements are placed, coordinate salt/supplements placement to reduce impacts on GRSG habitat (e.g., existing disturbed areas). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 11:** Design any new structural range improvements, following appropriate cooperation, consultation and coordination, to minimize and/or mitigate impacts on GRSG habitat. Any new structural range improvements should be placed along existing disturbance corridors or in unsuitable habitat, to the extent practical, and are subject to RDFs (Appendix C). Structural range improvement in this context, include, but are not limited to: fences, exclosures, corrals or other livestock handling structures; pipelines, troughs, storage tanks (including moveable tanks used in livestock water hauling), windmills, ponds/reservoirs, solar panels and spring developments. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 3**: Where opportunities exist, coordinate with other land managers to encourage livestock operations that utilize mixed federal, private and/or state land to be managed at the landscape scale to benefit GRSG and their habitat across land ownerships. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| **MD LG 6:** When livestock management practices are determined to not be compatible with meeting or making progress towards achievable habitat objectives following appropriate consultation, cooperation and coordination, implement changes in grazing management through grazing authorization modifications, or allotment management plan implementation. Potential modifications include, but are not limited to, changes in:<br>• Season or timing of use;<br>• Numbers of livestock;<br>• Distribution of livestock use;<br>• Duration and/or level of use;<br>• Kind of livestock (e.g., cattle, sheep, horses, or goats) (Briske et al. 2011); and<br>• Grazing schedules (including rest or deferment).<br>*Not in Priority Order | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 14:** In response to weather conditions (i.e. drought) adjust grazing management (i.e., delay turnout, adjust pasture rotations, adjust the amount and/or duration of grazing) as appropriate to provide for adequate food and cover for GRSG. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 18:** At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 7**: Where opportunities exist, establish forage reserves to facilitate restoration and rehabilitation efforts in GRSG habitat areas. A forage reserve is an area that is set aside for use as needed by various permittees who might be displaced by wildfire, ESR, restoration efforts, etc. rather than having a term permit issued for grazing like a regular allotment. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 5:** When modifying grazing management, analyze indirect impacts on habitat, including changes in fuel loading and wildfire behavior. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 8:** PHMA & IHMA - Where practical, design pasture rotations to utilize non-native perennial grass seedings and/or annual grasslands, during GRSG nesting season annually or periodically. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 10:** Incorporate RDFs into Terms and Conditions for crossing permits to limit disturbance of occupied leks when trailing livestock across BLM administered lands in the spring. Work with permittees in locating over-nighting, watering and bedding locations to minimize impacts on seasonal habitats. | Potential change under Alternatives 3, 4, 5, and 6. |

| Dillon 2015 RMP Revision | Potential for Change in 2023 Plan |
|---|---|
| ***Management Decisions: Wild Horse and Burros*** | |
| **WHB-1:** Manage herd management areas (HMAs) in GRSG habitat within established AML ranges to achieve and maintain GRSG habitat objectives (Table 2-2). | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-2:** Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g. range, wildlife, and riparian). The priorities for conducting assessments are: 1) HMAs Containing SFA; 2) HMAs containing PHMA; 3) HMAs containing IHMA; 4) HMAs containing GHMA; 5) HMAs containing sagebrush habitat outside of PHMA, IHMA, and GHMA mapped habitat; 6) HMAs without GRSG Habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-3:** Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on Herd Areas not allocated as HMAs and occupied by wild horses and burros in SFA followed by PHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-4:** In SFA and PHMA outside of SFA, assess and adjust AMLs through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting land health standards, even if current AML is not being exceeded. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-5:** In SFA and PHMA outside of SFA, monitor the effects of wild horse and burro use in relation to GRSG seasonal habitat objectives on an annual basis to help determine future management actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-6:** Develop or amend herd management area plans (HMAPs) to incorporate GRSG habitat objectives and management considerations for all HMAs within GRSG habitat, with emphasis placed on SFA and other PHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-7:** Consider removals or exclusion of wild horse and burros during or immediately following emergency situations (such as fire, floods, and drought) to facilitate meeting GRSG habitat objectives where HMAs overlap with GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-8:** When conducting NEPA analysis for wild horse and burro management activities, water developments, or other rangeland improvements for wild horses, address the direct and indirect impacts on GRSG populations and habitat. Implement any water developments or rangeland improvements using the criteria identified for domestic livestock. | Potential change under Alternatives 3, 4, 5, and 6. |
| **WHB-9:** Coordinate with professionals from other federal and state agencies, researchers at universities, and others to utilize and evaluate new management tools (e.g., population growth suppression, inventory techniques, and telemetry) for implementing the wild horse and burro program. | Potential change under Alternatives 3, 4, 5, and 6. |

## Table 2: Dillon Habitat Objectives for GRSG

| Attribute | Indicator | Desired Conditions | Reference |
|---|---|---|---|
| **LEK HABITAT (Seasonal Use Period March 1 – May 15)1** | | | |
| Lek Security | Proximity of trees | Trees (i.e., in Idaho mainly juniper, conifers, and does not include old-growth juniper, pinyon pine and mountain mahogany; in Montana mainly Douglas-fir) absent or uncommon on shrub/grassland ecological sites within 1.86 miles (3 km) of occupied leks. | Baruch-Mordo et al.2013<br>Stiver et al. 2015 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 ft. (100 m) of an occupied lek | Stiver et al. 2015 |
| **NESTING/EARLY BROOD REARING (Seasonal Use Period May 1 – June 30) 1** | | | |
| Cover and Food | Sagebrush cover [2] | 15-25% | Connelly et al. 2000<br>Connelly et al. 2003<br>Hagen et al. 2007 |
| | Sagebrush height<br>Arid sites[3]<br>Mesic sites[4] | <br>12-31 inches (30-80cm)<br>16-31 inches (40-80cm) | Connelly et al. 2000 |
| | Predominant sagebrush shape | Predominantly spreading shape[5] | Stiver et al. 2015 |
| | Perennial grass cover (such as native bunchgrasses) [2]<br>Arid sites[3]<br>Mesic sites[4] | <br><br><br>>10%<br>>15% | Connelly et al. 2000<br>Stiver et al. 2015 |
| | Perennial grass (and forb) height (includes residual grasses) | ≥ 7 inches | Connelly et al. 2000<br>Connelly et al. 2003<br>Hagen et al. 2007<br>Stiver et al. 2015 |
| | Perennial forb cover [2]<br>Arid sites[3]<br>Mesic sites[4] | <br>>5%<br>>10% | Connelly et al. 2000 |
| | Perennial forb availability | Preferred forbs are common with several species present6 | Stiver et al. 2015 |
| **LATE BROOD-REARING/SUMMER (July-October)1 Late brood-rearing areas, such as riparia** | | | |
| Cover and Food | Sagebrush cover[2] | Uplands 10-25%<br>Riparian/Meadow: Sagebrush cover within 100 m | Connelly et al. 2000 |
| | Sagebrush height | 16 to 32 inches (40-80cm) | Connelly et al. 2000 |
| | Perennial grass and forb cover [2] | >15% | |
| | Upland and riparian perennial forb availability [2] | Preferred forbs are common with appropriate numbers of species present,6 | Stiver et al. 2015 |
| | Riparian and/or meadow habitat condition | Proper Functioning Condition | Stiver et al. 2015 |
| **WINTER November-March1 (Apply to areas of known or likely winter-use)** | | | |
| Cover and Food | Sagebrush cover and height above snow, | Sagebrush is at least 10 inches (25 cm) above snow and ≥10% cover[16] | Connelly et al. 2000<br>Stiver et al. 2015 |

Notes:

[1] Seasonal dates can be adjusted by local unit according to geographic region.

[2] Since plant species and/or life forms may overlap, total vegetative cover, inclusive of shrubs, forbs and grasses may exceed 100%.

[3] Arid corresponds to the 10 – 12 inch precipitation zone; Artemisia tridentata wyomingensis is a common big sagebrush subspecies for this type site (Stiver et al. 2015).
[4] Mesic corresponds to the >12 inch precipitation zone; Artemisia tridentata vaseyana is a common big sagebrush sub-species for this type site (Stiver et al. 2015).
[5] Collectively the indicators for sagebrush (cover, height, and shape), perennial grass and perennial forb (cover, height and/or availability) represent the desired condition range for nesting/early brood rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. 2015. Sagebrush plants that are more tree or columnar-shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.
[6] Preferred forbs are listed in Stiver et al. 2015. Overall total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred.
[15] Some late brood habitat occurs at higher elevations outside of mapped nesting habitat and some is embedded within nesting landscapes especially areas such as wet meadows, riparian areas, springs and seeps.
[16] Winter habitat metrics are a guideline but snow depths and habitat availability may vary widely depending on winter severity, topography and elevation.

### 2.5.2 Relevant Appendices

The following table shows which appendices from the 2015 plan have management direction that may change through this RMP amendment. The appendices can be found on the Idaho and Southwestern Montana GRSG ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Amendment Maps | Yes |
| B: Buffers | Yes |
| C: Required Design Features | Yes |
| D: Monitoring Framework | Yes |
| E: Anthropogenic Disturbance and Adaptive Management | Yes |
| F: Greater Sage-Grouse - Mitigation | Yes |
| G: Fluid Mineral Lease Stipulations, Waivers, Modifications, and Exceptions | Yes |
| H: Fire and Invasives Assessment Tool (FIAT) | Yes |
| I: US Fish and Wildlife Service Concurrence Letter | No |
| J: Montana Action Screen and Mitigation Process | Yes |

## 2.6 HiLine RMP

This appendix presents the approved RMP revision language from the record of decision for the HiLine RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.6.2** of this appendix.

### 2.6.1 Existing GRSG RMP Management – HiLine RMP

**Table 1. Summary of Goals, Objectives, and Management Actions in HiLine RMP**

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| Vegetation Objective 4: In all SFA and PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (such as big sagebrush) (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Vegetation MD-5): Conifers encroaching into sagebrush habitats will be removed, in a manner that considers tribal cultural values. Treatments will be prioritized closest to occupied sage-grouse habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in the Fire and Invasives Assessment Tool (FIAT) report (Chambers, et al. 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Vegetation MD-3): The BLM will consult with MFWP and seek concurrence regarding the anticipated benefits and/or impacts of any vegetation treatments that may impact wildlife habitat including priority sage-grouse habitat. | No change proposed. |
| (Same as Vegetation MD-10): The BLM will use land treatments to achieve and maintain fire regimes, and watershed, grazing management, and wildlife objectives. Within the Greater Sage-Grouse PHMA and the Grassland Bird/Greater Sage-Grouse PHMA, treatments that conserve, enhance or restore Greater Sage-Grouse habitat will be allowed as well as treatments that benefit other resources and do not adversely affect sage-grouse or their habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Wildlife MD-35): Sagebrush habitats will be managed so that mid-scale (i.e. landscape level) shrub cover should include a mix of height classes with herbaceous understory adequate for meeting Greater Sage-Grouse requirements as well as habitat requirements for other sage-associated species such as mule deer and pronghorn. | No change proposed. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-1: Quantifiable vegetation objectives for sage-grouse habitat are presented in Table 2.3-2. The actions needed to meet or progress toward meeting these objectives will be incorporated into the respective AMPs or livestock grazing permits as appropriate. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal SSS-1: Maintain and/or increase GRSG abundance and distribution by conserving, enhancing, or restoring the sagebrush ecosystem upon which populations depend, in cooperation with other conservation partners. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Wildlife MD-39): The BLM will emphasize restoration and rehabilitation of sagebrush in areas that are capable of, but no longer support sagebrush to contribute to the distribution and connectivity of habitat patches. | No change proposed. |
| (Same as Wildlife MD-40): Greater Sage-Grouse habitats associated with silver sagebrush north of the Milk River will be enhanced to improve habitat conditions for nesting and brood rearing. Specific management actions will be derived from the results of ongoing research and best available science. | No change proposed. |
| Development in Highly Important Landscapes (Same as Wildlife MD-24): The BLM will designate SFA as shown in Figure 2.3-1 (927,074 acres). All BLM-administered lands within the SFA boundary will be managed as PHMA with the following additional management: 1) Recommended for withdrawal from the General Mining Act of 1872, subject to valid existing rights.<br>2) Managed as NSO, without WEMs, for fluid mineral leasing.<br>3) Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Wildlife MD-18): Fragmentation of large intact blocks of important wildlife habitat will be minimized, particularly in PHMA for Greater Sage-Grouse and grassland birds. | No change proposed. |
| Application of Lek Buffers (Same as Wildlife MD-23): In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the U.S. Geological Survey (USGS) Report Conservation Buffer Distance Estimates for Greater Sage-Grouse – A Review (Open File Report 2014-1239) in accordance with Appendix B. | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area. The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| • As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* |
| (Same as Wildlife MD-38): Greater Sage-Grouse habitat suitability determinations will be based upon existing guidelines modified with data from recent habitat inventories and assessments in the planning area. Relevant range-wide research findings will also be included in habitat suitability determinations. | No change proposed. |
| ***Management Decisions: Disturbance*** | |
| Wildlife Objective 7: Protect priority Greater Sage-Grouse habitats from anthropogenic disturbances that would reduce distribution or abundance of sage-grouse. | Potential change under Alternatives 3, 4, 5, and 6. |
| Disturbance: (Same as Wildlife MD-25 & MD-26) The Montana/Dakotas BLM will use a 3% disturbance cap at the BSU and project scale, until the State strategy, similar to Wyoming's Core Strategy of 5% for all lands and all disturbances, is fully implemented. The density calculation (an average of 1 facility per 640 acres) applies to energy and mining facilities. The disturbance cap will not be applied to foreclose development of locatable minerals on unpatented claims located under the General Mining Act of 1872; the disturbance from locatable mining will be accounted for in determining the percent disturbance and whether the cap has been exceeded.<br>-If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of landownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the General Mining Act of 1872, valid existing rights, etc.) will be permitted by the BLM within a project analysis area until the disturbance has been reduced to less than the cap. Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site-specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br>-If the BLM determines that the State of Montana has adopted a Greater Sage-Grouse Habitat Conservation Program that contains comparable components to those found in the State of Wyoming's Core Area Strategy including an all lands approach for calculating anthropogenic disturbances, a clear methodology for measuring the density | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| of operations, and a fully operational density disturbance calculation tool, the 3% disturbance cap will be converted to a 5% cap for all sources of habitat alteration within a project analysis area.<br>[Management action clarified in 2018 to reflect State of Montana process, under DOI-BLM-MT-20 I 8-0005-CX. RMP Maintenance Action Language: This maintenance action is to clarify that the BLM has determined that the State's all lands approach to analyzing disturbance is operational and effective. Therefore, the BLM will adopt and implement the State's approach as identified in Attachments D (Stipulations for Uses and Activities) and H (definitions) of Montana Executive Order 12-2015.] | *(See above.)* |
| Mitigation: (MD-6) Mitigation measures for all resources are included in Appendices H and I. The BLM may add additional mitigation measures as deemed necessary by further environmental analysis and as developed through consultation with other federal, state, and local regulatory and resource agencies.<br><br>In all sage-grouse habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| Adaptive Management Strategy: (MD-5) Adaptive Management: Follow the adaptive management strategy outlined in Appendix J. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| Same as MD-11 (Fire): The BLM will protect sensitive status species habitat (such as Greater Sage-Grouse habitat) during suppression and prescribed fire activities as described in this document and consistent with the Secretarial Order on Rangeland Fire and BLM Policy. Fire management-related activities, including prescribed fire, should preserve or enhance the habitat quality for Greater Sage-Grouse and other sensitive status species, especially in priority habitat areas. Where applicable, the BLM will use BMPs (Appendix H) to design fuels treatment objectives to protect existing sagebrush ecosystems, modify fire behavior, restore native plants, and create landscape patterns which benefit sage-grouse habitat (Appendix I). The use of heavy equipment during wildfire suppression and rehabilitation is allowable in sage-grouse habitat although cross-country travel should be limited through these areas. Wildfire suppression facilities shall be located to the extent possible in areas that minimize disturbance to high quality sage-grouse habitat. | No change proposed. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Same as MD-12 (Fire): If prescribed fire is used in Greater Sage-Grouse habitat, the NEPA analysis for the Burn Plan will address:<br>*why alternative techniques were not selected as viable options;<br>*how Greater Sage-Grouse goals and objectives would be met by its use;<br>*how the COT Report objectives would be addressed and met;<br>*a risk assessment to address how potential threats to Greater Sage-Grouse habitat would be minimized. | Potential change under Alternatives 3, 4, 5, and 6. |
| Same as MD-13 (fire): Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that would protect Greater Sage-Grouse habitat in PHMA (e.g., creation of fuel breaks that would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities). | Potential change under Alternatives 3, 4, 5, and 6. |
| Same as MD-14 (fire): Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat would need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | Potential change under Alternatives 3, 4, 5, and 6. |
| Same as Wildlife MD-43h: If prescribed fire is to be used for vegetation treatments, the burn plan will clearly indicate how COT objectives will be addressed and met by its use, and why alternative techniques were not selected. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Lands and Realty*** | |
| (Land Tenure: Same as Lands and Realty MD-8): Lands classified as priority habitat and general habitat (or habitat classification appropriate for the sub-region) for Greater Sage-Grouse will be retained in federal management unless:<br>(1) The agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the Greater Sage-Grouse; or<br>(2) The agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the Greater Sage-Grouse. | No change proposed. |
| (MD-3): GHMA are open to minor ROWs and avoidance for major ROWs (high voltage transmission lines of 100 kilovolts or greater and pipelines 24 inches or greater in diameter). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-1 (Solar and Wind): PHMA will be exclusion areas for solar and wind energy rights-of-way. GHMA will be avoidance areas for solar and wind energy rights-of-way. | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Same as Wildlife MD-41): New distribution power lines on BLM land within 1 mile of Greater Sage-Grouse leks will be buried [GHMA]. | No change proposed. |
| (Same as Wildlife MD-43c) The area [PHMA] will be an avoidance area for the issuance of rights-of-way except within designated corridors. Rights-of-way and similar facilities will be located adjacent to other facilities in a corridor where practical. The BLM will consider opportunities to remove, bury, or modify existing power lines (e.g., burying, anti-perching devices or line location). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| Action FL-10: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| Fluids 9: Where the federal government owns the mineral estate in PHMA and GHMA, and the surface estate is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| Objective FM 1 and 2: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 US Code 226(p) and 43 CFR, Part 3162.3-1(h).<br><br>Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize, and apply compensatory mitigation for adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an application for permit to drill for the lease to avoid and minimize impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Similar to Wildlife MD-43a): The area [PHMA] will include a NSO stipulation, without modifications or waivers, for oil and gas leasing unless there is a more restrictive stipulation in place to protect other resource values (e.g., no lease in the Mountain Plover ACEC). | Potential change under Alternatives 3, 4, 5, and 6. |
| (MD-4): GHMA are open to fluid mineral leasing with moderate and standard constraints. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-2: The SFA are open to leasing with NSO with no waivers, exceptions, or modifications (WEMs). | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Wildlife MD-43b): Exploration and development activities for existing oil and gas leases will be managed according to BMPs (Appendix N), or other mitigation measures, through COA in authorizing APDs or plans of development. Consistent with surface use rights granted, the existing lease may be subject to "restrictions deriving from specific, nondiscretionary statutes; and such reasonable measures as may be required by the authorized officer to minimize adverse impacts on other resource values, land uses or users not addressed in the lease stipulations at the time operations are proposed" (43 CFR, Part 3101.1-2). Overall consideration shall be given to minimizing the impact on sage-grouse through a project design that avoids, minimizes, and applies compensatory mitigation for direct and indirect impacts on sage-grouse habitat or use and includes applicable and technically feasible COA (Appendix I). Selection and application of these measures shall be based on current science and research on the impacts on important breeding, nesting, brood-rearing, and wintering areas. | No change proposed. |
| ***Management Decisions: Locatable Minerals*** | |
| (Also included as a part of Solid Minerals MD-14): A recommended withdrawal for 927,074 acres from locatable mineral entry to protect the SFA. | Potential change under Alternative 3. |
| (Same as Solid Minerals MD-15): Within the limits of the Mining Laws, the BLM will apply COAs (Appendix I) to Plans of Operations to prevent undue and unnecessary degradation to Greater Sage-Grouse habitat. | Potential change under Alternative 3. |
| ***Management Decisions: Mineral Materials*** | |
| (Same as Wildlife MD 43l): PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br>*the activity is within the BSU and project area disturbance cap;<br>*the activity is subject to the provisions set forth in the mitigation framework (Appendix I); and<br>*all applicable RDFs are applied (Appendix C). | Potential change under Alternatives 3 and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Similar to Solid Minerals MD-22): PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met: * The activity is within the BSU and project area disturbance cap;<br>*The activity is subject to the provisions set forth in the mitigation framework (Appendix F); and<br>*All applicable RDFs are applied and the activity is permissible under the specific subregional screening criteria (Appendix C). | Potential change under Alternatives 3 and 6. |
| ***Management Decisions: Recreation*** | |
| Management Direction REC-1: In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, and staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from important areas, etc.), or unless the development is required for visitor health and safety or resource protection | No change proposed. |
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| (Same as Wildlife MD-43m): New road construction will be limited to realignments of existing roads, if that realignment has a minimal impact on Greater Sage-Grouse habitat, eliminates the need to construct a new road, or is necessary for public safety. New road construction will include appropriate BMPs and mitigation (Appendices H and I). | No change proposed. |
| (Same as TM & OHV: MD-7): The BLM will pursue opportunities to conduct restoration of roads, primitive roads and trails not designated during travel management planning, with priority given to areas with special management concerns. This includes primitive routes that have not been designated as "primitive routes" within wilderness study areas (WSAs) and those that have been closed within areas that are being managed to protect or enhance wilderness characteristics or special status species such as the Greater Sage-Grouse. Restoration activities will be done in accordance with guidelines described in Appendix M, Reclamation. Applicable requirements such as specific seed mixes or transplanting recommendations will also be applied where special status species or issues are a concern (e.g., mitigation for Greater Sage-Grouse). | No change proposed. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Same as TM and OHV MD-28): In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use).<br><br>(Same as TM and OHV MD-28): Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that off-highway vehicles (OHV) are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence (43 CFR, Part 8341.2). A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| MD-2 (Similar to Livestock Grazing MD-9): Appropriate indicators and measurements specific to habitat for Greater Sage-Grouse, or any other wildlife species of concern, will be evaluated as part of standards and guidelines assessment and any necessary and appropriate habitat objectives specific to meeting the wildlife health standard for the site will be identified and incorporated into allotment management plans (AMPs) or the terms and conditions of livestock grazing permits. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as MD-36): Consideration will be given to incorporating fine-scale and site-specific Greater Sage-Grouse habitat and management objectives as appropriate to the area into AMPs or livestock grazing permits. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Vegetation MD-11): Rangeland health monitoring and assessments will be conducted within current staffing capabilities. The allotments within the Greater Sage-Grouse PHMA and the Grassland Bird/Greater Sage-Grouse PHMA will be high priority for reassessment of land health standards and processing grazing permits as detailed in Appendix I. Rangeland health monitoring plans will be developed and implemented at the field office level. | Potential change under Alternatives 3, 4, 5, and 6. |

| HiLine RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Same as Livestock Grazing MD-17): Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Vegetation MD-9): Water developments will be installed and/or maintained to facilitate control of livestock use of vegetation, support other uses, and protect resource values. In order to minimize surface disturbance, have reliable water of better quality and not alter normal surface flow of water, alternative water developments will be emphasized before constructing new pits and reservoirs. The BLM will manage water developments within Greater Sage-Grouse habitat to reduce the spread of West Nile virus (Appendix I). | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Wildlife MD-43g): Existing range improvements, including the location of supplements, will be evaluated and if necessary modified to conserve, enhance or restore sage-grouse habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Riparian MD-10): Grazing techniques and practices detailed in Appendix I will be implemented to reduce hot season (summer) grazing on riparian and meadow complexes within the PHMA. Alternative water facilities will be installed to relieve grazing impacts on riparian areas inside of priority sage-grouse habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-1: If monitoring data demonstrate that livestock use on an allotment in a priority Greater Sage-Grouse area is adversely affecting Greater Sage-Grouse or their habitat, the terms and conditions of grazing permits may be modified, or changes in active use could be considered in order to meet the standards for rangeland health as described in 43 CFR, Part 4180 and the Standards for Rangeland Health and Guidelines for Livestock Grazing Management (Appendix L) or to otherwise manage, maintain, or improve sage-grouse habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| LG-16: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2. HiLine Habitat Objectives for GRSG**

| Habitat Indicators | Dominant Sagebrush, Soil Type and/or Ecological Site | | | | |
|---|---|---|---|---|---|
| | **Sagebrush on Saline and/or Sodic Soils** | **Sagebrush on Acid Shale Parent Materials** | **Silver Sagebrush on Overflow Sites** | **Silver Sagebrush on All Other Soils/Sites** | **Wyoming Big Sagebrush on All Other Soils/Sites Sage-Grouse Breeding Habitat** |
| Sagebrush Canopy Cover | > 5% | > 5% | 10-25% | > 2% | 15-25% |
| Sagebrush Height | > 6 inches | > 6 inches | > 12 inches | > 12 inches | > 12 inches |
| Perennial Grass Heights (includes residual grasses) | > 5 inches | > 7 inches | > 7 inches | > 7 inches | > 7 inches |
| Perennial Grass Canopy Cover (such as green needlegrass) | > 10% | > 10% | > 15% | > 15% | > 10% |
| Perennial Forb Canopy Cover | > 3% | > 3% | > 10% | > 5% | > 5% |
| Perennial Forb Availability | > 3 species | > 3 species | > 5 species | > 5 species | > 5 species |
| Riparian Areas & Wet Meadows | Proper Functioning Condition | | | | |
| Lek Security | Rocky Mountain juniper and/or Ponderosa pine with less than 1% canopy cover on shrub/grassland ecological sites within 3 kilometers (1.86 miles) of occupied leks Sage-Grouse | | | | |
| **Winter Habitat** | | | | | |
| Sagebrush Availability | >10% canopy and >10 inches visible above snow | | | | |

### 2.6.2 Relevant Appendices

The following table shows which appendices from the 2015 plan have management direction that may change through this RMP amendment. The appendices can be found on the HiLine RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Amendment Maps | Yes |
| B: Applying Lek Buffer Distances when Approving Actions in Greater Sage-Grouse Habitat Management Areas | Yes |
| C: Required Design Features for Greater Sage-Grouse Habitat | Yes |
| D: The Greater Sage-Grouse Monitoring Framework | No |
| E: Greater Sage-Grouse Disturbance Caps | Yes |
| F: Greater Sage-Grouse Mitigation | Yes |
| G: Oil and Gas Lease Stipulations and Exception, Modification, and Waiver Criteria | Yes |
| H: Best Management Practices | Yes |
| I: Mitigation Measures and Conservation Actions for Greater Sage-Grouse Habitat | Yes |
| J: Adaptive Management Strategy for Greater Sage-Grouse Habitat Management | Yes |
| K: USFWS Concurrence | No |
| L: Standards for Rangeland Health and Guidelines for Livestock Grazing Management | No |
| M: Reclamation | No |
| N: Oil and Gas Best Management Practices (General Conditions of Approval) | No |
| O: Fire and Emergency Stabilization and Rehabilitation | No |
| P: Recreation Sites and Management Areas | No |

## 2.7 LEWISTOWN RMP

This appendix presents the approved RMP revision language from the record of decision for the Lewistown RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.7.2** of this appendix.

### 2.7.1 Existing GRSG RMP Management – Lewistown RMP

**Table 1. Summary of Goals, Objectives, and Management Actions in Lewistown RMP**

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Riparian Areas and Wetlands*** | |
| Action LG-1.14: Riparian-wetland areas will be managed for PFC within the LFO. Within PHMA and GHMA, manage wet meadows to maintain a component of perennial forbs with diverse species richness relative to site potential (e.g., reference state) to facilitate brood rearing. Also conserve or enhance these wet meadow complexes. | No change proposed. |
| Action LG-1.17: Human-made water developments, such as reservoirs and stock ponds, can develop riparian-wetland characteristics. Those that have the capability to support important wildlife values (such as GRSG habitats and fisheries) will be managed for such to the extent practical, with greater consideration given to the purpose of the development. When constructing or modifying water developments in PHMA, use RDFs (Appendix C) to reduce potential impacts from West Nile virus. | No change proposed. |
| Action LG-1.20: Analyze springs, seeps, and associated pipelines during the land health evaluation and determination process to determine if modifications are necessary to maintain the continuity of the predevelopment riparian area within PHMA. Make modifications, where necessary, in accordance with Montana water law, considering impacts on other water uses, when such considerations are neutral or beneficial to GRSG. | No change proposed. |
| ***Management Decisions: Vegetation Communities*** | |
| Objective VEG-1.1: In all SFA and PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action VG-1.12: Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in the FIAT report (Chambers et. al., 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action VEG-1.2: In PHMA and GHMA, prioritize restoration in seasonal habitats that are thought to be limiting GRSG distribution or abundance. | No change proposed. |
| Action VEG-1.4: Manage for suitable GRSG habitat within PHMA. | No change proposed. |
| Action VEG-1.3: In PHMA and GHMA, consideration for other threatened, endangered, or sensitive species will be evaluated in addition to GRSG when prioritizing restoration projects. | No change proposed. |
| Action VEG-1.10: Make reestablishment of suitable GRSG habitat a high priority for restoration. Other restoration efforts within the field office may take precedence over sagebrush habitat projects, based on future threatened and endangered species listing decisions, funding sources and requirements, access to sites, landowner, and other agency cooperation, potential project success, as well as others. Decisions regarding restoration of habitats within the field office will remain at the discretion of the authorized officer. | No change proposed. |
| Action VEG-1.9: In PHMA, restore native (or desirable) plants and create landscape patterns that most benefit GRSG. Consideration for other threatened, endangered, or sensitive species will be evaluated, in addition to GRSG, when creating landscape habitat patterns. | No change proposed. |
| Management Direction VEG-1.5: In PHMA, require use of native seeds for restoration based on availability, adaptation (ecological site potential), and probability of success. Where probability of success or adapted seed availability is low, non-native seeds may be used as long as they support GRSG habitat objectives. | No change proposed. |
| Action VEG-1.8: Choose appropriate seed mix for the location. | No change proposed. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action VEG-1.6: In PHMA, design post-restoration management to ensure long-term persistence. This can include changes in current resource management to achieve and maintain the desired condition of the restoration that benefits GRSG. Modifications to livestock grazing will be made in accordance with BLM grazing regulation 43 CFR, Part 4130.3-3, and after consultation, cooperation, and coordination with owners or lessees having lands or managing resources within the affected allotment(s), affected cooperative state grazing districts and the interested public, if the grazing permit is being modified to make these adjustments. Temporary or long-term adjustments in post-restoration livestock use will be implemented by documented agreement or by the decision of the authorized officer in accordance with BLM grazing regulation 43 CFR, Part 4160. | No change proposed. |
| Management Direction VEG-1.7: In PHMA, consider potential changes in climate when proposing restoration seedings when using native plants. Consider collection from the warmer component of the species current range when selecting native species. | No change proposed. |
| Management Direction VEG-1.11: In PHMA fire prone areas, where sagebrush seed is required for GRSG habitat restoration, consider establishing seed harvest areas that are managed for seed production and are a priority for protection from outside disturbances. | No change proposed. |
| Action VEG-1.1: In PHMA, prioritize implementation of restoration projects based on environmental variables that improve chances for project success in areas most likely to benefit GRSG. | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal SSS-1: Maintain and/or increase GRSG abundance and distribution by conserving, enhancing, or restoring the sagebrush ecosystem upon which populations depend, in cooperation with other conservation partners. | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective SSS-1.2: Habitat Delineation: Delineate PHMA to encompass the 75% breeding bird density map: 233,219 BLM surface acres (19% of total PHMA acres). See Figure 2-1, Lewistown Habitat Management Areas (Appendix A, Approved RMP Amendment Maps). | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective SSS-1.3: Habitat Delineation: Delineate GHMA to encompass the remainder of the habitat presented in the 100% breeding bird density map: 112,341 BLM surface acres (11% of total GHMA acres). | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action SSS-1.5: Designate SFA as shown on Figure 2-1 (Appendix A) (53,440 acres). SFA will be managed as PHMA, with the following additional management:<br>1) Recommended for withdrawal from the General Mining Act of 1872 (as amended), subject to valid existing rights.<br>2) Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | Potential change under Alternatives 3, 4, 5, and 6. |
| Wildlife Objective 8: Minimize fragmentation of large intact blocks of important wildlife habitat, particularly habitat areas for Greater Sage-Grouse and grassland birds. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action SSS-1.1: In undertaking BLM management actions in PHMA and GHMA, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the US Geological Survey Report Conservation Buffer Distance Estimates for Greater Sage-Grouse – A Review (Open File Report 2014-1239) in accordance with Appendix B, Applying Lek Buffer Distances When Approving Actions.<br><br>Also MD WLH & SSS-97 | No change proposed. |
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* |
| ***Management Decisions: Disturbance*** | |
| Objective SSS-1.1: Protect PHMA from anthropogenic disturbances that will reduce distribution or abundance of GRSG. | No change proposed. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action SSS-1.2: Disturbance: If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA in any given BSU (see Figure 2-2, Lewistown GRSG Biologically Significant Units and Priority Habitat Management Areas [PHMA] [Appendix A]), then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 hard rock mining law, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA in any given BSU until the disturbance has been reduced to less than the cap. (BSU for this RMPA is the summary of all the PHMA within a GRSG population as delineated in the COT report.)<br><br>If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership), or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 Mining Law, as amended, valid existing rights, etc.) will be permitted by BLM within a project analysis area until the disturbance has been reduced to less than the cap. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action SSS-1.4: Disturbance: Protect PHMA from anthropogenic disturbances that will reduce distribution or abundance of GRSG. See Appendix E, Greater Sage-Grouse Disturbance Caps. If the BLM determines that the State of Montana has adopted a GRSG Habitat Conservation Program that contains comparable components to those found in the State of Wyoming's Core Area Strategy including an all lands approach for calculating anthropogenic disturbances, a clear methodology for measuring the density of operations, and a fully operational density and (DDCT, the 3% disturbance cap will be converted to a 5% cap for all sources of habitat alteration within a project analysis area.<br><br>[Management action clarified in 2018 to reflect State of Montana process, under DOI-BLM-MT-2018-0005-CX. RMP Maintenance Action Language: This maintenance action is to clarify that the BLM has determined that the State's all lands approach to analyzing disturbance is operational and effective. Therefore, the BLM will adopt and implement the State's approach as identified in Attachments D (Stipulations for Uses and Activities) and H (definitions) of Montana Executive Order 12-2015.] | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| SSS-1.3 : Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action SSS-1.7: Implement Regional Mitigation Strategy (Appendix F). | Potential change under Alternatives 3, 4, 5, and 6. |
| Action SSS-1.6: Implement Adaptive Management Plan (Appendix I). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| Objective FIRE-1.2: Manage wildfires to minimize loss of sagebrush and protect GRSG habitat. | No change proposed. |
| Action FIRE-1.8: Follow the most current RDFs for fire and fuels (Appendix C). | No change proposed. |
| Action FIRE-1.4: Follow the most current RDFs for fire and fuels (Appendix C, Required Design Features). | No change proposed. |
| Action FIRE-1.1: If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plans will address:<br>*why alternative techniques were not selected as a viable options;<br>*how GRSG goals and objectives will be met by its use;<br>*how the COT report objectives will be addressed and met; and<br>*a risk assessment to address how potential threats to GRSG habitat will be minimized.<br>Prescribed fire as vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect GRSG habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action FIRE-1.6: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. In PHMA, prioritize suppression, after life and property, to conserve the habitat. See Appendix H, which will be completed to help further refine fire management actions once this plan is completed. | No change proposed. |
| Action FIRE-1.5: If prescribed fire is used, the burn plan will clearly indicate how COT objectives will be addressed and met, and why alternative techniques are not applicable. A fire risk assessment will be completed for implementation of prescribed fire used to meet the GRSG goals and objectives in PHMA (see Appendix H, GRSG Wildfire and Invasive Species Habitat Assessment). | Potential change under Alternatives 3, 4, 5, and 6. |
| Action FIRE-1.2: Design fuels management projects in PHMA to strategically and effectively reduce wildfire threats in the greatest area. This may require fuels treatments implemented in a more linear versus block design. | No change proposed. |
| FIRE-1.9: In PHMA, prioritize native seed allocation for use in GRSG habitat in years when preferred native seed is in short supply. This may require reallocation of native seed from emergency stabilization and rehabilitation (ES&R) projects outside of PHMA to those inside it. Use of native plant seeds for ES&R seedings is required based on availability, adaptation (site potential), and probability of success. Where probability of success or native seed availability is low, non-native seeds may be used as long as they meet GRSG habitat conservation objectives. Re-establishment of appropriate sagebrush species/subspecies and important understory plants, relative to site potential, shall be the highest priority for rehabilitation efforts. | No change proposed. |
| Action FIRE-1.10: In PHMA, design post ES&R management to ensure long-term persistence of seeded or pre-burn native plants. This can include changes in current resource management to achieve and maintain the desired condition of the restoration effort that benefits GRSG.<br><br>Modifications to livestock grazing will be made in accordance with BLM grazing regulation 43 CFR, Part 4130.3-3 and after consultation, cooperation and coordination with owners or lessees having lands or managing resources within the affected allotment(s), affected cooperative state grazing districts and the interested public, if the grazing permit is being modified to make these adjustments. Temporary or long-term adjustments in post-restoration livestock use will be implemented by documented agreement or by the decision of the authorized officer in accordance with BLM grazing regulation 43 CFR, Part 4160. | No change proposed. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Management Direction FIRE-1.11: In PHMA, consider potential changes in climate when proposing post-fire seedings using native plants. Consider seed collections from the warmer component within a species' current range for selection of native seed. | No change proposed. |
| Management Direction FIRE-1.7: In GHMA, prioritize suppression where wildfires threaten PHMA | No change proposed. |
| ***Management Decisions: Lands and Realty*** | |
| Action LR-1.9: Lands classified as PHMA and GHMA will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG. See Figure 2-11, Lewistown Land Tenure (Appendix A). | No change proposed. |
| Action LR-1.13: When offered, PHMA will be a priority in consideration of land acquisitions (refer to Appendix H, Land Pattern Review and Land Adjustment, in Lewistown Field Office Proposed RMPA/Final EIS). Consider GRSG for all land tenure actions. | No change proposed. |
| Action LR-1.1: PHMA and GHMA will be managed as ROW avoidance areas for high voltage transmission lines (100 kilovolt [kV] and over) and large pipelines (24 inches in width and over) (345,560 acres) with limited exceptions, which must be based on an explicit rationale that biological impacts on GRSG are being avoided with the exception. See Figure 2-10a, Major Rights-of-Way (Appendix A).<br>· PHMA will also be managed as a minor ROW avoidance area (233,219 acres). See Figure 2-10b, Lewistown Minor Rights-of-Way (Appendix A).<br>· GMHA will be open to minor ROWs (112,341 acres).<br>· Where new ROWs are required, collocate new ROWs within existing ROWs or where it best minimizes impacts on GRSG and GRSG habitat.<br>· Appropriate RDFs identified within the terms of the authorization to minimize surface-disturbing and disruptive activities. See Appendix C for RDFs that may be applied based on site-specific project level NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LR-1.2: PHMA will be managed as a ROW exclusion area for wind and solar energy (233,219 acres) and GHMA will be managed as a ROW avoidance area for wind and solar energy (112,341 acres). See Figure 2-8, Lewistown Wind, and Figure 2-9, Lewistown Solar (Appendix A). | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action LR-1.6: Leases and permits (other than for cabin site leasing), which may be for occupancy, and film production, will be considered on a case-by-case basis; however, PHMA will be lease and permit avoidance areas. Leases and permits will be allowed in GHMA with appropriate stipulations and conservation measures identified within the terms of the authorization to minimize surface-disturbing and disruptive activities. Avoidance areas within GHMA may be identified. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LR-1.3: When addressing ROW authorizations in PHMA, identify and evaluate opportunities to remove, bury, or modify power lines within PHMA. Financial and technical feasibility will be evaluated during the environmental analysis process. | No change proposed. |
| Action LR-1.9: Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table D.2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA. | No change proposed. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| Action MR-1.11: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee (Appendix C). | No change proposed. |
| Action MR-1.12: Where the federal government owns the mineral estate in PHMA and GHMA, and the surface estate is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs (Appendix C) applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| Action MR-1.1: Allow geophysical exploration within PHMA to obtain exploratory information for areas outside of and adjacent to PHMA areas. Allow only geophysical operations by helicopter-portable drilling methods and in accordance with seasonal timing restrictions and other restrictions that may apply (see Appendix C). | Potential change under Alternative 3. |
| FW–AU-01: Apply NSO stipulations to greater sage-grouse PHMA. | Potential change under Alternatives 3 and 6. |
| FW–AU-02: Apply NSO stipulations within 0.6 miles of a lek within GHMA. | Potential change under Alternative 3. |
| FW-AU-03: Apply CSU stipulations within 2 miles of a lek within GHMA. | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-1: No waivers or modifications to a fluid mineral lease NSO stipulation will be granted in PHMA. The authorized officer may grant an exception to a fluid mineral lease NSO stipulation only where the proposed action:<br>(i) would not have direct, indirect, or cumulative effects on Greater Sage-Grouse or its habitat; or<br>(ii) is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and would provide a clear conservation gain to Greater Sage-Grouse.<br>*Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid federal fluid mineral lease existing as of the date of this RMP revision. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br>*Any exceptions to this lease stipulation may be approved by the authorized officer only with the concurrence of the State Director. The authorized officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other Greater Sage-Grouse expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publicly available at least quarterly. | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action MR-1.2: During implementation level review and decisions, (e.g., approval of an application for permit to drill or Sundry Notice) and on completion of the environmental record of review (43 CFR, Part 3162.5), include appropriate documentation of compliance with NEPA. In this process evaluate, among other things:<br>· Whether the conservation measure is reasonable (43 CFR, Part 3101.1-2) with the valid existing rights; and<br>· Whether the action is in conformance with the ARMPA.<br>The following operating constraints will be applied to existing leases as COAs in PHMA and GHMA. Exceptions may be granted by the authorized officer if an environmental review demonstrates that effects can be mitigated to an acceptable level, if habitat for the species is not present in the area, or if portions of the area can be occupied without affecting GRSG. Exceptions may also be granted where the short-term effects on GRSG within PHMA and GHMA are mitigated by the long-term benefits. Permanent (longer than two months) structures that create movement must be designed or sited to minimize impacts on GRSG.<br>· As reasonable (43 CFR, Part 3101.1-2), in consideration of valid existing rights, and to achieve a net conservation gain, the BLM will require compensatory mitigation when impacts cannot be adequately avoided and minimized, and residual impacts will result in habitat loss and degradation. Compensatory mitigation actions will align with the recommendations in the Regional Mitigation Strategy (see Appendix F), as appropriate. A priority may be given to compensatory mitigation actions in the same PHMA as is being impacted, unless a greater benefit can be achieved elsewhere. Compensatory mitigation will be considered when no feasible options remain to adequately avoid and minimize impacts within and immediately adjacent to the impacted site.<br>· Make applicable RDFs (Appendix C) mandatory as COAs within PHMA and GHMA. RDFs provided in Appendix C will be site-specific restrictions applied to permits to drill as COAs after the completion of site- specific NEPA analysis. Standard stipulations (see Appendix G, Oil and Gas Lease Stipulations) apply to existing leases. See Figure 2-4, Lewistown Fluid Minerals (Oil and Gas) (Appendix A). Applied RDFs will have to be reasonable (43 CFR, Part 3101.1-2) with the valid existing rights and in conformance with the approved Judith and Headwaters RMPs. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Solid Leasable Minerals*** | |
| Action MR-1.7: Close PHMA to nonenergy leasable mineral leasing. This includes not permitting any new leases to expand an existing mine. See Figure 2-7, Lewistown Non-Energy Leasable Minerals (Appendix A). | Potential change under Alternatives 3 and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action MR-1.8: For existing nonenergy leasable mineral leases in PHMA, apply all appropriate RDFs from Appendix C, whether traditional or solution mining is used to extract resources. | No change proposed. |
| Action SL-Coal-6: At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1). | No change proposed. |
| ***Management Decisions: Locatable Materials*** | |
| Action MR-1.4: Recommend SFA (53,440 acres) for withdrawal from the General Mining Act of 1872 (as amended), subject to valid existing rights.<br>Analyze proposed action in Plan of Operations and apply mitigating measures needed to prevent unnecessary or undue degradation, as appropriate and in accordance with applicable law. | Potential change under Alternative 3. |
| Action LR-1.15: SFA (53,440 acres) will be recommended for withdrawal from the General Mining Act of 1872 (as amended), subject to valid existing rights. | Potential change under Alternative 3. |
| ***Management Decisions: Mineral Materials*** | |
| Action MR-1.9:<br>In GHMA, the BLM will issue permits for salable minerals, where disposal is deemed to be in the public interest. | Potential change under Alternatives 3 and 6. |
| Action MR-1.10: In PHMA, restore salable mineral pits no longer in use to meet GRSG habitat conservation objectives | No change proposed. |
| FW-AU-04: PHMA are open to new mineral material sales for both free and commercial use following disturbance guidelines and other applicable conservation measures. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| Action TTM-1.1: BLM-administered lands are designated limited to existing roads, primitive roads, and trails yearlong for off-highway vehicle use (OHVs; OHVs are restricted to existing roads, primitive roads, and trails).<br>Implement a comprehensive travel and transportation management (CTTM) plan to designate roads and trails (when travel management plan is complete).<br>Administrative off-road use for BLM personnel and BLM authorized activities will be allowed. BLM-implemented CTTM will not apply to private or other state or federal lands within the LFO. | No change proposed. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action TTM-1.5: Through site-specific planning, the BLM will designate roads, primitive roads, and trails for motorized use. Roads, primitive roads, and trails will be inventoried, mapped, and analyzed to the degree necessary to evaluate and designate the roads, primitive roads, and trails as open, seasonally open, or closed (BLM 2003). All CTTM planning shall be completed within 5 years of the signing of the ROD. The CTTM planning will be conducted using an interdisciplinary team approach to address all resource uses, including administrative, recreation, commercial, and associated modes of travel (motorized, mechanized, and nonmotorized types; BLM—Travel and Transportation Handbook [H-8342]). | No change proposed. |
| Action TTM-1.8: In PHMA, during site-specific travel and transportation management planning, the upgrading of existing routes that will change route category (road, primitive road, or trail) or capacity may be allowed when there are minimal impacts on GRSG and GRSG habitat, if it is necessary for motorist safety, or if it eliminates the need to construct a new road. All upgrades to existing routes will be evaluated on a case-by-case basis and will be subject to valid existing rights (e.g., existing ROWs or easements). | No change proposed. |
| Action TTM-1.6: In PHMA, during site-specific travel and transportation management planning, limit route construction to realignment of existing routes if that realignment has a minimal impact on GRSG habitat, if it eliminates the need to construct a new road, or if it is necessary for motorist safety. | No change proposed. |
| Action TTM-1.9: When travel plans are complete, restore roads, primitive roads and trails in PHMA that are not designated in travel management plans. This also includes primitive routes/roads that were not designated in wilderness study areas (WSA) that have been selected for protection in previous RMPs. | No change proposed. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action TTM-1.11: In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR, subpart 8364 (Closures and Restrictions); 43 CFR, subpart 8351 (Designated National Area); 43 CFR, subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR, subpart 8341 (Conditions of Use).<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that OHVs are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence (43 CFR, Part 8341.2). A closure or restriction order shall be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders shall be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No change proposed. |
| Action TTM-1.4: During route designation and travel planning in PHMA, travel management will evaluate the need for permanent or seasonal route or area closures where vehicle use is causing or will cause considerable adverse effects on habitat. | No change proposed. |
| Action TTM-1.7: In PHMA, during site-specific travel and transportation management planning, use existing routes or realignments, as described above, to access valid existing rights that are not yet developed. If valid existing rights cannot be accessed via existing routes, then build any new route to the absolute minimum standard necessary. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| Action LG-1.1: GRSG habitat objectives will be considered when evaluating an allotment's conformance with land health standards (see Appendix F in the Lewistown Field Office Proposed RMPA/Final EIS) prior to renewing a grazing authorization. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.2: In PHMA and GHMA, conduct land health evaluations and determinations that include (at a minimum) indicators and/or measurements of structure/condition/composition of vegetation specific to achieving GRSG habitat objectives. Management actions will be developed and implemented within one year if land health determinations indicate that an allotment is not meeting standards due to current livestock grazing. Appendix D addresses mid-scale monitoring. | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| (Same as Wildlife MD-43e): The area will remain available for livestock grazing. Site-specific Greater Sage-Grouse habitat and management objectives will be developed for BLM land and incorporated into the respective AMPs or livestock grazing permits as appropriate. Third order (fine-scale) and fourth order (site-scale) habitat indicators and characteristics for sage-grouse habitat seasonal use areas as described in the Sage-Grouse Habitat Assessment Framework (Stiver, et al. 2015) will be used to quantify habitat objectives. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.7: In PHMA, conduct land health evaluations and determinations that include (at a minimum) indicators and/or measurements of structure/condition/composition of vegetation specific to achieving GRSG habitat objectives. Management actions will be developed if land health determinations indicate that an allotment is not meeting standards due to current livestock grazing. Appendix D addresses mid-scale monitoring. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.9: In PHMA and GHMA, conduct land health evaluations and determinations that include (at a minimum) indicators and/or measurements of structure/condition/composition of vegetation specific to achieving GRSG habitat objectives. Management actions will be developed if land health determinations indicate that an allotment is not meeting standards due to livestock grazing in accordance with BLM grazing regulations 43 CFR, Part 4100. Appendix D addresses mid-scale monitoring. | Potential change under Alternatives 3, 4, 5, and 6. |
| (Same as Livestock Grazing MD-12): The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in SFA followed by PHMA outside of the SFA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.6: Allotments that have the best opportunities for conserving, enhancing, or restoring habitat for GRSG will receive high priority for monitoring, evaluation, and management. | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action LG 1.5: The BLM will prioritize (1) the review of grazing permits/leases in particular to determine if modification is necessary prior to renewal): and (2) the processing of grazing permits/leases in in SFA, followed by PHMA. In setting will prioritize (1) the review of grazing permits/leases in particular to determine if modification is necessary prior to renewal): and (2) the processing of grazing permits/leases in in SFA, followed by PHMA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations.<br>The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds, based on GRSG Habitat Objectives (Table 2-2), Land Health Standards (43 CFR, Part 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis.<br><br>Ecological site descriptions, riparian PFC protocols, water quality data, and various types of appropriate vegetative, riparian, habitat, and any other applicable data will continue to be used as the basis in allotment evaluations to determine conformance to Standards for Land Health and Guidelines for Livestock Grazing Management (see Appendix F, in the Lewistown Field Office Proposed RMPA/Final EIS) | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG 1.5 [part]: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.8: The BLM will monitor grazing permits/leases renewed or modified in accordance with the direction contained in this guidance as follows: Allotments within SFA, followed by those in other PHMA, and focusing on those with riparian areas, will be prioritized for monitoring to ensure compliance with the terms and conditions in the permits. The BLM will collect, at a minimum, the following monitoring data:<br>· Vegetation Condition<br>· Actual Use<br>· Utilization<br>· Use Supervision | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action LG-1.21: Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to PHMA to determine if they should be restored to sagebrush or habitat of higher quality for GRSG. If these seedings are part of a grazing management plan that is providing value in conserving or enhancing native rangelands in PHMA and other priority wildlife habitats, then no restoration will be necessary. Assess the compatibility of these seedings for GRSG habitat or as a component of a grazing system during the land health evaluation and determination process. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.26: When developing or modifying water developments in PHMA and GHMA, use applicable RDFs (Appendix C) to reduce potential impacts from West Nile virus. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.27: During the land health evaluation and determination and grazing authorization renewal process (typically every 10 years), examine existing structural range improvements and location of supplements (salt or protein blocks) to ensure they conserve, enhance or restore PHMA.<br>· Identify and mark fences in high and moderate risk areas, as identified by the use of "The Fence Collision Risk Tool" (http://www.nrcs.usda.gov/Internet/FSE_DOCUMENTS/) within PHMA, based on proximity to lek, lek size, and topography (Stevens 2011, Stevens et al. 2013).<br>· During the allotment evaluation and determination and grazing authorization renewal process, examine existing structural range improvements to ensure they conserve, enhance, or restore PHMA.<br>· In PHMA and GHMA, monitor for and treat invasive and noxious weed species associated with existing range improvement projects. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.24: In PHMA, site and design new structural range improvements and location of supplements (salt or protein blocks) to conserve, enhance, or restore said habitat through an improved grazing management system relative to GRSG habitat objectives. Structural range improvements, in this context, include cattle guards, fences, exclosures, corrals, or other livestock handling structures; pipelines, troughs, storage tanks (including movable tanks used in livestock water hauling), windmills, ponds/reservoirs, solar panels, and spring developments). | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action LG-1.18: Within PHMA, reduce hot season grazing on riparian and meadow complexes to promote recovery or maintenance of appropriate vegetation and water quality. Use fencing/herding techniques or seasonal use or livestock distribution changes to reduce pressure on riparian or wet meadow vegetation used by GRSG in summer. Hot season use of riparian and wet meadow complexes may be authorized where consistent with overall GRSG habitat objectives and where use is currently resulting in vegetative conditions that are in conformance with land health standards. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.4: In PHMA, cooperate with ranchers and other agencies on integrated ranch planning so operations with intermingled land ownerships within BLM allotments can be planned as single units. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.10: Conserve, enhance, or restore PHMA based on ecological site descriptions (including wetlands and riparian areas). If an effective grazing system that meets GRSG habitat objectives is not already in place, analyze at least one allotment-specific alternative within the planning unit/permit renewal process that conserves, restores, or enhances PHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.11: In PHMA, manage for vegetation composition and structure consistent with ecological site potential within the reference state to achieve GRSG seasonal habitat objectives. Natural ecological processes that impede localized site potential and that create a mosaic of habitat successional patterns will continue to occur. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG-1.12: In PHMA, implement management actions within or outside of the watershed planning/permit renewal process to modify grazing management and to meet seasonal GRSG habitat objectives. Consider singly, or in combination, for changes in:<br>· Season or timing of use<br>· Numbers of livestock (includes temporary non-use or livestock removal)<br>· Distribution of livestock use<br>· Intensity of use<br>· Type of livestock | Potential change under Alternatives 3, 4, 5, and 6. |

| Lewistown RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Action LG-1.13: During drought periods, prioritize evaluating effects of the drought in PHMA, relative to their needs for food and cover. Drought management will continue to be in accordance with the Montana/Dakotas drought policy (see Appendix I, Drought Policy, in the Lewistown Field Office Proposed RMPA/Final EIS). Since there is a lag in vegetation recovery following drought, post-drought management will be implemented to allow for vegetation recovery that meets GRSG needs in PHMA. In accordance with BLM grazing regulation 43 CFR, Part 4130.3-3, consultation, cooperation, and coordination with owners or lessees having lands or managing resources within the area, the affected cooperative state grazing district, and interested public will be completed prior to adjusting post-drought livestock management if the grazing permit is being modified to make these adjustments. Implementation of adjustments will be initiated through documented agreement or by decision of the authorized officer in accordance with BLM grazing regulation 43 CFR, Part 4160. | Potential change under Alternatives 3, 4, 5, and 6. |
| Action LG 1.5 (part): At the time a permittee or lessee voluntarily relinquishes a grazing permit or lease, the BLM will consider whether the public lands where that permitted use was authorized shall remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR, 4110.2-3. | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 1. Lewistown Habitat Objectives for GRSG**

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **BREEDING, NESTING, AND EARLY BROOD REARING (Seasonal Use Period: March 1 to June 30)** | | | |
| Lek Security | Proximity of trees | Trees or other tall structures are not within line of sight of lek and absent or uncommon within 3 kilometers (km) (1.9 miles) of the lek. | Connelly et al. 2000 |
| | Collision Risks | Fences and other structures that pose a high collision risk are absent or mitigated with visual markers. | Connelly et al. 2000. Stevens 2011 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 100 meters (m; 328 feet [ft.]) of an active lek. | Stiver et al. 2015 |
| Cover | Sagebrush cover | 10-25% | Berkeley et al. 2013<br>Connelly et al. 2000<br>Doherty et al. 2010<br>Lane 2005<br>Hagen et al. 2007<br>Sant et al. 2014 |
| | Sagebrush height | 40-80 centimeters (cm) (15.7-31.5 inches) individual sagebrush available within stand (for nesting) with a variety of heights (including those <40 cm [<15.7 inches]). | Connelly et al. 2000<br>Lane 2005 |
| | Predominant sagebrush shape | Spreading | Stiver et al. 2015 |
| | Perennial grass cover (such as bluebunch wheatgrass, green needlegrass and western wheatgrass) | ≥15% | Connelly et al. 2000<br>Lane 2005<br>Sant et al. 2014 |
| | Perennial grass and forb height (includes residual grasses) | ≥18 cm (≥7.1 inches) | Berkeley et al. 2013<br>Connelly et al. 2000<br>Doherty et al. 2014<br>Hagen et al. 2007<br>Taylor et al. 2012 |
| | Perennial forb cover | ≥10% | Connelly et al. 2000<br>Sant et al. 2014 |

## 2.8 MILES CITY RMP

This appendix presents the approved RMP revision language from the record of decision for the Miles City RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.8.2** of this appendix.

### 2.8.1 Existing GRSG RMP Management – Miles City RMP

**Table 1. Summary of Goals, Objectives, and Management Actions in Miles City RMP**

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| Objective 5: In all PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 2: Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in the Fire and Invasive Species Team (FIAT) report (Chambers et. al., 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal 1: Provide for the conservation, enhancement, restoration, and connectivity of the Northern Great Plains mixed grass prairie and shrubland, capable of supporting sustainable populations of GRSG and other wildlife species. | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective 2: Conserve GRSG habitat while promoting movement and genetic diversity | Potential change under Alternatives 3, 4, 5, and 6. |
| PHMA Objective 2: Restore degraded GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| PHMA Objective 1: Maintain or increase GRSG habitat over the long-term, recognizing valid existing rights. | Potential change under Alternatives 3, 4, 5, and 6. |
| (GHMA) Goal 1: Maintain or increase habitat needed for GRSG through the management of surface disturbing and disruptive activities, including the loss and distribution of sagebrush habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-1 (part): In undertaking BLM management actions and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the United States geological Survey (USGS) Report (see Appendix B, GRSG Conservation Buffer). [GHMA] | Potential change under Alternatives 3, 4, 5, and 6. |
| RHMA Objective 1: Strive for proponents to develop area-wide Habitat Recovery Plans. | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| RHMA Objective 2: Strive for no net loss of GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| RHMA Objective 3: Strive for the restoration of previously disturbed landscapes in a manner which increases or improves the quality and quantity of GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| All HMAs Objective 1: Maintain, improve and increase sagebrush habitats to sustain sagebrush obligates and other sagebrush dependent species. | Potential change under Alternatives 3, 4, 5, and 6. |
| In addition, surface occupancy and use within 2 miles of leks is restricted or prohibited. Prior to such activities, a plan to mitigate impacts on nesting GRSG or their habitat will be prepared by the proponent and implemented upon approval, by the Authorized Officer (AO) (CSU) (652,000 acres). [GHMA] | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 3 (part): PHMA is managed according to the following prescriptions: In undertaking BLM management actions, and consistent with valid and existing rights and law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the USGS Report Conservation Buffer Distance Estimates for Greater Sage-grouse – A Review (Open File Report 2014-1239), in accordance with Appendix B, GRSG Conservation Buffer. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Disturbance*** | |
| MD 3 (part): PHMA is managed according to the following prescriptions: If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the Mining Law of 1872, valid existing rights, etc.) will be permitted by BLM within PHMA in a analysis area until the disturbance has been reduced to less than the cap.<br><br>If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the Mining Law of 1872, as amended, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA in any given BSU until the disturbance has been reduced to less than the cap.<br><br>If the BLM determines that the State of Montana has adopted a GRSG Habitat Conservation Program that contains comparable components to those found in the State of Wyoming's Core Area Strategy including an all lands approach for calculating anthropogenic disturbances, a clear methodology for measuring the density of operations, and a fully operational Density Disturbance Calculation Tool, the 3% disturbance cap will be converted to a 5% cap for all sources of habitat alteration within an analysis area.<br><br>[Management action clarified in 2018 to reflect State of Montana process, under DOI-BLM-MT-2018-0005-CX. RMP Maintenance Action Language: This maintenance action is to clarify that the BLM has determined that the State's all lands approach to analyzing disturbance is operational and effective. Therefore, the BLM will adopt and implement the State's approach as identified in Attachments D (Stipulations for Uses and Activities) and H (definitions) of Montana Executive Order 12-2015.] | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 1: In all GRSG habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD 2: Will follow the adaptive management strategy outlined in Appendix H, GRSG Adaptive Management Strategy. The hard and soft trigger data will be analyzed as soon as it becomes available after the signing of the ROD and then at a minimum, analyzed annually thereafter. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| MD 3: If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plan will address:<br>-why alternative techniques were not selected as a viable options;<br>-how GRSG goals and objectives will be met by its use;<br>-how the COT Report objectives will be addressed and met;<br>-a risk assessment to address how potential threats to GRSG habitat will be minimized<br><br>Prescribed fire as vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that will protect GRSG habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 1: The BLM will prioritize fire management activities according to potential risks to life and property across the planning area. Wildfires adjacent to or near wildland urban or industrial interface will have the highest priority for fire suppression. In PHMA, prioritize suppression, after life and property, to conserve the habitat. In GHMA, prioritize suppression where wildfires threaten PHMA. | No change proposed. |
| ***Management Decisions: Lands and Realty*** | |
| MD 5: Lands classified as PHMA and GHMA for GRSG will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG. | No change proposed. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD 3 (part): PHMA is managed according to the following prescriptions: Major (high voltage transmission lines and large pipelines) and minor ROWs will avoid GRSG priority areas (817,000 acres). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 1 (part): Major ROWs (100 kv and over for high voltage transmission lines and 24 inch in width and over for large pipelines) and renewable energy ROWs will avoid GRSG GHMA (1,395,000 acres).<br><br>Minor ROWs will be allowed with design features to protect breeding, nesting and brood rearing in GRSG GHMA (1,365,000 acres). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 3 (part): PHMA is managed according to the following prescriptions: Renewable Energy ROWs will be excluded within GRSG priority areas (817,000 acres). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 1 (part): Surface-disturbing and disruptive activities will be allowed with required design features to minimize disturbance to GRSG habitat (87,000 acres).<br>-Renewable Energy ROWs will be excluded within all Restoration Areas.<br>-Major ROWs will be avoided and minor ROWs will be allowed with design features. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4: Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table 2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA. | No change proposed. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| MD 8 (partial): Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| MD 8 (partial): Where the federal government owns the mineral estate in PHMA and GHMA, and the surface is in non-federal ownership, apply the same stipulations, conditions of approval (COAs), and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-1 (part): Other surface-disturbing and disruptive activities (including Mineral Material Sales) will be allowed with design features to protect breeding, nesting, and brood-rearing GRSG habitat (1,365,000 acres). [GHMA] | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Objective 3: Priority will be given to leasing and development of fluid minerals outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources in PHMA and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 United States Code (U.S.C.) 226(p) and 43 CFR, Part 3162.3-1(h). | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective 4: Where a proposed fluid mineral development on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other proponents to avoid, minimize and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessees, operators, or other proponent in developing an application for permit to drill (APD) for the lease to avoid and minimize impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | No change proposed. |
| MD 3 (part): PHMA is managed according to the following prescriptions: Oil and gas leasing is open and surface occupancy and use is prohibited within sage grouse priority areas (NSO (1,329,000 acres). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-1 (part): Oil and gas leasing is open and surface occupancy and use is prohibited within 0.6 miles of the perimeter of leks (NSO) (61,000 acres). | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD 3 (part): PHMA is managed according to the following prescriptions: No waivers or modifications to a fluid mineral lease no-surface occupancy stipulation will be granted. The AO may grant an exception to a fluid mineral lease no-surface occupancy stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and will provide a clear conservation gain to GRSG.<br><br>Any exceptions to this lease stipulation may be approved by the AO only with the concurrence of the State Director. The AO may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfied (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publically available at least quarterly. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 1 (part): Surface-disturbing and disruptive activities will be allowed with required design features to minimize disturbance to GRSG habitat (87,000 acres).<br>-Oil and gas leasing is open and surface occupancy and use is subject to design features, to minimize disturbance to GRSG habitat in the Cedar Creek Area (CSU) (22,000 acres).<br>-In the West Decker (11,000 acres) and South Carter Area (164,000 acres) oil and gas leasing is open and surface occupancy and use is prohibited (NSO). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Solid Leasable Minerals*** | |
| Action MR-3: At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1). | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Mineral Materials*** | |
| MD 3 (part): PHMA is managed according to the following prescriptions: PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br>-The activity is within the PHMA BSU and area disturbance cap.<br>-The activity is subject to the provisions set forth in the mitigation framework (Appendix F, GRSG Regional Mitigation Strategy).<br>-All applicable required design features are applied; and (if applicable) the activity is permissible under the specific subregional screening criteria. | Potential change under Alternatives 3 and 6. |
| ***Management Decisions: Recreation*** | |
| Management Direction REC-1: In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, and staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from important areas, etc.), or unless the development is required for visitor health and safety or resource protection | No change proposed. |
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| Objective 7: The BLM will strive to complete travel management planning using a developed strategy that sets time frames and prioritizes Travel Management Areas (TMAs). TMAs within the priority GRSG habitat area will strive to be prioritized and completed as funding and staffing allows. | No change proposed. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD 1: On BLM administered surface, including PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use).<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the AO to resolve management conflicts and protect persons, property, and public lands and resources. Where an AO determines that OHVs are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. (43 CFR, Part 8341.2) A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| MD LG-4: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds based on GRSG Habitat Objectives Table and Land Health Standards (43 CFR, Part 4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG-3: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (ex., fire) and legal obligations. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-5: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |

| Miles City RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD 1: Where deemed effective, water developments will be managed to reduce the spread of West Nile virus (see Appendix C, GRSG Required Design Features). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction 6: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2. Miles City Habitat Objectives for GRSG**

| Attribute | Indicator | Desired Condition | References |
|---|---|---|---|
| **BREEDING, NESTING AND EARLY BROOD-REARING (Seasonal Use Period March 1-June 15)** | | | |
| Lek Security | Proximity of trees | .65–$Km^2$ (.388 miles) avoidance of coniferous habitats | Doherty 2008 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 ft. (100 m) of an occupied lek | Stiver et al. 2015 |
| Cover | Sagebrush canopy cover | 5-25% | Herman–Brunson 2007<br>Swanson 2009<br>Doherty et al. 2010<br>Hagen et al. 2007<br>Doherty et al. 2011<br>Foster et al. 2014<br>Wright and Wegner 2008 |

### 2.8.2 Relevant Appendices

The following table shows which appendices from the 2015 plan have management direction that may change through this RMP amendment. The 2015 Appendices can be found on the Miles City RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Maps | Yes |
| B: GRSG Conservation Buffer | Yes |
| C: GRSG Required Design Features | Yes |
| D: GRSG Monitoring Framework | Yes |
| E: GRSG Disturbance Cap | Yes |
| F: GRSG Regional Mitigation Strategy | Yes |
| G: Minerals Stipulations | Yes |
| H: Adaptive Management Strategy for GRSG Habitat Management | Yes |
| I: Air Resources and Climate | No |
| J: Fish, Aquatic and Wildlife Habitat Including Special Status Species | No |
| K: Livestock Grazing | No |
| L: Mitigation Measures and Conservation Actions | No |
| M: Monitoring | No |
| N: Reclamation | No |
| O: Recreation | No |
| P: Special Designation Areas | No |
| Q: Biological Opinion | No |

## 2.9 UPPER MISSOURI RIVER BREAKS NATIONAL MONUMENT RMP

This appendix presents the approved RMP revision language from the record of decision for the Upper Missouri River Breaks National Monument RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.9.2** of this appendix.

### 2.9.1 Existing GRSG RMP Management – UMRBNM RMP

**Table 1. Summary of Goals, Objectives, and Management Actions in UMRBNM RMP**

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| The BLM will consider mechanical treatment as the primary method and prescribed fire as a secondary method to remove conifers encroaching on sage-grouse habitat, except where forested habitat is limited. | No change proposed. |
| The BLM will promote sage planting, where appropriate, on project areas (such as sites where sagebrush has been removed for crested wheat grass conversions) occurring within sage-grouse habitats and will reclaim and/or reseed areas disturbed by treatments. | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Sage-grouse management will utilize the 2005 Management Plan and Conservation Strategies for Sage-Grouse in Montana – Final for overall guidance and direction. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Habitat Objectives*** | |
| The BLM will manage for a healthy diverse vegetative community with a variety of forbs, and maintain big sagebrush and silver sage on sage-grouse wintering and nesting areas with a canopy cover of 15-30% and an average height of 12 inches. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Disturbance*** | |
| **Greater Sage-Grouse –** The BLM will not authorize new surface-disturbing or disruptive activities within 1/4 mile of active leks, nor will it allow new surface-disturbing or disruptive activities within nesting areas (a 2-mile radius of an active lek) from March 1 to June 15. The BLM will not authorize any new surface-disturbing or disruptive activities in active sage-grouse winter habitat from December 1 to March 31. | Potential change under Alternatives 3, 4, 5, and 6. |

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| The following mitigating measures will be applied to new surface-disturbing or disruptive activities for identified/important wildlife habitat in the Monument. Mitigating measures will be applied on a case-by-case basis during activity level planning after an on-site evaluation of the project area indicates the presence of a species. Exceptions to these mitigation measures may be granted by the authorized officer if an environmental review demonstrates there would be no adverse impacts, habitat for the species is not present in the area, or portions of the area can be occupied without affecting a particular species. Exceptions will also be considered for interim and final reclamation. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| The appropriate management response to all wildland fires will be based on firefighter and public safety and resource values on BLM, state, and private land while considering the natural role of fire. Fires could be managed with less than full suppression efforts and, in most cases, allowed to burn to natural barriers or roads. The cost of suppression will also be considered. Resource values, such as sage-grouse habitat, will be protected during wildland fire suppression through the knowledge of resource advisors assigned to wildland fire incidents and/or information on the location of critical resource areas available to incident commanders; however, protection for resource values will be secondary to life safety and property values. | No change proposed. |

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Lands and Realty*** | |
| The BLM's goal is to provide reasonable access for the public and for private landowners, as well as for the administrative needs and authorized uses of industry and government agencies.<br>Under the Proclamation, all federal lands and interests in lands are "hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or leasing or other disposition under the public land laws . . . and from disposition under all laws relating to mineral and geothermal leasing, other than by exchange that furthers the protective purposes of the monument. The establishment of this monument is subject to valid existing rights. . . . Lands and interests in lands within the proposed monument not owned by the United States shall be reserved as a part of the monument upon acquisition of title thereto by the United States."<br><br>In addition to the seven utility and transportation corridors that cross the Missouri River, the Klabzuba pipeline on the south side of the river will also be a designated corridor (Table 2.5). The corridor for the Klabzuba pipeline will only be on the south side of the river. The pipeline follows the McClelland/Stafford Ferry corridor on the north side of the river.<br><br>[Language about corridors is general, but included here for reference. RMP goes forward with specifics about each corridor.] | No change proposed. |
| Avoidance areas for ROWs include the scenic sections of the UMNWSR, the Bodmer Landscapes, the Cow Creek ACEC, cultural/historic sites, riparian and wetland areas, areas containing unique geologic formations, areas considered unsuitable due to erosion and slope, and sage-grouse seasonal habitat where impacts could not be mitigated or effectively controlled. | Potential change under Alternatives 3, 4, 5, and 6. |
| Applications for commercial wind energy systems, solar energy systems and communication sites will not be considered. | No change proposed. |

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Fluid Mineral Resources*** | |
| *The BLM's goal is to provide reasonable oil and gas exploration and development on existing leased land without diminishing the objects of the Monument.*<br>The Proclamation does not allow new oil and gas leases in the Monument. The 43 federal oil and gas leases in the Monument are considered to have valid existing rights based upon the Proclamation, wherein it states "The establishment of this monument is subject to valid existing rights. The Secretary of Interior shall manage development on existing oil and gas leases within the monument, subject to valid existing rights, so as not to create any new impacts that would interfere with the proper care and management of the objects protected by this proclamation." The existing leases are also in compliance with their lease terms and conditions. | No change proposed. |
| [RMP includes language about managing O&G leases in general with consideration for the objects of the monument: Through the environmental review process, the BLM will determine the potential impacts of oil and gas operations and mitigation measures to avoid interference with the proper care and management of the objects protected by the Monument. If the analysis and documentation indicate that a proposal may have impacts that are not in conformance with the Proclamation, regulation, BMPs or existing resource management plans, the BLM will work with the applicant to find alternatives or modifications to the proposal that will minimize such impacts through special permit conditions, consistent with the applicant's rights under applicable laws, regulations and stipulations.<br>See the RMP for specific language.] | No change proposed. |

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| **Conditions of Approval**<br>In addition to the oil and gas lease stipulations (Appendix H), reasonable conditions of approval, under BLM's authority to protect the objects in the Monument, will be applied to APDs. The conditions of approval will apply to all the oil and gas lease acreage (42,805 acres) in the Monument. The conditions of approval will be applied to the APD after an onsite evaluation indicates the presence of the specific resource and after considering the waivers, exceptions and modifications listed in Appendix H. The current APD review process will be utilized, which includes a 30-day posting period for public review of the proposal. The current stipulations (Form 3109-1) will apply to the portions of five of the 12 West HiLine leases that are outside the Monument (2,454 acres). Seasonal or distance restrictions will be placed on oil and gas activities to protect sage-grouse nesting areas and winter habitat, active ferruginous hawk nests, big game winter range, and bighorn sheep distribution and bighorn sheep lambing areas. | No change proposed. |
| *Greater Sage-Grouse Nesting Zone* – Surface-disturbing or disruptive activities will be prohibited from March 1 to June 15 in sage-grouse nesting habitat within 2 miles of a lek. Travel on identified designated roads may include these timing restrictions or limited site visits.<br><br>*Greater Sage-Grouse Winter Habitat* – Surface-disturbing or disruptive activities will be prohibited from December 1 to March 31 within winter habitat for sage-grouse. This condition will not apply to the operation and maintenance of production facilities. Travel on identified designated roads may include these timing restrictions or limited site visits.<br><br>*Greater Sage-Grouse Leks* – Surface-disturbing or disruptive activities will be prohibited within 1/4 mile of active sage-grouse leks. | Potential change under Alternatives 3, 4, 5, and 6. |
| Travel on identified designated roads will be restricted to the minimal vehicle size and type needed for the job. Due to resource issues, timing restrictions may be applied to site visits. For construction and heavy trucks related to production, equipment that exceeds 49dB will be restricted from being within 2 miles of sage-grouse leks between 4:00 a.m. and 8:00 a.m. and from 7:00 p.m. to 10:00 p.m. between March 1 and June 15. | No change proposed. |

| UMRBNM Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Livestock Grazing*** | |
| Grazing permittees will avoid the placement of salt or mineral supplements near leks during the breeding season (March 1 to June 15). The placement of salt or mineral supplements by other entities will not be allowed. Supplemental winter feeding will not be allowed on sage-grouse winter habitat and around leks.<br><br>Concentrations of livestock near leks or winter habitat can disturb or displace sage-grouse. Therefore, concentrations of livestock on leks or other key sage-grouse habitats could be avoided by using conservative stocking levels*, locating salt or other supplements away from leks or winter habitat, adjusting grazing seasons and locating water facilities where they would not jeopardize habitat.<br><br>***Conservative Stocking Level**<br>Conservative stocking level is a stocking rate that will result in a moderate utilization level (or less) by livestock at the end of the grazing period for the year. A conservative stocking level will be established based on resource management goals including maintaining healthy vegetation; acceptable livestock performance; expected normal weather; and annual plant production consistent with the Standards for Rangeland Health and Guidelines for Livestock Grazing Management. | Potential change under Alternatives 3, 4, 5, and 6. |

## Table 2. UMRBNM Habitat Objectives for GRSG

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| **BREEDING, NESTING, AND EARLY BROOD REARING (Seasonal Use Period: March 1 to June 30)** | | | |
| Lek Security | Proximity of trees | Trees or other tall structures are not within line of sight of lek and absent or uncommon within 3 kilometers (km) (1.9 miles) of the lek. | Connelly et al. 2000 |
| | Collision Risks | Fences and other structures that pose a high collision risk are absent or mitigated with visual markers. | Connelly et al. 2000. Stevens 2011 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 100 meters (m; 328 feet [ft.]) of an active lek. | Stiver et al. 2015 |
| Cover | Sagebrush cover | 10-25% | Berkeley et al. 2013<br>Connelly et al. 2000<br>Doherty et al. 2010<br>Lane 2005<br>Hagen et al. 2007<br>Sant et al. 2014 |
| | Sagebrush height | 40-80 centimeters (cm) (15.7-31.5 inches) individual sagebrush available within stand (for nesting) with a variety of heights (including those <40 cm [<15.7 inches]). | Connelly et al. 2000<br>Lane 2005 |
| | Predominant sagebrush shape | Spreading | Stiver et al. 2015 |
| | Perennial grass cover (such as bluebunch wheatgrass, green needlegrass and western wheatgrass) | ≥15% | Connelly et al. 2000<br>Lane 2005<br>Sant et al. 2014 |
| | Perennial grass and forb height (includes residual grasses) | ≥18 cm (≥7.1 inches) | Berkeley et al. 2013<br>Connelly et al. 2000<br>Doherty et al. 2014<br>Hagen et al. 2007<br>Taylor et al. 2012 |
| | Perennial forb cover | ≥10% | Connelly et al. 2000<br>Sant et al. 2014 |
| **LATE BROOD-REARING/SUMMER (Seasonal Use Period: July 1 to October 31)** | | | |
| Cover | Sagebrush cover | 5-25% | Connelly et al. 2000<br>Lane 2005<br>Hagen et al. 2007<br>Sant et al. 2014 |
| | Sagebrush height | 40-80 cm (15.7-31.5 inches) individual sagebrush available within stand (for nesting) with a variety of heights (including those <40 cm [<15.7 inches]). | Connelly et al. 2000<br>Lane 2005 |
| | Perennial grass and forb cover | ≥25% | Connelly et al. 2000<br>Hagen et al. 2007 Sant et al. 2014 |
| | Riparian areas/mesic meadows | 80% or more of PHMA in Proper Functioning Condition (PFC) or higher. | Prichard et al. 1999<br>Schroeder et al. 1999<br>USDI BLM 1997 |
| | Upland and riparian perennial forb availability | Preferred forbs are common with several preferred species present | Connelly et al. 2000<br>Stiver et al. 2015 |

| Attribute | Indicator | Desired Condition | Reference |
|---|---|---|---|
| WINTER (Seasonal Use Period: November 1 to February 28) | | | |
| Cover and Food | Sagebrush cover | ≥10% | Wallestad 1975<br>Connelly et al. 2000<br>Sant et al. 2014 |
| | Sagebrush height | ≥25cm (≥9.8 inches) | Connelly et al. 2000. |

### 2.9.2 Relevant Appendices

The following table shows which appendices from the 2008 plan have management direction that may change through this RMP amendment. The appendices can be found on the Upper Missouri River Breaks National Monument RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Federal and Montana Ambient Air Quality Standards | No |
| B: Standards for Rangeland Health and Guidelines for Livestock Grazing Management | No |
| C: Best Management Practices | Yes |
| D: Cultural Resource Use Categories | No |
| E: Watershed Planning Process | No |
| F: Grazing Allotments | No |
| G: Visitor Use Standards and Indicators | No |
| H: Oil and Gas | Yes |
| I: Wildlife Mitigation Noise Levels | No |

# Appendix 2.10

# Montana and Dakotas Alternative 1 and 2 Oil and Gas Lease Stipulations

This page intentionally left blank.

## 2.10 MONTANA AND DAKOTAS OIL AND GAS LEASE STIPULATIONS (ALTERNATIVES 1 AND 2)

The table below presents the oil and gas lease stipulations for Montana and the Dakotas that apply to GRSG, including their ID number, stipulation text, and office in which the stipulation applies.

| ID # | Stipulation | Office |
|---|---|---|
| **LN 14-11** | **GREATER SAGE-GROUSE HABITAT**<br>The lease may, in part or in total, contain important greater sage grouse habitats as identified by the BLM, either currently or prospectively. The operator may be required to implement specific measures to reduce impacts of oil and gas operations on the greater sage grouse populations and habitat quality. Such measures shall be developed during the application for permit to drill on-site and environmental review process and will be consistent with the lease rights granted. | All |
| **LN 14-37** | **GREATER SAGE-GROUSE HABITAT CONSERVATION**<br>The lessee/operator is given notice that prior to project-specific approval, the authorized officer may consider compensatory mitigation measures proffered by a project proponent, or compensatory mitigation requested or required by a state plan, program, or authorization. Any state required mitigation may be incorporated as a proposed design feature for a proposed project (Instructional Memorandum No. 2019-018).<br>For projects in Montana, lessee/operators may be required to demonstrate they have submitted their project to the Montana Sage-Grouse Habitat Conservation Program for review, and have incorporated any State program requirements into their project proposal in any designated sage-grouse habitat. The objectives of these requirements are to avoid, minimize, or compensate for unavoidable impacts associated with oil and gas development in order to provide a net conservation gain, which is a benefit or gain above baseline conditions when the development occurs within Greater Sage-Grouse habitat as specified in the Record of Decision for the Field Office's Approved Resource Management Plan (Sept, 2015). Site-specific GRSG habitat conservation, mitigation, or compensation requirements would be identified during the BLM environmental review process and would be developed into the project proposal or as terms and conditions of the subsequent approval. | Billings HiLine<br>Miles City<br>South Dakota<br>North Dakota |
| **LN 14-44** | **GREATER SAGE-GROUSE**<br>The lease may in part, or in total contain important Greater Sage-Grouse habitats as identified by the BLM, either currently or prospectively. The operator may be required to implement specific measures to reduce effects of oil and gas operations on the Greater Sage-Grouse populations and habitat quality. Such measures shall be developed during the application for permit to drill on-site and environmental review process and will be consistent with the lease rights granted. | Lewistown |
| **CSU 12-30** | **SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREAS**<br>Surface occupancy and use within 2 miles of the perimeter of a lek active within the past 5 years may be restricted or prohibited. Prior to such activities, a plan to mitigate impacts to breeding or nesting sage- grouse; or breeding, nesting, or brood rearing habitat will be prepared by the proponent and implemented upon approval by the AO. | Miles City |
| **CSU 12-31** | **SAGE-GROUSE HABITAT – CEDAR CREEK RESTORATION HABITAT MANAGEMENT AREA**<br>Surface occupancy and use would be allowed with design features to minimize disturbance to sage- grouse habitat. | Miles City |

| ID # | Stipulation | Office |
|---|---|---|
| **CSU 12-40** | **GREATER SAGE-GROUSE GENERAL HABITAT**<br>Surface use prohibited within 2 miles of a lek. Surface disturbing and disruptive activities within 2 miles of a lek will be avoided unless the project proponent can clearly demonstrate that the impacts can be adequately mitigated and conservation actions or needed design features are included and the goals of this plan not compromised. | South Dakota |
| **CSU 12-41** | **GREATER SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREAS (GHMAs) – UNDERGROUND UTILITY (POWER AND TRANSMISSION) LINES**<br>All new utility and power lines that can be safely buried will be buried within 2 miles of sage-grouse leks and within sage-grouse winter range.<br>When burial of power lines is not possible, above ground lines will be located and designed to minimize impacts of predation, collision, and other associated stressors to sage-grouse.<br>Existing overhead lines within 2 miles of leks and within sage-grouse winter range will be evaluated for threats to sage-grouse and if necessary, modified to reduce the threat. If modification will not likely be effective, the overhead line may be relocated. Any requirements for modification or relocation of existing overhead lines will be subject to valid existing rights. | South Dakota |

| ID # | Stipulation | Office |
|---|---|---|
| **CSU 12-46** | **GREATER SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREA (GHMA)**<br>All identified Greater Sage-Grouse habitat within GHMA is subject to the following operating constraints:<br>Maintain Greater Sage-Grouse habitat to promote movement and genetic diversity of Greater Sage- Grouse populations<br>To minimize the impacts of surface disturbing/disruptive activities and ensure maintenance of habitat for sustainable populations of Greater Sage-Grouse within GHMA, surface disturbing and disruptive activities are subject to the following requirements.<br>a) Surface disturbing/disruptive activities will prevent or minimize disturbance to Greater Sage-Grouse or their habitat. Except as identified above or during emergency situations, activities will not compromise the habitat.<br>b) Continuous noise (related to long-term operations and/or activities) will be no greater than 49 decibels at 1/4 miles from the perimeter of the lek.<br>c) Temporary noise (related to installation, maintenance, one-time use, emergency operations, etc.) exceeding 49 decibels at 1/4 miles from the perimeter of a lek or surface disturbing/disruptive activities may be allowed, but only from 10 a.m. to 4 p.m. between March 15 and May15.<br>d) Manage water developments to reduce the spread of West Nile virus within sage-grouse habitat areas.<br>e) Site and/or minimize linear ROW to reduce disturbance to sagebrush habitats.<br>f) Maximize placement of new utility developments (power lines, pipelines, etc.) and transportation routes in existing utility or transportation corridors.<br>g) Power lines will be buried, eliminated, designed, or sited in a manner which does not impact sage- grouse.<br>h) Placement of other high profile structures, exceeding 10 feet in height, will be eliminated, designed, or sited in a manner which does not impact sage-grouse.<br>i) Remote monitoring of production facilities must be utilized, and all permit applications must contain a plan to reduce the frequency of vehicle use.<br>J) Maximize the area of interim reclamation on long-term access roads and well pads including reshaping, topsoiling and revegetating cut and fill slopes.<br>k) Restore disturbed areas at final reclamation to pre-disturbance conditions or desired plant community.<br>l) Permanent (longer than 2 months) structures which create movement must be designed or sited to minimize impacts to sage-grouse.<br>m) Consider use of off-site mitigation, (e.g. creation of sagebrush habitat, purchase conservation easements, or buying down grazing) with proponent dollars to offset habitat losses.<br>n) Consider creation of a "Mitigation Trust Account" when impacts cannot be avoided, minimized, or effectively mitigated through other means. If approved by the BLM, the proponent may contribute funding to maintain habitat function based on the estimated cost of habitat treatments or other mitigation needed to maintain the functions of impacted habitats. Off-site mitigation should only be considered when no feasible options are available to adequately mitigate within and immediately adjacent to the impacted site, or when the off- site location will provide more effective mitigation of the impact than can be achieved on-site | North Dakota |

| ID # | Stipulation | Office |
|---|---|---|
| **CSU 12-66** | **CRUCIAL WINTER RANGE – BIG GAME AND/OR SAGE-GROUSE**<br>Prior to surface-disturbing or disruptive activities a plan to maintain functionality of crucial winter range for big game and/or Greater Sage-Grouse will be prepared by the proponent and implemented upon approval by the authorized officer. Within crucial winter range surface-disturbing or disruptive activities will be restricted or prohibited within 6/10 of a mile from any existing surface-disturbing or disruptive activity. The plan shall address how short-term and long-term direct and indirect effects to crucial winter range will be mitigated based on current science and research (Appendix E.5). | HiLine |
| **CSU 12-67** | **GREATER SAGE-GROUSE NESTING HABITAT (GENERAL HABITAT MANAGEMENT AREAS)**<br>Within Greater Sage-Grouse general habitat surface-disturbing or disruptive activities may be restricted or prohibited within 2 miles of Greater Sage-Grouse leks. Prior to surface-disturbing or disruptive activities a plan to maintain functionality of Greater Sage-Grouse habitat will be prepared by the proponent and implemented upon approval by the authorized officer. This plan shall address how short- term and long-term direct and indirect effects to nesting and brood-rearing areas will be mitigated based on current science and research (Appendix E.5). | HiLine |
| **CSU 12-69** | **GREATER SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREAS (GHMA)**<br>In General Habitat Management Areas (GHMA), parcels would be offered for lease subject to Controlled Surface Use restrictions (including RDFs). Activities will be avoided within the following distances from a sage-grouse lek:<br>• linear features (roads) within 3.1 miles of leks.<br>• infrastructure related to energy development within 3.1 miles of leks.<br>• tall structures (e.g., communication or transmission towers, transmission lines) within 2 miles of leks.<br>• low structures (e.g., fences, rangeland structures) within 1.2 miles of leks.<br>• surface disturbance (continuing human activities that alter or remove the natural vegetation) within 3.1 miles of leks.<br>• noise and related disruptive activities including those that do not result in habitat loss (e.g., motorized recreational events) at least 0.25 miles from leks. | Dillon |
| **CSU 12-73** | **GREATER SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREAS (GHMAs)**<br>Within Greater Sage-Grouse general habitat surface-disturbing or disruptive activities may be restricted or prohibited within 2 miles of Greater Sage-Grouse leks. Prior to surface-disturbing or disruptive activities, a plan to maintain functionality of Greater Sage-Grouse habitat will be prepared by the proponent and implemented upon approval by the authorized officer. This plan shall address how short-term and long-term direct and indirect effects to nesting and brood-rearing areas will be mitigated based on current science and research. | Lewistown |
| **NSO 11-4** | **GROUSE LEKS**<br>No surface occupancy or use is allowed within one-quarter mile of grouse leks. | Butte Dillon |
| **NSO 11-35** | **SAGE GROUSE STRUTTING GROUNDS**<br>No surface occupancy or use is allowed within one-quarter mile of active sage grouse strutting grounds. | North Dakota |

| ID # | Stipulation | Office |
|---|---|---|
| **NSO 11-79** | **SAGE-GROUSE HABITAT – PRIORITY ARES, WEST DECKER RESTORATION AREA, SOUTH CARTER RESTORATION AREA**<br>Surface occupancy and use is prohibited within sage-grouse priority areas, West Decker Restoration area, and South Carter Restoration Area. | Miles City |
| **NSO 11-80** | **SAGE-GROUSE HABITAT – GENERAL HABITAT MANAGEMENT AREA**<br>Surface occupancy and use is prohibited within 6/10 mile of the perimeter of sage-grouse leks. | Miles City |
| **NSO 11-96** | **GREATER SAGE-GROUSE GENERAL HABITAT LEKS**<br>No surface occupancy or use within 6/10 mile from leks. | South Dakota |
| **NSO 11-97** | **GREATER SAGE-GROUSE CRUCIAL WINTER RANGE**<br>Sage-grouse crucial winter range will be managed as a No Surface Occupancy for oil and gas development and exploration. | South Dakota |
| **NSO 11-98** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREAS (PHMAs)**<br>Greater Sage-Grouse PHMAs will be managed as No Surface Occupancy and Use (127,735 surface and 412,822 oil and gas subsurface mineral acres.) These areas will be open to oil and gas leasing with no surface occupancy stipulation. All sage-grouse habitat that is not part of PHMAs will be managed as GHMA as noted in Figure 1-2. | South Dakota |
| **NSO 11-99** | **GREATER SAGE-GROUSE WINTER RANGE IN PRIORITY HABITAT MANAGEMENT AREAS (PHMAs)**<br>Sage-grouse crucial winter range will be managed as a No Surface Occupancy for oil and gas development and exploration. | South Dakota |
| **NSO 11-111** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREA (PHMA)**<br>Surface occupancy and use is prohibited within Greater Sage-Grouse PHMA. | North Dakota |
| **NSO 11-127** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREAS (PHMAs)**<br>To protect Greater Sage-grouse, a priority species for management, surface occupancy and use is prohibited for oil and gas exploration and development within Greater Sage-grouse Priority Habitat Management Areas (PHMAs). | Billings |
| **NSO 11-128** | **GREATER SAGE-GROUSE GENERAL HABITAT MANAGEMENT AREAS**<br>To protect general habitat areas for Greater Sage-grouse breeding activities, surface occupancy and use is prohibited for oil and gas exploration and development within 0.6 mile of the perimeter of Greater Sage-grouse leks. | Billings |
| **NSO 11-129** | **GREATER SAGE-GROUSE RESTORATION AREAS**<br>To protect restoration areas for Greater Sage-grouse breeding activities, surface occupancy and use is prohibited for oil and gas exploration and development within 0.6 mile of the perimeter of Greater Sage- grouse leks. | Billings |
| **NSO 11-136** | **CRUCIAL WINTER RANGE**<br>Surface occupancy and use is prohibited for oil and gas exploration and development in crucial winter range for antelope, elk, moose, bighorn sheep, mule deer, white-tailed deer, and Greater Sage-grouse. | Billings |
| **NSO 11-141** | **SAGEBRUSH FOCAL AREA**<br>Surface occupancy and use is prohibited within the Sagebrush Focal Area. | HiLine |
| **NSO 11-151** | **GREATER SAGE-GROUSE LEKS (GENERAL HABITAT AREAS)**<br>Surface occupancy and use is prohibited within 0.6 miles of Greater Sage-Grouse leks. This stipulation does not apply within the boundaries of the Greater Sage-Grouse Priority Habitat Management Area. | HiLine |

| ID # | Stipulation | Office |
|---|---|---|
| **NSO 11-152** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREAS (PHMA)**<br>Surface occupancy and use is prohibited within Greater Sage-Grouse Priority Habitat Management Area and the Grassland Bird/Greater Sage-Grouse Priority Habitat Management Area. | HiLine |
| **NSO 11-159** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREAS (PHMA)**<br>Priority Habitat Management Areas (PHMA) outside of Sagebrush Focal Areas would be open to mineral leasing and development subject to NSO with a limited **Exception**. | Dillon |
| **NSO 11-171** | **CRUCIAL WINTER RANGE**<br>Surface occupancy and use is prohibited in crucial winter range for the following BLM priority species for management:<br>• bighorn sheep<br>• elk<br>• greater sage-grouse<br>• moose<br>• mule deer<br>• pronghorn<br>• whitetail deer | Lewistown |
| **NSO 11-181** | **SAGEBRUSH FOCAL AREA**<br>Surface occupancy and use is prohibited within the Sagebrush Focal Area (SFA) | Lewistown |
| **NSO 11-182** | **GREATER SAGE-GROUSE PRIORITY HABITAT MANAGEMENT AREAS (PHMAs)**<br>To protect greater sage-grouse, a priority species for management, surface occupancy and use is prohibited for oil and gas exploration and development within greater sage-grouse Priority Habitat Management Areas (PHMAs). | Lewistown |

## 2.11 NORTH DAKOTA RMP AMENDMENT

This appendix presents the GRSG approved RMP amendment language from the 2015 record of decision for the North Dakota RMP Amendment. The North Dakota RMP was not amended in 2019. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 appendices that are listed in **Section 2.11.2** of this appendix.

### 2.11.1 Existing GRSG RMP Management – North Dakota RMP Amendment

**Table 1. Summary of Goals, Objectives, and Management Actions in North Dakota 2015 ARMP**

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Riparian Areas and Wetlands*** | |
| Management Direction LG-1.12: Where riparian and wetland areas are already meeting standards, they will be maintained in that condition or better. Where a site's capability is less than proper functioning condition (PFC), BLM will manage to achieve or move towards capability.<br>• Within PHMA and GHMA, manage wet meadows to maintain a component of perennial forbs with diverse species richness relative to site potential (e.g., reference state) to facilitate brood rearing. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.13: In PHMA, where riparian areas and wet meadows meet PFC, strive to move towards GRSG habitat objectives within capabilities of the reference state vegetation relative to the ecological site descriptions.<br>• Example: Within PHMA, reduce where necessary hot season grazing on riparian and meadow complexes to promote recovery or maintenance of appropriate vegetation and water quality. Utilize fencing/herding techniques, seasonal use, or livestock distribution changes where necessary to reduce pressure on riparian or wet meadow vegetation used by GRSG in the hot season (summer). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.14: Authorize new water development for diversion from spring or seep source only when PHMA will be maintained or benefit from the development. This includes developing new water sources for livestock as part of an AMP/Conservation Plan to improve GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.15: Analyze springs, seeps and associated pipelines at time of grazing lease renewal to determine if modifications are necessary to maintain the continuity of the predevelopment riparian area within PHMA. Make modifications where necessary, considering impacts on other water uses when such considerations are neutral or beneficial to GRSG. | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| Objective VEG-1.1: In all PHMA, the desired condition is to maintain a minimum of 70% of lands capable of producing sagebrush with 10 to 30% sagebrush canopy cover. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction VEG-1.1: Remove conifers encroaching into sagebrush habitats. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in RMRS-GTR-326: Using resistance and resilience concepts to reduce impacts of invasive annual grasses and altered fire regimes on the sagebrush ecosystem and GRSG: A strategic multi-scale approach (Chambers et al. 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction VEG-1.8: Make re-establishment of sagebrush cover and desirable understory plants (relative to ecological site potential) a high priority for restoration efforts in PHMA. Prioritize areas for juniper removal to benefit GRSG habitat. | No change proposed. |
| Management Direction VEG-1.3: Include GRSG habitat parameters as defined by State of North Dakota Sage-Grouse conservation plans and appropriate local information in habitat restoration objectives. Make meeting these objectives within PHMA the highest restoration priority, along with other priority species habitat. | No change proposed. |
| Management Direction VEG-1.7: In PHMA, restore native (or desirable) plants and create landscape patterns which most benefit GRSG, as well as other priority species. | No change proposed. |
| Management Direction VEG-1.4: In PHMA, require use of native seeds for restoration based on availability, adaptation (ecological site potential), and probability of success. Where probability of success or adapted seed availability is low, non-native seeds may be used as long as they support GRSG habitat objectives. | No change proposed. |
| Management Direction VEG-1.5: Design post restoration management to ensure long-term persistence in PHMA. This could include changes in livestock grazing management, travel management, etc., to achieve and maintain the desired condition of the restoration effort that benefits GRSG. | No change proposed. |
| Management Direction VEG-1.6: In PHMA, consider potential changes in climate when proposing restoration seedings when using native plants. Consider collection from the warmer component of the species current range when selecting native species. | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction VEG-1.9: In PHMA fire prone areas, where sagebrush seed is required for GRSG habitat restoration, consider establishing seed harvest areas that are managed for seed production and are a priority for protection from outside disturbances. | No change proposed. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal SSS-1: Maintain and/or increase GRSG abundance and distribution by conserving, enhancing, or restoring the sagebrush ecosystem upon which populations depend, in cooperation with other conservation partners. | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective SSS-1.2: Habitat Delineation: Delineate PHMA to encompass the 100% Breeding Bird Density map: 32,900 BLM surface acres (7% of total PHMA acres). Since mapping 75% of breeding bird density map misses the majority of GRSG habitat in North Dakota, 100% was used. See Map 2-1. | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective SSS-1.3: Habitat Delineation: Delineate GHMA to encompass the remainder of the habitat: 80 BLM surface acres. See Map 2-1. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br><br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | |
| ***Management Decisions: Disturbance*** | |
| Objective SSS-1.1: Protect PHMA from anthropogenic disturbances that will reduce distribution or abundance of GRSG. Manage PHMA so that discrete anthropogenic disturbances cover less than 3% of the total GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction SSS-1.1: Protect PHMA from anthropogenic disturbances that will reduce distribution or abundance of GRSG. See Appendix E, Greater Sage-Grouse Disturbance Caps, of the 2015 Greater Sage-Grouse Approved RMPA/ROD (BLM 2015a). In undertaking BLM management directions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the US Geological Survey Report Conservation Buffer Distance Estimates for Greater Sage-Grouse—A Review (Open File Report 2014-1239) in accordance with Appendix B, Applying Lek Buffer Distances When Approving Actions, of the 2015 Greater Sage-Grouse Approved RMPA/ROD (BLM 2015a). | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Direction SSS-1.2: If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA in any given BSU (see Figure 2-2, North Dakota and South Dakota GRSG Biologically Significant Unit and Priority Habitat Management Areas [Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD; BLM 2015a]), then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 hard rock mining law, valid existing rights, etc.) will be permitted by BLM within GRSG PHMA in any given BSU until the disturbance has been reduced to less than the cap. (BSU for this Approved RMPA is the summary of all the PHMA within a GRSG population as delineated in the COT report.) | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction SSS-1.4: Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction SSS-1.5: Implement Regional Mitigation Strategy (Appendix F, Regional Mitigation Strategy, of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, and 5. |
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| Management Direction FIRE-1.7: Follow the most current BMPs/RDFs for fire and fuels (Appendix C, Required Design Features, of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction FIRE-1.1: In PHMA, design and implement fuels treatments with an emphasis on protecting existing sagebrush ecosystems.<br>• Do not reduce sagebrush canopy cover to less than 15% unless a fuels management objective requires additional reduction in sagebrush cover to meet strategic protection of PHMA and conserve habitat quality for the species.<br><br>Closely evaluate the benefits of the fuel break against the additional loss of sagebrush cover in future NEPA documents.<br>• Apply appropriate seasonal restrictions for implementing fuels management treatments according to the type of seasonal habitats present in a priority area.<br>• If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plan will address:<br>– why alternative techniques were not selected as a viable options; | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| – how GRSG goals and objectives will be met by its use;<br>– how the COT report objectives will be addressed and met;<br>– a risk assessment to address how potential threats to GRSG habitat will be minimized.<br>• Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect GRSG habitat in PHMA (e.g., creation of fuel breaks that will disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br>• Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality.<br>• Monitor and control invasive vegetation post-treatment.<br>• Rest treated areas from grazing for two full growing seasons unless vegetation recovery dictates otherwise.<br>• Require use of native seeds for fuels management treatment based on availability, adaptation (site potential), and probability of success. Where probability of success or native seed availability is low, non-native seeds may be used as long as they meet GRSG habitat objectives.<br>• Design post fuels management projects to ensure long-term persistence of seeded or pre-treatment native plants. This may require temporary or long-term changes in livestock grazing management, travel management, or other activities to achieve and maintain the desired condition of the fuels management project. | *(See above.)* |
| Management Direction FIRE-1.5: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. In PHMA, prioritize suppression, immediately after life and property, to conserve the habitat. See Appendix H of the 2015 Greater Sage-Grouse Approved RMPA/ROD (BLM 2015a), which will be completed to help further refine fire management actions once this plan is completed. | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Included in MA above. Also:<br><br>Management Direction FIRE-1.4: If prescribed fire is used, the Burn Plan will clearly indicate how COT objectives will be addressed and met, and why alternative techniques are not applicable. A fire risk assessment will be completed for implementation of prescribed fire used to meet the GRSG goals and objectives in PHMA (see Appendix H, GRSG Wildfire and Invasive Species Habitat Assessment, of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction FIRE-1.2: Design fuels management projects in PHMA to strategically and effectively reduce wildfire threats in the greatest area. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction FIRE-1.3: In PHMA, during fuels management project design, consider the utility of using livestock to strategically reduce fine fuels, and implement grazing management that will accomplish this objective. Consult with ecologists to minimize impacts on native perennial grasses. | No change proposed. |
| Management Direction FIRE-1.8: In PHMA, prioritize native seed allocation for use in GRSG habitat in years when preferred native seed is in short supply. This may require reallocation of native seed from emergency stabilization and rehabilitation (ES&R) projects outside of PHMA to those inside it. Use of native plant seeds for ES&R seedings is required based on availability, adaptation (site potential), and probability of success. Where probability of success or native seed availability is low, non-native seeds may be used as long as they meet GRSG habitat conservation objectives. Re-establishment of appropriate sagebrush species/subspecies and important understory plants, relative to site potential, shall be the highest priority for rehabilitation efforts. | No change proposed. |
| Management Direction FIRE-1.9: In PHMA, design post ES&R management to ensure long-term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, and travel management, etc., to achieve and maintain the desired condition of ES&R projects to benefit GRSG. | No change proposed. |
| Management Direction FIRE-1.10: In PHMA, consider potential changes in climate when proposing post-fire seedings using native plants. Consider seed collections from the warmer component within a species' current range for selection of native seed. | No change proposed. |
| Management Direction FIRE-1.6: In GHMA, prioritize suppression where wildfires threaten PHMA. | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Lands and Realty*** | |
| Management Direction LR-1.11: Lands classified as PHMA and GHMA for GRSG will be retained in federal management unless: (1) the BLM can demonstrate that disposal of the lands will provide a net conservation gain to GRSG or (2) the BLM can demonstrate that the disposal of the lands will have no direct or indirect adverse impact on conservation of GRSG. See Figure 2-11, North Dakota Land Tenure (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | No change proposed. |
| Management Direction LR-1.12: PHMA will be a priority in consideration of land acquisitions. Consider GRSG for all land tenure actions. | No change proposed. |
| Management Direction LR-1.1: PHMA will be managed as ROW avoidance area for major ROWs (high-voltage transmission lines (100 kilovolt [kV] and over) and large pipelines (24 inches in width and over)). See Figure 2-10a, North Dakota Major Rights-of-Way (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]).<br>• Where new ROWs are required, co-locate new ROW within existing ROWs or where it best minimizes impacts on GRSG and GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.2: PHMA will be managed as ROW avoidance area for minor ROWs (including communication sites and towers). See Figure 2-10b, North Dakota Minor Rights-of-Way (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.6: GHMA will be managed as ROW avoidance area for high-voltage transmission lines (100kV and over) and large pipelines (24 inches in width and over). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.7: Minor ROWs will be allowed in GHMA with appropriate mitigation and conservation measures identified within the terms of the authorization to minimize surface disturbing and disruptive activities. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.9: Where new ROWs are necessary in GHMA, co-locate new ROWs within existing ROWs where possible. | No change proposed. |
| Management Direction LR-1.3: Make PHMA exclusion area for new ROW wind and solar energy authorizations. See Figure 2-8, North Dakota Wind, and Figure 2-9, North Dakota Solar (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Land Use Authorizations - Allocation: Manage the following areas as ROW exclusion (Map 2-4):<br>• Greater Sage-Grouse PHMA (solar and wind; see Greater Sage-Grouse Approved RMP Amendment, September 2015) | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction LR-1.8: Make GHMA avoidance area for new wind and solar energy authorizations. See Figure 2-8 and Figure 2-9 (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.10: PHMA will be avoidance areas for leases/land use authorizations, which can be for agricultural, occupancy, or filming. Leases/land use authorizations will be allowed in GHMA with appropriate mitigation and conservation measures identified within the terms of the authorization to minimize surface disturbing and disruptive activities. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LR-1.4: When addressing ROW authorizations in PHMA identify and evaluate opportunities to remove, bury or modify existing power lines within PHMA. | No change proposed. |
| Management Direction LR-1.5: In PHMA, where existing leases or ROWs have had some level of development (road, fence, well, etc.) and are no longer in use, reclaim the site by removing these features and restoring the habitat. | No change proposed. |
| ***Management Decisions: Fluid Mineral Resources*** | |
| Management Direction MR-1.14: Where the federal government owns the mineral estate in PHMA and GHMA, and the surface is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| Management Direction MR-1.15: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| Management Direction MR-1.3: Allow geophysical exploration within PHMA to obtain exploratory information for areas outside of and adjacent to PHMA. | Potential change under Alternative 3. |
| Management Direction MR-1.4: Allow geophysical operations by existing roads and trails, or helicopter-portable drilling methods, and in accordance with seasonal timing restrictions and/or other restrictions that may apply. | Potential change under Alternative 3. |
| Management Direction R-1.14: In PHMA, do not recommend withdrawal proposals not associated with mineral activity unless the land management is consistent with GRSG conservation measures. (For example, in a proposed withdrawal for a military training range buffer area, manage the buffer area with GRSG conservation measures.) | Potential change under Alternative 3. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Objective MR-1.1: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 US Code 226(p) and 43 CFR, Part 3162.3-1(h).<br><br>Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize, and apply compensatory mitigation for adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an application for permit to drill for the lease to avoid and minimize impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction MR-1.1 (part): Open to oil and gas leasing and development; however, surface occupancy and use will be prohibited within PHMA (NSO). Upon expiration or termination of existing leases, apply NSO. See Figure 2-4, North Dakota Fluid Minerals (Oil, Gas, and Geothermal) (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3 and 6. |
| Fluid Mineral Leasing – Allocation: Manage Greater Sage-Grouse PHMA open to fluid mineral leasing subject to NSO stipulations (see Greater Sage-Grouse Approved RMP Amendment, September 2015). | Potential change under Alternatives 3 and 6. |
| Management Direction MR-1.2: In GHMA, surface occupancy and use will be subject to special operating constraints (CSU) (Appendix G, Oil and Gas Stipulations, of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction MR-1.1 (part): No waivers or modifications to a fluid mineral lease no-surface-occupancy stipulation will be granted.<br><br>The BLM Authorized Officer may grant an exception to a fluid mineral lease no-surface-occupancy stipulation only where the proposed action:<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel and will provide a clear conservation gain to GRSG.<br><br>Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMPA. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br><br>Any exceptions to this lease stipulation may be approved by the BLM Authorized Officer only with the concurrence of the State Director. The BLM Authorized Officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publicly available at least quarterly. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction MR-1.5: During implementation level review and decisions, (e.g., approval of an application for permit to drill and Sundry Notice) and upon completion of the environmental record of review (43 CFR, Part 3162.5), include appropriate documentation of compliance with NEPA. In this process evaluate, among other things: (1) Whether the conservation measure is "reasonable" (43 CFR, Part 3101.1-2) with the valid existing rights; and (2) Whether the action is in conformance with the Approved RMPA. | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Conservation Measure #1: The following operating constraints will be applied to existing leases as conditions of approval (COAs) in PHMA and GHMA. Exceptions may be granted by the BLM Authorized Officer if an environmental review demonstrates that effects can be mitigated to an acceptable level, habitat for the species is not present in the area, or portions of the area can be occupied without affecting a particular species. Exceptions may also be granted where the short-term effects are mitigated by the long-term benefits.<br><br>The BLM may add additional site-specific restrictions as deemed necessary by further environmental analysis and as developed through coordination with other federal, state, and local regulatory and resource agencies.<br>a. Surface disturbing/disruptive activities will prevent or minimize disturbance to GRSG or their habitat. Except as identified above or during emergency situations, activities will not compromise the functionality of the habitat.<br>b. Manage water developments to reduce the spread of West Nile virus within GRSG habitat areas.<br>c. Site and/or minimize linear ROW to reduce disturbance to sagebrush habitats.<br>d. Maximize placement of new utility developments (power lines, pipelines, etc.) and transportation routes in existing ROWs.<br>e. Power lines will be buried, eliminated, designed or sited in a manner which does not impact GRSG.<br>f. Placement of other high profile structures, exceeding 10 feet in height, will be eliminated, designed or sited in a manner which does not impact GRSG.<br>g. Remote monitoring of production facilities must be utilized and all permit applications must contain a plan to reduce the frequency of vehicle use.<br>h. Maximize the area of interim reclamation on long-term access roads and well pads including reshaping, top-soiling and re-vegetating cut and fill slopes. Utilize native grass species mix which includes sagebrush and forbs.<br>i. Restore disturbed areas at final reclamation to pre-disturbance conditions or desired plant community. Utilize native grass species mix which includes sagebrush and forbs.<br>j. Permanent (longer than 2 months) structures which create movement must be designed or sited to minimize impacts on GRSG.<br>k. As reasonable (43 CFR, Part 3101.1-2), in consideration of valid existing rights, and to achieve a net conservation gain, the BLM will require compensatory mitigation when impacts cannot be adequately avoided and minimized, and residual impacts will result in habitat loss and degradation. | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Compensatory mitigation actions will align with the recommendations in the Regional Mitigation Strategy (see Appendix F of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]), as appropriate. A priority may be given to compensatory mitigation actions in the same PHMA as is being impacted, unless a greater benefit can be achieved elsewhere. Compensatory mitigation will be considered when no feasible options remain to adequately avoid and minimize impacts within and immediately adjacent to the impacted site.<br><br>Conservation Measure #2: Make applicable RDFs (Appendix C of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]) mandatory as COA within PHMA. | *(See above.)* |
| ***Management Decisions: Solid Leasable Minerals*** | |
| Management Direction MR-1.12: Close PHMA to nonenergy leasable mineral leasing. See Figure 2-7, North Dakota Nonenergy Leasables (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). This includes not permitting any new leases to expand an existing mine. | Potential change under Alternatives 3 and 6. |
| Management Direction MR-1.13: For existing nonenergy leasable mineral leases in PHMA, follow the same RDFs applied to fluid minerals (Appendix C of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]), when wells are used for solution mining. | No change proposed. |
| Management Direction MR-1.8: In GHMA, apply minimization of surface-disturbing or disrupting activities (including operations and maintenance) where needed to reduce the impacts of human activities on important seasonal GRSG habitats. Apply these measures during activity level planning.<br>• Use additional, effective mitigation to offset impacts as appropriate (determined by local options/needs). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction MR-1.6: At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1).<br><br>See Figure 2-13, North Dakota Coal (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction MR-1.7: Sub-surface mines - Grant no new mining leases unless all surface disturbances (appurtenant facilities) are placed outside of PHMA. | No change proposed. |
| ***Management Decisions: Locatable Materials*** | |
| Management Direction LR-1.13: Not withdrawn from minerals on BLM surface. | Potential change under Alternative 3. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction MR-1.9: In PHMA, proposed actions under Plan of Operations and Notices will be analyzed on a case-by-case basis in cooperation with the State of North Dakota, and RDFs (Appendix C of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]) will be applied to the extent consistent with applicable law. See Figure 2-5, North Dakota Locatable Minerals (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]).<br><br>Note: Locatable mineral exploration and development under the mining laws are not discretionary actions; however, Notices and Plan of Operation are reviewed to prevent unnecessary or undue degradation to resources. | Potential change under Alternative 3. |
| ***Management Decisions: Mineral Materials*** | |
| Management Direction MR-1.10: Close PHMA to mineral material sales [available to free use permits]. See Figure 2-6, North Dakota Salable Minerals (Mineral Materials) (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3 and 6. |
| Management Direction MR-1.11: In PHMA, restore salable mineral pits no longer in use to meet GRSG habitat conservation objectives.<br><br>Note: Although there are no authorized mineral pits in the planning area, any trespass pits found in the planning area will be subject to restoration. | No change proposed. |
| ***Management Decisions: Recreation*** | |
| Management Direction REC-1.1: Only allow Special Recreation Permits that will have neutral or beneficial effects on PHMA. | No change proposed. |
| Management Direction REC-1.2: In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, and staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from important areas, etc.), or unless the development is required for visitor health and safety or resource protection. | No change proposed. |
| **Management Decisions: Comprehensive Trails and Travel Management** | |
| Management Direction TTM-1.1: In PHMA and GHMA, limit OHV travel to existing roads, primitive roads, and trails at a minimum, until such time as travel management planning is complete and routes are either designated or closed.<br><br>See Figure 2-12, North Dakota Trails and Travel Management (Appendix A of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction TTM-1.3: In PHMA and GHMA, complete activity level travel plans within 5 years of the ROD. During activity level planning, where appropriate, designate routes in PHMA and GHMA with current administrative/agency purpose or need to administrative access only. | No change proposed. |
| Management Direction TTM-1.6: In PHMA and GHMA, allow no upgrading of existing routes that will change route category (road, primitive road, or trail) or capacity unless the upgrading will have minimal impact on GRSG habitat, is necessary for motorist safety, or eliminates the need to construct a new road. | No change proposed. |
| Management Direction TTM-1.4: In PHMA, limit route construction to realignments of existing designated routes if that realignment has a minimal impact on GRSG habitat, eliminates the need to construct a new road, or is necessary for motorist safety. Allow new routes/realignments in PHMA and GHMA during site-specific travel planning if it improves GRSG habitat and resource conditions. | No change proposed. |
| Management Direction TTM-1.7: When travel management plans are complete, conduct restoration of roads, primitive roads and trails in PHMA and GHMA. | No change proposed. |
| Management Direction TTM-1.8: When reseeding roads, primitive roads and trails in PHMA and GHMA, use appropriate seed mixes and consider the use of transplanted sagebrush. | No change proposed. |
| Management Direction TTM-1.9: In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR, subpart 8364 (Closures and Restrictions); 43 CFR, subpart 8351 (Designated National Area); 43 CFR, subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR, subpart 8341 (Conditions of Use).<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the BLM Authorized Officer to resolve management conflicts and protect persons, property, and public lands and resources. Where a BLM Authorized Officer determines that OHVs are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. (43 CFR, Part 8341.2) A closure or restriction order shall be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders shall be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No change proposed. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction TTM-1.2: In PHMA, travel management will evaluate the need for permanent, or seasonal, road or area closures where vehicle use is causing or will cause adverse effects upon habitat. | No change proposed. |
| Management Direction TTM-1.5: In PHMA, use existing routes, or realignments as described above to access valid existing rights that are not yet developed. If valid existing rights cannot be accessed via existing routes, then build any new route constructed to the absolute minimum standard necessary. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| Management Direction LG-1.3: Within PHMA, incorporate GRSG habitat objectives and management considerations into all BLM grazing allotments through AMP or permit renewals. Develop standards with State of North Dakota and USFWS. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.6: In PHMA, conduct land health assessments that include (at a minimum) indicators and measurements of structure/condition/composition of vegetation specific to achieving GRSG habitat objectives. Local objectives will be developed at the field office level in partnership with North Dakota Game and Fish Department and USFWS, and incorporated into AMPs or livestock grazing permits as appropriate incorporating best available science. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.8: Develop specific objectives to conserve, enhance or restore PHMA based on ecological site descriptions and assessments (including within wetlands and riparian areas). If an effective grazing system that meets GRSG habitat requirements is not already in place, analyze at least one alternative that conserves, restores or enhances GRSG habitat in the NEPA document prepared for the permit renewal. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.5: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (such as fire) and legal obligations.<br><br>The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds, based on GRSG Habitat Objectives (Table 2-3), Habitat Objectives for GRSG and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Part of Management Direction LG-1.5: Allotments within PHMA, focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.17: Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to PHMA to determine if they should be restored to sagebrush or habitat of higher quality for GRSG. If these seedings are part of an AMP/Conservation Plan or if they provide value in conserving or enhancing the rest of the PHMA, then no restoration will be necessary. Assess the compatibility of these seedings for GRSG habitat or as a component of a grazing system during the land health assessments. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.19: When developing or modifying water developments in PHMA, use applicable RDFs (Appendix C of the 2015 Greater Sage-Grouse Approved RMPA/ROD2 [BLM 2015a]) to mitigate potential impacts from West Nile virus. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.20: In PHMA, evaluate existing structural range improvements and location of supplements (salt or protein blocks) during grazing lease renewal process to make sure they conserve, enhance or restore GRSG habitat.<br><br>To reduce outright GRSG strikes and mortality, remove, modify or mark fences in high risk areas within PHMA based on proximity to lek, lek size, and topography. Monitor for, and treat invasive species associated with existing range improvements. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.18: In PHMA, design any new structural range improvements and location of supplements (salt or protein blocks) to conserve, enhance, or restore GRSG habitat through an improved grazing management system relative to GRSG objectives. Structural range improvements, in this context, include but are not limited to: cattle guards, fences, exclosures, corrals or other livestock handling structures; pipelines, troughs, storage tanks (including moveable tanks used in livestock water hauling), windmills, ponds/reservoirs, solar panels and spring developments. Potential for invasive species establishment or increase following construction must be considered in the project planning process and monitored and treated post-construction. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.16: In PHMA, allow treatments that conserve, enhance or restore GRSG habitat as well as other priority species habitat (this includes treatments that benefit livestock as part of an AMP/Conservation Plan to improve GRSG habitat). | Potential change under Alternatives 3, 4, 5, and 6. |

| North Dakota RMP Amendment | Potential Change in 2023 Plan |
|---|---|
| Management Direction LG-1.9: In PHMA, manage for vegetation composition and structure consistent with GRSG seasonal habitat objectives. ESDs can help determine whether or not the GRSG seasonal habitat objectives are consistent with the ecological site potential within the reference state. GRSG seasonal habitat objectives and ecological site potential within reference states are not always going to be the same. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.10: In PHMA, implement management directions (grazing decisions, AMP/Conservation Plan development, or other agreements) to modify grazing management to meet State of North Dakota seasonal GRSG habitat requirements, where allotment evaluations indicate land health assessments are not being met due to livestock. Consider singly, or in combination, changes in:<br>1. Season or timing of use;<br>2. Numbers of livestock (includes temporary non-use or livestock removal);<br>3. Distribution of livestock use;<br>4. Intensity of use; and<br>5. Type of livestock (e.g., cattle, sheep, horses, llamas, alpacas, and goats). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.11: During drought periods, prioritize evaluating effects of the drought in PHMA relative to their needs for food and cover. Management will continue to be in accordance with the Montana-Dakotas Drought Policy (see Appendix H, Drought Policy, of the 2015 Greater Sage-Grouse Approved RMPA/ROD [BLM 2015a]). | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Direction LG-1.7: At the time a permittee[3] or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3.<br><br>[3]The North Dakota BLM does not currently have any issued grazing permits, only leases. | Potential change under Alternatives 3, 4, 5, and 6. |
| ND RMP Amendment process:<br>Management Directions Common to All Alternatives for LG includes:<br>• Apply the management decisions to address livestock use in Greater Sage Grouse habitat as described in the North Dakota Field Office Greater Sage-Grouse Approved RMP Amendment (2015). | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2. North Dakota Habitat Objectives for GRSG**

| Attribute | Indicators | Desired Conditions | Reference |
|---|---|---|---|
| **BREEDING AND NESTING (Seasonal Use Period March 1 - June 15)** | | | |
| Lek Security | Proximity of trees | 0.388 miles avoidance of coniferous habitats | Doherty 2008 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 feet (ft.) (100 meters [m]) of an occupied lek | Stiver et al. 2015 |
| Cover | Sagebrush cover | ≥5-25% | Herman-Brunson 2007<br>Doherty et al. 2010 |
| | Sagebrush height | 7-30 inches | Swanson 2009<br>Holloran et al. 2005<br>Herman-Brunson 2007 |
| | Predominant sage brush shape | Predominately spreading shape | Stiver et al. 2015 |
| | Perennial grass cover | ≥10% Not Continuous | Doherty et al. 2010<br>Doherty et al. 2011<br>Holloran et al. 2005<br>Hagen et al. 2007 |
| | Perennial grass and forb height | Adequate nest cover based on ecological site potential and seasonal precipitation; 4.4-11.3 inches[1] | Doherty et al. 2014 |
| | Perennial forb cover | ≥5% Not Continuous | Doherty et al. 2010<br>Doherty et al. 2011<br>Hagen et al. 2007<br>Holloran et al. 2005 |
| **BROOD-REARING/SUMMER (Seasonal Use Period June 16-October 31** | | | |
| Cover | Sagebrush cover | ≥5 % | Herman-Brunson 2007<br>Swanson 2009<br>Doherty et al. 2010<br>Doherty et al. 2011<br>Hagen et al. 2007 |
| | Sagebrush height | 7-30 inches | Herman-Brunson 2007<br>Doherty et al. 2011<br>Holloran et al. 2005<br>Schroeder et al. 1999 |
| | Perennial grass and forbs | ≥20% Forbs 6-16% | Doherty et al. 2010<br>Doherty et al. 2011<br>Holloran et al. 2005<br>Herman-Brunson 2007 |
| | Riparian areas/mesic meadows | Proper Functioning Condition | BLM 1997c<br>Prichard et al. 1999<br>Dickard et al. 2015 |
| | Upland and riparian perennial forb availability | Preferred forbs are common with several preferred species present. | Stiver et al. 2015<br>Doherty et al. 2011 |
| **WINTER (Seasonal Use Period November 1-February 28)** | | | |
| Cover and Food | Sagebrush cover above snow | ≥10% | Schroeder et al. 1999<br>Swanson 2009 |
| | Sagebrush height above snow | ≥ 6 inches | Schroeder et al. 1999<br>Doherty et al. 2011<br>Swanson 2009 |

[1]Specific height requirements needed to meet the objective will be set at the time of watershed assessments.

### 2.11.2 Relevant Appendices

The following table shows which appendices from the 2015 plan have management direction that may change through this RMP amendment. The appendices can be found on the North Dakota GRSG ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Amendment Maps | Yes |
| B: Applying Lek Buffer Distances When Approving Actions | Yes |
| C: Required Design Features | Yes |
| D: The Greater Sage-Grouse Monitoring Framework | Yes |
| E: Greater Sage-Grouse Disturbance Caps | Yes |
| F: Regional Mitigation Strategy | Yes |
| G: Oil and Gas Stipulations | Yes |
| H: GRSG Wildfire and Invasive Species Habitat Assessment | Yes |

## 2.12 NEVADA AND NORTHEASTERN CALIFORNIA RMPS

This appendix presents the GRSG approved RMP amendment language from the 2015 and 2019 records of decision for Nevada and northeastern California. Changes between 2015 and 2019 are noted. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 and 2019 appendices that are listed in **Section 2.12.2** of this appendix.

### 2.12.1 Existing GRSG RMP Management – Nevada and Northeastern California

**Table 1. Acres of PHMA, GHMA, and OHMA in the Decision Area for the 2015 ARMPA (as maintained April 2022)**

| Management Agency | PHMA | GHMA | OHMA |
|---|---|---|---|
| BLM Administered Surface | 9,224,903 | 5,770,276 | 4,860,140 |
| BLM Administered Subsurface (Forest Service) | 986,400 | 796,100 | 621,400 |

**Table 2. Acres of PHMA, GHMA, and OHMA in the Decision Area for the 2019 ARMPA**

| Management Agency | PHMA | GHMA | OHMA |
|---|---|---|---|
| BLM Administered Surface | 9,309,700 | 5,720,600 | 5,876,600 |
| BLM Administered Subsurface (Forest Service) | 986,400 | 796,100 | 621,400 |

**Table 3. Acres of GRSG Habitat by County in the Decision Area (BLM-Administered Lands Only)[1] 2015 ARMPA (as maintained April 2022)**

| County Name[2] | ARMPA | | | |
|---|---|---|---|---|
| | PHMA[3] | GHMA | OHMA | TOTAL |
| Churchill | 26,088 | 89,088 | 132,034 | 247,210 |
| Elko | 3,180,610 | 1,152,284 | 1,033,775 | 5,366,669 |
| Eureka | 684,165 | 616,828 | 363,653 | 1,664,646 |
| Humboldt | 1,117,470 | 375,499 | 330,672 | 1,823,641 |
| Lander | 850,521 | 519,097 | 510,744 | 1,880,362 |
| Lassen | 421,208 | 401,137 | 119,000 | 941,345 |
| Lincoln | 101,555 | 312,960 | 317,101 | 731,616 |
| Lyon | - | - | - | - |
| Mineral | - | - | - | - |
| Modoc | 63,329 | 128,512 | 60,714 | 252,555 |

[1]Any one single habitat indicator does not define whether the habitat objective is or is not met. Instead, the preponderance of evidence from all indicators within that seasonal habitat period must be considered when assessing GRSG habitat objectives.
[2] Upland standards are based on indicators for cover, including litter, live vegetation, and rock, appropriate to the ecological potential of the site.
[3] Applicable to Phase I and Phase II pinyon and/or juniper.
[4]Does not include fences.
[5]In addition, if upland rangeland health standards are being met.
[6] Ecological site potential to meet habitat objectives should be considered when determining if objectives are feasible for the site. See discussion below Table 2-2.
[7]In drought years, 4-inch perennial bunchgrass height with greater than 20 percent measurements exceeding 5 inches in dry years.
[8] Arid is defined as areas that received >35.0 cm of average annual precipitation.
Mesic is defined as areas that received ≤35.0 cm of average annual precipitation.

**Table 9** will be implemented following this guidance: The habitat objectives are desired habitat conditions that are broad goals based on GRSG habitat selection that may not be achievable in all areas. The ability of a site to achieve habitat objectives shall be based on the ecological site potential and BLM should use high quality local or site-specific information, such as ecological site descriptions and state-and-transition models, if available, to determine if objectives are achievable. Attempting to manage sites, particularly large landscapes, to meet the vegetation objectives may not always be ecologically possible or may result in an unwanted site transition. In some cases, suitable habitat may only be found as small inclusions within the landscape, which could meet the habitat objectives.

**Table 9** includes a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that GRSG select. While the habitat objectives are not attainable on every site or every acre within GRSG HMAs, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM shall consider the ecological site potential within GRSG HMAs to validate the habitat conditions achievable for a specific site. The seasonal habitat descriptions in **Table 9** vary across the range of GRSG, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for GRSG. These measurable values reflect ecological potential and may be adjusted based on local factors influencing GRSG local data or if new science indicates that GRSG select for vegetation structure and composition in seasonal habitats not characterized by the values in **Table 9**. In these cases, it may be appropriate to adjust the values. Habitat objectives shall be evaluated in the context of annual variability in ecological conditions and shall not be used singly to determine habitat suitability for GRSG. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of GRSG conservation, or when identifying limiting habitat characteristics for a given area.

The indicators, characteristics, values and desired seasonal habitat conditions in **Table 9** are to be incorporated into the Sage-Grouse Habitat Assessment Framework (Stiver et al. 2015; HAF) Site-Scale forms (4th Order) and are meant to inform the wildlife habitat component of the Land Health Standards (LHS) evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the

LHS evaluation shall be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and LHS.

**Table 9** will be periodically revised to incorporate the best available science in coordination with the SETT, USFWS, NDOW, CDFW, USGS and other partners. The team will periodically review and incorporate the best available science and will recommend adjustments based on locally derived data. As **Table 9** is updated, adjustments will be made by the BLM through plan maintenance or amendment, as appropriate.

[1]Any one single habitat indicator does not define whether the habitat objective is or is not met. Instead, the preponderance of evidence from all indicators within that seasonal habitat period must be considered when assessing sage-grouse habitat objectives.
[2] Upland standards are based on indicators for cover, including litter, live vegetation, and rock, appropriate to the ecological potential of the site.
[3] Applicable to Phase I and Phase II pinyon and/or juniper.
[4]Does not include fences.
[5]In addition, if upland rangeland health standards are being met.
[6] Relative to ecological site potential.
[7]In drought years, 4-inch perennial bunchgrass height with greater than 20 percent measurements exceeding 5 inches in dry years.

**Table 10** will be periodically revised to incorporate the best available science in coordination with the SETT, USFWS, NDOW, CDFW, USFS, USGS, University of Nevada, Reno, University of California, and appropriate local agencies, and the BLM. The team will periodically review and incorporate the best available science and will recommend adjustments based on locally derived data. As **Table 10** is updated, adjustments will be made by the BLM through plan maintenance or amendment, as appropriate.

**Table 10** will be implemented following this guidance: The habitat objectives are desired habitat conditions that are broad goals based on GRSG habitat selection that may not be achievable in all areas. The ability of

a site to achieve the objectives shall be based on site potential, ecological site descriptions, state-and-transition models, etc.

**Table 10** includes a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that GRSG select. While the habitat objectives are not attainable on every site or every acre within GRSG HMAs, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM shall consider the ecological site potential within GRSG HMAs to validate the habitat conditions achievable for a specific site. a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that GRSG select. While the habitat objectives are not attainable on every site or every acre within GRSG HMAs, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM shall consider the ecological site potential within GRSG HMAs to validate the habitat conditions achievable for a specific site.

The seasonal habitat descriptions in **Table 10** vary across the range of GRSG, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for GRSG. These measurable values reflect ecological potential and may be adjusted based on local factors influencing GRSG local data or if new science indicates that GRSG select for vegetation structure and composition in seasonal habitats not characterized by the values in **Table 10**. In these cases, it may be appropriate to adjust the values. Habitat objectives shall be evaluated in the context of annual variability in ecological conditions and shall not be used singly to determine habitat suitability for GRSG. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of GRSG conservation, or when identifying limiting habitat characteristics for a given area.

The indicators, characteristics, values and desired seasonal habitat conditions in **Table 10** are to be incorporated into the Sage-Grouse Habitat Assessment Framework (Stiver et al. 2015; HAF) Site-Scale forms (4th Order) and are meant to inform the wildlife habitat component of the Land Health Standards (LHS) evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation shall be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and LHS.

**Table 11. Changes in Management from the 2015 ARMPA to the 2019 ARMPA Goals, Objectives, and Management Decisions**

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| ***SPECIAL STATUS SPECIES (SSS)*** | ***SPECIAL STATUS SPECIES (SSS)*** | — |
| **GOAL:** | **GOAL:** | — |
| **Goal SSS 1:** Conserve, enhance, and restore the sagebrush ecosystem upon which GRSG populations depend in an effort to maintain and/or increase their abundance and distribution, in cooperation with other conservation partners. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objectives** | — | — |
| **Objective SSS 1:** Manage land resource uses to meet GRSG habitat objectives, as described in Table 2-2. The habitat objectives will be used to evaluate management actions that are proposed in GRSG habitat. Managing for habitat objectives will ensure that habitat conditions are maintained if they are currently meeting objectives or if habitat conditions move toward these objectives in the event that current conditions do not meet these objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective SSS 2:** Maintain or improve connectivity between, to, and in PHMAs and GHMAs to promote movement and genetic diversity for GRSG population persistence and expansion. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective SSS 3:** Identify and implement GRSG conservation actions that can augment, enhance, or integrate program conservation measures established in agency and state land use and policy plans, to the extent consistent with applicable law. | No changes made. | No change proposed. |

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| **Objective SSS 4:** In PHMAs and GHMAs, apply the concept of "avoid, minimize, and compensatory mitigation" for all human disturbance in areas not already excluded or closed, so as to avoid adverse effects on GRSG and its habitat. The first priority will be to avoid new disturbance; where this is not feasible, the second priority will be to minimize and mitigate any new disturbance (Appendices F and I). | **Objective SSS 4:** When authorizing third-party actions in designated GRSG HMAs, the BLM will apply avoidance and minimization measures to reduce impacts, while seeking to achieve the planning-level goals and objectives for GRSG and its habitat, consistent with valid existing rights and applicable law. Management will be consistent with the GRSG goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. Specifically, the BLM will authorize uses of the public lands that are consistent with the policy in BLM Manual 6840 and therefore "minimize or eliminate threats affecting the status of [GRSG]" or "improve the condition of [GRSG] habitat." | Potential change under Alternatives 3, 4, 5, and 6. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD SSS 1:** In PHMAs and GHMAs, work with the proponent/applicant, whether in accordance with a valid existing right or not, and use the following screening criteria to avoid effects of the proposed human activity on GRSG habitat[l]<br>A. First priority—locate project/activity outside PHMAs and GHMAs<br>B. Second priority—if the project/activity cannot be placed outside PHMAs and GHMAs, locate the surface-disturbing activities in non-habitat areas first, then in the least suitable habitat for GRSG<br>l. In non-habitat, ensure the project/activity will not create a barrier to movement or connectivity between seasonal habitats and populations<br>C. Third priority—collocate the project/activity next to or in the footprint of existing infrastructure | **MD SSS 1:** In PHMAs and GHMAs, work with the proponent/applicant, whether in accordance with a valid existing right or not, and use the following screening criteria to avoid effects of the proposed human activity on GRSG habitat[l]:<br>A. |---|---|---|
| field biologist or other GRSG experts from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the BLM State Director, USFWS State Ecological Services Director and NDOW Director for final resolution. In the event their finding is not unanimous, the exception will not be granted (Appendix E).<br>3. For BLM land in the state of California only, subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. Energy and mining facilities to which this action applies are:<br>• Oil and gas wells and development facilities.<br>• Wind towers<br>• Geothermal wells/developments, and<br>• Active locatable, leasable, and salable developments.<br>4. For proposed projects to be located, within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the | permitted by the BLM: 1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or 2) unless the energy or mining facility is co-located into an existing disturbed area. Energy and mining facilities to which this action applies are:<br>• Oil and gas wells and development facilities.<br>• Wind towers<br>• Geothermal wells/developments, and<br>• Active locatable, leasable, and salable developments.<br>4. For proposed projects to be located, within existing designated utility corridors, the 3 percent disturbance cap may be exceeded at the project scale if a net conservation gain to the species will be achieved, as a component of compliance with a State's mitigation plan, program, or authority, such as required by the State of Nevada Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law). This exception is limited to projects which fulfill the use for which the corridors were designated (e.g., transmission lines, pipelines, etc.) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br>B. See **MD MIT 1**. Authorized/permitted activities are implemented by adhering to the Required Design Features (RDFs) described in **Appendix C**, consistent with applicable law. At the site-specific scale, if | *(See above.)* |

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br>B. In PHMA, in undertaking BLM management actions, and consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species, including accounting for any uncertainty associated with the effectiveness of such mitigation. The project/activity with associated mitigation (such as the use of the State of Nevada Conservation Credit System) will result in an overall net conservation gain to GRSG (see Appendix F).<br>C. Authorized/permitted activities are implemented by adhering to the RDFs described in Appendix C, consistent with applicable law. At the site-specific scale, if an RDF is not implemented, at least one of the following must be demonstrated in the NEPA analysis associated with the project/activity:<br>1. A specific RDF is documented to not be applicable to the site-specific conditions of the project/activity (e.g., due to the site limitations or engineering considerations). Economic considerations, such as increased costs, do not necessarily require that an RDF be varied or rendered inapplicable.<br>2. An alternative RDF is determined to provide equal | an RDF is not implemented, at least one of the following must be demonstrated in the NEPA analysis associated with the project/activity:<br>1. A specific RDF is documented to not be applicable to the site-specific conditions of the project/activity (e.g., due to the site limitations or engineering considerations). Economic considerations, such as increased costs, do not necessarily require that an RDF be varied or rendered inapplicable.<br>2. An alternative RDF is determined to provide equal or better protection for GRSG or its habitat.<br>3. A specific RDF will provide no additional protection to GRSG or its habitat.<br>D. In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will utilize the lower end of the interpreted range of lek buffer-distances and guidance identified in Mainer et al. (2014) to establish the evaluation area around leks that will be used to analyze impacts during project-specific NEPA, including scientifically justifiable departures based on local data, topography, and other factors, in accordance with **Appendix B**.<br>D. Seasonal restrictions will be applied during the period specified below to manage discretionary surface-disturbing activities and uses on public lands (i.e., anthropogenic disturbances) that are disruptive to GRSG, to prevent disturbances to GRSG during seasonal life-cycle periods:<br>1. In breeding habitat within 4 miles of active and pending | *(See above.)* |

|---|---|---|
| *(See above.)* | ii. The proposed activities impacts will be offset to result in no adverse impacts on GRSG or its habitat, through use of the mitigation hierarchy and the State's mitigation policies and programs, such as the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law). In cases where exceptions may be granted for projects with a residual impact, voluntary compensatory mitigation consistent with the State's mitigation policies and programs, such as the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law) will be one mechanism by which a proponent achieves the Approved RMPA goals, objectives, and exception criteria. When a proponent volunteers compensatory mitigation as their chosen approach to address residual impacts, the BLM will incorporate those actions into the rationale used to grant an exception. The final decision to grant a waiver, exception, or modification will be based, in part, on criteria consistent with the State's GRSG management plans and policies.<br>iii. The proposed activity will be authorized to address public health and safety concerns, specifically as they relate to federal, state, local government and national priorities.<br>iv. Renewals or re-authorizations of existing infrastructure in previously disturbed sites or expansions of existing infrastructure that do not result | *(See above.)* |

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| *(See above.)* | in direct, indirect, or cumulative impacts on GRSG and its habitat.<br>v. The proposed activity is determined to be a routine administrative function conducted by federal, state or local governments, including prior existing uses, authorized uses, valid existing rights and existing infrastructure (i.e., rights-of-way for roads) that serve a public purpose and will have no adverse impacts on GRSG and its habitat, consistent with the State's mitigation policies and programs, such as the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law).<br>vi. Exceptions to non-disposal or exchange of lands that are identified for retention in **Appendix A, Figure 2-12** could be considered if (a) they are identified for disposal through previous planning efforts or address a Congressional Act (e.g., the respective Lincoln and White Pine County Conservation, Recreation, and Development Acts), (b) the agency can demonstrate that the disposal, including land exchanges, will have no adverse direct, indirect or cumulative impacts on GRSG and its habitat, or (c) adverse impacts on GRSG or its habitat will be offset, through use of voluntary compensatory mitigation, consistent with the States' mitigation policies and programs, such as the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law). | *(See above.)* |

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 6**: Cooperate with federal and state agencies, universities, and other organizations to establish and maintain a GRSG telemetry database. | No changes made. | No change proposed. |
| **MD SSS 7**: Work with project proponents to limit project-related noise, seasonally or annually (see MDs SSS 2 and SSS 3), in GRSG habitat where it would be expected to reduce functionality of habitats that support associated GRSG populations. Support the establishment of ambient baseline noise levels for leks in PHMAs and GHMAs.<br>• As additional noise-related research and information emerge, specific new limitations appropriate to the type of projects being considered will be evaluated and appropriate measures will be implemented where necessary to minimize the potential for noise impacts on GRSG populations. | No changes made. | No change proposed. Alternatives 3, 4, 5, and 6 |
| **MD SSS 8**: As determined by BLM in coordination with NDOW or CDFW, for any surface-disturbing activities involving mineral activities (to the extent possible under existing law) and rights-of-way actions proposed in PHMAs and GHMAs, the proponent will use the services of a qualified biologist approved by the BLM to conduct surveys for GRSG breeding activity during the GRSG breeding season before project activities begin. The surveys must encompass all suitable GRSG habitats within a minimum of 4 miles of the proposed activities. Surveys will be conducted following protocols established by state fish and wildlife agencies during planning operations and during project activities. GRSG seasonal habitat delineations will also be required within a minimum of 4 miles of project activities. | No changes made. | Potential change under Alternative 3. |

| 2015 GRSG ARMPA (as maintained) | 2019 GRSG ARMPA (as maintained) | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 9a**: In Nevada only, the BLM will consult with the Sagebrush Ecosystem Technical Team (SETT) for application of the "avoid, minimize, and compensate" mitigation strategy and the Conservation Credit System developed by the Nevada Natural Heritage Program and the SETT (2014a, 2014b) or other applicable mitigation system such as outlined in Appendix I. This will be to ensure that a net conservation gain of GRSG habitat is achieved in mitigating human disturbances in PHMAs and GHMAs (see Appendix F) on all agency-authorized activities. The specifics of the coordination will be identified in an MOU between the agencies. | See **MD MIT 1** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 9b**: In California only, the BLM will follow the BLM mitigation strategy outlined in Appendix F. | See **MD MIT 1** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 10**: When necessary or as new data becomes available, site-specific NEPA analysis on use authorizations in PHMA and GHMA will include project level adaptive management responses to address changed conditions in GRSG habitat and population trends (see Appendix J, Adaptive Management Plan). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 11**: Design and construct fences consistent with BLM H-1741-1, Fencing Standards Manual (BLM 1990), and apply the Sage-Grouse Fence Collision Risk Tool to Reduce Bird Strikes (NRCS 2012). Bring existing fencing into compliance as opportunities arise. | No changes made. | No change proposed. |

[1]The screening criteria would not be applicable to vegetation treatments being conducted to enhance GRSG habitat.
[2] & [3]The conditions would not be applicable to vegetation treatments being conducted to enhance GRSG habitat, with the exceptions of seasonal restrictions and noise.

## Changes in Management from the 2015 ARMPA to the 2019 ARMPA Goals, Objectives, and Management Decisions (Continued)

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Disease** | **Disease** | — |
| **Objective SSS 5:** Coordinate with state agencies to monitor trends of diseases, such as West Nile virus, in the subregion to determine if mitigation or additional RDFs need to be applied (consistent with applicable law) to use authorizations. | No changes made. | No change proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD SSS 12**: When developing or modifying water developments on BLM-administered lands in PHMAs, GHMAs, and OHMAs and in accordance with state water law and subject to valid existing rights, use applicable RDFs consistent with applicable law to mitigate potential impacts from West Nile virus. Bring existing water developments into compliance as opportunities arise. | No changes made. | Potential change under Alternative 3. |
| **Predation** | **Predation** | — |
| **Objective SSS 6**: Manage human uses on public lands to reduce the effects of predation on GRSG. | No changes made. | No change proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD SSS 13:** Require authorizations to include stipulations and RDFs consistent with applicable law to reduce or eliminate opportunities to attract and provide nesting, cover, or perches for predators in PHMAs and GHMAs.<br><br>**MD SSS 14:** Coordinate with other federal, state, county, and tribal governments and local working groups to reduce GRSG deaths due to predation where it is determined to be additive or is a limiting factor influencing GRSG populations. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 15**: Reduce and eliminate artificial hunting perches and nesting surfaces for aerial predators (e.g., remove fences, nonworking fences, and power lines and install anti-perch devices on existing and new power lines). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***Adaptive Management (Also see Appendix J)*** | — | — |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| No similar action. | **MD SSS 16:** PHMA, GHMA, and OHMA boundaries are based on composite management categories contained within USGS's *Spatially Explicit Modeling of Annual and Seasonal Habitat for Greater Sage-Grouse (Centrocercus urophasianus) in Nevada and Northeastern California—an updated decision-support tool for management* (Coates et al. 2016), (see **Appendix A: Maps**).<br>• Manage 9,265,800 acres as PHMA<br>• Manage 5,748,000 acres as GHMA<br>• Manage 4,868,900 acres as OHMA<br>BLM recognizes that landscape level mapping may not accurately reflect on-the-ground conditions. Therefore, the HMAs (**Figure 2-1**) do not constitute a land use plan decision but rather a landscape level reference of relative habitat suitability. When a proposed project is thought to be in an area that is unsuitable for GRSG within PHMA, GHMA, and/or OHMA, habitat assessments of the project site and its surrounding areas will be conducted by a biologist with GRSG experience using BLM-approved methods such as Stiver et al. 2015 and compliant with current BLM policy, to identify suitable, marginal, or unsuitable GRSG habitats at multiple scales. This habitat assessment process will inform criteria (i) under Issue: Allocation Exception Process, Management Alignment Alternative and Proposed Plan Amendment. The BLM will track all on-the-ground assessments and share this information with USGS and the States of Nevada and California to consider when updating HMA maps in the future. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 17**: As site-specific GRSG data (habitat assessments, lek counts, telemetry, etc.) is collected, the information will be included into future modeling efforts using the "*Spatially Explicit Modeling of Greater Sage-Grouse Habitat in Nevada and Northeastern California*" (Coates et al. 2014) to reflect the most up-to-date spatial representation of GRSG habitat categories. Through plan maintenance or plan amendment/revision, as appropriate, and in consultation with the Nevada Department of Wildlife and USFWS, based on the best scientific information, the updated modeling efforts may be adopted and appropriate allocation decisions and management actions will be applied to PHMA, GHMA, and OHMA. Future modeling efforts to incorporate site-specific GRSG data will utilize the same modeling methods (as described under *Methods and Results* in Coates et al. 2014) used to develop the current Nevada and Northeastern California Subregions' GRSG habitat management categories. The addition of site-specific GRSG data will allow for the refinement of the spatial representation of the GRSG habitat management categories. | **MD SSS 17:** Consistent with the State of Nevada's Greater Sage-Grouse Conservation Plan (2014, as amended) and CDFW's management recommendations, the HMA mapping process will be reviewed and refined every 3 to 5 years, or when new data are incorporated in the model. New or improved spatial data (e.g., additional GRSG telemetry data, updated or improved vegetation community data) will be incorporated during the refinement process. The review and refinement process will be scientifically based and include review and input from the Sagebrush Ecosystem Technical Team (SETT), NDOW, BLM, USFS, USFWS, and local agencies as appropriate. For refinements on California BLM managed lands, this process will also include CDFW. Other stakeholders will be encouraged to participate in the process by submitting relevant information to the listed agencies. The USGS' habitat suitability modeling processes (Coates et al. 2016) will be the basis for future refinements, which may include results of BLM habitat suitability determinations shared with the USGS for their consideration. As these HMAs boundaries are adjusted and approved by the States of Nevada and California, adjustments to the BLM's PHMA, GHMA, and/or OHMA boundaries (along with the existing allocation decisions and management actions tied to these areas) will be made by the BLM through plan maintenance or amendment, as appropriate. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 18**: A BSU (see Appendix A; Figure 2-2) that has hit a soft trigger due to vegetation disturbance will be a priority for restoration treatments consistent with Fire and Invasives Assessment Tool (FIAT) (Appendix J). | **MD SSS 18:** The BLM will implement the Adaptive Management Strategy as described in **Appendix D**. The revised soft and hard population triggers, warnings, and new BSU and lek cluster boundaries were derived from USGS's *Hierarchical Population Monitoring of Greater Sage-Grouse (Centrocercus urophasianus) in Nevada and California— Identifying Populations for Management at the Appropriate Spatial Scale: U.S. Geological Survey Open-File Report 2017– 1089* (Coates et al. 2017). These triggers, warnings, BSU boundaries, and lek cluster boundaries can be found in **Appendix D**. Soft and hard trigger responses will be removed when the criteria for recovery have been met (see **Appendix D**, Longevity of Responses). Removal of the soft and hard trigger responses returns management direction in the affected lek cluster and/or BSU to the management directions that were in place prior to reaching a trigger. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 19**: If a soft trigger is reached, the BLM will identify the causal factor and apply additional project-level adaptive management and/or mitigation measures contained in the authorization (and for future similar authorizations), to alleviate the specific or presumptive causes in the decline of GRSG populations or its habitats and include the following:<br>• The adjustment in management would be based on the causal factor and would affect only the area being impacted in the lek cluster or other appropriate scale (e.g., BSU)<br>• GRSG populations and habitat would continue to be monitored annually<br>• If the causal factor were not readily discernable, then an interdisciplinary team, including the BLM, Forest Service (as applicable), and state wildlife agency representatives, would identify the appropriate mitigation or adjusted management actions in a timely manner | No similar action. (MD SSS 19 was removed) | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 20**: Once a hard trigger has been reached, all responses in Table J-1 and Table J-2 in Appendix J will be implemented. This includes where soft triggers have been reached for both population and habitat. | No similar action. (MD SSS 20 was removed) | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD SSS 21**: When a hard trigger is hit in a PAC that has multiple BSUs, including those that cross state lines, the WAFWA Management Zone GRSG Conservation Team will convene to determine the cause, will put project level responses in place, as appropriate, and will discuss further appropriate actions to be applied. The team will also investigate the status of the hard triggers in other BSUs in the PAC and will invoke the appropriate plan response. Adopting any further actions at the plan level may require initiating a plan amendment process. | No similar action. (MD SSS 21 was removed) | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD SSS 22**: As determined by BLM in coordination with NDOW, for any surface-disturbing activities involving mineral activities and rights-of-way actions (with the possible exception of short duration activities outside of seasonal GRSG habitats) BLM will require that active and pending leks be monitored annually within 4 miles of disturbance until the use terminates and all disturbances have been restored. The proponent will fund the services of an independent qualified biologist approved by the BLM, in coordination with NDOW or CDFW, consistent with applicable law. | **MD SSS 22:** As determined by the BLM in coordination with the state wildlife agencies, for any surface-disturbing activities involving mineral activities and rights-of-way actions (with the possible exception of short duration activities outside of seasonal GRSG habitats) BLM will require that active and pending leks be monitored annually within 4 miles of disturbance until the use terminates and all disturbances have been restored. The proponent will fund the services of an independent qualified biologist approved by the BLM, in coordination with NDOW or CDFW, consistent with applicable law. | No change proposed. |
| **MD SSS 23**: In making amendments to this plan, the BLM will coordinate with the FWS as BLM continues to meet its objective of conserving, enhancing and restoring GRSG habitat by reducing, minimizing or eliminating threats to GRSG and its habitat. | No changes made. | No change proposed. |
| **MD SSS 24**: The hard and soft trigger data will be analyzed as soon as it becomes available after the signing of the ROD and then at a minimum, analyzed annually thereafter. | No similar action. (MD SSS 24 was removed) | Potential change under Alternatives 3, 4, 5, and 6. |
| ***VEGETATION (VEG)*** ***SAGEBRUSH-STEPPE*** | ***VEGETATION (VEG)*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG 1:** In all SFA and PHMAs, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | **Objective VEG 1**: In PHMAs, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Objective VEG 2**: On public lands, establish, maintain, and enhance a resistant and resilient sagebrush vegetative community and restore sagebrush vegetation communities to reduce GRSG habitat fragmentation and maintain or reestablish GRSG habitat connectivity over the long term (Chambers et al. 2014). | No changes made. | No change proposed. |
| **Objective VEG 3**: Manage PHMAs and GHMAs for vegetation composition and structure, consistent with ecological site potential and to achieve GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD VEG 1**: Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 2**: Incorporate GRSG habitat objectives (**Table 2-2**) in the design of habitat restoration projects and manage treated areas to meet GRSG habitat objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 3**: Use BLM GRSG habitat maps, habitat objectives (see Table 2-2 for GRSG habitat objectives), ecological site potential, state and transition models, and concepts of resistance and resilience (Appendix H) to prioritize habitat restoration projects, including those following wildfire, to address the most limiting GRSG habitat vegetation components and to connect seasonal ranges.<br><br>Habitat restoration includes the following:<br>i. Restoring sagebrush canopy in PHMAs and GHMAs to meet GRSG habitat objectives (Table 2-2)<br>ii. Reestablishing perennial grasses and native forbs in PHMAs and GHMAs<br>iii. Reducing or removing pinyon or juniper in PHMAs and GHMAs to enhance seasonal range connectivity and to maintain sagebrush canopy and understory integrity<br>iv. Restore areas affected by wildfire and the continuing invasive annual fire cycle to meet GRSG habitat objectives (Table 2-2)<br>iv. Prioritize restoration in areas that have not crossed an ecological threshold | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 4:** Plan vegetation treatments (including GRSG habitat treatments) in a landscape-scale context to address habitat fragmentation, effective patch size, invasive species presence, and intact sagebrush community protection, consistent with the GRSG habitat objectives identified in **Table 2-2**. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 5**: For Wyoming, mountain, and basin big sagebrush communities in PHMAs and GHMAs:<br>i. Prioritize treatments that focus on enhancing, reestablishing, or maintaining the most limiting GRSG habitat component<br>ii. Reestablish sagebrush to meet GRSG habitat objectives (Table 2-2)<br>iii. Manage sagebrush communities to achieve age-class, structure, cover, and species composition objectives in GRSG habitat (Table 2-2)<br>iv. Restore herbaceous understory in brush-dominated areas to meet GRSG habitat objectives (Table 2-2)<br>iv. Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species (Table 2-2)<br>v. Treat disturbed areas in accordance with FIAT (see Appendix H), including implementation-level assessments | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 6:** Manage for establishment of sagebrush in unmaintained nonnative seedings (e.g., crested wheatgrass seedings) in or next to GRSG habitat to meet habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 7:** In PHMAs and GHMAs, give preference to native seeds for restoration, based on availability, adaptation (ecological site potential), and probability of success. Where the probability of success or adapted seed availability is low, nonnative seeds may be used, as long as they support GRSG habitat objectives. Choose native plant species outlined in Ecological Site Descriptions (ESDs), where available, to revegetate sites. Emphasize use of local seed collected from intact stands or greenhouse cultivation. If the commercial supply of appropriate native seeds and plants is limited, work with the BLM Native Plant Materials Development Program, Natural Resource Conservation Service (NRCS) Plant Material Program, or State Plant Material Programs. If currently available supplies are limited, use the materials that provide the greatest benefit for GRSG. In all cases, seed must be certified as weed free. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 8:** To increase seeding success and to ensure effective soil and seed contact, consider the use of specialized seed drills or other proven and effective methods that may become available based on new science. | No changes made. | No change proposed. |
| **MD VEG 9a:** For Nevada BLM-managed lands, before implementation, establish project monitoring sites where vegetation treatment is planned. Treatment areas will be monitored both pre- and post- treatment on a multiple-year basis to ensure that project objectives are achieved. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 9b:** For California BLM-managed lands, before implementation, establish project monitoring sites where vegetation treatment is planned. Treatment areas will be monitored both pre- and post- treatment on a multiple-year basis to ensure that project objectives are achieved. Juniper treatments will be monitored in accordance with the Sage Steppe Ecosystem Restoration FEIS (BLM 2008). | No changes made. | No change proposed. |
| **MD VEG 10:** On public lands, where the attributes, quality, or lack of GRSG winter habitat has been identified as a limiting factor, emphasize vegetation treatments in known winter habitat to enhance quality or reduce wildfire risk around or in winter habitat. | No changes made. | No change proposed. |
| **MD VEG 11:** In perennial grass, invasive annual grass, and conifer-invaded cover types, restore sagebrush steppe with local sagebrush seedings or planted seedlings where feasible. | No changes made. | No change proposed. |
| **MD VEG 12:** Continue to coordinate with NDOW, CDFW, and NRCS for all development or habitat restoration proposals in PHMAs and GHMAs. Also, coordinate with the Nevada SETT, tribes, and local working groups on projects proposed in sagebrush ecosystems. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***VEGETATION (VEG)*** | ***VEGETATION (VEG)*** | — |
| ***Conifer Encroachment*** | ***Conifer Encroachment*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG 4:** In accordance with the vegetation dynamic development tool (VDDT; Appendix L), improve GRSG habitat by removing invading conifers in the number of acres shown in **Table 2-2** by decade for the next 50 years. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD VEG 13:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks and where juniper encroachment is phase 1 and phase 2. Use of site-specific analysis and tools like VDDT and FIAT (see Appendix L for VDDT and Appendix H for FIAT) will help refine the location for specific areas to be treated. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD VEG 14:** Do not construct or create new roads (temporary or permanent), skid trails, or landings in phase I pinyon or juniper removal areas during project implementation for vegetation treatments. Administrative access, including off-road travel with heavy equipment and vehicles, will be allowed during implementation. | No changes made. | No change proposed. |
| **MD VEG 15:** Only treat habitats in late phase II or phase III pinyon or juniper condition to create movement corridors, connect habitats, or reduce the potential for catastrophic fire (see **Table 2-3**). | No changes made. | No change proposed. |
| ***Vegetation (VEG)*** | ***Vegetation (VEG)*** | — |
| ***Invasive Species*** | ***Invasive Species*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG 5**: Reduce the amount of GRSG habitat loss due to wide-spread wildfires and invasion by nonnative species. | No changes made. | No change proposed. |
| **Objective VEG 6**: Control invasive species infestations in GRSG habitat already compromised by invasion. | No changes made. | No change proposed. |
| **Objective VEG 7**: In accordance with the VDDT (Appendix L), improve GRSG habitat by treating annual grasses in the number of acres shown in **Table 2-4** by decade using the FIAT (Appendix H). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD VEG 16**: Prevent the establishment of invasive species into uninvaded areas in PHMAs and GHMAs through properly managed grazing and by conducting systematic and strategic detection surveys, collecting data, mapping these areas, and engaging in early response to contain and eradicate invasion if it occurs. | No changes made. | Potential change under Alternative 3. |
| **MD VEG 17**: Control the spread and introduction of noxious weeds listed by the Nevada Department of Agriculture and California Department of Food and Agriculture (NAC 555.010, Classes A through C, inclusive and 3 CCR 4500, Noxious Weed Species Pest Rating A, B, C, and Q) and undesirable nonnative plant species (Gelbard and Belnap 2003; Bergquist et al. 2007). Work with federal, state, local, and tribal groups, such as Weed Control Districts, Cooperative Weed Management Areas, and Conservation Districts, in detecting and treating nonnative species. | No changes made. | No change proposed. |
| **MD VEG 18**: Where scientific support is lacking, carefully construct treatments to rigorously assess the value or detriment of untested methods to determine their value for future application to GRSG habitats. | No changes made. | No change proposed. |
| **MD VEG 19**: The BLM will cooperate with other federal, state, tribal and local agencies along with academia in researching the development of biological control agents and deploying emerging technologies as they become available. | No changes made. | No change proposed. |
| **MD VEG 20**: Monitor and adjust treatment sites and methods as needed to ensure effectiveness of efforts to prevent and control invasive species and restore GRSG habitat. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD VEG 21**: Assess invasive annual grass presence and distribution before implementing vegetation restoration projects to determine if treatments are required to treat invasive annual grasses. | No changes made. | No change proposed. |
| **MD VEG 22**: Treat sites in PHMAs and GHMAs that contain invasive species infestations through an integrated pest management (IPM) approach, using fire, chemical, mechanical, and biological (e.g., targeted grazing) methods, based on site potential and in accordance with FIAT (Appendix H). Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Vegetation (VEG)***<br>***Riparian and Wetlands Habitat*** | ***Vegetation (VEG)***<br>***Riparian and Wetlands Habitat*** | — |
| **Objectives:** | **Objectives:** | — |
| **Objective VEG 8**: Manage riparian areas in PHMAs and GHMAs for vegetation composition and structure, consistent with ecological site potential and to achieve GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective VEG 9**: Manage upland habitat associated with riparian areas to promote cover relative to site potential to facilitate brood-rearing habitat (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective VEG 10**: Where riparian function has been compromised or lost, manage to restore riparian function and meet GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective VEG 11**: In riparian and wet meadow areas, inventory, monitor, and control invasive species in PHMAs and GHMAs. | No changes made. | Potential change under Alternative 3. |

| **Objective VEG 12**: Use the landscape approach and promote landscape-scale, ecosystem-based actions to enhance resiliency and sustainability of PHMAs and GHMAs to climate stress. | No changes made. | Potential change under Alternative 3. |
| **Objective VEG 13**: In PHMAs and GHMAs, manage risks of GRSG habitat degradation or loss from landscape stressors of drought, invasive species, and wildfire exacerbated by climate change to maintain existing GRSG populations and habitats. | No changes made. | Potential change under Alternative 3. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD VEG 26**: As climate change data become available through Rapid Ecoregional Assessments or other ecological studies, identify areas of unfragmented GRSG habitat and corridors that provide the life-cycle and genetic transfer needs for GRSG and adjust resource management practices, as needed. | No changes made. | No change proposed. |
| **MD VEG 27**: Cooperate with multiple agencies and stakeholders to establish and maintain a network of climate monitoring sites and stations. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***FIRE AND FUELS MANAGEMENT (FIRE)*** ***WILDFIRE MANAGEMENT*** | ***FIRE AND FUELS MANAGEMENT (FIRE)*** ***WILDFIRE MANAGEMENT*** | — |
| ***OBJECTIVE*** | ***OBJECTIVE*** | — |
| **Objective FIRE 1**: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. GRSG habitat will be prioritized commensurate with property values and other critical or sensitive habitats to be protected, with the goal to restore, enhance, and maintain areas suitable for GRSG. | No changes made. | No change proposed. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD FIRE 1:** Support the conservation of GRSG habitat objectives (**Table 2-2**) through appropriate wildfire management planning, coordination, staffing, resource allocations, training, equipment, and management oversight. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 2:** Prioritize fire operations and fuels management decisions in SFA first, followed by PHMAs outside of SFA in accordance with the implementation-level FIAT assessments, and then GHMAs for conservation and protection during fire operations and fuels management decision-making. When suppression resources are widely available, place maximum efforts on limiting fire growth in GHMAs as well. | **MD FIRE 2:** Prioritize fire operations and fuels management decisions in PHMA in accordance with the implementation-level FIAT assessments, and then GHMAs for conservation and protection during fire operations and fuels management decision-making. When suppression resources are widely available, place maximum efforts on limiting fire growth in GHMAs as well. | Potential change under Alternative 3. |
| **MD FIRE 3:** BLM planning units, in coordination with the USFWS and relevant state agencies, will annually review the GRSG landscape wildfire and invasive species habitat assessments (FIAT). Based on this review, revised actions to ameliorate invasive species must be incorporated into the assessment. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 4:** Compile relevant field office- and district-level information into the statewide GRSG Annual Operating Handbook for use by resource advisors, wildfire crews, and agency administrators. The handbook will contain GRSG maps (including habitat and fuels treatment maps) and lists of state and local GRSG resource advisors and their contact information, local guidance, and other relevant information for each field office and district, aggregated into a statewide document. | No changes made. | No change proposed. |
| **MD FIRE 5:** Coordinate and collaborate with federal, tribal, state, and local governments and associations sanctioned through either California or Nevada that meet fire standards for effective and efficient wildfire response. | No changes made. | No change proposed. |
| **MD FIRE 6:** Strengthen and improve interagency wildfire prevention statewide through targeted wildfire prevention messages, including providing education on GRSG habitat loss, updating interagency agreements, and conducting wildfire prevention workshops and demonstration projects. | No changes made. | No change proposed. |
| ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Pre-Suppression*** | ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Pre-Suppression*** | — |
| ***OBJECTIVE*** | | — |
| **Objective FIRE 2:** Use pre-suppression efforts to reduce the size and impact of wildfires in SFA, PHMAs, and GHMAs. | **Objective FIRE 2:** Use pre-suppression efforts to reduce the size and impact of wildfires in PHMAs and GHMAs. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective FIRE 3:** Protect post-fire treatments in SFA first, followed by PHMAs outside of SFA, and then GHMAs from subsequent wildfires. | **Objective FIRE 3:** Protect post-fire treatments in PHMAs first, followed by GHMAs from subsequent wildfires. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD FIRE 7:** Identify and prioritize areas that are vulnerable to wildfires and prescribe actions important for GRSG protection, in accordance with FIAT (see Appendix H, USDI 2015) and further refined in the implementation-level FIAT assessments. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 8:** Create fire management plans to guide wildfire suppression in order to protect PHMAs and GHMAs. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 9**: Before the fire season, train GRSG resource advisors on wildfire suppression organization, objectives, tactics, and procedures to develop a cadre of qualified individuals. Involve state wildlife agency experts in fire operations through the following:<br>• Instruction of resource advisors during preseason trainings<br>• Qualification as resource advisors<br>• Coordination with resource advisors before fire season<br>• Contribution to incident planning with information, such as habitat features or other key data useful in fire decision-making | No changes made. | No change proposed. |
| ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Suppression*** | ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Suppression*** | — |
| ***OBJECTIVE*** | ***OBJECTIVE*** | — |
| **Objective FIRE 4:** Use suppression to reduce the size and impact of wildfires in SFA, PHMAs, and GHMAs. | **Objective FIRE 4:** Use suppression to reduce the size and impact of wildfires in PHMAs and GHMAs. | Potential change under Alternative 3. |
| **Management Decisions (MD):** | **Management Decisions (MD):** | — |
| **MD FIRE 10:** Provide local GRSG habitat maps to dispatch offices and extend attack incident commanders to prioritize wildfire suppression resources and design suppression tactics. Ensure GRSG habitat maps and suppression strategies are uploaded and updated in WFDSs. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 11:** Assign a resource advisor with GRSG habitat expertise or with access to GRSG habitat expertise to all extended attack fires in or near SFA, PHMAs, and GHMAs. | **MD FIRE 11:** Assign a resource advisor with GRSG habitat expertise or with access to GRSG habitat expertise to all extended attack fires in or near PHMAs and GHMAs. | Potential change under Alternative 3. |
| **MD FIRE 12:** In advance of critical fire weather, station additional federal fire suppression resources to optimize a quick and efficient response in SFA, PHMAs, and GHMAs. | **MD FIRE 12:** In advance of critical fire weather, station additional federal fire suppression resources to optimize a quick and efficient response in PHMAs and GHMAs. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 13:** During periods of multiple fires, ensure line officers prioritize decisions by coordinating with resource advisors. | No changes made. | No change proposed. |
| **MD FIRE 14:** To the extent possible, locate wildfire suppression facilities (e.g., base camps, spike camps, drop points, staging areas, and helicopter bases) in areas to avoid disturbing PHMAs and GHMAs. These include disturbed areas, grasslands, roads and trails, or in other areas with existing disturbance or minimal sagebrush cover. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 15:** Document fire operations (e.g., disturbance) in PHMAs and GHMAs for potential follow- up coordination and restoration. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 16:** Use indirect attack tactics (including burn-out operations) when:<br>Direct attack is not effective in stopping fires with the potential of becoming significantly larger due to fuel loading, weather conditions, and fire behavior. If firefighter and public safety would be threatened or compromised | No changes made. | No change proposed. |
| **MD FIRE 17:** Use retardant, mechanized equipment, and other available resources to minimize burned acreage during initial attack. As safety allows, conduct mop-up where the black adjoins unburned islands, dog legs, or other habitat features to minimize sagebrush loss. | No changes made. | No change proposed. |
| **MD FIRE 18:** Minimize unnecessary cross-country vehicle travel during fire operations in GRSG habitat. | No changes made. | No change proposed. |
| ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Fuels Management*** | ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Fuels Management*** | — |
| ***OBJECTIVE*** | ***OBJECTIVE*** | — |
| **Objective FIRE 5:** Protect and enhance PHMAs and GHMAs and areas of connectivity that support GRSG populations, including large contiguous blocks of sagebrush, through fuels management and incorporation of the FIAT assessment (Appendix H). | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***MANAGEMENT DECISIONS (MD):*** | ***MANAGEMENT DECISIONS (MD):*** | — |
| **MD FIRE 19:** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 20:** In PHMAs and GHMAs, apply fuels treatments on a landscape level to modify fire behavior, intensity, complexity (fire patchiness), size, and effects in which fire management efforts are enhanced. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 21:** Establish and maintain fuel breaks to protect GRSG and its habitat to limit fire size and mitigate fire behavior to increase suppression effectiveness. When possible, establish fuel breaks next to roads or other previously disturbed areas. | No changes made. | No change proposed. |
| **MD FIRE 22:** Use a full range of fuels management strategies and tactics within acceptable risk levels across the range of GRSG habitat consistent with land use plan direction. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 23:** If prescribed fire is used in GRSG habitat, the NEPA analysis for the Burn Plan will address:<br>• Why alternative techniques were not selected as a viable option<br>• How GRSG goals and objectives will be met by its use<br>• How the COT report objectives will be addressed and met<br>• A risk assessment to address how potential threats to GRSG habitat will be minimized.<br><br>Allow prescribed fire as a vegetation or fuels treatment, and it shall only be considered after the NEPA analysis for the burn plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that will protect GRSG habitat in PHMAs (e.g., creation of fuel breaks that would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Allow prescribed fire in known winter range, and it shall only be considered after the NEPA analysis for the burn plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 24:** In coordination with the USFWS and relevant state agencies and in accordance with FIAT (see Appendix H), develop a fuels management strategy for the BLM with large blocks of GRSG habitat. The strategy shall include an up-to-date fuels profile, land use plan direction, current and potential habitat fragmentation, sagebrush and GRSG ecological factors, and active vegetation management steps to provide critical breaks in fuel continuity. When developing this strategy, consider the risk of increased habitat fragmentation from a proposed action versus the risk of large-scale fragmentation posed by wildfires if the action were not taken. | No changes made. | No change proposed. |
| **MD FIRE 25:** Design fuels treatments through an interdisciplinary team process to expand, enhance, maintain, and protect PHMAs and GHMAs. Fuel reduction techniques, such as prescribed fire and chemical, biological (including targeted grazing), and mechanical treatments, are acceptable. Use green strips and fuel breaks, where appropriate, to protect seeding from subsequent fires. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 26:** In coordination with the USFWS and relevant state agencies and in accordance with FIAT (see Appendix H), BLM will identify treatment needs for wildfire and invasive species management. Ongoing treatment needs will be coordinated on state and regional scales and across jurisdictional boundaries for long-term conservation of GRSG and its habitat. | No changes made. | No change proposed. |
| **MD FIRE 27:** On project completion, monitor and manage fuels projects to ensure long-term success, including persistence of seeded species and other treatment components. Control invasive vegetation post-treatment. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 28**: Design fuels treatments to protect sagebrush ecosystems, modify fire behavior, restore ecological function, and create landscape patterns that most benefit PHMAs and GHMAs and promote use by GRSG. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 29:** Train fuels treatment personnel on GRSG biology, habitat requirements, and identification of areas used locally. | No changes made. | No change proposed. |
| **MD FIRE 30:** Use burning prescriptions that minimize undesirable effects on vegetation or soils (e.g., minimize killing desirable perennial plant species and reduce risk of annual grass invasion) and incorporate FIAT assessment (Chambers et. al 2014) in PHMAs and GHMAs. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 31:** Ensure proposed sagebrush treatments are planned with interdisciplinary input from the BLM and coordinated with USFWS and state fish and wildlife agencies to meet GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 32:** Design vegetation treatments in areas of high fire frequency to facilitate firefighter safety, reduce the potential acres burned, and reduce the fire risk to GRSG habitat. | No changes made. | No change proposed. |
| **MD FIRE 33a:** For Nevada BLM-administered lands, before implementation, establish project monitoring sites where fuels management projects are planned. Monitor treatment areas both pre- and post-treatment on a multiple-year basis to ensure that project objectives are achieved. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 33b:** For California BLM-managed lands, before implementation, establish project monitoring sites where fuels management projects are planned. Monitor treatment areas both pre- and post- treatment on a multiple-year basis to ensure that project objectives are achieved. Juniper treatments will be monitored in accordance with the Sage Steppe Ecosystem Restoration FEIS (BLM 2008). | No changes made. | No change proposed. |
| ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Post Fire Management*** | ***FIRE AND FUELS MANAGEMENT (FIRE)***<br>***Post Fire Management*** | — |
| ***OBJECTIVE*** | ***OBJECTIVE*** | — |
| **Objective FIRE 6:** Retain, protect, and improve intact unburned sagebrush communities in burned areas by incorporating the FIAT assessment (Chambers et. al 2014). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions (MD):*** | ***Management Decisions (MD):*** | — |
| **MD FIRE 34:** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | No change proposed. |
| **MD FIRE 35:** Prioritize post-fire treatments in PHMAs and GHMAs to maximize benefits to GRSG and its habitat. Focus post-fire treatments on replacing or reestablishing burned sagebrush habitat with the appropriate cover and structure to support GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 36:** In post-fire rehabilitation plans in PHMAs and GHMAs, design revegetation projects to accomplish the following:<br>• Maintain and enhance unburned intact sagebrush communities when at risk from adjacent threats<br>• Stabilize soils<br>• Reestablish hydrologic function<br>• Maintain and enhance biological integrity<br>• Promote plant resiliency<br>• Limit expansion or dominance or invasive species<br>• Reestablish native species | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD FIRE 37:** Implement post-fire treatments in PHMAs and GHMAs that emphasize stabilizing, rehabilitating, and restoring sagebrush ecosystems damaged by wildfires, including controlling invasive species. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 38:** Increase post-fire treatment activities in PHMAs and GHMAs through the use of integrated funding opportunities with other resource programs and partners. | No changes made. | Potential change under Alternative 3. |
| **MD FIRE 39:** Following post-fire treatments, monitor and implement management actions in PHMAs and GHMAs that promote healthy perennial grass, shrub and forb communities, and lentic (slow-moving freshwater) and lotic (rapid freshwater) riparian habitats so as to further restoration and ensure long-term persistence of seeded or pre-burn native plants, in accordance with GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD FIRE 40:** Evaluate the potential for sagebrush island plantings based on ESDs in large burn areas that may lack sufficient sagebrush seed sources in order to ensure the reestablishment of sagebrush in GRSG habitat. | No changes made. | No change proposed. |
| **MD FIRE 41**: Monitor post-fire rehabilitation treatments on a multiple-year basis to ensure that project objectives are achieved. | No changes made. | No change proposed. |
| **MD FIRE 42:** Use GRSG habitat objectives (**Table 2-2**) and emphasize the use of native plant species in post-fire rehabilitation (e.g., reseeding), recognizing that nonnative species may be necessary, depending on the availability of native seed and prevailing site conditions. Selected species shall maintain site ecological function based on pre-burn conditions and anticipated threat of invasive and noxious weed establishment. Use ESDs and state and transition models if available. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Burton et. al 2011, Cagney et. al, 2010, Connelly et. al 2000, France et. al 2008, Hagen et. al 2007, Holechek 1988, Platts 1990, and Tanaka et. al 2014):<br>▪ In riparian areas and wet meadows the allowable percent utilization is 35% woody species, and a minimum stubble height of 4-6 inches (10-15 cm) for herbaceous riparian vegetation based on site.<br>▪ In mountain big sage habitat, the allowable percent utilization is 40 % herbaceous key species and/or 35 % shrub key species.<br>▪ In Wyoming Basin big sage habitat, the allowable percent utilization is 35% herbaceous key species and/or 35 % shrub key species.<br>▪ In black sage habitat, the allowable percent utilization is 35% herbaceous key species and/or 35 % shrub key species. | Burton et. al 2011, Cagney et. al, 2010, Connelly et. al 2000, France et. al 2008, Hagen et. al 2007, Holechek 1988, Platts 1990, and Tanaka et. al 2014):<br>▪ In riparian areas and wet meadows, the allowable percent utilization is 35% woody species, and a minimum stubble height of 4-6 inches (10-15 cm) for herbaceous riparian vegetation based on site.<br>▪ In mountain big sage habitat, the allowable percent utilization is 40 % herbaceous key species and/or 35 % shrub key species.<br>▪ In Wyoming Basin big sage habitat, the allowable percent utilization is 35% herbaceous key species and/or 35 % shrub key species.<br>▪ In black sage habitat, the allowable percent utilization is 35% herbaceous key species and/or 35 % shrub key species.<br><br>To the extent that the implementation of these strategies would be in conflict with the terms and conditions of any applicable livestock grazing permit or lease, then the BLM would complete a new decision-making process before implementing the strategies. | *(See above.)* |
| **MD LG 6:** Appropriate allowable utilization levels will be defined through the grazing permit renewal process. At least one alternative in the NEPA process will consider the utilization levels identified in MD LG 5. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 7:** In pastures where post livestock removal use monitoring results in utilization levels that exceed allowable use levels and livestock are identified as a causal factor, reduce animal unit months (AUMs) grazed the following year accordingly. AUMs cannot be applied to another pasture that is already being used by livestock or is being purposefully rested. | **MD LG 7:** In pastures where post livestock removal use monitoring results in utilization levels that exceed allowable use levels and livestock are identified as a causal factor, reduce animal unit months (AUMs) grazed the following year in accordance with 43 CFR 4160.1 and IM 2018-023. AUMs cannot be applied to another pasture that is already being used by livestock or is being purposefully rested. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 8:** Within PHMAs and GHMAs, incorporate terms and conditions into grazing permits to meet GRSG habitat objectives (**Table 2-2**), specific terms and conditions will be based on rangeland health assessments (and subsequent monitoring data). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 9:** When a transfer application is received for preference on an allotment within GRSG habitat:<br>• Transfer of Preference: A transfer of preference will be approved unless the applicant does not meet qualifications (43 CFR, Part 4110.1 and 4110.2). A transfer will be approved to an unqualified applicant if 4110.2-3(e) applies.<br>• Issuing the permit: In accordance with Section 402(c)(2) of FLPMA, a new permit will be issued to the new preference holder with the same terms and conditions as the terminated permit unless:<br>▪ A NEPA analysis of alternative terms and conditions has been completed. If changes in terms and conditions are needed to meet sage-grouse habitat needs or otherwise make progress toward meeting land health standards, issue a decision offering a permit with the new terms and conditions<br>• If a new permit is issued as required by Section 402(c)(2) of FLPMA, then determine priority for completing land health evaluations, habitat assessments and NEPA analysis as described in MD LG 1. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 10**: In any allotment where land health standards were not met and livestock grazing was found to be a significant causal factor, compliance monitoring will be conducted annually until GRSG habitat objectives (**Table 2-2**) are met. If compliance monitoring finds that the implemented management strategies identified in MD LG 5 are not achieving the desired results, a change in action will be required. | **MD LG 10:** In any allotment where land health standards were not met and livestock grazing was found to be a significant causal factor, compliance monitoring will be conducted annually until GRSG habitat objectives (**Table 2-2**) are met or making progress towards meeting habitat objectives. If compliance monitoring finds that the implemented management strategies identified in MD LG 5 are not achieving the desired results, a change in action will be required in compliance with CFR 43 CFR 4160.1 and IM 2018-023. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 11**: Allotments within SFA, followed by those within PHMAs, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | **MD LG 11:** Allotments within PHMAs, focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 12**: Grazing management strategies for riparian areas and wet meadows will, at a minimum, maintain or achieve proper functioning condition (PFC) and promote GRSG brood-rearing habitat objectives (**Table 2-2**) within PHMAs and GHMAs. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 13:** For range improvement projects, review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 14:** Build or modify livestock exclosures so that they are large enough to provide hiding cover to GRSG and other wildlife and to reduce the possibility of wildlife collisions with fences (Christiansen 2009; Stevens 2011; NRCS 2012). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 15:** In accordance with state water law and subject to valid existing rights, remove or modify water developments that are negatively impacting GRSG habitats. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 16:** Authorize new water developments for diversion from spring or seep source, in accordance with state water law and subject to valid existing rights when PHMAs and GHMAs will benefit from or not be negatively impacted by the new development. This includes developing new water sources for livestock as part of a grazing management plan to improve GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 17:** Modify water development projects to ensure riparian habitats in PHMAs and GHMAs are being maintained or improved in compliance with valid existing rights and in accordance with state water law. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 18:** Locate salting and supplemental feeding locations, temporary or mobile watering, and new handling facilities (e.g., corrals and chutes) at least 1 mile from riparian areas, springs, and meadows. The distance can be greater based on site-specific conditions. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 19:** In PHMAs and GHMAs, remove livestock ponds built in perennial channels that are negatively impacting riparian habitats, either directly or indirectly, unless riparian access is able to be controlled and negative impacts effectively mitigated (e.g.; water gap fence to pond), and do not permit new ones to be built in these areas subject to valid existing rights. Prior to pond removal, offsite watering options will be examined and considered. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 20:** In PHMA and GHMA, rest areas that have received vegetative treatments from livestock grazing until resource monitoring data verifies the treatment objectives are being met and an appropriate grazing regime has been developed. Any livestock grazing temporary suspended use or other management changes per 43 CFR, Part 4110.3-2a for the purpose of a vegetation treatment will be done through the grazing decision, prior to treatment. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LG 21:** At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized shall remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments and fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR, Part 4110.2-3. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 22:** After grazing rest associated with vegetation treatments in PHMAs and GHMAs, monitor annually for a minimum of 5 years to ensure project objectives are being maintained. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LG 23:** Fences shall not be constructed or reconstructed within 1.2 miles from the perimeter of occupied leks, unless the collision risk can be mitigated through design features or markings (e.g., mark, laydown fences, and design). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***WILD HORSES AND BURROS (WHB)*** | ***WILD HORSES AND BURROS (WHB)*** | — |
| ***Management Decisions (MD):*** | ***Management Decisions (MD):*** | — |
| **MD WHB 1:** For WHB management activities (e.g., gathers), review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 2:** Manage herd management areas (HMAs) in GRSG habitat within established AML ranges to achieve and maintain GRSG habitat objectives (**Table 2-2**). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD WHB 3:** Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g., range, wildlife, and riparian). The priorities for conducting assessments are:<br>1. HMAs containing SFA;<br>2. HMAs containing PHMAs, which include riparian areas;<br>3. HMAs containing only GHMAs;<br>4. HMAs containing sagebrush habitat outside of PHMAs and GHMAs mapped habitat;<br>5. HMAs without GRSG habitat. | **MD WHB 3:** Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g., range, wildlife, and riparian). The priorities for conducting assessments are:<br>1. HMAs containing PHMAs, which include riparian areas;<br>2. HMAs containing only GHMAs;<br>3. HMAs containing sagebrush habitat outside of PHMAs and GHMAs mapped habitat;<br>4. HMAs without GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 4:** Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on herd areas not allocated as HMAs and occupied by wild horses and burros in SFA, followed by PHMAs. | **MD WHB 4:** Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on herd areas not allocated as HMAs and occupied by wild horses and burros in PHMAs. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 5**: In SFA and PHMAs outside SFA, assess and adjust AMLs through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting rangeland health standards, even if current AML is not being exceeded. | **MD WHB 5:** In PHMAs, assess and adjust AMLs through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting rangeland health standards, even if current AML is not being exceeded. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 6:** In SFA and PHMAs outside of SFA, monitor the effects of WHB use in relation to GRSG habitat objectives (**Table 2-2**) on an annual basis to help determine future management actions. | **MD WHB 6:** In PHMAs, monitor the effects of WHB use in relation to GRSG habitat objectives (**Table 2-2**) on an annual basis to help determine future management actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 7**: Develop or amend herd management area plans (HMAPs) to incorporate GRSG habitat objectives (**Table 2-2**) and management considerations for all HMAs within GRSG habitat, with emphasis placed on SFA and PHMAs outside of SFA. | **MD WHB 7:** Develop or amend herd management area plans (HMAPs) to incorporate GRSG habitat objectives (**Table 2-2**) and management considerations for all HMAs within GRSG habitat, with emphasis placed on PHMAs. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD WHB 8**: Consider removals or exclusion of WHB during or immediately following emergency situations (such as fire, floods, and drought) to facilitate meeting GRSG habitat objectives (**Table 2-2**) where HMAs overlap with GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD WHB 9:** When conducting NEPA analysis for wild horse/burro management activities, water developments, or other rangeland improvements for wild horses, address the direct and indirect effects to GRSG populations and habitat. Implement any water developments or rangeland improvements using the criteria identified for domestic livestock. | No changes made. | Potential change under Alternative 3. |
| **MD WHB 10:** Coordinate with professionals from other federal and state agencies, researchers at universities, and others to utilize and evaluate new management tools (e.g., population growth suppression, inventory techniques, and telemetry) for implementing the WHB program. | No changes made. | Potential change under Alternative 3. |
| ***MINERALS RESOURCES (MR)*** | ***MINERALS RESOURCES (MR)*** | — |
| ***Leasable Minerals*** | ***Leasable Minerals*** | — |
| ***Objectives*** | ***Objectives*** | — |
| **Objective MR 1**: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMAs and GHMAs. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMAs and GHMAs, that are subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 C.F.R. 3162.3-1(h). | **Objective MR 1 Removed** | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **Objective MR 2**: Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an application for permit to drill (APD) for the lease to avoid and minimize impacts on GRSG or its habitat and will ensure that the best information about GRSG and its habitat informs and helps to guide development of such federal leases. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions (MD): Unleased Fluid Minerals*** | ***Management Decisions (MD): Unleased Fluid Minerals*** | — |
| **MD MR 1:** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | No change proposed. |
| **MD MR 2:** Manage SFA as NSO without waivers, exceptions, or modifications (see Appendix A; Figure 2-4). | **MD MR 2 Removed** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD MR 3:** In PHMAs outside of SFA, no waivers or modifications to an oil and gas lease no-surface-occupancy stipulation will be granted. In PHMAs, the Authorized Officer may grant an exception to an oil and gas lease no-surface-occupancy stipulation only where the proposed action:<br><br>MD MR 1: Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat.<br>i. Will not have direct, indirect, or cumulative effects on GRSG or its habitat; or,<br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and | **MD MR 3:** In PHMAs, manage oil and gas with major constraints (no-surface occupancy) and timing limitations. See **MD SSS 5 (Allocation Exceptions)** and **Appendix E** regarding waivers, exceptions, and modifications for oil and gas lease stipulations. | Potential change under Alternatives 3 and 66. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| will provide a clear conservation gain to GRSG.<br><br>Exceptions based on conservation gain (ii) may only be considered in (a) PHMAs of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) Areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid federal oil and gas lease existing as of the date of this RMP amendment. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts (see Appendix G).<br><br>Any exceptions to this lease stipulation may be approved by the Authorized Officer only with the concurrence of the State Director. The Authorized Officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publicly available at least quarterly. | *(See above.)* | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD MR 4a**: For BLM land in the state of Nevada only, in the portions of the PHMAs outside of SFA, geothermal projects may be considered for authorization if all of the following conditions are met:<br>• A team comprised of BLM, FWS, and NDOW specialists advises the BLM State Director on appropriate mitigation measures for the project and its ancillary facilities, including lek buffer distances using the best available science;<br>• Mitigation actions are consistent with this Plan's mitigation strategy such as the Nevada Conservation Credit System, and;<br>• The footprint of the project is consistent with the disturbance management protocols identified in this plan (see MD SSS 2 and Appendix E) | **MD MR 4a:** In PHMAs, manage geothermal fluid minerals with major constraints (no-surface occupancy) and timing limitations. See **MD SSS 5 (Allocation Exceptions)** and **Appendix E** regarding waivers, exceptions, and modifications for oil and gas lease stipulations. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD MR 4b:** For BLM lands in California only, manage geothermal leasing in PHMAs in accordance with MD MR 3 (see Appendix G). | **MD MR 4b Removed** | Potential change under Alternatives 3 and 66. |
| **MD MR 5:** In GHMAs, manage oil and gas and geothermal fluid minerals with moderate constraints, timing limitations, and controlled surface use stipulations (see Appendix A; Figure 2-4). | No changes made. | Potential change under Alternative 3. |
| **MD MR 6:** In PHMAs and GHMAs, allow only geophysical exploration that does not crush sagebrush or create new or additional surface disturbance. Examples of technologies that may meet this requirement are drilling methods using helicopters, articulated rubber-tired vehicles that leave no trace, and vibroseis geophysical operations on roads and bladed shoulders. | No changes made. | Potential change under Alternative 3. |
| **MD MR 7:** Prohibit surface shot methods in PHMAs. | No changes made. | Potential change under Alternative 3. |

|---|---|---|
| ***Management Decisions (MD): Land Use Authorizations*** | ***Management Decisions (MD): Land Use Authorizations*** | — |
| **MD LR 5:** PHMAs and GHMAs are designated as avoidance areas for high voltage transmission line ROWs (>100 kV) (see Appendix A; Figure 2-11a), except for the transmission projects specifically identified below. All authorizations in these areas, other than the identified projects, must comply with the conservation measures outlined in this proposed plan amendment, including all of the requirements presented in MDs SSS 1 – SSS 4. The BLM is currently processing an application for the TransWest Express transmission line and the NEPA review for this project is well underway. Conservation measures for GRSG are being analyzed through the project's NEPA review process, which should achieve a net conservation benefit for the GRSG. | **MD LR 5:** PHMAs and GHMAs are designated as avoidance areas for high voltage transmission line ROWs (>100 kV) (see **Appendix A; Figure 2-11**), unless the high voltage transmission line meets one of the allocation exception criteria outlined in **MD SSS 5.** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. In OHMAs, apply MD SSS 4. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 6**: PHMAs and GHMAs are designated as major pipeline (≥24-inch diameter) ROW avoidance areas (see Appendix A; Figure 2-11a). Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. In OHMAs, apply MD SSS 4. | **MD LR 6:** PHMAs and GHMAs are designated as major pipeline (≥24-inch diameter) ROW avoidance areas (see **Appendix A; Figure 2-11**), unless the major pipeline line meets one of the allocation exception criteria outlined in **MD SSS 5.** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. In OHMAs, apply MD SSS 4. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 7:** Issue ROWs only after documenting that they will not adversely affect or disrupt GRSG habitat (independent of disturbance cap), except where such limitation will make accessing valid existing rights impracticable in PHMAs and GHMAs. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 8:** Manage PHMAs as avoidance areas for ROWs (including permits and leases) (see Appendix A; Figure 2-11b). These do not include the wind, solar, or high-voltage transmission line and major pipeline ROW actions, above. | **MD LR 8:** Manage PHMAs as avoidance areas for ROWs (including permits and leases) (see **Appendix A; Figure 2-11)**, unless the ROW meets one of the allocation exception criteria outlined in **MD SSS 5.** These ROWs do not include the wind, solar, or high-voltage transmission line and major pipeline ROW actions, above. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 9:** Manage GHMAs as open to ROWs (including for permits and leases) (see Appendix A; Figure 2-11b). These do not include the wind, solar, or high-voltage transmission line and major pipeline ROW actions, above. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 10:** In PHMAs, bury new distribution power and communication lines in existing disturbed areas, unless it would not be technically feasible, or the cost would prohibit the proponent from providing the service. Where burying transmission lines is not feasible, locate new transmission lines next to existing linear disturbances, when possible; additional mitigation will be required. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 11:** When renewing or amending ROWs (including permits and leases), assess the impacts of ongoing use of the ROW on GRSGs and their habitat and minimize such impacts to the extent allowed by law. | No changes made. | No change proposed. |
| **MD LR 12:** When renewing or amending ROWs that are undeveloped, work with ROW holders to bury or relocate authorized but undeveloped lines to minimize impacts on PHMAs, unless this would not be technically feasible or would be contrary to policy. Where burying transmission lines is not feasible, locate new transmission lines next to existing linear disturbances, when possible. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 13:** In PHMAs and GHMAs where existing ROWs, permits, or leases are no longer in use, coordinate with the authorized holder to relinquish the authorization and reclaim the site by removing the infrastructure. | No changes made. | Potential change under Alternative 3. |
| **MD LR 14:** Stipulate site relinquishment and reclamation in all new, amended or renewed ROWs, permits, and leases. | No changes made. | Potential change under Alternatives 3 and 6. |
| **MD LR 15**: In PHMAs and GHMAs, site new linear features in designated corridors, as identified in Appendix A, Figure 2-10, or at a minimum, collocate with existing linear features. Construct new ROWs in designated corridors as close as technically feasible to existing linear ROW infrastructure to limit disturbance to the smallest footprint. | No changes made. | Potential change under Alternatives 3 and 6. |
| **MD LR 16:** Manage landfills and transfer stations on public lands to eliminate opportunities to attract and provide nesting, cover, or perches for predators. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD LR 17:** Within 4 miles of active and pending leks in GRSG habitat, require ROW, permit, and lease holders to retrofit those portions of power lines and other utility structures with nesting and perch-deterring devices. Do this during the renewal and amendment process if adverse effects, such as increased nest predation, on GRSG populations have been documented. This requirement shall be predicated on research and monitoring studies specific to power lines or other utility structures. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6a. |
| **MD LR 18:** In PHMAs and subject to valid existing rights, authorize new road ROWs only when necessary for public safety or administrative access, or if it will create no new surface disturbance. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 19:** In PHMAs and GHMAs, address access to valid existing rights to provide the minimum access necessary to exercise the right and maintain or enhance PHMAs and GHMAs. | No changes made. | Potential change under Alternative 3. |
| **MD LR 20:** Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table 2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA. | No changes made. | No change proposed. |
| ***Management Decisions (MD): Land Tenure*** | ***Management Decisions (MD): Land Tenure*** | — |
| **MD LR 21**: Lands classified as PHMAs and GHMAs for GRSG will be retained in federal management, unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG (see Appendix A; Figure 2-12). | **MD LR 21:** Exceptions to non-disposal or exchange of lands that are identified for retention in Appendix A, Figure 2-12 could be considered if (a) they are identified for disposal through previous planning efforts or address a Congressional Act (e.g., the respective Lincoln and White Pine County Conservation, Recreation, and Development Acts), (b) the agency can demonstrate that the disposal, including land exchanges, will have no adverse direct, indirect or cumulative impacts on GRSG and its habitat, or (c) adverse impacts on GRSG or its habitat will be offset, through use of voluntary compensatory mitigation, consistent with the States' mitigation policies and programs, such as the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law). Also see allocation exception criteria in MD SSS 5. | Potential change under Alternative 3. |
| **MD LR 22:** Where significant conservation actions can be achieved in PHMAs and GHMAs, seek to acquire lands with intact subsurface mineral estate by donation, purchase, or exchange in order to best conserve, enhance, or restore GRSG habitat. | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD LR 23:** Manage lands acquired by exchange, purchase or easement as either PHMAs or GHMAs, in consideration of surrounding habitat. | No changes made. | Potential change under Alternative 3. |

| **MD REC 1:** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when analyzing projects and activities proposed in GRSG habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD REC 2:** Allow special recreation permits in PHMAs and GHMAs only if their effects on GRSG and its habitat are neutral or result in a net conservation gain. | **MD REC 2:** Allow special recreation permits in PHMAs and GHMAs only if their effects on GRSG and its habitat are neutral or beneficial. | Potential change under Alternative 3. |
| **MD REC 3:** In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, staging areas) unless the development will have a net conservation gain to GRSG and its habitat (such as concentrating recreation, diverting use away from critical areas, etc.), or unless the development is required for visitor health and safety or resource protection. | **MD REC 3:** In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, staging areas) unless the facility meets one of the criteria outlined in **MD SSS 5.** | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD REC 4:** Develop trail mapping and educational campaigns in PHMAs and GHMAs to reduce recreational impacts on GRSG and their habitat, including the effects of cross-country travel. | No changes made. | Potential change under Alternative 3. |
| ***Travel and Transportation Management (TTM)*** | ***Travel and Transportation Management (TTM)*** | — |
| ***Objective*** | ***Objective*** | — |
| **Objective TTM 1:** Prioritize and complete transportation planning in PHMAs and GHMAs that provides for reasonable access to public lands for administration and recreation and that minimizes proliferation of user-created routes (e.g., roads, primitive roads, and trails). | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| ***Management Decisions (MD):*** | ***Management Decisions (MD):*** | — |
| **MD TTM 1:** Review Objective SSS 4 and apply MDs SSS 1 through SSS 4 when reviewing and analyzing projects and activities proposed in GRSG habitat. | No changes made. | No change proposed. |
| **MD TTM 2:** In areas where travel planning has not been completed, limit off-highway vehicle (OHV) travel to existing routes in PHMAs and GHMAs (subject to valid existing rights, such as for a mine under a plan of operations) until subsequent implementation-level travel planning is completed and a designated route system is established. In travel management plans that have been completed and are being implemented (e.g., northeastern California plans), continue to limit OHV travel to designated routes in PHMAs and GHMAs (see Appendix A; Figure 2-13). | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD TTM 3:** Allow the goals, objectives, and actions in relevant national OHV guidance to guide subsequent implementation-level travel planning efforts. In addition, the following guidelines will be considered when undertaking future implementation-level travel planning:<br>• Identify, prioritize, and update annually a timeline to complete travel planning in all relevant planning areas to accelerate data collection, route evaluation and selection, and on-the- ground implementation, including signing, monitoring, and rehabilitation.<br>• Consult with interested user groups, federal, state, county, and local agencies, local landowners, and other parties to provide an opportunity for the public to express itself and have its views considered. Consequently, incorporate a public outreach plan to fully engage all interested stakeholders into future travel management plans.<br>• Among other route evaluation criteria, incorporate criteria from 43 CFR, Part 8342.1, and specifically section (b), "areas and trails shall be located to minimize harassment of wildlife or significant disruption of wildlife habitats. Special attention will be given to protect endangered or threatened species and their habitats."<br>• Evaluate all routes to determine the purpose and need and the potential resource or user conflicts from motorized travel. Where resource or user conflicts outweigh the purpose and need for the route, consider closing the route or relocating it outside of PHMAs and GHMAs. Evaluate for administrative access only routes not required for public access or recreation against current administrative/agency purpose or need. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| Consider closing routes that are duplicative, parallel, or redundant.<br>• Consider seasonal restrictions (see Actions SSS 2 and SSS 3) on motorized travel use PHMAs and GHMAs where motorized vehicle use is a threat. Consider limiting over snow vehicles (OSVs) designed for use on a track or tracks or a ski or skis, while in use to designated routes or consider seasonal closures in GRSG wintering areas from November 1 through February 28.<br>• Consider the need for restricting motorized vehicles, including their sound levels (Actions SSS 2 and SSS 3), speed and design (e.g., motorcycles, ATVs, and UTVs).<br>• Consider scheduling road maintenance to avoid disturbance during sensitive GRSG life-cycle periods to the extent practicable. Consider using time of day, seasonal, and noise restrictions (see Actions SSS 2 and SSS 3) to reduce impacts on GRSG seasonal habitat.<br>• In PHMAs and GHMAs, close to motorized travel those roads, primitive roads, and trails not designated in travel management plans.<br>• In PHMAs and GHMAs, prioritize restoring routes not designated in a travel management plan. Obliterate and seed roads, primitive roads, and trails not designated in travel management plans, with appropriate seed mixes and transplanted sagebrush when applicable. Use fire-resistant species as fuel breaks where appropriate. Seed must be certified weed free. | *(See above.)* | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD TTM 4:** In PHMAs and GHMAs, where new roads are necessary for public safety, administration, or public need, consider limiting route construction to realignments of existing routes where possible. | No changes made. | Potential change under Alternative 3. |
| **MD TTM 5:** In PHMAs and GHMAs, work with local governments to minimize upgrading existing routes that will change route category (e.g., road, primitive road, or trail) or capacity, unless the upgrade will maintain or enhance GRSG habitat, provide a fuel break to protect native vegetation, will be necessary for public safety, or will eliminate the need to construct a new road. | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| **MD TTM 6**: In PHMAs and GHMAs, temporary closures will be considered in accordance with 43 CFR, Subpart 8364 (Closures and Restrictions), 43 CFR, Subpart 8351 (Designated National Area), 43 CFR, Subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties), and 43 CFR, Subpart 8341 (Conditions of Use).<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. where an authorized officer determines that off-highway vehicles are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence (43 CFR, Part 8341.2). A closure or restriction order shall be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders shall be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No changes made. | Potential change under Alternative 3. |

| **Mitigation (MI)** | **Mitigation (MI)** | — |
| ***Management Decisions (MD):*** | ***Management Decisions (MD):*** | — |
| **MD MIT 1:** In Nevada, coordinate with the SETT on the application of a compensatory mitigation program, such as the Nevada Conservation Credit System (CCS) (**Appendix N**) for mitigating activities that result in habitat loss and degradation of GRSG habitat in Nevada, where the application of compensatory mitigation will occur on, or the credit will be applied to disturbance on BLM-administered lands. | **MD MIT 1:** When authorizing third-party actions in GRSG HMAs, the BLM will seek to achieve the planning-level GRSG management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Management will be consistent with the GRSG goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [GRSG] or to improve the condition of [GRSG] habitat" across the planning area.<br><br>The BLM has determined that FLPMA does not explicitly mandate or authorize the BLM to require public land users to implement compensatory mitigation as a condition of obtaining authorization for the use of BLM-administered lands (IM 2019-018, Compensatory Mitigation, December 6, 2018). Consistent with that determination, compensatory mitigation must be voluntary unless required by other applicable laws, but the BLM recognizes that state authorities may also require compensatory mitigation.<br><br>To align this planning effort with the BLM's compensatory mitigation policy, IM 2019-018, the amended plans clarify that the BLM will consider compensatory mitigation | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| *(See above.)* | only when offered voluntarily by a project proponent, when required by a law other than FLPMA; or as a component of compliance with a state mitigation plan, program, or authority, such as required by State of Nevada Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law). In accordance with the State's goals for managing Greater Sage-Grouse, the plans modify the net conservation gain standard for compensatory mitigation to clarify that the BLM would pursue net benefit/net conservation gain as a broader planning goal and objective. This means that the BLM would continue to require avoidance, minimization, and other onsite mitigation to adequately conserve Greater Sage-Grouse and its habitat, while remaining committed to implementing beneficial habitat management actions to reduce the threats of fire and invasive species. In fiscal year 2018, the BLM funded approximately $29 million in sage-grouse management actions resulting in approximately 500,000 acres of treated sage-grouse habitat and expects to invest another $22.5 million of habitat management projects in fiscal year 2019 in the Great Basin Region. The BLM would continue to apply the mitigation hierarchy as described in the CEQ regulations at 40 CFR 1508.20; however, the BLM would focus on avoiding, minimizing, rectifying, and reducing impacts over time. Compensation, which involves replacing or providing substitute resources for the impacts (including through payments to fund such work), would be considered only when voluntarily offered by a proponent, required by a law other than FLPMA, or to meet a State requirement. The BLM commits to cooperating with the State to | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | 2019 BLM GRSG Approved RMP Amendment | Potential for Change in 2023 Plan |
|---|---|---|
| *(See above.)* | analyze applicant-proposed or state-imposed compensatory mitigation to offset residual impacts. The BLM remains committed to achieving the planning-level management goals and objectives identified in this ROD and the 2015 ARMPA by ensuring Greater Sage-Grouse habitat impacts are addressed through implementing mitigating actions consistent with the governing RMP.<br><br>In all GRSG habitat, before authorizing third-party actions that result in habitat loss and degradation within the State of Nevada, the BLM will complete the following steps, in alignment with the State of Nevada's Greater Sage-Grouse Conservation Plan (2014, as amended), including avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions:<br><br>1. Notify the State of Nevada's Sagebrush Ecosystem Technical Team to determine if the State requires or recommends any mitigation – including avoidance, minimization, or compensatory mitigation – under the States' regulations, policies, or programs, such as required by the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law), related to the conservation of GRSG.<br>2. Incorporate the States' required or recommended mitigation into the BLM's NEPA decision-making process, if the State of Nevada's Sagebrush Ecosystem Technical Team determines that there are unacceptable residual impacts on GRSG or its habitat and compensatory mitigation is required as a part of the State's policy or authorization, such as required by the State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the | *(See above.)* |

| *(See above.)* | State of Nevada's Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law).<br><br>The BLM will ensure project design is aligned with the States' requirements—including compensatory mitigation—that may be necessary to comply with State's policies and programs for the conservation of GRSG. Where compensatory mitigation is required as part of a States' plan, program, or authority, such as Nevada State Executive Order 2018-32 (and any future regulations adopted by the State of Nevada regarding compensatory mitigation, consistent with federal law), the BLM will include the required mitigation in all of its action alternatives in a NEPA analysis. | *(See above.)* |
| **MD MIT 2:** Identify compensatory mitigation areas in PHMAs and GHMAs with the potential to achieve GRSG habitat objectives (**Table 2-2**), in accordance with FIAT, the SFA prioritization, and the State of Nevada Strategic Action Plan. | **MD MIT 2:** On BLM-administered lands within Nevada and California, when authorizing third-party actions that will result in direct, indirect, or cumulative impacts on GRSG or their habitat, the BLM will defer to the State of Nevada's most current version of the Habitat Quantification Tool (HQT) to quantify those impacts to ensure consistency in tracking and reporting changes to GRSG habitat quality and quantity. | Potential change under Alternatives 3, 4, 5, and 6. |

### 2.12.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The 2015 and 2019 Appendices can be found on the Nevada and Northeastern California GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Approved RMP Amendment Maps | 2015 | Yes |
| A: Maps | 2019 | Yes |
| B: Applying Lek Buffer-Distances When Approving Actions | 2015 | No |
| B: Lek Buffer-Distances (Evaluating Impacts on Leks) | 2019 | No |
| C: Required Design Features | 2015 | Yes (grazing BMPs) |
| C: Required Design Features Worksheet | 2019 | Yes (grazing BMPs) |
| D: Greater Sage-Grouse Monitoring Framework | 2015 | No |
| J: Monitoring Framework | 2019 | No |
| E: Greater Sage-Grouse Disturbance Cap Guidance | 2015 | Yes |
| F: Disturbance Cap Guidance | 2019 | Yes |
| G: Fluid Mineral Stipulations, Waivers, Modifications, and Exceptions | 2015 | Yes |
| E: Fluid Mineral Stipulations, Waivers, Modifications, and Exceptions | 2019 | Yes |
| H: Fire and Invasives Assessment Tool | 2015, 2019 | No |
| I: Avoid, Minimize and Apply Compensatory Mitigation | 2015 | Yes |
| F: Regional Mitigation Strategy | 2015 | Yes |
| J: Adaptive Management Plan | 2015 | Yes |
| D: Adaptive Management Plan | 2019 | Yes |
| K USFWS Biological Opinion | 2015 | No |
| L: VDDT Methodology | 2015 | No |
| I: VDDT Methodology | 2019 | No |
| M: Greater Sage-Grouse Noise Protocol | 2015 | No |
| G: Noise Protocol | 2019 | No |
| N: State of Nevada Conservation Credit System | 2015 | No |

## 2.13 OREGON RMPS

This appendix presents the GRSG approved RMP amendment language from the 2015 and 2019 records of decision for Oregon. Changes between 2015 and 2019 are noted. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 and 2019 appendices that are listed in **Section 2.13.2** of this appendix.

### 2.13.1 Existing GRSG RMP Management – Oregon RMPs

**Table 1: Changes in Management from the 2015 Approved ARMPA to the 2019 Approved ARMPA**

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| — | Plan outcome (goal, objective, management direction (MD))<br><br>Published plan included only text provided in this column and did not reprint all text from Column A (as maintained in Column B) - Text in this column replaced text in Column A for the Goals, Objectives, and Management Directions. Other maintenance actions noted after goals, objectives, and management directions. | — |
| **Special Status Species (SSS)** | **Special Status Species (SSS)** | — |
| **Goal** | **Goal** | — |
| Goal SSS 1: Conserve, enhance, and restore the sagebrush ecosystem upon which GRSG populations depend in an effort to maintain and/or increase their abundance and distribution, in cooperation with other conservation partners. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective** | **Objective** | — |
| Objective SSS 1: Protect PHMA necessary to conserve 90 percent of Oregon's Greater Sage-grouse population with emphasis on highest density and important use areas that provide for breeding, wintering, and connectivity corridors. Protect GHMA necessary to conserve occupied seasonal or year-round habitat outside of PHMA. | No changes made. | No change proposed. |
| Objective SSS 2: Maintain or improve habitat connectivity between PHMA within Oregon and adjoining states to promote Greater Sage-grouse movement and genetic diversity. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Objective SSS 3: In addition to the net conservation gain mitigation requirement, manage Oregon PACs so that discrete anthropogenic disturbances, whether temporary or permanent, cover less than 3 percent of the total available Greater Sage-grouse habitat, regardless of ownership. | No changes made. | No change proposed. |
| Per Oregon Maintenance Action 2:<br><br>Objective SSS 4: The habitat objectives for GRSG (Table 2-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards.<br><br>The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential, and local information.<br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* | *(See above.)* |
| Objective SSS 5: Manage anthropogenic uses and GRSG predator subsidies on public lands (landfills, transfer stations, predator perches and nest sites) to reduce the effects of predation on GRSG. | No changes made. | No change proposed. |
| Objective SSS 6: The BLM will coordinate with the State of Oregon regarding proposed management changes, the implementation of conservation measures, mitigation, and site-specific monitoring related to adaptive management and anthropogenic disturbance. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Direction** | **Management Direction** | — |
| MD SSS 1: Designate PHMA on 4,578,518 acres and designate GHMA on 5,628,628 acres. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 2: Designate Sagebrush Focal Areas (SFA) (1,929,580 acres) as shown on Figure 1-2: Oregon Decision Area, Greater Sage-Grouse Habitat Management Areas for BLM-Administered Lands (with SFA). SFAs will be managed as PHMA, with the following additional management:A. Recommended for withdrawal from the General Mining Law of 1872, as amended, subject to valid existing rights. B. Managed as NSO, without waiver, exception, or modification, for fluid mineral leasing.C. Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 3: If the 3% anthropogenic disturbance cap, not to exceed 1% increase per decade, is exceeded on lands (regardless of landownership) within GRSG Priority Habitat Management Areas in the affected Oregon PAC, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the General Mining Law of 1872, as amended, valid existing rights, etc.) will be permitted by BLM within GRSG Priority Habitat Management Areas in the affected Oregon PAC until the disturbance has been reduced to less than the cap. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD SSS 4: If the 3% disturbance cap, not to exceed 1% increase per decade, is exceeded on all lands (regardless of landownership) within a proposed project analysis area in Priority Habitat Management Areas, then no further anthropogenic disturbance will be permitted by BLM until disturbance in the proposed project analysis area has been reduced to maintain the area under the cap (subject to applicable laws and regulations, such as General Mining Law of 1872, as amended, valid existing rights, etc.). Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 5: Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in the Priority Habitat Management Area within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area, as described in Appendix E. | No changes made. | No change proposed. |
| MD SSS-6: Using the habitat disturbance cap calculation methodology (Appendix E), in cooperation with ODFW, measure the direct area of influence of infrastructure, facilities, energy, and mining within Oregon PACs (Figure 2-2 in Appendix A) and maintain a current database of anthropogenic disturbance. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD SSS 7: Verify the accuracy of Greater Sage-grouse habitat data layers at the site/project scale. Consider ecological site potential when assessing habitat suitability for Greater Sage-grouse. Periodically update PHMA and GHMA in cooperation with ODFW using the best available information. | No changes made. | No change proposed. |
| MDSSS 8: When fine and site-scale Greater Sage-grouse habitat assessment and monitoring is needed or required, (e.g., as a component of a rangeland health assessment), measure the Greater Sage-grouse habitat suitability indicators for seasonal habitats identified in Table 2-2. Site suitability values may be adjusted regionally where there is scientific justification for doing so. When using the indicators to guide management actions or during land health assessments, consider that the indicators are sensitive to the ecological processes operating at the scale of interest and that a single habitat indicator does not necessarily define habitat suitability for an area or particular scale. | No changes made. | No change proposed. |
| MD SSS 9: Apply buffers and seasonal restrictions in Table 2-4 to all occupied or pending leks in PHMA and GHMA to avoid direct disturbance to Greater Sage-grouse. In undertaking BLM management actions, and consistent with valid and existing rights and applicable law in authorizing third-party actions, the BLM will apply the lek buffer-distances identified in the USGS Report Conservation Buffer Distance Estimates for Greater Sage-Grouse—A Review (Open File Report 2014-1239) (Manier et al. 2014; Appendix B). | No changes made. | No change proposed. |
| See Table 2-3 Greater Sage-Grouse Buffers (text included in table 2-3 after this comparison table) | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD SSS 10: In undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 11: Anthropogenic disturbances or activities disruptive to GRSG (including scheduled maintenance activities) shall not occur in seasonal GRSG habitats unless the project plan and NEPA document demonstrate the project will not impair the life-cycle or behavioral needs of GRSG populations. Seasonal avoidance periods vary by GRSG seasonal habitat as follows:<br>• In breeding habitat within four (4) miles of occupied and pending leks from March 1 through June 30. Lek hourly restrictions are from two hours before sunset to two hours after sunrise at the perimeter of an occupied or pending lek.<br>• Brood-rearing habitat from July 1 to October 31<br>• Winter habitat from November 1-February 28<br>The seasonal dates may be modified due to documented local variations (e.g., higher/lower elevations) or annual climactic fluctuations (e.g., early/late spring, long and/or heavy winter) in coordination with ODFW, in order to better protect GRSG. | No changes made. | No change proposed. |
| MD SSS 12: Identify Greater Sage-grouse habitat outside of PHMA that can function as connecting habitat. Consider the habitat connectivity map developed by The Nature Conservancy and BLM for Oregon (Jones and Schindel, 2015). When conducting analysis for project level NEPA, include Greater Sage-grouse habitat and populations in adjoining states within 4 miles of leks in Oregon. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD SSS 13: All authorized actions in Greater Sage-grouse habitat are subject to RDFs and BMPs in Appendix C and these disturbance screening criteria:<br><br>Where avoidance is not possible, disturbance will be allowed under the following conditions:<br>• Development in each Oregon PAC and PHMA does not exceed the disturbance cap at either the Oregon PAC scale or the project scale (Appendix E).<br>• New anthropogenic disturbance does not occur within 1.0 mile of an occupied or pending lek in PHMA or GHMA.<br>• Development meets noise restrictions in PHMA and GHMA.<br>• Analyze through implementation level NEPA seasonal protection and timing limitations of occupied and pending leks in PHMA and GHMA.<br>• All disturbance is subject to net conservation gain mitigation to Greater Sage-grouse and its habitat (see Appendix F, Mitigation) in PHMA and GHMA.<br>• All new permitted activities will follow Required Design Features (Appendix C) in PHMA and GHMA. | No changes made. | No change proposed. |
| • To the extent feasible, development should only occur in non-habitat areas. If this is not possible, then development must occur in the least suitable habitat for Greater Sage-grouse.<br>• Apply buffers and seasonal restrictions in Table 2-4 to all occupied or pending leks in PHMA and GHMA to avoid direct disturbance to Greater Sage-grouse.<br><br>Screening criteria and conditions will not be applicable to vegetation treatments being conducted to enhance GRSG habitat, except noise and seasonal restrictions will apply. | No changes made. | No change proposed. |
| MD SSS 14: Assist ODFW and other partners with surveillance and, where appropriate, control of West Nile virus. Report observations of dead or sick Greater Sage-grouse or other bird deaths that could be attributed to disease or parasites. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD 15: Implement adaptive management responses to hard and soft triggers established in the Adaptive Management Strategy (Appendix J). Hard trigger responses will be removed, either through a plan amendment or when the criteria for recovery have been met (see Appendix J - Longevity of Responses). Removal of the hard trigger responses returns management direction in the affected Oregon PAC to the plan decisions that are in force within those Oregon PACs that have not tripped a hard trigger. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Vegetation (VEG)** | **Vegetation (VEG)** | — |
| **Goal** | **Goal** | — |
| Goal VEG 1: Increase the resistance of Greater Sage-grouse habitat to invasive annual grasses and the resiliency of Greater Sage-grouse habitat to disturbances such as fire and climate change to reduce habitat loss and fragmentation. | No changes made. | No change proposed. |
| Goal VEG 2: Within Greater Sage-grouse habitat, re-establish sagebrush cover, native grasses, and forbs in areas where they have been reduced below desired levels or lost. Use ecological site descriptions to determine appropriate levels of sagebrush cover and appropriate native grasses and forbs. | No changes made. | No change proposed. |
| Goal VEG 3: Use integrated vegetation management to control, suppress, and eradicate invasive plant species per BLM Handbook H-1740-2. Apply ecologically based invasive plant management principles in developing responses to invasive plant species. | No changes made. | No change proposed. |
| **Objective** | **Objective** | — |
| Objective VEG 1: Within the boundaries of each Field Office establish a mix of sagebrush classes as identified in Table 2-4, Desired Mix of Sagebrush Classes by Sagebrush Type on BLM-administered lands in Greater Sage-grouse habitat. Evaluate progress toward the objective every 10 years. | No changes made. | No change proposed. |
| Table 2-4 Desired Mix of Sagebrush Classes by Sage Brush Type (text included in table 2-4 after this comparison table) | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Objective VEG 2: Reduce encroaching conifer cover to zero within 1.0 mile of all occupied or pending leks and to less than 5 percent within 4.0 miles of such leks at a rate at least equal to the rate of encroachment. Priorities for treatment are phase I and phase II juniper, and phase III juniper with a grass-forb understory. Retain all old trees, culturally significant trees, and trees in active use by special status species (e.g. nest, den, and roost trees) and all old growth stands of juniper within 4.0 miles of occupied or pending leks. See OSU Technical Bulletin 152, or its successor, for the key characteristics of old trees. Old growth stands are those where the dominant trees in the stand meet the key characteristics for old trees. Pending occupied leks and pending unoccupied leks are hereafter collectively referred to as "pending leks" (see Glossary). | No changes made. | No change proposed. |
| Objective VEG 3: Reduce the area dominated by invasive annual grasses to no more than 5 percent within 4.0 miles of all occupied or pending leks. Manage vegetation to retain resistance to invasion where invasive annual grasses dominate less than 5 percent of the area within 4.0 miles of such leks. | No changes made. | No change proposed. |
| Objective VEG 4: Thin sagebrush stands that exceed 30 percent cover in cool-moist sagebrush and 25 percent cover warm-dry sagebrush to no less than 15 percent cover within 4.0 miles of all occupied or pending leks. | No changes made. | No change proposed. |
| Objective VEG 5: Increase native plant diversity (number of species) to at least 50 percent of the potential diversity listed for the relevant ecological site description and sagebrush cover where it is less than 15 percent in half of crested wheatgrass seedings in PHMA. If existing diversity equals or exceeds 50 percent of the potential diversity, no forb restoration is needed. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Objective VEG 6: Conduct vegetation treatments based on the following 10-year (decadal) acreage objectives within four miles of occupied and pending leks, using results of the fire and invasives assessment tool (FIAT; Fire and Invasive Assessment Team 2014) to establish the priority PACs and treatments within PACs: | No changes made. | No change proposed. |
| Objective VEG 7: Each Oregon PAC has at least 5 percent sagebrush cover on a minimum of 70 percent of the area within the Oregon PAC that is capable of supporting sagebrush plant communities. Use ecological site descriptions to determine which sites are capable of supporting sagebrush plant communities. | No changes made. | No change proposed. |
| Objective VEG 8: Coordinate vegetation management activities with adjoining landowners. | No changes made. | No change proposed. |
| Objective VEG 9: In all Sagebrush Focal Areas and Priority Habitat Management Areas, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6) and in Table 2-5. | No changes made. | No change proposed. |
| Table 2-5 Decadal Treatment Objectives for GRSG Habitat (text included in table 2-5 after this comparison table) | No changes made. | No change proposed. |
| **Management Direction** | **Management Direction** | — |
| Habitat Restoration: | — | — |
| MD VEG 1: Priority areas for Greater Sage-grouse habitat restoration and maintenance projects are*:<br>• Sites with a higher probability of success.<br>• Seasonal habitats thought to be limiting to Greater Sage-grouse populations.<br>• Connectivity corridors between Greater Sage-grouse populations and subpopulations.<br>• Following stand-replacing events at least 100 acres in size.<br>*Not in priority order. Incorporate these priorities in the assessments conducted using the FIAT process detailed in Appendix H. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD VEG 2: Base species composition, function, and structure of sagebrush communities on ecological site descriptions. Use climate change science concerning projected changes in species ranges and changes in site capability to adjust expected and desired native species compositions as that information becomes available. | No changes made. | No change proposed. |
| MD VEG 3: Do not treat sagebrush during nesting and early brood-rearing within 4.0 miles of occupied or pending leks. Conduct pre-treatment lek surveys to determine if the lek is active. Breeding and brood-rearing typically occur from March 1 to June 30; use local information to further refine this period. | No changes made. | No change proposed. |
| MD VEG 4: Cutting of juniper can occur within 4.0 miles of an occupied or pending lek during the breeding season from two hours after sunrise and two hours before sunset. | No changes made. | No change proposed. |
| MD VEG 5: Vegetation management activities that are timing-sensitive for maximum effectiveness, such as herbicide application or seeding operations, can occur during the breeding season within 4.0 miles of occupied or pending leks. Limit operations to no more than 5 days and to the period beginning two hours after sunrise and ending two hours before sunset during the breeding and early brood rearing period. Conduct pre-treatment surveys for nests and do not damage or destroy identified nests during treatment operations. Conduct operations so as to minimize the risk of accidentally killing chicks. Breeding and early-brood-rearing typically occur from March 1 through June 30; use local information to further refine this period. | No changes made. | No change proposed. |
| MD VEG 6: Use adaptive management principles (for example, monitoring and adjusting seed mixes, planting methods or timing of planting to increase success rates) to provide for persistence of seeded or planted species important to Greater Sage-grouse. | No changes made. | No change proposed. |
| MD VEG 7: Do not use non-specific insecticides in brood-rearing habitat during the brood-rearing period. Use instar-specific insecticides to limit impacts on Greater Sage-grouse chick food sources. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD VEG 8: Use native plant materials for restoration and rehabilitation based on availability, adaptive capacity, and probability of successful establishment (see Appendix I). Where native plant material availability or probability of successful establishment is low, use desirable non-native plant materials that are of a similar functional/structural group as native plant species (e.g. deep-rooted, tall perennial bunchgrass, tap-rooted perennial forb). | No changes made. | No change proposed. |
| MD VEG 9: When sufficient native plant materials are available, use native plant materials unless the area is immediately threatened by invasive plant species spread or dominance.<br>Use non-native plant materials as necessary to:<br>1. Limit or control invasive plant species spread or dominance.<br>2. Create fuel breaks along roads and ROWs.<br>3. Create defensible space within 0.5 mile of human residences. | No changes made. | No change proposed. |
| MD VEG 10: When seedings include non-native plant materials, evaluate post-planting within 10 years to determine the need to increase native species populations or compositions to be more representative of the ecological site description and capability. When existing native herbaceous diversity is less than 50 percent of the potential diversity for the applicable ecological site description, conduct treatments to increase the diversity. | No changes made. | No change proposed. |
| MD VEG 11: Do not conduct forage enhancement solely for domestic livestock in PHMA. | No changes made. | No change proposed. |
| MD VEG 12: Adjust discretionary land uses, such as active use for livestock grazing or recreational uses or seasons, as needed to facilitate attainment and persistence of vegetation restoration objectives. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD VEG 13: Use provisional and established seed zones identified by the Great Basin Native Plant Project (http://www.fs.fed.us/rm/grassland-shrubland-desert/research/projects/gbnpsip/) to determine appropriate seed sources for grasses, forbs, and shrubs. Identify sagebrush seed collection areas to provide locally adapted sagebrush seed sources. | No changes made. | No change proposed. |
| MD VEG 14: Allowable methods for vegetation treatment include mechanical, biological (including targeted grazing), chemical, or wildland fire or combinations of these general treatment categories. | No changes made. | No change proposed. |
| MD VEG 15: Create mosaics of varying sagebrush density using spot treatments within the treatment area. Sagebrush density shall be equivalent to Classes 1 through 4 in cool-moist sagebrush and Classes 1 through 3 in warm-dry sagebrush (see Table 2-4). Maximum stand-replacement patch size shall not exceed 25 acres and total stand-replacement patches shall not exceed 15 percent of the treatment block. See Required Design Features for additional details. | No changes made. | No change proposed. |
| MD VEG 16: Test new potential restoration methods in areas with a sagebrush overstory and an annual grass understory. | No changes made. | No change proposed. |
| MD VEG 17: Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use site-specific analysis and tools such as VDDT and the FIAT process (Appendix H), or their successors, to refine the specific locations to be treated. | No changes made. | No change proposed. |
| MD VEG 18: Apply additional restoration treatments, such as seeding or planting, in conjunction with juniper removal in areas with more than trace amounts of invasive annual grasses or where the pre-treatment understory has less than 2 healthy bunchgrass plants per 10 square feet in cool-moist sagebrush or less than 4 healthy bunchgrass plants per 10 square feet in warm-dry sagebrush. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD VEG 19: Conduct jackpot burning of cut juniper when soils are frozen or snow-covered and moisture content of felled trees is low enough to promote complete or near complete consumption of branches. Leaving the bole portion is acceptable. | No changes made. | No change proposed. |
| Integrated Invasive Species: | — | — |
| MD VEG 20: In priority treatment areas for invasive annual grasses, apply early detection-rapid response principles on*:<br>• New infestations.<br>• Satellite populations.<br>• Isolated populations.<br>• Where invasive annual grasses are still sub-dominant.<br>• Edges of large infestations<br>• Where sites are frequently or commonly used for temporary infrastructure such as incident base camps, spike camps, staging areas, and helicopter landing areas.<br>*Not in priority order. Incorporate these priorities in the assessments conducted using the process detailed in Appendix H (FIAT process). | No changes made. | No change proposed. |
| MD VEG 21: Allowable methods of invasive plant control include mechanical, chemical, biological (including targeted grazing, biocides, and bio-controls), or prescribed fire or combinations of these methods. Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | No change proposed. |
| MD VEG 22: Use of approved herbicides, biocides, and bio-controls is allowed on all land allocations currently providing or reasonably expected to provide Greater Sage-grouse habitat. Follow the guidance in the 2010 Record of Decision for Vegetation Treatments Using Herbicides on BLM Lands in Oregon and subsequent step-down decision records, when complete, or successor/subsequent decisions governing the use of additional herbicides and biocides. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD VEG 23: On Type I through Type III wildfires provide and require the use of weed washing stations and acceptable disposal of subsequent waste water and material to minimize the risk of further spread. Wash all vehicles and equipment arriving from outside the local area before initial use in the fire area and during post-fire emergency stabilization and rehabilitation operations. Wash all vehicles and equipment prior to release from the incident to reduce the probability of transporting invasive plant materials to other locations. | No changes made. | No change proposed. |
| MD VEG 24: Wash vehicles and equipment used in field operations prior to use in areas without known infestations of invasive plants. Wash vehicles and equipment used in areas with known infestations prior to use in another area to limit the further spread of invasive species to other locations. | No changes made. | No change proposed. |
| MD VEG 25: Locate base camps, spike camps, coyote camps, or other temporary infrastructure in areas that lack invasive plant populations. Where no such options are available provide for post-operation invasive plant treatments. | No changes made. | No change proposed. |
| **Fire and Fuels Management (FIRE)** | **Fire and Fuels Management (FIRE)** | — |
| **Objective** | **Objective** | — |
| Objective FIRE 1: Manage wildland fire and hazardous fuels to protect, enhance, and restore Greater Sage-grouse habitat. | No changes made. | No change proposed. |
| Objective FIRE 2: Use a combination of vegetation management and wildfire response to minimize the probability of a wildfire tripping an adaptive management trigger for habitat within an Oregon PAC. (See Appendix J for adaptive management triggers). | No changes made. | No change proposed. |
| Objective FIRE 3: Within 4.0 miles of occupied or pending leks, maintain or develop a mosaic of structure and species of sagebrush consistent with site potential and vegetation management objectives. See Vegetation Objectives section for desired outcomes and conditions. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Direction** | **Management Direction** | — |
| MD FIRE 1: Complete an interagency landscape-scale assessment (Appendix H) to prioritize at-risk habitats and identify fuels management, preparedness, suppression, and restoration priorities based on the quality of habitat at risk as directed in the Secretarial Order for Rangeland Fire SO3336. Update these assessments as necessary or when major disturbances occur. Within Greater Sage-grouse habitat, prioritize suppression and fuels management activities based on an assessment of the quality of habitat at risk. | No changes made. | No change proposed. |
| MD FIRE 2: The protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. Prioritize Greater Sage-grouse habitat commensurate with property values and other habitat to be protected, with the goal to restore, enhance, and maintain these areas. | No changes made. | No change proposed. |
| MD FIRE 3: Within PHMA and GHMA, prioritize fire management activities in order to protect and restore Greater Sage-grouse habitat and reduce the impacts of large wildfires as follows:<br>1. Habitat within 4.0 miles of an occupied or pending lek.<br>2. Greater Sage-grouse winter range. | No changes made. | No change proposed. |
| MD FIRE 4: Incorporate locations of priority Greater Sage-grouse protection areas into the dispatch system. Provide local Greater Sage-grouse habitat maps to dispatch offices and initial attack Incident Commanders for use in prioritizing wildfire suppression resources and designing suppression tactics. | No changes made. | No change proposed. |
| MD FIRE 5: During fire management operations, retain unburned areas of sagebrush, including interior islands and patches between roads and the fire perimeter unless there is a compelling safety, resource protection, or wildfire management objective at risk. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD FIRE 6: Follow established direction in the current Interagency Standards for Fire Operations (Red Book) with respect to use of resource advisors, annual review of fire management plans for updates relevant to Greater Sage-grouse habitat, and contents of the Delegation of Authority letters. | No changes made. | No change proposed. |
| MD FIRE 7: Allow retardant and other fire suppressant chemicals use on all land allocations except where expressly prohibited by land allocation direction. Use of retardant and other fire suppressant chemicals can be specifically allowed by the authorized official when prohibited by land allocation direction. Allow retardant use on all land allocations regardless of management direction when there is imminent threat to human life. | No changes made. | No change proposed. |
| MD FIRE 8: Allow mechanical fire line except:<br>• Where prohibited by other resource direction (e.g., wilderness, soils, hydrology, and riparian management)<br>• Where inconsistent with direction for specific land allocations<br><br>The authorized official may approve exceptions. | No changes made. | No change proposed. |
| MD FIRE 9: Allow use of naturally ignited wildfires to meet resource management objectives to improve Greater Sage-grouse habitat such as reducing juniper encroachment and creating mosaics of sagebrush classes. When natural ignitions occur, utilize an interdisciplinary process (including a wildlife biologist familiar with GRSG habitat requirements) to determine if the fire could be managed to meet GRSG and vegetation objectives. | No changes made. | No change proposed. |
| MD FIRE 10: Locate base camps, spike camps, drop points, staging areas, helicopter landing areas, and other temporary wildfire infrastructure in areas where physical disturbance to Greater Sage-grouse habitat can be minimized, to the extent feasible. | No changes made. | No change proposed. |
| MD FIRE 11: Develop a system of fuel breaks to protect larger intact blocks of Greater Sage-grouse habitat. Locate these fuel breaks along existing roads and ROWs, where possible. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD FIRE 12: In Greater Sage-grouse habitat, reduce hazardous fuels created by other management actions, such as establishment of new roads, trails, or ROWs within 3 years of project completion. The reduction should be sufficient to limit fire spread or undesirable fire behavior or fire effects in sagebrush ecosystems. | No changes made. | No change proposed. |
| MD FIRE 13: Use interagency- coordinated fire restrictions and public service announcements to reduce the number of human starts in or near Greater Sage-grouse habitat during periods of elevated fire danger. | No changes made. | No change proposed. |
| MD FIRE 14: Develop annual treatment and fire management programs in coordination with interagency partners and across jurisdictional boundaries based on priorities identified in the local District Landscape Wildfire and Invasive Species Assessment. | No changes made. | No change proposed. |
| MD FIRE 15: Complete an annual review of landscape assessment implementation efforts with interagency partners. | No changes made. | No change proposed. |
| MD FIRE 16: Implement appropriate fire operations and fuels management RDFs identified in Appendix C. | No changes made. | No change proposed. |
| MD FIRE 17: Include information on the resource value of Greater Sage-grouse habitat in existing prevention plans. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD FIRE 18: If prescribed fire is used in Greater Sage-grouse habitat, the NEPA analysis for the Burn Plan will address:<br>• why alternative techniques were not selected as a viable options;<br>• how Greater Sage-grouse goals and objectives would be met by its use;<br>• how the COT Report objectives would be addressed and met;<br>• a risk assessment to address how potential threats to Greater Sage-grouse habitat would be minimized.<br><br>Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that would protect Greater Sage-grouse habitat in PHMA (e.g., creation of fuel breaks that would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat would need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. | No changes made. | No change proposed. |
| **Livestock Grazing/Range Management (LG)** | **Livestock Grazing/Range Management (LG)** | — |
| **Objective** | **Objective** | — |
| Objective LG 1: Manage livestock grazing to maintain or improve Greater Sage-grouse habitat by achieving Standards for Rangeland Health (SRH). | No changes made. | Potential change under Alternative 3. |
| Objective LG 2: On BLM-managed lands, 12,083,622 acres will continue to be available for livestock grazing in Greater Sage-grouse habitat. In key RNAs, 22,765 acres will be unavailable to livestock grazing. See Table 2-6, Key ACECs and RNAs for ARMPA. | Objective LG2: On BLM-managed lands, 12,105,581 acres will continue to be available for livestock grazing in Greater Sage-Grouse habitat. Table 2-6 is no longer applicable and is therefore deleted. | Potential change under Alternatives 3 and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Table 2-6 Key ACECs and RNAs (text included in table 2-5 after this comparison table) | Table 2-6 is no longer applicable and is therefore deleted. | Potential change under Alternatives 3 and 6. |
| Objective LG 3: Complete rangeland health assessments for grazing permits/leases that have not been renewed and prioritized by Allotment Categories I, M, and C. The priority order for completing rangeland health assessments in Greater Sage-grouse habitat is:<br>1. Allotments containing SFA that have never been evaluated.<br>2. Allotments containing SFA that have not been re-evaluated in 10 or more years.<br>3. Allotments containing PHMA that have never been evaluated.<br>4. Allotments containing PHMA that have not been re-evaluated in 10 or more years.<br>5. Allotments containing GHMA that have never been evaluated.<br>6. Allotments containing GHMA that have not been re-evaluated in 10 or more years. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Management Direction** | **Management Direction** | — |
| MD LG 1: All or portions of key RNAs will be unavailable to grazing (Table 2-6). Determine whether to remove fences, corrals, or water storage facilities (e.g. reservoirs, catchments, ponds). | MD LG 1 is deleted.<br><br>Livestock grazing management in the 13 key RNAs returns to being governed by applicable district RMPs as amended by the 2015 Oregon Greater Sage-Grouse ROD/ARMPA goals, objectives, and management decisions. | Potential change under Alternatives 3 and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LG 2: When livestock management practices are determined to not be compatible with meeting or making progress towards achievable habitat objectives following appropriate consultation, cooperating and coordination, implement changes in grazing management through grazing authorization modifications, or allotment management plan implementation. Potential modifications include, but are not limited to, changes in:<br>1. Season or timing of use;<br>2. Numbers of livestock;<br>3. Distribution of livestock use;<br>4. Duration and/or level of use;<br>5. Locations of bed grounds, sheep camps, trail routes, and the like;<br>6. Extended rest or temporary closure from grazing through BLM administrative actions;<br>7. Make allotment unavailable to grazing;<br>8. Kind of livestock (e.g., cattle, sheep, horses, or goats) (Briske et al. 2011); and<br>9. Grazing schedules (including rest or deferment).<br>*Not in Priority Order<br>When SRH are being met no changes in current management or activity plans or permits/leases are required, but could occur to meet other resource management objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 3: The timing and location of livestock turnout and trailing shall not contribute to livestock congregation on occupied or pending leks during the Greater Sage-grouse breeding season of March 1 through June 30. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LG 4: When fine and site-scale Greater Sage-grouse habitat assessment and monitoring is needed or required, (e.g., as a component of a rangeland health assessment), measure the Greater Sage-grouse habitat suitability indicators for seasonal habitats identified in Table 2-2. Site suitability values may be adjusted regionally where there is scientific justification for doing so. When using the indicators to guide management actions or during land health assessments, consider that the indicators are sensitive to the ecological processes operating at the scale of interest and that a single habitat indicator does not necessarily define habitat suitability for an area or particular scale. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 5: During drought conditions use a recognized drought indicator, such as the Drought Monitor or Palmer Drought Severity Index, to determine when abnormally dry or drought conditions are developing, present, or easing. When such conditions are developing or present:<br>1. Conduct pre-season assessments prior to livestock turn out.<br>2. Monitor vegetation conditions during authorized livestock use periods to determine need for early removal or other changes to meet seasonal PHMA and GHMA objectives.<br><br>If livestock grazing is deferred due to drought, reevaluate vegetation and Greater Sage-grouse habitat indicators that measure Greater Sage-grouse habitat prior to reauthorization of grazing. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 6: Authorize new, relocate, or modify existing range improvements that use seeps or springs as a water source to enhance their year round functionality. Install or retrofit wildlife escape ramps in all livestock water troughs or water storage facilities (e.g., catchments, storage tanks).<br><br>Maintain, enhance, or reestablish riparian areas in PHMA and GHMA | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LG 7: Identify playas, wetlands, and springs that have been modified for livestock watering within PHMA and GHMA. Identify those water improvements that have Greater Sage-grouse population limiting implications, and develop projects for rehabilitation. Further actions should be instigated for development of water off site; new water should be available before existing water is eliminated. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 8: Design new and maintain existing water projects to avoid standing pools of shallow water that would spread West Nile Virus. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 9: Remove, modify, or mark fences identified as high risk for collisions, generally within 1.2 miles of occupied or pending leks. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 10: Avoid construction of livestock facilities and supplemental feeding of livestock within 1.2 mile of occupied or pending leks in Greater Sage-grouse habitat unless it is part of an approved habitat improvement project or approved by the authorized officer to improve ecological health or to create mosaics in dense sagebrush stands that are needed for optimum Greater Sage-grouse habitat. Supplemental feeding in Greater Sage-grouse habitat must be part of an approved habitat improvement plan or approved by the authorized officer. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 11: Sagebrush Focal Areas will be prioritized for management and conservation actions, including, but not limited to review of livestock grazing permits/leases. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 12: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in Sagebrush Focal Areas (SFA) followed by PHMA outside of the SFA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g. fire) and legal obligations. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LG 13: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within SFA and PHMA will include specific management thresholds based on GRSG Habitat Objectives Table 2-2, Land Health Standards (43 CFR, Part 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 14: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LG 15: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR, Part 4110.2-3. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Wild Horses and Burros (WHB)** | **Wild Horses and Burros (WHB)** | — |
| **Objective** | **Objective** | — |
| Objective WHB 1: Manage wild horses and burros as components of BLM-administered lands in a manner that preserves and maintains a thriving natural ecological balance in a multiple use relationship. | No changes made. | Potential change under Alternative 3. |
| Objective WHB 2: Manage wild horse and burro population levels within established appropriate management levels (AML). | No changes made. | Potential change under Alternative 3. |
| Objective 3: Complete assessments of Greater Sage-grouse habitat indicators for HMAs containing PHMA and GHMA. The priorities for conducting evaluations are:1. HMAs containing SFA.2. HMAs containing PHMA. 3. HMAs containing GHMA. 4. HMAs without GRSG Habitat. | No changes made. | Potential change under Alternative 3. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Direction** | **Management Direction** | — |
| MD WHB 1: Manage herd management areas (HMAs) in GRSG habitat within established AML ranges to achieve and maintain GRSG habitat objectives (Table 2-2). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WHB 2: Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g. range, wildlife, and riparian). The priorities for conducting assessments are:<br>1. HMAs containing SFA;<br>2. HMAs containing PHMA;<br>3. HMAs containing only GHMA;<br>4. HMAs containing sagebrush habitat outside of PHMA and GHMA mapped habitat;<br>5. HMAs without GRSG habitat. | No changes made. | Potential change under Alternative 3. |
| MD WHB 3: Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. Place higher priority on Herd Areas not allocated as Herd Management Areas and occupied by wild horses and burros in SFA followed by PHMA. | No changes made. | Potential change under Alternative 3. |
| MD WHB 4: In SFA and PHMA outside of SFA, assess and adjust AMLs through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting land health standards, even if current AML is not being exceeded. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD WHB 5: In SFA and PHMA outside of SFA, monitor the effects of WHB use in relation to GRSG seasonal habitat objectives on an annual basis to help determine future management actions. | No changes made. | Potential change under Alternative 3. |
| MD WHB 6: Develop or amend herd management area plans (HMAPs) to incorporate GRSG habitat objectives and management considerations for all HMAs within GRSG habitat, with emphasis placed on SFA and other PHMA. | No changes made. | Potential change under Alternative 3. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD WHB 7: Consider removals or exclusion of WHB during or immediately following emergency situations (such as fire, floods, and drought) to facilitate meeting GRSG habitat objectives where HMAs overlap with GRSG habitat. | No changes made. | Potential change under Alternative 3. |
| MD WHB 8: When conducting NEPA analysis for wild horse/burro management activities, water developments, or other rangeland improvements for wild horses, address the direct and indirect effects on GRSG populations and habitat. Implement any water developments or rangeland improvements using the criteria identified for domestic livestock. | No changes made. | Potential change under Alternative 3. |
| MD WHB 9: Coordinate with professionals from other federal and state agencies, researchers at universities, and others to utilize and evaluate new management tools (e.g., population growth suppression, inventory techniques, and telemetry) for implementing the WHB program. | No changes made. | Potential change under Alternative 3. |
| MD WHB 10: When WHB are a factor in not meeting Greater Sage-grouse habitat objectives or influence declining Greater Sage-grouse populations in PHMA, Oregon's gather priority for consideration by the Washington Office is as follows:<br>1. Response to an emergency. (e.g., fire, insect infestation, disease or other events of unanticipated nature).<br>2. Greater Sage-grouse habitat.<br>3. Maintain a thriving natural ecological balance. | No changes made. | Potential change under Alternative 3. |
| MD WHB 11: In PHMA, design any new and modify existing structural WHB improvements to conserve, enhance, or restore Greater Sage-grouse habitat. | No changes made. | Potential change under Alternative 3. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| **Mineral Resources (MR)** | — | — |
| **Objective** | — | — |
| Leasable Minerals | — | — |
| Objective MR 1: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of Greater Sage-grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 USC 226(p) and 43 CFR 3162.3-1(h). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| Objective MR 2: Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize, and provide compensatory mitigation to reduce adverse impacts on GRSG to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an Application for Permit to Drill (APD) or Geothermal Drilling Permit (GDP) on the lease to avoid and minimize impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such Federal leases. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| **Management Direction** | **Management Direction** | — |
| Unleased Fluid Minerals: | — | — |
| MD MR 1: Stipulate all leases within PHMA as NSO. No waivers or modifications to a fluid mineral lease no-surface-occupancy stipulation will be granted. The authorized officer may grant an exception to a fluid mineral lease no-surface-occupancy stipulation only where the proposed action:<br><br>i. Would not have direct, indirect, or cumulative effects on Greater Sage-grouse or its habitat; or<br><br>ii. Is proposed to be undertaken as an alternative to a similar action occurring on a nearby parcel, and would provide a clear conservation gain to GRSG.<br><br>Exceptions based on conservation gain (ii) may only be considered in (a) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) areas of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP amendment. Exceptions based on conservation gain must also include measures, such as enforceable institutional controls and buffers, sufficient to allow the BLM to conclude that such benefits will endure for the duration of the proposed action's impacts.<br><br>Any exceptions to this lease stipulation may be approved by the Authorized Officer only with the concurrence of the State Director. The Authorized Officer may not grant an exception unless the applicable state wildlife agency, the USFWS, and the BLM unanimously find that the proposed action satisfies (i) or (ii). Such finding shall initially be made by a team of one field biologist or other GRSG expert from each respective agency. In the event the initial finding is not unanimous, the finding may be elevated to the appropriate BLM State Director, USFWS State Ecological Services Director, and state wildlife agency head for final resolution. In the event their finding is not unanimous, the exception will not be granted. Approved exceptions will be made publicly available at least quarterly. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD MR 2: Stipulate all leases within Sagebrush Focal Areas as NSO, without waiver, exception, or modification. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD MR 3: GHMA is considered open for unleased fluid minerals with moderate constraints, including CSU and TL. Areas within 1.0 mile of an occupied or pending lek within GHMA will be open to leasing fluid minerals subject to NSO stipulations. Apply Fluid Mineral Stipulations, identified in Appendix G. | No changes made. | Potential change under Alternative 3. |
| MD MR 4: Allow geophysical exploration within PHMA and GHMA subject to seasonal restrictions, see Appendix G. | No changes made. | Potential change under Alternative 3. |
| Leased Fluid Minerals: | — | — |
| MD MR 5: In PHMA, apply the conservation measures through RMP implementation decisions (e.g., approval of a Geothermal Drilling Permit (GDP)) and upon completion of the environmental record of review (43 CFR, Part 3162.5), including appropriate documentation of compliance with NEPA. In this process evaluate, among other things:<br>1. Whether the conservation measure is "reasonable" (43 CFR, Part 3101.1-2) with the valid existing rights.<br>2. Whether the action is in conformance with the approved RMP.<br><br>Additionally, apply the 3 percent disturbance cap for development within Oregon PACs and PHMA (see Appendix E).<br><br>Issue written orders of the authorized office requiring reasonable protective measures consistent with the lease terms where necessary to avoid or minimize impacts on Greater Sage-grouse populations and its habitat in accordance with the project habitat mitigation plan. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD MR 6: Implement RDFs in PHMA and GHMA as detailed in Appendix C, as allowed by law for existing leases. | No changes made. | No change proposed. |
| MD MR 7: Complete Master Leasing Plans in lieu of APD/GDP by APD/GDP or Operations/Utilization plans for fluid mineral lease development processing within PHMA. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD MR 8: Within an Oregon PAC, when permitting APDs or GDPs on existing leases that are not yet developed, the proposed anthropogenic disturbance must be under the 3 percent cap for that area, to the extent allowed by law. | No changes made. | No change proposed. |
| MD MR 9: Require unitization when the BLM determines it is necessary for proper development and operation of an area according to the Federal Lease Form, 3100-11 Sections 4 and 6. Where 10 percent or less of the land is federal, encourage rather than require unitization to minimize adverse impacts on Greater sage-grouse. | No changes made. | No change proposed. |
| MD MR 10: Identify areas where land acquisitions including mineral rights or conservation easements would benefit Greater Sage-grouse habitat. Proceed with acquisition process where appropriate. | No changes made. | No change proposed. |
| Locatable Minerals: | — | — |
| MD MR 11: To the extent consistent with the rights of a mining claimant under existing laws and regulations, limit surface disturbance, and provide recommendations for net conservation gain of Greater Sage-grouse habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD MR 12: If a 3809 Plan of Operation is filed on mining claims in PHMA or GHMA, identify and evaluate mitigation measures to avoid or minimize adverse effects on PHMA and GHMA, through the Plan of Operation NEPA process, as appropriate and to the extent allowable by law. For notice and casual use levels of activity, apply RDFs (to the extent consistent with applicable law) in Appendix C. | No changes made. | Potential change under Alternative 3. |
| MD MR 13: ~~Sagebrush Focal Areas are recommended for withdrawal from the General Mining Law of 1872, as amended, subject to valid existing rights.~~<br><br>Per Oregon maintenance action 3 of May 2018:<br><br>The recommendation for withdrawal of Sagebrush Focal Areas was analyzed and removed. It was determined through an assessment process that the BLM proposal to withdraw 10 million acres was unreasonable in light of data that showed that current and 20 years of anticipated mining would affect less than 0. I percent of occupied sage-grouse range." | No changes made. | Potential change under Alternative 3. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Salable Minerals: | — | — |
| MD MR 14: PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br>• The activity is within the Oregon PAC (also called BSU, and is the same footprint as PHMA) and project area disturbance cap.<br>• The activity is subject to the provisions set forth in the mitigation framework in Appendix F.<br>• All applicable required design features are applied and the activity is permissible under screening criteria (see SSS 13).<br><br>Federal Highway Act material sites are a ROW and not subject to mineral sale requirements. See ROW section for management (MD LR 7). | No changes made. | Potential change under Alternatives 3 and 6. |
| MD MR 15: GHMA remains open subject to stipulations that will protect Greater Sage-grouse and its habitat; see RDFs and BMPs in Appendix C. | No changes made. | Potential change under Alternatives 3 and 6. |
| Nonenergy Leasable Minerals: | — | — |
| MD MR 16: Close PHMA to new leases and permits. Consider expansion of existing operations if the disturbance is within the cap and subject to compensatory mitigation. | No changes made. | Potential change under Alternatives 3 and 6. |
| MD MR 17: GHMA remains open to new leases subject to stipulations that would protect Greater Sage-grouse and its habitat; see RDFs and BMPs in Appendix C. | No changes made. | Potential change under Alternatives 3 and 6. |
| Mineral Split Estate: | — | — |
| MD MR 18: Where the federal government owns the mineral estate in PHMA and GHMA, and the surface is in non-federal ownership, apply the same stipulations, COAs, and/or conservation measures and RDFs as applied if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD MR 19: Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No changes made. | No change proposed. |
| **Renewable Energy (Wind and Solar) (RE)** | **Renewable Energy (Wind and Solar) (RE)** | — |
| **Management Direction** | **Management Direction** | — |
| MD RE 1: Designate PHMA as an exclusion area for new utility/commercial scale development of wind or solar ROWs, except in Lake, Harney, and Malheur Counties. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD RE 2: Designate PHMA outside of sagebrush focal areas (SFA) in Lake, Harney, and Malheur Counties as an avoidance area for new utility/commercial scale wind or solar ROWs. In Harney, Lake and Malheur counties, priority would be placed on locating commercial scale wind and solar energy development in non-habitat areas first (i.e., outside of PHMA and GHMA) before approving development in PHMA. Where an Oregon PAC (PHMA) occurs in more than one county, the allocation for each Oregon PAC is determined by the county in which it occurs. For example, the Cow Valley PAC is located in Malheur and Baker Counties; the Baker County portion would be exclusion, and the Malheur portion would be avoidance. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD RE 3: Designate Sagebrush Focal Areas as exclusion areas for new utility/commercial scale wind or solar ROWs development. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD RE 4: Designate GHMA as an avoidance area for new utility/commercial scale wind or solar rights-of-way. If new utility/commercial scale wind or solar development in GHMA is unavoidable apply the following measures:<br>1. If possible, construct meteorological towers without guy wires.<br>2. If guy wires are necessary, mark with anti-strike devices.<br>3. Analyze potential alternative site locations with known wind or solar potential outside of Greater Sage-grouse habitat in NEPA documents for ROW applications. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Lands and Realty (LR)** | **Lands and Realty (LR)** | — |
| **Objective** | **Objective** | — |
| Objective LR 1: Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |
| **Management Direction** | **Management Direction** | — |
| Utility Corridors and Communications Sites: | — | — |
| MD LR 1: All Lands and Realty actions shall comport with SSS 13 disturbance screening criteria. | No changes made. | No change proposed. |
| MD LR 2: Designated existing utility corridors will remain open in PHMA and GHMA to utility rights-of-way. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LR 3: Designate other ROWs (including permits and leases) in PHMA as avoidance areas:<br><br>Road ROWs:<br>• New road ROWs will be authorized only when necessary for public safety, administrative access, or subject to valid existing rights. If the new ROW is necessary for public safety, administrative access, or subject to valid existing rights and creates new surface disturbance, mitigate the impacts on protect the Greater Sage-grouse or their habitat. New road ROWs will be allowed if the ROW applicant is pursuing a Title V FLPMA ROW grant and will create no new surface disturbance.<br>• Only allow use of existing roads, or realignment of existing roads, when renewing or amending existing authorizations.<br>• Co-locate new ROWs as close as technically possible to existing ROWs or where the ROW best minimize Greater Sage-grouse impacts. Use existing roads, or realignments, to access valid existing rights that are not yet developed. If valid existing rights cannot be accessed via existing roads, then construct any new road to the minimum standard necessary.<br>• Existing Federal Highway Act (FHWA) appropriation ROWs are valid existing rights and new FHWA ROWs will continue to be considered subject to all disturbance screening criteria. See disturbance screening criteria in SSS 13.<br><br>New proposals for power lines, access roads, pump storage, and other hydroelectric facilities licensed by FERC will be subject to all Greater Sage-grouse ROW screening criteria.<br><br>Communication Sites:<br><br>Locate new communication towers within an existing communication site where technically feasible. If not feasible, new sites will be considered where necessary for public safety but shall adhere to the ROW disturbance screening criteria as listed in SSS 13. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD LR 4: Renewing, Amending or Terminating ROW Grants in PHMA and GHMA:<br>• Conduct rehabilitation when FLPMA ROW grant expires, is relinquished, or terminated, rehabilitation is required in compliance with 43 CFR, Part 2805.12(i).<br>• Remove overhead lines and other infrastructure to eliminate existing avian predator nesting opportunities (e.g. remove power line and communication facilities no longer in service) when a ROW grant expires or is relinquished or terminated.<br>• Add additional stipulations, if necessary, when renewal or amendment of existing ROW grants.<br><br>Mitigate impacts on GRSG or their habitats during amendment of an existing ROW grant. Mitigation could include the disturbance screening criteria. | No changes made. | No change proposed. |
| MD LR 5: Designated ROW Corridors in PHMA and GHMA:<br>• Manage existing designated ROW corridors as open.<br>• Allow placement of new ROWs in existing designated corridors. Construct new ROWs as close as technically feasible to existing linear ROW infrastructure to limit disturbance to the smallest footprint.<br>• Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location. | No changes made. | No change proposed. |
| MD LR 10: Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table 2 of the Monitoring Framework (Appendix D) − under valid existing rights prior to authorizing new projects in PHMA. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| Land Use Authorizations: | — | — |
| MD LR 6: Priority Habitat Management Areas (PHMA) and General Habitat Management Areas (GHMA) are designated as avoidance areas for high voltage (100kV or greater) transmission lines and major pipelines (24" or greater in diameter) ROWs (including permits and leases). All authorizations in these areas, other than the following identified projects, shall comply with the conservation measures outlined in this Approved Plan, including the RDFs (Appendix C) and screening criteria (see SSS 13) of this document. The BLM is currently processing an application for Boardman to Hemingway Transmission Line Project and the NEPA review for this project is well underway. Conservation measures for GRSG are being analyzed through the project's NEPA review process, which should achieve a net conservation benefit for the GRSG.<br><br>Place new high voltage transmission lines in designated utility corridors where technically feasible; where not technically feasible, locate lines adjacent to existing infrastructure.<br><br>If an existing transmission line is upgraded to a higher voltage the following is required:<br>• The existing transmission line shall be removed within a reasonable amount of time after the new line is installed and energized.<br>• The new line shall be constructed in the same alignment (ROW boundary) as the existing line unless an alternate route would benefit Greater Sage-grouse or its habitat.<br><br>Outside of designated corridors, bury new transmission lines where technically and financially feasible.<br>• Where burying transmission lines is not technically and financially feasible, locate new transmission lines adjacent to existing transmission lines, and would be subject to Greater Sage-grouse ROW screening criteria.<br>• Where determined to have a negative impact on Greater Sage-grouse or its | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| habitat, remove existing guy wires or mark with bird flight diverters to make them more visible to Greater Sage-grouse in flight.<br><br>Outside of designated corridors, bury new pipelines where technically and financially feasible. Pipelines should be located adjacent to existing infrastructure. | | |
| MD LR 7: GHMA is open to other ROWs/Land Use Authorization/Permits but must adhere to screening criteria in SSS 13.<br>• Existing Federal Highway Act (FHWA) Appropriation ROWs are valid existing rights. New FHWA ROWs will be subject to all Greater Sage-grouse screening criteria.<br>• Construct new high-voltage transmission lines and new pipelines in GHMA as close as technically feasible to existing infrastructure (e.g. roads, distribution/transmission lines and pipelines) to limit disturbance to the smallest footprint. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| Land Tenure: | — | — |
| MD LR 8: Designate PHMA and GHMA as Z-1 and retain public ownership. Lands classified as priority habitat and general habitat for Greater Sage-grouse will be retained in federal management. Exception: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the Greater Sage-grouse or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the Greater Sage-grouse. | No changes made. | No change proposed. |
| Withdrawals: | — | — |
| Per Oregon maintenance action 3 in May of 2018 MD LR 9 from the 2015 plan was deleted.<br><br>(MD LR 9: Recommend SFAs for withdrawal from the General Mining Act of 1872, as amended; subject to valid existing rights.) | No changes made. | Potential change under Alternative 3. |

|---|---|---|
| Sage-grouse population trends, work with the interdisciplinary team and ODFW to determine the best reroute or closure point for a section of an existing road.<br><br>In addition, implementation level travel planning efforts will be guided by the goals, objectives and guidelines outlined in the SSS section, relevant National and Oregon specific guidance, and the following:<br>• A timeline to complete travel planning efforts will be identified, prioritized and updated annually in all relevant planning areas to accelerate the accomplishment of: data collection, route evaluation and selection, and on the ground implementation efforts including signing, monitoring and rehabilitation.<br>• During subsequent travel management planning, consultation "with interested user groups, Federal, State, county and local agencies, local landowners, and other parties in a manner that provides an opportunity for the public to express itself and have its views given consideration." Consequently, a public outreach plan to fully engage all interested stakeholders will be incorporated into future travel management plans.<br>• Among other designation criteria from "areas and trails shall be located to minimize harassment of wildlife or significant disruption of wildlife habitats. Special attention would be given to protect endangered or threatened species and their habitats."<br>• During subsequent travel management planning, all routes will undergo a route evaluation to determine its purpose and need and the potential resource and/or user conflicts from motorized travel. Where resource and/or user conflicts outweigh the purpose and need for the route, the route will be considered for closure or considered for relocation outside of sensitive GRSG habitat.<br>• During subsequent travel planning, threats to GRSG and their habitat will be considered when evaluating route designations and/or closures. | *(See above.)* | *(See above.)* |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| • During subsequent travel management planning, routes that do not have a purpose or need would be considered for closure.<br>• During subsequent travel management planning, routes that are duplicative, parallel, or redundant will be considered for closure.<br>• During subsequent travel management planning, seasonal restrictions on OHV use will be considered in important seasonal habitats where OHV use is a threat. During subsequent travel management planning, consider limiting over snow vehicles (OSV) designed for use over snow and that runs on a track or tracks and/or a ski or skis, while in use over snow to designated routes or consider seasonal closures in GRSG wintering areas from November 1 through March 31.<br>• During subsequent travel management planning, routes not required for public access or recreation with a current administrative/agency purpose or need will be evaluated for administrative access only.<br>• During subsequent travel management planning, consider prioritizing restoration of routes not designated in a Travel Management Plan.<br>• During subsequent travel management plan implementation, consider using seed mixes or transplant techniques that will maintain or enhance GRSG habitat when rehabilitating linear disturbances.<br><br>During subsequent travel management plan implementation, consider scheduling road maintenance to avoid disturbance during sensitive periods and times to the extent practicable. Consider using time of day limits (exclude activities from 2 hours before sunset to 2 hours after sunrise) to reduce impacts on GRSG during breeding periods. | No changes made. | No change proposed. |

| Oregon 2015 GRSG ARMPA (as published text) | Oregon 2019 GRSG ARMPA (as published) | Potential for Change in 2023 Plan |
|---|---|---|
| MD TTM 2: ORV-OHV designations that are "closed" will be maintained as closed to motorized vehicles. OHV Areas designated as "limited to existing" within PHMA and GHMA will be managed as "limited to existing roads, primitive roads, and trails" until the completion of an implementation level travel planning (travel management planning).<br><br>Individual route designations will occur during subsequent implementation level travel management planning efforts. Upon the completion of implementation level travel management plans OHV areas designated as "Limited" will transition to "limited to designated roads, primitive roads and trails." | No changes made. | No change proposed. |
| MD TTM 3: Avoid upgrading existing roads or construction of new roads that are found to contribute to Greater Sage-grouse mortality or lek abandonment. | No changes made. | No change proposed. |
| MD TTM 4: In PHMA and GHMA complete transportation plans in accordance with National BLM Travel Management guidance, requiring the BLM to maintain a current action plan and planning schedule to most effectively target available resources. The following GRSG population areas are Oregon's top priority areas to designate comprehensive travel management plans:<br>1. In Oregon PACs with declining population trends.<br>2. In all other Oregon PACs.<br>3. In all GHMA.<br><br>In PHMA and GHMA, travel systems will be managed with an emphasis on improving the sustainability of the travel network in a comprehensive manner to minimize impacts on GRSG, maintain motorist safety, and prevent unauthorized cross country travel while meeting access needs. To do so, it may be necessary to improve portions of existing routes, close existing routes or create new routes that meet user group needs, thereby reducing the potential for pioneering unauthorized routes. The emphasis of the comprehensive travel and transportation planning will be placed on having a neutral or positive effect on GRSG habitat. | No changes made. | No change proposed. |

[1]Perennial grass and forb minimum height may not be achievable in years with below normal precipitation. Other indicators of desired condition may still render the site suitable, however.
[2] In very dry years, forb cover and availability may not be at the desired condition, and in certain plant associations such as Wyoming big sagebrush/Needle and Thread, these indicators may rarely be achieved even in years with normal precipitation.
[3] Riparian includes swales, wet meadows, and intermittent/ephemeral streams.
[4]Sage-grouse preferred forbs are listed in Appendix I.

## Table 4. Greater Sage-Grouse Buffers

| Resource Program | Activity | Temporal Buffer | Spatial Buffer Miles from Lek PHMA | GHMA |

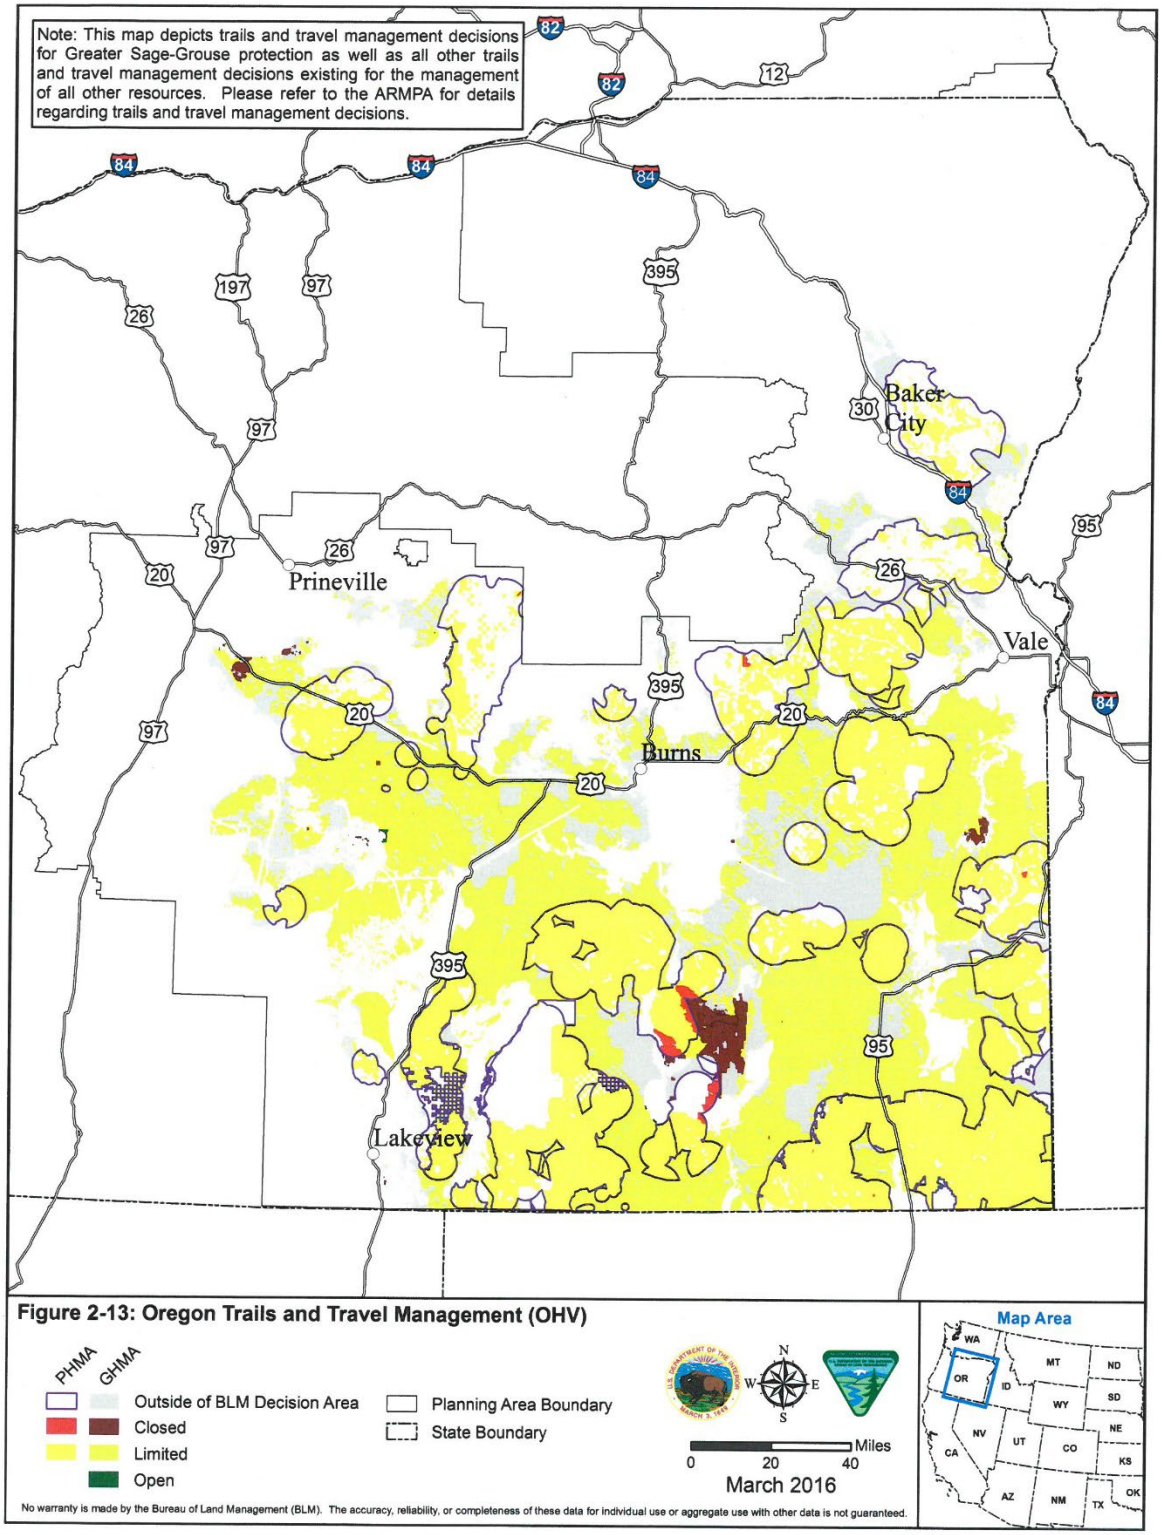
**Table 5. Desired Mix of Sagebrush Classes by Sagebrush Type**

| Sagebrush Type | General Description | Characteristic Plant Community | Class 1(A)[2] | Class 2(A)[2] | Class 3 (A, B)[2] | Class 4 (A, B)[2] | Class 5(A)[2] |
|---|---|---|---|---|---|---|---|
| Shallow-Dry | Very shallow soils and very dry sites not capable of producing at least 600 lb/ac of grass on any sites or in any type of year[1]. | Low sagebrush/ Sandberg's bluegrass. Includes the driest Wyoming big sagebrush types. | 15% (0-25%) | 15% (0-25%) | 70% (50-90%) | N/A3 | N/A[3] |
| Warm-Dry | Shallow to moderately deep soils and dry sites capable of producing at least 600 lb/ac of grass only on best sites or wet years[1]. | Wyoming big sagebrush/bluebunch wheatgrass-Thurber's needlegrass. Includes some moderately productive low sagebrush sites and dry mountain big sagebrush sites. | 15% (0-25%) | 15% (0-25%) | 25% (10-40%) | 45% (25-70%) | N/A[3] |
| Cool-Moist | Moderately deep to deep soils and moist sites capable of producing at least 600 lb/ac of grass on average and high productivity sites or average and wet years[1]. | Mountain big sagebrush-Idaho fescue. Includes productive low sagebrush communities and highly productive Wyoming big sagebrush sites. May include antelope bitterbrush as a co-dominant with big sagebrush. | 15% (0-25%) | 15% (0-25%) | 20% (10-30%) | 35% (20-60%) | 15% (5-25%) |

[1]Based on Ecological Site Descriptions
[2]Median value and range
[3] Site not capable of producing this class

**Table 5. Decadal Treatment Objectives for Greater Sage-grouse Habitat**

| Treatment Objective | Average Annual Acres | Average Decadal Acres |
|---|---|---|
| Conifer reduction | 40,250 | 402,500 |
| Sagebrush thinning | 53,217 | 532,170 |
| Invasive plant control* | 12,700 | 127,000 |
| Crested wheatgrass restoration | 1,844 | 18,440 |



*Principally annual grasses
These acreage estimates represent an objective for treatment over a ten-year (decadal) period to support achievement or progress toward GRSG habitat objectives. These estimates account for variability in funding and do not reflect a maximum or minimum acreage for any one treatment objective should funding and site-specific conditions allow for more or less treatment acreage than described in order to meet habitat objectives.

## Table 6. From 2015 ARMPA - Key ACECs and RNAs for ARMPA

| ACEC/RNA Name | Type | District | ACEC/RNA | | |
|---|---|---|---|---|---|
| | | | ACEC/RNA Acres | RNA Acres Unavailable to Grazing | Estimated Reduction of AUMs |
| Abert Rim | ACEC | Lakeview | 18,039 | 0 | 0 |
| High Lakes | ACEC | Lakeview | 38,952 | 0 | 0 |
| Red Knoll | ACEC | Lakeview | 11,119 | 0 | 0 |
| **TOTAL KEY ACEC** | — | — | **68,110** | **0** | **0** |
| Black Canyon | RNA | Vale | 2,639 | 2,640 | 225 |
| Dry Creek Bench | RNA | Vale | 1,637 | 622 | 101 |
| East Fork Trout Creek | RNA | Burns | 361 | 304 | 47 |
| Fish Creek Rim | RNA | Lakeview | 8,718 | 2,750 | 110 |
| Foley Lake | RNA | Lakeview | 2,228 | 1,269 | 51 |
| Foster Flat * | RNA | Burns | 2,687 | 0 | 0 |
| Guano Creek—Sink Lakes * | RNA | Lakeview | 11,185 | 0 | 0 |
| Lake Ridge | RNA | Vale | 3,860 | 769 | 229 |
| Mahogany Ridge | RNA | Vale | 682 | 155 | 22 |
| North Ridge Bully Creek | RNA | Vale | 1,569 | 164 | 46 |
| Rahilly-Gravelly | RNA | Lakeview | 18,678 | 8,282 | 630 |
| South Bull Canyon | RNA | Vale | 790 | 747 | 89 |
| South Ridge Bully Creek | RNA | Vale | 621 | 397 | 166 |
| Spring Mountain | RNA | Vale | 996 | 995 | 137 |
| Toppin Creek Butte | RNA | Vale | 3,998 | 2,865 | 504 |
| **TOTAL KEY RNA** | — | — | **60,652** | **21,957** | **2,388** |

(NOTE: The 2019 FEIS and RMPA showed 21,959 acres in 13 key RNAs (corrected math error in the 2015 ARMPA)

## Appendix A: Map 2-13 (from Maintenance Action 1)

### 2.13.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 have management direction that may change through this RMP amendment. Note that if 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The appendices can be found on the Oregon GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Approved RMP Amendment Maps | 2015 | Yes |
| B: Lek Buffer Distances | 2015 | No |
| C: Required Design Features and Best Management Practices | 2015 | Yes |
| D: Greater Sage-Grouse Monitoring Framework | 2015 | No |
| E: Disturbance Cap Calculation Method | 2015 | Yes |
| F: Mitigation | 2015 | Yes |
| G: Fluid Mineral Leasing Stipulations | 2015 | Yes |
| H: Fire and Invasives Assessment Tool | 2015 | No |
| I: Sage-grouse Plant List | 2015 | No |
| J: Adaptive Management Strategy | 2015 | Yes |
| K Biological Assessment Summary | 2015 | No |
| L: Greater Sage-Grouse Noise Protocol | 2015 | No |
| A: Additional RNA Information | 2019 | No |
| B: Cumulative Effects Supporting Information | 2019 | No |
| C: Responses to Substantive Public Comments on the Draft EIS | 2019 | No |

## 2.14 SOUTH DAKOTA RMP AMENDMENT

This appendix presents the GRSG approved RMP amendment language from the 2015 record of decision for the South Dakota RMP Amendment. The South Dakota RMP was not amended in 2019. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 appendices that are listed in **Section 2.14.2** of this appendix.

### 2.14.1 Existing GRSG RMP Management – South Dakota RMP Amendment

**Table 1. Summary of Goals, Objectives, and Management Actions in South Dakota 2015 ARMP**

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Vegetation Communities*** | |
| Goal: In all PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush canopy cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-28 Weed Treatments: TL: Spot weed treatments only, using IPM methods within all suitable nesting or brood rearing habitat of known sage-grouse leks from March 1-June 30. | No change proposed. |
| MD-19 Weed Treatments: Timing Limit (TL): Herbicide treatments limited to spot weed treatments only within a 3 mile buffer zone, of known sage-grouse leks from March 1-June 30. Exceptions to treatment types and dates of treatments may be allowed to address aggressively spreading weeds or invasive plants that require aggressive and timely treatment during this period following consultation with necessary specialists to minimize impacts on sage-grouse. | No change proposed. |
| MD-31 Seasonal Habitat Objectives: Seasonal habitat objectives identified in Table 2-5 will be incorporated into all project designs, as appropriate, based on site conditions and ecological potential.<br><br>Habitat objectives include metrics for sagebrush height, cover, and other vegetation characteristics typical of sage-grouse habitat at the eastern edge of the species' distribution. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Terrestrial and Aquatic Wildlife Resources*** | |
| Goal SSS-1: Maintain and/or increase GRSG abundance and distribution by conserving, enhancing, or restoring the sagebrush ecosystem upon which populations depend, in cooperation with other conservation partners. | Potential change under Alternatives 3, 4, 5, and 6. |
| Goal: Within GRSG habitat areas, the BLM will maintain habitat for viable GRSG populations. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Goal: Provide suitable habitat condition to allow for movement between large blocks of habitat and seasonal and specialized habitats on a local and landscape scale. | Potential change under Alternatives 3, 4, 5, and 6. |
| Goal: Across the planning area, maintain greater sagebrush cover at levels at or near the full potential for the each ecological site. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-21 Greater Sage-Grouse PHMA: PHMA will be the same as the State of South Dakota Sage-grouse Core Areas (SDGFP 2014); which includes 127,735 surface and 412,822 subsurface oil and gas minerals acres. See Figure 1-2 and 1-3. Adaptive management for sage-grouse is described in Chapter 2 Narrative section under Greater Sage-Grouse. BLM will apply the lek buffer-distances in the USGS Report "Conservation Buffer Distance Estimates for Greater Sage-Grouse-A Review (Open File Report 2014-1239)" in both GHMA and PHMA as detailed in Appendix B, Applying Lek Buffer-Distances When Approving Actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-10 Greater Sage-Grouse GHMA: includes 23,684 surface and 247,771 subsurface oil and gas minerals acres. | Potential change under Alternatives 3, 4, 5, and 6. |
| Monitoring Framework for Greater Sage-Grouse Habitat Management<br>The BLM's planning regulations, specifically 43 CFR, Part 1610.4-9, require that land use plans establish intervals and standards for monitoring based on the sensitivity of the resource decisions. Land use plan monitoring is the process of tracking the implementation of land use plan decisions (implementation monitoring) and collecting data/information necessary to evaluate the effectiveness of land use plan decisions (effectiveness monitoring). For GRSG, these types of monitoring are also described in the criteria found in the Policy for Evaluation of Conservation Efforts When Making Listing Decisions (50 CFR Vol. 68, No. 60). One of the Policy for Evaluation of Conservation Efforts When Making Listing Decisions criteria evaluates whether provisions for monitoring and reporting progress on implementation (based on compliance with the implementation schedule) and effectiveness (based on evaluation of quantifiable parameters) of the conservation effort are provided. The Monitoring Framework is located in Appendix D. | No change proposed. |
| ***Management Decisions: Habitat Objectives*** | |
| **[Original language updated through plan maintenance action in 2018]**<br><br>The habitat objectives for GRSG (Table 2.3-2) is a list of indicators, characteristics, and values that describe GRSG seasonal habitat use areas. The BLM used indicator values derived from a synthesis of local and regional GRSG habitat research and data to describe the typical vegetation communities that sage-grouse select. While the habitat objectives are not attainable on every site or every acre within designated GRSG habitat management areas, | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| the values reflect a range of habitat conditions that generally lead to greater survival of individuals within a population. When permitting land use activities, BLM should consider the ecological site potential within designated habitat management areas to validate the habitat conditions achievable for a specific site.<br><br>The seasonal habitat descriptions in Table 2.3-2 vary across the range of sage-grouse, within a subregion, and between sites. They are not land health standards but are quantitative measures that inform the Special Status Species Habitat Land Health Standard for sage-grouse. These measurable values reflect ecological potential, and may be adjusted based on local factors influencing sage-grouse habitat selection. Local data or recent science may indicate that sage-grouse select for vegetation structure and composition in seasonal habitats not characterized by the values in the habitat objectives table. In these cases, it may be appropriate to adjust the values. Habitat objectives should be evaluated in the context of annual variability in ecological conditions and should not be used singly to determine habitat suitability for sage-grouse. They may be used to demonstrate trends over time, during plan evaluations for effectiveness of sage-grouse conservation, or when identify limiting habitat characteristics for a given area.<br><br>The indicators, characteristics, values and desired seasonal habitat conditions in the GRSG Plan Habitat Objectives Table are meant to inform the wildlife habitat component of the Land Health Standards evaluation process (LHS, 43 CFR 4180.2), but do not replace rangeland health assessments. Results from the LHS evaluation should be used to support BLM in land use authorization processes and during development of objectives for management actions such as vegetation treatments. BLM land use authorizations will contain terms and conditions regarding the actions needed to achieve or make progress toward achieving habitat objectives and land health standards. The Habitat Objectives Tables are to be used:<br>• To assess habitat suitability for sage-grouse following the BLM policy on sage-grouse habitat assessments<br>• To evaluate land use plan effectiveness for sage-grouse conservation, and<br>• As a basis to develop measurable project objectives for actions in BLM-designated GRSG Habitat Management areas when considered alongside land health standards, ecological potential and local information.<br><br>References: U.S. Department of the Interior, Bureau of Land Management. 2001. Rangeland health standards handbook H-4180-1. https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h4180-1.pdf | *(See above.)* |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Disturbance*** | |
| Goal: Manage PHMA so that discrete anthropogenic (human-caused) disturbances do not adversely impact GRSG distribution or abundance. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-20 Greater Sage-Grouse PHMA: Manage PHMA so that discrete anthropogenic (human-caused) disturbances do not adversely impact GRSG distribution or abundance. | No change proposed. |
| MD-24 Other Resources Uses: Other resource uses within PHMA may be allowed pending project level environmental review provided that Mitigation, BMPs Guidelines, standard operating procedures (SOP), and RDFs are implemented, Impacts are evaluated as described in the GRSG Effects Analysis Process (Appendix I) and the project does not exceed the disturbance cap (Appendix E) and the goals for sage-grouse and sage-grouse habitat are not compromised. Categorical Exclusions (CXs) including those under the Energy Policy Act of 2005, Section 390 will not be used in priority sage-grouse habitats due to resource conflicts. | No change proposed. |
| Management Direction SSS-1.3: If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 Mining Law, valid existing rights, etc.) will be permitted by BLM within PHMA in a project analysis area until the disturbance has been reduced to less than the cap. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Surface disturbing and disruptive activities may be allowed if the project proponent can clearly demonstrate that adverse impacts on sage-grouse can be adequately mitigated through BMPs, guidelines (Appendix J), disturbance is within the 3% disturbance cap limit (Appendix E) and RDFs (Appendix C) are included and the goals for sage-grouse not compromised. If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) within GRSG PHMA in any given BSU, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 hard rock mining law, valid existing rights, etc.) will be permitted by BLM within PHMA in any given BSU until the disturbance has been reduced to less than the cap.<br><br>If the 3% anthropogenic disturbance cap is exceeded on lands (regardless of land ownership) or if anthropogenic disturbance and habitat loss associated with conversion to agricultural tillage or fire exceed 5% within a project analysis area in PHMA, then no further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the 1872 Mining Law, valid existing rights, etc.) will be permitted by BLM within PHMA in a project analysis area until the disturbance has been reduced to less than the cap. Within existing designated utility corridors, the 3% disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is co-located into an existing disturbed area. This direction applies to the following: oil and gas wells and development facilities, coal mines, wind towers, solar fields, geothermal, and mining (active locatable, leasable, and saleable developments). Appendix E provides specific details about how calculations are determined for disturbance caps. Prior to approving any surface disturbance and disruptive activities, the project proponent will be required to provide a plan approved by BLM to maintain suitability of habitat and avoid or minimize habitat loss and disturbance. | No change proposed. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Mitigation for Sage-Grouse Management<br>Consistent with the Plan's goal, the intent of the South Dakota ARMP is to provide a net conservation gain to the species. In all sage-grouse habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in sage-grouse habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species, including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions.<br><br>Actions that result in habitat loss and degradation including those identified as threats which contribute to Greater Sage-Grouse disturbance as identified by the USFWS in its 2010 listing decision (75 FR 13910) and shown in Table 2 in the attached Monitoring Framework (Appendix D). This is also consistent with BLM Manual 6840 – Special Status Species Management, Section .02B, which directs BLM "to initiate proactive conservation measures that reduce or eliminate threats to Bureau sensitive species to minimize the likelihood of the need for listing of these species under the ESA."<br><br>Mitigation Standards. In undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing-third party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species, including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. Mitigation will follow the regulations from the CEQ (40 CFR, Part 1508.20; e.g., avoid, minimize, and compensate), hereafter referred to as the mitigation hierarchy. If impacts from BLM management actions and authorized third-party actions that result in habitat loss and degradation remain after applying avoidance and minimization measures (i.e., residual impacts), then compensatory mitigation projects will be used to provide a net conservation gain to the species. Any compensatory mitigation will be durable, timely, and in addition to that which would have resulted without the compensatory mitigation. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Greater Sage-Grouse Conservation Team. The BLM will establish a WAFWA Management Zone Greater Sage-Grouse Conservation Team (hereafter, Team) to help guide the conservation of Greater Sage-Grouse, within 90 days of the issuance of the ROD. This Team will develop a WAFWA Management Zone Regional Mitigation Strategy (hereafter, Regional Mitigation Strategy). The Team will also compile and report on monitoring data (including data on habitat condition, population trends, and mitigation effectiveness) from States across the WAFWA Management Zone (see Monitoring section). Subsequently, the Team will use these data to either modify the appropriate Regional Mitigation Strategy or recommend adaptive management actions (see Adaptive Management section).<br><br>The BLM will invite governmental and Tribal partners to participate in this Team, including the SDGFP and USFWS, in compliance with the exemptions provided for committees defined in the Federal Advisory Committee Act and the regulations that implement that act. The BLM will strive for a collaborative and unified approach between Federal agencies, Tribal governments, state and local government(s), and other stakeholders for Greater Sage-Grouse conservation. The Team will provide advice, and will not make any decisions that impact Federal lands. The BLM will remain responsible for making decisions that affect Federal lands. | No change proposed. |
| Developing a Regional Mitigation Strategy. The Team will develop a Regional Mitigation Strategy to inform the mitigation components of NEPA analyses for BLM management actions and third-party actions that result in habitat loss and degradation. The Strategy will be developed within one year of the issuance of the ROD. The BLM's Regional Mitigation Manual MS-1794 will serve as a framework for developing the Regional Mitigation Strategy. The Regional Mitigation Strategy will be applicable to the States/Field Offices within the WAFWA Management Zone's boundaries.<br><br>Regional mitigation is a landscape-scale approach to mitigating impacts on resources. This involves anticipating future mitigation needs and strategically identifying mitigation sites and measures that can provide a net conservation gain to the species. The Regional Mitigation Strategy developed by the Team will elaborate on the components identified above (i.e., avoidance, minimization, and compensation; additionality, timeliness, and durability). | Potential change under Alternatives 3, 4, 5, and 6. |
| In the time period before the Strategy is developed, BLM will consider regional conditions, trends, and sites, to the greatest extent possible, when applying the mitigation hierarchy and will ensure that mitigation is consistent with the standards set forth in the first paragraph of this section. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Incorporating the Regional Mitigation Strategy into NEPA Analyses. The BLM will include the avoidance, minimization, and compensatory recommendations from the Regional Mitigation Strategy in one or more of the NEPA analysis' alternatives for BLM management actions and third-party actions that result in habitat loss and degradation, and the appropriate mitigation actions will be carried forward into the decision.<br><br>Implementing a Compensatory Mitigation Program. Consistent with the principles identified above, the BLM needs to ensure that compensatory mitigation is strategically implemented to provide a net conservation gain to the species, as identified in the Regional Mitigation Strategy. To align with existing compensatory mitigation efforts, this compensatory mitigation program will be implemented at a State level (as opposed to a WAFWA Management Zone, a Field Office, or a Forest), in collaboration with our partners (e.g., Federal, Tribal, and State agencies).<br><br>To ensure transparent and effective management of the compensatory mitigation funds, the BLM will enter into a contract or agreement with a third-party to help manage the State-level compensatory mitigation funds, within one year of the issuance of the ROD. The selection of the third-party compensatory mitigation administrator will conform to all relevant laws, regulations, and policies. The BLM will remain responsible for making decisions that affect Federal lands. Information on BMPs, Guidelines and SOPs can be found in Appendix J. RDFs are described in Appendix C. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| 2.3.3 Adaptive Management Strategy for Greater Sage-Grouse Habitat Management<br>Decisions: Adaptive Management is a decision process that promotes flexible resource management decision-making that can be adjusted in the face of uncertainties as outcomes from management actions and other events become better understood. Careful monitoring of these outcomes both advances scientific understanding and helps with adjusting resource management directions as part of an iterative learning process. Adaptive management also recognizes the importance of natural variability in contributing to ecological resilience and productivity. Adaptive management does not represent an end in itself, but rather a means to more effective decisions and enhanced benefits. On February 1, 2008, the USDI published its Adaptive Management Implementation Policy (522 DM 1). The adaptive management strategy presented within this EIS complies with this policy and direction. The GRSG Monitoring Framework will be used to inform adaptive management; the GRSG Monitoring Framework can be found in Appendix D. The following provides the BLM adaptive management strategy for the South Dakota ARMP. | Potential change under Alternatives 3, 4, 5, and 6. |
| Adaptive Management Triggers<br>Adaptive management triggers are essential for identifying when potential management changes are needed in order to continue meeting Greater Sage-Grouse conservation objectives. The BLM will use soft and hard triggers.<br><br>Soft Triggers are indicators that management or specific activities may not be achieving the intended results of conservation actions. The soft trigger is any negative deviation from normal trends in habitat or population in any given year, or if observed across two to three consecutive years. Metrics include, but are not limited to, annual lek counts, wing counts, aerial surveys, habitat monitoring, and Density and Disturbance Calculation Tool (DDCT) evaluations. BLM field offices, local SDGFP offices, and sage-grouse working groups will evaluate the metrics. The purpose of these strategies is to address localized Greater Sage-Grouse population and habitat changes by providing the framework in which management will change if monitoring identifies negative population trends and habitat anomalies.<br><br>Each major project (EIS level) will include adaptive management strategies in support of the population management objectives for Greater Sage-Grouse set by the State of South Dakota, and will be consistent with this Greater Sage-Grouse Adaptive Management Plan. These adaptive management strategies will be developed in partnership with the State of South Dakota, project proponents, partners, and stakeholders, incorporating the best available science. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Soft Triggers Response - Soft triggers require immediate monitoring and surveillance to determine causal factors and may require curtailment of activities in the short or long term, as allowed by law. The project-level adaptive management strategies will identify appropriate responses where the project's activities are identified as the causal factor. The management agency and the adaptive management group will implement an appropriate response strategy to address causal factors not addressed by specific project adaptive management strategies, not attributable to a specific project, or to make adjustments at a larger regional or state-wide level.<br><br>Hard Triggers are indicators that management is not achieving desired conservation results. Hard triggers would be considered a catastrophic indicator that the species is not responding to conservation actions, or that a larger-scale impact is having a negative effect. Hard triggers are focused on three metrics: 1) number of active leks, 2) acres of available habitat, and 3) population trends based on annual lek counts. Within the context of normal population variables, hard triggers shall be determined to take effect when two of the three metrics exceeds 60% of normal variability for the BSU in a single year, or when any of the three metrics exceeds 40% of normal variability for a three-year time period within a five-year range of analysis. A minimum of three years is used to determine trends, with a five-year period preferred to allow determination of three actual time periods (i.e., Y1-2-3, Y2-3-4, Y3-4-5). Baseline population estimates are established by pre-disturbance surveys, reference surveys, and account for regional and statewide trends in population levels. Population count data in South Dakota are maintained by SDGFP. Estimates of population are determined based upon survey protocols determined by SDGFP, and are implemented consistently throughout the state. Population counts are tracked for individual leks and are then summarized by county and for the state.<br><br>Hard Trigger Response - Hard triggers represent a threshold indicating that immediate action is necessary to stop a severe deviation from Greater Sage-Grouse conservation objectives set forth in the BLM plans. As such, the ARMP includes a "hard-wired" plan-level response; that is, it provides that, upon reaching the trigger, a more restrictive alternative, or an appropriate component of a more restrictive alternative analyzed in the Proposed RMP and Final EIS, will be implemented without further action by the BLM. Specific "hard-wired" changes in management are identified in Table 2-7, Specific Management Responses, below. In addition to the specific changes identified in Table 2-7, the BLM will review available and pertinent data, in coordination with Greater Sage-Grouse biologists and managers from multiple | *(See above.)* |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| agencies, including the USFWS, NRCS, and the State of South Dakota, to determine the causal factor(s) and implement a corrective strategy. The corrective strategy would include the changes identified in Table 2-7 and could also include the need to amend or revise the ARMP to address the situation and modify management accordingly.<br><br>Upon determination that a hard trigger has been tripped, the BLM will immediately defer issuance of discretionary authorizations for new actions within the BSU for a period of 90 days. When a hard trigger is hit in a BSU, including those that cross state lines, the WAFWA Management Zone Greater Sage-Grouse Conservation Team will convene to determine the casual factor(s), put project level responses in place, as appropriate, and discuss further appropriate actions to be applied.<br><br>In addition to implementing the hard wired plan-level response, in the event that new scientific information becomes available demonstrating that the hard-wired response would be insufficient to stop a severe deviation from sage-grouse conservation objectives set forth in the BLM plans, the BLM will immediately implement a formal directive to protect GRSG and its habitat and to ensure that conservation options are not foreclosed. To the extent that it is supported scientifically, this formal directive will be drawn from the range of alternatives analyzed in the RMP Amendments/Revisions. | *(See above.)* |
| Adaptive Management and Monitoring<br>This EIS contains a monitoring framework plan (Appendix D) that includes an effectiveness monitoring component. The agencies intend to use the data collected from the effectiveness monitoring to identify any changes in habitat conditions related to the goals and objectives of the plan and other range-wide conservation strategies BLM 2004; Stiver et al. 2006; USFWS 2013). The information collected through the Monitoring Framework Plan (Appendix D) will be used by the BLM to determine when adaptive management hard and soft triggers (discussed below) are met. Adaptive management responses at the RMP level were included as part of the assumptions when impacts were analyzed in Chapter 4 of the Proposed RMP. In making amendments to this plan, the BLM will coordinate with the FWS as BLM continues to meet its objective of conserving, enhancing and restoring GRSG habitat by reducing, minimizing or eliminating threats to that habitat. The GRSG adaptive management plan provides a means of addressing and responding to unintended negative impacts on GRSG and its habitat before consequences become severe or irreversible.<br><br>The hard and soft trigger data will be analyzed as soon as it becomes available after the signing of the ROD and then at a minimum, analyzed annually thereafter. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Wildland Fire Ecology and Management*** | |
| MD-33 Prescribed Fire: Prescribed fire may be allowed in PHMA and general habitat if it is done solely for the purposes of improving or maintaining sage-grouse habitat. If prescribed fire is used in Greater Sage-Grouse habitat, the NEPA analysis for the Burn Plan will address the following:<br>• Why alternative techniques were not selected as a viable options;<br>• How Greater Sage-Grouse goals and objectives would be met by its use;<br>• How the COT report objectives would be addressed and met;<br>• Develop a risk assessment to address how potential threats to Greater Sage-Grouse habitat would be minimized.<br><br>Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that would protect Greater Sage-Grouse habitat in PHMA (e.g., creation of fuel breaks that would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, and burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br><br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat would be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. Secretarial order SO3336 will be applied to protect GRSG habitat from fire: http://www.forestsandrangelands.gov/rangeland/index.shtml. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Lands and Realty*** | |
| MD-27 Lands and Realty: PHMA and GHMA within the Center of the Nation will be Class 2 land retention areas (Appendix A2, Map E and Figure 1-3). Any land disposals will be limited and subject to specialist review. Refer to the Land Tenure subsection of the Lands section of this table for additional details about Class 2 retention criteria.<br><br>BLM could also dispose of land in PHMA and GHMA within the Center of the Nation areas in cases where there is mixed ownership, and land exchanges will allow for additional or more contiguous federal ownership patterns.<br><br>Under sage-grouse habitat areas with minority federal ownership, BLM will develop an additional, effective mitigation agreement for any disposal of federal land. As a final preservation measure, consideration will be given to pursuing a permanent conservation easement. Lands classified as PHMA and GHMA for GRSG will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the GRSG or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the GRSG.<br><br>The agency can demonstrate that disposal of the lands will provide a net conservation gain to Greater Sage-Grouse; or the agency can demonstrate that the disposal of the lands will have no direct or indirect adverse impact on conservation of Greater Sage-Grouse. | No change proposed. |
| MD-12 Renewable Energy ROWs: Renewable Energy ROWs: 1 mile from leks will be an exclusion area, the rest of the GHMA will be an avoidance area.<br><br>Other types of ROWs: Major ROWs (power lines 100 kilovolt (kV) and pipelines 24 inches and over) will be avoided. Minor ROWs within 2 miles of a lek will be avoidance, the rest of the GHMA will be open.<br><br>Where new ROWs are necessary, ROWs will be co-located within existing ROWs where possible.<br><br>GHMA and PHMA within the Center of the Nation will be Class 2 land retention areas (Appendix A1: Figure 2-10). | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-18 Utility and Power lines: All new utility and power lines (overhead lines) that can be safely buried will be buried within 2 miles of GRSG leks and within GRSG winter range.<br><br>When burial of power lines is not possible, above ground lines will be located and designed to minimize impacts of predation, collision and other associated stressors to GRSG.<br><br>Existing overhead lines within 2 miles of leks and within GRSG winter range will be evaluated for threats to GRSG and if necessary, modified to reduce the threat. If modification is not likely to be effective, the overhead line may be relocated. Any requirements for modification or relocation of existing overhead lines will be subject to valid existing rights.<br><br>Oil and Gas (O&G) - CSU: All new utility and power lines that can be safely buried will be buried within 2 miles of sage-grouse leks and within sage-grouse winter range.<br><br>When burial of power lines is not possible, above ground lines will be located and designed to minimize impacts of predation, collision and other associated stressors to sage-grouse.<br><br>Existing overhead lines within 2 miles of leks and within sage-grouse winter range will be evaluated for threats to sage-grouse and if necessary, modified to reduce the threat. If modification will not likely be effective, the overhead line may be relocated. Any requirements for modification or relocation of existing overhead lines will be subject to valid existing rights. | No change proposed. |
| MD-15 Renewable Energy/Winter Range: GRSG winter range will be an exclusion area.<br><br>Within GHMA, major ROWs are avoidance and minor ROWs are avoidance within two miles of leks with GHMA. The rest of the GHMA is open to minor ROWs. GRSG winter range will be an avoidance area. In cases where avoidance is not possible, BLM may require design features to mitigate impacts or co-location of new ROWs with existing ROWs where possible. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-25 Renewable Energy ROWs: PHMA will be exclusion areas. Other types of ROWs: PHMA will be avoidance areas. Winter range is an exclusion areas for renewable energy ROWs. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-26 General ROWs: PHMA are defined as avoidance areas for all General ROWs (major and minor). Renewable ROWs are addressed in MD-25 above. Sage-Grouse winter range is treated the same in PHMA and GHMA: These areas are avoidance areas for general ROWs.<br><br>If a proposed project cannot be avoided, the following actions will apply:<br>*Within PHMA all new power and utility lines (overhead lines) that can be safely buried will be buried.<br>*When burial of power lines is not possible, above ground lines will be located and designed to minimize impacts of predation, collision and other associated stressors to sage-grouse.<br>*Existing overhead lines within PHMA and within sage-grouse winter range will be evaluated for threats to sage-grouse and if necessary, modified to reduce the threat. If modification is not likely to be effective, the overhead line may be relocated.<br>*Any requirements for modification or relocation of existing overhead lines will be subject to valid existing rights.<br>*Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table 2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-30 Rights of Ways (ROWs): Winter range in PHMA will be treated the same as winter range in GHMA: Renewable Energy ROWs in sage-grouse winter range will be an exclusion area.<br><br>Other types of ROWs in sage-grouse winter range will be an avoidance area. In cases where avoidance is not possible, BLM may require co-location of new ROWs with existing ROWs where possible.<br><br>ROWs are defined for sage-grouse management in terms of major and minor ROWs. Major ROWs include transmission lines 100kV and greater and pipelines 24 inches in width and greater. Minor ROWs include utilities under these design descriptions, as well as communication sites and towers.<br><br>Greater Sage-Grouse PHMA are avoidance areas for major and minor ROWs.<br><br>Within GHMA, major ROWs are avoidance and minor ROWs are avoidance within two miles of leks with GHMA. The rest of the GHMA is open to minor ROWs.<br><br>Sage-Grouse winter range is treated the same in PHMA and GHMA: These areas are avoidance areas for general ROWs and exclusion areas for renewable energy ROWs. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Fluid Mineral Resources*** | |
| MD-22 (part): Where the federal government owns the surface and the mineral estate is in non-federal ownership in PHMA and GHMA, the federal government will apply appropriate surface use COAs, stipulations, and mineral RDFs through ROW grants or other surface management instruments, to the maximum extent permissible under existing authorities, in coordination with the mineral estate owner/lessee. | No change proposed. |
| MD 22 (part): Where the federal government owns the mineral estate in PHMA and GHMA, and the surface is in non-federal ownership, the federal government will apply the same stipulations, Conditions of Approval (COAs), and/or conservation measures and mineral RDFs if the mineral estate is developed on BLM-administered lands in that management area, to the maximum extent permissible under existing authorities, and in coordination with the landowner. | No change proposed. |
| MD-11 Surface Disturbing and Disruptive Activities and Fluid Minerals: Surface disturbing and disruptive activities will be avoided within 6/10 of a mile of sage-grouse leks. BLM will apply the lek buffer-distances in the US Geological Survey (USGS) Report "Conservation Buffer Distance Estimates for Greater Sage-Grouse-A Review (Open File Report 2014-1239)" in both GHMA and PHMA as detailed in Appendix B, Applying Lek Buffer-Distances When Approving Actions. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-14 Surface Disturbing and Disruptive Activities and Fluid Minerals (part): Surface disturbing and disruptive activities will be avoided in winter range for sage-grouse unless the project proponent can clearly demonstrate that the impacts can be adequately mitigated, Conservation Actions, Guidelines or needed design features (Appendices C and F) are included and the goals for sage-grouse are not compromised. Prior to approving any surface disturbance and disruptive activities, the project proponent will be required to provide a plan approved by BLM to maintain suitability of habitat and avoid or minimize habitat loss and disturbance. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-29 Surface Disturbance and Disruptive Activities and Fluid Minerals in Winter Range (part): Winter range in PHMA will be treated the same as winter range in GHMA: Surface disturbing and disruptive activities will not be allowed in winter range for sage-grouse unless the project proponent can clearly demonstrate that the impacts can be adequately mitigated, conservation actions or needed design features are included and the goals of this plan are not compromised. Prior to approving any surface disturbance and disruptive activities, the project proponent will be required to provide a plan approved by BLM to maintain suitability of habitat and avoid or minimize habitat loss and disturbance. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Oil and gas stipulations will also apply to geothermal resources. | No change proposed. |
| Goal: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA.<br><br>MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Fluid Minerals - NSO: PHMA will be managed as NSO and Use (127,735 surface and 412,822 oil and gas subsurface minerals acres). These areas will be open to oil and gas leasing with a NSO stipulation. All sage-grouse habitat that is not part of PHMA will be managed as GHMA as noted in Figure 1-2. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-11 (Second Part): Fluid Minerals - NSO: NSO or use within 6/10 of a mile from leks. The Authorized Officer (AO) ay waive this stipulation if no portion of the leasehold is within 6/10 mile of the perimeter of an active lek. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-14 Surface Disturbing and Disruptive Activities and Fluid Minerals (part): Fluid Minerals - NSO: GRSG crucial winter range will be managed as a NSO for oil and gas development and exploration. | No change proposed. |
| MD-29 Surface Disturbance and Disruptive Activities and Fluid Minerals in Winter Range (part): Fluid Minerals - NSO: Sage-grouse winter range will be managed as a NSO for oil and gas development and exploration. Waivers or modifications to a fluid minerals lease no-surface-occupancy stipulation will not be granted for NSO stipulations in PHMA. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-16 Surface Disturbing and Disruptive Activities and Fluid Minerals: Fluid Minerals - A CSU stipulation will apply within 2 miles of leks [GHMA]. The AO may waive this stipulation if no portion of the leasehold is within 2 miles of the perimeter of an active lek.<br><br>Fluid Minerals: A CSU stipulation will apply within 2 miles of leks [GHMA]. The AO may waive this stipulation if no portion of the leasehold is within 2 miles of the perimeter of an active lek. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| MD-22 (part): Waivers or modifications to a fluid minerals lease NSO stipulation will not be granted. The AO may grant an exception to a fluid mineral lease NSO stipulation in certain cases. Exceptions based on conservation gain (ii) may only be considered in (A) PHMA of mixed ownership where federal minerals underlie less than fifty percent of the total surface, or (b) area of the public lands where the proposed exception is an alternative to an action occurring on a nearby parcel subject to a valid Federal fluid mineral lease existing as of the date of this RMP. See Appendix G. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Solid Leasable Minerals*** | |
| MD-22 (part): At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR, Part 3461.5. PHMA is essential habitat for maintaining GRSG for purposes of the suitability criteria set forth at 43 CFR, Part 3461.5(o)(1). | Potential change under Alternatives 3, 4, 5, and 6. |
| ***Management Decisions: Locatable Materials*** | |
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Locatable minerals will be open. RDFs (Appendix C) and other applicable BMPs and Guidelines (Appendix J) will be applied as BMPs or Guidelines for locatable minerals, subject to valid existing rights and the mining laws. | Potential change under Alternative 3. |
| ***Management Decisions: Mineral Materials*** | |
| MD-22 (part) Surface Disturbing and Disruptive Activities and Fluid Minerals: Non-energy leasable minerals and salable minerals will be closed except for the following exception: PHMA are closed to new mineral material sales. However, these areas remain "open" to free use permits and the expansion of existing active pits, only if the following criteria are met:<br><br>The activity is within the BSU and project area disturbance cap; the activity is subject to the provisions set forth in the mitigation measures (Appendix F) BMPs and Guidelines (Appendix J), and RDFs for Greater Sage-Grouse Habitat (Appendix C) are applied, and the activity is permissible under the subregional screening criteria. | Potential change under Alternatives 3 and 6. |
| ***Management Decisions: Recreation*** | |
| Management Direction REC-38: In PHMA, do not construct new recreation facilities (e.g., campgrounds, trails, trailheads, and staging areas) unless the development will have a net conservation gain to GRSG habitat (such as concentrating recreation, diverting use away from important areas, etc.), or unless the development is required for visitor health and safety or resource protection. | No change proposed. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| ***Management Decisions: Comprehensive Trails and Travel Management*** | |
| MD-20 Temporary Travel Closures: Temporary travel closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); and 43 CFR subpart 8341 (Conditions of Use).<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the AO to resolve management conflicts and protect persons, property, and public lands and resources.<br><br>Where an AO determines that off-highway vehicles (OHV) are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures are implemented to prevent recurrence (43 CFR, Part 8341.2).<br><br>A closure or restriction order will be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders will be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No change proposed. |
| ***Management Decisions: Livestock Grazing*** | |
| MD 34: The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds based on GRSG Habitat Objectives Table and Land Health Standards (43 CFR, Part4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-32 Land Health Standards: BLM will prioritize grazing leases in PHMA to determine if modifications are necessary prior to renewals or if the allotment does not meet Land Health Standards. | Potential change under Alternatives 3, 4, 5, and 6. |

| South Dakota RMP Revision | Potential Change in 2023 Plan |
|---|---|
| Management Direction 36: The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMA. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (such as fire) and legal obligations.<br><br>The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will include specific management thresholds, based on GRSG Habitat Objectives (Table 2-3), Habitat Objectives for GRSG and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-35-Grazing: Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks can include monitoring for actual use, utilization, and use supervision. (also see MD-36). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-37: Range Improvements: Range improvements in PHMA would be allowed if the improvements would not impact GRSG, improvements would provide a conservation benefit to GRSG such as fences for protecting important seasonal habitats, or if improvements would meet the lek buffer requirement. Refer to Appendix B for a discussion about GRSG lek buffers. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD-23: At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | Potential change under Alternatives 3, 4, 5, and 6. |

**Table 2. South Dakota Habitat Objectives for GRSG**

| Attribute | Indicators | Habitat Conditions | Reference |
|---|---|---|---|
| **BREEDING HABITAT (LEK AND NESTING/EARLY BROOD REARING)** | | | |
| Lek Security | Proximity of trees | Trees absent or rare. When present trees consist of rocky mountain juniper and ponderosa pine >328 feet (100 meters) from lek. | Baruch-Mordo et al. 2013<br>Stiver et al. 2015 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 328 feet (100 m) of an occupied lek | Stiver et al. 2015 |
| **NESTING/EARLY BROOD REARING** | | | |
| Cover | Sagebrush canopy cover [2] | 2-20% | Connelly et al. 2000<br>Connelly et al. 2003<br>Hagen et al. 2011 |
| | Sagebrush height | 4-12 inches (10.16-30.48 cm) | Connelly et al. 2000 |
| | Predominant sagebrush shape | Predominantly spreading shape5 | Stiver et al. 2015 |
| | Perennial grass cover (such as native rhizomatous and bunchgrasses) 2 | >10% | Stiver et al. 2015<br>Connelly et al. 2000 |
| | Perennial grass height (includes residual grasses) | Adequate nest cover based on ecological site potential and seasonal precipitation.[15] | Connelly et al. 2000<br>Stiver et al. 2015<br>Connelly et al. 2003<br>Hagen et al. 2011 |
| | Perennial forb cover [2] | >3%, Based on ecological site potential and seasonal precipitation | Connelly et al. 2000 |
| | Perennial forb availability | Preferred forbs are common with several species present[6] | Stiver et al. 2015 |
| **LATE BROOD-REARING/SUMMER1 (July-October) (Apply to all habitat outside of nesting/breeding and winter)** | | | |
| Cover | Sagebrush canopy cover[2] | 2-20% | Connelly et al. 2000 |
| | Sagebrush height | 4 - 12 inches (10.16-30.48 cm) | Connelly et al. 2000 |
| | Perennial grass canopy cover [2] | >10% | Connelly et al. 2000 |
| | Upland and riparian perennial forb availability [2] | Preferred forbs are common with several preferred species present,6, | Stiver et al. 2015 |
| | Riparian meadow habitat condition | Proper Functioning Condition (PFC)13 | |
| **WINTER1 November-March1 (Apply to areas of known or likely winter-use)** | | | |
| Cover and Food | Seasonal habitat extent | Winter habitat is managed to optimize its potential within the constraints of ecological site potential | Connelly et al. 2000<br>Stiver et al. 2015 |
| | Sagebrush canopy cover | 2-20% | Connelly et al. 2000<br>Stiver et al. 2015 |
| | Sagebrush height above snow | Winter habitat is managed to optimize its potential within the constraints of ecological site potential | Connelly et al. 2000 |

NOTES

1 Seasonal dates can be adjusted by local unit according to geographic region.

2 Absolute cover is the actual recorded cover and can exceed 100% when recorded across all species and all layers. It is not relative cover, which is the proportions of each species, and equals 100%. Note that cover is reported for only those species (e.g., sagebrush, preferred forbs) that are sampled to determine suitability of habitat for sage-grouse. Overall cover at the site

will be greater than that sampled for sage-grouse habitat, due to other species present. Percent cover refers to foliar cover, measured using the HAF protocol line-point intercept method.
3 Arid corresponds to the 10 – 12 inch precipitation zone; *Artemisia tridentata wyomingensis* is a common big sagebrush subspecies for this type site (Stiver et al. 2015 In press).
4 Mesic corresponds to the >12 inch precipitation zone.
5 Collectively the indicators for sagebrush (cover, height, and shape), perennial grass and perennial forb (cover, height and/or availability) represent the desired condition range for nesting/early brood rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. 2015 In press. Sagebrush plants that are more tree or columnar shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015 In press). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.
6 Preferred forbs are listed in Stiver et al. 2015 In press. Overall total forb cover may be greater than that of preferred for cover since not all forb species are listed as preferred.
15 Specific height requirements needed to meet the objective will be set when project level planning is completed.

### 2.14.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. The appendices can be found on the South Dakota RMP ePlanning website.

| ARMPA Appendix Name | Potential for Change in 2023 Plan |
|---|---|
| A: Approved RMP Amendment Maps | Yes |
| B: Applying GRSG Lek Buffer-Distances When Approving Decisions | Yes |
| C: GRSG Required Design Features | Yes |
| D: GRSG Monitoring Framework | Yes |
| E: GRSG Disturbance Caps | Yes |
| F: GRSG Regional Mitigation Strategy | Yes |
| G: Fluid Mineral Stipulations | Yes |
| H: Biological Opinion | No |
| I: Greater Sage-Grouse Effects Analysis Process | Yes |
| J: Summary of Mitigation Measures, Best Management Practices (BMPs), Standards, Guidelines, and Standard Operating Procedures (SOPs) | Yes |
| K: South Dakota Field Office Soil, Water and Reclamation Mitigation Guidelines | No |
| L: South Dakota Field Office Reclamation Guidelines and Abandoned Mine Actions | No |
| M: South Dakota Field Office Grazing Allotment Allocations | No |
| N: Land Ownership Adjustment Criteria | No |
| O: Soil Monitoring | No |
| P: Cultural Resource Stipulation for Grazing Leases | No |
| Q: South Dakota Field Office Air Resource Management Plan: Adaptive Management Strategy for Oil and Gas Resources | No |
| R: Rights-of-Way and Renewable Energy Avoidance or Exclusion Areas | No |
| S: Summary of Restrictions Table | No |

## 2.15 UTAH RMPS

This appendix presents the GRSG approved RMP amendment language from the 2015 and 2019 records of decision for Utah. Changes between 2015 and 2019 are noted. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 and 2019 appendices that are listed in **Section 2.15.2** of this appendix.

### 2.15.1 Existing GRSG RMP Management – Utah RMPs

**Table 1: Changes in Management from the 2015 Approved RMPA to the 2019 Approved RMPA**

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |

| **MA-SSS-2**: Designate SFA as shown on Figure 2-1 (181,100 acres of BLM surface estate; 52,200 acres split-estate federal minerals). SFA will be managed as PHMA, with the following additional management:<br>• Recommended for withdrawal from the Mining Law of 1872 (as amended), subject to valid existing rights.<br>• Managed as NSO, without waiver, exception, or modification, for fluid mineral leasing.<br>• Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-SSS-3:** In PHMA, apply the following management to discretionary disturbances or activities that are not otherwise excluded or closed to minimize and mitigate effects on GRSG and its habitat from the project/activity:<br><br>A- Net Conservation Gain:<br>In all GRSG habitat, in undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation, the BLM will require and ensure mitigation that provides a net conservation gain to the species, including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. Exceptions to net conservation gain for GRSG shall be made for vegetation treatments to benefit Utah prairie dog.<br><br>Mitigation will be conducted according to the mitigation framework contained in Appendix F, Mitigation Strategy: Utah Greater Sage-Grouse RMPA.<br>Consider the likelihood of development of not-yet-constructed surface-disturbing activities – as defined in Table D.2 of the Monitoring Framework (Appendix D)−under valid existing rights prior to authorizing new projects in PHMA.<br><br>B- Disturbance Cap<br>In PHMA, manage discrete anthropogenic disturbances, whether temporary or permanent, so they cover less than 3 percent of 1) PHMA associated with a GRSG population area and 2) within a proposed project analysis area. See Appendix E, Greater Sage-Grouse Disturbance Cap Guidance, for additional information on implementing the disturbance cap, including what is and is not considered disturbance and how to calculate the proposed project analysis area.<br><br>If the 3 percent anthropogenic disturbance cap is exceeded on all lands (regardless of land ownership) within GRSG PHMA in any given population area (BSU), then no | **MA-SSS-3:** In PHMA, apply the following management to discretionary disturbances or activities that are not otherwise excluded or closed to minimize and mitigate effects on GRSG and its habitat from the project/activity:<br><br>A- Mitigation Strategy:<br>In PHMA, when undertaking BLM management actions, and, consistent with valid existing rights and applicable law, when authorizing third-party actions that result in habitat loss and degradation, the BLM will achieve the planning-level GRSG management goals and objectives through implementation of mitigation and management actions. Under this Proposed Plan Amendment, management would be consistent with the GRSG goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [GRSG] or to improve the condition of [GRSG] habitat" across the planning area. Exceptions to this mitigation strategy for GRSG shall be made for vegetation treatments to benefit Utah prairie dog.<br><br>Compensation, which involves replacing or providing substitute resources for the impacts (including through payments to fund such work), would be considered only when voluntarily offered by a proponent, required by a law other than FLPMA, or to meet a State recommendation or requirement. Therefore, consistent with valid existing rights and applicable law, when considering third-party actions that result in habitat loss and degradation, the BLM will consider compensatory mitigation actions only as a component of compliance with a State mitigation plan, program, or authority; when required by a federal law other than FLPMA; or when offered voluntarily by a project proponent. Accordingly, before authorizing third-party actions that result in habitat loss and degradation in PHMA or State of Utah SGMAs, the BLM will complete the following steps: | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| further discrete anthropogenic disturbances (subject to applicable laws and regulations, such as the Mining Law of 1872 [as amended], valid existing rights, etc.) will be permitted by the BLM within GRSG PHMA in any given population area (BSU) until the disturbance has been reduced to less than the cap.<br><br>If the 3 percent disturbance cap is exceeded on all lands (regardless of land ownership) within a proposed project analysis area in PHMA, then no further anthropogenic disturbance will be permitted by the BLM until disturbance in the proposed project analysis area has been reduced to maintain the area under the cap (subject to applicable laws and regulations, such as the Mining Law of 1872 [as amended], valid existing rights, etc.). Within designated utility corridors, the 3 percent disturbance cap may be exceeded at the project scale if the site specific NEPA analysis indicates that a net conservation gain to the species will be achieved. This exception is limited to projects which fulfill the use for which the corridors were designated (ex., transmission lines, pipelines) and the designated width of a corridor will not be exceeded as a result of any project co-location.<br><br>An area with disturbance is not excluded from the 3 percent until it has been restored to provide GRSG habitat. The objective of successful restoration is to provide for the needs of GRSG, as evidenced by one of the following:<br>• Vegetative cover is consistent with the GRSG habitat objectives and the ecological site description (Objective SSS-3), or<br>• Monitoring indicates the area is regularly used by GRSG to sustain one or more seasonal habitat requirements (nesting, brood-rearing, winter).<br><br>Final restoration success and approval for abandonment for disturbances will be subject to an interdisciplinary review of available monitoring data and final monitoring reports. | 1) Notify the appropriate State of Utah agency to determine if the State of Utah requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of GRSG;<br>2) Recommend to the project proponent that it coordinate with the appropriate State of Utah agency to ensure it complies with all applicable State requirements relating to its proposal;<br>3) Consider the State's recommendations – if the State of Utah determines that there are unacceptable residual impacts on GRSG or its habitat and compensatory mitigation is required as a part of State policy or authorization, or if a proponent voluntarily offers mitigation, the BLM will incorporate that mitigation into the BLM's NEPA and decision-making process;<br>4) The BLM will ensure mitigation outcomes are consistent with the State of Utah's mitigation strategy and principles outlined in the State's Conservation Plan for Greater Sage-Grouse, including, but not limited to:<br>a) Creating, restoring and/or protecting functional habitat or habitat corridors to offset the impacts of unavoidable disturbance to GRSG habitat,<br>b) In most cases, compensatory mitigation projects should be completed before the project triggering mitigation occurs,<br>c) Compensatory mitigation projects should account for the risk that the mitigation may fail or not persist for the full duration of the project it is intended to offset,<br>d) Compensatory mitigation projects should provide habitat that is in place for at least the duration of the project it is intended to offset.<br><br>Project-specific analysis will be necessary to determine how a compensatory mitigation proposal addresses impacts from a proposed action. The BLM will cooperate with the State to determine appropriate project design and alignment with State policies and requirements, including those regarding compensatory mitigation. |---|---|---|
| C- Density of Energy/Mining Facilities<br>Subject to applicable laws and regulations and valid existing rights, if the average density of one energy and mining facility per 640 acres (the density cap) is exceeded on all lands (regardless of land ownership) in PHMA within a proposed project analysis area, then no further disturbance from energy or mining facilities will be permitted by BLM: (1) until disturbance in the proposed project analysis area has been reduced to maintain the limit under the cap; or (2) unless the energy or mining facility is collocated into an existing disturbed area (subject to applicable laws and regulations, such as the Mining Law of 1872 [as amended], valid existing rights, etc.). Energy and mining facilities to which this action applies are:<br>• Oil and gas wells and development facilities,<br>• Coal mines,<br>• Wind towers,<br>• Solar fields,<br>• Geothermal wells/developments, and<br>• Active locatable, leasable, and saleable developments.<br><br>D- Predation<br>In PHMA, eliminate or minimize external food sources for corvids, particularly dumps, or waste transfer facilities. Apply best management practices (BMP) to development activities to reduce opportunities for GRSG predators (e.g., limiting food sources, nest/perches deterrents, and road kill).<br><br>Apply habitat management practices (e.g. grazing management and vegetation treatments) that decrease the effectiveness of predators.<br><br>Collaborate with applicable government entities to implement programs to control predator populations of GRSG (e.g., ravens, red fox, badgers, and raccoons).<br><br>E- Noise Restrictions:<br>In PHMA, limit noise from discrete anthropogenic disturbances, whether during construction, operation, or maintenance, to not exceed 10 decibels above ambient sound levels (as available at the signing of the GRSG RMPA ROD or as | BLM will defer to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action.<br><br>The BLM will not deny a proposed authorization in GRSG habitat solely on the grounds that the proponent has not proposed or agreed to undertake voluntary compensatory mitigation. In cases where waivers, exceptions, or modification may be granted for projects with a residual impact, voluntary compensatory mitigation consistent with the State's management goals can be one mechanism by which a proponent achieves the RMPA goals, objectives, and waiver, exception, or modification criteria. When a proponent volunteers compensatory mitigation as their chosen approach to address residual impacts, the BLM can incorporate those actions into the rationale used to grant a waiver, exception, or modification. The final decision to grant a waiver, exception, or modification will be based, in part, on criteria consistent with the State's GRSG management plans and policies.<br><br>In short, the BLM would continue to apply the mitigation hierarchy as described in the CEQ regulations at 40 CFR 1508.20; however, the BLM would focus on avoiding, minimizing, rectifying, and reducing impacts over time. Compensation would be considered only when voluntarily offered by a proponent, required by a law other than FLPMA, or to meet a State recommendation or requirement. The BLM commits to cooperating with the State to analyze applicant-proposed, state-recommended, or state-imposed compensatory mitigation to offset residual impacts. The BLM remains committed to achieving the planning-level management goals and objectives identified in this ROD and the 2015 ARMPA by ensuring GRSG habitat impacts are addressed through implementing mitigating actions consistent with the governing RMP.<br><br>B- Disturbance Cap<br>In PHMA, manage discrete anthropogenic disturbances so they cover less than 3 percent of 1) PHMA associated with a GRSG population area and 2) within a | *(See above.)* |

|---|---|---|
| **MA-VEG-2:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. When conducting conifer treatments:<br>• Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase I or phase II.<br>• Treat areas in late Phase II or Phase III condition to create movement corridors, connect habitats, or to break up continuous, hazardous fuels and reduce the potential for catastrophic fire.<br>• Prioritize methods to reduce conifer canopy cover to those that maintain the understory vegetation as the preferred treatment methods (e.g., mechanical, lop and scatter).<br>• Require that vegetation treatments conducted within 0.6 miles of a lek include an objective of reducing conifer, where technically feasible, to less than 5 percent canopy cover, with preference for complete removal.<br>• Include stipulations to avoid removing old-growth pinyon/juniper stands (e.g., Tausch et al. 2009; Miller et al. 1999).<br>• Use of site-specific analysis and tools like the Vegetation Dynamics Development Tool and the fire and invasives assessment tool report (Chambers et al. 2014) will help refine the location for specific areas to be treated. | **MA-VEG-2:** Remove conifers encroaching into sagebrush habitats, in a manner that considers tribal cultural values. When conducting conifer treatments:<br>• Prioritize treatments closest to occupied GRSG habitats and near occupied leks, and where juniper encroachment is phase I or phase II.<br>• Treat areas in late Phase II or Phase III condition to create movement corridors, connect habitats, or to break up continuous, hazardous fuels and reduce the potential for catastrophic fire.<br>• Prioritize methods to reduce conifer canopy cover to those that maintain the understory vegetation as the preferred treatment methods (e.g., mechanical, lop and scatter).<br>• When conducting habitat treatments, remove trees that have corvid nests that could impact PHMA nesting and brood-rearing habitat when in compliance with the Migratory Bird Treaty Act (e.g., when the nest is unoccupied and outside of migratory bird nesting season).<br>• Require that vegetation treatments conducted within 0.6 miles of a lek include an objective of reducing conifer, where technically feasible, to less than 5 percent canopy cover, with preference for complete removal.<br>• Include stipulations to avoid removing old-growth pinyon/juniper stands (e.g., Tausch et al. 2009; Miller et al. 1999).<br>• Use of site-specific analysis and tools like the Vegetation Dynamics Development Tool and the fire and invasives assessment tool report (Chambers et al. 2014) will help refine the location for specific areas to be treated. | No change proposed. |
| **MA-VEG-3:** In PHMA manage wet meadows to maintain a component of perennial forbs with diverse species richness relative to site potential (e.g., reference state) to facilitate brood rearing. Also conserve or enhance these wet meadow complexes to maintain or increase amount of edge and cover within that edge. | **MA-VEG-3:** In PHMA manage riparian areas for proper functioning condition. In PHMA manage wet meadows to maintain a component of perennial forbs with diverse species richness relative to site potential (e.g., reference state) to facilitate brood rearing. Also conserve or enhance these wet meadow complexes to maintain or increase amount of edge and cover within that edge. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-VEG-4**: In PHMA, include GRSG habitat objectives in restoration/treatment projects. Include short-term and long-term habitat conditions in treatment objectives, including specific objectives for the establishment of sagebrush cover and height, as well as cover and heights for understory perennial grasses and forbs necessary for GRSG seasonal habitats (see Objective SSS-3).<br><br>Make meeting the GRSG objectives for the restoration/treatment project one of the primary priorities for the project and subsequent land uses, recognizing that managing for other special status species may result in treatment objectives that may not meet GRSG seasonal habitat objectives (e.g., winter habitat cover requirements versus creation of Utah prairie dog habitat). Where GRSG habitat overlaps with that of federally listed threatened or endangered species (e.g., Utah prairie dogs), coordinate with species-specific experts to develop conservation and recovery objectives and allow habitat treatments that will benefit both species. | No changes made. | No change proposed. |
| **MA-VEG-5**: In PHMA, prioritize the use of native seeds for restoration based on availability, adaptation (ecological site potential), and probability of success. Where probability of success or adapted seed availability is low, desirable non-native seeds may be used as long as they support GRSG habitat objectives. Re-establishment of appropriate sagebrush species/subspecies and important understory plants, relative to site potential, should be the principle objective for rehabilitation efforts. | No changes made. | No change proposed. |
| **MA-VEG-6**: In PHMA, design post restoration management to ensure long term persistence. This could include changes in livestock grazing management, wild horse and burro management and travel management, etc., to achieve and maintain the desired condition of the restoration effort that benefits GRSG, as well as monitoring and maintaining the treated area. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-VEG-7**: In PHMA, limit commercial seed or live plant collection to levels that ensure long-term maintenance of the GRSG habitat objectives. Locations, species allowed for collection, and limits on the amounts to be collected will be developed on a case-by-case basis following environmental review of annual site-specific conditions. Commercial collection during sensitive seasonal periods (see MA-SSS-3G) will include mitigation, developed to reflect the site-specific conditions on the ground, that could include, but is not necessarily limited to, restrictions on the timing and method of collection activities, limiting the number of individuals collecting, providing portions of collected seeds for use in local restoration projects, etc. | No changes made. | No change proposed. |
| **MA-VEG-8:** In PHMA, allow for seed collection and use in restoration/reclamation activities. Prioritize use of seed from areas as close as possible to where the seed will be used to capture local adaptations. | No changes made. | No change proposed. |
| **MA-VEG-9:** In PHMA, diversify the perennial grass and forb components through additional seeding in areas where historical seedings (e.g., crested wheatgrass) have been recolonized by sagebrush. | No changes made. | No change proposed. |
| **MA-VEG-10**: Follow the applicable and technically feasible RDFs in Appendix C for vegetation projects/activities (fuels management) at the site-level unless at least one of the following can be demonstrated in the NEPA analyses associated with the project/activity:<br>• A specific RDF is documented to not be applicable to the site-specific conditions of the project/activity;<br>• An alternative RDF, state-implemented conservation measure, or plan-level protection is determined to provide equal or better protection for GRSG or its habitat;<br>• A specific RDF will provide no additional protection to GRSG or its habitat. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-VEG-11**: In PHMA, design post Emergency Stabilization and Rehabilitation/Burn Area Emergency Rehabilitation management to ensure long term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, wild horse and burro, and travel management, etc., to achieve and maintain the desired condition of Emergency Stabilization and Rehabilitation projects to benefit GRSG (Eiswerth and Shonkwiler 2006).<br><br>Monitor and control invasive vegetation post-wildfire for at least 3 years. | No changes made. | No change proposed. |
| Integrated Invasive Species Management<br>**MA-VEG-12**: In PHMA, integrated Vegetation Management will be used to control, suppress, and eradicate noxious and invasive species per BLM Handbook H-1740-2. | No changes made. | No change proposed. |
| **MA-VEG-13**: In PHMA, treatments of Mormon cricket outbreaks will be collaborated with partners at the federal, state, and local levels to maintain and enhance GRSG habitats. | No changes made. | No change proposed. |
| **MA-VEG-14**: Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | No change proposed. |

|---|---|---|
| **MA-LG-4:** Evaluate Utah's Rangeland Health Standards and process grazing permits. Focus monitoring and management activities on allotments found not to be achieving Utah's Rangeland Health Standards where livestock grazing is identified as a causal factor and that have the best opportunities for conserving, enhancing or restoring habitat for GRSG.<br><br>Use ecological site descriptions and/or other appropriate information to determine the desired plant community within proper functioning ecological processes for conducting land health assessments to evaluate the achievement or non-achievement of rangeland health standards. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-5:** In PHMA and GHMA, conduct land health assessments that include indicators and measurements of structure, condition, composition, etc., of vegetation specific to achieving GRSG habitat objectives (Objective SSS-3), including within wetlands and riparian areas. Prioritize land health assessments in SFA, followed by PHMA outside of the SFA. Conduct land health assessments at the watershed scale and use the GRSG habitat objectives when assessing the applicable standard in GRSG habitats. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-LG-6:** In PHMA, when livestock management practices are determined to not be compatible with meeting or making progress towards achievable habitat objectives following appropriate consultation, cooperating and coordination, implement changes in grazing management through grazing authorization modifications, or allotment management plan implementation. Potential modifications include, but are not limited to, changes in:<br>• Season or timing of use;<br>• Numbers of livestock;<br>• Distribution of livestock use;<br>• Duration and/or level of use;<br>• Kind of livestock (e.g., cattle, sheep, horses, or goats); and<br>• Grazing schedules (including rest or deferment).<br>*Not in priority order<br><br>The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within SFA and PHMA will include specific management thresholds based on **Table 2**, Land Health Standards (43 CFR, Part 4180.2), and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. Adjustments to meet seasonal GRSG habitat requirements could include those items identified in the list above. | **MA-LG-6:** In PHMA, when an area is not meeting or making progress towards achievable habitat objectives and Land Health Standards, and the causal factor is livestock grazing (i.e., improper livestock grazing), implement changes in grazing management through grazing authorization modifications, or allotment management plan implementation. Potential modifications include, but are not limited to, changes in:<br>• Season or timing of use;<br>• Numbers of livestock;<br>• Distribution of livestock use;<br>• Duration and/or level of use;<br>• Kind of livestock (e.g., cattle, sheep, horses, or goats); and<br>• Grazing schedules (including rest or deferment).<br>*Not in priority order<br><br>When improper livestock grazing is the causal factor for not meeting or making progress towards achievable habitat objectives and Land Health Standards, the NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMA will analyze multiple potential modifications (e.g., alternatives from the list above) that address the reasons for not meeting, allowing the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. Adjustments to meet seasonal GRSG habitat requirements could include those items identified in the list above. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-7:** In PHMA, during drought periods, prioritize evaluating effects of the drought relative to GRSG needs for food and cover.<br><br>Initiate emergency management measures (e.g. delaying turnout, adjusting the amount and/or duration of livestock grazing, implement other terms of the permit) during times of drought to protect GRSG habitat, in accordance with Instruction Memorandum 2013-094 (Resource Management During Drought), or other agency policies.<br><br>Implement post-drought management to allow for vegetation recovery that meets GRSG needs. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-LG-8:** In PHMA, manage riparian areas and wet meadows for proper functioning condition. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-9:** In PHMA, assess livestock grazing in riparian and meadow complexes and ensure recovery or maintenance of appropriate vegetation and water quality. Where recovery or maintenance is not occurring and the causal factor is livestock grazing, reduce pressure on riparian or wet meadow vegetation used by GRSG in the summer by adjusting grazing management practices (e.g., use fencing/herding techniques, or changes in seasonal use or livestock distribution).<br><br>Allotments within SFA, followed by those within PHMA, and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-10:** In PHMA, limit authorization of new water developments to projects that have a neutral effect or are beneficial to GRSG habitat (such as by shifting livestock use away from critical areas). New developments that divert surface water must be designed to maintain riparian or wet meadow vegetation and hydrology to meet GRSG needs. | **MA-LG-10:** In PHMA, manage existing and new water developments to have a neutral or beneficial effect to GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-11:** In PHMA, evaluate existing water developments (springs, seeps, etc., and their associated pipelines) to determine if modifications are necessary to maintain or improve riparian areas and GRSG habitat. Make modifications where necessary, considering impacts on other water uses when such considerations are neutral or beneficial to GRSG. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-12:** In PHMA, ensure that vegetation treatments conserve, enhance or restore GRSG habitat (this includes treatments that benefit livestock). | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-LG-13**: In PHMA, evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses to determine if they should be restored to sagebrush or habitat of higher quality for GRSG. If existing seedings provide value in conserving or enhancing GRSG habitats, then no restoration will be necessary. Assess the compatibility of these seedings for GRSG habitat during the land health assessments. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-14:** In PHMA, design new structural range improvements to have a neutral effect or conserve, enhance, or restore GRSG habitat through an improved grazing management system relative to GRSG objectives. Structural range improvements, in this context, include but are not limited to: cattle guards, fences, exclosures, corrals or other livestock handling structures; pipelines, troughs, storage tanks (including moveable tanks used in livestock water hauling), windmills, ponds/reservoirs, solar panels and spring developments. Potential for invasive species establishment or increase following construction must be considered in the project planning process and monitored and treated post-construction. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-15:** In PHMA, evaluate existing structural range improvements to make sure they have a neutral effect or conserve, enhance or restore GRSG habitat. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-16:** To reduce outright GRSG strikes and mortality, remove, modify or mark fences in high risk areas (Stevens et al. 2012) based on proximity to lek (e.g., within 1.2 miles of a lek), lek size, and topography, or as latest science indicates. Prioritize actions in SFA first, then PHMA.<br><br>Employ NRCS fence collision risk tool (NRCS/CEAP Conservation Insight Publication "Applying the Sage Grouse Fence Collision Risk Tool to Reduce Bird Strikes"). | **MA-LG-16:** To reduce outright GRSG strikes and mortality, remove, modify or mark fences in high risk areas (Stevens et al. 2012) based on proximity to lek (e.g., within 1.2 miles of a lek), lek size, and topography, or as latest science indicates.<br><br>Employ NRCS fence collision risk tool (NRCS/CEAP Conservation Insight Publication "Applying the Sage Grouse Fence Collision Risk Tool to Reduce Bird Strikes"). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-LG-17:** In PHMA, monitor for and treat noxious weeds and treat invasive species where needed, associated with existing range improvements. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-LG-18:** At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fire breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR, Part 4110.2-3. | No similar action. | Potential change under Alternatives 3, 4, 5, and 6. |
| ***WILD HORSES AND BURROS (WHB)*** | ***WILD HORSES AND BURROS (WHB)*** | — |
| **Management Actions (MA):** | **Management Actions (MA):** | — |
| **MA-WHB-1:** Manage HMAs in GRSG habitat within established appropriate management level ranges to achieve and maintain GRSG habitat objectives (Objective SSS-3). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-WHB-2:** Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g. range, wildlife, and riparian). The priorities for conducting assessments are:<br>1. HMAs containing PHMA;<br>2. HMAs containing only GHMA;<br>3. HMAs containing sagebrush habitat outside of PHMA and GHMA mapped habitat; and<br>4. HMAs without GRSG habitat. | **MA-WHB-2:** Complete rangeland health assessments for HMAs containing GRSG habitat using an interdisciplinary team of specialists (e.g. range, wildlife, and riparian). The priorities for conducting assessments are:<br>1. HMAs containing PHMA;<br>2. HMAs containing sagebrush habitat outside of PHMA mapped habitat; and<br>3. HMAs without GRSG habitat. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-WHB-3:** Prioritize gathers and population growth suppression techniques in HMAs in GRSG habitat, unless removals are necessary in other areas to address higher priority environmental issues, including herd health impacts. | No changes made. | Potential change under Alternative 3. |
| **MA-WHB-4:** In PHMA, assess and adjust appropriate management levels through the NEPA process within HMAs when wild horses or burros are identified as a significant causal factor in not meeting land health standards, even if current appropriate management levels are not being exceeded. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| **MA-WHB-5:** In PHMA, monitor the effects of WHB use in relation to GRSG seasonal habitat objectives on an annual basis to help determine future management actions. | No changes made. | Potential change under Alternative 3. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-WHB-6:** Develop or amend herd management plans to incorporate GRSG habitat objectives and management considerations for all HMAs within GRSG habitat, with an emphasis placed on PHMA. | No changes made. | Potential change under Alternative 3. |
| **MA-WHB-7:** Consider removals or exclusion of wild horses/burros during or immediately following emergency situations (such as fire, floods, and drought) to facilitate meeting GRSG habitat objectives where HMAs overlap with GRSG habitat. | No changes made. | Potential change under Alternative 3. |
| **MA-WHB-8**: When conducting NEPA analysis for wild horse/burro management activities, water developments, or other rangeland improvements for wild horses, address the direct and indirect effect on GRSG populations and habitat. Implement any water developments or rangeland improvements using the criteria identified for domestic livestock. | No changes made. | Potential change under Alternative 3. |
| **MA-WHB-9:** Coordinate with professionals from other federal and state agencies, researchers at universities, and others to utilize and evaluate new management tools (e.g., population growth suppression, inventory techniques, and telemetry) for implementing the wild horse and burro program. | No changes made. | Potential change under Alternative 3. |
| ***MINERALS RESOURCES (MR)*** | ***MINERALS RESOURCES (MR)*** | — |
| **Management Actions (MA):** | **Management Actions (MA):** | — |
| **MA-MR-1:** Allow exploration for all minerals (e.g., geophysical, trenching, drilling, etc.) within mapped occupied GRSG habitat areas that are not closed to leasing, permitting, etc., to obtain exploratory information. In areas where leasing, permitting, etc. is still available, minerals exploration shall be subject to the pertinent management for discretionary activities in PHMA (MA-SSS-3) and GHMA (MA-SSS-5). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| ***Fluid Minerals*** | ***Fluid Minerals*** | ***Fluid Minerals*** |
| **Objectives:** | **Objectives:** | **Objectives:** |
| **Objective MR-1:** Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of GRSG, priority will be given to development in non-habitat areas first and then in the least suitable habitat for GRSG. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 USC 226(p) and 43 CFR, Part 3162.3-1(h). | No similar objective. | Potential change under Alternatives 3, 4, 5, and 6. |
| **Objective MR-2:** Where a proposed fluid mineral development project on an existing lease could adversely affect GRSG populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, minimize, and compensate for adverse impacts on the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an application for permit to drill for the lease to avoid, minimize, and compensate for impacts on GRSG or its habitat and will ensure that the best information about the GRSG and its habitat informs and helps to guide development of such federal leases. | No changes made. | No change proposed. |
| **Management Actions (MA):** | **Management Actions (MA):** | — |
| **MA-MR-2:** Manage fluid mineral leasing in PHMA as follows (Figure 2-4, Fluid Minerals [Oil and Gas] [Appendix A]) (Appendix G, Stipulations Associated with Fluid Mineral Leasing):<br>• open to leasing, subject to standard stipulations: 0 acres<br>• open to leasing, subject to CSU and/or TL stipulations: 23,600 acres<br>• open to leasing, subject to NSO stipulations: 3,229,600 acres<br>• closed to leasing: 111,900 acres | No changes made. | Potential change under Alternatives 3 and 5a. |

|---|---|---|
| parallel, or redundant will be considered for closure.<br>• During subsequent travel management planning, seasonal restrictions on OHV use will be considered in important seasonal habitats where OHV use is a threat. During subsequent travel management planning, consider limiting over snow vehicles designed for use over snow and that runs on a track or tracks and/or a ski or skis, while in use over snow to designated routes or consider seasonal closures in GRSG wintering areas from November 1 through March 31.<br>• During subsequent travel management planning, routes not required for public access or recreation with a current administrative/agency purpose or need will be evaluated for administrative access only.<br>• During subsequent travel management planning, consider prioritizing restoration of routes not designated in a Travel Management Plan.<br>• During subsequent travel management plan implementation, consider using seed mixes or transplant techniques that will maintain or enhance GRSG habitat when rehabilitating linear disturbances.<br>• During subsequent travel management plan implementation, consider scheduling road maintenance to avoid disturbance during sensitive periods and times to the extent practicable. Consider using time of day limits (e.g., no use between 6:00 pm and 9:00 am) to reduce impacts on GRSG during breeding periods. | *(See above.)* | *(See above.)* |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-TTM-4:** In PHMA, complete transportation plans in accordance with National BLM Travel Management guidance, requiring the BLM to maintain a current action plan and planning schedule to most effectively target available resources. The following GRSG population areas are Utah's top priority areas to designate comprehensive travel plans:<br>• Sheeprocks<br>• Box Elder<br>• Ibapah<br>• Bald Hills<br>• Rich<br>• Hamlin Valley | No changes made. | No change proposed. |
| **MA-TTM-5:** In PHMA, travel systems will be managed with an emphasis on improving the sustainability of the travel network in a comprehensive manner to minimize impacts on GRSG, maintain motorist safety, and prevent unauthorized cross country travel while meeting access needs. To do so, it may be necessary to improve portions of existing routes, close existing routes or create new routes that meet user group needs, thereby reducing the potential for pioneering unauthorized routes. The emphasis of the comprehensive travel and transportation planning will be placed on having a neutral or positive effect on GRSG habitat. | No changes made. | No change proposed. |
| **MA-TTM-6:** In PHMA, when considering upgrade of existing routes that will change route category (BLM route categories: road, primitive road, or trail) or capacity, consider the larger transportation network while providing for protection of GRSG habitat. | No similar action. | No change proposed. |
| **MA-TTM-7:** In PHMA, use existing roads, or realignments as described above to access valid existing rights that are not yet developed. If valid existing rights cannot be accessed via existing roads, then build any new road constructed to the absolute minimum standard necessary, and add the surface disturbance to the total disturbance. Apply additional effective mitigation necessary to offset the resulting loss of GRSG habitat. Plan for new routes in consideration of the larger transportation network objectives and needs while providing for protection of GRSG habitat. | No changes made. | No change proposed. |

| 2015 BLM GRSG Approved RMP Amendment | Changes between 2015 and 2019 GRSG Management | Potential for Change in 2023 Plan |
|---|---|---|
| **MA-TTM-8:** In PHMA, when reseeding roads, primitive roads and trails, use appropriate seed mixes and consider the use of transplanted sagebrush. | No similar action. | No change proposed. |
| **MA-TTM-9:** Develop an educational process to advise OHV users of the potential for conflict with GRSG. | No changes made. | No change proposed. |
| **MA-TTM-10:** In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR, subpart 8351 (Designated National Area); 43 CFR, subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR, subpart 8341 (Conditions of Use) and any applicable policies.<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that OHVs are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. (43 CFR, Part 8341.2) A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | **MA-TTM-10:** In PHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR, subpart 8351 (Designated National Area); 43 CFR, subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR, subpart 8341 (Conditions of Use) and any applicable policies.<br><br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. [5] Holloran and Anderson 2005
[6] Stiver et al. 2015 *In Press*
[7] Baruch-Mordo et al. 2013
[8] Connelly et al. 2000
[9] Unpublished data, Utah Community-Based Conservation Program Greater Sage-Grouse Statewide Database, Utah State University, Logan, Utah and Brigham Young University, Provo, Utah. Summarization and analysis of nesting and brood-rearing habitat characteristics from data collected through Utah State University and Brigham Young University research efforts. Researchers located the nest and brood sites using radio-marked telemetry methods. Shortly after the site was used by the marked bird (after hatch or use by a brood), vegetation characteristics on the site were measured using the line intercept method for shrub canopy cover and Daubenmire frames for herbaceous cover. Researchers across the various study areas used methods that followed the guidelines identified in Connelly et al. (2003).
[10] Sagebrush plants that are more tree or columnar-shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015 *In Press*). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush), and a natural part of the plant community. However, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site specific scales.
[11] Specific height requirements needed to meet the objective will be set at the time of watershed assessments.
[12] Preferred forbs are listed in Stiver et al. 2015 *In Press*. Overall total forb cover may be greater than that of preferred forb cover since not all forb species are listed as preferred.
[13] The height of sagebrush remaining above the snow depends upon snow depth in a particular year. Intent is to manage for tall, healthy, sagebrush stands.

[11] Specific height requirements needed to meet the objective will be set at the time of watershed assessments.
[12] Preferred forbs are listed in Stiver et al. 2015. Overall total forb cover may be greater than that of preferred forb cover, since not all forb species are listed as preferred.

## Table 4. PHMA and GHMA in the 2015 BLM GRSG Approved RMPA

| Population Area | Acres | | | | | |
|---|---|---|---|---|---|---|
| | PHMA | | | GHMA | | |
| | Total Surface[1] | BLM Surface[2] | Split Estate[3] | Total Surface[1] | BLM Surface[2] | Split Estate[3] |
| Uintah | 566,800 | 263,200 | 140,800 | 991,500 | 294,200 | 81,700 |
| Carbon[4] | 260,100 | 43,500 | 124,200 | 198,700 | 82,800 | 19,200 |
| Emery | 85,500 | 100 | 84,000 | 11,400 | 0 | 9,700 |
| Parker Mtn. | 741,300 | 214,200 | 378,300 | 12,900 | 0 | 7,400 |
| Panguitch | 343,900 | 163,200 | 91,000 | 0 | 0 | 0 |
| Bald Hills | 326,400 | 259,400 | 5,200 | 21,200 | 8,300 | 1,200 |
| Hamlin Valley | 143,700 | 101,500 | 6,600 | 0 | 0 | 0 |
| Sheeprocks | 534,600 | 381,100 | 111,200 | 296,500 | 52,800 | 15,300 |
| Ibapah | 88,800 | 48,000 | 700 | 10,800 | 10,100 | 0 |
| Box Elder | 1,227,800 | 439,200 | 112,000 | 0 | 0 | 0 |
| Rich | 1,051,000 | 167,000 | 178,400 | 197,900 | 300 | 20,600 |
| Lucerne | 0 | 0 | 0 | 37,500 | 0 | 11,500 |
| Strawberry | 161,500 | 0 | 40,900 | 20,600 | 0 | 500 |
| *Statewide* | *5,531,400* | *2,080,400* | *1,273,300* | *1,799,000* | *448,500* | *167,100* |
| *% PHMA/ GHMA* | *75%* | *80%* | *85%* | *25%* | *20%* | *15%* |

[1] Acreage associated with total PHMA polygon, regardless of land ownership.
[2] Acreage within PHMA where the BLM has managerial authority on the surface estate.
[3] Acreage where the surface and mineral estates are owned or administered by separate entities. These acres show where the surface estate is not BLM (e.g., private, state, tribal, and Forest Service), but that have a federal mineral estate administered by the BLM. Most minerals decisions apply to the combination of the BLM surface and mineral estates.
[4] The 41,200 acres of National Forest System lands in the Anthro Mountain area would be managed as neither PHMA nor GHMA. These areas would be identified as "Anthro Mountain." In the BLM's RMPPA, these areas are considered split-estate, where the BLM administers the mineral estate.

**Table 5. PHMA in the 2019 BLM GRSG Approved RMPA**

| Population Area | Acres | | |
|---|---|---|---|
| | PHMA | | |
| | Total Surface[1] | BLM Surface[2] | Split Estate[3] |
| Uintah | 566,800 | 263,200 | 140,800 |
| Carbon [4] | 260,100 | 43,500 | 124,200 |
| Emery | 85,500 | 100 | 84,000 |
| Parker Mtn. | 741,300 | 214,200 | 378,300 |
| Panguitch | 343,900 | 163,200 | 91,000 |
| Bald Hills | 326,400 | 259,400 | 5,200 |
| Hamlin Valley | 143,700 | 101,500 | 6,600 |
| Sheeprocks | 534,600 | 381,100 | 111,200 |
| Ibapah | 88,800 | 48,000 | 700 |
| Box Elder | 1,227,800 | 439,200 | 195,800 |
| Rich | 1,015,400 | 167,000 | 153,700 |
| Lucerne | 0 | 0 | 0 |
| Strawberry | 161,500 | 0 | 40,900 |
| *Statewide*[5] | *5,495,800* | *2,080,400* | *1,332,400* |

[1] Acreage associated with total PHMA polygon, regardless of land ownership.
[2] Acreage within PHMA where the BLM has managerial authority on the surface estate.
[3] Acreage where the surface and mineral estates are owned or administered by separate entities. These acres show where the surface estate is not BLM (e.g., private, state, tribal, and Forest Service), but that have a federal mineral estate administered by the BLM. Most minerals decisions apply to the combination of the BLM surface and mineral estates.
[4] The 41,200 acres of National Forest System lands in the Anthro Mountain area would not be managed PHMA. These areas would be identified as "Anthro Mountain." In the BLM's RMPPA, these areas are considered split-estate, where the BLM administers the mineral estate.
[5] PHMA were mapped to exclude all incorporated towns/cities.

### 2.15.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The appendices can be found on the Utah GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Approved RMP Amendment Maps | 2015 | Yes |
| A: Maps | 2019 | Yes |
| B: Applying Lek Buffer Distances | 2015, 2019 | No |
| C: Required Design Features | 2015 | Yes |
| D: Greater Sage-Grouse Monitoring Framework | 2015 | No |
| E: Greater Sage-Grouse Disturbance Cap Guidance | 2015, 2019 | Yes |
| F: Mitigation Strategy: Utah Greater Sage-Grouse RMPA | 2015 | Yes |
| G: Stipulations Associated with Fluid Mineral Leasing | 2015, 2019 | Yes |
| H: Fire and Invasives Assessment Tool | 2015 | No |
| I: Adaptive Management | 2015, 2019 | Yes |
| J: Biological Opinion | 2015 | No |
| K: Greater Sage Grouse Habitat Baseline and Habitat Update Protocol | 2015, 2019 | Yes |

## 2.16 WYOMING RMP 2015 AMENDMENTS

This appendix presents the GRSG approved RMP amendment language from the 2015 record of decision for the RMP Amendments for Casper, Kemmerer, Newcastle, Pinedale, Rawlins, and Rock Springs RMPs. These RMPs were not amended in 2019. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable 2015 appendices that are listed in **Section 2.16.2** of this appendix.

### 2.16.1 Existing GRSG RMP Management – Wyoming RMP 2015 Amendments (Casper, Kemmerer, Newcastle, Pinedale, Rawlins, and Rock Springs RMPs)

**Table 1. Summary of Goals, Objectives, and Management Actions in Wyoming 2015 RMP Amendments**

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| Management Goal 1: Conserve, restore, and enhance Greater Sage-Grouse habitat on a landscape scale consistent with local, state, and federal management plans and policies, as practical, while providing for multiple use of BLM-administered lands. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| Management Objective (MO) 1: In cooperation with the State of Wyoming and its agencies, local governments, private landowners, local Greater Sage-Grouse working groups, partners, and stakeholders, develop site-specific conservation strategies to maintain or enhance Greater Sage-Grouse habitats and habitat connectivity. | No changes made. | No change proposed. |
| MO 2: Maintain and enhance quality/suitable habitat to support the expansion of Greater Sage-Grouse populations on federally administered lands within the planning area. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO 3: Manage Greater Sage-Grouse seasonal habitats and maintain habitat connectivity to support population objectives set by the State of Wyoming in cooperation with the agencies. | No changes made. | No change proposed. |
| MO 4: Identify and prioritize opportunities for habitat enhancement and conservation within Greater Sage-Grouse core habitat areas based on threats and the ability to manage Greater Sage-Grouse habitat. | No changes made. | No change proposed. |
| MO 5: Restore native (or desirable) plants and create landscape patterns that most benefit Greater Sage-Grouse. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MO 6: Develop specific habitat objectives to protect, enhance, or restore Greater Sage-Grouse priority habitat based on ESDs and BLM land health evaluations (including within wetlands and riparian areas) taking into account site history (historic treatments or habitat manipulations) that have changed the soil chemistry, possibly altering the ESD. If an effective grazing system that meets sage-grouse habitat requirements is not already in place, analyze at least one alternative that conserves, restores, or enhances sage-grouse habitat in the NEPA document prepared for grazing management (Doherty et al. 2011, Williams et al. 2011). | Develop specific habitat objectives to protect, enhance, or restore Greater Sage-Grouse priority habitat based on ESDs and BLM land health evaluations (including within wetlands and riparian areas) taking into account site history (historic treatments or habitat manipulations) that have changed the soil chemistry, possibly altering the ESD. | No change proposed. |
| MO 7: Establish measurable objectives related to Greater Sage-Grouse habitat from baseline monitoring data, ESDs, or land health assessments/evaluations. | No changes made. | No change proposed. |
| MO 8: Manage for vegetation composition and structure consistent with ecological site potential to achieve Greater Sage-Grouse seasonal habitat objectives. | No changes made. | No change proposed. |
| MO 9: Incorporate available site information collected using the Sage-Grouse Habitat Assessment Framework or similar methods to evaluate existing resource conditions and to develop any necessary resource solutions in cooperation with the State of Wyoming and its agencies, the local governments, private landowners, project proponents, partners, and stakeholders. | No changes made. | No change proposed. |
| MO 10: Incorporate management practices that will provide for maintenance and/or enhancement of Greater Sage-Grouse habitats, including specific attention to maintenance of desired understories of sagebrush plant communities. When developing objectives for residual cover and species diversity, identify the ecological site types within the planning area and refer to the appropriate ESDs. | No changes made. | No change proposed. |
| MO 11: In determining appropriate management actions that will be considered, refer to the document, *Grazing Influence, Management, and Objective Development in Wyoming's Greater Sage-Grouse Habitat* (Cagney et al. 2010) for guidance. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MO 12: Identify PHMA and GHMA for each WAFWA MZ across the current geographic range of Greater Sage-Grouse that are large enough to stabilize populations in the short term and enhance populations over the long term. Greater Sage-Grouse habitat in this planning area overlaps two WAFWA MZs: (1) MZ I - Great Plains and (2) MZ II - Wyoming Basin. | No changes made. | Potential change under Alternatives 4 and 5. |
| MO 13: Protect PHMA and GHMA from anthropogenic disturbance that will reduce distribution or abundance of Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 4 and 5. |
| MO 14: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority would be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 CFR 3162.3-1(h). Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce, and mitigate adverse impacts on the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts on Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases. | Leasing is allowed in PHMA. Where the BLM has a backlog of Expressions of Interest for leasing, the BLM will prioritize its work first in non-habitat management areas, followed by lower priority habitat management areas (e.g., GHMA) and then higher priority habitat management areas (i.e., PHMA). To the extent consistent with federal regulation, law, and policy, priority would be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority would be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 CFR 3162.3-1(h). Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce, and mitigate adverse | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | impacts on the extent compatible with lessees' rights to drill and produce fluid mineral resources. To incentivize development to locate outside of PHMA, the BLM would work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts on Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases. | *(See above.)* |
| MO 15: In all SFAs and PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70 percent) with a minimum of 15 percent sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in *Interpreting Indicators of Rangeland Health* (BLM Tech Ref 1734-6). | In PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70 percent) with a minimum of 15 percent sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in *Interpreting Indicators of Rangeland Health* (BLM Tech Ref 1734-6). | No change proposed. |
| MO 16: The habitat objectives (see Tables 2-2 and 2-3) will be part of the Greater Sage-Grouse habitat assessment to be used during land health evaluations (see Monitoring Framework in Appendix D). These habitat objectives are not obtainable on every acre within the designated Greater Sage-Grouse habitat management areas. Therefore, the determination on whether the objectives have been met will be based on the specific site's ecological ability to meet the desired condition identified in the table. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO 17: Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |
| MD GMD 1: Continue to support the development of statewide Greater Sage-Grouse seasonal habitat models for the State of Wyoming. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 2: Field offices will work with project proponents, partners, and stakeholders to avoid or minimize impacts and/or implement direct mitigation (e.g., relocating disturbance, timing restrictions, etc.), and utilize best management practices (BMPs). | No changes made. | No change proposed. |
| MD GMD 3: Utilize the Wyoming SGIT and LWG plans or other state plans, analyses, and other sources of information to guide development of conservation objectives for local management of Greater Sage-Grouse habitats. The BLM will collaborate with appropriate federal agencies, and the State of Wyoming as contemplated under Governor Executive Order 2013-3, to: (1) develop appropriate conservation objectives; (2) define a framework for evaluating situations where Greater Sage-Grouse conservation objectives are not being achieved on federal land, to determine if a causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and Greater Sage-Grouse conservation objectives; and (3) identify appropriate site-based action to achieve Greater Sage-Grouse conservation objectives within the framework. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD GMD 4: Include the collection of baseline data and outline post-project monitoring components in project planning, as appropriate and necessary. | No changes made. | No change proposed. |
| MD GMD 5: The BLM will coordinate new recommendations, mitigation, habitat objectives, and management considerations applied for Greater Sage-Grouse with the WGFD and other appropriate agencies, local government cooperators, and the Wyoming SGIT. These measures will be analyzed in site-specific NEPA documents, and planning-level documents, as necessary. | No changes made. | No change proposed. |
| MD GMD 6: Apply appropriate seasonal restrictions for implementing vegetation management treatments according to the type of seasonal habitats present within Greater Sage-Grouse habitat. Vegetation treatments must include monitoring to determine achievement of objectives and their long-term success. | No changes made. | No change proposed. |
| MD GMD 7: Ensure site-specific, measurable conservation and mitigation objectives are included in project planning within Greater Sage-Grouse habitats. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 8: Each BLM field office will develop landscape-scale restoration, conservation, and maintenance strategies, including special management of seasonal habitats and identified connectivity zones outside of PHMA, working with voluntary partners and cooperating agencies. These strategies and habitat designations must be coordinated and reconciled with Wyoming's Greater Sage-Grouse Core Area Protection strategy (EO 2015-4), and where possible, with adjoining management entities that share habitats or populations. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD GMD 9: Design all projects in a manner that minimizes potential for invasive species establishment. Monitor and treat invasive species associated with all permitted activities consistent with BLM Handbook H-1740-2. | No changes made. | No change proposed. |
| MD GMD 10: Apply all appropriate RDFs (Appendix C) as mandatory Stipulations/COA/Terms and Conditions within PHMA for all program areas as applicable. | No changes made. | No change proposed. |
| MD GMD 11: Integrated vegetation management will be used to control, suppress, and eradicate, where possible, noxious and invasive species per BLM Handbook H-1740-2. Manage weed treatments to maintain and improve Greater Sage-Grouse habitat. RDFs and BMPs will be applied to the permit as COA as determined through the site-specific analysis. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 12: Existing notices and approved plans of operations under 43 CFR 3809: For projects that overlap PHMA, operators may be requested to submit modifications to the accepted notice or approved plan of operations so that the operations minimally affect PHMA (core only). The AO may convey to the operator suggested conservation measures, based on the notice or plan level operations and the geographic area of those operations (also called the project area, which is defined in 43 CFR 3809.5). These suggested conservation measures include measures that support the overall goals and objectives of the priority/core population area strategy and may not be reasonable or applicable to the BLM's determination of whether the proposed operations will cause unnecessary or undue degradation under 43 CFR 3809.5. The request containing the suggested conservation measures must make clear that the operator's compliance is not mandatory. Notices or plans of operation, or modifications thereto, submitted following the issuance of this guidance: As part of the 15-day completeness review of notices (or modifications thereto) and 30-day completeness review of plans of operations (or modifications thereto), the proposed project area(s) where exploration, development, mining, access and reclamation would take place will be reviewed for overlap of Greater Sage-Grouse PHMA in the corporate GIS database. If there is overlap, the BLM AO may notify the operator of ways that they may minimize impacts on PHMA (core only) and request the operator to amend its notice or plan to include such measures. The request to amend the submitted notice or plan of operations must make clear that the operator's compliance is not mandatory and that including such measures is not a requirement for completeness of either the notice or a plan of operations, nor is it a condition of acceptance of the notice or approval of the plan of operations. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 13: As new occupied Greater Sage-Grouse habitat is found or occurs either through additional inventories or expansion into previously unoccupied habitat, the BLM will incorporate, through appropriate processes and analyses, these areas into the GHMA category and manage them as such, until the earliest review occurs by the SGIT. At that time, they will be considered for PHMA status or continue to be managed as GHMA and will be added to the statewide map. | No changes made. | Potential change under Alternatives 4, 5, and 6. |
| MD GMD 14: Contribute to actions that help to ground-truth the statewide Greater Sage-Grouse seasonal habitat models for the State of Wyoming. | No changes made. | No change proposed. |
| MD GMD 15: Use the Sage-grouse Habitat Assessment Framework or best available assessment tool (approved by the AO) when assessing or evaluating Greater Sage-Grouse habitats at multiple scales. | No changes made. | No change proposed. |
| MD GMD 16: The official Wyoming Greater Sage-Grouse lek database is maintained by the WGFD in accordance with Appendix 4B of the Umbrella MOU between the WGFD and BLM (WGFD and BLM 1990). The MOU states that agencies will meet at least annually to coordinate and review the accuracy of data, and incorporate the most up-to-date information. | No changes made. | No change proposed. |
| MD GMD 17: Many Greater Sage-Grouse seasonal habitats within and outside of PHMA (core only) are encumbered by valid existing rights, such as mineral leases or existing rights-of-way. Fluid mineral leases often will include less stringent lease stipulations than the timing, distance, and density requirements identified for consideration in this plan. The BLM will work with proponents holding valid existing leases that include less stringent lease stipulations than the timing, distance, and density restrictions described within this plan to ensure that measurable Greater Sage-Grouse conservation objectives (such as, but not limited to, consolidation of infrastructure to reduce habitat fragmentation and loss, and effective conservation of seasonal habitats and habitat connectivity to support management objectives set by the WGFD) are included in all project proposals. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 18: PHMA will be designated as OHV Limited Areas. The OHV limitation will ultimately be to "Designated Routes" as determined through a subsequent implementation/activity-level Travel Management Plan. In the interim, motorized use on existing routes may occur; however, no new routes may be created without specific authorization. | No changes made. | No change proposed. |
| MD GMD 19: Complete activity-level travel plans within 5 years of the record of decision (ROD) for this planning effort. During activity-level planning, where appropriate, designate routes in PHMA with current administrative/agency purpose or need to administrative access only. Existing plans shall be assessed for consistency with Greater Sage-Grouse conservation objectives. | No changes made. | No change proposed. |
| MD GMD 20: Construct roads needed for production activities to minimum design standards within PHMA, in compliance with the Density and Disturbance Calculation Tool (DDCT) process. | No changes made. | No change proposed. |
| MD GMD 21: Field office staff will work with project proponents (including those within the BLM) and the WGFD to site their projects in locations that meet the purpose and need for their project, utilize the DDCT, and have been determined to contain the least sensitive habitats. | No changes made. | No change proposed. |
| MD GMD 22: Evaluate opportunities to coordinate management plans and strategies on multiple allotments where coordination under a single management plan/strategy will result in enhancing Greater Sage-Grouse populations or its habitat, as determined in coordination with the state wildlife agency and with project proponents, partners, and stakeholders. | No changes made. | No change proposed. |
| MD GMD 23: Existing RMP decisions, pertaining to non-Greater Sage-grouse resources, will be retained unless vacated or modified by decisions in this ARMPA. Where more restrictive land use allocations or decisions are made in existing RMPs, those more restrictive land use allocations or decisions will remain in effect and will not be amended by this ARMPA. | Existing RMP decisions, pertaining to non-Greater Sage-Grouse resources, will be retained unless vacated or modified by decisions in this ARMPA. Where inconsistencies between the 2015 Greater Sage-Grouse ARMPA and this 2019 Wyoming GrSG ARMPA arise, the 2019 Wyoming GrSG ARMPA decisions and Appendices apply. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 24: Fire and fuels management actions will be designed to contribute to the protection and enhancement of sagebrush habitat that support Greater Sage-Grouse populations (including large, contiguous blocks of sagebrush). | No changes made. | No change proposed. |
| MD GMD 25: BLM planning units (Districts), in coordination with the USFWS and relevant state agencies, will complete and continue to update Greater Sage-Grouse Landscape Wildfire & Invasive Species Habitat Assessments to prioritize at-risk habitats, and identify fuels management, preparedness, suppression and restoration priorities necessary to maintain sagebrush habitat to support interconnecting Greater Sage-Grouse populations. These assessments and subsequent assessment updates will also be a coordinated effort with an interdisciplinary team to take into account other Greater Sage-Grouse priorities identified in this plan. 2015 ARPMA Appendix L describes a minimal framework example and suggested approach for this assessment. Implementation actions will be tiered to the Local (District) Greater Sage-Grouse Landscape Wildfire & Invasive Species Assessment using the best available science related to the conservation of Greater Sage-Grouse. In coordination with the USFWS and relevant state agencies, the BLM planning units (Districts) will identify annual treatment needs for wildfire and invasive species management as identified in local unit-level Landscape Wildfire and Invasive Species Assessments. Annual treatment needs will be coordinated across state/regional scales and across jurisdictional boundaries for long-term conservation of Greater Sage-Grouse. These landscape assessment implementation efforts will be reviewed annually with appropriate USFWS and state agency personnel. | No changes made. | No change proposed. |
| MD GMD 26: Implement a coordinated inter-agency approach to fire restrictions based on National Fire Danger Rating System thresholds (fuel conditions, drought conditions, and predicted weather patterns) for Greater Sage-Grouse habitat. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD GMD 27: Within acceptable risk levels, utilize a full range of fire management strategies and tactics, including the management of wildfires, to achieve resource objectives across the range of Greater Sage-Grouse habitat consistent with land use plan direction. | No changes made. | No change proposed. |
| (No similar action.) | MD GMD 28: The BLM will update its Greater Sage-Grouse habitat management areas, including biologically significant units (BSUs), in conjunction with the State of Wyoming's core areas, upon issuance of any Wyoming Governor's Executive Order revising or amending the core area boundaries and upon completion of appropriate NEPA analysis and process. The BLM will complete the appropriate NEPA documentation (including appropriate public comment) prior to adopting any revised core area boundaries (e.g., maintenance action or plan amendment, environmental assessment, etc.). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 1: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows: The BLM, in coordination with the State of Wyoming and its agencies, other local partners and stakeholders, will establish monitoring framework (Appendix D) for Greater Sage-Grouse populations and habitat that will be incorporated into individual project approvals, including small and in-house projects, as appropriate and necessary. Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Casper RMP:</u><br>Bates Hole and Fish Creek/Willow Creek: The areas will have priority for vegetation treatments to improve Greater Sage-Grouse habitats and for vegetation monitoring to ensure residual herbaceous vegetation is maintained for nesting cover on public lands. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD SSS 2: In PHMA (core only), the density of disturbance of an energy or mining facility (Appendix D) will be limited to an average of one site per square mile (640 acres) within the DDCT, subject to valid existing rights. The one location and cumulative value of existing disturbances will not exceed 5 percent of suitable habitat of the DDCT area. Inside PHMA, all suitable habitat disturbed (any program area) will not exceed 5 percent within the DDCT area using the DDCT process. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 3: Inside PHMA (connectivity only), all suitable habitat disturbed (any program area) will not exceed 5 percent of suitable habitat within the DDCT area using the DDCT process. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SSS 4: Within PHMA, Specific to management for Greater Sage-Grouse, all RMPs are amended as follows: In undertaking BLM management actions, and, consistent with valid existing rights and applicable law, in authorizing third-party actions that result in habitat loss and degradation in PHMA, the BLM will require and ensure mitigation that provides a net conservation gain to the species including accounting for any uncertainty associated with the effectiveness of such mitigation. This will be achieved by avoiding, minimizing, and compensating for impacts by applying beneficial mitigation actions. In Wyoming, the USFWS has found that "the core area strategy, if implemented by all landowners via regulatory mechanism, would provide adequate protection for Greater Sage-Grouse and their habitats in the state." The BLM will implement actions to achieve the goal of net conservation gain consistent with the Wyoming Strategy (EO2015-4) that includes "compensatory mitigation as a strategy that should be used when avoidance and minimization are inadequate to protect Core Population Area Greater sage-grouse."<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Pinedale RMP:</u><br>Off-site mitigation proposed by oil and gas or other operators shall be considered and analyzed in future environmental documents as possible mitigation for proposed activities | Specific to management for Greater Sage-Grouse, all RMPs are amended as follows: Adopt the State of Wyoming's Greater Sage-Grouse Compensatory Mitigation Framework to the extent consistent with federal law, regulations, and policy.<br>In all Greater Sage-Grouse habitat, when authorizing third-party actions in designated Greater Sage-Grouse habitat, the BLM will seek to achieve the planning-level Greater Sage-Grouse management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Under this Plan Amendment, management would be consistent with the Greater Sage-Grouse goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [Greater Sage-Grouse] or to improve the condition of [Greater Sage-Grouse] habitat" across the planning area. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| within the planning area. Proposed off-site mitigation will be described and analyzed for effectiveness in detail on a project-specific basis. Planning for off-site mitigation will be performed in coordination with local government agencies. The need for off-site mitigation will be determined in conformance with current BLM policy, as updated.<br>The order of use of mitigation methods from most to least preferred is as follows:<br>1. On-site mitigation directly resolving impacts created by the action<br>2. Off-site mitigation to the resources affected by the action that cannot be resolved on-site<br>3. Off-site mitigation to similar or related resources affected by the action that cannot be resolved on-site.<br>The following stipulations apply to off-site mitigation measures:<br>1. Off-site mitigation will be used as a last choice when developing mitigation measures.<br>2. Off-site mitigation proposals will describe the replacement or substitution activities or methods that are used to address potential impacts on specific resources or environments or both.<br>3. Off-site mitigation must be as close to "in-kind" in replacement or substitution of resources, habitat function, or environments as practicable (e.g., elk habitat for elk habitat, historical properties for historical properties).<br>4. Off-site mitigation practices must last as long as the impacts are expected to occur.<br>5. Off-site mitigation practices are to be developed, conducted or performed, and funded by the project proponent.<br>6. Off-site mitigation activities must be conducted subject to BLM review and approval that the mitigation will actually address the impacts occurring on the public lands.<br>The priority order for mitigating resource impacts on-site or off-site is as follows:<br>1. On-site Mitigation – On-site (avoid, minimize, rectify, or reduce in time).<br>2. Off-site Mitigation – Local (unless greater resource benefits can be achieved through regional or interstate mitigation). | Accordingly, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the following steps, in alignment with the Governor of Wyoming's Executive Order 2015-4 (July 29, 2015):<br>1. Work jointly with the WGFD to evaluate projects and recommend mitigation in the form of avoidance and minimization.<br>2. The WGFD will determine if the State requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>3. Incorporate state required or recommended mitigation into the BLM's NEPA decision-making process, if the WGFD determines that compensatory mitigation is required to address impacts to GRSG habitat as a part of State policy or authorization, or if a proponent voluntarily offers mitigation.<br>4. Analyze whether the compensatory mitigation (deferring to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action):<br>• achieves measurable outcomes for Greater Sage-Grouse habitat function on a landscape scale as determined by WGFD that are at least equal to the lost or degraded values in accordance with the Governor of Wyoming's Executive Order 2015-4. | *(See above.)* |

| MD SSS 14: Designate SFAs as shown on Map 1-2 (1,915,990 acres). SFAs will be managed as PHMA, with the following additional management: Recommended for withdrawal from the General Mining Act of 1872, subject to valid existing rights, the lands shown in Map 2-3 (252,160 acres), and 2) Prioritized for vegetation management and conservation actions in these areas, including, but not limited to land health assessments, wild horse and burro management actions, review of livestock grazing permits/leases, and habitat restoration (see specific management sections). | Lands identified as Sagebrush Focal Areas (SFAs) will no longer be designated as SFAs. Lands previously identified as SFAs will be managed as Priority Habitat Management Areas (PHMAs), consistent with Core Area boundaries. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD VEG 1: Manage vegetation composition, diversity, and structure, as determined by ESD, or other methods that reference site potential, and WGFD protocols, to achieve Greater Sage-Grouse habitat management objectives, in cooperation with stakeholders. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD VEG 2: Within PHMA in northeast Wyoming (as mapped in EO 2015-4), vegetation treatments in nesting and wintering habitat that will reduce sagebrush canopy to less than 15 percent will not be conducted. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD VEG 3: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows: For vegetation treatments in sagebrush within PHMA, refer to 2015 ARMPA Appendix H, WGFD Protocols for Treating Sagebrush to Benefit Sage-Grouse (WGFD 2011, as updated) and BLM Washington Office Instruction Memorandum 2013-128 (Sage-grouse Conservation Related to Wildland Fire and Fuels Management). These recommended protocols will be used in determining whether proposed treatment constitutes a "disturbance" that will contribute toward the 5 percent threshold within PHMA maintenance. Additionally, these protocols will be used to determine whether the proposed treatment configuration is expected to have neutral or beneficial impacts for PHMA (core only) populations or if they represent additional habitat loss or fragmentation.<br>Treatments to enhance sagebrush/grasslands habitat for Greater Sage-Grouse will be evaluated based on habitat quality and the functionality/use of treated habitats post-treatment.<br>The BLM will work collaboratively with partners at the state and local level to maintain and enhance Greater Sage-Grouse habitats. Seasonal restriction would be applied, as needed, for implementing fuels management treatments according to the type of seasonal habitat present.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Green River RMP:</u><br>Prescribed burns generally will be conducted in areas having greater than 35 percent sagebrush composition, 20 percent desirable grass composition, and greater than 10 inches of precipitation. Other vegetation manipulation methods will be considered on a case-by-case basis depending on objectives and cost benefits. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| Casper RMP:<br>Decision 4053: The areas (Bates Hole and Fish Creek/Willow Creek) will have priority for vegetative treatments to improve Greater Sage-Grouse habitats and for vegetation monitoring to ensure residual herbaceous vegetation is maintained for nesting cover on public lands. | *(See above.)* | *(See above.)* |
| MD VEG 4: Within PHMA, grazing will be deferred on treated areas for two full growing seasons unless vegetation objectives or vegetation recovery indicates a shorter or longer rest period is necessary based on vegetation monitoring results. | No changes made. | Potential change under Alternative 3. |
| MD VEG 5: Reclamation of surface disturbances in PHMA will be consistent with the Wyoming Reclamation Policy (BLM 2009a), vegetation objectives (Table 2-2 and 2-3), and Appendix M. A monitoring plan will be developed for each restoration or reclamation project and will report progress and changes in resource condition. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD VEG 6: Areas for vegetation restoration and/or restoration criteria that include state Greater Sage-Grouse conservation plans and appropriate local information will be identified. The use of native plants and seeds for restoration will be required unless the probability for success is low (nonnative plants and seeds may be used as long as they meet Greater Sage-Grouse habitat objectives), and restoration management will be designed to obtain long-term persistence based on ESD.<br>Reestablishment of sagebrush cover and desirable understory plants will be the highest priority for restoration efforts.<br>Landscape patterns that most benefit Greater Sage-Grouse will be restored and created, considering potential changes in climate. | No changes made. | No change proposed. |
| MD VEG 7: Within PHMA, implementation of restoration projects will be prioritized based on environmental variables that improve chances for project success in areas most likely to benefit Greater Sage-Grouse. Restoration will be prioritized in seasonal habitats that are thought to be limiting Greater Sage-Grouse distribution and/or abundance. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD VEG 8: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Where probability of success or native seed availability is low or where there is a specific identified purpose that cannot be met with natives, nonnative seeds can be used provided they meet Greater Sage-Grouse habitat conservation and vegetation (see Tables 2-2 and 2-3) objectives. The use of native seeds for fuels management treatment will be prioritized based on availability, adaptation (site potential), and probability of success.<br>Where probability of success or native seed availability is low, non- native seeds may be used to meet Greater Sage-Grouse habitat objectives to trend toward restoring the fire regime. When reseeding, use fire resistant native and nonnative species, as appropriate, to provide for fuel breaks.<br>Native seed allocation will be prioritized for use in Greater Sage-Grouse habitat.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Kemmerer RMP:</u><br>Require the use of certified weed-free seed and mulch for rehabilitation projects.<br><u>Pinedale RMP:</u><br>Disturbed areas will be reclaimed to native site plant composition. If reclamation of original plant composition is impossible or not desirable, reclamation will achieve a native plant community that meets the Wyoming Standards for Rangeland Health. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD VEG 9: Post emergency stabilization and rehabilitation (ES&R) and burn area emergency rehabilitation (BAER) management will be designed to ensure long-term persistence of seeded or pre-burn native plants. This may require temporary or long-term changes in livestock grazing, wild horse, and travel management, etc., to achieve and maintain the desired condition of ES&R and BAER projects to benefit Greater Sage-Grouse (Eiswerth and Shonkwiler 2006). | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD VEG 10: Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to Greater Sage-Grouse habitat to determine if they should be restored to sagebrush or habitat of higher quality for Greater Sage-Grouse. If these seedings provide value in conserving or enhancing Greater Sage-Grouse habitats, then no restoration would be necessary. Assess the compatibility of these seedings for Greater Sage-Grouse habitat during the land health assessments. | No changes made. | No change proposed. |
| MD VEG 11: Priority will be given for implementing specific Greater Sage-Grouse habitat restoration projects in areas invaded by annual grasses first to sites that are adjacent to or surrounded by PHMA. Areas invaded by annual grasses will be second priority for restoration when the sites are not adjacent to PHMA, but are within 2 miles of PHMA. The third priority for areas invaded by annual grasses habitat restoration projects will be sites beyond 2 miles of PHMA. The intent will be to focus restoration outward from existing, intact habitat. | No changes made. | No change proposed. |
| MD VEG 12: In fire prone areas where sagebrush seed is required for Greater Sage-Grouse habitat restoration, the BLM will consider establishing seed harvest areas that are managed for seed production and are a priority for protection from outside disturbances. | No changes made. | No change proposed. |
| MD VEG 13: Vegetation treatment proposals must include evaluation of soils, precipitation, invasive/exotic plants, as well as the current condition of PHMA. Avoid aerial pesticide/herbicide spraying in favor of ground applications to minimize drift into nontarget areas in Greater Sage-Grouse habitat unless benefits of treatments are likely to outweigh impacts. | No changes made. | No change proposed. |
| MD VEG 14: Treat areas that contain cheatgrass and other invasive or noxious species to minimize competition and favor establishment of desired species. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD VEG 15: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>The BLM can implement treatments within PHMA where outbreaks of grasshopper or Mormon cricket populations are expected to rise above economic levels. Treatments must be conducted only following reduced agent-area treatments protocols. The BLM will work collaboratively with partners at the federal, state, and local levels, including the Wyoming Weed and Pest Districts within the counties where the treatment is to occur, to maintain and enhance Greater Sage-Grouse habitats in a manner consistent with the core population area strategy for conservation.<br>The BLM will be directed to utilize the Wyoming Grasshopper and Mormon Cricket Control website as a resource for updated information when conducting analysis of grasshopper and Mormon cricket control in Greater Sage-Grouse habitats.<br>Avoid aerial pesticide/herbicide spraying in favor of ground applications to minimize drift into nontarget areas in Greater Sage-Grouse habitat unless benefits of treatments are likely to outweigh impacts.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Casper RMP:</u><br>Work with Animal and Plant Health Inspection Service to control outbreaks of grasshoppers and Mormon crickets on public lands in the planning area in accordance with the MOU between U.S. Department of the Interior and Animal and Plant Health Inspection Service. | No changes made. | No change proposed. |
| MD FIRE 1: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows: For Wildland Fire Management, the protection of human life is the single, overriding priority. Setting priorities among protecting human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, human health and safety, and the costs of protection. The goal is to restore, enhance, and maintain areas suitable for Greater Sage-Grouse. Greater Sage-Grouse habitat (GHMA) will be | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| prioritized commensurate with local fire plans, property values and other important habitat to be protected, with the goal to restore, enhance, and maintain areas suitable for Greater Sage-Grouse.<br>PHMA (and Priority Areas for Conservation, if so determined by individual RMP efforts) will be the highest priority for conservation and protection during fire operations and fuels management decision-making. The PHMA will be viewed as more valuable than GHMA when priorities are established. When suppression resources are widely available, maximum efforts will be placed on limiting fire growth in GHMA polygons as well. These priority areas will be further refined following completion of the Greater Sage-Grouse Landscape Wildfire and Invasive Species Habitat Assessments described in Appendix L.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Casper RMP:<br>Appropriate management response will be used on all wildfires in the planning area. Full protection strategies and tactics will be used in the following areas:<br>1. Wildland Urban Interface (WUI)<br>2. Wildland industrial interface<br>3. Developed recreation sites<br>4. Developed electronics sites of all types.<br>In all other areas appropriate management response (AMR) strategies and tactics will be determined by (but not limited to) the following:<br>1. Firefighter and public safety<br>2. Resource values at risk<br>3. Proximity to private land<br>4. Firefighting resource availability.<br>Tactical constraints follow:<br>1. The use of retardant within 300 feet of surface water (standing or running) is prohibited.<br>2. No trees are to be cut during suppression activities within 200 yards of an identified bald eagle roost.<br>No heavy equipment will be used within the following areas, except when human safety is at risk:<br>1. Areas of cultural resource sensitivity<br>2. Riparian/wetland habitats<br>3. Big game crucial winter range habitats | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| 4. Greater Sage-Grouse leks<br>5. Areas of highly erosive soils.<br>In areas not identified as full protection, heavy equipment usage will be limited to existing roads and trails or immediately adjacent to them.<br><u>Kemmerer RMP:</u><br>In areas of high-density urban and (or) industrial interface with intermingled BLM-administered lands, suppression objectives will follow the AMR in an approved fire management plan for the planning area to provide first for human health and safety, while minimizing loss of property and threats to other surface owners. Generally, wildland fires are suppressed in these areas. In areas of low-density urban and (or) industrial interface where BLM-administered lands occur in large contiguous blocks, fire suppression objectives will follow the AMR in an approved fire management plan for the planning area to provide first for human health and safety, while allowing for achievement of resource objectives.<br><u>Newcastle RMP:</u><br>Full suppression will be used on fires endangering human life or that spread to within 0.25 miles of state or private lands, structures and facilities, oil and gas fields, important riparian habitat, or other sensitive resources. All wildfires will be evaluated to determine the need for rehabilitation or restoration measures. Restoration of burned areas will be by natural succession unless a special need is identified to prevent further resource damage.<br><u>Pinedale RMP:</u><br>Wildland fire mitigation and fuels activities will be managed to provide for firefighter and public safety as a first priority. Public lands within intermixed land ownership areas will be managed in association with the adjoining and nearby private and state lands.<br>Areas of mixed land ownership, communities at risk as identified in the *Federal Register*, Volume 66, Number 160, 2001 (Antelope Run, Beaver Creek area, Boulder, Cottonwood Creek, Daniel, Forty Rod, Hoback Ranches, New Fork, Pinedale, Pocket Creek, and Upper Green); urban and industrial interface areas; and areas containing high-priority resource values have high priority for response to wildland fires and/or | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| for fuels reduction and mitigation. Wildland fire suppression activities will be based on the AMR.<br>Rawlins RMP:<br>A high priority for fire management activities will be given to areas identified as communities at risk, industrial interface areas, and areas containing resource values considered high priority within the RMP planning area.<br>Green River RMP:<br>Wildfire suppression will emphasize AMR. Immediate control actions will be used only in cases of arson, direct threat to public safety, or a strong potential threaten structural property.<br>Fire suppression actions will be based on achieving the most efficient control and allowing historical acres burned to increase. Activity plans will be developed for designated fire management areas defining specific parameters for all fire occurrences.<br>JMH CAP:<br>Appropriate management response to protect the basin big sagebrush/lemon scurfpea plant communities will be applied. Wildland and prescribed fires will be managed in all vegetation types to maintain or improve biological diversity and the overall health of the public lands. In particular, plant species and age class diversity will be a priority; thus, AMR for all wildland fires will be identified and implemented depending on the resources and management objectives for the area. Suppression techniques and hazardous fuels reduction activities will be identified to reduce wildland fire severity and occurrence on portions of the landscape where fire causes undesirable changes in plant community composition and structure. A site-specific analysis will be prepared for sensitive resource areas, such as special status plant species sites, heritage sites, historic trails, and areas of critical environmental concern (ACECs), to determine the type of fire suppression activity that will be acceptable. Fire equipment and fire suppression techniques, such as vegetation clearing, will be limited to existing roads and trails in special status plant species habitat. As appropriate, the Fire Management Plan will be updated to reflect the appropriate suppression activity in sensitive resource areas. | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD FIRE 2: In PHMA, fuels treatments will be designed and implemented with an emphasis on protecting existing sagebrush ecosystems and enhancing and protecting future sagebrush ecosystems (refer to WGFD Protocols for Treating Sagebrush to Benefit Sage-grouse [WGFD 2011, as updated]) and 2015 ARMPA Appendix H.<br>These recommended protocols will be used in determining whether proposed treatment constitutes a "disturbance" that will contribute toward the 5 percent threshold for habitat maintenance.<br>Fuel treatments will be designed through an interdisciplinary process to expand, enhance, maintain, and protect Greater Sage-Grouse habitat. Green strips (using native fire resistant/resilient species) and/or fuel breaks will be used, where appropriate, to protect seeding efforts from subsequent fire events.<br>In coordination with the USFWS and relevant state agencies, BLM planning units (Districts) with large blocks of Greater Sage-Grouse habitat will develop, using the assessment process described in 2015 ARMPA Appendix L, a fuels management strategy which considers an up-to-date fuels profile, land use plan direction, current and potential habitat fragmentation, sagebrush and Greater Sage-Grouse ecological factors, and active vegetation management steps to provide critical breaks in fuel continuity, where appropriate. When developing this strategy, planning units will consider the risk of increased habitat fragmentation from a proposed action versus the risk of large scale fragmentation posed by wildfires if the action is not taken.<br>Utilizing an interdisciplinary approach, a full range of fuel reduction techniques will be available. Fuel reduction techniques such as grazing, prescribed fire, chemical, biological, and mechanical treatments will be acceptable.<br>Upon project completion, fuels projects will be monitored and managed to ensure long-term success, including persistence of seeded species and/or other treatment components. Invasive vegetation post-treatment will be controlled.<br>Wildfire prevention plans will be developed that explain the resource value of Greater Sage-Grouse habitat and include fire prevention messages and actions to reduce human-caused ignitions. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD FIRE 3: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>For fuels management, the BLM will consider multiple tools for fuels reduction and will analyze in NEPA compliance documentation before electing to implement prescribed fire in PHMA.<br>If prescribed fire is used in Greater Sage-Grouse habitat, the NEPA analysis for the Burn Plan will address:<br>• Why alternative techniques were not selected as a viable options<br>• How Greater Sage-Grouse goals and objectives will be met by its use<br>• How the COT (Conservation Objectives Team) report objectives will be addressed and met<br>• A risk assessment to address how potential threats to Greater Sage-Grouse habitat will be minimized.<br>Prescribed fire as a vegetation or fuels treatment shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire can be used to meet specific fuels objectives that protect Greater Sage-Grouse habitat in PHMA (e.g., creation of fuel breaks that disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br>Prescribed fire in known winter range shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in winter habitat will need to be designed to strategically reduce wildfire risk around and/or in the winter range and designed to protect winter range habitat quality. Refer to 2015 ARMPA Appendix H, WGFD Protocols for Treating Sagebrush to Benefit Sage-grouse (WGFD 2011, as updated) and BLM Washington Office Instruction Memorandum 2013-128. If prescribed fire activities are not in compliance with these protocols, the treatment will be considered a PHMA disturbance. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

|---|---|---|
| Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Casper RMP:<br>Use prescribed burning to achieve measurable 5th-order watershed objectives from (1) other resources, including, but not limited to, forestry, wildlife, range, vegetation, and watershed; (2) the reduction of hazardous fuels; and (3) the introduction of fire into fire-adapted ecosystems.<br>Green River RMP/JMH CAP:<br>Prescribed fire will generally be the preferred method of vegetation manipulation to convert decadent stands of brushland to grasslands and to stimulate sprouting of old, decadent aspen stands and/or shrub species. Prescribed burns are preferred in areas having greater than 35 percent sagebrush composition, 20 percent desirable grass composition, and greater than 10 inches of precipitation.<br>Rawlins RMP:<br>Fuel treatments, including prescribed fire, mechanical, chemical, and biological treatments will be used for fuels reduction and to meet other multiple-use resource objectives, including returning fire to its natural role in the ecosystem. WUIs and communities at risk will receive priority for fuels reduction. | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD FIRE 4: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Remove conifers encroaching into sagebrush habitats in a manner that considers tribal cultural values. Prioritize treatments closest to occupied Greater Sage-Grouse habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2. Use of site-specific analysis and principles like those included in the FIAT (Fire and Invasive Species Assessment) report (Chambers et. al., 2014) and other ongoing modeling efforts to address conifer encroachment will help refine the location for specific priority areas to be treated.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Casper RMP: Treat woodland encroachment in grassland, sagebrush, aspen, and other vegetative communities where it is determined to be detrimental to other resource values or uses. Manage 630,180 acres of sagebrush communities toward Desired Plant Community. | No changes made. | No change proposed. |
| MD FIRE 5: The following RMP decisions remain in effect for both PHMA and GHMA:<br><u>Pinedale RMP:</u><br>In the WUI or industrial interface, fuels reduction methods best suited to the area will be used to reduce the risk of catastrophic fire to these areas.<br><u>Casper RMP:</u><br>Use prescribed burning to achieve measurable 5th-order watershed objectives from (1) other resources, including, but not limited to, forestry, wildlife, range, vegetation, and watershed; (2) the reduction of hazardous fuels; and (3) the introduction of fire into fire-adapted ecosystems.<br>Utilize an integrated management technique approach (defined as prescribed fire, mechanical, chemical, or biological, followed by desired reseeding) to reduce fuels to protect high priority areas or resource values defined as, but not limited to the following:<br>• Urban and industrial interface areas<br>• Developed recreation areas<br>• Commercial timber areas<br>• Wildlife habitats<br>• Range-improvement facilities | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| • Communication sites<br>• Municipal watersheds. Decision 3008 Fuels Management.<br><u>Rawlins RMP:</u><br>A high priority for fire management activities will be given to areas identified as communities at risk, industrial interface areas, and areas containing resource values considered high priority within the RMP planning area.<br><u>JMH CAP:</u><br>Appropriate management response to protect the basin big sagebrush/lemon scurfpea plant communities will be applied. Wildland and prescribed fires will be managed in all vegetation types to maintain or improve biological diversity and the overall health of the public lands. In particular, plant species and age class diversity will be a priority; thus, AMR for all wildland fires will be identified and implemented depending on the resources and management objectives for the area. Suppression techniques and hazardous fuels reduction activities will be identified to reduce wildland fire severity and occurrence on portions of the landscape where fire can cause undesirable changes in plant community composition and structure. A site-specific analysis will be prepared for sensitive resource areas, such as special status plant species sites, heritage sites, historic trails, and ACECs, to determine the type of fire suppression activity that will be acceptable. Fire equipment and fire suppression techniques, such as vegetation clearing, will be limited to existing roads and trails in special status plant species habitat. As appropriate, the Fire Management Plan will be updated to reflect the appropriate suppression activity in sensitive resource areas. | *(See above.)* | *(See above.)* |

|---|---|---|
| MD LG 1: The BLM policy in WO-IM-2009-007 and BLM Handbook H-4180-1 will be used to evaluate land health standards achievement in PHMA (core only) and, where not achieved, to determine if existing grazing management practices or levels of grazing use on public lands are significant factors in failing to achieve the standards and conform with the guidelines, which through this process will identify appropriate actions to address nonachievement and nonconformance. When determining appropriate actions to address nonachievement of land health standards and nonconformance with the guidelines due to existing grazing management practices or levels of grazing use, management actions including but not limited to the following will be considered singly or in combination:<br>1. Season or timing of use<br>2. Numbers of livestock (includes temporary nonuse or livestock removal)<br>3. Distribution of livestock use<br>4. Intensity of use<br>5. Kind of livestock (e.g., cattle, sheep, horses, llamas, alpacas and goats)<br>6. Class of livestock (e.g., yearlings versus cow calf pairs)<br>7. Range improvements.<br>Refer to the document, "Grazing Influence, Management, and Objective Development in Wyoming's Greater Sage-Grouse Habitat" (Cagney et al. 2010) for guidance when considering appropriate management actions to achieve conformance. | No changes made. | No change proposed. |
| MD LG 2: Within PHMA the BLM will work cooperatively with permittees, lessees, and other landowners to develop voluntary grazing management strategies that integrate both public and private lands into single management units to improve Greater Sage-Grouse habitat. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD LG 3: The following RMP decisions remain in effect:<br>Casper RMP:<br>Grazing leases will be adjusted where an evaluation of monitoring, field observations, or other data indicate changes, and either increases or decreases, in forage allocation are needed or when necessary or required by other applicable law or regulation.<br>Kemmerer RMP:<br>Vegetative communities will be managed in accordance with Wyoming Standards for Healthy Rangelands.<br>Appropriate livestock grazing management actions will be developed and integrated to address rangeland health standards, improve forage for livestock, and enhance rangeland health.<br>Newcastle RMP:<br>Any adjustments in livestock grazing use will be made as a result of monitoring and consultation with grazing permittees. Monitoring studies will be conducted using the current BLM-approved methodology.<br>Pinedale RMP:<br>Monitoring of the range and the vegetation resource will be conducted at a level sufficient to detect changes in grazing use, trend, and range conditions. Monitoring will be tied to land health standards and indicators that help determine change in status and progress toward meeting objectives. Data will be used to direct and support grazing management decisions consistent with national policy.<br>Rawlins RMP:<br>Livestock grazing will be managed to meet the Wyoming Standards for Healthy Rangelands.<br>Green River RMP/JMH CAP:<br>The kinds and seasons of livestock grazing use will continue to be licensed until monitoring, negotiation, consultation, or a change in resources conditions indicate that a modification is needed. Monitoring will be continued or initiated following adjustments in grazing use to assure that grazing and other management objectives are being met. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD LG 4: Within PHMA, all BLM use authorizations will contain terms and conditions regarding the actions needed to meet or progress toward meeting the habitat objectives. If monitoring data show the habitat objectives have not been met nor progress being made toward meeting them, there will be an evaluation and a determination made as to the cause. If it is determined that the authorized use is a significant factor in failing to achieve the standards for healthy rangelands, the use will be adjusted by the response specified in the instrument that authorized the use.<br>The NEPA analysis for renewals and modifications of livestock grazing permits/leases that includes lands within SFAs and PHMA will include specific management thresholds based on GRSG habitat objectives (Tables 2-2 and 2-3) and Land Health Standards (43 CFR 4180.2), and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Within PHMA, if monitoring data show the wildlife/special status species standard has not been met nor progress being made toward meeting that standard, there would be an evaluation and a determination made as to the cause. If it is determined that the current authorized livestock use is a significant causal factor in failing to achieve the wildlife/special status species standards, the BLM would address the achievement or progress toward achieving the LHSs (43 CFR 4180.2) and, if needed, Greater Sage-Grouse habitat maintenance or improvement.<br>When NEPA analysis is required for a specific implementation action, one alternative would include mechanisms to make adjustments to meet or make progress toward meeting the wildlife/special status species standard. The analysis should also identify the BLM-approved data collection methodologies used for monitoring conditions and determining when adjustments are necessary. If current grazing management meets land health standards and provides for Greater Sage-Grouse habitat, there would be no need to analyze an alternative for Greater Sage-Grouse.<br>Authorized uses in PHMA that incorporate habitat objectives for Greater Sage-Grouse must develop desired conditions based on Greater Sage-Grouse habitats present in the allotment and the ecological potential of sites that supports these habitats. Metrics used to monitor for objectives must be developed and inform the wildlife/SSS portion of the Standards for Healthy Rangelands.<br>Within PHMA, seasonal habitat objectives for Greater Sage- | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD MR 3, Fluid Minerals, Leased Estate:<br>Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>In cases where federal oil and gas leases have been issued with stipulations varying from those in Appendix B for the protection of Greater Sage-Grouse or their habitats, as provided in the applicable RMP decision, as revised or amended, their inclusion as APD COAs will be considered when approving exploration and development activities through completion of the environmental record of review (43 CFR 3162.5 and 36 CFR 228.108), including appropriate documentation of compliance with NEPA. Overall consideration shall be given to minimizing the impact on Greater Sage-Grouse through a project design that avoids, minimizes, reduces, rectifies, and/or adequately compensates for direct and indirect impacts on PHMA or use and includes applicable and technical COAs. Selection and application of these measures shall be based on current science and research on the effects on important breeding, nesting, brood-rearing, and wintering areas. For proposed operations in PHMA, the Surface Use Plan of Operations (see 43CFR 3162.3-1(f)) shall address, at a minimum, the anticipated noise, density and amount of disturbance, mechanical movement (e.g., pump jacks), permanent and temporary facilities, traffic, phases of development over time, off-site mitigation, and expected periods of use associated with the proposed project. Seasonal habitats or project features related to potential Greater Sage-Grouse impacts that are not addressed in the Surface Use Plan of Operations based on site- specific or project-specific considerations shall be noted in the project file, along with a rationale for not including them.<br>In this process the BLM will evaluate, among other things:<br>Whether the conservation measure is "reasonable" (43 CFR 3101.1-2) and consistent with valid existing rights<br>Whether the action is in conformance with the approved LUP; and the effectiveness of the proposed mitigation measures (See MD SSS 4). | No changes made. | Potential change under Alternative 3. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| The BLM will work with project proponents in these situations to promote measurable Greater Sage-Grouse conservation objectives such as, but not limited to, consolidation of project related infrastructure to reduce habitat fragmentation and loss and to promote effective conservation of seasonal habitats and PHMA (connectivity only) that support population management objectives set by the state.<br>The BLM will continue to work with project proponents and the WGFD to site their projects in locations that meet the purpose and need for their project, but have been determined to contain the least sensitive habitats (based on vegetation, topography, or other habitat features) and resources whether inside or outside of PHMA (utilizing DDCT analysis process). Valid existing rights will be recognized and respected.<br>For values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br><u>Kemmerer RMP:</u><br>Choose and implement appropriate mitigation in a timely manner to minimize decreases in habitat function.<br>Utilize appropriate voluntary off-site compensatory mitigation to reduce impacts. This will be necessary if (1) all on-site mitigation has been accomplished and adverse effects have not been mitigated; or (2) if on-site mitigation is not feasible.<br><u>Pinedale RMP:</u><br>Off-site mitigation proposed by oil and gas or other operators can be considered and analyzed in future environmental documents as mitigation for proposed activities within the planning area. Proposed off-site mitigation will be described and analyzed for effectiveness in detail on a project-specific basis. Off-site mitigation will conform to requirements in the Pinedale RMP regarding the order of use of mitigation methods, stipulations applied to off-site mitigation measures, and priority order for mitigating resource impacts on-site or off-site.<br><u>Green River RMP:</u><br>Development actions will be analyzed on a case-by-case basis to identify mitigation needs to meet RMP objectives, provide for resource protection, and provide for logical development. Limitations on the amount, | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| sequence, timing, or level of development may occur. This may result in transportation planning and in limitations in the number of roads and drill pads, or deferring development in some areas until other areas have been restored to previous uses.<br>JMH CAP:<br>COAs attached to an APD will be based on site-specific NEPA or other analysis and will establish specific, necessary mitigation measures not covered by stipulations for resource and environmental protection. Some areas will need more intensive mitigation measures to protect sensitive resources and provide for public health and safety. These intensive mitigation measures or COAs will mostly apply to areas with overlapping sensitive resources (e.g., Areas 2 and 3). Examples of intensive mitigation that can apply to all activities based on site-specific analysis include off-site placement of facilities, remote control monitoring, restricted or prohibited surface use including road construction, multiple wells from a single pad, central tank batteries/facilities, and pipelines and power lines concentrated in specific areas. In addition, refer to Section 3.12.3 for additional mitigation measures that may apply as part of the transportation plan. | *(See above.)* | *(See above.)* |
| MD MR 4: Within PHMA, field offices will work with project proponents (including those within BLM) to site their projects in locations that minimize impacts on sensitive resources. | No changes made. | No change proposed. |
| MD MR 5: Master Development Plans will be considered and encouraged for projects involving multiple proposed disturbances within PHMA. | No changes made. | No change proposed. |
| MD MR 6: Within PHMA, unitization will be encouraged as a means of minimizing adverse impacts on Greater Sage-Grouse to reduce fragmentation and surface-disturbing and disruptive activities. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD MR 7: The BLM shall closely examine the applicability of categorical exclusions in PHMA and GHMA. If extraordinary circumstances review is applicable, the BLM shall determine whether those circumstances exist. For proposed actions in PHMA, determine whether a categorical exclusion is applicable and if so, closely examine the extraordinary circumstances, if applicable, to determine whether one or more exists that will require preparation of a NEPA analysis. If a categorical exclusion applies, and no extraordinary circumstances exist, determine whether preparing a NEPA analysis will help inform decision making. | No changes made. | No change proposed. |
| MD MR 8: Federal Regulations, 43 CFR 3104.1 requires that a bond be furnished before any drilling or surface disturbance activities begin. The lessee, sublessee or the operator must furnish a surety or personal bond in the amount of at least $10,000 to ensure compliance with all the lease terms, including protection of the environment.<br>With the consent of the surety and principal, the operator may use the bond of another party, such as the lessee. Each time there is a new operator, that operator must notify the BLM that he/she is the responsible operator, giving the particulars of the bond under which he/she will operate. The BLM can require an increase in a bond amount any time conditions warrant such an increase.<br>A reclamation bond will be required on all projects that is commensurate with the scope, scale, size of the project within PHMA. Partial bonding may be appropriate depending on these factors. | No changes made. | No change proposed. |

| screening process results will determine which lands may be available for further consideration for coal leasing and development. Appropriate NEPA analysis will be required prior to leasing. Federal land within the proposed Haystack project area is determined acceptable for further consideration for coal leasing and development. No coal LBAs will be considered for Rock Creek/Tunp and Bear River Divide management areas.<br>Pinedale RMP:<br>Decisions on lands acceptable for leasing consideration for coal development will be made after an application is received and the coal screening process is conducted.<br>Rawlins RMP:<br>Federal coal lease applications will be accepted only on those federal coal lands with development potential identified as suitable for further leasing consideration after application of the coal unsuitability criteria (the above-mentioned approximately 51,250 acres and 2,318.7 million tons of surface minable federal coal).<br>Green River RMP/JMH CAP:<br>Federal coal lands within the Coal Occurrence and Development Potential area (about 422,000 acres) are open to further consideration for coal leasing and development (i.e., new competitive leasing, emergency leasing, lease modifications, and exchange proposals, under the Federal Coal Management Program) with appropriate and necessary conditions and requirements for protection of other land and resource values and uses. | *(See above.)* | *(See above.)* |
| MD MR 18: Coal exploration activities will be allowed in PHMA if they can be completed in compliance to surface occupancy and disturbance and density stipulations analyzed through the DDCT process. | No changes made. | No change proposed. |
| MD MR 19: Exceptions to lease stipulations, COA, and terms and conditions:<br>Exceptions waivers, and modifications to lease stipulations, COAs, and terms and conditions, for Greater Sage-Grouse will continue to be considered on a case-by-case basis consistent with approved LUPs and other BLM policy and regulations as they relate to exceptions within PHMA and GHMA. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD RE 1: Within PHMA, all RMPs are amended as follows:<br>Wind energy development would be avoided in PHMA (Map 2-6), and not allowed unless it can be sufficiently demonstrated that the development activity would not result in declines of PHMA populations. Sufficient demonstration of "no declines" should be coordinated with the WGFD and USFWS.<br>For values other than Greater Sage-Grouse, the following RMP decisions remain in effect:<br>Areas that are currently unavailable due to the need to protect sensitive resources would remain unavailable to wind energy development. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD RE 2: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>The use of guy wires for meteorological towers (MET) tower supports would be avoided within PHMA. All existing and any new unavoidable guy wires should be marked with recommended bird deterrent devices.<br>The siting of new temporary MET towers within PHMA would be avoided within 2 miles of occupied Greater Sage-Grouse leks, unless they are out of the direct line of sight of the occupied lek.<br>Outside of PHMA, the following RMP decisions remain in effect:<br><u>Kemmerer RMP:</u><br>New MET towers would be avoided within 1 mile of occupied sagebrush obligate habitats, unless anti-perch devices are installed. MET towers relying on guy wires for support would be prohibited in these habitats. Exceptions could be made if NEPA analysis shows little or no impact on sagebrush obligate species.<br><u>Rawlins RMP:</u><br>MET towers would be authorized on a case-by-case basis from 0.25 miles to 1 mile of an occupied Greater Sage-Grouse and sharp-tailed grouse lek. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD LR 1: *Land Use Authorizations*<br>Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>PHMA will be managed as ROW avoidance areas for new ROW or Special Use Authorization (SUA) permits (Map 2-7).<br>Within PHMA where new ROWs/SUAs are necessary, new ROWs/SUAs will be located within designated RMP corridors or adjacent to existing ROWs/SUAs where technically feasible. Subject to valid existing rights including nonfederal land inholdings, required new ROWs/SUAs will be located adjacent to existing ROWs/SUAs or where it best minimizes Greater Sage-Grouse impacts. Consider the likelihood of development of not-yet-constructed surface-disturbing activities, as defined in Table 2 of the Monitoring Framework (Appendix D under valid existing rights.<br>For values other than Greater Sage-Grouse, the following RMP decisions remain in effect:<br>Portions of PHMA will be managed as ROW exclusion areas in accordance with existing RMP decisions for resource values other than Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD LR 2: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Within GHMA where new ROWs/SUAs are necessary, new ROWs/SUAs will be collocated within existing ROWs/SUAs where technically feasible.<br>Appropriate Greater Sage-Grouse seasonal timing constraints will be applied.<br>For values other than Greater Sage-Grouse, the following RMP decisions remain in effect:<br>Portions of GHMA will be managed as ROW avoidance areas in accordance with existing RMP decisions for resource values other than Greater Sage-Grouse. | No changes made. | Potential change under Alternative 3. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD LR 3: Within PHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br><u>New Transmission Lines (greater than 115 kV):</u><br>New transmission lines greater than 115 kV in PHMA (core only) will be allowed only (1) within the 2-mile wide transmission line route through PHMA (core only) population areas in south-central and southwestern Wyoming (Attachment 1 from EO 2015-4); (2) when located within 0.5 miles or less of an existing 115 kV or greater transmission line constructed prior to 2008; or (3) in designated RMP corridors authorized for aboveground transmission lines. Transmission lines routed using one or more of the three criteria listed above will not be counted against the DDCT 5 percent disturbance cap. New transmission lines greater than 115 kV proposed outside of these areas will be considered where it can be demonstrated that declines in Greater Sage-Grouse populations can be avoided through project design and/or mitigation. These projects will be subject to the density and disturbance restrictions for PHMA.<br>Construction of new transmission lines will adhere to the restrictions associated with conducting activities within PHMA.<br>Review of transmission line proposals will incorporate the Framework for Sage-grouse Impacts Analysis for Interstate Transmission Lines and other appropriate documents consistent with the three routing criteria described above.<br>New projects within PHMA that may require future utility lines, including distribution and transmission lines or pipelines, will include the proposed utility lines in their DDCT as part of the proposed disturbance. Lines permitted but not located in the above mentioned routes or a designated corridor will be counted toward the 5 percent disturbance calculation (line disturbance is equal to the anticipated construction footprint or construction ROW width multiplied by length and includes all access roads, staging areas, and other surface disturbance associated with construction outside of the construction ROW). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| New Electric Distribution Lines (less than 115 kV):<br>New electric distribution lines will be buried where feasible and economically feasible. If not economically feasible, distribution lines may be authorized when effectively designed/mitigated to protect Greater Sage-Grouse and the AO determines that overhead installation is the action alternative with the fewest adverse impacts while still meeting the project need. Agricultural and residential lines will be considered to be adequately mitigated for Greater Sage-Grouse if constructed at least 0.6 miles from the lek perimeter with appropriate timing constraints and constructed to the latest APLIC guidance. These ROW authorizations will be subject to approval by the State Director.<br>Priority Transmission Lines:<br>PHMA are designated as avoidance areas for high voltage transmission line and pipeline ROWs, except for the transmission projects specifically identified below. All authorizations in these areas, other than the following identified projects, must comply with the conservation measures outlined in this proposed plan, including the RDF and avoidance criteria presented Appendix C of this document. The BLM is currently processing an application for Gateway South, Gateway West, and TransWest Express and the NEPA review for these projects is well underway. The BLM is analyzing Greater Sage-Grouse mitigation measures through the project's NEPA review process.<br>Pipelines:<br>New pipelines through PHMA will be allowed: (1) within an RMP corridor currently authorized for that use or designated through future RMP amendments; or (2) constructed in or adjacent to existing utilities (buried and aboveground) or roads. Pipelines constructed in RMP corridors or adjacent to existing utilities or roads will require completion of a DDCT analysis for baseline data collection but the project is not required to meet the threshold of 5 percent. However, within 6 months of the completion of construction, the project proponent will provide the AO with as-built drawings so that total disturbance within core area can be calculated annually. | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| The following RMP decisions remain in effect with the modification described above:<br>Casper RMP:<br>No new corridor designations will be made in Bates Hole. When placement of a major ROW facility within a designated corridor is not possible, and for smaller ROW and other linear facilities, placement will be adjacent to existing facilities or disturbances. Cross-country placement of ROW and other linear facilities will be allowed only when placement in a designated corridor or adjacent to an existing facility is not practical or feasible. The extent of all surface disturbances will be minimized.<br>No new corridors will be established in the Sand Hills Management Area; ROWs will be allowed when management objectives for the area can still be achieved.<br>All currently designated corridors will be maintained. All special restrictions that apply to types of use/facilities on the corridors will be removed, except as noted for the Oregon Trail Road ROW Corridor, Segment A. The corridors include 351,020 acres, of which 94,580 acres are federal surface. The widths/size of designated corridors will not change. Special restrictions applying to types of use/facilities on the corridors will be removed on a case-by-case basis. Existing corridors include:<br>1. Oregon Trail Road Corridor, Segment A<br>2. Oregon Trail Road Corridor, Segment B<br>3. Oregon Trail Road Corridor, Segment C<br>4. Poison Spider/Gas Hills Road Corridor<br>5. Highway 20-26 Corridor<br>6. Wyoming Highway 259/U.S. 87 Corridor<br>7. Wyoming Highway 387 Corridor<br>8. Lost Cabin-Arminto Road Corridor<br>9. RMP Change No. 2012-03, including the West-Wide Energy Corridor<br>10. Cabin Creek Corridor<br>11. Existing Oregon Trail Road ROW Corridor, Segment A.<br>Oregon Trail Road ROW Corridor, Segment A allows additional ROW facilities provided they are subsurface, surface, or low profile developments. ROW facilities that introduce visual intrusions on the skyline along the corridor will not be allowed. Special restrictions applying to types of use/facilities on the corridors will be removed on a case- | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| by-case basis, and a new corridor, to be called the Cabin Creek Corridor, will be designated.<br>Future Corridor Adjustments and New Corridor Designations:<br>Future corridor adjustments and new corridor designations will be made only when facility placement within an existing designated corridor is incompatible, unfeasible, or impractical and when the environmental consequences can be adequately mitigated. Problems of technical compatibility between facilities and spacing of facilities in corridors will be solved on a case-by-case basis. Special restrictions applying to types of use/facilities on the corridors will be removed on a case-by-case basis.<br>South Bighorns/Red Wall Management Area:<br>No corridors will be designated; however, ROWs will be allowed on a case-by-case basis when management objectives for the area can still be achieved.<br><u>Kemmerer RMP:</u><br>Utility corridors will be designated, based on use (i.e., power lines, pipelines, and fiber optic lines).<br>Preferred utility corridors will be 2 miles wide (width will be determined based on resource values) and designated as follows, but variances will be allowed based on application where conflicts with other resources were minimal or can be mitigated through resource-specific stipulations:<br>High-voltage power line corridors will be established north of and parallel to I-80, and along Wyoming State Highway 89 from the junction of I-80 and the Wyoming state line.<br>Fiber optic and low-voltage power line corridors will be located along currently established road systems (e.g., interstate or state highways and paved county roads).<br><u>Newcastle RMP:</u><br>Utility/transportation systems will be located adjacent to existing utility/transportation systems whenever practical. Areas to be avoided for new facility placement and routes will be identified on a case-by-case basis, rather than attempting to establish utility corridors.<br><u>Pinedale RMP:</u><br>Utility facilities will be restricted to existing routes and designated corridors where practicable, including environmental and socioeconomic considerations. Corridor | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| routes include U.S. Highways 189 and 191 and State Highways 189, 191, 350, 351, 352, 353, and 354. New corridors may be established as oil and gas fields are developed.<br>Rawlins RMP:<br>All BLM-administered lands, except WSA and some SD/MAs (including ACEC/Special Interest Areas), will be open to consideration for placement of utility ROW systems. Each utility ROW will be located adjacent to existing facilities, when possible. Areas with important or sensitive resource values will be avoided.<br>Existing major transportation and utility ROW routes will be designated corridors. However, major transportation routes within the planning area that are located east of the Carbon County-Albany County line will not be considered for ROW corridor designation because of the scattered public land ownership pattern in the area. All corridors will be designated for power lines (aboveground and buried), telephone lines, and fiber optic lines.<br>Specific proposals will require site-specific environmental analysis and compliance with established permitting processes.<br>Activities generally excluded from ROW corridors include mineral materials disposal, range and wildlife habitat improvements involving surface disturbance and facility construction, campgrounds, and public recreation facilities and other facilities that will attract public use.<br>ROW facilities will not be placed adjacent to each other if issues with safety or incompatibility or resource conflicts were identified. The designated width, allowable uses, and excluded uses for each corridor may be modified during implementation of the Approved RMP.<br>Green River RMP:<br>Areas designated as utility windows will be preferred locations for future grants. Five windows have been identified: 2 east-west, 3 north-south. Other areas will be considered for rights-of-way on a case-by-case basis. Windows 0.5 miles in width have been identified for the placement of utilities. The northern east-west window will be for underground facilities only, and the southern east-west window will be for both above and below ground facilities. A 0.5-mile wide | *(See above.)* | *(See above.)* |

| MD LR 8: Within PHMA and GHMA, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Areas where acquisitions (including subsurface mineral rights) or conservation easements will benefit Greater Sage-Grouse habitat will be identified.<br>Outside of PHMA and GHMA, and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Casper RMP:<br>The BLM will pursue acquisition of lands and interest in lands in the Bolton Creek Drainage and Bates Creek areas. | No changes made. | No change proposed. |
| MD LR 9: Greater Sage-Grouse habitat requirements will be utilized to prioritize parcels for exchange or acquisition within PHMA. | No changes made. | No change proposed. |
| MD LR 10: Within PHMA, non-mineral withdrawals will be evaluated to determine if the withdrawal action is consistent with Greater Sage-Grouse conservation. | No changes made. | No change proposed. |
| MD REC 1: Specific to management for Greater Sage-Grouse or PHMA, all RMPs are amended as follows:<br>BLM Special Recreation Permits will be allowed in PHMA, unless negative impacts on Greater Sage-Grouse cannot be adequately mitigated.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Casper RMP:<br>The entire planning area will remain open to dispersed recreation. The camping limit on public lands is set by BLM policy and is currently limited to 14 days. Emphasis will be placed on providing interpretive and information signs and materials for public land visitors, maintaining existing facilities to a high standard consistent with the recreational setting, and limiting development of additional facilities to those areas where public recreational use of surrounding public lands requires. Work with state, local groups, and adjacent landowners will be conducted to identify and develop recreational trails, both motorized and nonmotorized, when the opportunities presents themselves. Special Recreation Permits will be allowed for commercial, noncommercial, and competitive | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| events on a case-by-case basis. Cooperation will be maintained with a variety of user groups, especially in the local area, to provide diverse recreational opportunities for enjoyment of public lands. BLM will pursue acquisition of lands and interest in lands in the Rattlesnake Range and Pine Ridge areas, as well as promote and support recreation-based tourism.<br>Kemmerer RMP:<br>Allow dispersed recreation and permit special recreational activities (e.g., outfitting and guiding permits and OHV events permitted on an annual basis after evaluation).<br>Green River RMP:<br>Special recreation permits will be considered on a case-by-case basis. Appropriate mitigation will be included in special recreation permits, commercial recreation uses, and major competitive recreation events to provide resource protection and public safety.<br>JMH CAP:<br>Special recreation use permits for managed activities that occur in the JMH CAP planning area will be reviewed and subject to recommendations made by the Rock Springs Field Office. This will allow the Rock Springs Field Office to track the amount, location, and timing of organized activity occurring within the planning area to monitor resource pressure. The permit evaluation process will consider the nature of the event, potential impacts on resources, conflicts with other events, and impacts on the quality of other visitors' experiences. Mitigation measures necessary to protect the resources will be included in any permit issued. A plan of operation will be required for all commercial recreational operators and outfitters. The plan will describe the type, extent, and location of the recreation use and the mechanisms by which the operator/outfitter will prevent impacts on environmental resources. Any requests in special recreation use permit applications to remove natural resources will be evaluated on a case-by-case basis after an environmental analysis process. | *(See above.)* | *(See above.)* |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD REC 2: Construction of recreation facilities within PHMA must conform with the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater Sage-Grouse, the BLM will consider and ensure compensatory mitigation that provides a net conservation gain to the species. | Construction of recreation facilities within PHMA must conform to the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater Sage-Grouse, the BLM will consider mitigation consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4 (see also MD SSS 4). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD TTM 1: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Within PHMA, designate the non-sand dune portions of the following OHV Open Areas as OHV Limited Area. The OHV limitation will ultimately be to "Designated Routes" as determined through a subsequent implementation/activity level Travel Management Plan. In the interim, motorized use on existing routes may occur; however, no new routes may be created without specific authorization: Rawlins Field Office: Dune Pond Cooperative Management Area. Rock Springs Field Office: Portion of the Greater Sand Dunes Recreation Area.<br>The following RMP decisions remain in effect: The Casper Field Office Poison Spider OHV Park (290 acres) will remain as an "open" OHV area. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD TTM 2: Within PHMA and GHMA, all motorized use (of which OHVs are a subset) will be limited to designated routes. Route designations will occur in subsequent implementation/activity level Travel Management Plans. In the interim motorized use on existing routes may occur; however, no new routes may be created without specific authorization. In PHMA and GHMA, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use). Temporary closure or restriction orders under these authorities are enacted at the discretion of the AO to resolve management conflicts and protect persons, property, and public lands and resources. Where an AO determines that off-highway vehicles are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. (43 CFR 8341.2) A closure or restriction order shall be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders shall be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No changes made. | Potential change under Alternatives 4, 5, and 6. |
| MD TTM 3: New local or collector roads (as defined in BLM Manual 9113) will be avoided within 1.9 miles of the perimeter of occupied Greater Sage-Grouse leks within PHMA. All new roads will be prohibited within 0.6 miles of the perimeter of occupied Greater Sage-Grouse leks within PHMA. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD TTM 4: Within PHMA, no upgrading of existing routes that will change route category or capacity will be allowed unless the upgrading will have minimal impact on Greater Sage-Grouse in PHMA, was necessary for motorist safety, or eliminated the need to construct a new road. | No changes made. | No change proposed. |
| MD TTM 5: In PHMA, existing roads or realignments will be used to access valid existing rights that are not yet developed. If valid existing rights cannot be accessed via existing roads, any new road will be constructed to the absolute minimum standard necessary, and the surface disturbance will be added to the total disturbance in the PHMA. | No changes made. | No change proposed. |

| 2015 Approved RMPAs | 2019 Approved RMPAs | Potential Change in 2023 Plan |
|---|---|---|
| MD TTM 6: Specific to management for Greater Sage-Grouse or PHMA, all RMPs are amended as follows:<br>For roads, primitive roads and trails not designated in travel management plans within PHMA, natural reclamation of roads and trails will be allowed in appropriate situations where additional resource damage is not foreseeable.<br>This will include primitive route/roads that were not designated in wilderness study areas and within lands with wilderness characteristics that have been selected to be managed to retain those characteristics for protection.<br>In PHMA, locate new roads that will have relatively high levels of activity (accessing multiple wells, housing development) greater than 1.9 miles from the perimeter of occupied Greater Sage-Grouse leks. Locate new other roads used to provide facility site access and maintenance >0.6 miles from the perimeter of occupied Greater Sage-Grouse leks.<br>Outside of PHMA and/or for values other than Greater Sage-Grouse, the following RMP decisions remain in effect with the modification described above:<br>Kemmerer RMP:<br>Roads and two-track routes determined to be unauthorized or redundant and unnecessary for resource management purposes will be reclaimed to achieve surrounding native conditions.<br>Rawlins RMP:<br>Roads or trails that are eroding beyond a reasonable level will be fixed or closed. JMH CAP:<br>Transportation planning will provide for access to achieve multiple-use goals while providing maximum protection for crucial habitats and sensitive resources and will consider:<br>Closing and rehabilitating unused roads and trails and those causing resource damage. This will be subject to county review of existing rights-of-way needs. | No changes made. | No change proposed. |
| MD TTM 7: Within PHMA, when reseeding roads and trails, appropriate seed mixtures will be used and the use of transplanted sagebrush will be considered. | No changes made. | No change proposed. |

**Table 2. Seasonal Habitat Objectives for GRSG**

| Attribute | Indicators | Desired Condition[6] | Reference |
|---|---|---|---|
| **Breeding and Nesting (Seasonal Use Period March 1–June 15** (Doherty 2008; Holloran and Anderson 2005) | | | |
| Lek Security | Proximity of trees | Trees absent or uncommon shrub/grassland ecological sites within 1.8 miles (approximately 3 kilometers) of occupied leks | Baruch-Mordo et al. 2013; Stiver et al. 2015 |
| | Proximity of sagebrush to leks | Adjacent protective sagebrush cover within 330 feet (approximately 100 meters) of an occupied lek | Stiver et al. 2015 |
| Cover | % of seasonal habitat meeting desired conditions | >80% of the nesting habitat meets the recommended vegetation characteristics, where appropriate (relative to ecological site potential, etc.). | Connelly et al. 2000 |
| | Sagebrush cover[2] | 5 to 25% | Connelly et al. 2000; Connelly et al. 2003; Hagen et al. 2007 |
| | Sagebrush height<br>Arid sites[3]<br>Mesic sites[4] | <br>4–31 inches (10–80 centimeters)<br>12–31 inches (30–80 centimeters) | Connelly et al. 2000 |
| | Predominant sagebrush shape | Predominantly spreading shape[5] | Stiver et al. 2015 |
| | Perennial grass cover (such as native bunchgrass)[2]<br>Arid sites[3]<br>Mesic sites[4] | <br>>10%<br>>15%<br>Cool-season bunchgrasses preferred | Connelly et al. 2000; Stiver et al. 2015; Cagney et al. 2010 |
| | Perennial grass and forb height (including residual grasses) | Adequate nesting cover ~~of >7" or~~ **would be** as determined by ESD site potential ~~and~~ **or best available science in consideration of** local variability. | Connelly et al. 2000; Connelly et al. 2003; Doherty et al. 2014; Hagen et al. 2007; Stiver et al. 2015 |
| | Perennial forb cover[2]<br>Arid sites[3]<br>Mesic sites[4] | <br>>5%<br>>10% | Connelly, J. W., M. A. Schroeder, A. R. Sands, and C. E. Braun 2000. |

| Attribute | Indicators | Desired Condition[6] | Reference |
|---|---|---|---|
| **Brood-Rearing/Summer[1] (Seasonal Use Period June 16–October 31)** | | | |
| Cover | % of seasonal habitat meeting desired condition | >40% of the summer/brood habitat meets recommended brood habitat characteristics where appropriate (relative to ecological site potential, etc.) | Connelly et al. 2000 |
| | Sagebrush cover[2] | 5–25% | Connelly et al. 2000 |
| | Sagebrush height | 4–32 inches (20.3–80 centimeters) | Connelly et al. 2000 |
| | Perennial grass cover and forbs[2] | >5% arid sites<br>>10% mesic sites | Connelly et al. 2000 |
| | Riparian areas/mesic meadows[2] | Proper functioning condition | Preferred forbs are listed in Stiver et al. 2015 |
| | Upland and riparian perennial forb availability | Preferred forbs are common with several preferred species present | Stiver et al. 2015 |
| **Winter (Seasonal Use Period November 1–February 28)** | | | |
| Cover and Food | % of seasonal habitat meeting desired conditions | >80% of the wintering habitat meets winter habitat characteristics where appropriate (relative to ecological site, etc.). | Connelly et al. 2000 |
| | Sagebrush cover above snow[2] | >5% | Connelly et al. 2000; Stiver et al. 2015 |
| | Sagebrush height above snow | >10 inches (>25 centimeters) | Connelly et al. 2000 |

Notes:

1 Where credible data support different seasonal dates than those identified, dates may be shifted, but the amount of days cannot be shortened or lengthened by the local unit.

2 Absolute cover is the actual recorded cover and can exceed 100% when recorded across all species and all layers. It is not relative cover, which is the proportions of each species, and equals 100%. Note that cover is reported for only those species (e.g., sagebrush and preferred forbs) that are sampled to determine suitability of habitat for Greater Sage-Grouse. Overall cover at the site will be greater than that sampled for Greater Sage-Grouse habitat, due to other species present. 3 Arid corresponds to the 10-12-inch precipitation zone; *Artemisia tridentata wyomingensis* is a common big sagebrush subspecies for this type site (Stiver et al. 2015).

4 Mesic corresponds to the ≥12-inch precipitation zone; *Artemisia tridentata vaseyana* is a common big sagebrush subspecies for this type site (Stiver et al. 2015).

5 Collectively, the indicators for sagebrush (cover, height, and shape), perennial grass, and perennial forb (cover, height, and/or availability) represent the desired condition range for nesting/early brood-rearing habitat characteristics, consistent with the breeding habitat suitability matrix identified in Stiver et al. 2015. Sagebrush plants that are more tree or columnar shaped provide less protective cover near the ground than sagebrush plants with a spreading shape (Stiver et al. 2015). Some sagebrush plants are naturally columnar (e.g., Great Basin big sagebrush) and a natural part of the plant community; however, a predominance of columnar shape arising from animal impacts may warrant management investigation or adjustments at site-specific scales.

6 All desired conditions will be dependent upon site capability and local variation (e.g., weather patterns, localized drought, and ESD state).

### 2.16.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The appendices can be found on the Wyoming GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|

## 2.17 BUFFALO, WYOMING RMP REVISIONS

This appendix presents the approved RMP revision language from the record of decision for the Buffalo RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.17.2** of this appendix.

### 2.17.1 Existing GRSG RMP Management – Buffalo RMP Revisions

**Table 1. Summary of Goals, Objectives, and Management Actions to the Buffalo RMP**

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MG BR:10: Distribution and abundance of all special status species are optimized. | No changes made. | No change proposed. |
| MO BR:10.1: Maintain or enhance special status species plant communities and habitats. | No changes made. | No change proposed. |
| MO:10.2: Manage BLM-administered lands to maintain or restore populations and habitat consistent with conservation requirements for special status species. | No changes made. | No change proposed. |
| MO:10.3: Develop effective conservation and cooperative management plans, strategies, and agreements with stakeholders. | No changes made. | No change proposed. |
| MG BR:11: Sustainable sagebrush habitats that provide the quantity, quality, and connectivity that is necessary to maintain sustainable populations of Greater Sage-Grouse and other special status species. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:11.1: Maintain large patches of high quality interconnected sagebrush habitats, with emphasis on patches occupied by Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:11.2: Maintain connectivity between and within sagebrush habitats with emphasis on communities occupied by Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:11.3: In all PHMA, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70%) with a minimum of 15% sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Tech Ref 1734-6). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MG BR:12: Successful restoration and rehabilitation of potential Greater Sage-Grouse habitat across the planning area. | No changes made. | No change proposed. |
| MO BR:12.1: Reestablish sagebrush corridors, where feasible, between Greater Sage-Grouse occupied habitats. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO BR:12.2: Reconnect large patches of sagebrush habitat with emphasis on reconnecting patches occupied by stronghold and isolated populations of Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD SS WL-4001: Utilize current research, management and conservation plans, and similar related documents to guide special status species habitat management. | No changes made. | No change proposed. |
| MD SS WL-4002: Implement actions set forth in recovery plans, conservation measures, terms and conditions, protection measures, and appropriate BMPs and reasonable and prudent measures within biological opinions for Threatened and/or Endangered wildlife species, including those specific to this RMP and any future statewide programmatic biological opinions. | No changes made. | No change proposed. |
| MD SS WL-4003: Maintain (size and quality) or enhance current habitat utilized by special status species. Enlarge/restore habitat on a site-specific basis. | No changes made. | No change proposed. |
| MD SS WL-4004: Maintain or enhance the integrity of identified special status wildlife species migration corridors. Manage identified special status wildlife species travel corridors consistent with other resource values. | No changes made. | No change proposed. |
| MD SS WL-4005: Locate and manage facilities to mitigate noise impacts on special status species. | No changes made. | No change proposed. |
| MD SS WL-4006: Manage surface-disturbing and disruptive activities to mitigate impacts on special status wildlife species and their habitats. | No changes made. | No change proposed. |
| MD SS WL-4007: Apply a CSU stipulation to fluid mineral leases containing special status species habitat. Surveys required for clearance. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *MD SS WL-4010: The BLM will coordinate new recommendations, mitigation, and Greater Sage-Grouse habitat objectives and management considerations with the WGFD and other appropriate agencies, local government cooperators, and the Wyoming SGIT. These measures will be analyzed in site-specific NEPA documents, as necessary.<br>The Greater Sage-Grouse adaptive management plan (Appendix D (p. 325)) provides regulatory assurance that unintended negative impacts to Greater Sage-Grouse habitat will be addressed before consequences become severe or irreversible. Projects requiring an EIS shall develop adaptive management strategies in support of the population management objectives for Greater Sage-Grouse set by the State of Wyoming (State of WY EO 2015-4). Adaptive management triggers are essential for identifying when potential management changes are needed in order to continue meeting Greater Sage-Grouse conservation objectives.<br>With respect to Greater Sage-Grouse, all regulatory entities in Wyoming, including the BLM, use soft and hard triggers. Soft and hard triggers are focused on three metrics: (1) number of active leks, (2) acres of available habitat, and (3) population trends based on annual lek counts.<br>**Soft Triggers Response**: Soft triggers require immediate monitoring and surveillance to determine causal factors and may require curtailment of activities in the short- or long-term, as allowed by law. The project level adaptive management strategies will identify appropriate responses where the project's activities are identified as the causal factor. The management agency (BLM) and the Adaptive Management Working Group will implement an appropriate response strategy to address causal factors not attributable to a specific project or to make adjustments at a larger regional or statewide level.<br>**Hard Trigger Response**: Upon determination that a hard trigger has been tripped, the BLM will immediately defer issuance of discretionary authorizations for new actions within the Biologically Significant Unit for a period of 90 days. In addition, | The BLM will coordinate new recommendations, mitigation, and Greater Sage-Grouse habitat objectives and management considerations with the WGFD and other appropriate agencies, local government cooperators, and the Wyoming Sage-Grouse Implementation Team. These measures will be analyzed in site-specific NEPA documents, as necessary.<br>The Greater Sage-Grouse adaptive management plan (2019 Wyoming GrSG ARMPA Appendix C) provides regulatory assurance that unintended negative impacts to Greater Sage-Grouse habitat will be addressed before consequences become severe or irreversible. Projects requiring an EIS shall develop adaptive management strategies in support of the population management objectives for Greater Sage-Grouse set by the State of Wyoming (State of WY EO 2015-4). Adaptive management triggers are essential for identifying when potential management changes are needed in order to continue meeting Greater Sage-Grouse conservation objectives.<br>With respect to Greater Sage-Grouse, all regulatory entities in Wyoming, including the BLM, use soft and hard triggers. | 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD SS WL-4014: Minimize disturbances that would result in alterations to springs and riparian Greater Sage-Grouse habitat. In coordination with stakeholders, develop alternative water sources to replace natural sources that have been affected or destroyed. | No changes made. | No change proposed. |
| MD SS WL-4015: Manage stored water to control mosquitoes and prevent the spread of WNv to Greater Sage-Grouse. | No changes made. | No change proposed. |
| MD SS WL-4016: Design water facilities with protective features to reduce mortality of Greater Sage-Grouse from drowning or entrapment. | No changes made. | No change proposed. |
| MD SS WL-4017: Design and locate fences to reduce impacts to important Greater Sage-Grouse habitat. | No changes made. | No change proposed. |
| MD SS WL-4018: Use the Fire Management Plan to incorporate the most current sagebrush habitat information and to guide fire suppression priorities in sagebrush habitats. | No changes made. | No change proposed. |
| MD SS WL-4019: Remove conifers where they have encroached upon Greater Sage-Grouse habitat in cooperation with stakeholders. Reduce the density of conifers that have encroached into, but do not yet dominate sagebrush plant communities. | No changes made. | No change proposed. |
| MD SS WL-4020: Inventory, record, and report existing type and condition of BLM fences. Prioritize areas and annually implement modifications to existing fences to reduce hazards to flying Greater Sage-Grouse, in cooperation with stakeholders. All new fences, in priority areas, will be properly designed and located to avoid hazards to flying Greater Sage-Grouse. | No changes made. | No change proposed. |
| MD SS WL-4021: Avoid renewable energy (solar and wind) projects in Greater Sage-Grouse Core Population Areas unless it can be demonstrated that the activity would not result in declines of core Greater Sage-Grouse populations. Sufficient demonstration of "no declines" should be coordinated with the WGFD and USFWS. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| No similar action. | *MD SS WL-4035: The BLM will update its Greater Sage-Grouse habitat management areas, including biologically significant units (BSUs), in conjunction with the State of Wyoming's core areas, upon issuance of any Wyoming Governor's Executive Order revising or amending the core area boundaries and upon completion of appropriate NEPA analysis and process. The BLM will complete the appropriate NEPA documentation (including appropriate public comment) prior to adopting any revised core area boundaries (e.g., maintenance action or plan amendment, environmental assessment, etc.). | Potential change under Alternatives 3, 4, 5, and 6. |
| No similar action. | *MD SS WL-4036: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Adopt the State of Wyoming's Greater Sage-Grouse Compensatory Mitigation Framework to the extent consistent with federal law, regulations, and policy.<br>In all Greater Sage-Grouse habitat, when authorizing third-party actions in designated Greater Sage-Grouse habitat, the BLM will seek to achieve the planning-level Greater Sage-Grouse management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Under this Plan Amendment, management would be consistent with the Greater Sage-Grouse goals and objectives, | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [Greater Sage-Grouse] or to improve the condition of [Greater Sage-Grouse] habitat" across the planning area.<br>Accordingly, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the following steps, in alignment with the Governor of Wyoming's Executive Order 2015-4 (July 29, 2015):<br>1. Work jointly with the WGFD to evaluate projects and recommend mitigation in the form of avoidance and minimization.<br>2. The WGFD will determine if the State requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>3. Incorporate state required or recommended mitigation into the BLM's NEPA decision-making process, if the WGFD determines that compensatory mitigation is required to address impacts to GRSG habitat as a part of State policy or authorization, or if a proponent voluntarily offers mitigation.<br>4. Analyze whether the compensatory mitigation (deferring to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action):<br>• achieves measurable outcomes for Greater Sage-Grouse habitat function on a landscape scale as determined by WGFD that are at least equal to the lost or degraded values in accordance with the Governor of Wyoming's Executive Order 2015-4.<br>• provides benefits that are in place for at least the duration of the impacts<br>• accounts for a level of risk that the mitigation action may fail or not persist for the full duration of the impact<br>5. Ensure mitigation outcomes are consistent with the State of Wyoming's mitigation strategy and principles outlined in 2019 | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | Wyoming GrSG ARMPA Appendix C, The Greater Sage-Grouse Habitat Management Strategy.<br>The BLM has determined that compensatory mitigation must be voluntary unless required by other applicable law and in recognition that State authorities may also require compensatory mitigation (IM 2019-018, *Compensatory Mitigation*, December 6, 2018). Therefore, consistent with valid existing rights and applicable law, when authorizing third-party actions that result in habitat loss and degradation, the BLM will consider voluntary compensatory mitigation actions only as a component of compliance with a State mitigation plan, program, or authority, or when offered voluntarily by a project proponent.<br>Project-specific analysis will be necessary to determine how a compensatory mitigation proposal addresses impacts from a proposed action. The BLM will cooperate with the State to determine appropriate project design and alignment with State policies and requirements, including those regarding compensatory mitigation. When the BLM is considering compensatory mitigation as a component of the project proponent's submission or based on a mitigation requirement from the State, the BLM's NEPA analysis would evaluate the need to avoid or minimize impacts of the proposed project and achieve the goals and objectives of this RMPA. The BLM will defer to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action. | *(See above.)* |
| MO PR:2.1: Achieve and maintain Standards for Healthy Rangelands and Guidelines for Livestock Grazing Management for the Public Lands Administered by the BLM in the State of Wyoming (Appendix I (p. 419)). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO PR:2.3: Rehabilitate all surface-disturbing activities consistent with applicable laws, regulations, and policies. | No changes made. | No change proposed. |
| MD Soil-1002: Authorized surface-disturbing activities will include plans for reclamation; site-specific reclamation actions should reflect the complexity of the project, environmental concerns, and the reclamation potential of the site. | No changes made. | No change proposed. |

|---|---|---|
| MG PR:3: Watershed, surface water, and groundwater resources are consistent with applicable state and federal standards and regulations. | No changes made. | No change proposed. |
| MO PR:3.1: BLM actions maintain or improve watershed, wetland, and riparian functions to support desired surface-flow regimes and water quality. | No changes made. | No change proposed. |
| MD Water-1007: Design and manage land use and surface-disturbing activities to reduce channel and bank erosion and the associated loss of riparian habitats. | No changes made. | No change proposed. |
| MD Water-1013: Allow surface disturbance within 500 feet of springs, non-CBNG reservoirs, water wells, or perennial streams with an approved site-specific plan that ensures construction, stabilization and reclamation methods are meeting water and other resource objectives including, but not limited to soil, slope, and vegetation, and wildlife habitat. | No changes made. | No change proposed. |
| MD Water-1016: Evaluate unneeded reservoirs for removal and reclamation. | No changes made. | No change proposed. |
| MO MR:1.1: Provide opportunities for the exploration and development of locatable minerals, as well as mill and tunnel site operations, while avoiding or mitigating the effects of these activities on other resource values so that unnecessary or undue degradation is prevented. | No changes made. | Potential change under Alternative 3. |
| MO MR:2.1: Maintain coal leasing and exploration, while minimizing impacts to other resource values. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Coal-2001: Coal planning was completed as part of the April 2001 BFO RMP update. At that time the four coal planning screens (i.e., coal development potential, unsuitability, multiple use and surface owner consultation) were applied to certain federal coal lands within the BFO planning area. The result of this planning effort was a decision identifying lands acceptable for further coal leasing consideration. The coal management decisions made in the BFO RMP update will be carried forward in this Approved RMP. Federal coal lands identified acceptable for further coal leasing consideration are available for Lease By Applications, lease modifications, emergency leases, and exchanges. Prior to offering a coal tract for sale, the need to reapply the unsuitability criteria will be reviewed, a tract specific NEPA analysis will be completed, and there will be opportunity for public comment. At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR 3461.5. Priority habitat (core population areas and core population connectivity corridors) is essential habitat for maintaining Greater Sage-Grouse for purposes of the suitability criteria set forth at 43 CFR 3461.5(o)(1). | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO MR:3.4: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of Greater Sage-Grouse habitat.<br>When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in priority habitat (core population areas and core population connectivity corridors) and general habitat, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 CFR 3162.3-1(h). Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts to Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

|---|---|---|
| MO BR:4.2: Improve riparian systems and wetlands in systems operating at less than PFC. | No changes made. | No change proposed. |
| MO BR:4.3: Manage contributing watersheds to sustain riparian health and water quality. | No changes made. | No change proposed. |
| MO BR:4.4: Manage and enhance riparian and wetland systems for plant, insect, fish and wildlife species that depend on these systems for their health and well being. | No changes made. | No change proposed. |
| MO BR:4.5: CBNG created riparian and wetland systems will be evaluated, retained, or reclaimed to support vegetation and other resource values. | No changes made. | No change proposed. |
| MD Riparian-4002: Prioritize, and develop activity and implementation plans to manage riparian systems to be at or above, or continue to be improving toward, PFC while achieving the Standards for Healthy Rangelands and Guidelines for Livestock Grazing Management for the Public Lands Administered by the BLM in the State of Wyoming. | No changes made. | No change proposed. |
| MD Riparian-4003: Manage riparian and wetland systems to enhance forage conditions and improve water quality. Manage all riparian systems with sensitive species concerns to a succession stage appropriate for that system, including vertical as well as horizontal vegetative structure and composition. | No changes made. | No change proposed. |
| MD Riparian-4004: Expand and enhance riparian/wetland systems and habitat in cooperation with stakeholders. | No changes made. | No change proposed. |
| MD Riparian-4005: Prevent degradation, loss, or destruction of riparian/wetland habitat. | No changes made. | No change proposed. |
| MD Riparian-4008: Allow surface-disturbing activities within 500 feet of riparian/wetlands systems with an approved site-specific plan that ensures construction, stabilization, and reclamation methods are meeting resource objectives, including, but not limited to soil, vegetation and wildlife habitat. | No changes made. | No change proposed. |
| MD Riparian-4010: Identify and manage systems capable of achieving DFC. | No changes made. | No change proposed. |
| MD Riparian-4011: Restore vegetation in CBNG supported wetland and riparian systems on BLM surface and/or lease in accordance with the ecological site potential. | No changes made. | No change proposed. |
| MG BR:5: Healthy native communities with manageable levels of pathogens, undesirable, invasive, non-native, or noxious species. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO BR:5.1: Develop and maintain baseline information regarding the extent, location, and potential impact(s) of pest species. From this baseline information develop and implement an Integrated Pest Management Plan. Integrated management would be used to control, suppress, and eradicate, where possible, noxious and invasive species per BLM Handbook H-1740-2. Manage noxious or invasive species treatments to maintain or improve Greater Sage-Grouse habitat. Apply Required Design Features as Conditions of Approval, such as those in Appendix C (p. 285). Encourage the use of voluntary BMPs. | Develop and maintain baseline information regarding the extent, location, and potential impact(s) of pest species. From this baseline information develop and implement an Integrated Pest Management Plan. Integrated management would be used to control, suppress, and eradicate, where possible, noxious and invasive species per BLM Handbook H-1740-2. Manage noxious or invasive species treatments to maintain or improve Greater Sage-Grouse habitat. Apply Required Design Features as Conditions of Approval, such as those in the 2019 Wyoming GrSG ARPMA Appendix B. Encourage the use of voluntary BMPs. | No change proposed. |
| MO BR5.2: Facilitate support for an integrated approach for the detection, management, or eradication of new and minor infestations. | No changes made. | No change proposed. |
| MO BR:5.3: Develop, implement, and maintain a management program for annual bromes and other invasive or undesirable species not listed as noxious, utilizing the best available science and BMPs. | No changes made. | No change proposed. |
| MO BR:5.4: Coordinate with APHIS to facilitate pest and predator management. | No changes made. | No change proposed. |
| MD Pest-4002: Manage designated pests on public surface lands using an Integrated Pest Management Approach consistent with DOI Manual 517 (BLM 2007b). | No changes made. | No change proposed. |
| MD Pest-4003: Limit surface disturbance to the minimum needed for safe project completion to limit the spread of noxious weeds. | No changes made. | No change proposed. |
| MD Pest-4004: Use certified noxious weed seed-free products on all BLM-administered projects and lands. | No changes made. | No change proposed. |
| MD Pest-4005: Implement and maintain cooperative integrated pest management programs with county weed and pest districts, state agencies, private industry, grazing lessees, and other stakeholders in conjunction with BLM weed and pest control work on public lands adjoining deeded and state lands. | No changes made. | No change proposed. |
| MD Pest-4006: Require surface or vegetation disturbance areas, including areas formerly receiving or holding water, be treated for invasive species and revegetated. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Pest-4009: Treat those plants on the State of Wyoming Designated list, the appropriate county lists, and other species of concern as determined by BLM resource specialists.<br>Note: Priority treatments are those areas where infestations on private land are threatening public lands. Treat areas that contain annual bromes and/or other invasive species to minimize competition and favor establishment of desired species | No changes made. | No change proposed. |
| MD Pest-4010: Designate and prioritize areas for the treatment of annual brome species. | No changes made. | No change proposed. |
| MG BR:6: Distribution and abundance of all native and desirable non-native species are optimized. | No changes made. | No change proposed. |
| MO BR:6.1: BLM actions prevent and/or reduce impacts to desirable species. | No changes made. | No change proposed. |
| MO BR:6.2: In coordination with cooperating agencies, develop and implement an achievable Wildlife Monitoring and Protection Plan. | No changes made. | No change proposed. |
| MO BR:6.3: Maintain, restore, or improve the continuity and productivity of fish and wildlife habitats to support WGFD population objectives. | No changes made. | No change proposed. |
| MO BR:6.4: Develop and implement an adaptive conservation and management strategy. | No changes made. | No change proposed. |
| MG BR:7: Sufficient functional habitat for native and desirable non-native species. | No changes made. | No change proposed. |
| MO BR:7.1: Evaluate, update, and revise as necessary existing Wildlife Habitat Management Plans. | No changes made. | No change proposed. |
| MO BR:7.2: Develop Wildlife Habitat Management Plans for areas with important habitats. | No changes made. | No change proposed. |
| MO BR:7.3: Manage habitat consistent with local, state, and federal management plans, as applicable. | No changes made. | No change proposed. |
| MO BR:7.4: Continue to gather habitat and population data while concurrently monitoring human and natural disturbance dynamics to improve habitat management. | No changes made. | No change proposed. |
| MO BR:7.5: Provide security habitat, sufficient in amount and distribution, to support WGFD population objectives for fish and wildlife to escape from disruptive activities. | No changes made. | No change proposed. |
| MO BR:7.6: Maintain and provide functioning sagebrush habitat to sustain sagebrush obligates and other sagebrush dependent species. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MG BR:8: Fish and wildlife are able to move between areas of functionally intact habitat. | No changes made. | No change proposed. |
| MO BR:8.1: Develop Travel Management Plans for areas important for fish and wildlife while supporting other resource values. | No changes made. | No change proposed. |
| MO BR:8.2: Develop a ROW Management Plan for utility corridors to manage impacts to areas of habitat important to fish and wildlife consistent with other resource values. | No changes made. | No change proposed. |
| MO BR:8.3: Land acquisitions should support desirable fish and wildlife populations or habitat. | No changes made. | No change proposed. |
| MO BR:8.4: Restore functionality to areas of degraded habitat important to fish and wildlife populations consistent with other resource values. | No changes made. | No change proposed. |
| MD Fish-4008: Maintain or enhance streams and riparian areas associated with Class I and II streams (WGFD classifications), Powder River, Tongue River, and other appropriate areas for desired fisheries potential. | No changes made. | No change proposed. |
| MD Fish-4012: Allow surface-disturbing activities within 0.25 mile of naturally occurring water bodies containing native and desirable non-native fish species where fish resource objectives can be met. | No changes made. | No change proposed. |
| MD WL-4001: Develop appropriate mitigation for surface-disturbing and disruptive activities associated with wildlife habitat management through use of the mitigation guidelines described in Appendix F (p. 397). | No changes made. | No change proposed. |
| MD WL-4002: Maintain or improve important wildlife habitats through vegetative manipulations, habitat improvement projects, livestock grazing strategies and the application of The Wyoming Guidelines for Managing Sagebrush Communities with Emphasis on Fire Management (Wyoming Interagency Vegetation Committee 2002) and Appendix F (p. 397), WGFD Strategic Habitat Plan (WGFD 2001), State Wildlife Action Plan (WGFD 2010), and similar guidance updated over time. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD WL-4003: Continue to use existing Habitat Management Plans and update as necessary to include management objectives and prescriptions for wildlife: South Big Horns Habitat Management Plan (BLM 1986b), including a portion or all of the Gardner Mountain and North Fork WSAs; Wetlands Habitat Management Plan (BLM 1986a); and Middle Fork Powder River Habitat Management Plan (BLM 1980). | No changes made. | No change proposed. |
| MD WL-4005: Consult with the WGFD and USFWS, in accordance with MOUs, when applying mitigation for wildlife and before waiving, allowing exceptions to, or modifying wildlife-related land use restrictions and mitigation. | No changes made. | No change proposed. |
| MD WL-4006: Provide, to the extent possible, suitable habitat and forage to support wildlife population objectives as defined by WGFD.<br>BLM will cooperatively consider proposals by the WGFD to change population objective levels based on habitat capability and availability. | No changes made. | No change proposed. |
| MD WL-4007: Manage access to protect crucial habitats in cooperation with WGFD and other stakeholders. | No changes made. | No change proposed. |
| MD WL-4008: Utilize current research, management and conservation plans, and similar related documents to guide wildlife habitat management. | No changes made. | No change proposed. |
| MD WL-4009: Construct new fences to avoid adverse impacts to wildlife and in accordance with BLM Fencing Handbook 1741-1 (BLM 1989) and WO Instruction Memorandum 2010-022: Managing Structures for the Safety of Sage-grouse, Sharp-tailed grouse, and Lesser prairie chicken (BLM 2009b). | No changes made. | No change proposed. |
| MD WL-4012: Inventory, record, and report existing type, condition, and location of BLM fences. Prioritize fence projects and annually implement modifications in accordance with appropriate wildlife needs and the BLM Fencing Handbook 1741-1. | No changes made. | No change proposed. |
| MD WL-4013: Allow surface-disturbing and disruptive activities to occur throughout the entire life of projects during seasons important for wildlife when wildlife resource objectives can be met | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD WL-4014: Powerlines (distribution and transmission) will be designed to minimize wildlife related impacts and constructed to the latest APLIC guidance.<br>Prohibit above ground distribution powerlines unless identified in an approved distribution plan. | No changes made. | No change proposed. |
| MD Cultural-5007: Prohibit surface disturbance within the following sites:<br>• Pumpkin Buttes<br>• Cantonment Reno<br>• Dull Knife Battle<br>• Crazy Woman Battle<br>• Contributing and Unevaluated Segments of the Bozeman Trail<br>• All Rock Art Sites<br>• All Rock Shelter Sites<br>• All Native American Burials<br>Allow surface disturbance and infrastructure within 3.0 miles of the following sites where development is either not visible, or will result in a weak contrast to the setting:<br>• Pumpkin Buttes<br>• Cantonment Reno<br>• Dull Knife Battle<br>• Crazy Woman Battle<br>• Contributing and Unevaluated Segments of the Bozeman Trail<br>• All Rock Art Sites<br>• All Native American Burials | No changes made. | No change proposed. |
| MD Paleo-5001: Retain public lands with significant paleontological values. | No changes made. | No change proposed. |
| MD Paleo-5006: Avoid areas containing paleontological resources of high quality or importance when developing locatable minerals. | No changes made. | No change proposed. |
| MD Paleo-5007: Apply an NSO stipulation to mineral leases in areas containing paleontological resources of high quality or importance. | No changes made. | No change proposed. |
| MD Paleo-5008: Avoid areas containing paleontological resources of high quality or importance when developing salable minerals. | No changes made. | No change proposed. |
| MD VRM-5002: Incorporate BMPs for visual resources into project planning for federal actions. | No changes made. | No change proposed. |
| MG LR:2: Manage land tenure adjustments and land use authorizations to meet the needs of the customers while protecting other resource values. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO LR:2.1: Develop and maintain a land-ownership pattern that improves access for public use, and improves management and protection of BLM-administered lands by:<br>1. Acquiring legal easements to BLM-administered lands for recreational opportunities and administrative use.<br>2. Responding to requests for land authorizations for access needs.<br>3. Responding to requests for land transfers.<br>4. Giving priority to land exchanges and/or sales on custodial grazing allotments while supporting other resource values. | No changes made. | No change proposed. |
| MO LR:2.3: Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |
| MD L&R-6002: Consider land use authorizations (permits, leases, etc.) on a project-specific basis consistent with other resource objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD L&R-6003: Consider withdrawals for surface and/or minerals on a project-specific basis. | No changes made. | No change proposed. |
| MD L&R-6011: Acquire private or state land or interest in land from willing sellers consistent with other resource objectives, on a project-specific basis. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD L&R-6012: Acquire and dispose of land based on all resource values, including but not limited to agricultural potential and water. Do not classify, open, or make available any BLM-administered public lands within the planning area for agricultural leasing or agricultural entry under either Desert Land Entry or Indian Allotment for one or more of the following reasons: rugged topography, presence of sensitive resources, lack of water or access, small parcel size, and/or unsuitable soils.<br>Lands classified as PHMA and GHMA for Greater Sage-Grouse will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the Greater Sage-Grouse or (2) the agency can demonstrate that the disposal, including land exchanges, of the lands will have no direct or indirect adverse impact on conservation of the Greater Sage-Grouse.<br>Exceptions would be considered where there is mixed ownership and land exchanges would allow for additional or more contiguous federal ownership patterns within PHMA. For PHMA with minority federal ownership, an additional, effective mitigation agreement would be included for any disposal of federal land. As a final preservation measure, consideration should be given to pursuing a permanent conservation<br>easement.<br>For lands in GHMA that are identified for disposal, the BLM will only dispose of such lands consistent with the goals and objectives of this plan, including, but not limited to, the land use plan goal to conserve, recover, and enhance Greater Sage-Grouse habitat on a landscape scale. | No changes made. | No change proposed. |
| MD L&R-6014: Prioritize acquiring land or interests in lands in areas adjacent to large blocks of BLM-administered land or other lands having significant resource or other values before other areas. | No changes made. | No change proposed. |
| MG LR:4: Primary infrastructure corridors and subsidiary routes consistent with other resource values. | No changes made. | No change proposed. |
| MO LR:4.1: Manage public lands to meet the needs of ROW customers while supporting other resource values. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO LR:4.3: Identify infrastructure corridors consistent with other resource values. | No changes made. | No change proposed. |
| MO LR:4.4: Make opportunities available for exploration and development of CO2 sequestration research and activities, while avoiding or mitigating impacts of these activities on other resource values. | No changes made. | No change proposed. |
| MO LR:4.5: Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |
| MD ROW-6001: Designate corridors for major ROW to minimize surface disturbance and impacts to other resources. | No changes made. | No change proposed. |
| MD ROW-6004: The preferred location for new ROW will be in or adjacent to existing disturbed areas associated with existing ROW, constructed roads, or highways. | No changes made. | No change proposed. |
| MD ROW-6005: Maintain a transportation management system in cooperation with appropriate state and local agencies to meet public and resource management needs. | No changes made. | No change proposed. |
| MD ROW-6006: Make lands available for ROW in accordance with management identified within the Approved RMP to conserve other resources. This results in:<br>• 79,777 acres excluded from ROW.<br>• 321,149 acres identified for ROW avoidance.<br>PHMA would be managed as ROW avoidance areas for new ROW or SUA permits. Within PHMA where new ROWs/SUAs are necessary, new ROWs/SUAs would be located within designated RMP corridors or adjacent to existing ROWs/SUAs where technically feasible. Subject to valid existing rights including non-federal land inholdings, required new ROWs/SUAs would be located adjacent to existing ROWs/SUAs or where it best minimizes Greater Sage-Grouse impacts.<br>Greater Sage-Grouse priority habitat (Core Population Areas and Core Population Connectivity Corridors) are designated as avoidance areas for ROWs.<br>• 381,176 acres are open for ROW development. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD ROW-6009: Designate the following corridors for major ROW transportation and utility use, in cooperation with the State of Wyoming:<br>• Echeta Road<br>• Sheridan to Gillette, largely following US 14/16<br>• Highway 59 north of Gillette<br>• Interstate 25<br>• Interstate 90, Gillette to Montana State Line<br>• Powder River<br>• Powder River Breaks (Buffalo to Gillette)<br>Corridor use is required. No above ground lines will be authorized in the Powder River or Powder River Breaks corridors. Corridor requirements within Greater Sage-Grouse habitat are identified in SS WL-4022. | No changes made. | No change proposed. |
| MD ROW-6010: Authorize and place above ground facilities (i.e., compressors, electric distribution powerlines) within ROW and other disturbance areas when resource objectives can be met. | No changes made. | No change proposed. |
| MD ROW-6012: Evaluate CO2 sequestration proposals where in accordance with management identified within the Approved RMP. | No changes made. | No change proposed. |
| MG LR:5: A safe transportation network that supports other resource values. | No changes made. | No change proposed. |
| MO LR:5.1: Utilize a comprehensive travel management approach to sustain and enhance access, recreational experiences, and support other resource values. | No changes made. | No change proposed. |
| MO LR:5.3: Designate all BLM-administered lands as Open, Limited, or Closed to OHV use, in consideration of other resource values. | No changes made. | No change proposed. |
| MO LR:5.4: Provide for acceptable modes of legal public access that supports other resources, reduces conflicts, and provides for diverse recreation opportunities. | No changes made. | No change proposed. |
| MD Trans-6002: Evaluate roads constructed under other initiatives (e.g., oil and gas exploration) for inclusion in the BLM transportation system. Roads that are no longer needed for their original purposes are assessed for addition to the BLM transportation system prior to reclamation. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Trans-6004: Design, construct, and maintain roads or trails based on the specific objectives for that trail or road in consideration of other resources. Design, construct, and maintain roads to minimize surface disturbance, changes to surface water runoff, and erosion. | No changes made. | No change proposed. |
| MD Trans-6006: Base road or trail closures and abandonments on resource protection, demand for new roads, and accommodation of authorized uses. | No changes made. | No change proposed. |
| MD Trans-6007: Maintain transportation system roads under BLM jurisdiction in accordance with assigned maintenance levels and in consideration of other resource values. Maintain administrative roads on an as needed basis, dependent on time, funding, and access priorities. | No changes made. | No change proposed. |
| MD Trans-6008: Within 5 years of the ROD, inventory all routes on public land and develop a travel management plan to classify and designate routes for continued use or decommissioning and reclamation. Include maintenance standards for routes to be retained for public use, as well as specific measures to accomplish road closure in the travel management plan. Inventory, designate, number, and sign all routes as appropriate. Posted signs will include allowed uses and activities. Restrictions to existing roads and trails remains in effect until travel management planning is completed and designated routes are identified. Appendix S (p. 667) provides additional information regarding the travel management planning process. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Trans-6013: Allow temporary closures to motorized vehicle use in areas that pose public health and safety risks, and/or where resource damage is imminent.<br>In Greater Sage-Grouse priority habitat (Core Population Areas and Core Population Connectivity Corridors) and general habitat, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use).<br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that OHVs are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence (43 CFR 8341.2). A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No changes made. | No change proposed. |
| MD Trans-6014: Limit OHV use to designated routes unless compelling reasons exist to classify parcels as Open or Closed, and is consistent with other resource values. Until individual routes are designated, areas subject to route designation will be classified as Limited to existing routes. Once route designation is completed, areas will no longer be classified as Limited to existing routes. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Trans-6019: Limit motorized vehicle use to designated routes within habitat of special status species consistent with travel management designations for that area. Routes will be designated to avoid occupied habitat during travel management planning. | No changes made. | No change proposed. |
| MD Trans-6020: Evaluate existing routes in the vicinity of any new system roads for closure and reclamation consistent with other resource values. | No changes made. | No change proposed. |
| MO LR:7.2: Manage recreation to protect resources, maintain public health and safety, and to provide a diverse array of benefits to the public. | No changes made. | No change proposed. |
| MG LR:8: Recreation facilities balance public demand with other resource values. | No changes made. | No change proposed. |
| MO LR:8.1: Design and maintain recreation sites to meet acceptable health and safety standards while supporting other resource values. | No changes made. | No change proposed. |
| MD Rec-6003: Open the planning area to dispersed recreation where consistent with other resource values. | No changes made. | No change proposed. |
| MD Rec-6010: Avoid riparian habitat or develop and manage recreational sites, recreation facilities, and recreational access in a manner that minimizes impacts to riparian habitats. | No changes made. | No change proposed. |
| MD Rec-6011: Prohibit dispersed camping and commercial camps within 200 feet of perennial surface water. | No changes made. | No change proposed. |
| **MD Rec-6015: Allow additional recreation facilities in areas where they are supported by recreational use and are consistent with other resource values.<br>Construction of recreation facilities within Greater Sage-Grouse PHMA (Core Population Areas and Core Population Connectivity Corridors) must conform with the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater Sage-Grouse, the BLM will require and ensure compensatory mitigation that provides a net conservation gain to the species. | Allow additional recreation facilities in areas where they are supported by recreational use and are consistent with other resource values.<br>Construction of recreation facilities within Greater Sage-Grouse PHMA (Core Population Areas and Core Population Connectivity Corridors) must conform to the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater Sage-Grouse, the BLM will consider mitigation consistent with the applicable State Management Strategy (currently Governor's Executive Order 2015-4) (see also MD SS WL-4036). | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD Rec-6018: Designate the following areas as SRMAs and delineate discrete recreation management zone boundaries:<br>• Burnt Hollow (17,280 acres)<br>• Dry Creek Petrified Tree (2,567 acres)<br>• Hole-in-the-Wall (11,952 acres)<br>• Middle Fork Powder River (10,083 acres)<br>• Mosier Gulch (1,026 acres)<br>• Welch Ranch (1,748 acres)<br>• Weston Hills (9,504 acres)<br>Strategically emphasize a variety of recreation opportunities along with the protection of natural and cultural resources. R&VS management will be recognized as the predominant land use focus in SRMAs. Manage SRMAs under site-specific management plans. Site-specific management plans will be consistent with and implement the provisions specified for SRMAs in Appendix T (p. 679). | No changes made. | No change proposed. |
| MD Rec-6019: Do not lease minerals within the boundary of the following SRMAs:<br>• Burnt Hollow (17,280 acres)<br>• Dry Creek Petrified Tree (2,567 acres)<br>• Hole-in-the-Wall (11,952 acres)<br>• Middle Fork Powder River (10,083 acres)<br>• Mosier Gulch (1,026 acres)<br>• Welch Ranch (1,748 acres)<br>Lease fluid minerals with a CSU stipulation to be consistent with SRMA management in the following SRMA:<br>• Weston Hills (9,504 acres) | No changes made. | No change proposed. |
| MD Rec-6021: Allow surface disturbance within designated SRMAs for administrative use only, where consistent with other resource values. | No changes made. | No change proposed. |
| MD Rec-6022: Recommend withdrawals from mineral entry under the mining laws in designated SRMAs. | No changes made. | No change proposed. |
| MD Rec-6023: Allow salable mineral development within designated SRMAs for administrative use only. | No changes made. | No change proposed. |
| MG LR:11: Public rangelands provide for a sustainable level of livestock grazing consistent with other resource values and sustained yield. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO LR:11.2: Manage forage to maintain or improve ecological states and achieve and/or maintain Standards for Healthy Rangelands and Guidelines for Livestock Grazing Management for the Public Lands Administered by the BLM in the State of Wyoming. | No changes made. | Potential change under Alternative 3. |
| MO LR:11.3: Monitor and evaluate rangeland health and condition in coordination with cooperators, and lessees to determine if, and what additional management is needed to achieve desired ecological state. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6001: Develop and implement appropriate livestock grazing management actions to achieve the Standards for Healthy Rangelands and Guidelines for Livestock Grazing Management for the Public Lands Administered by the BLM in the State of Wyoming, to provide watershed protection, to improve forage for livestock, forage and habitat for wildlife, and enhance rangeland health. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6004: Continue implementation of existing AMPs. Develop and implement new AMPs with grazing lessees and other stakeholders to achieve desired resource goals and objectives. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6005: Manage livestock grazing to sustain riparian, wetland, mountain mahogany, specials status species or other special habitats. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6009: Implement strategies that best protect rangeland resources during periods of drought. Cooperate with stakeholders for voluntary adjustments in livestock use and/or livestock management. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6015: Develop range improvements in accordance with resource needs and livestock management. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6016: Conduct baseline inventories. Develop, implement, and monitor AMPs. Base AMP goals/objectives in Category I and M allotments on resource protection and watershed health. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *MD Grazing- 6017: Allow livestock grazing on all public lands in the planning area except where an evaluation has determined it to be incompatible with other resource uses or values (campgrounds, entrances of caves, sites of cultural significance).<br>• The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in Greater Sage-Grouse priority habitat (Core Population Areas and Core Population Connectivity Corridors) followed by general habitat. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations.<br>• The BLM will collaborate with appropriate federal agencies and the State of Wyoming, as contemplated under the Wyoming Governor's Executive Order 2013-3, to: (1) develop appropriate conservation objectives; (2) define a framework for evaluating situations where Greater Sage-Grouse conservation objectives are not being achieved on federal land, to determine if a significant causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and Greater Sage-Grouse conservation objectives; and (3) identify appropriate site-based actions to achieve<br>Greater Sage-Grouse conservation objectives within the framework. Absent substantial and compelling information that adjustments are necessary to the core population area strategy, these core population areas, connectivity areas, identified and mapped winter concentration areas, and protective stipulations shall not be altered for a minimum of 7 years. Any changes shall involve a transparent process that provides an opportunity for public input and proper consideration of any proposal consistent with the provisions contemplated | Allow livestock grazing on all public lands in the planning area except where an evaluation has determined it to be incompatible with other resource uses or values (campgrounds, entrances of caves, sites of cultural significance).<br>• The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in Greater Sage-Grouse priority habitat (Core Population Areas and Core Population Connectivity Corridors) followed by general habitat. In setting workload priorities, precedence will be given to existing permits/leases in these areas not meeting Land Health Standards, with focus on those containing riparian areas, including wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., fire) and legal obligations.<br>• Within PHMA, if monitoring data show the wildlife/special status species standard has not been met nor progress being made toward meeting that standard, there would be an evaluation and a determination made as to the cause. If it is determined that the current authorized livestock use is a significant causal factor in failing to achieve the wildlife/special status species standards, the BLM would address the achievement or progress toward achieving the LHSs (43 CFR 4180.2) and, if needed, Greater Sage-Grouse habitat maintenance or improvement.<br>• The BLM will collaborate with appropriate federal agencies and the State of Wyoming, as contemplated under the Wyoming Governor's Executive Order 2013-3, to: (1) develop appropriate conservation objectives; (2) define a framework for evaluating situations where Greater Sage-Grouse conservation objectives are not being achieved on federal land, to determine if a significant causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and Greater Sage-Grouse conservation objectives; and (3) identify appropriate site-based actions to | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| under Wyoming's core population area strategy.<br>• The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMAs will include specific management thresholds based on Greater Sage-Grouse Habitat Objectives Table and Land Health Standards (43 CFR 4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis.<br>• Allotments within priority habitat (Core Population Areas and Core Population Connectivity Corridors), and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision.<br>• At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fuel breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. 9,992 acres are incompatible with and 772,110 acres are available for livestock grazing. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | achieve Greater Sage-Grouse conservation objectives within the framework. Absent substantial and compelling information that adjustments are necessary to the core population area strategy, these core population areas, connectivity areas, identified and mapped winter concentration areas, and protective stipulations shall not be altered for a minimum of 7 years. Any changes shall involve a transparent process that provides an opportunity for public input and proper consideration of any proposal consistent with the provisions contemplated under Wyoming's core population area strategy.<br>• When NEPA analysis is required for a specific implementation action, one alternative would include mechanisms to make adjustments to meet or make progress toward meeting the wildlife/special status species standard. The analysis should also identify the BLM-approved data collection methodologies used for monitoring conditions and determining when adjustments are necessary. If current grazing management meets land health standards and provides for Greater Sage-Grouse habitat, there would be no need to analyze an alternative for Greater Sage-Grouse. Within PHMA, seasonal habitat objectives for Greater Sage-Grouse apply only to those habitats delineated within an allotment during the specific season (e.g., breeding season objectives during breeding season). Data needed to inform the relationship between the authorized use and habitat condition would come from sample locations that appropriately reflect the impact of the authorized use on habitat conditions. Data points should fall within Greater Sage-Grouse seasonal habitat areas and be collected on ecological sites that have the potential to produce Greater Sage-Grouse habitat.<br>• Allotments within priority habitat (Core Population Areas and Core Population Connectivity Corridors), and focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing | *(See above.)* |

|---|---|---|
| *(See above.)* | permits. Field checks could include monitoring for actual use, utilization, and use supervision.<br>• Authorized uses in PHMA that incorporate habitat objectives for Greater Sage-Grouse must develop desired conditions based on Greater Sage-Grouse habitats present in the allotment and the ecological potential of sites that supports these habitats. Metrics used to monitor for objectives must be developed and inform the wildlife/SSS portion of the Standards for Healthy Rangelands.<br>• At the time a permittee or lessee voluntarily relinquishes a permit or lease, the BLM will consider whether the public lands where that permitted use was authorized should remain available for livestock grazing or be used for other resource management objectives, such as reserve common allotments or fuel breaks. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. 9,992 acres are incompatible with and 772,110 acres are available for livestock grazing. This does not apply to or impact grazing preference transfers, which are addressed in 43 CFR 4110.2-3. | *(See above.)* |
| MD Grazing-6019: Locate livestock salt or mineral supplements a minimum of 500 feet away from water sources, riparian areas, and aspen stands. | No changes made. | Potential change under Alternative 3. |
| MD Grazing-6021: Provide rest/deferment from livestock grazing following wildfire, prescribed burns, and other vegetative treatments until resource objectives are met. | No changes made. | Potential change under Alternative 3. |

### 2.17.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The 2015 appendices can be found on the Buffalo RMP ePlanning website. The 2019 appendices can be found on the Wyoming GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |

## 2.18 CODY, WYOMING RMP REVISIONS

This appendix presents the approved RMP revision language from the record of decision for the Cody RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.18.2** of this appendix.

### 2.18.1 Existing GRSG RMP Management – Cody RMP

**Table 1. Summary of Goals, Objectives, and Management Actions to the Cody RMP**

|---|---|---|
| **Land Use Plan Revisions/Amendments to the Cody RMP** | | |
| MO MR:2.3: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 CFR 3162.3-1(h). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| *MO MR:2.4: Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce, and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources.<br>The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts to Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases. | Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce, and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources.<br>The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts to Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases (see MDs 4107, 4108, 4109, 4111, and 4157). | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 2006 MR:3.1: Consider interest in exploration for, or leasing of, federal coal (Map 3-5), if any on a case-by-case basis. Allow coal exploration licenses subject to the regulations of 43 CFR 3410, and subject to guidance mitigating for surface-disturbing activities in the Wyoming BLM Standard Oil and Gas- Lease Stipulations (Appendix B, Oil and Gas Lease Notices and Lease Stipulations, including Exception, Modification, and Waiver Criteria (p. 211)). Before issuing a coal exploration license, require the authorized officer to prepare an environmental assessment or environmental impact statement, if necessary, of the potential effects of the proposed exploration on the natural and socioeconomic environment of the affected area. If an application for a federal coal lease is received, conduct an appropriate land use and environmental analysis, including the coal screening process, to determine whether the area(s) proposed for leasing is (are) acceptable for coal development and leasing (as per 43 CFR 3425). If public lands are determined to be acceptable for further consideration for coal leasing, amend the land use plan as necessary. Only accept federal coal lease applications on those federal coal lands with development potential identified as suitable for further leasing consideration, after application of the coal screens and unsuitability criteria. At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR 3461.5. PHMA is essential habitat for maintaining Greater Sage-Grouse for purposes of the suitability criteria set forth at 43 CFR 3461.5(o)(1). The BLM will also consider that USFWS has found "the core area strategy…if implemented by all landowners via regulatory mechanisms, would provide adequate protection for sage-grouse and their habitats in the state" when considering leasing coal in PHMA under the criteria set for at 43 CFR 3461.5(o)(1) (USFWS 2010). | Consider interest in exploration for, or leasing of, federal coal (Map 3-5), if any on a case-by-case basis. Allow coal exploration licenses subject to the regulations of 43 CFR 3410, and subject to guidance mitigating for surface-disturbing activities in the Wyoming BLM Standard Oil and Gas Lease Stipulations (2015 Cody RMP Appendix B, Oil and Gas Lease Notices and Lease Stipulations, including Exception, Modification, and Waiver Criteria (p. 211)). Before issuing a coal exploration license, require the authorized officer to prepare an environmental assessment or environmental impact statement, if necessary, of the potential effects of the proposed exploration on the natural and socioeconomic environment of the affected area.<br>If an application for a federal coal lease is received, conduct an appropriate land use and environmental analysis, including the coal screening process, to determine whether the area(s) proposed for leasing is (are) acceptable for coal development and leasing (as per 43 CFR 3425). | 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 2013: Process oil and gas lease applications on a case-by-case basis. Ensure that leasing activities in PHMAs comply with Greater Sage-Grouse RMP decisions and remain in compliance with laws, regulations, and policy. | Process oil and gas lease applications on a case-by-case basis. Ensure that leasing activities in PHMAs comply with Greater Sage-Grouse RMP decisions and remain in compliance with laws, regulations, and policy (see also MDs 4107, 4108, 4109, 4111, and 4157). | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 2023: Delineate **Oil and Gas Management Areas** (Map 3-9) (108,174 acres of federal mineral estate) around existing intensively-developed fields, applying a 2-mile buffer from the outer boundary of the existing field (Map 3-10); adding enhanced oil recovery areas identified by the Governor's Office Enhanced Oil Recovery Institute and excluding Greater Sage-Grouse PHMAs. Manage these areas primarily for oil and gas exploration and development. Oil and gas development, including enhanced oil recovery operations, within Oil and Gas Management Areas is allowed to take place at the same level and density as the existing development in the field, except in the Oregon Basin Oil Field, where new development must result in no net gain of surface disturbance. Levels and densities beyond the existing field development may require additional reclamation or compensatory offsite mitigation.<br>As oil and gas fields expand or exploration reaches beyond the Oil and Gas Management Areas depicted on Map 3-9, Oil and Gas Management Areas may be enlarged as appropriate. To enlarge Oil and Gas Management Areas, the expansion area would:<br>i) have to be adjacent to the field and under valid oil and gas lease(s) with stipulations allowing surface occupancy and development; ii) have to have a surface density of, on average, at least four well pads per 640 acres; a determination that additional well density is required to efficiently and adequately produce the oil or gas resource; iii) have a project-specific environmental analysis prepared to analyze the impacts and determine operating methods, mitigation, and BMPs to be used in the efficient and comprehensive development of the field; iv) need surface resources to be satisfactorily mitigated; and v) need commitment to accelerate reclamation as required by the authorized officer. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO FM:1.5: Following wildland fires, conduct appropriate emergency stabilization and rehabilitation when and where needed. In priority Greater Sage-Grouse habitat areas, prioritize suppression immediately after life and property to conserve the habitat. In general Greater Sage-Grouse habitat, prioritize suppression where wildfires threaten priority Greater Sage-Grouse habitat. | No changes made. | No change proposed. |
| MO FM:2.1: Consult and cooperate with adjacent landowners, state and local governments, and other stakeholders to plan and implement prescribed fire and other vegetation treatments across the landscape. In areas of general Greater Sage-Grouse habitat, design and implement fuels treatments with an emphasis on protecting existing sagebrush ecosystems. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 3008: Suppress fires threatening Greater Sage-Grouse habitats and crucial winter wildlife habitat within Wyoming big sagebrush communities. Where fire would be utilized to meet resource objectives, work closely with resource specialists to protect and improve Greater Sage-Grouse habitat. For fuels management, the BLM would consider multiple tools for fuels reduction and would analyze in NEPA compliance documentation before electing to implement prescribed fire in PHMAs.<br>If prescribed fire is used in Greater Sage-Grouse habitat, the NEPA analysis for the Burn Plan will address:<br>• why alternative techniques were not selected as a viable options;<br>• how Greater Sage-Grouse goals and objectives would be met by its use;<br>• how the COT Report objectives would be addressed and met; and<br>• a risk assessment to address how potential threats to Greater Sage-Grouse habitat would be minimized.<br>Prescribed fire as a vegetation or fuels treatment in Greater Sage-Grouse habitat shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Prescribed fire could be used to meet specific fuels objectives that would protect Greater Sage-Grouse habitat in PHMAs (e.g., creation of fuel breaks that would disrupt the fuel continuity across the landscape in stands where annual invasive grasses are a minor component in the understory, burning slash piles from conifer reduction treatments, used as a component with other treatment methods to combat annual grasses and restore native plant communities).<br>Prescribed fire in known crucial winter wildlife habitat shall only be considered after the NEPA analysis for the Burn Plan has addressed the four bullets outlined above. Any prescribed fire in and/or around crucial winter wildlife habitat must be strategically-designed to reduce wildfire risk and protect winter range habitat quality. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MO BR:2.6: In PHMAs, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70 percent) with a minimum of 15 percent sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Technical Reference 1734-6 [BLM 2005c]). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MG BR:9: GREATER SAGE-GROUSE – Sustain the integrity of the sagebrush biome to provide the amount, continuity, and quality of habitat that is necessary to maintain sustainable populations of Greater Sage-Grouse and other species by achieving the objectives below. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:9.1: Maintain large patches of high quality sagebrush habitats, with emphasis on patches occupied by Greater Sage-Grouse. | No changes made. | No change proposed. |
| MO BR:9.2: Maintain connections between sagebrush habitats, with emphasis on connections between habitats occupied by Greater Sage-Grouse. | No changes made. | No change proposed. |
| MO BR:10.1: Reconnect large patches of sagebrush habitat with emphasis on reconnecting patches occupied by stronghold and isolated populations of Greater Sage-Grouse. | No changes made. | No change proposed. |
| **MD 4059: Maintain or improve important wildlife habitats through vegetative manipulations, habitat improvement projects, livestock grazing strategies and the application of The Wyoming Guidelines for Managing Sagebrush Communities with Emphasis on Fire Management (Wyoming Interagency Vegetation Committee 2002) and the Wyoming BLM Standard Mitigation Guidelines for Surface-Disturbing and Disruptive Activities (Appendix F, Wyoming Bureau of Land Management Mitigation Guidelines for Surface-Disturbing and Disruptive Activities (p. 351)), BMPs (Appendix C, Required Design Features and Best Management Practices (p. 251)), and similar guidance updated over time. | Maintain or improve important wildlife habitats through vegetative manipulations, habitat improvement projects, livestock grazing strategies and the application of The Wyoming Guidelines for Managing Sagebrush Communities with Emphasis on Fire Management (Wyoming Interagency Vegetation Committee 2002) and the Wyoming BLM Standard Mitigation Guidelines for Surface-Disturbing and Disruptive Activities (Appendix F, Wyoming Bureau of Land Management Mitigation Guidelines for Surface-Disturbing and Disruptive Activities (p. 351)), BMPs (2019 Wyoming GrSG ARMPA Appendix B, Required Design Features and Best Management Practices), and similar guidance updated over time. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4071: Conduct habitat enhancement vegetation treatments within sagebrush communities as opportunities and funding allow, consistent with EO 2015-4 (Wyoming Office of the Governor 2015). | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4072: Modify identified hazard fences, and analyze and construct new fences in accordance with wildlife needs, the BLM Fencing Handbook 1741-1, and WO IM 2010-022, Managing Structures for the Safety of Sage-grouse, Sharp-tailed grouse, and Lesser Prairie-chicken, and similar guidance and policy as updated over time. | No changes made. | No change proposed. |
| MD 4077: Allow water development projects in crucial elk winter range and in Greater Sage-Grouse nesting habitat with 10 inches or less annual precipitation only when adverse effects can be avoided, minimized and/or compensated based on site-specific analysis. Allow existing uses pending site-specific analysis on a priority basis. | No changes made. | No change proposed. |
| MD 4081: Avoid wind energy projects in big game crucial winter range and raptor concentration areas.<br>Wind-energy development would be avoided in Greater Sage-Grouse PHMAs (Map 3-17), and not allowed unless it can be sufficiently demonstrated that the development activity would not result in declines of Greater Sage-Grouse PHMA populations. Sufficient demonstration of "no declines" should be coordinated with the WGFD and USFWS. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4088: Discourage the use of broad-spectrum insecticides where insect control is required. Target pest control toward key problem areas and schedule applications to be effective in minimum doses in Greater Sage-Grouse brood-rearing areas. Field Offices may implement treatments within Greater Sage-Grouse habitat utilizing RAATS protocols | No changes made. | No change proposed. |
| MD 4089: Avoid aerial pesticide spraying in favor of ground applications to minimize drift into non-target areas in Greater Sage-Grouse habitat unless benefits of treatments are likely to outweigh impacts. | No changes made. | No change proposed. |
| MD 4090: Avoid applying pesticides to Greater Sage-Grouse breeding habitat during the nesting and early brood-rearing season (March 15 through June 30) to reduce the loss of food supply to chicks and avoid the chance of secondary poisoning unless benefits of treatments are likely to outweigh impacts. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4091: Maintain seeps, springs, wet meadows, and riparian vegetation in a functional and diverse condition for young Greater Sage-Grouse and other species that depend on forbs and insects associated with these areas.<br>Consider management actions if desirable green vegetation associated with these wet areas is not available, accessible, or cannot be maintained with current livestock, wildlife, or wild horse use, and the impacts are outweighed by the improved habitat quality. | No changes made. | No change proposed. |
| MD 4092: Restore Greater Sage-Grouse brood-rearing habitats in riparian/wetland areas. | No changes made. | No change proposed. |
| MD 4093: Restore lost riparian functioning systems by repairing abnormally incised drainages to raise water tables and increase water storage and brood-rearing habitats within Greater Sage-Grouse habitat. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4094: Manage vegetation composition diversity and structure, as determined by ESD, or other methods that reference site potential, and WGFD protocols to achieve Greater Sage-Grouse habitat management objectives, in cooperation with stakeholders.<br>Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to Greater Sage-Grouse habitat to determine if they should be restored to sagebrush or habitat of higher quality for Greater Sage-Grouse. If these seedings provide value in conserving or enhancing Greater Sage-Grouse habitats, then no restoration would be necessary. Assess the compatibility of these seedings for Greater Sage-Grouse habitat during the land health assessments.<br>Burned areas within PHMAs would be restored to suitable habitat with consideration given to ESDs, reference sites, site potential and local variability.<br>The BLM could bring in burned area rehabilitation and Burned Area Emergency Response teams who would work cooperatively with partners at the federal, state, and local levels to rehabilitate and restore Greater Sage-Grouse habitats in a manner consistent with the core habitat populations area strategy for conservation.<br>DDCT reviews would be conducted in coordination with the WGFD Habitat Protection Program located in Cheyenne, Wyoming at the WGFD headquarters. Areas within PHMAs would be prioritized for restoration of Greater Sage-Grouse habitat beyond immediate response. | No changes made. | No change proposed. |
| MD 4095: Maintain sagebrush and understory diversity (relative to ecological site description) in crucial seasonal Greater Sage-Grouse habitats unless such removal is necessary to achieve Greater Sage-Grouse habitat management objectives. For example, thinning small patches of dense sagebrush may increase desirable forbs in early brood-rearing habitat. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4096: Increase the composition and canopy cover of Wyoming big sagebrush, within existing nonnative grass seedings with less than 5 percent sagebrush canopy cover, to greater than or equal to neighboring sagebrush communities or historical levels. (See Shrubland-Salt Desert/Salt Bottom on Map 3-14; deeper soiled, and gentler sloped portions of the Shrubland-Salt Desert/Salt Bottom, colored in pink, would be those areas where sagebrush restoration efforts could be conducted.) | No changes made. | No change proposed. |
| MD 4097: Investigate opportunities to increase sagebrush in lower precipitation zones. | No changes made. | No change proposed. |
| MD 4098: Plan and construct mining and mineral development activities, to the degree possible given state water rights, to minimize disturbances that would result in alterations to springs and riparian Greater Sage-Grouse habitat. Alternative water sources may be developed to replace natural sources that have been affected or destroyed during these development activities. | No changes made. | Potential change under Alternative 3. |
| MD 4099: Treat constructed or non-natural water storage impoundments to control mosquito breeding (and the associated spread of West Nile virus), to prevent disease spread to Greater Sage-Grouse as necessary. | No changes made. | No change proposed. |
| MD 4100: In cooperation with stakeholders, manage to promote the growth and persistence of native shrubs, grasses, and forbs needed by Greater Sage-Grouse for seasonal food and concealment | No changes made. | No change proposed. |
| MD 4101: In cooperation with stakeholders, design and locate fences so as not to disturb PHMAs. Increase the visibility of fences in these areas which have been identified as hazardous to flying Greater Sage-Grouse. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4102: Conduct fire management activities to minimize overall wildfire size and frequency in sagebrush plant communities where Greater Sage-Grouse habitat objectives are at risk.<br>General priorities for habitat protection:<br>Priority # 1 – Protection of Greater Sage-Grouse PHMAs.<br>Priority # 2 – Wyoming big sagebrush communities outside Greater Sage-Grouse PHMAs and habitats recovering from disturbance within or adjacent to Greater Sage-Grouse PHMAs. | No changes made. | No change proposed. |
| MD 4103: Annually maintain FMPs to incorporate updated sagebrush habitat information as well as fire suppression priorities in sagebrush habitats. Incorporate fire management objectives for the management of sagebrush ecosystems into FMPs. Provide fire management objectives for sagebrush ecosystems to initial attack personnel at the beginning of each fire season. | No changes made. | No change proposed. |
| MD 4104: Establish fuels treatment projects at strategic locations to minimize size of wildfires and limit loss of Greater Sage-Grouse habitat. | No changes made. | No change proposed. |
| MD 4105: Reintroduce appropriate fire regimes to limit conifer encroachment into the sagebrush plant communities. Take into account invasive herbaceous species and Fire Regime Group and FRCC (measure of departure from historic fire regime) with treatments. Where possible, achieve a balance between treating areas that have significantly departed from the historic fire regime (Condition Class 3) and areas that are functioning within an appropriate fire regime (Condition Class 1). | No changes made. | No change proposed. |
| MD 4106: Remove conifers encroaching into sagebrush habitats in a manner that considers tribal and cultural values. Prioritize treatments closest to occupied Greater Sage-Grouse habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2 as defined in Miller et al. (2005). Refine the location of specific priority areas to be treated by utilizing site-specific analysis and principles like those included in the FIAT report (Chambers et. al. [2014]) and other ongoing modeling efforts to address conifer encroachment. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| Soft Triggers Response:<br>Soft triggers are indicators that management or specific activities may not be achieving the intended results of conservation action or that unanticipated changes to populations or habitats have occurred that have the potential to place habitats or populations at risk. The soft trigger is any deviation from normal trends in habitat or population in any given year. Metrics include, but are not limited to, annual lek counts, wing counts, aerial surveys, habitat monitoring, and DDCT evaluations.<br>For population metrics, normal population trends are calculated as the 5-year running mean of annual population counts. BLM field offices, with the assistance of their respective land and RMP implementation groups, local WGFD offices, and local sage-grouse working groups will evaluate the metrics with the Adaptive Management Working Group on an annual basis. The purpose of these strategies is to address localized greater sage-grouse population and habitat changes by providing the framework in which management will change if monitoring identifies negative population and habitat anomalies in order to avoid crossing a hard trigger threshold.<br>Soft triggers require immediate monitoring and surveillance to determine causal factors and may require curtailment of activities in the short or long term, as allowed by law. The project level adaptive management strategies will identify appropriate responses where the project's activities are identified as the causal factor. The management agency (BLM) and the Adaptive Management Work Group will implement an appropriate response strategy to address causal factors not attributable to a specific project or to make adjustments at a larger regional or statewide level.<br>Hard Trigger Response:<br>Hard triggers are indicators that management is not achieving desired conservation results. Hard triggers would be considered a catastrophic indicator that the species is not responding to conservation actions, or that a larger-scale impact or set of impacts is having a negative effect. | Soft Triggers Response:<br>Soft triggers are indicators that management or specific activities may not be achieving the intended results of conservation action or that unanticipated changes to populations or habitats have occurred that have the potential to place habitats or populations at risk. | MD 4145: Base future adjustments to the appropriate management level on monitoring information and multiple use considerations through development of and/or revisions to HMA Plans. Update HMA plans to include Greater Sage-Grouse objectives. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *MD 4156: No similar action. | The BLM will update its Greater Sage-Grouse habitat management areas, including biologically significant units (BSUs), in conjunction with the State of Wyoming's core areas, upon issuance of any Wyoming Governor's Executive Order revising or amending the core area boundaries and upon completion of appropriate NEPA analysis and process. The BLM will complete the appropriate NEPA documentation (including appropriate public comment) prior to adopting any revised core area boundaries (e.g., maintenance action or plan amendment, environmental assessment, etc.). | Potential change under Alternatives 3, 4, 5, and 6. |
| No similar action. | *MD 4157: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Adopt the State of Wyoming's Greater Sage-Grouse Compensatory Mitigation Framework to the extent consistent with federal law, regulations, and policy.<br>In all Greater Sage-Grouse habitat, when authorizing third-party actions in designated Greater Sage-Grouse habitat, the BLM will seek to achieve the planning-level Greater Sage-Grouse management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Under this Plan Amendment, management would be consistent with the Greater Sage-Grouse goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [Greater Sage-Grouse] or to improve the condition of [Greater Sage-Grouse] habitat" across the planning area.<br>Accordingly, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the following steps, in alignment with the Governor of Wyoming's Executive Order 2015-4 (July 29, 2015):<br>1. Work jointly with the WGFD to evaluate projects and recommend mitigation in the form of avoidance and minimization.<br>2. The WGFD will determine if the State requires or recommends any additional | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>3. Incorporate state required or recommended mitigation into the BLM's NEPA decision-making process, if the WGFD determines that compensatory mitigation is required to address impacts to GRSG habitat as a part of State policy or authorization, or if a proponent voluntarily offers mitigation.<br>4. Analyze whether the compensatory mitigation (deferring to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action):<br>• achieves measurable outcomes for Greater Sage-Grouse habitat function on a landscape scale as determined by WGFD that are at least equal to the lost or degraded values in accordance with the Governor of Wyoming's Executive Order 2015-4.<br>• provides benefits that are in place for at least the duration of the impacts.<br>• accounts for a level of risk that the mitigation action may fail or not persist for the full duration of the impact<br>5. Ensure mitigation outcomes are consistent with the State of Wyoming's mitigation strategy and principles outlined in 2018 Approved RMPA Appendix C, The Greater Sage-Grouse Habitat Management Strategy.<br>The BLM has determined that compensatory mitigation must be voluntary unless required by other applicable law and in recognition that State authorities may also require compensatory mitigation (IM 2019-018, *Compensatory Mitigation*, December 6, 2018). Therefore, consistent with valid existing rights and applicable law, when authorizing third-party actions that result in habitat loss and degradation, the BLM will consider voluntary compensatory mitigation actions only as a component of compliance with a State mitigation plan, program, or authority, or when offered voluntarily by a project proponent. | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | Project-specific analysis will be necessary to determine how a compensatory mitigation proposal addresses impacts from a proposed action. The BLM will cooperate with the State to determine appropriate project design and alignment with State policies and requirements, including those regarding compensatory mitigation. When the BLM is considering compensatory mitigation as a component of the project proponent's submission or based on a mitigation requirement from the State, the BLM's NEPA analysis would evaluate the need to avoid or minimize impacts of the proposed project and achieve the goals and objectives of this RMPA. The BLM will defer to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action. | *(See above.)* |
| MO LR:1.5: Effects of infrastructure projects, including siting, will be minimized using the best available science, updated as monitoring information on current infrastructure projects becomes available. | No changes made. | No change proposed. |

|---|---|---|
| **MD 6016: Retain approximately 1,072,653 acres of BLM-administered land. 14,283 acres of BLM-administered land are available for disposal by sale, exchange or other means (Map 3-21) (Appendix I, Land Disposal and Acquisition (p. 381)).<br>Disposal can include none, some, or all of the mineral estate as allowed by 43 CFR 2720 and FLPMA Section 209(b)(1). A mineral potential report would determine if a surface estate disposal includes none, some, or all of the mineral estate.<br>Lands classified as PHMAs and GHMAs for Greater Sage-Grouse will be retained in federal management unless: (1) the agency can demonstrate that disposal of the lands, including land exchanges, will provide a net conservation gain to the Greater Sage-Grouse or (2) the agency can demonstrate that the disposal of the lands, including land exchanges, will have no direct or indirect adverse impact on conservation of the Greater Sage-Grouse. Consider exceptions where there is mixed ownership. Allow land exchanges for additional or more contiguous federal ownership patterns within PHMAs. For PHMAs with minority federal ownership, include an additional, effective mitigation agreement for any disposal of federal land. Consider pursuing a permanent conservation easement as a final preservation measure. For lands in GHMAs that are identified for disposal, the BLM will only dispose of such lands consistent with the goals and objectives of this plan, including, but not limited to, the land use plan objective to maintain or increase Greater Sage-Grouse abundance and distribution.<br>Note: All land actions to acquire or dispose of lands would require a site specific analysis under NEPA. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 6032: Designate ROW corridors as shown on Map 3-24. PHMAs are designated as avoidance areas for high voltage transmission line and pipeline ROWs. All authorizations in these areas must comply with the conservation measures outlined in this Approved RMP, including the RDFs and avoidance criteria presented in Appendix C, Required Design Features and Best Management Practices (p. 251).<br>Within PHMAs, specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>**New Transmission Lines (greater than 115 kV):**<br>New transmission lines greater than 115 kV in PHMA would be allowed only (1) when located within 0.5 miles or less of 115 kV or greater transmission lines constructed prior to 2008; or (2) in designated RMP corridors authorized for aboveground transmission lines. Transmission lines routed using one or more of the two criteria listed above will not be counted against the DDCT 5 percent disturbance cap.<br>New transmission lines greater than 115 kV proposed outside of these areas would be considered where it can be demonstrated that declines in Greater Sage-Grouse populations could be avoided through project design and/or mitigation. These projects will be subject to the density and disturbance restrictions for PHMA.<br>Review of transmission line proposals would incorporate the Framework for Sage-grouse Impact Analysis for Interstate Transmission Lines (BLM 2012b) and other appropriate documents consistent with the three routing criteria described above. New projects within PHMAs that may require future utility lines, including distribution and transmission lines or pipelines, would include the proposed utility lines in their DDCT as part of the proposed disturbance. Lines permitted, but not located in the above mentioned routes or a designated corridor will be counted toward the 5 percent disturbance calculation (line distance is equal to the anticipated construction footprint or construction ROW width multiplied by length and includes all access roads, staging area, and other surface disturbance | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| associated with construction outside of the construction ROW).<br>**New Electric Distribution Lines (less than 115 kV):**<br>Require burial of new electric distribution lines where economically feasible. If not economically feasible, distribution lines may be authorized when effectively designed/mitigated to protect Greater Sage-Grouse and when the authorized officer determines that overhead installation is the action alternative with the fewest adverse impacts while still meeting the project need. Consider agricultural and residential distribution lines to be adequately mitigated for Greater Sage-Grouse if constructed at least 0.6 mile from the lek perimeter with appropriate timing constraints and constructed to the latest APLIC standards. These ROW authorizations will be subject to approval by the State Director.<br>**Pipelines:**<br>Allow new pipelines through PHMAs:<br>(1) within an RMP corridor currently authorized for that use or designated through future RMP amendments; or<br>(2) constructed in or adjacent to existing utilities (buried and aboveground) or roads. Pipelines constructed in RMP corridors or adjacent to existing utilities or roads will require completion of a DDCT analysis for baseline data collection, but the project is not required to meet the threshold of 5 percent. However, within 6 months of the completion of construction, the project proponent will provide the authorized officer with as-built drawings so that the total disturbance within PHMAs can be calculated annually. | *(See above.)* | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6033: Manage 637,154 acres as ROW avoidance areas (Map 3-24).<br>Manage PHMAs as ROW avoidance areas for new ROW or SUA permits (317,307 acres).<br>Within PHMAs where new ROWs/SUAs are necessary, locate new ROWs/SUAs within designated RMP corridors or adjacent to existing ROWs/SUAs where technically feasible. Subject to valid existing rights, including non-federal land inholdings, locate new, required ROWs/SUAs adjacent to existing ROWs/SUAs or where impacts to Greater Sage-Grouse are minimized.<br>Work with proponents to design ROW applications to protect Greater Sage-Grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6046: Allow temporary closures to motorized vehicle use in areas that pose public health and safety risks, and/or where resource damage is imminent. In PHMAs and GHMAs, temporary closures will be considered in accordance with 43 CFR subpart 8364 (Closures and Restrictions); 43 CFR subpart 8351 (Designated National Area); 43 CFR subpart 6302 (Use of Wilderness Areas, Prohibited Acts, and Penalties); 43 CFR subpart 8341 (Conditions of Use).<br>Temporary closure or restriction orders under these authorities are enacted at the discretion of the authorized officer to resolve management conflicts and protect persons, property, and public lands and resources. Where an authorized officer determines that off-highway vehicles are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the affected areas shall be immediately closed to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. (43 CFR 8341.2) A closure or restriction order should be considered only after other management strategies and alternatives have been explored. The duration of temporary closure or restriction orders should be limited to 24 months or less; however, certain situations may require longer closures and/or iterative temporary closures. This may include closure of routes or areas. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *MD 6059: Design recreational sites, recreation facility development, and recreational access to avoid riparian habitat areas or develop and manage them in a manner that minimizes effects on riparian habitats. Construction of recreation facilities within PHMA must conform with the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater sage-grouse, the BLM will require and ensure compensatory mitigation that provides a net conservation gain to the species. | Design recreational sites, recreation facility development, and recreational access to avoid riparian habitat areas or develop and manage them in a manner that minimizes effects on riparian habitats. Construction of recreation facilities within PHMA must conform to the avoidance and minimization measures of this plan. If it is determined that these conservation measures are inadequate for the conservation of Greater Sage-Grouse, the BLM will consider mitigation is consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4 (see also MD 4157). | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 6126: In cooperation, consultation, and coordination with permittees/lessees, cooperators, and interested public, develop and implement appropriate livestock grazing management actions to enhance land health, improve forage for livestock, and meet other multiple use objectives by using the *Wyoming Guidelines for Livestock Grazing Management*, other appropriate BMPs (see Appendix C, *Required Design Features and Best Management Practices* (p. 251)), and development of appropriate range improvements. The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMAs. In setting workload priorities, precedence will be given to existing permits/leases in areas not meeting Land Health Standards, with focus on allotments containing riparian areas or wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., wildfire) and legal obligations.<br>The BLM will collaborate with appropriate federal agencies, and the State of Wyoming as contemplated under EO 2013–3 (Wyoming Office of the Governor 2013), to 1) develop appropriate conservation objectives; (2) defined a framework for evaluating situations where Greater Sage-Grouse conservation objectives are not being achieved on federal land, to determine if a causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and Greater Sage-Grouse conservation objectives; and 3) identify appropriate site-specific actions to achieve Greater Sage-Grouse conservation objectives within the framework. | In cooperation, consultation, and coordination with permittees/lessees, cooperators, and interested public, develop and implement appropriate livestock grazing management actions to enhance land health, improve forage for livestock, and meet other multiple use objectives by using the Wyoming Guidelines for Livestock Grazing Management, other appropriate BMPs (see 2019 Wyoming GrSG ARMPA Appendix B, Required Design Features and Best Management Practices ), and development of appropriate range improvements. The BLM will prioritize (1) the review of grazing permits/leases, in particular to determine if modification is necessary prior to renewal, and (2) the processing of grazing permits/leases in PHMAs. In setting workload priorities, precedence will be given to existing permits/leases in areas not meeting Land Health Standards, with focus on allotments containing riparian areas or wet meadows. The BLM may use other criteria for prioritization to respond to urgent natural resource concerns (e.g., wildfire) and legal obligations.<br>The BLM will collaborate with appropriate federal agencies, and the State of Wyoming as contemplated under EO 2013–3 (Wyoming Office of the Governor 2013), to 1) develop appropriate conservation objectives; (2) defined a framework for evaluating situations where Greater Sage-Grouse conservation objectives are not being achieved on federal land, to determine if a causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and Greater Sage-Grouse conservation objectives; and 3) identify appropriate site-specific actions to achieve Greater Sage-Grouse conservation objectives within the framework. | Potential change under Alternative 3. |
| *MD 6130: Utilize a rangeland health assessment, resource monitoring, or analysis to determine if livestock grazing adjustments in amounts, kinds, or season are necessary. The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMAs will include specific management thresholds based on Greater Sage-Grouse | Utilize a rangeland health assessment, resource monitoring, or analysis to determine if livestock grazing adjustments in amounts, kinds, or season are necessary. Within PHMA, if monitoring data show the wildlife/special status species standard has not been met nor progress being made toward meeting that standard, there would be an evaluation and a determination made | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| Habitat Objectives Table (Table 2.7, "Greater Sage-Grouse Seasonal Habitat Objectives" (p. 21)) and Land Health Standards (43 CFR 4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. Greater Sage-Grouse Habitat Objectives Habitat Objectives Table (Table 2.7, "Greater Sage-Grouse Seasonal Habitat Objectives" (p. 21)), Land Health Standards (43 CFR 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | as to the cause. If it is determined that the current authorized livestock use is a significant causal factor in failing to achieve the wildlife/special status species standards~~,~~ the BLM would address the achievement or progress toward achieving the LHSs (43 CFR 4180.2) and, if needed, Greater Sage-Grouse habitat maintenance or improvement.<br>When NEPA analysis is required for a specific implementation action, one alternative would include mechanisms to make adjustments to meet or make progress toward meeting the wildlife/special status species standard. The analysis should also identify the BLM-approved data collection methodologies used for monitoring conditions and determining when adjustments are necessary. If current grazing management meets land health standards and provides for Greater Sage-Grouse habitat, there would be no need to analyze an alternative for Greater Sage-Grouse.<br>Authorized uses in PHMA that incorporate habitat objectives for Greater Sage-Grouse must develop desired conditions based on Greater Sage-Grouse habitats present in the allotment and the ecological potential of sites that supports these habitats. Metrics used to monitor for objectives must be developed and inform the wildlife/SSS portion of the Standards for Healthy Rangelands.<br>Within PHMA, seasonal habitat objectives for Greater Sage-Grouse apply only to those habitats delineated within an allotment during the specific season (e.g., breeding season objectives during breeding season).<br>Data needed to inform the relationship between the authorized use and habitat condition would come from sample locations that appropriately reflect the impact of the authorized use on habitat conditions.<br>Data points should fall within Greater Sage-Grouse seasonal habitat areas and be collected on ecological sites that have the potential to produce Greater Sage-Grouse habitat. | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6142: Allotments within PHMAs, focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | No changes made. | Potential change under Alternative 3. |

### 2.18.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The 2015 Appendices can be found on the Bighorn Basin RMP ePlanning website. The 2019 Appendices can be found on the Wyoming GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Maps | 2015 | Yes |
| A: Approved RMP Amendment with Management Goals, Objectives, and Decisions | 2019 | Yes |
| B: Oil and Gas Lease Notices and Lease Stipulations; including Exception, Modification, and Waiver Criteria | 2015 | Yes |
| C: Required Design Features and Best Management Practices | 2015 | Yes |
| B: Required Design Features | 2019 | Yes |
| D: Greater Sage-Grouse Habitat Management Strategy | 2015 | Yes |
| C: Greater Sage-Grouse Habitat Management Strategy | 2019 | Yes |
| E: Laws, Regulations, Policies, and Guidance | 2015 | No |
| F: Wyoming Bureau of Land Management Mitigation Guidelines for Surface-Disturbing and Disruptive Activities | 2015 | No |

## 2.19 LANDER, WYOMING RMP REVISIONS

This appendix presents the approved RMP revision language from the record of decision for the Lander RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.19.2** of this appendix.

### 2.19.1 Existing GRSG RMP Management – Lander RMP Revisions

**Table 1. Summary of Goals, Objectives, and Management Actions to the Lander RMP**

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **Land Use Plan Revisions/Amendments to the Lander RMP** | | |
| **MD 1015: Implement BLM National and Wyoming Reclamation Policies requiring the development of reclamation plans for all federal actions authorized, conducted, or funded by the BLM that disturb vegetation and/or the mineral/soil resources. Require that site-specific interim and final reclamation practices be developed and implemented that will meet the reclamation standards as identified in Appendix B (p. 185). The type and detail of the reclamation plan will be commensurate with the extent and duration of soil disturbance. For extensive disturbance such as a full-field oil and gas development, a detailed, multi-phase plan such as the Continental Divide Creston oil and gas project reclamation plan (attached as Appendix G to the Proposed RMP and Final EIS as an example) will be required. | No changes made. | No change proposed. |
| **MD 1016: Require a full reclamation bond specific to the site for all new disturbances in accordance with 43 CFR 3104.2, 3104.3, and 3104.5 or current policy. Ensure bonds are sufficient for costs relative to reclamation (Connelly et al. 2000; Hagen et al. 2007) that would result in restoration of disturbed lands in accordance with the final reclamation standards and objectives identified in Appendix B (p. 185). Base the reclamation costs on the assumption that contractors for the BLM will perform the work. | No changes made. | Potential change under Alternative 3. |
| MD 1017: Require that surface-disturbing activities minimize the surface disturbance footprint to the maximum extent possible to limit the areas requiring reclamation. Limit disturbance of desirable vegetative communities established during interim reclamation when implementing final reclamation. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 1018: Require that all reclamation plans identify the desired plant community for final reclamation. | No changes made. | No change proposed. |
| MD 1019: Consider wildlife habitat objectives in all final reclamation objectives. In Core Area, final reclamation objectives will be to restore greater sage-grouse habitat. Include metrics to ensure that restoration goals are met. | No changes made. | No change proposed. |
| MD 1020: Require site stabilization and sediment control in compliance with Wyoming Stormwater Discharge requirements and BLM reclamation policies. | No changes made. | No change proposed. |
| **MD 1021: Require that during and following reclamation activities, the land user is responsible for monitoring to help ensure interim and final reclamation success as defined in reclamation policies and with the standards identified in Appendix B (p. 185) is achieved. Require follow-up seeding and/or other corrective or remedial erosion-control measures on areas of surface disturbance, as appropriate and, if necessary, protecting the reclaimed landscape until reclamation standards have been achieved. Monitoring and follow-up reclamation practices will continue on interim and final reclaimed areas until the standards identified in Appendix B (p. 185) have been successfully achieved. | No changes made. | No change proposed. |
| MD 1022: Identify areas with soil disturbance that were not successfully reclaimed. Priorities for reclamation of these areas are determined on a case-by-case basis with an emphasis on greater sage-grouse Core Area and other important wildlife habitat. Develop partnerships and funding sources to implement reclamation where no responsible party has the reclamation obligation. | No changes made. | No change proposed. |
| **MD 1023: Adapt reclamation methods to specific requirements based on plant communities within ecological sites and site-specific objectives. Incorporate reclamation objectives and require reclamation plans, including reclamation standards as identified in Appendix B (p. 185) on a site-specific basis. | No changes made. | No change proposed. |
| MD 1024: Utilize management practices, including phased development and BMPs, to achieve reclamation success. Require Reclamation Objectives and Standards as identified in all reclamation plans. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 1025: Reclamation management practices will select native plant species based on site characteristics and ecological site descriptions. Reclamation success will be determined based on the criteria and standards identified in Appendix B (p. 185). | No changes made. | No change proposed. |
| MD 2001: Do not lease coal or oil shale-tar sands. | No changes made. | No change proposed. |
| MD 2002: Incorporate proponent committed or BLM Required Design Features or mitigation such as BMPs as Conditions of Approval for any authorized mineral activity for federal minerals, regardless of surface ownership. | No changes made. | No change proposed. |
| 2003 (MR: 1.3): In project-level EISs and EAs, require, on a case-by-case basis, the development of a wildlife resource monitoring and mitigation plan to address potential impacts from mineral development on wildlife populations and/or habitat. | Action was removed in 2019. | No change proposed. |
| MD 2004: Recommend for withdrawal from locatable mineral entry (Map 9) approximately 467,065 acres. (In addition, approximately 8,634 acres are withdrawn in pre-FLPMA actions that do not expire.) See decisions under resource programs such as wildlife, cultural, and recreation for specific details of acres recommended for withdrawals. A total of approximately 2,333,402 acres are open to locatable mineral entry (Map 9). | No changes made. | Potential change under Alternative 3. |
| 2005 (MR:1.3): 1,411,095 acres of federal mineral estate are open to geothermal leasing with moderate constraints (Map 10). 603,633 acres of federal mineral estate are open to geothermal leasing with major constraints (Map 10). 714,545 acres of federal mineral estate are closed to geothermal leasing (Map 10). | Action was removed in 2019. | Potential change under Alternatives 3 and 6. |
| 2006 (MR:1.3): Constraints applied for oil and gas leasing also apply to geothermal leasing. | Action was removed in 2019. | Potential change under Alternatives 3 and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 2008: Approximately 67,511 acres of federal mineral estate are open to oil and gas leasing subject only to standard lease stipulations (Map 11).<br>Approximately 1,423,264 acres of federal mineral estate are open to oil and gas leasing subject to controlled surface use and/or timing limitation stipulations (Map 11 and Appendix 1 (p. 255)).<br>Approximately 1,146,630 acres of federal mineral estate are open to oil and gas leasing subject to NSO stipulations (Map 11 and Appendix 1 (p. 255)).<br>Approximately 172,071 acres of federal mineral estate are closed to oil and gas leasing (Map 11). | Approximately 80,198 acres of federal mineral estate are open to oil and gas leasing subject only to standard lease stipulations (Map 11).<br>Approximately 1,419,568 acres of federal mineral estate are open to oil and gas leasing subject to controlled surface use and/or timing limitation stipulations (Map 11 and Appendix 1 (p. 255)).<br>Approximately 1,137,666 acres of federal mineral estate are open to oil and gas leasing subject to NSO stipulations (Map 11 and Appendix 1 (p. 255)).<br>Approximately 171,669 acres of federal mineral estate are closed to oil and gas leasing (Map 11). | Potential change under Alternatives 3 and 6. |
| MD 2009: All oil and gas and other mineral leases are subject to standard lease stipulations. Additional stipulations may apply as otherwise specified in this RMP. In areas that are closed to mineral leasing, do not re-offer existing leases when they expire. If drainage occurs in an area closed to oil and gas leasing, authorize leasing on a case-by-case basis with an NSO stipulation. | No changes made. | Potential change under Alternatives 3 and 6. |
| MD 2010: For proposed actions in greater sage-grouse Core Area, determine whether a categorical exclusion is applicable and if so, closely examine the extraordinary circumstances, if applicable, to determine whether one or more exists that would require preparation of a NEPA analysis. If a categorical exclusion applies, and no extraordinary circumstances exist, determine whether preparing a NEPA analysis would help inform decision making. | No changes made. | No change proposed. |
| MD 2011: Require unitization when deemed necessary for proper development and operation of an area or to facilitate more orderly (e.g., phased and/or clustered) development as a means of minimizing adverse impacts to resources, including greater sage-grouse, so long as the unitization plan adequately protects the rights of all parties, including the United States. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 2012: Disposal of produced water is authorized in accordance with Onshore Oil and Gas Order #7, Disposal of Produced Water, and in compliance with state regulations. If there is Wyoming Pollutant Discharge Elimination System permitted discharge, consider soil erosion, degradation of soil quality, sedimentation, and other factors in coordination with the State of Wyoming. | No changes made. | Potential change under Alternative 3. |
| MD 2013: The planning area is open to geophysical exploration except for lands identified as closed to mineral leasing or NSO to oil and gas leasing or as otherwise provided in other decisions. Geophysical exploration is subject to motorized travel limitations and restrictions on surface-disturbing and disruptive activities. | No changes made. | Potential change under Alternatives 3 and 6. |
| MD 2017: Approximately 1,955,798 acres are open for mineral material disposal on a demand basis (Map 12) subject to resource protections. 853,303 acres are closed to mineral material disposal (Map 12). | Action was removed in 2019. | Potential change under Alternatives 3 and 6. |
| MD 2018: Identify areas disturbed by expired mineral material sales, including free-use permits and community use pits. Prioritize reclamation of these sites, starting with those in greater sage-grouse Core Area where restoration as long-term greater sage-grouse habitat is possible. Next in priority are those in riparian-wetland areas, ACECs, the National Trails Management Corridor, VRM Class II areas, non-Core Area greater sage-grouse habitat, and wildlife migration corridors. Seek partnerships with others to complete restoration, including applicants seeking suitable offsite mitigation opportunities. | Action was removed in 2019. | Potential change under Alternatives 3 and 6. |
| FM: 2: Manage fire and fuels to restore or maintain natural ecosystem functions, restore fire-adapted ecosystems, reduce losses from landscape-level wildland fire, and protect multiple-use values. | Action was removed in 2019. | No change proposed. |
| FM 2.6: Utilize fuels and vegetation treatments to maintain and enhance greater sage-grouse habitat where applicable. | Action was removed in 2019. | No change proposed. |
| MD 3004: In greater sage-grouse Core Area, prioritize suppression to conserve the habitat. Where applicable and technically feasible, apply greater sage-grouse BMPs such as those identified in Appendix E (p. 215). | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 3007: Use chemical, biological, and mechanical treatments to reduce the risk of landscape-level wildfire within priority areas. Alter fuel loading and improve ecological condition of vegetation communities. Consider the presence and potential for noxious and nonnative plant species when designing wildland fire response and fuels treatments. | No changes made. | No change proposed. |
| MD 3008: Use personal use and commercial vegetation sale permits, where not otherwise constrained or prohibited (as identified in Records 4012, 6139, and 7045), for removal of firewood, post and pole, Christmas trees, sawlogs, and wildlings, for hazardous fuels management. | Use personal use and commercial vegetation sale permits, where not otherwise constrained or prohibited, for removal of firewood, post and pole, Christmas trees, sawlogs, and wildlings, for hazardous fuels management. | No change proposed. |
| MD 3009: Monitor fuels treatment and wildfire burn areas for sufficient time after treatment or fire event in order to determine short-term and long-term project success, detect weed infestations and accelerated soil erosion, and assess overall vegetation recovery. Utilize all available rehabilitation tools to control weed infestation and accelerated soil erosion. Implement post-treatment rest of treated areas from livestock grazing for two full growing seasons on all prescribed or wildland fire burn areas unless vegetation recovery dictates otherwise. | No changes made. | No change proposed. |
| MD 3010: Partner with the University of Wyoming and other research entities to develop a greater understanding of the ecology and disturbance regime of sagebrush steppe, woodland, and forested vegetation communities found within the planning area. Use this information to develop a regionally specific scientific foundation for vegetation management activities. | No changes made. | No change proposed. |
| MD 3011: Inventory the Fire Regime Condition Class (Map 14) of the vegetative communities found within the fire management units (Map 15). In coordination with stakeholders and in consideration of greater sage-grouse Core Area objectives, prioritize areas requiring treatment and utilize appropriate vegetation treatment techniques to improve the condition class across a landscape. Prioritize those projects in areas with the greatest benefits to wildlife and the highest likelihood of landscape-level wildfire. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 3012: Allow vegetation treatments in greater sage-grouse Core Area that conserve, enhance, or restore greater sage-grouse habitat excluding the use of prescribed fire unless specifically for the purpose of greater sage-grouse habitat improvement (this includes treatments that benefit livestock as part of an allotment management plan/conservation plan to improve greater sage-grouse habitat).<br>In suitable habitat within greater sage-grouse Core Area, incorporate specific greater sage-grouse habitat objectives and apply appropriate seasonal restrictions for implementing vegetation management treatments.<br>In identified greater sage-grouse winter concentration areas, vegetation treatments should emphasize strategically reducing wildfire risk around or in the winter concentration areas and maintaining winter concentration habitat quality. Prioritize restoration treatments in areas that are thought to limit greater sage-grouse distribution and/or abundance. Focus vegetation treatments outward from existing, intact greater sage-grouse habitat. Utilize BMPs, such as those in Appendix E (p. 215) and other current habitat management guidelines, when designing and implementing the project. | No changes made. | No change proposed. |
| MD 3013: In suitable greater sage-grouse Core Area, do not reduce sagebrush canopy cover to less than 15 percent within a defined treatment polygon unless a vegetation management objective requires additional reduction in sagebrush cover to protect or to conserve habitat quality for greater sage-grouse or other sagebrush steppe obligate species. Maintain sagebrush and understory diversity (relative to ecological site description) unless such removal is necessary to achieve greater sage-grouse habitat management objectives. Remove conifers or reduce the density of conifers that have encroached into sagebrush plant communities. | No changes made. | No change proposed. |
| MD 3014: Outside of greater sage-grouse Core Area, emphasize the reintroduction of fire into its natural role in the ecosystem in consideration of Decision Record 3016. Where possible, use wildland fire and prescribed fire to achieve management objectives, including reducing hazardous fuel loading, restoring vegetation communities, improving and/or protecting wildlife habitat, enhancing forage production, and addressing forest and woodland health issues such as pine beetle outbreaks. | Action was removed in 2019. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 3015: Cooperate with stakeholders to conduct landscape level treatments resulting in enhanced fuels management and/or restoration of fire-adapted ecosystems. In cooperation with stakeholders, manage to promote the growth and persistence of native shrubs, grasses, and forbs. | No changes made. | No change proposed. |
| MD 3016: Limit the use of fire to treat areas receiving less than 12 inches of annual precipitation. Prescribed fire to reduce hazardous fuels or enhance land health in areas receiving less than 12 inches of annual precipitation could be utilized after exploring other potential treatment methods and in areas where the relative resistance and relative recovery rate of the site allows for the successful post-fire reestablishment of desired native vegetation. | No changes made. | No change proposed. |
| MD 3017: Utilizing Required Design Features and BMPs applied as Conditions of Approval, establish fuels treatment projects at strategic locations to minimize the size of wildfires. Restore native or desirable plants and create landscape patterns to benefit wildlife. Power wash all fire vehicles including engines, water tenders, personnel vehicles, and OHVs after they have been in the field to help prevent the establishment or spread of invasive weeds. | No changes made. | No change proposed. |
| MD 4015: Identify unique plant communities and manage to protect, preserve, or enhance these communities. | No changes made. | No change proposed. |
| MD 4016: Manage vegetation communities for vegetative attributes described in NRCS Ecological Site Guides and to meet identified vegetative goals. When existing Ecological Site Descriptions have not been developed, are too general, or are not correct to serve adequately as benchmarks, identify and document local areas of similar potential within each specific ecological site that exemplify achievement of appropriate habitat objectives, and use these sites for the development of new reference sheets to be used as the benchmark reference. | No changes made. | No change proposed. |
| MD 4017: Use vegetation treatments to change plant community composition in a manner that achieves wildlife objectives, rangeland health objectives, and facilitates grazing management. Ensure that projects conform to resource objectives for the site. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MG BR:3: Manage for healthy native plant communities by reducing, preventing expansion of, or eliminating the occurrence of invasive nonnative species, undesirable vegetation, or noxious weeds, and predatory plant pests or disease by implementing decisions consistent with goals included in Partners Against Weeds and consistent with state and local weed management plans. | No changes made. | No change proposed. |
| MO BR:3.1: Maintain adequate baseline information, and inventory and monitoring data, regarding the extent and control of invasive species. Evaluate effectiveness of decisions, and assess progress toward goals to improve invasive species management. Develop a prevention and early detection program. | No changes made. | No change proposed. |
| MO BR:3.2: Coordinate with adjoining jurisdictions in management and control of invasive nonnative species across jurisdictional and political boundaries. | No changes made. | No change proposed. |
| MO BR:3.3: Include provisions for invasive nonnative species management in all BLM-funded or authorized actions. | No changes made. | No change proposed. |
| MG BR:4: Support internal and external education and awareness of noxious weeds. | No changes made. | No change proposed. |
| MO BR:4.1: Develop and deploy educational and public awareness programs and materials in cooperation with other agencies and organizations. | No changes made. | No change proposed. |
| MG BR:5: In all parts of the planning area, manage for the reduction, prevention, and halting the expansion of cheatgrass. Emphasize the prevention of invasive annual grass and woody plants in greater sage-grouse Core Area. | No changes made. | No change proposed. |
| MD 4020: Manage weed treatments to maintain and improve greater sage-grouse habitat. Apply Required Design Features and BMPs as Conditions of Approval, such as those in Appendix E (p. 215). | No changes made. | No change proposed. |
| MD 4021: Require the use of certified noxious-weed free forage, mulch, and other land-applied products for BLM-authorized activities on BLM-administered lands. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4022: Should invasive nonnative species become established in a location, develop and implement site-specific plans to eradicate/control invasive weeds for all surface-disturbing activities in the immediate vicinity. Priority for control will be: (1) Wyoming Declared Weed and Pest Species, (2) those weeds on the Western States Combined Declared Noxious Weed List, (3) those annual/biennial invasive weeds interfering with reclamation efforts, and (4) those invasive nonnative species interfering with a management objective. | No changes made. | No change proposed. |
| MD 4023: Require that equipment and vehicles used for BLM-authorized activities be cleaned for seeds of noxious weeds and invasive nonnative species before moving onto BLM-administered lands. Prohibit project vehicles accessing BLM-administered lands via cross-county travel from driving through infestations during access to the site. If the area on which BLM-authorized activities take place is identified as being a high risk for invasive and/or noxious weeds, require that vehicles be cleaned before leaving the worksite and include prescriptions for the disposal of wash water. | No changes made. | No change proposed. |
| MD 4024: Develop a plan to manage cheatgrass in coordination with other agencies and individuals, with the local County Weed & Pest Control Districts acting as the point of contact among all parties. | No changes made. | No change proposed. |
| MD 4025: If the Authorized Officer determines that BLM-authorized activities are contributing to the spread of noxious or invasive species, adjust the terms of the authorized activity to aid in the control of the species. | No changes made. | No change proposed. |
| MD 4026: If the Authorized Officer determines that livestock are likely carrying ingested seeds of invasive nonnative species, the Authorized Officer may require that livestock be flushed for weeds for a period of 72 hours before allowing livestock to move onto BLM-administered lands. | No changes made. | Potential change under Alternative 3. |
| MD 4027: Develop and implement a program promoting public awareness of Wyoming Declared Noxious Weeds and Pests as well as invasive nonnative species. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4028: Identify riparian-wetland management actions to promote biodiversity and develop an implementation plan to incorporate actions into BLM-authorized activities. Manage riparian-wetland areas and wet meadows to achieve or maintain diverse species richness that includes a component of perennial forbs in conjunction with desirable riparian sedges, rushes, bulrushes, and grasses, as appropriate. | No changes made. | No change proposed. |
| MD 4029: Implement management actions to have riparian-wetland areas meet or exceed proper functioning conditions and Standard 2 of the Wyoming Standards for Healthy Rangelands. | No changes made. | No change proposed. |
| MD 4035: Use an integrated management approach (mechanical, chemical, or biological treatments, prescribed fire, and grazing management techniques) to manipulate vegetative communities to achieve fish, wildlife, and watershed objectives. See the *Special Status Species* section for limitations on the use of prescribed fire in greater sage-grouse habitat. | Action was removed in 2019. | No change proposed. |
| MD 4041: The Dubois, Red Canyon, Lander Slope, and Green Mountain ACECs, greater sage-grouse Core Area, and the Sweetwater River watershed are priorities for management of fish and wildlife and their habitat. See the *Areas of Critical Environmental Concern* section for ACEC decisions. See the *Special Status Species – Wildlife* section for greater sage-grouse management. | Action was removed in 2019. | No change proposed. |
| MD 4051: Avoid the movement of water from one 4th level hydrologic unit code drainage to another 4th level hydrologic unit code drainage to prevent aquatic invasive species and disease transfer. | No changes made. | No change proposed. |
| **MD 4056: Outside of DDAs, wildlife seasonal protections for surface-disturbing and disruptive activities apply to maintenance and operations actions when the activity is determined to be detrimental to wildlife (see Appendix F (p. 229)). Reclamation of surface disturbance will be in accordance with Appendix B (p. 185) for non-DDAs. | No changes made. | No change proposed. |
| MD 4059: On a case-by-case basis, close and reclaim redundant roads to reduce road density and habitat fragmentation in coordination with adjacent landowners and/or state and county governments. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4060: Manage wind-energy development on a case-by-case basis and in consideration of the resource values in big game crucial winter range, migration corridors, and parturition areas, raptor concentration areas, and other areas with wildlife values. Wind-energy management in greater sage-grouse Core Area is found in the *Special Status Species – Wildlife* section. | Action was removed in 2019. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4067: On a case-by-case basis, manage vegetation in identified crucial winter range and parturition areas to benefit the identified species (Maps 18-22). | No changes made. | No change proposed. |
| MD 4069: Avoid authorizing road development in big game crucial winter range and parturition areas. | No changes made. | No change proposed. |
| MG BR:13: Maintain and/or increase greater sage-grouse abundance and distribution by conserving, enhancing, or restoring the sagebrush ecosystem upon which populations depend, in cooperation with other conservation partners. Sustain the integrity of the sagebrush biome to provide the amount, continuity, and quality of habitat that is necessary to maintain sustainable populations of greater sage-grouse and other species by achieving the objectives below. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:13.1: Maintain large patches of high-quality sagebrush habitats with emphasis on patches occupied by greater sage-grouse. | No changes made. | No change proposed. |
| MO BR:13.2: Maintain connections between sagebrush habitats, with emphasis on connections between habitats occupied by greater sage-grouse. | No changes made. | No change proposed. |
| MD 4072: Develop and implement protective measures for federally listed species in coordination with the USFWS. For proposed actions in greater sage-grouse Core Areas, determine whether a categorical exclusion is applicable and if so, closely examine the extraordinary circumstances, if applicable, to determine whether one or more exists that would require preparation of a NEPA analysis. If a categorical exclusion applies, and no extraordinary circumstances exist, determine whether preparing a NEPA analysis would help inform decision making.<br>Continue to take action in cooperation with the USFWS to facilitate the recovery of threatened and endangered plant species that occur on BLM-administered land. | Action was removed in 2019. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4074: Coordinate with agencies, including state and local governments, in the restoration, reintroduction, augmentation, or reestablishment of threatened, endangered, and other special status species populations and/or habitats. | No changes made. | No change proposed. |
| MD 4076: Develop site-specific measures for BLM-authorized activities to protect threatened, endangered, and sensitive species. Reduce the footprint of development and facilities to the smallest practical to protect special status species and their habitat. Incorporate Required Design Features and BMPs such as those identified in Appendix E (p. 215) as Conditions of Approval as appropriate for authorized activities to address adverse impacts to special status species. | Develop site-specific measures for BLM-authorized activities to protect threatened, endangered, and sensitive species. Reduce the footprint of development and facilities to the smallest practical to protect special status species and their habitat. Incorporate Required Design Features and BMPs such as those identified in Appendix E (p. 215) as conditions of approval as appropriate for authorized activities to address adverse impacts to special status species. Conditions of approval are called stipulations or terms and conditions in some programs. | No change proposed. |
| MD 4079: On a case-by-case basis, require surveys for BLM sensitive species as part of authorizing actions. Require protective actions when appropriate. | No changes made. | No change proposed. |
| MD 4080: Establish limits of acceptable cumulative habitat loss, including habitat modification, fragmentation, and loss of function, for special status species on a case-by-case basis. Limits of habitat loss and fragmentation for greater sage-grouse in Core Area are addressed in Decision Record 4109. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4096: Manage travel corridors for threatened and endangered species and BLM sensitive species on a case-by-case basis (Map 25). (Note: Only Canada lynx analysis units have been identified to date.) Manage permitted activities within travel corridors to avoid adverse impacts to sensitive species. | No changes made. | No change proposed. |
| MD 4097: To protect the concentration of special status species and their habitats, mineral and ROW actions in the Dubois area not within a WSA or an ACEC are managed as follows:<br>• Closed to oil and gas leasing<br>• Closed to geophysical exploration<br>• Closed to phosphate leasing<br>• Open to locatable minerals<br>• Closed to mineral material disposals unless entirely contained within the 120 acres located in T41N, R107W, Sec. 1 N½SE¼<br>• Excluded to major ROWs<br>• Avoided for minor ROWs | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 4098: Maintain sagebrush and understory diversity (relative to ecological site description) in seasonal greater sage-grouse and other sagebrush-obligate species habitats unless plant removal is necessary to achieve habitat management objectives. Vegetation treatments for greater sage-grouse would follow the "Wyoming Game and Fish Department Protocols for Treating Sagebrush to be Consistent with Wyoming Executive Order 2011-5; Greater Sage-Grouse Core Area Protection" (WGFD 2011) or the most current version or science available. | Maintain sagebrush and understory diversity (relative to ecological site description) in seasonal Greater Sage-Grouse and other sagebrush-obligate species habitats unless plant removal is necessary to achieve habitat management objectives. Vegetation treatments for Greater Sage-Grouse would follow the "Wyoming Game and Fish Department Protocols for Treating Sagebrush to be Consistent with Wyoming Executive Order 2015-4; Greater Sage-Grouse Core Area Protection" (WGFD 2015) or the most current version or science available. | No change proposed. |
| MD 4099: To minimize adverse impacts to greater sage-grouse from allowable uses, utilize recommendations and guidance from the following sources:<br>• Grazing Influence, Management, and Objective Development in Wyoming's Greater Sage-Grouse Habitat-With Emphasis on Nesting and Early Brood Rearing<br>• Sage-Grouse Habitat Management Guidelines for Wyoming<br>• Studies in Avian Biology article "Ecology and Conservation of Greater Sage-Grouse: A Landscape Species and Its Habitats"<br>• Western Association of Fish and Wildlife Agencies Greater Sage-Grouse Conservation Strategy<br>• Conservation Objectives Team Report<br>• National Technical Team Report<br>Utilize additional information as it becomes available. | No changes made. | No change proposed. |
| MD 4100: Maintain seeps, springs, wet meadows, and riparian vegetation in a functional and diverse condition for young greater sage-grouse and other species that depend on forbs and insects associated with these areas. Restore non-functioning riparian systems by repairing abnormally incised drainages to raise water tables and increase water storage and brood-rearing habitats within greater sage-grouse habitat. | No changes made. | No change proposed. |
| MD 4101: Discourage the use of broad-spectrum insecticides where insect control is required. Target pest control toward key problem areas and schedule applications to be the smallest amount effective in greater sage-grouse brood-rearing areas. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4102: Establish forage utilization levels in greater sage-grouse nesting habitat to ensure adequate cover remains. | No changes made. | No change proposed. |
| MD 4103: Except as otherwise provided in this RMP, greater sage-grouse Core Area is open to oil and gas and geothermal leasing, subject to standard stipulations for the protection of greater sage-grouse and other resources as described elsewhere in this RMP. | No changes made. | Potential change under Alternatives 3 and 6. |
| **MD 4104: Prohibit surface-disturbing or surface occupancy on or within a 0.6-mile radius of the perimeter of occupied greater sage-grouse leks in Core Area and on or within a 0.25-mile radius of the perimeter of occupied greater sage-grouse leks outside Core Area (Map 24).<br>In Core Area, keep any new roads or road upgrades 1.9 miles from the perimeter of the lek. | Prohibit surface-disturbing **activities** or surface occupancy on or within a 0.6-mile radius of the perimeter of occupied Greater Sage-Grouse leks (or lek center if no perimeter is yet mapped) in Core Area and on or within a 0.25-mile radius of the perimeter of occupied Greater Sage-Grouse leks (or lek center if no perimeter is yet mapped) outside Core Area (Map 24). In Core Area, keep any new roads or road upgrades 1.9 miles from the perimeter of the lek (or lek center if no perimeter is yet mapped). The authorized officer may grant an exception on a case-by-case basis subject to appropriate site-specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see also MD 4134). | Potential change under Alternatives 3, 4, 5, and 6. |
| **MD 4105: Prohibit surface-disturbing activities and/or disruptive activities from March 15 to June 30 in Core Area. Outside of Core Area, prohibit surface-disturbing and/or disruptive activities from March 15 to June 30 within 2 miles of the perimeter of occupied leks (Map 24). Where credible data support different timeframes for these seasonal restrictions, dates may be expanded 14 days prior to or subsequent to the above dates. | Prohibit surface-disturbing and/or disruptive activities from March 15 to June 30 in Core Area. The authorized officer may grant an exception on a case-by-case basis subject to appropriate site- specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see also MD 4134). Where credible data support different timeframes for these seasonal restrictions, dates may be expanded 14 days prior to or subsequent to the above dates. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 4106: Consistent with the BLM's regulatory authority over locatable mineral exploration and development, prohibit surface disturbance or disruptive activities from notice-level activity under 43 CFR 3809.320 in Core Area during the period March 15 to June 30. | Consistent with the BLM's regulatory authority over locatable mineral exploration and development, prohibit surface disturbance or disruptive activities from notice-level activity under 43 CFR 3809.320 in Core Area during the period March 15 to June 30. The authorized officer may grant an exception on a case-by-case basis subject to appropriate site-specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see also MD 4134). | Potential change under Alternative 3. |
| **MD 4107: Prohibit disruptive activities between 6 p.m. and 8 a.m. from March 1 to May 15 on or within a 0.6-mile radius of the perimeter of occupied greater sage-grouse leks in Core Area (Map 24). | Prohibit disruptive activities between 6 p.m. and 8 a.m. from March 1 to May 15 on or within a 0.6-mile radius of the perimeter of occupied Greater Sage-Grouse leks (or lek center if no perimeter is yet mapped) in Core Area (Map 24). The authorized officer may grant an exception on a case-by-case basis subject to appropriate site-specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see also MD 4134). | No change proposed. |
| **MD 4108: Prohibit surface-disturbing and disruptive activities in greater sage-grouse winter concentration areas, as they are identified, from December 1 to March 14 unless data indicate a date modification is necessary to better protect wintering greater sage-grouse. | Prohibit surface-disturbing and disruptive activities in Greater Sage-Grouse winter concentration areas, as they are identified, from December 1 to March 14 unless data indicate a date modification is necessary to better protect wintering Greater Sage-Grouse. The authorized officer may grant an exception on a case-by-case basis subject to appropriate site-specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see also MD 4134). Protection of additional mapped winter concentration areas in GHMA would be implemented where winter concentration areas are mapped and designated by the State of Wyoming. Appropriate seasonal timing restrictions and habitat protection measures would be considered and evaluated in consultation with the WGFD in all identified winter concentration areas. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4109: In greater sage-grouse Core Area, limit the density of disturbance of an activity (oil and gas or mining) to an average of one site per square mile (640 acres) within the DDCT. The one location and cumulative value of existing disturbances will not exceed 5 percent of suitable habitat of the DDCT area. Utilize the most current greater sage-grouse density disturbance process or other state and/or federal agreed-upon process for compliance evaluations. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4110: If in order to accommodate valid existing rights, the new disturbance for a ROW in greater sage-grouse Core Area coupled with existing disturbance would exceed 5 percent of suitable habitat within the DDCT area (see current guidance with respect to disturbance calculations), then additional effective mitigation is necessary to offset the resulting loss of greater sage-grouse habitat. Interim reclamation following construction of the ROW and final reclamation following the relinquishment of the ROW will ensure reestablishment of the predisturbance greater sage-grouse habitat, with the reclamation bond amount set in consideration of this reclamation obligation. These ROW authorizations will be subject to approval by the State Director. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4111: In Core Area, major overhead powerlines will not be authorized unless co-located with an existing 115 kilovolt or greater powerline, as close as technically feasible, not to exceed 0.5 miles or within a designated corridor authorized for overhead powerlines. Distribution lines may be authorized when effectively mitigated to protect greater sage-grouse and the Authorized Officer determines that overhead installation is the action alternative with the fewest adverse impacts. Agricultural and residential lines will be considered to be adequately mitigated for greater sage-grouse if constructed at least 0.6 mile from the lek perimeter with appropriate timing constraints and installation of raptor deterrents. These ROW authorizations will be subject to approval by the State Director. | In Core Area, major overhead powerlines will not be authorized unless co-located with an existing 115 kilovolt or greater powerline, as close as technically feasible not to exceed 0.5 miles or within a designated corridor authorized for overhead powerlines. Distribution lines may be authorized when effectively mitigated to protect Greater Sage-Grouse and the Authorized Officer determines that overhead installation is the action alternative with the fewest adverse impacts. Agricultural and residential lines will be considered to be adequately mitigated for Greater Sage-Grouse if constructed at least 0.6 mile from the lek perimeter (or lek center if no perimeter is yet mapped) with appropriate timing constraints and installation of raptor deterrents. These ROW authorizations will be subject to approval by the State Director. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4112: Until research on impacts of wind energy to greater sage-grouse is completed and adequate mitigation can be developed, exclude wind-energy development in Core Area. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4113: Allow livestock water development projects in greater sage-grouse nesting habitat. Consistent with the intent of greater sage-grouse Core Area management, such projects will only be allowed if they will contribute to improved greater sage-grouse habitat, developments can be designed to be compatible with greater sage-grouse, and they are part of a comprehensive grazing strategy. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4114: The BLM will collaborate with appropriate federal agencies and the State of Wyoming, as contemplated under the Wyoming Governor's Executive Order 2013-3, to: 1) develop appropriate conservation objectives; 2) define a framework for evaluating situations where greater sage-grouse conservation objectives are not being achieved on federal land, to determine if a significant causal relationship exists between improper grazing (by wildlife or wild horses or livestock) and greater sage-grouse conservation objectives; and 3) identify appropriate site-based actions to achieve greater sage-grouse conservation objectives within the framework. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4115: In cooperation with stakeholders, design and locate fences, so as not to disturb important greater sage-grouse habitat areas. When fences are authorized, require a design that has the fewest adverse impacts to greater sage-grouse, including features to reduce greater sage-grouse strikes and mortality. Require the installation of fence markers on wire fences constructed in greater sage-grouse habitat to increase fence visibility and reduce collision potential. Remove, modify, or mark fences with high-risk for collision. | No changes made. | No change proposed. |
| MD 4116: New permanent, high-profile structures within greater sage-grouse nesting habitat will be allowed on a case-by-case basis. Require the installation of anti-perching devices on appropriate structures to reduce predation opportunities. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *MD 4117: Limit noise sources to 10 decibels above ambient noise measured at the perimeter of occupied greater sage-grouse leks from March 1 to May 15, unless scientific findings indicate a different noise level is appropriate. In addition, limit noise sources in other important greater sage-grouse habitats if research and/or policy indicate the need. | Within PHMA (core only), new project noise levels, either individual or cumulative, should not exceed 10 dBA (as measured by L50) above baseline noise at the perimeter of the lek (or lek center if no perimeter is yet mapped) from 6:00 pm to 8:00 am during the breeding season (March 1–May 15). The authorized officer may grant an exception on a case-by-case basis subject to appropriate site-specific analysis, mitigation requirements, and consultation with the State of Wyoming and consistent with the applicable State management strategy (currently Governor of Wyoming's Executive Order 2015-4) (see MD 4134). In coordination with the State of Wyoming, specific noise protocols for measurement and implementation will be developed as additional research and information emerges. These measures would be considered at the site-specific project level where and when appropriate. | No change proposed. |
| MD 4118: To minimize raptor use, require anti-perching devices on new overhead powerlines in greater sage-grouse Core Area. Require anti-perching devices on new overhead powerlines and wind energy meteorological towers in prairie dog, mountain plover, and pygmy rabbit habitats on a case-by-case basis. Work with ROW holders to install anti-perching devices on existing powerlines in these habitats. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4119: Allow above ground low voltage utility lines or require burying lines in greater sage-grouse, prairie dog, mountain plover, and pygmy rabbit habitats on a case-by-case basis. Evaluate and take advantage of opportunities such as the renewal of existing ROWs to remove or modify existing powerlines, prioritizing greater sage-grouse Core Area. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4120: In order to avoid surface-disturbing activities in Core Areas, priority will be given to development of oil and gas and other mineral resources outside of Core Areas, subject to applicable stipulations. When authorizing development of oil and gas and other mineral resources in core habitat, subject to applicable stipulations for the conservation of greater sage-grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for greater sage-grouse. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4129: Update the Herd Area Management Plan as needed to meet herd health objectives, including Appropriate Management Levels, and to address impacts to other resources. Consider forage competition and evaluate overall utilization levels by all grazing animals, and incorporate greater sage-grouse habitat management objectives. | No changes made. | Potential change under Alternative 3. |
| No similar action. | *MD 4133: The BLM will update its Greater Sage-Grouse habitat management areas, including biologically significant units (BSUs), in conjunction with the State of Wyoming's core areas, upon issuance of any Wyoming Governor's Executive Order revising or amending the core area boundaries and upon completion of appropriate NEPA analysis and process. The BLM will complete the appropriate NEPA documentation (including appropriate public comment) prior to adopting any revised core area boundaries (e.g., maintenance action or plan amendment, environmental assessment, etc.). | Potential change under Alternatives 3, 4, 5, and 6. |
| No similar action. | *MD 4134: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows:<br>Adopt the State of Wyoming's Greater Sage-Grouse Compensatory Mitigation Framework to the extent consistent with federal law, regulations, and policy.<br>In all Greater Sage-Grouse habitat, when authorizing third-party actions in designated Greater Sage-Grouse habitat, the BLM will seek to achieve the planning-level Greater Sage-Grouse management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Under this Plan Amendment, management would be consistent with the Greater Sage-Grouse goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [Greater Sage-Grouse] or to improve the condition of [Greater Sage-Grouse] habitat" across the planning area.<br>Accordingly, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | following steps, in alignment with the Governor of Wyoming's Executive Order 2015-4 (July 29, 2015):<br>1. Work jointly with the WGFD to evaluate projects and recommend mitigation in the form of avoidance and minimization.<br>2. The WGFD will determine if the State requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>3. Incorporate state required or recommended mitigation into the BLM's NEPA decision-making process, if the WGFD determines that compensatory mitigation is required to address impacts to GRSG habitat as a part of State policy or authorization, or if a proponent voluntarily offers mitigation.<br>4. Analyze whether the compensatory mitigation (deferring to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action):<br>• achieves measurable outcomes for Greater Sage-Grouse habitat function on a landscape scale as determined by WGFD that are at least equal to the lost or degraded values in accordance with the Governor of Wyoming's Executive Order 2015-4.<br>• provides benefits that are in place for at least the duration of the impacts.<br>• accounts for a level of risk that the mitigation action may fail or not persist for the full duration of the impact.<br>5. Ensure mitigation outcomes are consistent with the State of Wyoming's mitigation strategy and principles outlined in 2019 Wyoming GrSG ARMPA Appendix C, The Greater Sage-Grouse Habitat Management Strategy.<br>The BLM has determined that compensatory mitigation must be voluntary unless required by other applicable law and in recognition that State authorities may also require compensatory mitigation (IM 2019-018, *Compensatory Mitigation*, December 6, 2018). Therefore, consistent with valid existing rights and applicable law, when authorizing | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| *(See above.)* | third-party actions that result in habitat loss and degradation, the BLM will consider voluntary compensatory mitigation actions only as a component of compliance with a State mitigation plan, program, or authority, or when offered voluntarily by a project proponent.<br>Project-specific analysis will be necessary to determine how a compensatory mitigation proposal addresses impacts from a proposed action. The BLM will cooperate with the State to determine appropriate project design and alignment with State policies and requirements, including those regarding compensatory mitigation. When the BLM is considering compensatory mitigation as a component of the project proponent's submission or based on a mitigation requirement from the State, the BLM's NEPA analysis would evaluate the need to avoid or minimize impacts of the proposed project and achieve the goals and objectives of this RMPA. The BLM will defer to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to determine the recommended compensatory mitigation action. | *(See above.)* |
| MD 6001: Respond to specific proposals for land use authorizations on a case-by-case basis. Do not classify, open, or make available any BLM-administered lands for agricultural leasing or agricultural entry under either Desert Land Entry or Indian Allotment for one or more of the following reasons: unsuitable topography, presence of sensitive resources or resource conflicts, lack of water or access, small parcel size, or unsuitable soils. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6002: Identify lands for acquisition through exchange and/or purchase with a priority on meeting special management objectives such as greater sage-grouse Core Area, ACECs, and National Landscape Conservation System lands. Prioritize lands for acquisition that do not have split-estate unless in Core Area where greater sage-grouse management objectives would benefit greater sage-grouse conservation. Lands and/or interests in lands acquired, and former withdrawn lands relinquished would be managed in a manner consistent with adjacent or nearby BLM-administered land including surface and mineral estate management and pursuing withdrawals as appropriate, unless otherwise addressed through further land use planning actions. Subject to further NEPA analysis. | Action was removed in 2019. | No change proposed. |
| MD 6003: Continue to administer lands leased under the Recreation and Public Purposes Act. Respond to requests for additional Recreation and Public Purposes Act leases. | No changes made. | No change proposed. |
| MD 6005: No parcels within a National Landscape Conservation System unit, including the National Trails Management Corridor or an ACEC, or in greater sage-grouse Core Area, are identified for disposal unless the disposal would benefit the goals and objectives of the area's priority values or other important resource values. Acquire lands in areas with mixed ownership and where land exchanges would result in additional or more contiguous federal ownership patterns or would improve management for the benefit of priority resources as identified in other decisions such as ACECs. | No changes made. | No change proposed. |
| MD 6011: Management prescriptions for wind-energy development in important wildlife habitat, areas managed as VRM Classes I and II, RMZs, areas with cultural resources, and special designations are found in those respective sections. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6012: Implement the programmatic policies and BMPs for wind-energy development as identified in the ROD for Wind-Energy Development on Bureau of Land Management-Administered Land in the Western States (BLM 2005b) and Instruction Memorandum 2009-043 or subsequent guidance as part of any wind-energy authorization. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6015: Programmatic policies, BMPs, leasing procedures, and stipulations identified in the ROD for the Programmatic EIS for Geothermal Leasing in the Western United States (BLM and Forest Service 2008) are analyzed in the *Minerals* section. | No changes made. | No change proposed. |
| **MD 6016: Manage 1,279,633 acres as ROW avoidance areas (Map 33). See Appendix C (p. 191) for avoidance criteria. Manage 576,458 acres as ROW exclusion areas (Map 33). Manage 538,110 acres as open to ROW (Map 33). | Manage 1,282,773 acres as ROW avoidance areas (Map 33). See 2014 Lander RMP Appendix C (p. 191) for avoidance criteria. Manage 567,476 acres as ROW exclusion areas (Map 33). Manage 543,961 acres as open to ROW (Map 33). | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6017: The Beef Gap section of the Sweetwater Rocks Complex (the gap between the Split Rock and the Miller Springs WSAs [Map 44]) is closed to any new ROWs even if co-located with existing ROWs. | No changes made. | No change proposed. |
| MD 6018: Energy Corridor 79-216 is a designated corridor (Map 34). | No changes made. | No change proposed. |
| MD 6019: The following are designated corridors for major ROW development (Map 34) open for above and/or below ground ROWs as indicated. The location of the designated corridors as represented on the map is approximate and subject to verification based on existing disturbance, particularly in the Sand Draw to Casper corridor through the Gas Hills mining district and the Lost Creek corridor north and south of Jeffrey City. The corridor widths displayed on Map 34 are overstated to improve clarity. The specific location of the designated corridors is based on the existing ROW. The Lost Creek Corridor, for example, is the area adjacent to the Lost Creek pipeline. These locations are subject to on-the-ground verification which will be reflected on updated iterations of Map 34.<br>• Jim Bridger (containing the Spence-Mustang-Jim Bridger existing 230 kV powerline) from where it enters the Lander planning area in Township 25 North, Range 94 West to where it intersects with the Lost Creek pipeline: above and below ground<br>• Lost Creek: variously below ground only and above and below ground as follows:<br>  ○ Lost Creek 1: from where the pipeline enters the Lander planning area in the south in Township 25 North, Range 93 West to where the pipeline meets the existing 230 kV powerline in the Jim Bridger corridor: below ground only | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| ○ Lost Creek 2: from the Jim Bridger meeting point northward until the Lost Creek pipeline meets the Sand Draw to Casper designated corridor: above and below ground. The section of the corridor through the Jeffrey City area that is not within the National Trails Management Corridor is open to oil and gas leasing subject to CSU stipulations<br>○ Lost Creek 3: from the Sand Draw to Casper meeting point north to Highway 20/26: below ground only<br>○ Lost Creek 4: from north of Highway 20/26 to the Westwide Corridor: above and below ground<br>• Pathfinder: below ground only. (The Pathfinder corridor is only in the Lander planning area in Township 30 North, Range 85 West.)<br>• Sand Draw to Casper: above and below ground<br>• Highway 20/26: above and below ground<br>• Beaver Creek (formerly called Beaver Creek North and Lost Creek Spur): below ground only<br>• Shoshoni/Badwater: below ground<br>• Bairoil: below ground only<br>• Sand Draw: below ground only<br>• Bison Basin: below ground only<br>• Frontier going southwest from the Bairoil corridor to where it leaves the Lander planning area: below ground only<br>• Rattlesnake Hills (formerly called Frontier-Anadarko) north of Black Rock: below ground<br>• Black Rock (formerly called Pacificorp): above and below ground<br>• Pacificorp (going east-west in Township 35): above and below ground<br>Widths for these corridors are 0.5 mile unless there are resource conflicts, then the construction ROW width will be adjusted accordingly. Within these corridors, new facilities will be constructed adjacent to existing linear facilities and overlapping existing ROWs where feasible, recognizing the need for adequate separation for operating system integrity, safety (construction and operation), appropriate local, state, and federal policies, regulations and laws, and land-use constraints. Designated corridors are subject to the | *(See above.)* | *(See above.)* |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| prescriptions for resource protections except that they are open for ROWs even if the surrounding areas are excluded or avoided. Management prescriptions for ROWs are found in other resource areas such as Special Designations. | *(See above.)* | *(See above.)* |
| MD 6020: The preferred location for new ROWs and access route authorizations is in areas already disturbed by existing ROWs. See Appendix E (p. 215) for design constraints to limit surface disturbance associated with new ROWs. Identify opportunities to reclaim duplicative ROWs or those no longer in use. | No changes made. | No change proposed. |
| MD 6021: Utilize the most current greater sage-grouse density disturbance process or other state/federal agreed-upon process for compliance evaluations. | No changes made. | No change proposed. |
| MD 6022: Locate linear ROWs such as fiber optic and low-voltage powerline corridors along currently established road systems (for example, state highways and county roads). | No changes made. | No change proposed. |
| MD 6024: Lands that are available to oil and gas leasing are available to carbon dioxide sequestration and research subject to the same surface limitations as would be applied to oil and gas operations. Lands that are closed to oil and gas leasing are excluded for carbon dioxide sequestration and research. | No changes made. | No change proposed. |
| MD 6029: Grant administrative use authorizations on a case-by-case basis with approval from the Authorized Officer. All access agreements will specify the following: what type of use is allowed and for what purpose, times, dates or seasons of access, where the use will occur, and additional stipulations required to provide for adequate resource protection and to meet pertinent planning decisions. | No changes made. | No change proposed. |
| MD 6050: Livestock grazing in the planning area (Map 38) is managed as follows:<br>• 2,323,152 acres are open to grazing<br>• 7,665 acres are closed to grazing<br>• 63,393 acres are unavailable to grazing | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6052: In cooperation, consultation, and coordination with permittees/lessees, cooperators, and stakeholders including interested parties, develop and implement appropriate livestock grazing management actions to achieve the Wyoming Standards for Healthy Rangelands, improve forage for livestock, and enhance rangeland health. Within greater sage-grouse Core Area, incorporate greater sage-grouse habitat objectives and management considerations into all BLM grazing allotments containing greater sage-grouse habitat through Allotment Management Plans or permit renewals. Consider the application of BMPs for the protection of greater sage-grouse as terms and conditions of grazing permit/lease renewals. In areas where Wyoming Standards for Healthy Rangelands are not being met or are not making progress toward meeting standards, because of current livestock grazing, modify existing permits or condition the issuance of new permits on the implementation of new grazing strategies to meet standards in accordance with grazing regulations. Apply appropriate BMPs as terms and conditions of the permit. | Action was removed in 2019. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6054: Conduct grazing program monitoring (see Glossary) of allotments by focusing on Category I allotments in order of priority starting with those allotments that have degraded riparian-wetland areas or are in whole or in part in greater sage-grouse Core Area. Modify BLM-authorized grazing use on an allotment-by-allotment basis to protect soil, water, vegetative resources, and wildlife. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6055: When a permittee or lessee voluntarily takes non-use of their grazing preference in a specific grazing allotment, permit annual periods of non-use of grazing preference, without penalty, on a case-by-case basis when the advantage to greater sage-grouse habitat or other resource values warrant. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6056: Include terms and conditions on grazing permits and leases that ensure plant growth requirements are met and that adequate forage remains available for greater sage-grouse hiding cover as necessary. Do not permit new range improvement projects within 500 feet of water and riparian-wetland areas except to benefit watershed health or vegetation. Develop project-specific BMPs that become terms and conditions of the grazing permit. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6057: Locate supplements such as minerals and salt in a manner designed to conserve, enhance, or restore greater sage-grouse habitat. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6.. |
| MD 6058: Prioritize completion of land health assessments and processing of grazing permits within greater sage-grouse Core Area and on allotments with riparian-wetland areas not achieving or making significant progress towards proper functioning condition. Emphasize allotments that have the best opportunities for riparian-wetland improvement or for conserving, enhancing, or restoring habitat for greater sage-grouse.<br>When conducting land health assessments, include indicators and measurements of structure, condition, and composition of vegetation specific to achieving greater sage-grouse habitat objectives. If local/state seasonal habitat objectives are not available, use greater sage-grouse habitat recommendations from Connelly et al. 2000 and Hagen et al. 2007 or updated research findings. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6059: Work cooperatively with permittees, lessees, and other landowners to develop comprehensive grazing management strategies to develop site-specific objectives to conserve, enhance, or restore greater sage-grouse Core Area and general habitat areas. Develop a comprehensive grazing strategy to achieve these objectives. In Core Area, monitor measurable objectives in representative sites and evaluate grazing management to ensure that decisions are achieving greater sage-grouse habitat objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6060: Monitor precipitation and vegetative production trends on BLM-administered lands as a tool to understand impacts to soil, water, and vegetative resources. Monitor measurable objectives and evaluate grazing management to confirm that decisions are achieving greater sage-grouse habitat objectives. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6061: Allotments are categorized as M, I, and C (see Appendix G (p. 231)). Re-categorize as appropriate during livestock grazing permit renewals. | No changes made. | No change proposed. |
| MD 6062: When livestock grazing permits and/or grazing preference are voluntarily relinquished in portions of or all of an allotment, analyze suitable livestock grazing management, including closure to livestock grazing where appropriate, based on benefits to resources and other uses. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6063: Establish stocking rates in areas preferred by livestock that allow for appropriate utilization levels by livestock, adjusted for the anticipated intensity of use necessary to provide sufficient forage and cover to support and maintain healthy, diverse wildlife and wild horse populations and to achieve the Wyoming Standards for Healthy Rangelands. Utilization levels may vary based on the implementation of a comprehensive grazing strategy or as needed to achieve vegetation objectives. | No changes made. | No change proposed. |
| MD 6064: Prioritize the management of hot-season grazing on riparian-wetland and meadow complexes to promote recovery or maintenance of key vegetation species appropriate for the ecological site and water quality through the use of comprehensive grazing strategies (see Glossary) as identified in Appendix G (p. 231). In areas of continuous season-long grazing where rangeland health standards are not met, modify existing grazing permits to incorporate rest and/or deferment of grazing to facilitate rangeland health recovery and attainment of rangeland health standards. | No changes made. | No change proposed. |
| MD 6065: Continue implementation of existing allotment management plans. Develop and implement new comprehensive grazing strategies and Allotment Management Plans with grazing permittees/lessees and interested public to achieve desired resource goals. Grant administrative use authorizations on a case-by-case basis with approval from the Authorized Officer. All administrative use agreements will specify the following: what type of use is allowed and for what purpose; times, dates or seasons of access; where the use will occur; and additional stipulations required to provide for adequate resource protection and to meet planning decisions. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6066: Utilizing Required Design Features and BMPs such as those in Appendix E (p. 215) applied as Conditions of Approval, develop and install range improvement projects necessary to implement comprehensive grazing strategies which will lead to improved rangeland health, or to enhance successful comprehensive grazing strategies already in place. Benefits associated with the projected improvement in rangeland health should exceed the adverse impacts associated with the project infrastructure. Avoid projects that would expand grazing on the landscape without a clear link to a comprehensive grazing strategy and consideration of other resources. | No changes made. | Potential change under Alternative 3. |
| MD 6067: Evaluate existing project infrastructure in the development of comprehensive grazing strategies. In consultation with the livestock grazing permittees authorized to use the allotment, identify projects that are no longer necessary, or that are contributing to adverse impacts to other resources, and modify or remove projects as appropriate to mitigate impacts. Evaluate whether the infrastructure contributes to the introduction or spread of invasive nonnative species, and develop mitigation (including removal of infrastructure) to reduce or eliminate weed infestation and spread. | No changes made. | No change proposed. |
| MD 6068: Remove or modify fences and cattleguards on a case-by-case basis to enhance other resource values and to facilitate livestock, wild horses, and wildlife movement and management. | No changes made. | No change proposed. |
| MD 6069: Establish and manage future forage reserves as opportunities arise within the planning area on a voluntary basis or as lands are acquired. | No changes made. | No change proposed. |
| MD 6070: Retain designated stock driveways. Permit other livestock trails on a case-by-case basis. | No changes made. | No change proposed. |
| MD 6071: Require that forage supplements have label information stating that the material is safe/compatible for sheep, wildlife, and wild horses in areas where their ranges overlap. Require that all forage supplement labels be submitted to the field office for approval by the Authorized Officer prior to use. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6072: Prohibit placement of salt and mineral supplements, such as low-moisture block supplements, in the following areas:<br>• Within 0.5 mile of water and riparian-wetland areas<br>• Within 0.6 mile of the perimeter of occupied greater sage-grouse leks<br>• Within 0.5 mile of areas being reclaimed from surface disturbance | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 6073: Modify or implement livestock grazing management (Appendix G (p. 231)) to facilitate successful reclamation efforts. | No changes made. | No change proposed. |
| MD 6074: Determine livestock grazing management for acquired lands consistent with the management objectives for the acquisition or for the area in which the land is located, for example, an ACEC, WSA, or within the National Trails Management Corridor. | No changes made. | No change proposed. |
| MD 6077: In greater sage-grouse Core Area, authorize Special Recreation Permits that, through mitigation or design, will have neutral or beneficial impacts to greater sage-grouse. | Action was removed in 2019. | No change proposed. |
| MD 6090: Sustain or enhance the Johnny Behind the Rocks RMZ (4,828 acres) for nonmotorized recreationists to engage in horseback riding, hiking, trail running, wildlife viewing, and mountain biking so that participants in visitor assessments/surveys report a higher than average (mean average of 4.0 on a 5-point scale) realization of the following experience and benefit outcomes:<br>• **Experiences:** Enjoying the sensory experience of a natural landscape, enjoying exercise and physical fitness, developing skills and abilities, enjoying having access to close to home outdoor amenities, and feeling that this community is a special place to live.<br>• **Benefits:** Improved mental and physical health, greater connection to nature, improved opportunity to view wildlife close up, greater sense of place, improved outdoor recreation skills, heightened sense of satisfaction with our community, and reduced adverse human impacts such as litter, vegetative trampling, and unplanned trails. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6091: Create and maintain the following desired future recreation setting qualities in the Johnny Behind the Rocks RMZ:<br>• **Physical Recreation Setting:** The natural setting may have subtle modifications that would be noticed but not draw the attention of the casual observer wandering through the area. Facility and trail development will focus on sufficient densities and developments to provide for a full day (6 to 8 hours or up to 40 miles of trail) of use. Non-trail facilities and structures will continue to be rare and co-located within close proximity to the highway/parking area.<br>• **Social Recreation Setting:** Usually 3-6 encounters per day off travel routes and 7-15 encounters per day on travel routes. Group size is usually small.<br>• **Operational Recreation Setting:** Excluding the adjacent highway, the Blue Ridge Road, and livestock permittee access to range improvements; the area will be managed for mountain bikes and other nonmotorized use(s). Mechanized/motorized trail building will be approved as needed to support the identified outcome objective. Onsite controls and services will be present, but harmonize with the natural environment. | No changes made. | No change proposed. |
| MD 6092: Mineral and ROW actions in the Johnny Behind the Rocks RMZ are managed with the following restrictions:<br>• Oil and gas leasing subject to NSO<br>• Closed to geophysical exploration<br>• Closed to phosphate exploration<br>• Recommend for withdrawal to locatable mineral entry<br>• Closed to mineral material sales<br>• Excluded from ROW actions | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6093: Initiate the following recreation decisions to support the identified outcome objective and desired future setting condition:<br>• Utilize monitoring and evaluation to adjust management techniques and implementation decisions as necessary to reach desired future setting conditions and provide identified recreation opportunities (activities, experiences, and benefits).<br>• New trails will be identified and authorized in a master trails plan and supported through implementation-level decision making.<br>• Pursue land exchanges and access agreements for parcels in and adjacent to this RMZ.<br>• Solicit partnerships and cooperative agreements to monitor outcome attainment and preferences through customer assessments (focus group interviews or visitor studies).<br>• Monitor recreation setting condition through onsite patrols May through November. | No changes made. | No change proposed. |
| MD 6094: Close the Johnny Behind the Rocks RMZ to motorized travel, except with an allowance for administrative access agreements with livestock grazing permittees. This management decision does not close motorized travel on the Blue Ridge Road and other roads adjacent to or outside of the SRMA. Motorized travel on and west of Cedar Ridge will be closed as a result of this decision. | No changes made. | |
| MD 6095: The Johnny Behind the Rocks area is open to cross-country nonmotorized travel. | No changes made. | No change proposed. |
| MD 6096: Manage the Johnny Behind the Rocks RMZ as VRM Class II. | No changes made. | No change proposed. |
| MD 6113: Mineral and ROW actions in the Dubois Mill-Site SRMA are managed with the following restrictions:<br>• Closed to oil and gas leasing<br>• Closed to geophysical exploration<br>• Closed to phosphate leasing<br>• Open to locatable minerals<br>• Closed to mineral material disposals<br>• Excluded to major ROWs<br>• Avoided for minor ROWs | No changes made. | No change proposed. |

### 2.19.2 Relevant Appendices

The following table shows which appendices from the 2014 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The 2014 Appendices can be found on the Lander RMP ePlanning website. The 2019 Appendices can be found on the Wyoming GRSG ePlanning website.

## 2.20 WORLAND, WYOMING RMP REVISIONS

This appendix presents the approved RMP revision language from the record of decision for the Worland RMP that relate to GRSG management. The table below notes which goals, objectives, appendices, and management decisions/actions have a potential to change as a result of the current planning effort and if so, under which alternatives changes are being considered. Note that any references to tables and appendices are to those applicable RMP appendices that are listed in **Section 2.20.2** of this appendix.

### 2.20.1 Existing GRSG RMP Management –Worland RMP Revisions

**Table 1. Summary of Goals, Objectives, and Management Actions to the Worland RMP**

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **Land Use Plan Revisions/Amendments to the Worland RMP** | | |
| MO MR:2.3: Priority will be given to leasing and development of fluid mineral resources, including geothermal, outside of PHMA and GHMA. When analyzing leasing and authorizing development of fluid mineral resources, including geothermal, in PHMA and GHMA, and subject to applicable stipulations for the conservation of Greater Sage-Grouse, priority will be given to development in non-habitat areas first and then in the least suitable habitat for Greater Sage-Grouse. The implementation of these priorities will be subject to valid existing rights and any applicable law or regulation, including, but not limited to, 30 U.S.C. 226(p) and 43 CFR 3162.3-1(h). | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO MR:2.4: Where a proposed fluid mineral development project on an existing lease could adversely affect Greater Sage-Grouse populations or habitat, the BLM will work with the lessees, operators, or other project proponents to avoid, reduce, and mitigate adverse impacts to the extent compatible with lessees' rights to drill and produce fluid mineral resources. The BLM will work with the lessee, operator, or project proponent in developing an APD for the lease to avoid and minimize impacts to Greater Sage-Grouse or its habitat and will ensure that the best information about the Greater Sage-Grouse and its habitat informs and helps to guide development of such federal leases. | No changes made. | Potential change under Alternative 3. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| **MD 2005: Consider interest in exploration for, or leasing of, federal coal (Map 3-5), if any on a case-by-case basis. Allow coal exploration licenses subject to the regulations of 43 CFR 3410, and subject to guidance mitigating for surface-disturbing activities in the *Wyoming BLM Standard Oil and Gas-Lease Stipulations* (Appendix B, *Oil and Gas Lease Notices and Lease Stipulations, including Exception, Modification, and Waiver Criteria* (p. 211)).<br>Before issuing a coal exploration license, require the authorized officer to prepare an environmental assessment or environmental impact statement, if necessary, of the potential effects of the proposed exploration on the natural and socioeconomic environment of the affected area.<br>If an application for a federal coal lease is received, conduct an appropriate land use and environmental analysis, including the coal screening process, to determine whether the area(s) proposed for leasing is (are) acceptable for coal development and leasing (as per 43 CFR 3425). If public lands are determined to be acceptable for further consideration for coal leasing, amend the land use plan as necessary. Only accept federal coal lease applications on those federal coal lands with development potential identified as suitable for further leasing consideration, after application of the coal screens and unsuitability criteria.<br>At the time an application for a new coal lease or lease modification is submitted to the BLM, the BLM will determine whether the lease application area is "unsuitable" for all or certain coal mining methods pursuant to 43 CFR 3461.5. PHMA is essential habitat for maintaining Greater Sage-Grouse for purposes of the suitability criteria set forth at 43 CFR 3461.5(o)(1). The BLM will also consider that USFWS has found "the core area strategy…if implemented by all landowners via regulatory mechanisms, would provide adequate protection for sage-grouse and their habitats in the state" when considering leasing coal in PHMAs under the criteria set for at 43 CFR 3461.5(o)(1) (USFWS 2010). | No changes made. | Potential change under Alternative 3. |

|---|---|---|
| MO BR:2.6: In PHMAs, the desired condition is to maintain all lands ecologically capable of producing sagebrush (but no less than 70 percent) with a minimum of 15 percent sagebrush cover or as consistent with specific ecological site conditions. The attributes necessary to sustain these habitats are described in Interpreting Indicators of Rangeland Health (BLM Technical Reference 1734-6 [BLM 2005c]). | No changes made. | No change proposed. |
| MG BR:9: GREATER SAGE-GROUSE – Sustain the integrity of the sagebrush biome to provide the amount, continuity, and quality of habitat that is necessary to maintain sustainable populations of Greater Sage-Grouse and other species by achieving the objectives below. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MO BR:9.1: Maintain large patches of high quality sagebrush habitats, with emphasis on patches occupied by Greater Sage-Grouse. | No changes made. | No change proposed. |
| MO BR:9.2: Maintain connections between sagebrush habitats, with emphasis on connections between habitats occupied by Greater Sage-Grouse. | No changes made. | No change proposed. |
| MO BR:10.1: Reconnect large patches of sagebrush habitat with emphasis on reconnecting patches occupied by stronghold and isolated populations of Greater Sage-Grouse. | No changes made. | No change proposed. |
| MD 4058: Maintain or improve important wildlife habitats through vegetative manipulations, habitat improvement projects, livestock grazing strategies and the application of *The Wyoming Guidelines for Managing Sagebrush Communities with Emphasis on Fire Management* (Wyoming Interagency Vegetation Committee 2002) and the *Wyoming BLM Standard Mitigation Guidelines for Surface-Disturbing and Disruptive Activities* (Appendix F, *Wyoming Bureau of Land Management Mitigation Guidelines for Surface-Disturbing and Disruptive Activities* (p. 349)), BMPs (Appendix C, *Required Design Features and Best Management Practices* (p. 249)), and similar guidance updated over time. | No changes made. | No change proposed. |
| MD 4070: Conduct habitat enhancement vegetation treatments within sagebrush communities as opportunities and funding allow, consistent with EO 2015-4 (Wyoming Office of the Governor 2015). | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4071: Modify identified hazard fences, and analyze and construct new fences in accordance with wildlife needs, the BLM Fencing Handbook 1741-1, and WO IM 2010-022, *Managing Structures for the Safety of Sage-grouse, Sharp-tailed grouse, and Lesser Prairie-chicken*, and similar guidance and policy as updated over time. | No changes made. | No change proposed. |
| MD 4076: Allow water development projects in crucial elk winter range and in greater Greater Sage-Grouse nesting habitat with 10 inches or less annual precipitation only when adverse effects can be avoided, minimized and/or compensated based on site-specific analysis. Allow existing uses pending site-specific analysis on a priority basis. | No changes made. | No change proposed. |
| MD 4080: Avoid wind energy projects in big game crucial winter range and raptor concentration areas. Wind-energy development would be avoided in Greater Sage-Grouse PHMAs (Map 3-17), and not allowed unless it can be sufficiently demonstrated that the development activity would not result in declines of Greater Sage-Grouse PHMA populations. Sufficient demonstration of "no declines" should be coordinated with the WGFD and USFWS. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |
| MD 4087: Discourage the use of broad-spectrum insecticides where insect control is required. Target pest control toward key problem areas and schedule applications to be effective in minimum doses in Greater Sage-Grouse brood-rearing areas. Field Offices may implement treatments within Greater Sage-Grouse habitat utilizing RAATS protocols. | No changes made. | No change proposed. |
| MD 4088: Avoid aerial pesticide spraying in favor of ground applications to minimize drift into non-target areas in Greater Sage-Grouse habitat unless benefits of treatments are likely to outweigh impacts. | No changes made. | No change proposed. |
| MD 4089: Avoid applying pesticides to Greater Sage-Grouse breeding habitat during the nesting and early brood-rearing season (March 15 through June 30) to reduce the loss of food supply to chicks and avoid the chance of secondary poisoning unless benefits of treatments are likely to outweigh impacts. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4090: Maintain seeps, springs, wet meadows, and riparian vegetation in a functional and diverse condition for young Greater Sage-Grouse and other species that depend on forbs and insects associated with these areas.<br>Consider management actions if desirable green vegetation associated with these wet areas is not available, accessible, or cannot be maintained with current livestock, wildlife, or wild horse use, and the impacts are outweighed by the improved habitat quality. | No changes made. | No change proposed. |
| MD 4091: Restore Greater Sage-Grouse brood-rearing habitats in riparian/wetland areas. | No changes made. | No change proposed. |
| MD 4092: Restore lost riparian functioning systems by repairing abnormally incised drainages to raise water tables and increase water storage and brood-rearing habitats within Greater Sage-Grouse habitat. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4093: Manage vegetation composition diversity and structure, as determined by ESD, or other methods that reference site potential, and WGFD protocols to achieve Greater Sage-Grouse habitat management objectives, in cooperation with stakeholders.<br>Evaluate the role of existing seedings that are currently composed of primarily introduced perennial grasses in and adjacent to Greater Sage-Grouse habitat to determine if they should be restored to Greater Sage-Grouse or habitat of higher quality for Greater Sage-Grouse. If these seedings provide value in conserving or enhancing Greater Sage-Grouse habitats, then no restoration would be necessary. Assess the compatibility of these seedings for Greater Sage-Grouse habitat during the land health assessments.<br>Burned areas within PHMAs would be restored to suitable habitat with consideration given to ESDs, reference sites, site potential and local variability.<br>The BLM could bring in burned area rehabilitation and Burned Area Emergency Response teams who would work cooperatively with partners at the federal, state, and local levels to rehabilitate and restore Greater Sage-Grouse habitats in a manner consistent with the core habitat populations area strategy for conservation.<br>DDCT reviews would be conducted in coordination with the WGFD Habitat Protection Program located in Cheyenne, Wyoming at the WGFD headquarters. Areas within PHMAs would be prioritized for restoration of Greater Sage-Grouse habitat beyond immediate response. | No changes made. | No change proposed. |
| MD 4094: Maintain sagebrush and understory diversity (relative to ecological site description) in crucial seasonal Greater Sage-Grouse habitats unless such removal is necessary to achieve Greater Sage-Grouse habitat management objectives. For example, thinning small patches of dense sagebrush may increase desirable forbs in early brood-rearing habitat. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4095: Increase the composition and canopy cover of Wyoming big sagebrush, within existing nonnative grass seedings with less than 5 percent sagebrush canopy cover, to greater than or equal to neighboring sagebrush communities or historical levels. (See Shrubland-Salt Desert/Salt Bottom on Map 3-15; deeper soiled, and gentler sloped portions of the Shrubland-Salt Desert/Salt Bottom, colored in pink, would be those areas where sagebrush restoration efforts could be conducted.) | No changes made. | No change proposed. |
| MD 4096: Investigate opportunities to increase sagebrush in lower precipitation zones. | No changes made. | No change proposed. |
| MD 4097: Plan and construct mining and mineral development activities, to the degree possible given state water rights, to minimize disturbances that would result in alterations to springs and riparian Greater Sage-Grouse habitat. Alternative water sources may be developed to replace natural sources that have been affected or destroyed during these development activities. | No changes made. | Potential change under Alternative 3. |
| MD 4098: Treat constructed or non-natural water storage impoundments to control mosquito breeding (and the associated spread of West Nile virus), to prevent disease spread to Greater Sage-Grouse as necessary. | No changes made. | No change proposed. |
| MD 4099: In cooperation with stakeholders, manage to promote the growth and persistence of native shrubs, grasses, and forbs needed by Greater Sage-Grouse for seasonal food and concealment. | No changes made. | No change proposed. |
| MD 4100: In cooperation with stakeholders, design and locate fences so as not to disturb PHMAs. Increase the visibility of fences in these areas which have been identified as hazardous to flying Greater Sage-Grouse. | No changes made. | No change proposed. |
| MD 4101: Conduct fire management activities to minimize overall wildfire size and frequency in sagebrush plant communities where Greater Sage-Grouse habitat objectives are at risk. General priorities for habitat protection:<br>Priority # 1 – Protection of Greater Sage-Grouse PHMAs.<br>Priority # 2 – Wyoming big sagebrush communities outside Greater Sage-Grouse PHMAs and habitats recovering from disturbance within or adjacent to Greater Sage-Grouse PHMAs. | No changes made. | No change proposed. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 4102: Annually maintain FMPs to incorporate updated sagebrush habitat information as well as fire suppression priorities in sagebrush habitats. Incorporate fire management objectives for the management of sagebrush ecosystems into FMPs. Provide fire management objectives for sagebrush ecosystems to initial attack personnel at the beginning of each fire season. | No changes made. | No change proposed. |
| MD 4103: Establish fuels treatment projects at strategic locations to minimize size of wildfires and limit loss of Greater Sage-Grouse habitat. | No changes made. | No change proposed. |
| MD 4104: Reintroduce appropriate fire regimes to limit conifer encroachment into the sagebrush plant communities. Take into account invasive herbaceous species and Fire Regime Group and FRCC (measure of departure from historic fire regime) with treatments. Where possible, achieve a balance between treating areas that have significantly departed from the historic fire regime (Condition Class 3) and areas that are functioning within an appropriate fire regime (Condition Class 1). | No changes made. | No change proposed. |
| MD 4105: Remove conifers encroaching into sagebrush habitats in a manner that considers tribal and cultural values. Prioritize treatments closest to occupied Greater Sage-Grouse habitats and near occupied leks, and where juniper encroachment is phase 1 or phase 2 as defined in Miller et al. (2005). Refine the location of specific priority areas to be treated by utilizing site-specific analysis and principles like those included in the FIAT report (Chambers et. al. [2014]) and other ongoing modeling efforts to address conifer encroachment. | No changes made. | No change proposed. |

|---|---|---|
| No similar action. | *MD 4152: Specific to management for Greater Sage-Grouse, all RMPs are amended as follows: Adopt the State of Wyoming's Greater Sage-Grouse Compensatory Mitigation Framework to the extent consistent with federal law, regulations, and policy.<br>In all Greater Sage-Grouse habitat, when authorizing third-party actions in designated Greater Sage-Grouse habitat, the BLM will seek to achieve the planning-level Greater Sage-Grouse management goals and objectives through implementation of mitigation and management actions, consistent with valid existing rights and applicable law. Under this Plan Amendment, management would be consistent with the Greater Sage-Grouse goals and objectives, and in conformance with BLM Manual 6840, Special Status Species Management. In accordance with BLM Manual 6840, the BLM will undertake planning decisions, actions and authorizations "to minimize or eliminate threats affecting the status of [Greater Sage-Grouse] or to improve the condition of [Greater Sage-Grouse] habitat" across the planning area. Accordingly, before authorizing third-party actions that result in habitat loss and degradation, the BLM will complete the following steps, in alignment with the Governor of Wyoming's Executive Order 2015-4 (July 29, 2015):<br>1. Work jointly with the WGFD to evaluate projects and recommend mitigation in the form of avoidance and minimization.<br>2. The WGFD will determine if the State requires or recommends any additional mitigation – including compensatory mitigation – under State regulations, policies, or programs related to the conservation of Greater Sage-Grouse.<br>3. Incorporate state required or recommended mitigation into the BLM's NEPA decision-making process, if the WGFD determines that compensatory mitigation is required to address impacts to GRSG habitat as a part of State policy or authorization, or if a proponent voluntarily offers mitigation.<br>4. Analyze whether the compensatory mitigation (deferring to the appropriate State authority to quantify habitat offsets, durability, and other aspects used to | Potential change under Alternatives 3, 4, 5, and 6. |

| *MD 6202: Utilize a rangeland health assessment, resource monitoring, or analysis to determine if livestock grazing adjustments in amounts, kinds, or season are necessary. The NEPA analysis for renewals and modifications of livestock grazing permits/leases that include lands within PHMAs will include specific management thresholds based on Greater Sage-Grouse Habitat Objectives Table (Table 2.7, "Greater Sage-Grouse Seasonal Habitat Objectives" (p. 22)) and Land Health Standards (43 CFR 4180.2) and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. Greater Sage-Grouse Habitat Objectives Table (Table 2.7, "Greater Sage-Grouse Seasonal Habitat Objectives" (p. 22)), Land Health Standards (43 CFR 4180.2) and ecological site potential, and one or more defined responses that will allow the authorizing officer to make adjustments to livestock grazing that have already been subjected to NEPA analysis. | Within PHMA, if monitoring data show the wildlife/special status species standard has not been met nor progress being made toward meeting that standard, there would be an evaluation and a determination made as to the cause. If it is determined that the current authorized livestock use is a significant causal factor in failing to achieve the wildlife/special status species standard~~s~~, the BLM would address the achievement or progress toward achieving the LHSs (43 CFR 4180.2) and, if needed, Greater Sage-Grouse habitat maintenance or improvement.<br>When NEPA analysis is required for a specific implementation action, one alternative would include mechanisms to make adjustments to meet or make progress toward meeting the wildlife/special status species standard. The analysis should also identify the BLM-approved data collection methodologies used for monitoring conditions and determining when adjustments are necessary. If current grazing management meets land health standards and provides for Greater Sage-Grouse habitat, there would be no need to analyze an alternative for Greater Sage-Grouse.<br>Authorized uses in PHMA that incorporate habitat objectives for Greater Sage-Grouse must develop desired conditions based on Greater Sage-Grouse habitats present in the allotment and the ecological potential of sites that supports these habitats. Metrics used to monitor for objectives must be developed and inform the wildlife/SSS portion of the Standards for Healthy Rangelands.<br>Within PHMA, seasonal habitat objectives for Greater Sage-Grouse apply only to those habitats delineated within an allotment during the specific season (e.g., breeding season objectives during breeding season). Data needed to inform the relationship between the authorized use and habitat condition would come from sample locations that appropriately reflect the impact of the authorized use on habitat conditions. Data points should fall within Greater Sage-Grouse seasonal habitat areas and be collected on ecological sites that have the potential to produce Greater Sage-Grouse habitat. | Potential change under Alternatives 3, 4, 5, and 6. |

| 2014/2015 Approved RMPs | 2019 Approved RMPs | Potential Change in 2023 Plan |
|---|---|---|
| MD 6214: Allotments within PHMAs, focusing on those containing riparian areas, including wet meadows, will be prioritized for field checks to help ensure compliance with the terms and conditions of the grazing permits. Field checks could include monitoring for actual use, utilization, and use supervision. | No changes made. | Potential change under Alternatives 3, 4, 5, and 6. |

### 2.20.2 Relevant Appendices

The following table shows which appendices from the 2015 and 2019 plans have management direction that may change through this RMP amendment. If 2019 is not listed in the year, then no change was made to the appendix between the 2015 and 2019 plans. The 2015 Appendices can be found on the Bighorn Basin RMP ePlanning website. The 2019 Appendices can be found on the Wyoming GRSG ePlanning website.

| ARMPA Appendix Name | Year | Potential for Change in 2023 Plan |
|---|---|---|
| A: Maps | 2015 | Yes |
| A: Approved RMP Amendment with Management Goals, Objectives, and Decisions | 2019 | Yes |
| B: Oil and Gas Lease Notices and Lease Stipulations; including Exception, Modification, and Waiver Criteria | 2015 | Yes |
| C: Required Design Features and Best Management Practices | 2015 | Yes |
| B: Required Design Features | 2019 | Yes |
| D: Greater Sage-Grouse Habitat Management Strategy | 2015 | Yes |
| C: Greater Sage-Grouse Habitat Management Strategy | 2019 | Yes |
| E: Laws, Regulations, Policies, and Guidance | 2015 | No |
| F: Wyoming Bureau of Land Management Mitigation Guidelines for Surface-Disturbing and Disruptive Activities | 2015 | No |
| G: Federal Oil and Gas Operations on Split-Estate Lands | 2015 | No |
| H: Monitoring and Evaluation | 2015 | No |
| I: Land Disposal and Acquisition | 2015 | No |
| J: Recreation Management | 2015 | No |
| K: Biological Opinion | 2015 | No |
| L: Implementation | 2015 | No |
| M: Bighorn Basin Air Resource Management Plan | 2015 | No |
| N: Seasonal Raptor Stipulations for All Surface-Disturbing and Disruptive Activities | 2015 | No |
| O: Livestock Grazing | 2015 | No |

## Greater Sage-Grouse Habitat Management Area State-by-State Mapping Strategies

This page intentionally left blank.

# Appendix 3. Greater Sage-Grouse Habitat Management Area State-by-State Mapping Strategies

New spatial information published since 2015 provided additional data for revision of habitat management area boundaries that may provide for increased conservation of GRSG. This information included GRSG habitat persistence Wann et al., 2022), habitat and genetic connectivity (Cross et al., 2018, Row et al., 2018, Cross et al., 2022, Oyler-McCance et al., 2022), GRSG distribution (Doherty et al., 2016, Coates et al., 2021) and likelihood of sagebrush habitat persistence under changing climatic conditions (Palmquist et al., 2021, Rigge et al., 2021). The BLM reviewed this new data and coordinated with state wildlife agencies to consider adjustments to the habitat management areas to enhance GRSG conservation. Some states (OR, NV, WY) were already in the process of updating habitat management area delineations based on local data and the BLM worked closely with these states to consider all data in these revisions. Descriptions of efforts in each state within the planning area are provided below.

## 3.1 COLORADO

The BLM has incorporated Habitat Management Area (HMA) boundaries submitted by Colorado Parks and Wildlife (CPW) into the mapping efforts for the Greater Sage-Grouse Resource Management Plan Amendment effort. BLM Colorado relies on CPW's expertise as the state wildlife agency to map greater sage-grouse (GRSG) habitat using the best available science. The revised habitat Priority Habitat Management Area (PHMA) and General Habitat Management Area (GHMA) boundaries currently represent the best-known habitat delineations of GRSG habitat in Colorado.

The definitions of PHMA and GHMA have not changed since initially defined in the 2015 ARMPA. PHMAs have been identified as having the highest conservation value to maintaining sustainable GRSG populations. they include breeding, late brood-rearing, and winter concentration areas. The BLM has identified these areas in coordination with CPW. GHMAs are areas of seasonal or year-round GRSG habitat outside of priority habitat. The BLM has identified these areas in coordination with CPW. In Colorado, the BLM and CPW incorporate an additional category, Linkage Management Areas (LMA) which were previously referred to as Linkage Connectivity Habitat Management Areas (LCHMAs) in the 2015 and 2019 ARMPAs. LMAs have been identified as broader regions of connectivity important to facilitate the movement of GRSG and maintain ecological processes, though they are not considered occupied habitat (Colorado Greater Sage-grouse Steering Committee, 2008). The BLM has removed the terms 'connectivity' and 'habitat' from the classification to reduce confusion with other applications of the term connectivity. Similarly, these areas are not considered occupied habitat though they might still contain sagebrush or associated vegetation communities that could serve as stop over points for grouse moving between populations. More information on the background and mapping methodology for LMAs can be found in the Colorado Sage-Grouse Conservation Plan (Colorado Greater Sage-grouse Steering Committee, 2008).

Prior to the current planning process, the BLM and CPW adopted refined HMA maps based on the modeling efforts of Olsson Consultants on behalf of the Associated Governments of Northwest Colorado (DOI-BLM-CO-S000-2020-0003-CX). The multi-year (2016-2019) collaborative mapping process refined the previously mapped areas to remove non-habitat in HMAs or expand areas with documented GRSG use. The 2019 re-

mapping effort incorporated state-specific, timely research and mapping tools. For the full methodology, see Olsson Project No. 016-516 (2019).

The refined HMA (2019) dataset was created by preparing fine-scale population-specific Species Distribution Models (SDMs) to map revised PHMA and GHMA areas for each of the six GRSG populations within the current occupied range of Colorado. First, known presence locations of marked GRSG were used to train Random Forest and Resource Selection Function (RSF) models to estimate seasonal (e.g., breeding, summer-fall and winter) habitat suitability. Secondly, the seasonal model results were classified into high or low habitat suitability categories and subsequently compiled to produce a year-round habitat suitability map. Third, the resulting year-round habitat suitability maps were used to develop revised PHMA and GHMA areas for each population. All areas classified as highly suitable habitat in each population's year-round classified habitat layer were classified as PHMA, while the remaining low habitat suitability areas were classified as GHMA. Finally, the current occupied range for each population was modified to exclude areas identified as unsuitable habitats (Olsson 2019). CPW reviewed the dataset and made minor modifications to include areas outside of previously mapped occupied range where evidence of GRSG occupancy exists. The BLM made slight modifications to the dataset by incorporating a minimum mapping unit and snapping the GIS layers to the state boundary. The 2019 mapping update did not model or adjust LMA boundaries.

During the current planning effort, the BLM coordinated with CPW to review the previous HMA compared to new data that became available since 2015. The BLM and CPW also coordinated with the wildlife agencies from Wyoming and Utah to determine if there was relevant cross-border information. The BLM and CPW revised two areas in the Northwest CO population to incorporate new (2017-2022) lek count data and to incorporate GRSG location data provided by Utah Division of Wildlife Resources. The updates resulted in approximately 49,000 acres of previously mapped GHMA becoming PHMA and 1,400 acres of previously unmapped areas becoming GHMA.

Alternative 1 uses the refined HMA (2019) dataset that was incorporated into the 2015 Northwest Colorado GRSG ARMPA via plan maintenance action. Alternative 2 uses the previous HMA dataset that was originally used for the 2015 and 2019 ARMPAs. Because of the timing of the preliminary injunction for the 2019 ARMPA, the BLM only applied the maintenance action and updated maps to the 2015 ARMPA.

Alternatives 4, 5, and 6 incorporate the most recent lek count and telemetry data from both Colorado and adjacent states. Based on these data, approximately 49,000 acres of previously mapped GHMA would be classified as PHMA and 1,400 acres of previously unmapped areas would be classified as GHMA. Both changes occur in the Northwest Colorado population. They difference between alternative 1 and alternatives 4, 5, and 6 is a 4.2% increase of PHMA in Northwest Colorado resulting in a 2.6% increase of PHMA in all of Colorado. The portion of previously unmapped area that would be classified as GHMA represents a 0.05% increase of total habitat management area extent in the Northwest Colorado population.

Alternative 3 represents the total habitat management area extent of alternatives 4, 5, and 6 but PHMA and GHMA would both be classified as PHMA. Alternative 3 includes the 1,400 acres of previously unmapped area in the Northwest Colorado population and therefore has a larger spatial extent than Alternative 1.

Compared to all other alternatives, alternative 2 includes the highest acreage because many of the interior areas of non-habitat had not been removed. However, there are some areas where the most recent data indicate GRSG use that would not be captured by the alternative 2 HMAs. Using the HMAs in alternative 2 would require more on-the-ground verification and more plan criteria that addresses non-habitat.

Alternatives 1, 4, 5, and 6 still require implementation-level verification but represent a more accurate depiction of GRSG habitat in Colorado. Alternatives 3, 4, 5, and 6 incorporate the most recent GRSG data.

## 3.2 IDAHO

BLM Idaho reviewed and revised HMAs for Alternatives 3, 4, 5, and 6 due to the availability of new data on GRSG, vegetation, and new range wide science on GRSG. BLM Idaho worked closely with Idaho's Governor's Office of Species Conservation (OSC), the Idaho Department of Fish and Game (IDFG), and other cooperating agencies during the review and revisions. First, IDFG worked to revise the extent of HMA based on biology, i.e. GRSG observations and habitat. Second, BLM Idaho reviewed HMA revisions as well as new range wide science and made HMA designations based on the 2015 Idaho-Southwest Montana Approved Resource Management Plan Amendment (ARMPA) for Alternatives 3 and 4. Third, the State of Idaho (OSC, IDFG) independently reviewed 2015 HMAs and new information including the modified HMA extent from Alternatives 3 and 4 and solicited input from stakeholders and other State agencies. The State provided BLM Idaho an initial draft in early May and a final draft in late September, taking into account the above input and assigning HMA designations based on definitions from the Idaho 2021 Plan (State of Idaho 2021). BLM used the State of Idaho's final draft for HMA designations for Alternatives 5 and 6.

### 3.2.1 Data Sources

Data sources used during HMA review and revisions for all alternatives included:

- **GRSG observations and population data:**
  - Lek survey data
  - Idaho breeding bird density (IDFG 2020)
  - GPS and VHF radiotelemetry studies, including individual movements and connectivity areas between seasonal ranges
  - Other reliable observations of unmarked birds since 2000 (e.g. incidental observations during targeted sage-grouse surveys and big game aerial surveys, falconry reports)
- **GRSG habitat models:**
  - General Habitat Suitability Index (HSI; seasons pooled) (IDFG 2018, 2019a)
  - Winter habitat suitability model (IDFG 2019b)
  - Late Brood-rearing (LBR) habitat suitability model (IDFG 2019b)
  - Spring habitat suitability model (IDFG 2019b)
  - GRSG breeding habitat (Doherty et al. 2016)
  - Craters of the Moon (CRMO) Sage-Grouse Habitat (Univ of Idaho and NPS 2018)
- **Remote sensing habitat models:**
  - Sagebrush cover (Rangeland Condition Monitoring Assessment and Projection [RCMAP] 2020, 2021)
  - Tree canopy cover (Rangeland Analysis Platform [RAP] 2021; Allred et al. 2021)
  - Annual grass cover (RCMAP 2020)
- **Other data:**
  - Fire history; perimeters through 2021 (BLM, NIFC data)
  - Visual interpretation of ortho-imagery (e.g., 2021 NAIP [OCM Partners 2023], Google Earth imagery)
  - Anthropogenic features from the Idaho Sage-grouse Habitat Quantification Tool

Additional data sources used for Alternative 4 included:

- **New range wide science on GRSG**
  - GRSG breeding bird density (Doherty et al. 2016)
  - GRSG lek persistence (Wann et al. 2023)
  - Genetic connectivity (Row et al. 2018, Cross et al. 2023)
  - Sagebrush Conservation Design tool (Doherty et al. 2022)

### 3.2.2 Methods

#### *HMA background for Alternatives 3, 4, 5, and 6*

First, IDFG revised the extent of HMA using the 2015 HMA as a base map and revised HMA based on direct evidence of habitat use (i.e., locations of observations) or a body of evidence that predicts GRSG space use irrespective of land ownership. Habitat was delineated using the best available science from the data sources listed above.

*HMA Additions.* In general, HMA was added if an area met one or more of the following criteria: documented GRSG observations, ≥ 3 models predicted suitable habitat, known winter or summer seasonal distributions, suitable (≥ 8%) sagebrush cover, and low (< 30%) tree canopy cover. With few exceptions, additions were located within a 10-km buffer of occupied and pending leks (i.e., 2022 management status). This criterion was a means to exclude seemingly good sagebrush habitat that appeared to be unoccupied.

*HMA Subtractions.* Areas that were subtracted from the 2015 HMA map generally lacked GRSG observations, had low habitat model agreement (< 3 models), low sagebrush cover and/or high tree canopy cover and annual grass cover (> 20%). Non-habitat areas were generally removed from the margins, whereas some small gaps of non-habitat within existing HMAs were filled, particularly if near GRSG observations. Occupied areas subject to more recent disturbance were not subtracted, particularly if they were expected to recover naturally or through restoration and are adjacent to quality habitat.

A concerted effort was made to consistently represent habitat across the state, and rationales were developed to justify additions and subtractions. Local experts were consulted as needed. The new 'biology map' was used for the HMA extent for Alternatives 3 and 4 and an early draft of Alternatives 5 and 6.

#### *HMA for Alternative 4*

For HMA designations under Alternative 4, BLM Idaho evaluated the GRSG biology map's proposed additions and subtractions, and the new range wide science on GRSG and designated HMA based on the 2015 ARMPA definitions:

**PHMA (Priority):** BLM-administered lands identified as having the highest value to maintaining sustainable GRSG populations. Areas of PHMA largely coincide with areas identified as priority areas for conservation in the United States Fish and Wildlife (USFWS) Conservation Objectives Team (COT) report. These areas include breeding, late brood-rearing, winter concentration areas, and migration or connectivity corridors.

**IHMA (Important):** BLM-administered lands that provide a management buffer for PHMA and connect patches of PHMA. IHMA encompass areas of generally moderate to high conservation value habitat and populations but that are not as important as PHMA.

**GHMA (General):** BLM-administered lands where some special management will apply to sustain GRSG populations; areas of occupied seasonal or year-round habitat outside of PHMA or IHMA.

Efforts were made to protect PHMA by a) avoiding isolating or fragmenting large blocks of PHMA, and b) applying new range-wide science, i.e. lek persistence, breeding bird density, genetic connectivity. To focus on areas with high conservation value based on the new science, BLM Idaho combined the following data layers: lek persistence (medium or high; Wann et al 2022), breeding bird density (50 and 25 relative percentage of the population and the highest densities of breeding birds; Doherty et al. 2016); and genetic connectivity (> 90% or > 95%; Cross et al. 2023). This resulted in a raster layer with values ranging from 0 to 6. Any areas classified as 3 or higher by this model were compared with the existing HMA designation. If these areas were not in PHMA, new polygons were drawn, generally following the extent of values ≥ 4, or corresponding to either two of the three layers (lek persistence, breeding bird density, Priority Genetic Pathways). In some instances, the polygon boundary was refined with information from the Key Habitat map or aerial imagery. Areas with high tree cover (≥ 30%) or high annual grass cover (≥ 20%) were excluded from additional areas of high conservation value and were not added to PHMA.

### *HMA for Alternatives 5 and 6*

For these alternatives, the BLM used HMA boundaries for GRSG provided by the State of Idaho for consideration in the LUP effort. This map was created by the IDFG and OSC to assist the BLM in their land use planning effort initiated in 2021 (86 FR 66331).

Consistent with the other alternatives, the State's map for alternative 5 (and alternative 6) adopts a 3-tiered habitat zoning strategy – PHMA, IHMA, and GHMA - to represent a management continuum strategy for GRSG conservation (see the 2021 Idaho Plan for more details, available at https://species.idaho.gov/wildlife-species/greater-sage-grouse/).

This HMA map was based on IDFG's "Biology Map" (version 03/08/2023), which describes GRSG habitat extent (i.e., space use) in Idaho, with the BLM's 2019 GRSG HMA applied. Between draft and final HMA maps, the State of Idaho refined the HMA extent further. HMAs were updated using new science and state policy direction. HMA types reflect breeding bird density (indexed by male lek attendance), habitat quality (suitability, the extent, configuration, and degree of fragmentation), GRSG occupancy and movements patterns. Data sources used are those listed under GRSG observations, Habitat suitability models, and remote sensing habitat models (see details listed above).

In general, PHMA encompassed high and medium-high BBD (25-50%), large areas of intact, habitat (medium and high HSI, high sagebrush cover (>8%), low tree canopy cover (<30%), and low annual herbaceous cover (<20%)), important connectivity and seasonal habitat, especially winter, as evidenced by telemetry locations, and a lack of disturbance (e.g., fire, anthropogenic features). IHMA serves to connect and buffer PHMA and encompassed slightly lower quality and/or more fragmented habitat, with lower BBD (50-100%). GHMA encompassed the lowest quality habitat and BBD (100% or outside the 10km occupied lek buffers) and mesic habitats used in summer (e.g., wet meadows, alfalfa fields).

When information was lacking, best professional judgments were made. There were a few exceptions to these general rules concerning policy (e.g., special community values) and land ownership. Other science products were referenced, e.g., lek persistence, landscape importance, sagebrush ecological integrity, and genetic connectivity models, but these were not primary decision support tools.

## 3.3 MONTANA/DAKOTAS

In the Montana-Dakotas portion of their range, GRSG are found in southwestern Montana and across eastern Montana from the Canadian to the Wyoming border, as well as in northwestern South Dakota, and southwestern North Dakota. In Montana, there are about 1,000 confirmed active GRSG leks, out of 1,892 known lek locations (MT FWP 2022). The number of confirmed active leks has grown since 2002 as survey efforts have identified new leks and have been able to identify the status of unconfirmed leks. The Dakotas are on the far eastern edge of GRSG range and the two states' populations are considered at a higher risk of extirpation because of their small numbers and isolation. GRSG in the Dakotas form a population connected to areas in eastern Montana and northeast Wyoming, though it is unclear how many birds move between the states (Cross et al. 2016, Row et al. 2018, Oyler-McCance et al. 2022). In addition, GRSG may reside near (within a handful of miles) their spring breeding grounds, leks, or undertake migratory movements between seasonal habitats. Differences between seasonal movements across the range may be driven by weather, juxtaposition of seasonal habitats, and other factors. Therefore, to account for differences between states and GRSG populations, the strategy for identifying HMAs, in cooperation with state natural resource entities, varies both among the three states, and across Montana.

In Montana, the Governor's Executive Order (EO) 12-2015 delineated core areas, general habitat, and connectivity habitat. Core areas capture the leks for 75-80% of displaying males and associated breeding and other seasonal habitats. These areas are considered the highest conservation priority. General Habitat, therefore, contains about 1/5 of the displaying males and is also an important component. The EO states, "Development scenarios in General Habitat are more flexible than in Core Areas, but should still be designed and managed to maintain populations, habitats, and essential migration routes, since this Conservation Strategy requires habitat connectivity and movement between populations in Core Areas." The Montana EO also identifies connectivity habitat, specifically a corridor where birds move from spring and summer areas close to the Canadian border to wintering areas farther south in Valley County.

Conversely, both North and South Dakota use a different approach than Montana to account for fewer leks, small populations sizes, and being found on the periphery of the range. Both states included all active leks (known breeding population) in their core areas. In South Dakota, active leks were buffered by 4 mi (6.4km) and in North Dakota 5.3m (8.5km) to capture breeding areas and habitat (SD GF&P 2022, NDG&F 2014). Then these buffered areas were refined to account for large areas of non-habitat, bird location information, resource selection functions, and expert opinion (along with collaboration with neighboring states and the BLM). In 2022, the State of SD Game, Fish, and Parks released a new GRSG Action Plan with update core areas accounting for new GRSG movement data.

In the 2015 GRSG Plans in MT-Dakotas, BLM used the core areas from the three states and general habitat from Montana as a starting point to identify HMAs. BLM designated Priority, Restoration, and General HMAs

(PHMA, RHMA, and GHMA). Primarily PHMA is equivalent to the state identified core areas. Two main differences exist, first small adjustments were made during the planning process based on cooperating agency and public input to identify PHMA in some areas. Second, the BLM designated some core areas as RHMA, where there were ongoing or imminent impacts to these high-quality habitats to emphasize the long-term restoration needs. The objectives for these areas include restoring habitat in order to provide the ability for establishing or enhancing GRSG populations. In Montana the EO general habitat was used as a starting point to identify GHMA, and individual plans worked with local experts and stakeholders to refine these, as needed. To identify general habitat in North and South Dakota the BLM used the current occupied range, along with local vegetation mapping and biologists' opinion, to account for areas where there is limited evidence of breeding habitat but known seasonal or sporadic use by GRSG.

To create HMAs for this current planning effort the BLM built off these prior efforts and again engaged cooperating agencies and stakeholders in the process. The BLM combined local knowledge, experience since the 2015 plans, and updated state information to compliment and provide context to new range wide and management zone habitat modeling efforts. The new GRSG science was used to identify areas to consider emphasizing based on management zone or range wide importance, and to refine the type, quality, and location of habitat areas. Throughout the process the BLM sought consistency, as appropriate and supported, with state natural resource entity core and general (also connectivity in MT) habitat areas. The two types of possible changes to be made in the range of alternatives by considering new information since prior planning efforts are: First, areas that should be added (or omitted) that provide (or do not) habitat for GRSG; and Second, what changes to HMA types should be made across Montana-Dakotas. HMAs are delineated as approximate boundaries and representations of habitat, utilize models and coarse grain data, and don't account for the dynamic nature of GRSG populations. Therefore, habitat characteristics should be verified with local data and efforts and there may be areas of non-habitat contained within HMAs.

The BLM considered designating (including new areas and adjustments) four types of HMAs. These include the 2015 types, PHMA, RHMA, and GHMA, and an additional HMA called Connectivity (CHMA) to capture unique, potential migration areas, particularly in silver sage habitat. Priority habitat (PHMA) includes areas with relatively limited impacts and containing substantial and high-quality habitat. These areas have been identified as having the highest conservation value to maintaining sustainable GRSG populations or maintaining the extent of the GRSG range. Restoration Habitat (RHMA) are areas with ongoing or imminent impacts that recently (i.e., in the 21st Century) contained substantial and high-quality GRSG habitat. In general, these areas differ from other HMAs as the BLM is identifying separate management actions to emphasize restoring habitat to establish or enhance GRSG populations. General habitat (GHMA) are areas with or without ongoing or imminent impacts containing seasonal or year-round habitat outside other HMA, including for the purpose of promoting movement and genetic diversity. Finally, Connectivity Habitat (CHMA) are areas that provide regions of connectivity important to facilitate the movement of GRSG and maintain ecological processes. While typically unoccupied or with inactive leks, this HMA boundary represents where stopover sites may exist, likely within a matrix of degraded or converted habitat or non-habitat, particularly in silver sagebrush habitats in northern Montana.

In both Alternatives 1 and 2 HMAs are the 2015 designations, as MT/Dak was not part of the 2019 plan amendments. In these alternatives two areas of the state with known GRSG habitat do not have designated HMAs because the Butte Field Office and the Upper Missouri River Breaks National Monument (UMRBNM) were not part of the 2015 planning effort. While there are no designated HMAs for Butte and UMRBNM these RMPs contain GRSG related objectives and management actions. While there are some differences between the MT EO habitat boundaries and the BLM 2015 GRSG Plan HMAs, the proportion of birds found

in different habitat types remains similar. BLM PHMA and RHMA boundaries encompass 75-80% of known displaying males (similar to core areas) with the remaining 1/5 to 1/4 of the state population found in GHMA (similar to general habitat). In North and South Dakota BLM PHMA matches the core habitat identified by those states at the time, capturing the majority of breeding habitat for all known active leks.

Alternative 3 considers HMA boundary adjustments to the 2015 plans, utilizing those HMAs as a starting point. Changes account for areas of GRSG habitat or leks identified since 2015, removal of areas that are not, and highly unlikely to be, occupied in the future and state identified connectivity habitats in Montana. This alternative would consider the same management across all HMAs, (i.e., all occupied HMAs as PHMA), therefore changes are focused on refining the extent of habitat. Through the planning process the BLM identified that in North Dakota and South Dakota GRSG habitat extent has not changed since 2015 Records of Decision (RODs). In Montana the BLM added in areas of habitat mapped by MT FWP where there is evidence of use, while also removing areas designated by the BLM in 2015 but are not considered GRSG habitat by MT Fish, Wildlife, and Parks (FWP) or based on multiple lines of evidence are not GRSG habitat. In addition, habitat in Butte and UMRBNM was included as HMAs. Finally, due to the unique behavior of GRSG in silver sage habitat (in the Havre, Malta, and Glasgow Field Offices under the HiLine RMP) the BLM mapped and designated Connectivity habitat (CHMA). These areas included state connectivity habitat as well as additional areas that may also provide for GRSG movement between known populations. All changes were made by considering local knowledge, cooperating agency input, and multiple sources of information, e.g., based on the preponderance of evidence.

For Alternative 4, 5 and 6 the outer boundaries (extent) for these alternatives remains the same as determined in Alternative 3. In addition, HMA designation do not vary between the alternatives 4, 5 and 6. The CHMA areas identified in Alternative 3 were included in 4, 5 and 6 as well. The criteria used to consider adjustment from prior HMA designations was to improve consistency between BLM field offices, between BLM and state delineations, and between states (including Idaho and Wyoming), while accounting for new science and on-the-ground knowledge to consider adjustments to HMA boundaries. In some instances, meeting all criteria was not possible, as aspects were in conflict (e.g., consistency between multiple entities). The BLM weighed these various inputs and utilized the preponderance of evidence to designate HMA types. Overall, the goal is that changes are supported with a sound rationale including relevant biological and/or management considerations. The types of changes made in comparison with Alternative 1 and 2 HMAs include switching between RHMA and PHMA (where different management was not needed or for consistency across boundaries), changing GHMA to PHMA (areas of regional importance and for consistency with the state core areas or across state borders), switching GHMA to CHMA or identifying new CHMA (areas where habitat remains that may be important for movement), and changing PHMA to GHMA (improved consistency with state core areas). The proportion of breeding birds in HMAs among the three states remain about the same as Alternatives 1 and 2, with around 80% of birds (breeding habitat) in PHMA in Montana, whereas all known leks are within PHMA in North and South Dakota.

Consistent definitions are needed for HMAs in Montana/Dakotas due to variations in language between existing plans, lack of CHMA definitions in Alternatives 1 and 2, and to apply HMA definitions in the Upper Missouri River Breaks National Monument and Butte RMPs. HMAs would be defined in all applicable action alternatives as:

**PHMA**: Areas with limited impacts containing substantial and high quality GRSG habitat that have been identified as having the highest conservation value to maintaining both sustainable sage-grouse populations and the range of GRSG. Management actions would emphasize the protection and enhancement of GRSG.

Areas are delineated using mapped state core areas, GRSG density/habitat models, genetic connectivity information, and other resource information that the BLM has identified in coordination with respective state and federal agencies. HMAs are delineated as approximate boundaries and representations of habitat, and therefore there may be areas of non-habitat contained within.

**RHMA**: Areas with ongoing or imminent anthropogenic impacts that recently (i.e. in the 21st Century) contained substantial and high-quality GRSG habitat and/or supported high density sustainable GRSG populations. Management actions would emphasize restoring habitat in order to provide the ability for establishing or enhancing GRSG populations to sustainable, dense levels. Areas are delineated using mapped state core areas, GRSG density/habitat models, genetic connectivity information other resource information, and human disturbance/footprint data. HMAs are delineated as approximate boundaries and representations of habitat, and therefore there may be areas of non-habitat contained within.

**GHMA**: Areas with or without ongoing or imminent impacts containing seasonal or year-round habitat outside other habitat management areas, including for the purpose of promoting movement and genetic diversity. Management actions will maintain, enhance, or restore habitat for GRSG. HMAs are delineated as approximate boundaries and representations of habitat, and therefore include potential or unoccupied habitat and may contain areas of non-habitat.

**CHMA**: Areas that provide regions of connectivity important to facilitate the movement of GRSG and maintain ecological processes, including between priority populations, adjacent states, and across international borders. This HMA boundary represents where stopover sites may exist, likely within a matrix of degraded or converted habitat or non-habitat. Areas are delineated using results from analyses of seasonal migratory movements and habitat characteristics conducive to movements, particularly between silver sagebrush and big sagebrush habitats.

## 3.4 NEVADA/CALIFORNIA

Greater Sage-Grouse Habitat Management Area (HMA) delineation in BLM's resource management plans (RMPs) in Nevada and northeastern California is informed by a science-based modeling process. As a summary, the model is informed by the following: resource selection information informed by telemetry locations from radio-marked greater sage-grouse (GRSG); the relationship of those telemetry points with associated habitat characteristics such as land cover composition, water resources, habitat configuration, elevation, and topography (each at multiple spatial scales related to the observed GRSG movement patterns); and a space use index based on GRSG breeding densities at leks. The modeled combination of these habitat characteristics and site use resulted in a model output of potential management prioritization scenarios (e.g., Priority, General and Other Habitat Management Area categories). The strength of using this model to identify the Habitat Management Areas (HMAs) is that it can be updated as new data become available.

Following the USFWS 2010 finding (75 Fed. Reg. 13910 [Mar. 23, 2010]) that the listing of GRSG was warranted but precluded and that regulatory mechanisms to protect the species were lacking, both the BLM and State of Nevada began planning processes to increase conservation and management of GRSG and its habitat. In 2013, there was a coordinated decision between the BLM, State of Nevada and US Forest Service (USFS) to develop a single science-based HMA delineation process (https://www.blm.gov/press-release/greater-sage-grouse-maps-available-public-comment) that coalesced in 2014 with the USGS publication: Spatially explicit modeling of greater sage-grouse (Centrocercus urophasianus) habitat in Nevada and northeastern California: a decision-support tool for management (Coates et al. 2014).

Mapping efforts prior to this publication varied widely as seen in the 2013 Nevada and Northeastern California GRSG Proposed Land Use Plan Amendment and Draft Environmental Impact Statement (2013 DEIS). In that document, the HMA maps in the BLM's Preferred Alternative and the State's Alternative differed by over 34 million acres in the management categories that were to become Priority, General and Other HMAs and included a nearly 5-million-acre difference for Priority and General HMAs (combined). This was due to each agency using differing strategies to identify the important GRSG areas, as well as lack of a consistent mapping approach. Following the release of the 2013 DEIS, the Sagebrush Ecosystem Program provided BLM with the 2014 Nevada Greater Sage-grouse Conservation Plan, which included an HMA map for use in the State's Alternative and for consideration by BLM and USFS in developing the Proposed Alternative in the 2015 Final EIS (2015 FEIS). Ultimately, the state and federal maps were both based on the 2014 USGS model and associated publication and were similar, but not identical. The main differences between these maps were the naming convention for HMA categories and inclusion of Sagebrush Focal Areas in the BLM's Proposed Alternative. In terms of HMA acres, the Proposed Alternative included about 1.2 million, or five percent, more than the State's Alternative within the 23-million-acre management area.

A central strength of adopting a science-based strategy, and challenge for management, is that science continues to improve over time as additional information is collected and new mapping products and techniques become available. The need to update the map as new information became available was disclosed and discussed throughout the 2013 DEIS, 2015 FEIS and ROD, and Nevada's Sage-grouse Conservation Plan. Following September publication of BLM's 2015 ROD, the Sagebrush Ecosystem Program (SEP) adopted a new State map (on December 11, 2015) that included the results of an updated version of the 2014 HMA model (Coates et al., 2016) and removed modeled HMA that fell outside of the Nevada Department of Wildlife's Population Management Unit boundaries.

On September 23, 2015, Western Exploration LLC and several additional plaintiffs filed a complaint seeking judicial review of the BLM and USFS actions under the Administrative Procedure Act, 5 U.S.C. § 706. While litigation continued, BLM was not able to update the HMA map included in the 2015 ROD to reflect changes made in the State of Nevada's HMA map. On March 31, 2017, the court ordered the BLM to conduct supplemental NEPA analysis to evaluate substantial changes between the 2013 DEIS and 2015 FEIS, including the addition of SFAs and their management, while not supporting other claims.

On October 11, 2017, BLM released a Notice of Intent to consider the possibility of amending some, all or none of the BLM land use plans that were amended or revised in 2014 and 2015 regarding GRSG conservation. This effort resulted in targeted amendments to BLM RMPs through the March 2019 ROD. Through this planning effort, the Nevada and Northeastern California Sub-region updated BLM's HMA map to match the State of Nevada's map within Nevada. However, these updates could not be completed in California where updated satellite imagery was not available during the USGS 2016 model update. USGS later updated the model to include new imagery of lands in California (Brussee et al., 2019).

On October 16, 2019, the U.S. District Court for the District of Idaho issued a preliminarily injunction, temporarily preventing the BLM from implementing the 2019 amendments, but did not vacate them. Since the 2019 plans were temporarily enjoined, the BLM reverted to the HMA map included in the 2015 ARMPA. Consistent with the intent of the BLM's decision to identify GRSG HMAs using the USGS model, the BLM updated the HMA map for Nevada and California through a plan maintenance action in 2022. This action allowed the Nevada BLM and the State of Nevada to use the same HMA map and for the California BLM to incorporate the 2019 model results into HMAs in California.

In late 2022, the BLM worked with the USGS and other state, local, and federal partners to begin updating the 2016 HMA model. This update is consistent with the approach from the previous two efforts while also incorporating new data and information related to habitat selection and space use. It also includes survival rates during reproductive life stages and specific seasons (e.g., brood-rearing or winter) and identifies corridors that link seasonal habitats. This update allows areas of high importance to current population dynamics (i.e., source areas) to be mapped. The final version of the USGS HMA model was not published in time for inclusion in the BLM's 2024 Draft EIS. However, USGS provided BLM with unpublished results for use in preparing the Draft EIS range of alternatives and impact analyses. This ensured that the BLM was using the best science available at the time.

Within this EIS, the HMA maps for NV/CA differ by Alternative. The HMA map in Alternative 1 displays management areas as identified in the maintained 2015 ARMPA. Maintenance Action # 5 (BLM 2022) updated the 2015 ARMPA HMA with information USGS published in 2016 and 2019 (Coates et al., 2106, Brussee et al., 2019). Alternative 2 uses HMA delineations as presented in the 2019 ARMPA. Alternative 3 uses the draft results of the updated model (Milligan et al. 2024 (in review)) but treats all categories of HMA as PHMA. Alternative 4 also uses the draft results of the updated model and includes all three HMA categories (areas identified as PHMA+ by USGS are merged with PHMA). Alternative 5 takes into consideration the Population Management Units (PMUs) defined by NDOW and uses the same HMA results as Alternative 4 within these units. Areas identified by the USGS model that are outside of PMUs have not been occupied by grouse for decades and are not included in the State's management of the population. Despite providing landscapes characteristics that are likely consistent with GRSG habitat, these areas are not considered important to population persistence. In terms of HMA, Alternative 6 is the same as Alternative 5. The difference between Alternatives 5 and 6 is the inclusion of ACEC in Alternative 6.

The unpublished results that BLM used for this Draft EIS includes more than six years of additional field data collected since the last published version (Coates et al., 2016) and advances in methodology to produce the HMA model (Milligan et al. 2024 (in review)). It represents an estimate of how HMA model results may change as the model continues to be refined. It is anticipated that the final published model, associated maps, and documentation will be available during the spring of 2024; the BLM intends to incorporate the final published version into the Final EIS. There will likely be differences in the spatial distribution of HMAs between the Draft EIS version and the final published version. This iterative evolution is anticipated as addressed in both the 2015 and 2019 RODs that focus on using the results of the model as the primary tool to identify alignment of GRSG HMAs. These anticipated updates are also consistent with the BLM using the best available information to consider decisions, as well as Congress' direction that the BLM maintain and use updated inventories of public land resources as part of the planning process.

Not all areas within HMAs will include characteristics associated with GRSG habitat. For example, areas of connectivity between seasonal habitats or areas recovering from fire might not support vegetation used by GRSG but these areas will be included in HMAs. Mapping errors are also anticipated to occur with HMA maps and the BLM provides mechanisms to correct those errors when encountered within this current planning process (2024 DEIS).

Within the USGS modeling framework, Priority HMA is defined as: 1) areas with relatively high habitat selection index (HSI) and relatively high likelihood of occupancy, or 2) source areas, which were defined as high selection and high survival during reproductive life stages, that were outside of areas of high occupancy. General HMA includes those areas of: 1) relatively high HSI but low occupancy, 2) relatively low HSI but high occupancy, or 3) relatively low HSI corridors that connect seasonal priority habitats (i.e., nesting areas

around leks to brood-rearing source areas). Areas with moderate to low HSI and low evidence of occupancy were included as Other HMA.

The BLM's definitions for HMA are as follows:

**Priority HMA**: Areas that have been identified as having the highest conservation value to maintaining sustainable Greater Sage-Grouse populations. These areas are occupied seasonally or year-round and include breeding, late brood-rearing, and winter concentration areas.

**General HMA**: An area that is likely to be occupied seasonally or year-round outside of a Priority Habitat Management Area and where management will apply to sustain the Greater Sage-Grouse populations. GHMA may include active leks, seasonal habitats, and fragmented or marginal habitat, as well as areas identified as corridors connecting seasonal habitats.

**Other HMA**: Areas with appropriate environmental conditions for Greater Sage-Grouse that are less used by Greater Sage-Grouse or have marginal habitat suitability.

Brussee, B.E., Coates, P.S., Ricca, M.A., Chenaille, M.P., 2019, Spatially explicit modeling of annual and seasonal habitat for greater sage-grouse (Centrocercus urophasianus) in northeastern California: U.S. Geological Survey data release, https://doi.org/10.5066/P99E64Y4.

## 3.5 OREGON

The definitions of PHMA and GHMA have not changed since initially defined in the 2015 ARMPA. PHMA and GHMA are defined as follows:

**PHMA**: BLM-administered lands identified as having the highest value to maintaining sustainable GRSG populations. Areas of PHMA largely coincide with areas identified as Priority Areas for Conservation in the USFWS's COT report. These areas include breeding, late brood-rearing, winter concentration areas, and migration or connectivity corridors.

**GHMA:** BLM-administered lands where some special management will apply to sustain GRSG populations; areas of occupied seasonal or year-round habitat outside of PHMA.

IM 2012-044 directed the BLM to collaborate with state wildlife agencies to identify and map GRSG Preliminary Priority Habitat and Preliminary General Habitat. In Oregon, the BLM developed maps for these habitats based on the Oregon Department of Fish and Wildlife's (ODFW) GRSG core and low-density habitat maps (Hagen 2011) for the 2015 BLM Oregon Greater Sage-Grouse Approved Resource Management Plan Amendment. The ODFW core and low-density habitats were initially delineated in 2011 and had not been updated since this initial mapping. Since 2011 Oregon has discovered over 150 new leks, acquired over a million locations from radio- and GPS- marked GRSG, and has benefitted from improved habitat suitability models. Additionally, there are many GRSG leks used in the 2011 mapping process that are no longer occupied by GRSG. Hence, in March 2022 ODFW notified the BLM, other partners, and the public that they would be reviewing and revising Oregon's GRSG core and low-density habitat designations and Oregon's Greater Sage-grouse Conservation Assessment and Strategy using new information and again using the methods and process published in Hagen 2011.

The ODFW's draft GRSG core and low-density habitat designation maps were not available for BLM's Draft EIS analysis needs in early 2023. After coordinating with ODFW, Oregon BLM followed the steps described

in the ODFW Greater Sage-grouse Conservation Assessment and Strategy for Oregon (Hagen 2011 pp. 79-83) using data collected up through the 2022 field season. The BLM developed maps that are conservative (i.e., few areas are clipped or reduced to omit non-habitat and therefore likely to show more habitat than the ODFW map will), and were rough estimates of expected core and low-density areas that were anticipated in the draft ODFW maps.

For alternative 3 all BLM identified core and low-density habitat from the model was considered draft Priority HMA. In addition to habitat identified by the model, the spring and summer kernel density estimates (90% utilization) from radio- or GPS-tagged GRSG marked in Oregon from 2000 to present provided by ODFW was included as priority habitat. The areas defined as General HMA in the 2015 BLM Oregon Greater Sage-Grouse Approved Resource Management Plan Amendments, based on combining ODFW low density habitat layer with the Durtsche et al. 2010 model layer, were not edited and were added as Priority HMA.

For alternatives 4, 5, and 6, all BLM newly modeled core habitat was considered Priority PHMA minus non-habitat clipped areas. For alternative 4 the areas defined as General HMA in the 2015 BLM Oregon Greater Sage-Grouse Approved Resource Management Plan Amendments were not edited and were included as General HMA in addition to the newly modeled low-density habitat.

However, for alternatives 5 and 6 the areas defined as General HMA used the newly modeled low-density habitat and Habitat Assessment Framework (HAF) mapped seasonal habitats (rather than the Durtsche 2010 model used in alternatives 1 through 4). The seasonal habitat maps BLM developed with ODFW provide more accurate boundaries for GRSG distribution than maps generated from ODFW low density and Durtsche et al (2010). Not all Oregon GRSG areas had HAF seasonal habitats mapped as of February 2023, but all areas are expected to be completed in time to be included in the BLM Final EIS.

ODFW completed their GRSG core and low-density habitat designation map update, and the Oregon Fish and Wildlife Commission approved it in December 2023, which was not in time for incorporation into the BLM's Draft EIS analysis. Oregon BLM anticipates using the final ODFW habitat designation maps to the maximum extent possible as a replacement of our draft PHMA and GHMA in the action alternatives in the BLM Final EIS.

## 3.6 UTAH

HMA definitions are defined below for both the 2015 and 2019 GRSG planning efforts. For HMA designations under Alternatives 3, 4, 5, and 6, BLM Utah evaluated the GRSG new range wide science and the State of Utah's 2019 SGMA boundaries to propose additions and subtractions consistent with the concepts for each alternative as identified below in each alternative discussion, and designated HMAs based on the 2019 ARMPA definition for PHMA and the 2015 definition for GHMA.

**BLM Utah 2015 PHMA**: BLM-administered lands identified as having the highest value to maintaining sustainable GRSG populations. Areas of PHMA largely coincide with areas identified as Priority Areas for Conservation in the USFWS's COT Report. These areas include breeding, late brood-rearing, winter concentration areas, and migration or connectivity corridors.

**BLM Utah 2015 GHMA**: BLM-administered lands where some special management will apply to sustain GRSG populations. Areas of occupied seasonal or year-round habitat outside of PHMA.

**BLM Utah 2019 PHMA**: Areas prioritized for managing Greater Sage-Grouse populations (management is only applicable to actions on BLM-administered lands). These management areas include high-quality habitat, and may also include areas with poor quality, potential habitat, and non-habitat. PHMA largely

coincides with the State of Utah's Sage-Grouse Management Areas (SGMAs). In the SGMA, the State identified areas of seasonal habitat, non-habitat, and opportunity areas, though management is focused on the habitat. PHMA are areas that include all the seasonal habitats for the corresponding Greater Sage-Grouse populations, including breeding, late brood-rearing, winter areas, and migration or connectivity corridors.

**BLM Utah 2019 GHMA**: Not Applicable since GHMA was removed.

The BLM Utah coordinated closely with the State of Utah in developing HMA maps for this planning process. Both the BLM and the state prioritized GRSG populations and associated habitat into these two categories, though there varying levels of inclusion across the different alternatives. For all alternatives, PHMA represents areas of the highest value to maintaining sustainable GRSG populations, areas of seasonally or year-round occupied habitat, and/or areas where sagebrush restoration or rehabilitation can provide additional GRSG habitat. Based on new science and information discussed in coordination with cooperating agencies, local biologists, etc., GHMA and PHMA was adjusted across alternatives 3, 4, 5, and 6 using various alternative concepts/strategies. One of the primary differences among the alternatives is how GHMA is used. Of the 380 known occupied GRSG leks in Utah, the alternatives include the following within PHMA:

- Alternative 1: 353 (92.8%) are in PHMA
- Alternative 2: 354 (93.1%) are in PHMA
- Alternative 3: 380 (100%) are in PHMA
- Alternative 4: 366 (96.3%) are in PHMA
- Alternatives 5 and 6: 342 (90%) are in PHMA

**Alternative 1** in Utah would retain PHMA and GHMA as identified in the 2015 GRSG ARMPA. In that effort, the BLM used the State of Utah's Sage-Grouse Management Areas (SGMA) as the primary tool to identify PHMA (with a few exceptions such as the Tavaputs Plateau), and the State's 2009 occupied GRSG habitat map as the basis of the GHMA. The SGMAs and PHMA focused on managing the most important GRSG populations in the state, regardless of the quality of the habitat associated with those populations.

It is important to note that the State of Utah's 2009 occupied habitat data was very broad in nature, and was developed to identify the general areas of potential habitat where GRSG could potentially be found and may not have reflected where birds were actually known to exist. As such, some areas identified for GHMA in the 2015 GRSG ARMPA have subsequently been identified as non-habitat. This includes areas such as west of Sanpete Valley (west of Ephraim and Mt. Pleasant), Porphyry Bench near Price, and Blue Bench north of Duchesne. While these areas were identified as habitat during the 2015 planning effort and included as GHMA in that effort, they have not had any documented birds using them for over 20 years, have no occupied or historically known leks, are poor-quality habitat, and do not provide connectivity habitat for birds moving between population areas or seasonal habitats. Under Alternative 1, there are five occupied leks that occur outside of PHMA/GHMA boundaries: two are in the Box Elder area, one in Sheeprocks, and two in the Rich area.

In the 2015 ARMPA, 97.5 percent of the BLM's PHMA was contained in areas identified as habitat in the State of Utah SGMAs. Further, 99.5 percent of the state's mapped habitat within SGMAs is within PHMA. The major difference between the BLM and State of Utah maps was how areas of lower priority are depicted. The state chose not to map lower priority areas of occupied GRSG habitat outside SGMAs, whereas the BLM mapped these areas as GHMA. Further, based on the State of Utah's Conservation Plan, SGMAs "encompass more than 90 percent of Utah's breeding populations, seasonal movements and the landscapes that provide the greatest potential to increase sage-grouse "usable space" [through habitat protection and

enhancements]" (State of Utah, 2019). The state determined that GRSG "habitats outside the SGMAs are not required for long-term conservation of the species. Much of this habitat has already been heavily disturbed by human and natural causes, and it is not suitable for enhancement or improvement. Therefore, sage-grouse populations in these areas are not considered essential to perpetuate the species in Utah" and the state did not provide any "specific management actions for this habitat" (State of Utah 2019).

***Statewide (Alternative 1) - Habitat Management Area Acres***

- 5,548,837 acres in PHMA
  - 2,079,470 of the BLM-administered surface acres are in PHMA
  - 1,197,778 of the BLM-administered mineral estate are in PHMA
- 1,684,818 acres in GHMA
  - 437,737 of the BLM-administered surface acres are in GHMA
  - 403,125 of the BLM-administered mineral estate are in GHMA
- 42,069 acres as Occupied Anthro Mountain (National Forest System lands)

***Leks Under Alternative 1 HMAs:***

- 353 (92.8%) of the 380 occupied leks in Utah are in PHMA
- 14 (3.7%) of the 380 occupied leks in Utah are in GHMA
- 7 (1.8%)of the 380 occupied leks in Utah are in Occupied Anthro Mountain
- 5 (1.3%) of the 380 occupied leks in Utah are outside any Utah habitat management area

**Alternative 2** is based on the BLM's 2019 GRSG ARMPA. In that effort, the BLM sought to increase HMA alignment with the State of Utah's SGMAs and prioritized the importance of management prescriptions on PHMA. This was to focus protection in the State on the seasonal habitats that support over 95 percent of GRSG populations in Utah, while removing the designation and management of GHMA to de-emphasize management in areas that were less important or not habitat. Other than removal of GHMA, there were very few changes in the HMAs under Alternative 2, though some differences in the BLM's PHMA and the State's SGMA remained in the West Tavaputs area, where the BLM maintained PHMA in an area where the State did not include an SGMA. Under Alternative 2, based on 2023 occupied leks, 19 occupied leks would occur outside of PHMA boundaries: 2 in the Box Elder population area, 4 in the Rich County area, 1 in the Sheeprocks area, 5 in Morgan-Summit area, and 7 in South Slope Uintah/Blue Bench. Most of these leks do not occur on BLM-managed lands.

***Statewide (Alternative 2) - Habitat Management Area Acres***

- 5,548,837 acres in PHMA
  - 2,079,476 of the BLM-administered surface acres are in PHMA
  - 1,235,904 of the BLM-administered mineral estate are in PHMA
- 0 acres in GHMA
- 42,069 acres as Occupied Anthro Mountain (National Forest System lands)

***Leks Under Alternative 2 HMAs:***

- 354 (93.1%) of the 380 occupied leks in Utah are in PHMA
- 0 of the 380 occupied leks in Utah are in GHMA
- 7 (1.8%) of the 380 occupied leks in Utah are in Occupied Anthro Mountain
- 19 (5%) of the 380 occupied leks in Utah are outside any Utah habitat management area

**Alternative 3** HMA boundaries were developed to represent the strongest GRSG management approach within the BLM's jurisdiction. All HMAs in Alternative 3 are managed as PHMA. PHMA under Alternative 3 encompasses a total of 9,802,136 acres. As compared to the other alternatives, the PHMA boundaries under Alternative 3 more closely aligns with the State of Utah's SGMA areas, though the management under Alternative 3 is more restrictive than what the State recommends. The State's SGMAs were developed to be inclusive of a variety of habitat types associated with the various GRSG populations throughout Utah. The State's plan clearly notes that the entirety of the SGMAs do not provide habitat for GRSG, but include areas of habitat, non-habitat, and potential habitat (opportunity areas). In the 2015 and 2019 planning efforts, the BLM focused PHMA in the areas the State coarsely mapped as "habitat" within the SGMAs in the original 2013 GRSG State plan. Under alternative 3, the BLM included the entirety of the SGMAs as PHMA, as well as areas of restoration areas that occurred on the periphery of the 2015 HMAs. The following are additional concepts used to build alternative 3:

- Include in PHMA all areas of GHMA from the 2015 plans.
- Apply new science, especially research on habitat connectivity, resulting in inclusion of the State of Utah's opportunity habitats.
- Include all occupied leks in PHMA.
- Include areas of non-habitat that are encompassed in large parts by PHMA or could provide corridors between valleys and occupied habitat.
- Include areas of GRSG habitat treatments that occur on the periphery of 2015 HMAs.
- Remove municipalities >2,500 acres.

Alternative 3 is the only alternative where the GHMA from alternative 1 becomes PHMA. Expanding the GHMA designation in Alternative 1 to PHMA includes some areas of unoccupied habitat, historic habitat where birds have not been observed in 20 years or more or may have never occurred (e.g., habitat west of Sanpete Valley), areas of non-habitat (e.g., phase 3 pinyon-juniper, rock outcrops), areas which are currently not habitat but could become habitat through significant habitat restoration, etc, which raises the concern of "when applying leasing restrictions, the least restrictive constraint to meet the resource protection objective should be used" (2018 FEIS Appendix 2 p. 2-28). Under Alternative 3, there are no occupied leks that are not encompassed by PHMA.

***Statewide (Alternative 3) - Habitat Management Area Acres***

- 9,801,294 acres in PHMA
  - 3,567,018 of the BLM-administered surface acres are in PHMA
  - 2,379,058 of the BLM-administered mineral estate are in PHMA
- 0 acres in GHMA

***Leks Under Alternative 3 HMAs:***

- 380 (100%) of the 380 occupied leks in Utah are in PHMA
- 0 of the 380 occupied leks in Utah are in GHMA
- 0 of the 380 occupied leks in Utah are outside any Utah habitat management area

**Alternative 4** would manage for a combination of PHMA and GHMA similar to alternatives 1 and 2. Some areas that were used to expand PHMA in alternative 3 were incorporated in alternative 4, such as the State of Utah's opportunity habitat, occupied leks, connectivity corridors based on the new science, as well as habitat improvement projects completed for the benefit of GRSG. However, many new areas of expansion would become GHMA where occupancy is uncertain or unknown (e.g., restoration areas, connectivity

corridors). Under Alternative 4, there are no occupied leks that occur outside of PHMA or GHMA. The vast majority of leks are within PHMA, except for 2 leks in the Rich population area northeast of Mountain Green, 5 leks in Morgan-Summit area, and 7 leks on Tribal lands in Uintah South Slope-Blue Bench, which are in GHMA. Under Alternative 4, there are no occupied leks that fall outside PHMA or GHMA. The following are additional concepts used to build alternative 4:

- Adjust boundaries for PHMA to include areas where monitoring shows GRSG utilization.
- Remove some areas of GHMA that have not provided habitat for an extended period.
- Refine boundaries on the periphery of HMAs to more closely align with the Utah State University (USU) GRSG Seasonal Habitat Model.
- Remove municipalities >2,500 acres.

***Statewide (Alternative 4) - Habitat Management Area Acres***

- 5,833,555 acres in PHMA
  - 2,191,844 of the BLM-administered surface acres are in PHMA
  - 1,291,398 of the BLM-administered mineral estate are in PHMA
- 3,314,103 acres in GHMA
  - 1,195,069 of the BLM-administered surface acres are in GHMA
  - 990,776 of the BLM-administered mineral estate are in GHMA

***Leks Under Alternative 4 HMAs:***

- 366 (96.3%) of the 380 occupied leks in Utah are in PHMA
- 14 (3.7%) of the 380 occupied leks in Utah are in GHMA
- 0 of the 380 occupied leks in Utah are outside any Utah habitat management area

**Alternatives 5 and 6** uses HMA boundaries developed, provided, and preferred by the State of Utah. The State incorporated agency biologist and stakeholder feedback to further refine the HMAs from alternative 4 and provide an expanded range of HMA delineation. This alignment prioritizes HMAs that encompass 95.6 percent of the male GRSG counted on leks during 2023 surveys. The following are additional concepts used to build this alternative:

- Expansion of HMAs to include active leks recently added to the state active sage-grouse lek data set;
- Expansion of HMAs to include wildlife management areas and other areas already subject to state-specific sage-grouse management;
- Refinement of HMAs using localized habitat assessment data and knowledge, including cross-state edge-mapping and review of existing BLM boundary adjustments;
- Updated HMAs to reflect changes in municipal boundaries; and
- Removal of large water bodies

Under alternatives 5 and 6, there are 25 occupied leks that are outside of PHMA or GHMA: 5 leks in Morgan-Summit on private lands, 7 leks in South Slope Uintah/Blue Bench on tribal lands, 7 leks in Anthro Mountain on National Forest System lands which are protected under the 2015 USFS Land Management Plan Amendment and Record of Decision, and 6 leks in West Tavaputs (5 on private, 1 on BLM). With this alignment, alternatives 5 and 6 would prioritize habitat management areas (PHMA and GHMA) that encompass 95.6 percent of the male GRSG counted on leks during 2023 surveys (not the percent of leks,

but the percent of males counted on leks). This includes 2,740 (93.8%) males counted within PHMA, 54 (1.8%) counted in GHMA and 127 (4.3%) counted outside of any HMA.

***Statewide (Alternatives 5 and 6) - Habitat Management Area Acres***

- 4,876,186 acres in PHMA
  - 1,626,862 of the BLM-administered surface acres are in PHMA
  - 1,118,527 of the BLM-administered mineral estate are in PHMA
- 1,499,184 acres in GHMA
  - 645,971 of the BLM-administered surface acres are in GHMA
  - 348,908 of the BLM-administered mineral estate are in GHMA

***Leks Under Alternatives 5 and 6 HMAs:***

- 342 (90%) of the 380 occupied leks in Utah are in PHMA
- 13 (3.4%) of the 380 occupied leks in Utah are in GHMA (two in the Rich area, and 11 in the Sheeprocks area)
- 25 (6.6%) of the 380 occupied leks in Utah are outside any Utah habitat management area

Alternatives 5 and 6 do not include any HMA designation for portions of the Uintah population area south of Highway 40, including the Deadman's Bench, East Bench, and Book Cliffs areas. The GRSG populations within this area were steadily declining during the preparation of the 2015 FEIS; however, in Deadman's Bench, there were 2 leks that had less than 10 birds since 1989 and suggested that the population was connected to other populations. Same with East Bench at the timing of the 2015 FEIS, "East Bench leks are the only known active leks in the last 10 years. However, it is unknown if there are leks on tribal lands in the western portion of this area because UDWR does not have access." (2015 FEIS p. 3-25). In 2023, the leks in these areas were documented as unoccupied. In coordination with local biologists, there is some limited bird use in these areas; however, the extent of use is largely unknown and the leks are no longer considered occupied by the State of Utah.

Habitats in the South Slope Uintah/Blue Bench and Uintah Population Area (Deadman's Bench, East Bench, and Book Cliffs) have been fragmented due to mineral development activities through much of the area, which has likely contributed to loss of occupied leks within these areas since the 2015 plans. Under alternative 1 development could still occur in GHMA similar to what was analyzed in the 2015 Final EIS, "despite the…[Greater Sage-Grouse] conservation measures, leasing and development in these areas could result in human alteration, direct loss, and fragmentation of seasonal [Greater Sage-Grouse] habitats, which, in most cases, have already been fragmented by mineral development activities. Fragmentation could further limit the amount of usable habitat available for the small and declining population of [Greater Sage-Grouse] that occupy this area [GHMA]" (2015 Final EIS, page 4-119). The limited information available for this area provides little insight into the population movements, important seasonal habitats, and connectivity with other populations. BLM lacks regulatory discretion on resources within the South Slope/Blue Bench and Book Cliffs areas since they are predominantly private and Tribal lands. Split estate in this area is limited; therefore, BLM does not have much regulatory responsibility over the mineral estate. The BLM has more jurisdiction in the Deadman's Bench and East Bench areas, removal of GHMA in these areas could result in further habitat loss, degradation, and direct disturbance to the small population of birds that occupy this area as a result of oil and gas leasing.

In addition to the differences in GHMA identified in Alternatives 5 and 6, Anthro Mountain and West Tavaputs have not been identified as either PHMA or GHMA.

*Anthro Mountain-West Tavaputs* – The Anthro Mountain area is predominantly National Forest System land and management would remain the same because USFS is not part of this current planning effort; however, there is a small sliver of BLM land (1,397 acres) in the very southern portion near the Bad Land Cliffs and predominantly tribal lands in the very northernmost extent (Cottonwood Canyon/Cottonwood Ridge). Under alternatives 5 and 6, the BLM portion (1,397 acres) would not be managed as PHMA. The majority of telemetry use is on the USFS lands; however, some birds do use the BLM portions. The easternmost portion of Anthro Mountain has 7 occupied leks (all on USFS) and some birds have been documented moving up to 25 miles outside of the Anthro Mountain area.

The West Tavaputs area is a mix of BLM, State of Utah State Institutional Trust Lands Administration (SITLA), and private lands. There are 6 occupied leks in this area. "Telemetry data suggest some birds are moving large distances to separated areas of seasonal habitats, including movements off the plateau. These seasonal movements include Emma Park, West Tavaputs, Fruitland, and Blue Bench and can range between 14 and 33 miles" (2015 FEIS Section 3.3.5, p. 3-27). Similar to what was analyzed in the 2015 FEIS under Alternative E, "SGMAs would not include the Anthro Mountain and West Tavaputs populations. These populations may be important for redundancy and may provide connectivity to northeastern Utah GRSG populations. While there is documented movement between these two areas and other population areas (e.g., Emma Park and portions of the Uintah Population Area on private and tribal lands), it is unknown what level of connectively is necessary to prevent isolation of populations and how important these areas are to maintaining genetic viability." (2015 FEIS, Section 4.3.6, p. 4-99).

The 2015 FEIS stated, "a total of 1,417 wells are predicted to be drilled from 709 pads within the occupied habitat of the Carbon Population Area, with a total disturbance estimated to be 6,384 acres. Development of 1,417 wells from 709 pads within occupied habitat in the Carbon Population Area would most likely impact some portions of the population to a greater degree than others. Removing management for Anthro Mountain and West Tavaputs would be similar to Alternative E from the 2015 Final EIS (Section 4.3.6 of the 2015 FEIS), which states "impacts would be the greatest in these areas because they have high oil and gas potential. The majority of the lands have already been leased, and they include GRSG habitat outside of PHMA and GHMA that would not be afforded any protection under this alternative." In the Carbon Population per the 2015 FEIS (4.3.2 p. 4-28 RFD), "most of the development is expected to occur in the Gasco, West Tavaputs, Gordon Creek, Drunkards Wash, and Brundage Canyon development areas. Developing 709 pads, additional wells, and ancillary facilities would likely cause direct habitat loss, functional habitat loss, and fragmentation and may impact the local GRSG population. The development in some of these areas may hinder the function of seasonal habitat for some of the local populations, causing localized population declines. The northern population that uses these areas for most of their life history needs would most likely decline. The population that is centered in the central region of the Carbon Population Area (Emma Park) would be impacted to a lesser degree because development is not currently focused in this area, this habitat would be left more intact, and the local birds are mostly nonmigratory." Potential connectivity for Tavaputs, Emma Park, and Tribal lands is unknown.

*Sheeprocks* – The Sheeprocks area is predominantly BLM, USFS, SITLA, and private land. There are 11 leks in this area. From 2007 to 2016, the 10-year running mean population of male birds on Sheeprock population area leks was 51 males, with 119 males in 2007 and 21 males in 2016. The 10-year decline went from an estimated 472 birds to 84 birds. Isolation and small-size was identified as a major causal factor in the Causal Factor Analysis [BLM 2021] for the Sheeprocks population. Since 2016 when Sheeprocks hit a hard population trigger under the 2015 ARMPA, the population has been augmented through translocations of sage-grouse from other populations in Utah. Telemetry data has been collected in association with the

translocations. Translocations has led to a heavily augmented population that is isolated and shows no connectivity or movement corridors to other populations.

Under Alternatives 5 and 6, Sheeprocks would be entirely managed as GHMA. The boundary would also remove prior PHMA/GHMA north of Faust/Rush Valley and areas in the Little Sahara Recreation Area south of Old Highway 148 (Weiss Highway), which was identified in the 2019 planning effort. These are two small areas in the Sheeprocks area, which would be "managed as available for cross-country OHV use. Approximately 6,320 acres in the 5 Mile Pass area in GHMA on the northeastern portion of Sheeprocks, and 7,900 acres in the Little Sahara Sand Dunes area in GHMA on the southern portion of the Sheeprocks population would be managed as available for cross-country OHV use. The acres in both areas are directly adjacent to other areas that are also available to cross-country OHV use, and were originally part of the same open areas prior to 2015. The 2015 Final EIS notes that "habitat loss could occur associated with cross-country OHV use" (2015 Final EIS page 4-52). However, a review of GPS tracking data for GRSG in the Sheeprocks area indicates that none of the collared birds (a sub-sample of the total population) used the areas proposed to be made available to cross-country use again (Chelak and Messmer 2017). "Due to the long-term use in both of these areas prior to 2015, these areas have likely already experienced the habitat losses, so this change is not anticipated to result in impacts on Greater Sage-Grouse or its habitat." [2018 FEIS p. 4-22].

## 3.7 WYOMING

BLM Wyoming used the most current scientific information, GRSG leks, and local expertise to update and revise GRSG HMA's across the state. HMAs in Alternatives 5 and 6 were developed by the State of Wyoming and adopted by the BLM as developed. For Alternatives 3 and 4, BLM first considered the existing HMA boundaries as identified in the 2015 and 2019 plans. The original HMA boundaries were updated and revised using the following data sources: (A) modeled GRSG lek persistence (Wann et al. 2023), (B) modeled sagebrush habitats that currently have high ecological integrity (Doherty et al. 2022), (C) modeled sagebrush habitats that are projected to have high ecological integrity into the near future (2030-2060) (Doherty et al. 2022), (D) genetic connectivity (Row et al. 2018; Cross et al. 2023), (E) sagebrush, invasive annual grass and conifer canopy cover (estimated in 2021; Rigge et al. 2021a,b); (F) terrain ruggedness (i.e., a measure of the variation in terrain slope and aspect; Welty and Jefferies 2018); (G) fire perimeter data from 1985 to 2021 (National Interagency Fire Center); (H) active energy development data (Wyoming Oil and Gas Conservation Commission); (I) GRSG lek activity status (Whitford and Bish 2022); (J) National Agriculture Imagery Program (NAIP) aerial imagery (2019); and (K) local expertise and data.

Wyoming's efforts to update GRSG core areas began in March, 2023. The State generated Draft 1 of proposed changes to core areas the week of May 15. The State's Draft 1 polygons were overlayed with BLM's HMA polygons so that the extent of both efforts was captured in Alternative 4.

Wyoming revised their core area designated habitats several times between release of Draft 1 in May and the final version released October 18, 2023. The final version of the State's core area polygons was adopted by the BLM as Alternatives 5 and 6.

Three tiers of habitat designations were considered for HMAs: (1) Priority Habitat Management Areas (PHMA); (2) Stewardship Habitat Management Areas (SHMA); and (3) General Habitat Management Areas (GHMA). PHMA was the only designation considered in Alternative 3; PHMA and GHMA were designations considered in Alternative 4; and PHMA, SHMA and GHMA were designations considered in Alternatives 5 and 6. Definitions of PHMA and GHMA are the same as those in the 2019 plan, and the definition of SHMA is the same as that provided to BLM by the State of Wyoming for the areas receiving this designation.

Generalized management statements were added to the definitions of PHMA and GHMA for clarity and to align the information provided in these definitions with the definition of SHMA received from the State.

**PHMAs:** GRSG habitats that have the highest conservation value for maintaining or increasing GRSG populations. The management in these areas is focused towards maintaining, enhancing, and where necessary restoring conditions suitable for GRSG across the seasonal ranges included as PHMA (breeding, brood-rearing, winter, and connectivity).

**SHMAs:** GRSG habitats that are generally characterized by large percentages of private land, existing disturbance and prior and existing rights, and fragmented landscapes but that continue to support substantial populations of GRSG, provide important connections between populations, and are important for maintaining GRSG populations. Management in SHMA is consistent with GHMA restrictions.

**GHMA:** used to designate all occupied and potential GRSG habitats not designated as PHMA or SHMA. Management in GHMA is focused on sustaining habitats suitable for GRSG populations using these areas.

Although the total area considered PHMA, SHMA and GHMA combined did not differ between alternatives 3, 4, 5 and 6, different combinations of habitat designations among alternatives were considered to provide a range of alternatives and as such planning flexibility resulting from EIS analyses. Alternative 3 is the conservation-forward alternative and the BLM is analyzing all habitats occupied by GRSG plus habitats that provide suitable habitat conditions for the species in the State as PHMA. The overall extent of PHMA in alternative 3 is considered as the extent of PHMA, SHMA and GHMA combined in alternatives 4, 5, and 6.

Alternatives 4, 5, and 6 considered revisions to the current (Alternatives 1 and 2) PHMA (core area) designated areas. In general, alternative 4 follows closely with the results of the research described above resulting in more habitats in the State being designated as PHMA compared to alternative 5. Alternatives 5 and 6 put more weight on GRSG lek count information and existing and potential anthropogenic disturbance compared to alternative 4 resulting in a more focused application of the PHMA designation to areas identified as being associated with GRSG leks supporting a greater percentage of the State's population of GRSG. An area in northeastern Wyoming was identified following the State's process as supporting high GRSG populations but was designated as SHMA in Alternative 5 because of high levels of existing disturbance and private lands. Revisions to the designation of areas currently considered PHMA (Alternatives 1 and 2) that no longer provide GRSG with suitable habitat conditions were incorporated into alternatives 4, 5, and 6.

## Lek Status Definition Comparison

This page intentionally left blank.

# Appendix 4. Lek Status Definition Comparison

Leks are traditional breeding display areas where male GRSG gather to attract and breed females (Connelly et al., 2011). Counts of males on leks are the primary method to monitor sage-grouse. Lek counts aid in estimating trend and potentially size of breeding populations and determine location of breeding habitats, informing conservation actions (Cook, et al. 2022). Previous lek count guidelines (I.e., Autenrieth et al., 1982, updated by Connelly et al., 2003) have been adjusted by each state across the species' range, resulting in inconsistencies and unintentional biases that create challenges when calculating population trends across state lines (Cook et al., 2022). Given the importance of lek definitions and counts in guiding GRSG management across its range, the Western Association of Fish and Wildlife Agencies (WAFWA) has drafted new guidelines that provide consistent population trend analyses and management applications (Cook, et al., 2022). The BLM is adopting the lek definitions developed by WAFWA to ensure consistency across the RMPs.

**Lek Definition Comparison – Nevada/California, Utah, Idaho, Oregon, Colorado, Wyoming, North Dakota, and South Dakota**

| Term | WAFWA Definition | NV/CA (2015 BLM plan unless otherwise noted) | UT (2015 BLM Plan unless otherwise noted) | ID (2015 BLM Plan unless otherwise noted) | OR (2015 BLM Plan unless otherwise noted) | CO (2015 BLM plan unless otherwise noted) | WY (2015 9-Plan BLM plan unless otherwise noted) | ND (2015 BLM plan only, no 2019 plan) | SD (2015 BLM plan only, no 2019 plan) |
|---|---|---|---|---|---|---|---|---|---|
| Lek | A lek is a traditional location where at least 2 male greater sage-grouse congregate during at least 2 springs within a 10-year period to perform their strutting display and opportunistically breed with females. Although males are territorial on leks and occupy an area, not a point, the representative location for the lek is the estimated or calculated center of the display activity. The 'lek' is the standard reporting and analysis unit for evaluating population status and long-term trends. Because males may alter their display locations within and between years (for numerous possible reasons), these multiple locations 'within' the lek have been referred to as "sub-leks", "satellite leks", "alternative leks", or "temporary leks". The location provided for the overall 'lek' should represent the dominant, largest, and/or most recent annual activity center. The lek identifier is the critical piece of data to remain consistent over time, the location can shift over time. | 2015 plan: A traditional courtship display area attended by male sage-grouse in or adjacent to sagebrush dominated habitat. A lek is designated based on observations of two or more male sage-grouse engaged in courtship displays. Sub-dominant males may display on itinerant strutting areas during population peaks. Such areas usually fail to become established leks. Therefore, a site where less than five males are observed strutting should be confirmed active for two years before meeting the definition of a lek (Connelly et al. 2000; Connelly et al. 2003, 2004). Each state may have a slightly different definition of lek, active lek, inactive lek, occupied lek, and unoccupied leks. Regional planning will use the appropriate definition provided by the state of interest.<br>2019 Plan: . A traditional display area where two or more male Greater Sage-Grouse have attended in 2 or more of the previous 5 years. The area is typically in an open site in or next to sagebrush-dominated habitats (Connelly et al. 2003). Generally, lek sites are traditional, with the same lek sites used year after year (Scott 1942; Batterson and Morse 1948; Wiley 1978; | 2015 plan: A traditional courtship display area attended by male sage-grouse in or adjacent to sagebrush dominated habitat. A lek is designated based on observations of two or more male sage-grouse engaged in courtship displays. Sub-dominant males may display on itinerant strutting areas during population peaks. Such areas usually fail to become established leks. Therefore, a site where less than five males are observed strutting should be confirmed active for two years before meeting the definition of a lek (Connelly et al. 2000, 2003, 2004). Each state may have a slightly different definition of lek, active lek, inactive lek, occupied lek, and unoccupied leks. Regional planning will use the appropriate definition provided by the state of interest. Leks can be different shapes, may move, and may change size year to year. When specific information is available for lek edges that information would be used for determining management buffers.<br>2019Plan: An arena where male Greater Sage-Grouse display for the purpose of gaining breeding territories and attracting females. These arenas are usually open areas with short | 2015 plan: A traditional courtship display area attended by male GRSG in or next to sagebrush-dominated habitat. A lek is designated based on observations of two or more male GRSG engaged in courtship displays. (Note – 2019 plan does not include other definitions) | 2015 plan: A courtship display area attended by male Greater Sage-Grouse in or adjacent to sagebrush dominated habitat. A lek is designated by two or more male sage-grouse engaged in courtship displays. For management purposes, leks with less than five males observed strutting should be confirmed active for two years to meet the definition of a lek (Connelly et al 2000, Connelly et al. 2003, 2004).<br>2019 Plan: An arena where male Greater Sage-Grouse display for the purpose of gaining breeding territories and attracting females. These arenas are usually open areas with short vegetation within sagebrush habitats, usually on broad ridges, benches, or valley floors where visibility and hearing acuity are excellent. | A traditional courtship display area attended by male Greater Sage-Grouse in or adjacent to sagebrush dominated habitat. A lek is designated based on observations of two or more male Greater Sage-Grouse engaged in courtship displays. Sub-dominant males may display on itinerant strutting areas during population peaks. Such areas usually fail to become established leks. Therefore, a site where less than five males are observed strutting should be confirmed active for two years before meeting the definition of a lek (Connelly et al 2000, Connelly et al. 2003, 2004). Each state may have a slightly different definition of lek, active lek, inactive lek, occupied lek, and unoccupied leks. Regional planning will use the appropriate definition provided by the state of interest. | For this RMP analysis, leks are areas used by sage-grouse during the mating season where males display to attract receptive females. Lek locations are typically used with great fidelity for decades or longer, though they may move some over time. These sites are characterized by low vegetation with sparse shrubs often surrounded by big sagebrush communities. Leks are considered to be the center of sage-grouse activities. Existence of a greater sage-grouse lek is supported by data collection. Supporting data defined as: a) minimum of 2 years with 2 or more males lekking on site (preferred); or b) 1 year with 2 or more males lekking on site followed with evidence of lekking (vegetation trampling, feathers, and droppings) during subsequent year. For the purpose of this RMP analysis, BLM follows South Dakota Game, Fish, & Parks in recognizing leks as active or inactive. |

| Term | WAFWA Definition | NV/CA (2015 BLM plan unless otherwise noted) | UT (2015 BLM Plan unless otherwise noted) | ID (2015 BLM Plan unless otherwise noted) | OR (2015 BLM Plan unless otherwise noted) | CO (2015 BLM plan unless otherwise noted) | WY (2015 9-Plan BLM plan unless otherwise noted) | ND (2015 BLM plan only, no 2019 plan) | SD (2015 BLM plan only, no 2019 plan) |
|---|---|---|---|---|---|---|---|---|---|
| Lek *(cont.)* | *(See above.)* | Autenrieth 1981). Taller sagebrush on the outskirts of the leks is necessary as a food source, escape cover, nesting cover for females, and loafing cover during the day (Patterson 1952; Gill 1965; Klebenow 1985). | vegetation within sagebrush habitats, usually on broad ridges, benches, or valley floors where visibility and hearing acuity are excellent. | *(See above.)* | *(See above.)* | *(See above.)* | *(See above.)* | *(See above.)* | *(See above.)* |
| Active | A lek that has more than 2 or more males counted during two or more lek counts within the last 10 years. | 2015: Any lek that has been attended by 2 or more males at least twice in the last 5 years<br>2019: 2 or more male observed at least twice in the last 5 years. | Any lek that has been attended by male sage-grouse during the strutting season | Any lek that has been attended by more than one male GRSG during the breeding season. | A lek attended by 1 male sage-grouse or more during the breeding season. Acceptable documentation of sage-grouse presence includes observation of birds using the site or recent signs of lek attendance (e.g. fresh droppings, feathers). New leks found during ground counts or surveys are given an annual status of active. | An open area that has been attended by more than two male sage-grouse more than two of the previous five years (Connelly et al. 2000a). This definition is derived mainly from observations of leks in large, stable populations and may not be appropriate for small populations with reduced numbers of males attending leks in fragmented sagebrush communities. Therefore, for smaller populations (e.g., Meeker – White River) that are isolated or disjunct from larger, more stable populations, an active lek is defined as an open area where one or more sage-grouse have been observed on more than one occasion engaging in courtship or breeding behavior. An area used by displaying males in the last five years is considered an active lek (CPW 2008a). | Any lek that has been attended by male Greater Sage-Grouse during the strutting season. | Any lek that has been attended by male Greater Sage- Grouse during the strutting season. | No similar definition. |
| Occupied | No similar definition. | A lek that has been active during at least one strutting season within the prior 10 years. | A lek that has been active during at least one strutting season within the prior 10 years. | A lek that has been active during at least one breeding season within the prior 5 years. | A regularly visited lek that has had 1 male or more counted in one or more of the last 7 years. Designate and protect surrounding area as Category 1 habitat. | A lek that has been active during at least one strutting season within the prior 10 years. | A lek that has been active during at least one strutting season within the prior 10 years. | A lek that has been active during at least one strutting season within the prior 10 years. | No similar definition. |

|---|---|---|---|---|---|---|---|---|---|
| Historical | A lek at which all observations within the last 20 years have been less than 2 males, but previously met the definition of a lek.<br>(Previously "Historic", Coates et al. 2021) | 2015 Plan: Any lek that has been attended by 0 or 1 male during every visit (minimum 5 visits) in the last 30 years.<br>2019 Plan: 0 or 1 male observed during every visit (minimum five visits) in the last 30 years. | No similar definition. | No similar definition. | A lek that has been unoccupied prior to 1980 and remains so. Mitigation category based on habitat type and condition (1980 serves as the baseline for evaluating population objectives under ODFW's Sage-grouse Conservation Strategy, thus leks unoccupied prior to 1980 are not included in the baseline for population abundance and distribution.) | No similar definition. | (Former term for "unoccupied lek".) There are two types of unoccupied leks, "destroyed" or "abandoned." Management protection will not be afforded to unoccupied leks. | No similar definition. | No similar definition. |
| Pending Active | A lek with one observation of at least 2 males in the last 10 years and at least one observation of at least 2 males more than 10 years ago. This status captures leks insufficiently monitored to classify as Active, Inactive, or Historical but contains a more recent observation than Pending Historical.<br>(Previously "Pending New", Coates et al. 2021) | 2015 Plan: Any lek that has been attended by 2 or more males only once in the last 5 years.<br>2018 Plan: 2 or more males observed only once in the last 5 years. | No similar definition. | No similar definition. | (called "Occupied-pending") A lek not counted regularly in the last 7 years, but birds were present at last visit. Designate and protect surrounding area as Category 1 habitat. These leks should be resurveyed at a minimum of two additional years to confirm activity | No similar definition. | No similar definition. | No similar definition. | No similar definition. |
| Pending Historical | A lek with insufficient observations in the last 10 years to classify as Active, Inactive, Historical, or Pending Active. This requires one observation of at least 2 males recorded 11 to 20 years ago and at least one observation of at least 2 males more than 20 years ago.<br>(Previously "Pending Old", Coates et al. 2021) | No similar definition. | No similar definition. | No similar definition. | (Called "Pending Lek") A lek not counted regularly in the last seven years, but birds were present one or more years of that period. | No similar definition. | No similar definition. | No similar definition. | No similar definition. |

| Term | WAFWA Definition | NV/CA (2015 BLM plan unless otherwise noted) | UT (2015 BLM Plan unless otherwise noted) | ID (2015 BLM Plan unless otherwise noted) | OR (2015 BLM Plan unless otherwise noted) | CO (2015 BLM plan unless otherwise noted) | WY (2015 9-Plan BLM plan unless otherwise noted) | ND (2015 BLM plan only, no 2019 plan) | SD (2015 BLM plan only, no 2019 plan) |
|---|---|---|---|---|---|---|---|---|---|
| Lek Complex | Considered an "outmoded" definition.<br>1. A grouping of leks that likely have frequent movement of individuals between leks.<br>2. A single lek recorded in multiple locations in multiple years in relatively close proximity. | 2015 Plan: A lek or group of leks within 2.5 kilometers (1.5 miles) of each other between which male GRSG may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004).<br>2019 Plan: (called "Lek Cluster") A group of leks in the same vicinity, among which Greater Sage-Grouse may interchange over time, and representing a group of closely related individuals. | A lek or group of leks within 2.5 kilometers (1.5 miles) of each other between which male sage-grouse may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004). | A lek or group of leks within 2.5 kilometers (1.5 miles) of each other between which male GRSG may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004). | A collection of lek sites typically with small numbers of males which are associated with a larger lek site in the vicinity (less than or equal to 1 mile). A count of a lek complex generally includes systematically acquiring and recording information about all displaying males in a series of leks where no 2 lek sites are more than 1 mile apart. | A lek or group of leks within 2.5 km (1.5 mi) of each other between which male sage-grouse may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004). | A lek or group of leks within 2.5 km (1.5 mi) of each other between which male sage-grouse may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004). | A lek or group of leks within 2.5 kilometers (km) (1.5 miles) of each other between which male Greater Sage-Grouse may interchange from one day to the next. Fidelity to leks has been well documented. Visits to multiple leks are most common among yearlings and less frequent for adult males, suggesting an age-related period of establishment (Connelly et al. 2004). | No similar definition. |
| Destroyed lek | No similar definition. | A formerly active lek site and surrounding sagebrush habitat that has been destroyed and is no longer suitable for GRSG breeding | A formerly active lek site and surrounding sagebrush habitat that has been destroyed and is no longer suitable for sage-grouse breeding. | No similar definition | No similar definition. | A formerly active lek site and surrounding sagebrush habitat that has been destroyed and is no longer suitable for sage-grouse breeding. | A formerly active lek site and surrounding sagebrush habitat that has been destroyed and is no longer suitable for sage-grouse breeding. | A formerly active lek site and surrounding sagebrush habitat that has been destroyed and is no longer suitable for Greater Sage-Grouse breeding. | No similar definition. |
| Abandoned lek | No similar definition. | A lek in otherwise suitable habitat that has not been active during a period of 10 consecutive years. To be designated abandoned, a lek must be "inactive" (see above criteria) in at least four non-consecutive strutting seasons spanning the 10 years. The site of an "abandoned" lek should be surveyed at least once every 10 years to determine whether it has been re-occupied by sage-grouse. | A lek in otherwise suitable habitat that has not been active during a period of 10 consecutive years. To be designated abandoned, a lek must be "inactive" (see above criteria) in at least four non-consecutive strutting seasons spanning the 10 years. The site of an "abandoned" lek should be surveyed at least once every 10 years to determine whether it has been re-occupied by sage-grouse. | No similar definition. | No similar definition. | A lek in otherwise suitable habitat that has not been active during a period of 10 consecutive years. The site of an "abandoned" lek should be surveyed at least once every 10 years to determine whether it has been re-occupied by Greater Sage-Grouse. | No similar definition. |

## Lek Status Definition Comparison – MT and WY 2015 Plans

| Term | WAFWA Definition | Billings | Lewistown | HiLine | Miles City | Buffalo | Bighorn Basin | Lander |
|---|---|---|---|---|---|---|---|---|
| Lek | A lek is a traditional location where at least 2 male greater sage-grouse congregate during at least 2 springs within a 10-year period to perform their strutting display and opportunistically breed with females. Although males are territorial on leks and occupy an area, not a point, the representative location for the lek is the estimated or calculated center of the display activity. The 'lek' is the standard reporting and analysis unit for evaluating population status and long-term trends. Because males may alter their display locations within and between years (for numerous possible reasons), these multiple locations 'within' the lek have been referred to as "sub-leks", "satellite leks", "alternative leks", or "temporary leks". The location provided for the overall 'lek' should represent the dominant, largest, and/or most recent annual activity center. The lek identifier is the critical piece of data to remain consistent over time, the location can shift over time. | An assembly area where birds, especially sage-grouse, carry on display and courtship behavior. Also referred to as a "strutting ground". | A traditional courtship display area attended by male sage-grouse in or next to sagebrush dominated habitat. A lek is designated based on observations of two or more male sage-grouse engaged in courtship displays. Subdominant males may display on itinerant strutting areas during population peaks. Such areas usually fail to become established leks; therefore, a site where less than five males are observed strutting should be confirmed active for two years before meeting the definition of a lek (Connelly et al 20008; Connelly et al. 20039, Connelly, et al. 200410). Each state may have a slightly different definition of lek, active lek, inactive lek, occupied lek, and unoccupied leks. Regional planning will use the appropriate definition provided by the state of interest. | Data supports existence of lek. Supporting data defined as: (a) minimum of 2 years with 2 or more males lekking on site (preferred); or (b) 1 year with 2 or more males lekking on site followed with evidence of lekking (vegetation trampling, feathers, and droppings) during subsequent year. | A traditional breeding area for sage-grouse and sharp-tailed grouse in which males assemble to establish dominance, display, and breed. Also called dancing grounds or strutting grounds. Confirmed sage-grouse lek: • a minimum of 2 years with 2 or more males lekking on site (preferred), or • 1 year with two or more males lekking on site, followed with evidence of lekking (vegetation trampling, feathers, and droppings) during the subsequent year. | A traditional courtship display area attended by male Greater Sage-Grouse in or adjacent to sagebrush dominated habitat. A lek is designated based on observations of two or more male Greater Sage-Grouse engaged in courtship displays. Before adding the suspected lek to the database, it must be confirmed by an additional observation made during the appropriate time of day, during the strutting season. Sign of strutting activity (tracks, droppings, feathers) can also be used to confirm a suspected lek. Sub-dominant males may display on itinerant (temporary) strutting areas during population peaks. Such areas usually fail to become established leks. Therefore, a site where small numbers of males (less than 5) are observed strutting should be confirmed active for two years before adding the site to the lek database. | A traditional courtship display area attended by male sage-grouse in or adjacent to sagebrush dominated habitat. A lek is designated based on observations of two or more male sage-grouse engaged in courtship displays. Before adding the suspected lek to the database, it must be confirmed by an additional observation made during the appropriate time of day, during the strutting season. Sign of strutting activity (tracks, droppings, feathers) can also be used to confirm a suspected lek. Sub-dominant males may display on itinerant (temporary) strutting areas during population peaks. Such areas usually fail to become established leks. Therefore, a site where small numbers of males (<5) are observed strutting should be confirmed active for two years before adding the site to the lek database | No similar definition. (only "occupied Lek" below) |
| Active | A lek that has more than 2 males counted during two or more lek counts within the last 10 years. | Data supports existence of lek. Supporting data defined as: a) minimum of 2 years with 2 or more males lekking on site (preferred) or b) 1 year with 2 or more males lekking on site followed with evidence of lekking (vegetation trampling, feathers, and droppings) during subsequent year. | No similar definition. | Default assignment unless criteria are met for "inactive" or "extirpated." | Default assignment unless criteria are met for "inactive" or "extirpated." | No similar definition. | No similar definition. | No similar definition. |
| Occupied | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | A lek that has been active during at least one strutting season within the last 10 years. |

| Term | WAFWA Definition | Billings | Lewistown | HiLine | Miles City | Buffalo | Bighorn Basin | Lander |
|---|---|---|---|---|---|---|---|---|
| Inactive | A lek at which all observations within the last 10 years have been less than 2 males and that has had at least 2 males recorded during a lek count between 11 to 20 years ago. | 10 years with no males or sign of lek activity - supported by surveys conducted during 3 or more years over the last 10 years. Sage grouse abundance patterns have generally fit within a 10-year time frame, encompassing both years of abundance and relative scarcity. For the purpose of assigning lek status, 10 years with 3 years of supporting data is minimal for characterizing a lek as inactive. However, the capacity for surveying leks at a greater annual frequency in 10 years is generally limited and therefore this Status Definition incorporates both biological (i.e., past abundance patterns) and current administrative factors. | No similar definition. | 10 years with no sign of lek activity - supported by surveys conducted during 3 or more years over the last 10 years. | 10 years with no sign of lek activity and supported by surveys conducted during 3 or more years over the last 10 years. | No similar definition. | No similar definition. | No similar definition. |

| Destroyed lek | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. | No similar definition. |
| Abandoned lek | No similar definition. | ("Confirmed Extirpated") Habitat changes have caused birds to permanently abandon a lek (e.g., plowing, urban development, overhead power- line). | No similar definition. | ("Extirpated") Habitat changes have caused birds to permanently abandon a lek (e.g., plowing, urban development, overhead power line). | (Extirpated) habitat changes have caused birds to abandon permanently a lek (e.g., plowing, urban development, overhead power lines). | No similar definition. | No similar definition. | No similar definition. |
| Provisionally confirmed Greater Sage-Grouse lek | — | — | — | Only one year of survey data is available but more than 5 males were observed. | — | — | — | — |
| Unconfirmed Greater Sage-Grouse lek | — | — | — | Single count with no subsequent survey or a reported lek without supporting survey data. | — | — | — | — |

# Appendix 5

## Evaluation of Areas of Critical Environmental Concern for Greater Sage-Grouse Habitat

This page intentionally left blank.

# Appendix 5. Evaluation of Areas of Critical Environmental Concern for Greater Sage-Grouse Habitat

## 5.1 INTRODUCTION

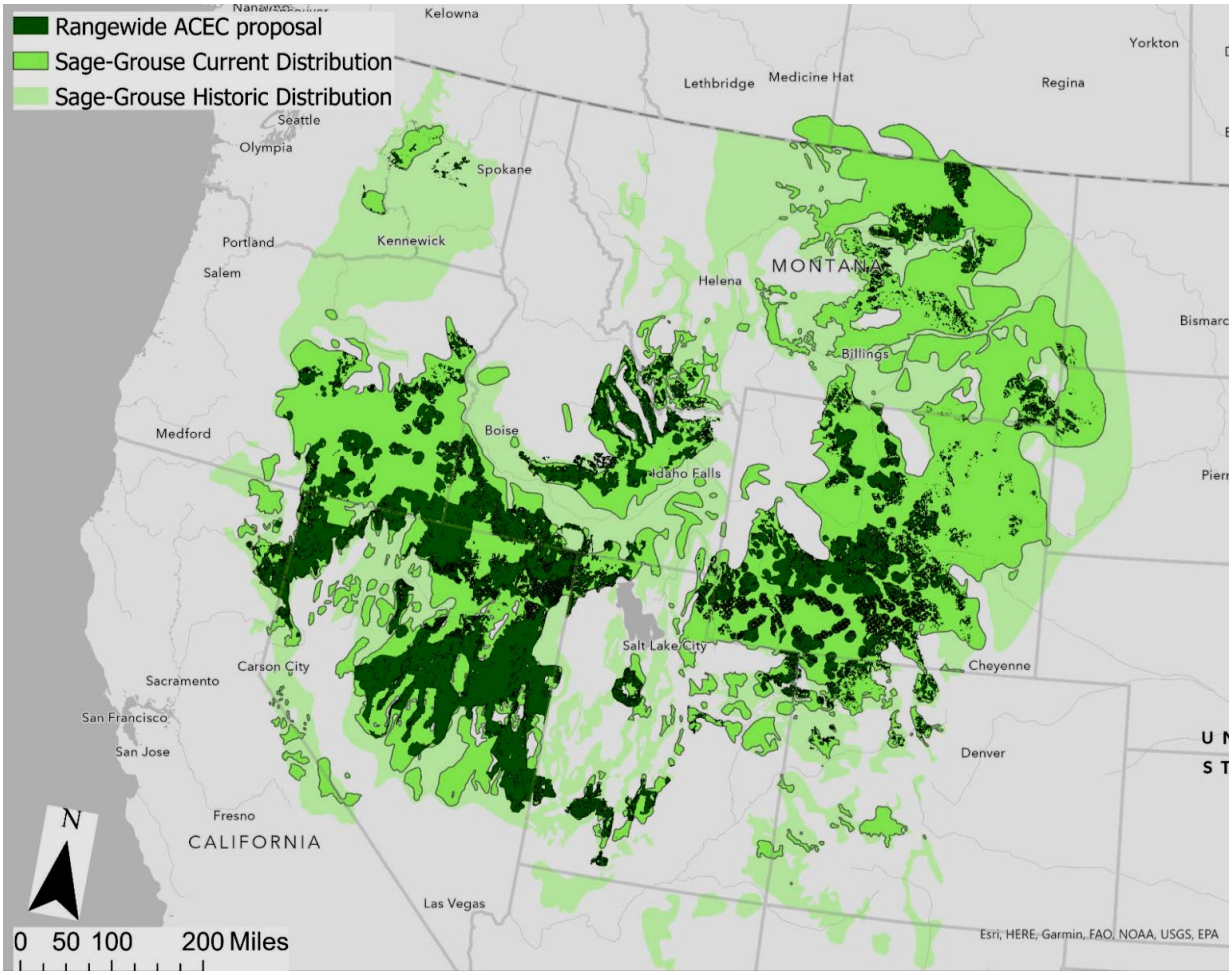
The Federal Land Policy and Management Act (FLPMA) requires that priority shall be given to the designation and protection of areas of critical environmental concern (ACECs). ACECs are defined in FLPMA Section 103(a) (43 United States Code 1702) and in 43 Code of Federal Regulations (CFR) 1601.0-5(a) as "areas within the public lands where special management attention is required (when such areas are developed or used or where no development is required) to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards." The following analysis and the resultant findings for ACEC relevance and importance criteria has been performed pursuant to FLPMA Section 202(c)(3) (43 United States Code 1712), 43 CFR 1610.7-2, and BLM Manual 1613, *Areas of Critical Environmental Concern.*

## 5.2 REQUIREMENTS FOR ACEC DESIGNATION

To be eligible for designation as an ACEC, an area must meet both the relevance and importance criteria described in 43 CFR 1610.7-2 and BLM Manual 1613, and it must require special management to protect and prevent irreparable damage to those values. The planning regulations define relevance and importance as follows:

> Relevance—There shall be present a significant historic, cultural, or scenic value; a fish or wildlife resource or other natural system or process; or natural hazard.
>
> Importance—The above-described value, resource, system, process, or hazard shall have substantial significance and values. This generally requires qualities of more than local significance and special worth, consequence, meaning, distinctiveness, or cause for concern. A natural hazard can be important if it is a significant threat to human life or property.

Additional clarification provided in BLM Instruction Memorandum 2023-013 states that during review of relevance and importance, evaluations should consider "whether relevant values contribute to landscape intactness, climate resiliency, habitat connectivity, or opportunities for conservation or restoration, or have substantial significance to Tribes or Alaska Native Corporations, as defined in the Alaska National Interest Lands Conservation Act, in a way that may support Tribal co-stewardship or traditional and customary uses."



The BLM's ACEC manual provides additional guidance on the requirement for special management attention, noting that such management "would not be prescribed in the absence of the designation. (In other words, the concept of special management is relative.)" While relevance and importance are evaluated to determine if a potential ACEC should be further analyzed in the draft environmental impact statement (DEIS), the need for special management is generally considered when analyzing alternatives with and without the potential ACEC and its associated management. Only those areas that meet relevance and importance criteria are identified as potential ACECs and considered in the DEIS.

## 5.3 NOMINATIONS

The BLM's Notice of Intent (86 FR 66331) for this greater sage-grouse (GRSG) amendment effort invited the public "to nominate or recommend areas that may be considered for designation as areas of critical environmental concern (ACEC), per 43 CFR 1610.7-2." Because this planning effort is only considering amending resource management plan (RMP) actions related to GRSG and its habitat, the invitation clarified that "nominations or recommendation of potential ACECs should be relevant to the preliminary purpose and need of this planning initiative." In other words, any ACEC nomination (or component thereof) that included values other than GRSG and its habitat were not evaluated or included as part of this planning effort. However, ACEC nominations that included GRSG as one of the (potentially many) nominated values were considered, but only for GRSG habitat.

In response to the BLM's request for nominations, one formal nomination was provided during the scoping period. A group of several non-governmental organizations, represented by the American Bird Conservancy, nominated 48,202,418 acres of public lands throughout the planning area as the "Sagebrush Sea Reserve ACEC." **Figure 5-1** is an image from the nomination letter, showing the extent of the nominated area.

**Figure 5-1. Sagebrush Sea Reserve ACEC Nomination**

For most of the proposal, the nominated area "is squarely based on the Sage-grouse Priority Areas for Conservation" (PACs) from the US Fish and Wildlife Service's (USFWS) 2013 Conservation Objectives Team Report (COT Report). However, in Wyoming the nominated area was expanded beyond the PACs to also include all the 75% breeding density areas from Doherty, et. al 2010[1], as well as new Wyoming Core Area designations from 2015. From all those areas in Wyoming the nominators removed areas with a density of active oil and gas wells that exceeded five wells per square mile. For Nevada, the nominated area expanded beyond the PACs "to increase coverage of important seasonal habitats for [GRSG] and ensure connectivity between numerous patches of high-quality habitat that are separated by rocky mountain ranges, playas, and other expanses of marginal quality habitat." In addition to identifying the area for consideration, the proposal also included suggestions for how the nominated ACEC should be managed.

Later in the planning process, additional ACEC nominations were submitted. These later submissions were associated with specific areas, though they included a wide variety of potential values beyond just GRSG habitat. These nominations include the following:

| Additional Externally Nominated GRSG ACECs | | |
|---|---|---|
| **Nominated Area Name** | **Location/State** | **Size** |
| Little Sandy | Central Wyoming | 367,362 acres |
| Red Desert | Central Wyoming | 153,763 acres |
| McDermitt Caldera | NE Nevada/SE Oregon | No specific area delineated |
| Frenchman Breaks Expansion | Northern Montana | 45,725 acres |
| Musselshell Breaks | Central Montana | 122,290 acres |
| North of the Charles M Russell National Wildlife Refuge | Central Montana | 185,055 acres |
| Powderville Expansion | Eastern Montana | 20,053 acres |

## 5.4 EVALUATION PROCESS

### 5.4.1 ACEC Evaluation in Prior GRSG Planning Efforts

The BLM evaluated GRSG habitat for consideration as ACECs during the 2015 greater sage-grouse (GRSG) plan amendment process. Conducted at the state or field office levels, those evaluations determined that Priority Habitat Management Areas (PHMA) for GRSG met relevance and importance criteria because it contains habitat that is valuable for all life stages, including lekking, brood-rearing, and winter range. However, the BLM decided not to designate PHMA as ACECs in the applicable Records of Decision because it was determined that the management actions for PHMA would be sufficient to protect GRSG habitat and, as such, ACEC designation of PHMA was not required. During the 2019 planning process, ACEC nominations were not reconsidered.

### 5.4.2 ACEC Evaluation Approach in the Current GRSG Planning Effort

The BLM evaluated for potential ACECs across the entirety of GRSG habitat on BLM-administered lands, with no distinction between habitat management areas, specific nominated areas, or prior identified areas. With all habitat as the starting point, BLM then considered available data at multiple spatial scales to determine what, if any areas met relevance and importance criteria. Because the BLM evaluated all GRSG habitat, the evaluation of externally provided ACEC nominations simply had to determine if any new data had been provided that had already been considered in the rangewide analyses.

[1] Doherty, K.E., J.D. Tack, J.S. Evans, J.SN. and D.E. Naugle. 2010. Mapping breeding densities of greater sage-grouse: a tool for range-wide conservation planning. BLM completion report: Agreement # L10PG00911.

The evaluation for relevance and importance criteria was conducted in a two-step approach that started with rangewide scientific data and models, followed by a review by staff at the state and field office levels who are more familiar with the local habitat conditions. The evaluation considered multiple lines of information, never relying on just one data set to conclude a criterion was met. Rangewide models were an important starting point, but incorporation of local information, and considerations of data accuracy and scale of application were carefully reviewed prior to making the preliminary delineations and for the evaluation of nominations. The preliminary evaluations described in this appendix will be adjusted based on information provided during the public review of the Draft EIS. These evaluations will be finalized in the Final EIS and analysis in chapter 4 updated, as necessary, to inform whether the potential ACECs should be considered proposed ACECs.

***Relevance Criteria***

In this evaluation process, the BLM considered just two of the relevance criteria: 1) a wildlife resource, and 2) a natural process or system – related to GRSG habitats. No cultural, scenic, values or natural hazards were evaluated.

Because the relevance criterion is simply the presence of a wildlife resource or a natural process or system, areas within the mapped habitat management areas generally met the relevance criteria at this scale of habitat mapping (populations or seasonal habitats). The BLM affirmed the presence of GRSG populations or associated sagebrush habitats with multiple data inputs (distribution maps, seasonal habitats, leks, etc.). All areas with GRSG and their habitats were determined to meet the relevance criteria.

Areas of split surface and mineral estates, where the BLM manages the mineral estate but not the surface, were not included in the relevance evaluation. Areas where the agency administers just the mineral estate would have no wildlife resource within the agency's jurisdiction, and therefore the area would not meet the relevance criterion.

***Importance Criteria***

Once confirming the presence of GRSG and associated habitats, the BLM then evaluated importance criteria. Importance evaluation must include an assessment of: "the value, resource, system, process or hazard…must have substantial significance and values" (BLM-M-1613.1.B). The BLM's planning regulation notes that substantial significance "generally requires qualities of more than local significance and special worth, consequence, meaning, distinctiveness, or cause for concern." This evaluation effort focused on determining whether a given area of GRSG habitat being considered has characteristics that make it more than locally significant, and the evaluation compared areas of GRSG habitat to determine if any particular area had characteristics that were more than locally important. The importance criteria considerations are not an assessment of biological value of habitat to a given population, but how that habitat and its characteristics compare to other GRSG habitat throughout the species range. Rising to a level of national importance required multiple lines of evidence identifying and area as exemplary for GRSG.

***Priority Areas for Conservation (PACs) and Sagebrush Focal Areas (SFAs)***

The BLM did not simply relabel prior designations as ACECs for this planning effort. Rather than using the composite results of prior mapping efforts, which were identified for purposes different than land use planning or ACEC evaluation, this evaluation sought to use primary data-sets. Neither the COT Report nor the SFAs specifically considered the various components associated with the importance criteria. While there may be overlap in evaluation for ACEC criteria, previous designations were not developed using the regulatory and policy criteria associated with the BLM ACEC process. Additionally, PACs and SFAs were

developed using data that was available at the time of their publication (2013 and 2015, respectively). The PACs were developed by the States and helped inform the BLM's habitat management areas in the 2015 GRSG amendment effort. Since the 2013 COT Report, the BLM has worked with state wildlife agencies to update habitat management area boundaries in three states. For this amendment, the BLM is working with all the states to re-evaluate the habitat management areas based on new science and research products that have been completed since 2015. For these reasons, the BLM did not use PACs or SFAs as an automatic delineation of potential ACECs, or as justification that the area met importance criteria.

### 5.4.3 Rangewide Preliminary Evaluation

A series of rangewide spatial layers (see list below) were visually reviewed across the entire GRSG range. This preliminary review focused on areas outside of the SFAs designated in 2015, with the understanding that new data associated with the SFAs would be reviewed at the state level as a next step in the evaluation. The purpose of the review was to identify potential areas where multiple data sources indicated areas of high value or concern related to GRSG use and conservation. The resulting areas were identified as an initial screening for consideration by BLM State and Field Office staff to determine if they should be carried forward to discussions with partners. Every layer in the list below was considered but some carried more importance in some areas than others. For example, areas that models indicated as important genetic connectivity may have resulted in that layer receiving more emphasis than others where genetic connectivity was not a factor.

After initial areas were identified, the size and extent of the polygons were reviewed in context of the presence of BLM-administered lands. Areas where the BLM had marginal or scattered parcels were removed, as the effectiveness of habitat management is such areas is low without cross-ownership coordination. Some areas extend beyond BLM lands simply for consideration of external factors that may influence the conservation value of the areas being considered. For each area, the information supporting the decision to identify that area for further consideration is outlined below.

***Areas Identified from Rangewide Review***

**Figure 5-2** show the areas that were identified through the rangewide review, as well as the designated SFAs from the 2015 planning process.

**Figure 5-2: Rangewide Review Areas (light orange) and SFAs (light green areas)**

The following list summarizes the areas identified through the rangewide review, organized by state. Bullets that are bolded indicated the most influential considerations in identifying areas for further consideration.

*Colorado*

- North Park
  - Most of the area is PHMA
  - High relative abundance
  - Entire area is modeled breeding habitats
  - High habitat connectivity for genetics.

  - Climate change models predict 5-25% sagebrush cover into the future, with moderate increase in sagebrush biomass.
  - Area anchored by NWR
  - **Few current threats**
  - **Appears to be an isolated population on the "edge" of the range**
- WY/CO border
  - Areas within PHMA in CO, and mostly PHMA in WY
  - High relative abundance
  - Modeled breeding habitats cover entire area in CO, most of the area in WY
  - Many genetic nodes, including an important node in CO. **Genetic movement between these areas suggest extensive population movements**
  - **High habitat connectivity for genetics within and between the areas**
  - Climate change models predict 5-25% sagebrush cover into the future and a mix of mostly increasing sagebrush biomass

*Montana/Dakotas*

- Area bordering ND
  - GHMA in MT, PHMA in ND
  - High relative abundance
  - Several connected genetic nodes
  - **May provide the only refuge for the ND birds; important for that genetic subpopulation**
  - Future sagebrush cover models suggest 0-4%, but that is not atypical for this area.
  - Future sagebrush biomass to increase
- Area bordering WY
  - RHMA in MT, mostly GHMA in WY
  - High relative abundance
  - lots of modeled breeding habitat
  - contains an important genetic node (maybe hub?); **may provide a connection with the GRSG in the DKs, and SE MT.**
  - Future sagebrush cover models suggest 0-4%, but that is not atypical for this area
  - Future sagebrush biomass to increase in PHMA and RHMA, but decrease in GHMA

*Nevada/California*

- Central Nevada (Areas that are currently PHMA and high abundance only)
  - **High relative abundance**
  - High modeled breeding habitats
  - **High connectivity within the PHMA areas**
  - Two key genetic nodes and many other genetic nodes
  - Overlaps two genetic subpopulations
  - Climate change models predict 5-25% sagebrush cover, but decreasing biomass in most areas
- East-central CA
  - Area is PHMA
  - **High relative abundance – likely the greatest number of males in CA**

  - Breeding habitat mimics relative abundance
  - **Few genetic nodes but those indicate connection to the north (OR) and SE into NV**
  - Medium connectivity (combined models)
  - Climate change models predict reduction in sagebrush biomass, but sagebrush cover at 5-25%

*Utah*

- NW UT
  - Area is PHMA
  - Some areas of high relative abundance – should consider additional protections in those areas
  - Breeding habitat model are in the same area of high relative abundance
  - Habitat connectivity for genetic is high throughout the area
  - **Area has two key genetic nodes and several others. The key nodes are connected with populations in ID and eastern NV, while other nodes are connected with southern UT populations and NE UT**
  - **3 subpopulations overlap this area – may indicate value for maintaining connectivity.**
  - Climate change models predict 5-25% sagebrush cover into the future and increasing sagebrush biomass
  - **Looking at wintering habitat – breeding habitat is on private ground**
- Parker Mountain
  - Area is currently PHMA
  - High relative abundance
  - Area is modeled breeding habitat
  - **Contains one key genetic node and a few other nodes – appears to be connected both to the north and the west**
  - Habitat connectivity high within the outlined area
  - Climate change models predict 5-25% sagebrush cover and increase in sagebrush biomass.
  - **Likely has the largest population of GRSG in the subpopulation**

*Wyoming*

- WY/CO border
  - Areas within PHMA in CO, and mostly PHMA in WY, but some GHMA along the western edge of the PHMA.
  - High relative abundance
  - Modeled breeding habitats cover entire area in CO, most of the area in WY
  - Many genetic nodes, including an important node in CO. **Genetic movement between these areas suggest extensive population movements**
  - **High habitat connectivity for genetics within and between the areas**
  - Climate change models predict 5-25% sagebrush cover and a mix of mostly increasing sagebrush biomass, but some areas of decreases.
- WY Pinedale and Atlantic City area
  - Most of the area is PHMA, some in original SFA
  - **High relative abundance – likely the largest number of GRSG in the entire range**
  - Entire area modeled breeding habitat

  - Many genetic nodes including two important nodes
  - High habitat genetic connectivity
  - Climate change models project 5-25% sagebrush cover into the future and an increase in sagebrush biomass.
  - **Area of high risk for continued development**
  - Northern end of Green River watershed is mostly private land.
- Area bordering WY – RHMA in MT, mostly GHMA in WY – Note this area overlaps with the area identified in MT
  - High relative abundance,
  - lots of modeled breeding habitat
  - contains an important genetic node (maybe hub?); **may provide a connection with the GRSG in the DKs, and SE MT.**
  - Future sagebrush cover models suggest 0-4%, but that is not atypical for this area
  - Future sagebrush biomass to increase in PHMA and RHMA, but decrease in GHMA

The rangewide review did not identify any areas in Idaho or Oregon outside the SFAs.

### 5.4.4 State Specific Evaluations

The results of the rangewide review were shared with staff from each BLM State Office, with discussions reviewing the rationale behind the identification. Offices reviewed the areas from the rangewide evaluation, the SFAs, and any other areas the local staff may be familiar with as having characteristics that could meet the importance criteria. Based on the combined evaluations, areas outside the SFAs or rangewide evaluation areas were determined to not meet importance criteria, as the data indicated they lacked the characteristics that made them more than locally significant. The remainder of the areas were evaluated in detail.

Through the rangewide and state specific evaluations, no areas met the importance criteria related to safety/public welfare concerns or posing a significant threat. As such, those criteria will not be discussed further in this evaluation.

The following sections summary the evaluation efforts associated with state specific evaluations, organized by state (alphabetically).

#### *Colorado*

BLM Colorado considered the previous ACEC evaluation from the 2015 FEIS and discussed whether there was new information or resource values making any of the populations and subpopulations (Colorado Management Zones) eligible for ACEC nomination. BLM Colorado also considered two areas highlighted by the range-wide planning team. The two highlighted areas were the North Great Divide and Fly Creek portions of the Northwest Colorado GRSG population and the North Park GRSG population. The North Great Divide and Fly Creek areas have contiguous habitat connecting north into the Wyoming Basin in Wyoming. BLM Colorado and BLM Wyoming coordinated during review of these areas, but separate determinations were made by the respective interdisciplinary teams.

BLM Colorado also coordinated with BLM Utah regarding the functional connectivity on the cross-border Blue Mountain habitat area. Row et al. (2018) demonstrates high connectivity between GRSG populations in CO and UT which is supported by bird collar location data (unpublished CPW data). However, Row et al. (2018) does not model a known connectivity area in the Diamond Mountain or Cold Springs Mountain

areas to the north. For these reasons, the Blue Mountain connectivity area was not considered to be more than locally significant and was not carried forward for additional evaluation.

*North Great Divide and Fly Creek*

North Great Divide and Fly Creek are situated within the northeast extent of the Northwest Colorado GRSG population. These areas include high quality sagebrush with relatively low disturbance except for the Highway 13 designated corridor, which bisects the areas. North Great Divide and Fly Creek provide breeding, nesting, brood-rearing, and winter habitat for GRSG and include several active leks.

The North Great Divide and Fly Creek areas were highlighted by the range wide planning team because of the genetic and functional genetic connectivity between the Northwest Colorado population and the Wyoming Basin population (Cross et al. 2018, Row et al. 2018) and high likelihood of lek persistence (Wann et al. 2022). The area contains many genetic nodes, or leks that are important to maintaining gene flow in a population, including an important node in Great Divide (Cross et al. 2018). Important nodes maintain gene flow between populations in the species range (Cross et al. 2018). Genetic movement between these areas suggest that the habitat has previously supported population movements within and between populations. Row et al. (2018) and Cross et al. (2023) modeled high habitat connectivity for genetics between these areas and the Wyoming Basin.

Genetic and functional connectivity between Northwest Colorado and the Wyoming Basin are modeled in other portions of the Northwest Colorado population as well. Row et al. (2018) modeled connectivity areas between Northwest Colorado and the Wyoming Basin occurring in the Sand Wash/Powder Wash area and in the Cold Springs area. Sand Wash also contains a genetically important node (Cross et al. 2018). Strong population genetics between the Northwest Colorado and Wyoming Basin do not indicate that there is a risk of the populations becoming genetically distinct (Oyler-McCance et al. 2022).

The North Great Divide and Fly Creek areas provide valuable GRSG habitat that is well-connected to the Wyoming Basin, but several other areas in the Northwest Colorado Population also demonstrate habitat and genetic connectivity. For this reason, BLM Colorado determined that the area does not have more than local significance and is not recommended to move forward as a potential ACEC.

*North Park*

North Park is a large basin bounded by Medicine Bow Range on the east and by the Park Range on the west. The Rabbit Ears Range separates North Park from Middle Park to the south. BLM Colorado discussed all areas of North Park for values important to GRSG. North Park provides well connected lekking, nesting, brood-rearing, and winter habitat for GRSG. A large majority of seasonal habitats for GRSG in North Park are suitable (North Park HAF Site-Scale Report, 2022). North Park has genetic connections to the Middle Park population to the south and a narrow connection north to the Wyoming Basin but is otherwise disjunct from the Northwest Colorado population (Cross et al. 2018; Row et al. 2018; Cross et al. 2023). The BLM Kremmling Field Office is implementing treatments to increase the value of GRSG habitat, particularly the extent of available mesic habitats.

*Case Flats*

BLM Colorado highlighted the Case Flats area, which is a known winter concentration area. CPW staff discovered the Case Flats winter concentration area while conducting GRSG research in the North Park Basin. For unknown reasons, GRSG from the entire basin congregate in large numbers at this location each year during late winter/early spring prior to lekking (CPW Wildlife Mitigation Plan, 2021). The area has been highlighted in conversations with Colorado Parks and Wildlife and outlined as a resource for concern in the

CPW Wildlife Mitigation Plan with the local operator but has not been otherwise recognized for specific management by the BLM.

Case Flats includes unitized fluid mineral leases and is in proximity to active oil & gas development, Highway 14, and ex-urban development. The likelihood of lease development is high, which could have direct and indirect impacts on GRSG and winter concentration in the area.

Due to the unique nature of the winter concentration area, population-wide importance, and likelihood of lease development, BLM Colorado evaluated the area as a potential ACEC. This nominated area meets relevance and importance criteria for wildlife and a natural process or system as presented in the table below.

**Colorado GRSG ACEC Importance Evaluation:**
**Case Flats Proposed ACEC**

| Importance Consideration | Yes/No | Rationale for Determination |
|---|---|---|
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | The area contains unique GRSG winter concentration areas, providing special worth to the North Park GRSG population. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | Case Flats provides a unique winter concentration area for a BLM sensitive status species. The habitat provides for unique GRSG congregating behavior which may be irreplaceable because it is not known why GRSG concentrate in this area and may not be replicable in other habitats. The area contains several unitized oil and gas leases and could be adversely impacted by development. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The area is within Greater Sage-Grouse Priority Habitat Management Areas which have been at the focus of national planning efforts, and state and local land use plans. |
| **Other Items** | | |
| Boundaries | South of Walden, bound by Highways 14 and 125, Bordering Arapaho Wildlife Refuge. | |
| **Conclusion** | | |
| This internally nominated area meets both relevance and importance criteria for a fish and wildlife resource. Because Case Flats meets relevance and importance as a fish and wildlife resource, it is recommended to move forward for analysis in at least one alternative of the current range-wide planning effort. | | |

| Colorado GRSG ACEC Importance Evaluation: North Great Divide/Fly Creek Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | The areas are modeled as having high genetic and functional genetic connectivity between the Northwest Colorado population and the Wyoming Basin (Cross et al. 2018; Row et al. 2018; Cross et al. 2023) and high likelihood of lek persistence (Wann et al. 2022). The area contains many genetic nodes, including an important node in Great Divide (Cross et al. 2018).<br><br>However, genetic and functional connectivity between Northwest Colorado and the Wyoming Basin are modeled in other portions of the Northwest Colorado population as well. Row et al. (2018) modeled connectivity areas between Northwest Colorado and the Wyoming Basin occurring in the Sand Wash/Powder Wash area and in the Cold Springs area. Sand Wash also contains a genetically important node (Cross et al. 2018). Strong population genetics between the Northwest Colorado and Wyoming Basin do not indicate that there is a risk of them becoming genetically distinct (Oyler-McCance et al. 2022).<br>Because there are multiple points of connection cross-state between the populations and, this area is not more than locally significant. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | Because there are multiple points of connection cross-state between the populations, this area is not unique, rare, or irreplaceable. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The area is within Greater Sage-Grouse Priority Habitat Management Areas which have been at the focus of national planning efforts, and state and local land use plans. However, this area contains only a small portion of the PHMA within Colorado and of the Western US and the area has not been specifically addressed as a national priority. |
| **Other Items** | | |
| Boundaries | Great Divide is bound by the Little Snake River to the west and Highway 13 to the east, and the Wyoming border to the north and Highway 40 to the south. Fly Creek is bound by the Elkhead Mountains to the south and connected sagebrush habitat moving north into Wyoming. Highway 13 bisects the areas. | |
| **Conclusion** | | |
| The nominated area meets relevance criteria but does not meet importance criteria. Therefore, it is not recommended that the area be considered a potential ACEC for GRSG for analysis in the current range-wide planning effort. | | |

***Idaho***

The ACEC evaluation in Idaho had several unique aspects. Even though the rangewide evaluation did not identify any additional areas beyond the SFAs, the rangewide evaluation did include areas within the 2015 SFAs. The ACEC evaluation process at the Idaho State Office overlapped with the mapping effort of Idaho's three-tiered system of habitat management areas. . At the state level, the Idaho State Office evaluated the following local datasets to help identify and delineate areas that meet the importance criteria:

- Local scale data: Idaho BLM developed a Landscape Importance Model (LIM) in 2015 to prioritize areas of Low to Highest Importance related to GRSG. The LIM model incorporates 3 orthogonal datasets related to GRSG: State level BBD, State level Lek Kernel Density, and Lek Persistence (related to amount of sagebrush within a 5-km window). These datasets are recalculated every year. Individual datasets are scored 1-10 and the resulting combined dataset is Categorized 1 (lowest) to 5 (Highest). For ACEC delineation we used the 2022 LIM – moderate to highest values (3,4,5) to extract our base ACEC polygon, focusing on the top two values.
- Local scale data: Idaho contains a significant proportion of the estimated GRSG population in the Great Basin (excluding WY); therefore, the current (2022) state-level BBD data was used, with the top 25$^{th}$ percentile of the population selected as indicating areas that had high levels of importance. These leks were then buffered 10K and the resulting polygon was added to the ACEC base.
- Regional scale data: Recently published regional GRSG data (BBD, Lek Persistence, and Priority Genetic Pathways) was used to inform regional importance. These data were combined (i.e. 25% and 50% BBD; medium or high lek persistence; >90 or >95% Priority Genetic Pathways) to provide an overall score of 0-6, from which a subset was included only using values 4 – 6. The resulting polygon was added to the ACEC base.

In some areas, moderate LIM values or top 50$^{th}$ percentile of the population (from the BBD data) were added to polygons in order to connect the delineated areas identified above.

The following table summarizes the areas that were identified through the state-level modeling effort, as well as the recommendations related to whether the area met the importance criteria.

**Idaho GRSG ACEC Evaluation: Importance Criteria**

| Identifier | Geographic Reference | Importance | Recommendation |
|---|---|---|---|
| N/A | Whiskey Mountain | N/A. SW Idaho area. Poor habitat on OR side, per discussion with Oregon SO; Medusa, cheatgrass threats. Not in 25% BBD on ID or OR side. | Remove. Not recommended for potential ACEC. |
| N/A | South Mountain | N/A. Poor habitat on OR side per discussion with Oregon SO; small proportion high genetic connectivity on east side of polygon; Medusahead, cheatgrass threats. Not in 25% BBD on ID or OR side. Boulder Creek ACEC occupies high value regional genetic pathway. | Remove. Not recommended for potential ACEC. |
| I | Triangle | Good habitat; high Resistance and Resilience; BBD 25%, and 50%; High value in Combined model. Genetic hub and keystone. Adjoins Castle Creek Canyon Lands With Wilderness Characteristics. | Keep. Recommended for potential ACEC. |

| Idaho GRSG ACEC Evaluation: Importance Criteria | | | |
|---|---|---|---|
| **Identifier** | **Geographic Reference** | **Importance** | **Recommendation** |
| 2 | Owyhee-Shoshone Basin | Significant representation of the 25% BBD in Idaho (i.e., contains 28 of the 77 leks comprising the 25% BBD in Idaho); Adjacent to NV Priority and Priority+ HMA; Significant contribution value from new regional datasets; High amount of genetic connections/nodes; Also represents a large area of contiguous BLM administered lands. | Keep. Recommended for potential ACEC. |
| 3 | Camas-Laidlaw | Significant representation of the 25% BBD in Idaho (i.e., contains 9 of the 77 leks comprising the 25% BBD in Idaho); Several genetic nodes constituting linkage to NV and UT; High value priority genetic pathways; In the top 25% of the MZ IV GRSG population; Large area of contiguous BLM administered lands; Adjacent to a major regional genetic node. | Keep. Recommended for potential ACEC. |
| 4 | Big Desert | Significant representation of the 25% BBD in Idaho (i.e., contains 6 of the 77 leks comprising the 25% BBD in Idaho); Adjacent to a major regional genetic node; contains several genetic nodes with Sand Creek/Upper Snake, Mountain Valles/Salmon, Craters Monument, and Utah. | Keep. Recommended for potential ACEC. |
| 5 | Antelope Valley | Smaller, distinct area of 25% BBD; Relatively low anthropogenic disturbance; | Keep. Recommended for potential ACEC. |
| 6 | Mountain Valley Complex | 25-50% BBD; Middle section has large existing ACEC (Donkey Hills); relatively low threats; High potential as a refugia for future climate change effects; relatively low anthropogenic disturbance; NW polygon, per Arkle et al, shows a lek cluster with increasing Lambda (+ pop growth). | Keep. Recommended for potential ACEC. |
| 7 | Upper Snake Complex | Significant representation of the 25% BBD in Idaho (i.e., contains 18 of the 77 leks comprising the 25% BBD in Idaho); Contains a major regional genetic node; contains several genetic nodes with the Mountain Valleys, Snake River Plain and Montana. Good habitat/ high Resistance and Resilience. Captures Table Butte, a known important GRSG winter concentration area; Area provides significant movement connectivity corridor (based on telemetry) with the proposed Big Desert ACEC. | Keep. Recommended for potential ACEC. |
| N/A | Bear Lake | BLM lands not in 25% BBD; No adjacency with ACEC proposals with WY or UT. No important genetic nodes. | Remove. Not recommended for potential ACEC. |

***Montana/Dakotas***

The Montana/Dakotas State Office considered new information or resource values making any of the habitat areas eligible for ACEC nomination. Montana/Dakotas considered three areas highlighted by the range-wide planning team based on a review of new science and an evaluation of Sagebrush Focal Areas from the 2015 plans. The three highlighted areas are the South-Valley-Phillips (Sagebrush Focal Area), Cedar Creek and Carter-Crook proposed ACECs. Evaluations of those proposals are evaluated below.

Nominations were evaluated for habitat supporting 25-50% relative abundance and associated seasonal habitats, high lek persistence, key genetic nodes and/or concentration of genetic nodes and existing or potential land uses that would be a concern for persistence of GRSG.

While the scoping period closed on February 8, 2022, on July 21, 2023, BLM received an external ACEC submission for consideration of four additional ACECs in Montana. These nominations included expansion of two existing ACECs, the Powderville Expansion ACEC and the Frenchman Breaks Expansion ACEC. Two new areas were nominated, including the Musselshell Breaks ACEC and the North of Charles M. Russel National Wildlife Refuge (CMR) ACEC. The nominations contained potential relevant and important values for these four proposed ACECs and suggestions for expanded, existing ACECs.

In addition to values related specifically to GRSG, the nominations contained potentially relevant values for grassland bird/mid-grass prairie habitat, ecological connectivity, intactness, paleontological resources and climate stability that are separate from purpose and need of this planning effort focused on amending GRGS management. Other potentially relevant and important values such as paleontology, intactness or grasslands are outside the scope of this planning effort and would need to be considered in a subsequent ACEC evaluation.

The BLM did consider the four proposed ACECs and focused on the relevance and importance values specific to GRSG. As for the internal nominations we considered multiple lines of evidence to determine if the values, GRSG habitat in this instance – had "more than local significance and special worth, consequence, meaning, distinctiveness, or cause for concern." Those values are present primarily in portions of the proposed North of the CMR ACEC which overlaps the internally developed South Valley-Phillips proposed ACEC, and therefore this area is evaluated below. The Frenchman Breaks Expansion ACEC nomination presents important connectivity values for GRSG, that are locally unique. However, the density of the GRSG population, genetic uniqueness, lek persistence, sagebrush conservation design, and other lines of evidence to identify "substantial significance" were not determined by the BLM to rise to the level of importance needed to move forward for evaluation in the alternatives of this RMP amendment. However, see other HMA actions such as PHMA and CHMA that are implemented to conserve GRSG values for this area. The Musselshell Breaks ACEC and Powderville Expansion ACEC nominations fall primarily outside of GRSG PHMA, with some overlap with GHMA. The BLM determined that while these areas are adjacent to priority GRSG habitat they did not meet the relevance criteria for GRSG (the nominations are primarily for other values) and would not move forward for evaluation in the alternatives of this RMP amendment.

| Montana GRSG ACEC Importance Evaluation: Cedar Creek Anticline GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | Greater sage-grouse are distributed throughout the western United States. The portion of the distribution in Montana, Wyoming, North Dakota, South Dakota, Alberta, and Saskatchewan are designated as Management Zone I (Stiver et al. 2006). Management zones are delineations of greater sage-grouse populations and subpopulations within floristic zones with similar management issues. Within Management Zone I Montana, Wyoming, North Dakota, and South Dakota have designated core areas, and in 2015 BLM designated Priority, General, and Restoration Habitats.<br><br>Since the 2015 BLM plans, new science addressing GRSG density and habitats has provided additional information about the locations of areas that may contain special worth, consequence, or distinctiveness. While higher density areas and genetic connectivity are considered important to greater sage-grouse conservation, areas with similar characteristics to the Cedar Creek area are dispersed throughout the region and are not significantly unique to a specific region or planning unit. In addition, greater sage-grouse habitat in the Cedar Creek area is owned by a number of different entities and habitat on BLM-administered lands is not distinct from habitat managed by other ownerships. While a portion of the area contains high relative abundance (Doherty et al. 2016), the size of the area is not distinct compared to other areas. Most leks have seen decreased counts since the 2010-14 period used to calculate relative density (e.g., FA-38: 34 males in 2010, now 0; FA-004A: 14 males in 2010 to 9 now; FA-013: 24 in 2011 to 6 now.<br><br>In addition, this area is close to the small fringe population in North Dakota, However the Cedar Creek Anticline represents only a small portion of the lager population as defined by recent genetic work (Oyler-McCance 2022). Therefore, this area is not particularly distinct or critical to maintaining unique genetics for the SE Montana and Dakotas area relative to other PHMA.<br><br>The Cedar Creek Anticline is a unitized oil and gas field that is predominantly leased, mostly developed, with a high level of anthropogenic activity. Additional substantial activity or development relative to current level is unlikely. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | The area is not particularly fragile or sensitive to change as compared to other sites in the Montana-Dakotas region. The area does not contain key or cluster of genetic nodes and represents a fringe population with genetic nodes as terminal sites (Cross et al 2018). Ongoing disturbance is high, including a high density of O&G wells, and is predominantly already leased. The area is found to have only a small area of core sagebrush as identified in Doherty (2022) Sagebrush Conservation Design and has only a small proportion as core relative to other areas in the region. Similarly, the MT GRSG Conservation Program's Habitat Quantification Tool identifies much of the area as low habitat value, with only a small portion providing high modeled habitat quality values. |

| Montana GRSG ACEC Importance Evaluation: Cedar Creek Anticline GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The BLM 2015, 2019, and current initiatives to conserve, enhance, and restore greater sage-grouse habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that finding, the USFWS concluded that greater sage grouse was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species.<br><br>Without multiple lines of evidence, including reasonably foreseeable development, valid existing rights, land ownership, crucial GRSG habitat characteristics from multiple science-based models, on-the-ground conditions/evidence this area does not have protection requirements beyond the standard approaches to implemented FLPMA and national priorities. |
| **Other Items** | | |
| Boundaries | No proposed changes to the boundary. | |
| Additional Notes | This area is a unitized oil and gas field, largely leased and developed, and with limited ability for the BLM to enhance GRSG habitat in the short term. The delineation as a RHMA is reflective of these challenges, the focus here is on longer-term objectives of the BLM to manage the area to maintain GRSG habitat and conduct restoration to provide for higher quality habitat (to support past bird density) in the future. | |
| **Conclusion** | | |
| Due to current habitat conditions and limited evidence for the Cedar Creek Anticline to qualify as more distinct or critical than other HMAs, the BLM MT-Dak does not find the Cedar Creek anticline to meet relevance and importance for an ACEC nomination. While the area is part of a larger population with ND (and beyond) there are other areas within the population that are more likely to maintain any local genetics and be a source population for North Dakota. We do not recommend moving this area forward to identify and consider unique management. | | |

| Montana GRSG ACEC Importance Evaluation: Carter Crook GRSG Connectivity Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | Greater sage-grouse are distributed throughout the western United States. The portion of the distribution in Montana, Wyoming, North Dakota, South Dakota, Alberta, and Saskatchewan are designated as Management Zone I (Stiver et al. 2006). Management zones are delineations of greater sage-grouse populations and subpopulations within floristic zones with similar management issues. Within Management Zone I Montana, Wyoming, North Dakota, and South Dakota have designated core areas, and in 2015 BLM designated Priority, General, and Restoration Habitats.<br><br>Since the 2015 BLM plans, new science addressing GRSG density and habitats has provided additional information about the locations of areas that may contain special worth, consequence, or distinctiveness. A portion of the area contains high relative abundance (Doherty et al. 2016), a factor considered important to greater sage-grouse conservation. However these higher density areas in the Carter-Crook area are similar to other areas dispersed throughout the region and are not significantly unique to this unit. Greater sage-grouse habitat in the Carter-Crook area is owned by a number of different entities and habitat on BLM-administered lands is not distinct from habitat managed by other ownerships.<br><br>While a limited portion of the Carter-Crook boundary contains high relative abundance (Doherty et al. 2016), the area has evidence it is a consequential genetic connection. Chiefly, it encompasses a keystone genetic node (Cross et al. 2018), and a potential corridor where genetic connections between the northern and southern portions of management Zone 1 are constricted (Row et al 2018, Cross et al. 2023). This area of genetic connectivity may provide the most likely link between GRSG in Montana-Dakotas and Wyoming. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The area is not particularly fragile or sensitive to change as compared to other sites in the Montana-Dakotas region. However, due to the key genetic node (Cross et al 2018), and constricted habitat, this area is the primary connectivity link between populations in northern portions of MZ1 with populations throughout the rest of the species' range. As such, loss of this area could isolate populations in the NE from populations in the rest of the range, which could have relatively dramatic impacts on populations in MT and the Dakotas.<br><br>Ongoing disturbance in isolated portions nearby (see boundary discussion below) the area are high, primarily in a unitized oil and gas field in Wyoming and on Bentonite producing areas in Montana. Much of the area is core sagebrush as identified in Doherty (2022) Sagebrush Conservation Design with proportionally large core relative to other areas in the region. Similarly, the MT GRSG Conservation Program's Habitat Quantification Tool identifies much of the area in Montana as higher habitat value, with only a small portion providing low modeled habitat quality values due to development. |

| Montana GRSG ACEC Importance Evaluation: Carter Crook GRSG Connectivity Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The BLM 2015, 2019, and current initiatives to conserve, enhance, and restore greater sage-grouse habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that finding, the USFWS concluded that greater sage grouse was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species, therefore, areas that meet national priority concerns or specific FLPMA mandates require multiple lines of evidence supporting more than local priorities and conservation value.<br><br>The proposed Carter-Crook ACEC includes multiple lines of evidence, identifying the area as highly valuable GRSG habitat, especially for genetic connectivity. Therefore, this area likely provides a key connection between GRSG populations in multiple states. In addition, conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005). |
| **Other Items** | | |
| Boundaries | The boundary for this ACEC began by considering the HQ proposal. To better reflect local information and concentrate on where the most likely, high-value, GRSG corridor falls, the boundaries were adjusted.<br><br>In Montana this focused on removing active areas of bentonite development and adjusting the boundary to the north to capture key GRSG leks that would "supply" birds that would migrate through the corridor to Wyoming leks. In addition, the ID Team considered GRSG relative density models, the MT HCP Habitat Quantification Tool, Sagebrush Conservation Design Core Areas, and other models along with on-the-ground experiences and conditions. Adjustments to the WY portion of the ACEC included analysis of cheatgrass and other habitat conditions (wee Wyoming analysis). To avoid inconsistencies across jurisdictional boundaries, the MT-Dak and WY BLM State Offices met to edge map the revised boundaries produced by each state in cooperation with Cooperating Agencies and Field Offices.<br><br>The ACEC boundary reflects an area focused on the area with the highest likelihood of facilitating long-distance (e.g., lek moving) GRSG dispersal and the and high-quality sagebrush habitat supporting leks in the area of the corridor. | |
| Additional Notes | Part of this original area is identified in an area that is one of the larger bentonite producing areas in the US. There are active claims, proposed additional projects, and a large amount of existing proven claims. | |
| **Conclusion** | | |
| Due to meeting R&I this area, with a revised boundary from original proposal, should move forward to be considered as a potential ACEC in at least one alternative. This will allow an analysis to consider if special management is needed to preserve the qualities of the area (i.e., beyond PHMA management actions). | | |

| Montana GRSG ACEC Importance Evaluation: South Valley Phillips GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | Greater sage-grouse are distributed throughout the western United States. The portion of the distribution in Montana, Wyoming, North Dakota, South Dakota, Alberta, and Saskatchewan are designated as Management Zone I (Stiver et al. 2006). Management zones are delineations of greater sage-grouse populations and subpopulations within floristic zones with similar management issues. Within Management Zone I Montana, Wyoming, North Dakota, and South Dakota have designated core areas, and in 2015 BLM designated Priority, General, and Restoration Habitats.<br><br>Since the 2015 BLM plans, new science addressing GRSG density and habitats has provided additional information about the locations areas that may contain special worth, consequence, or distinctiveness. Higher density areas and genetic connectivity are considered important to greater sage-grouse conservation, and small areas or lek clusters with limited connectivity are dispersed throughout the region.<br><br>However, the greater sage-grouse habitat in the South-Valley Phillips area is owned predominantly by BLM and the state of Montana. The majority of the area contains high relative abundance, representing the largest high-density area in Management Zone I (Doherty et al. 2016). There are well connected genetic nodes (Cross et al. 2018) within the area, and to surrounding areas. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The area is not particularly fragile or sensitive to change as compared to other sites in the Montana-Dakotas region. Ongoing disturbance in the area is limited to a few Bentonite mined area. The area is mostly core sagebrush as identified in Doherty (2022) Sagebrush Conservation Design with proportionally large core relative to other areas in the region. Similarly, the MT GRSG Conservation Program's Habitat Quantification Tool identifies much of the area as higher habitat value.<br><br>Furthermore, this area contains the wintering area for a unique GRSG population that exhibits long distance migration in the spring and fall (Newton et al. 2017, Tack et al. 2019) |

| Montana GRSG ACEC Importance Evaluation: South Valley Phillips GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The BLM 2015, 2019, and current initiatives to conserve, enhance, and restore greater sage-grouse habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that finding, the USFWS concluded that greater sage grouse was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species.<br><br>With multiple lines of evidence, including land ownership, highly valuable GRSG habitat characteristics from multiple science based models, and supporting on-the-ground conditions and evidence, this area may provide habitat key to meeting national GRSG conservation goals. |
| **Other Items** | | |
| Boundaries | The boundary for this ACEC began by considering the SFA in the area from the 2015 GRSG Planning Effort. To better reflect new information and GRSG habitat with the highest conservation value, the boundaries were adjusted. For example, isolated BLM parcels that fall in predominantly agricultural areas and lower value GRSG habitat were removed (e.g., areas south of the Missouri River). In addition, the ID Team considered GRSG relative density models, the MT HCP Habitat Quantification Tool, Sagebrush Conservation Design Core Areas, and other models along with on-the-ground experiences and conditions. Finally, a portion of this area is already designated as the Mountain Plover ACEC. To avoid duplicative, conflicting, or overlapping management, this existing ACEC was removed from the boundary. The ACEC boundary reflects an area focused on the highest density of GRSG, contiguous BLM lands, and high-quality sagebrush habitat. | |
| Additional Notes | None. | |
| **Conclusion** | | |
| Due to meeting R&I this area should move forward to be considered as a potential ACEC in at least one alternative. This will allow an analysis to consider if special management is needed to preserve the qualities of the area (i.e., beyond PHMA management actions). | | |

***Nevada/California***

NV-BLM received areas proposed for ACEC designation through the rangewide preliminary evaluation and from the Nevada Department of Wildlife. The draft polygons were reviewed and refined in coordination with preliminary input from federal, state, and county Cooperating Agencies. This initial review was conducted with the stated objective to the cooperating agencies of erring on the side of being inclusive, as opposed to removing areas, prior to public review of the DEIS. The BLM will update the ACEC evaluations, including potentially revising potential ACEC boundaries, based on input from the Cooperating Agencies, public, and other new information (e.g., Coates et al., 2024 – in review) and incorporating the updated areas in the Final EIS. The relevance and importance determinations were informed by combined evaluation of both State- and Regional-level information/priority to identify ACEC spatial extent.

The following datasets were used to help delineate the draft ACECs.

- Local scale data: Draft NV/CA Habitat Management Area Map (USGS in preparation) – GRSG habitat mapping in Nevada and northeastern California: updates to abundance and space use indices and an example of combining space use, habitat selection, and survival to help inform habitat management areas
- Regional scale data: Recently published regional GRSG data (BBD, Lek Persistence, Priority Genetic Pathways, genetic nodes, R&R, probability of breeding habitat, TAWS ) was used to inform regional importance.

**Nevada GRSG ACEC Evaluation: Importance Criteria**

| Identifier | Geographic Reference | Importance | Recommendation |
|---|---|---|---|
| 1 | Warm Springs | Greater than 60% core habitat, remainder is growth; low to medium Resistance and Resilience; ~50% of area in 50% to 25% BBD; 1 neighborhood cluster with declining population (<0.95) and active pop warning; About 90% PHMA with some PHMA+; High to Medium lek persistence; Includes Warm Springs LWC; Partially includes and adjoins East Fork High Rock Canyon Wilderness; adjoins North Black Rock Range Wilderness; Low genetic connectivity; no nodes. | Recommended for inclusion in draft EIS as a potential ACEC. Solid habitat that includes LWC and Wilderness. Population center but warning triggered for NC and population is in decline. |
| 2 | Montana Mountains | Strong representation of the 25% BBD in NV; Connects with OR population; High lek persistence; intersects three neighborhood clusters, primary neighborhood cluster shows population growth (lambda > 1.03), adjacent NCs nearly stable to declining (lambda = 0.99-0.95); Low R&R; mostly Growth area for sagebrush; about 10% of area includes Disaster Peak WSA. | Recommended for inclusion in draft EIS as a potential ACEC. Source population likely supporting connection between OR/NV and ID/NV populations. Includes Disaster Peak WSA. |
| 3 | Owyhee West | Supports two separate population centers; provides regionally important genetic connectivity with eastern NV and ID to OR populations; Several genetic nodes including a Keystone node; Large area of contiguous BLM administered lands; includes North Fork Little Humboldt River and Little Humboldt River WSA; High value area for LCT | Recommended for inclusion in draft EIS as a potential ACEC. Regionally important genetic connectivity, includes two WSA, and provides important LCT habitat. |

| Nevada GRSG ACEC Evaluation: Importance Criteria | | | |
|---|---|---|---|
| **Identifier** | **Geographic Reference** | **Importance** | **Recommendation** |
| 4 | Owyhee East | Concentration of active leks and high lek persistence; near stable to growing population trend; provides regionally important genetic connectivity between ID and northeast NV to the remainder of NV populations; five genetic nodes; ~ 40% of the area is Core sagebrush and ~ 50% sagebrush Growth; Medium R&R | Recommended for inclusion in draft EIS as a potential ACEC. Regionally important genetic connectivity, supports population centers and large tract of Core sagebrush. |
| 5 | North Fork Oneil | Adjoins ID proposed ACEC; provides regionally important genetic connectivity between ID and NV; population center with stable to growing trend; large area of contiguous BLM administered lands that is mostly Core and Growth sagebrush, PHMA and PHMA +; Medium R&R; includes Bad Lands WSA; Bisected by Proposed Designated Utility Corridor (possibly split ACEC into two separated by corridor). | Recommended for inclusion in draft EIS as a potential ACEC. |
| 6 | South Fork Dixie Flats | Stepping-stone population between northern and southern NV; medium to high regional genetic connectivity; comprised of 25% and 50% BBD; high to medium lek persistence; about 40% of area in checkerboard private ownership or BLM administration; important high elevation brood rearing habitat (PHMA+); population declining (lambda = 0.97-0.99) but no warnings; L-M R&R; adjacent to Cedar Ridge and Red Spring WSA; proposed designated corridor bisects northeast corner. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 7 | Butte Long Valley | Provides regionally important genetic connectivity between northern and southeastern NV; adjacent to a keystone lek; supports three population centers; supports 5 NCs – 1 with increasing population trend and remaining 4 declining; H-M lek persistence; proposed designated utility corridor bisects southeastern quarter; adjacent to Goshute Canyon and Bristlecone Wilderness. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 8 | Little Butte Long Valley | Includes keystone genetic node; medium genetic connectivity; mostly 75% BBD; bisected by Hwy 93; 75% of area in proposed designated utility corridor. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 9 | Eureka North and South | High genetic connectivity between northern and southern NV; high elevation brood-rearing habitat; ~30% of northern area in PHMA+; 6 miles east of genetic node that is both a keystone and hub; northern area bisected by large proposed designated corridor and HWY 50 runs between north and south; supports three population centers across the entire area. | Recommended for inclusion in draft EIS as a potential ACEC. |

| Nevada GRSG ACEC Evaluation: Importance Criteria | | | |
|---|---|---|---|
| **Identifier** | **Geographic Reference** | **Importance** | **Recommendation** |
| 10 | Grass-Kobeh Valley | Regionally important genetic connectivity between north and central NV; 4 genetic nodes; supports three 25% population centers and four 50% population centers; about 20% of area is PHMA+; H-M lek persistence; includes 5 NCs – 2 NCs have positive growth trend, remaining in decline; 2 NCs (about 15% of area) with active warnings; bounded on three sides by HWYs 395 (western side), 50 (south side), and 278 (eastern side); eastern side includes large proposed designated energy corridor; includes Simpson Park and Roberts Mountain WSA. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 11 | Monitor Valley | Supports three population centers (25-50% BBD) that are important to the southern portion of range in NV; provides genetic connectivity to central and northern NV; includes two genetic nodes; primarily core and growth sagebrush and PHMA; bordered by and supporting USFS GRSG populations/habitat; bisected by proposed designated utility corridor. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 12 | Reese River | Supports two population centers (25-50% BBD) that are important to the southern portion of range in NV; provides genetic connectivity to central and northern NV; includes two genetic nodes; primarily core and growth sagebrush and PHMA; bordered by and supporting USFS GRSG populations/habitat. | Recommended for inclusion in draft EIS as a potential ACEC. |
| 13 | Hayes Canyon | Stepping-stone population connecting the northern portion of MZ V (OR & NV) to the southern portion (CA); about 70% of area in 25%-50% BBD; one NC that is declining and has tripped an active warning; most of area is PHMA with about 25% of total area being PHMA+; primarily Growth with some Core sagebrush; M-H lek persistence; M-L R&R; bisected by proposed designated corridor (that includes an existing transmission line) | Recommended for inclusion in draft EIS as a potential ACEC. |
| 14-17 | 4 ID or UT border | Provides continuity of habitat and population connectivity with neighboring states that have proposed ACEC areas. | Recommended for inclusion in draft EIS as a potential ACEC |
| N/A | Vya/Massacre | See description in the "California GRSG ACEC Evaluation: Importance Criteria" below. | Recommended for inclusion in draft EIS as a potential ACEC |

| California GRSG ACEC Importance Evaluation: Buffalo Skedaddle Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | BLM CA included designated GRSG Priority, General, and Other Habitat Management Areas in the 2015 GRSG Plan Amendment. In 2022, updates to the GRSG Habitat Management Areas were initiated based on the best available science. These updates identified Priority Plus areas. Priority Plus are areas that are most productive to GRSG populations within Priority Habitat Management Areas (PHMA). PHMA plus includes modeled population performance, specifically survival of nests and broods and is informed by selection models and areas of increased survival. PHMA plus are considered "source" habitats.<br><br>In addition to PHMA plus, other new science has emerged since the 2015 plans related to GRSG density, habitats, population trends, and genetic exchange among populations which has provided information on areas that may contain special worth, consequence, or distinctiveness within CA BLM managed lands. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The area is not particularly fragile or sensitive to change as compared to other areas on CA BLM managed lands. However, the area has been undergoing intensive restoration efforts due to the Rush Fire over 10 years ago. In addition, this area is on the western fringe of GRSG populations in California with documented genetic exchange with populations in Nevada. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse as Threatened or Endangered concluded that GRSG was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species, therefore, areas that meet national priority concerns or specific FLPMA mandates require multiple lines of evidence supporting more than local priorities and conservation value.<br><br>The proposed Buffalo Skedaddle ACEC identifies the area as highly valuable for GRSG habitat and population persistence in northeastern California. |

| **Other Items** | |
|---|---|
| Boundaries | The boundary for this ACEC was initially delineated using the Population Management Unit (PMU) for the Buffalo Skedaddle PMU. The boundary was then refined to focus on the revised GRSG Habitat Management Area delineations, areas that have been successful in habitat restoration efforts since the Rush Fire and genetic exchange between CA and NV GRSG populations based on new science. |
| Additional Notes | — |

**Conclusion**

Due to meeting the Relevance and Importance criteria, this area should be considered a potential ACEC in at least one alternative. This will allow an analysis to consider if special management is needed to preserve the qualities of the area (i.e., above Management Decisions for PHMA).

**California GRSG ACEC Importance Evaluation:**
**Vya/Massacre GRSG Proposed ACEC**

| Importance Consideration | Yes/No | Rationale for Determination |
|---|---|---|
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | BLM CA and NV included designated GRSG Priority, General, and Other Habitat Management Areas in the 2015 GRSG Plan Amendment. In 2022, updates to the GRSG Habitat Management Areas were initiated based on the best available science. These updates identified Priority Plus areas. Priority Plus are areas that are most productive to GRSG populations within Priority Habitat Management Areas (PHMA). PHMA plus includes modeled population performance, specifically survival of nests and broods and are informed by selection models and areas of increased survival. PHMA plus are considered "source" habitats.<br><br>In addition to PHMA plus, other new science has emerged since the 2015 plans related to GRSG density, habitats, population trends, and genetic exchange among populations which has provided information on areas that may contain special worth, consequence, or distinctiveness within CA BLM managed lands. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The area is not particularly fragile or sensitive to change as compared to other areas on CA BLM managed lands. However, Bitner Ranch provides key brood-rearing habitat to GRSG in CA and connectivity between populations in NV, including the Sheldon Hart Refuge. |

| California GRSG ACEC Importance Evaluation: Vya/Massacre GRSG Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse as Threatened or Endangered concluded that GRSG was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species, therefore, areas that meet national priority concerns or specific FLPMA mandates require multiple lines of evidence supporting more than local priorities and conservation value.<br><br>The proposed Vya-Massacre ACEC includes multiple lines of evidence, identifying the area as highly valuable GRSG habitat providing key brood-rearing habitat and connectivity among multiple states. In addition, conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005). |
| **Other Items** | | |
| Boundaries | The boundary for this ACEC was initially delineated combining the Population Management Units (PMU) for Vya and Massacre PMUs. The boundaries were then refined to focus on the revised GRSG Habitat Area delineations, key brood-rearing habitat and additional new science. | |
| Additional Notes | — | |
| **Conclusion** | | |
| Due to meeting the Relevance and Importance criteria, this area should be considered a potential ACEC in at least one alternative. This will allow an analysis to consider if special management is needed to preserve the qualities of the area (i.e., above Management Decisions for PHMA). | | |

***Oregon***

Similar to Idaho, the BLM's evaluation of rangewide datasets did not result in the identification of any areas that raised to more than local significance outside the 2015 SFAs. In addition, Oregon is unique compared to the other states in that there are several existing ACECs and Research Natural Areas (RNA – which is a type of ACEC) that were already designated inside the 2013 PACs and 2015 SFAs. These areas were designated as part of the RMP development that pre-dated the 2015 or 2019 GRSG amendment efforts. The following 2 ACECs and 5 RNAs are located in PHMA where the relevant and important values that were identified in the RMP designation included GRSG and GRSG plant communities:

- High Lakes ACEC,
- Red Knoll ACEC,
- Lake Ridge RNA,
- North Ridge Bully Creek RNA,
- Rahilly-Gravelly RNA,
- South Ridge Bully Creek RNA, and
- Toppin Creek Butte RNA.

These existing designations are not being considered for amendment in this process.

Beyond the existing ACECs and RNAs, the BLM Oregon state office (OSO) staff examined the remainder of the SFA areas. Smaller areas within the SFAs were identified for further/closer examination, which the majority of the SFAs were determined to not contain multiple lines of evidence supporting a conclusion that the habitat was of more than local significance. The BLM state and district staff coordinated with Oregon Division of Fish and Wildlife staff to identify characteristics that may meet the importance criteria. New genetic information and lek density clusters were important considerations in the evaluation.

| Oregon GRSG ACEC Importance Evaluation: Soldier Creek Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | Greater sage-grouse are distributed throughout appropriate habitat in the western United States. This portion of the distribution located in Oregon (and Idaho) is designated as Management Zone IV (Stiver et al. 2006). Management zones are delineations of greater sage-grouse populations and subpopulations within floristic zones. Within Management Zone IV, Oregon has designated core areas, and in 2015 BLM designated Priority and General Habitat Management Areas.<br><br>Since the 2015 BLM plans, new science addressing GRSG genetics, density, and habitats has provided additional information about areas that may contain special worth, consequence, or distinctiveness.<br><br>OSO staff examined the genetic pathways data and connectivity (i.e., >80% cumulative connectivity) with GRSG priority areas for conservation in Idaho and that overlap with the very high lek density areas. In the Soldier Creek area south of Jordan Valley/Hwy 95, the Ecostate GIS shows fairly intact habitat and there are multiple areas of overlapping lek density. It's approximately 15 miles to a >95% genetic cumulative connectivity pathway in Idaho. The Soldier Creek area is mostly in the 80 to 85% cumulative connectivity genetic pathway range (Cross et al., 2023) and is similar to cumulative connectivity of the surrounding area (e.g. Cow Lakes) in Oregon.<br><br>While high density lek/population areas and genetic connectivity are considered important to greater sage-grouse conservation, the connectivity areas are dispersed throughout Oregon and are not substantially unique to one specific region or planning unit. Greater sage-grouse habitat in the Soldier Creek area is not substantially distinct from habitat managed by other nearby BLM lands that have similar cumulative genetic connectivity values.<br><br>Although a portion of the area contains medium relative abundance (Doherty et al. 2016), the size of the area is smaller than and not substantially distinct compared to other areas in Management Zone IV (e.g. Cow Lakes). There is a much larger, higher relative lek abundance area south and east (in Idaho) of the Soldier Creek area. See background notes and maps below. |

| Oregon GRSG ACEC Importance Evaluation: Soldier Creek Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | The area is not particularly fragile or sensitive to change when compared to other similar sites in the Oregon-Idaho region. The habitat is not rare, irreplaceable, exemplary, or unique. The area is vulnerable to adverse change, particularly wildfire and invasive annual grasses, but not more so than the surrounding habitat. The habitat is neither threatened or endangered.<br><br>Cumulative connectivity pathways mapped in the Soldier Creek potential ACEC are thresholded below 85%, indicating low impedances to sage-grouse movements (Cross et al., 2023). Higher connectivity pathways are mapped >10 miles east of the Oregon border.<br><br>The area does not contain key or clusters of genetic nodes,. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The BLM 2015, 2019, and current initiatives to conserve, enhance, and restore greater sage-grouse habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that 2010 finding, the USFWS concluded that greater sage grouse was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species.<br><br>Without multiple lines of evidence, including reasonably foreseeable development, valid existing rights, land ownership, and crucial GRSG habitat characteristics from multiple science-based models, on-the-ground conditions/evidence for this area does not currently need protection requirements beyond the standard approaches to implemented FLPMA and national priorities. In addition, the area currently has Priority Habitat Management Area designation and management under the 2015 ARMPA. Habitat loss and degradation due to wildfires and invasive annual grasses are primary threats to sage-grouse in this area. Significant amounts of high quality habitat in Oregon and Idaho has burned near this area. |
| **Other Items** | | |
| Boundaries | Nomination boundaries have been provided to the NOC (see also notes below). | |
| Additional Notes | We reviewed and then ruled out the Cow Lakes PAC area due to the high proportion of private lands mixed in with BLM lands, low amount of suitable habitat, and degraded seasonal habitat, as shown in the 2019-2021 Ecostate spatial data provided by SageCon/INR and reported in the Cow Lakes Habitat Assessment Framework Summary. | |
| **Conclusion** | | |
| This potential ACEC provides important lekking, nesting, and early brood-rearing habitat for a high abundance of sage-grouse. However, the habitat, density of birds, and connectivity to sage-grouse priority habitat is not unique. Multiple pathways of potential gene flow connecting sage-grouse priority areas for conservation in southeast Oregon and southwest Idaho coalesce approximately 10 miles east of the Oregon border to form the high concentration gene flow pathway depicted in Cross et al. (2023 figure 4). Cumulative connectivity pathways | | |

| **Conclusion** |
| --- |
| coalesce here due to cultivation and tree cover impeding sage-grouse movements (Cross et al 2013 figure 7b). These impendences decrease approaching the Oregon state border, and once inside Oregon, the cumulative connectivity pathways are more diffuse and non-distinct. In other words, the proposed ACEC does not appear to be vital to maintenance of range-wide connectivity. Moreover, the habitat is not unique, rare, irreplaceable, or exemplary. There are many areas of similar sage-grouse habitat in SE Oregon with similar genetic pathways depicted in Cross et al. 2023 intersecting areas of high lek density. BLM is actively managing juniper encroachment and other threats to GRSG in Oregon (e.g., fire, and invasive annual grasses). Thus, the Soldier Creek potential ACEC does not meet the criteria for special worth or importance with more than locally significant qualities of consequence, meaning, distinctiveness, or cause for concern due to its similarity, proximity, and connectedness with similar habitat, lek density areas, and modeled genetic pathways.<br><br>References<br>Cross TB, Schwartz MK, Naugle DE, Fedy BC, Row JR, Oyler-McCance SJ. 2018 The genetic network of greater sage-grouse: range-wide identification of keystone hubs of connectivity. | **Other Items** | | |
| Boundaries | Contiguous with a Nevada potential ACEC. An area of genetic connectivity to the north is disconnected from the Upper West Little Owyhee potential ACEC by lower quality habitat and that the southern area, contiguous with Nevada to the south, had more connectivity, although threshold cumulative values are moderate. | |
| Additional Notes | — | |
| **Conclusion** | | |
| This potential ACEC provides important lekking, nesting, and early brood-rearing habitat for a high abundance of GRSG. However, the habitat, bird density, and connectivity to GRSG priority areas of conservation are not unique in Oregon. The thresholded cumulative connectivity pathways in the potential ACEC are between 75 and 80 percent (Cross et al. 2013). GRSG movements are not impeded by tree cover or cultivation within the potential ACEC and in the surrounding landscape. There are no distinctive cumulative connectivity pathways intersecting areas of high lek density in this area. In other words, the proposed ACEC does not appear to be vital to maintenance of range-wide connectivity. Thus, the Upper West Little Owyhee potential ACEC does not meet the criteria for special worth or importance with more than locally significant qualities of consequence, meaning, distinctiveness, or cause for concern due to its similarity, proximity, and connectedness with similar habitat, lek density areas, and genetic considerations.<br><br>References<br>Cross TB, Schwartz MK, Naugle DE, Fedy BC, Row JR, Oyler-McCance SJ. 2018 The genetic network of greater sage-grouse: range-wide identification of keystone hubs of connectivity. ***Utah***

The 2015 GRSG ARMPA designated two SFAs in northern Utah, one on the eastern side of the state in Rich County bordering Wyoming and one of the western side of the state in Box Elder County, bordering with Nevada. Both those areas were evaluated by the Utah State office. In addition, the rangewide evaluation identified Parker Mountain as an area with characteristics that could result in meeting the importance criteria.

The Rich County area provides habitat for GRSG, a BLM sensitive species, and the area has also been identified as Sage-Grouse Management Area (SGMA) in the State of Utah's state plan. The Rich population area is one of the strongholds for GRSG populations in Utah and is one of the largest populations in Utah connecting with larger populations in Idaho and Wyoming. The area also meets the criterion for a natural system or process because of the sagebrush habitat condition in the area. The majority of intact sagebrush habitat is within a core area (Doherty et al. 2022). The Rich population area includes some of the largest core sagebrush habitat in Utah, which is why this area was identified as a focal landscape area.

The area in Box Elder County has also been identified as an SGMA by the State of Utah. The Box Elder population area is one of the largest of the GRSG populations in Utah connecting with larger populations in Idaho and Nevada. It is part of the Northern Great Basin sub-population (Utah, Idaho, and Nevada).

The Parker Mountain area is in Central Utah, and provides one of the strongholds for GRSG populations in Utah and is one of the largest populations in the Great Basin. The area has also been identified as a SGMA by the State of Utah. The majority of the area is intact sagebrush habitat within a core area (USGS SEI) with minimal development.

| Utah GRSG ACEC Importance Evaluation: Rich GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | Since the 2015 GRSG ARMPA, new science addressing GRSG density and habitats has provided additional information about the locations areas that may contain special worth, consequence, or distinctiveness. The area is not particularly fragile or sensitive to change as compared to other sites in the State of Utah. It consists of a largely intact contiguous mid to high elevation sagebrush habitat with large mesic meadow complexes. The area is largely undeveloped and threats from development are low. Oil and gas development is low, as well as other minor infrastructure for roads, pipelines, and transmission lines. Primary land uses are livestock grazing, agriculture, and recreation. Mechanical sagebrush treatments that have occurred to promote livestock grazing have reduced the quantity of winter sagebrush habitat. The area is mostly core and growth opportunity areas within the sagebrush (Doherty 2022) Sagebrush Conservation Design with a significantly large core relative to other areas in the state. Much of the core habitat including diverse mesic habitat occurs on private lands with a mix of BLM jurisdiction. Similarly, the USU seasonal habitat model identifies much of the area as summer, winter, and nesting habitat. There are two key genetic nodes and other nodes (Cross et al. 2018), and the area covers an area where genetic connections exist between the northern (into Idaho) and western (into Wyoming) portions of management Zone II (Stiver et al 2006). There is a key genetic node to the south of the Rich population area in Morgan-Summit; however, no detailed telemetry studies are available in the Morgan-Summit area to understand sage-grouse movements and connectivity in this area. Climate change models (Palmquist 2021) show that the Rich population area has the highest value for retention of sagebrush biomass. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The Upper Bear River Watershed has been identified as a focal landscape area in Utah with a goal of improving the ecological health in the region. Bear Lake and the Bear River are large contributors to the Great Salt Lake. The area is largely undeveloped and threats from development are low, including oil and gas. The area is mostly core sagebrush (Doherty 2022) with a proportionally large core relative to other areas in the state. Much of the core habitat occurs on private lands and BLM jurisdiction within the core is fairly limited to the periphery. Similarly, the USU seasonal habitat model identifies much of the area as summer, winter, and nesting habitat. Climate change models (Palmquist 2021) show that the Rich population area has the highest value for retention of sagebrush biomass. |

| Utah GRSG ACEC Importance Evaluation: Rich GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | Yes | The Upper Bear River Watershed has been identified as a focal landscape area in Utah with a goal of improving the ecological health in the region. Bear Lake and the Bear River are large contributors to the Great Salt Lake.<br><br>The BLM 2015, 2019, and current land use planning initiatives to conserve, enhance, and restore GRSG habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. | **Other Items** | | |
| Boundaries | Focus boundaries on the core, connectivity, genetic nodes, climate in relation to the BLM jurisdiction. Consider the Dingell Act Exchange and transfer of BLM lands. Also considered the existing Laketown ACEC in the boundary. | |
| Additional Notes | Connectivity is with the larger subpopulations within Wyoming and Idaho. Since the 2015 GRSG ARMPA Utah BLM's PHMA has not lined up with PHMA in Wyoming as their populations are generally GHMA along the border as these areas are not part of their core.<br><br>The Sagebrush Focal Area (SFA) boundary in the Rich population area included portions of the relevant and important values; consider the potential for an ACEC to include portions of this area which overlaps with the new science. Boundary adjustments would need to remove large portions of non-habitat on Monte Cristo.<br><br>Other genetic nodes in checkerboarded land jurisdiction in the southern portion (south of Neponset Reservoir) were excluded from the boundary. This area is highly checkerboarded (BLM/private land jurisdictions) and the majority of the BLM parcels have authorized leases and were part of the Dingell Act Exchange. | |
| **Conclusion** | | |
| With boundary adjustments the area meets to criteria to move forward to consider needs for special management as a potential ACEC in at least one alternative in the Draft EIS, focusing boundaries on BLM jurisdiction, core, probability of breeding habitat, and climate sagebrush biomass. Items listed above provide multiple lines of evidence that these areas are more than locally significant to Utah and may provide importance to Management Zone II. Data most influential justifying the consideration as an ACEC and having more than local significance: high density breeding (Doherty et al. 2016); genetic connectivity (Cross et al. 2023); and genetic mixing (i.e., important area for connectivity well beyond the region being considered; Oyler-McCance et al. 2022). | | |

| Utah GRSG ACEC Importance Evaluation: Box Elder GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | Since the 2015 GRSG ARMPA, new science addressing GRSG density and habitats has provided additional information about the locations areas that may contain special worth, consequence, or distinctiveness. The area has experienced a relatively large wildfire since the 2015 ARMPA (Goose Creek Fire, 2018) increasing cheatgrass risk and sagebrush loss within the sagebrush habitat making it somewhat fragile or sensitive to change as compared to other sites in the State of Utah. Fire within management zone IV has been a significant threat in Idaho and Nevada. It boasts a relatively large diverse low elevation salt desert shrub to high elevation mountain sagebrush, mountain mahogany and aspen habitat. The Box Elder Population Area supports the southeastern extent of a larger population that extends beyond state boundaries into Nevada and Idaho and is primarily influenced by fire risk, especially in dry, dense juniper areas or in areas dominated by nonnatives. The area is largely undeveloped and threats from development are low. Oil and gas development is low, as well as other minor infrastructure for rock quarries, roads and transmission lines. Primary land uses are livestock grazing, agriculture, and recreation. The area largely contains core sagebrush with growth opportunity areas as identified in Doherty (2022) Sagebrush Conservation Design. Much of the core habitat occurs on private lands with a mix of BLM jurisdiction. Similarly, the USU seasonal habitat model identifies much of the area as summer, winter, and nesting habitat. There are two key genetic nodes and other minor nodes (Cross et al. 2018), and the area covers an area where genetic connections exist between the northern and western portions of management zone IV connecting to populations to the west in Nevada and north into Idaho. Climate change models (Palmquist 2021) show that the Box Elder population area has the highest value for retention of sagebrush biomass especially in the higher elevations. Box Elder has been a source population for greater sage-grouse translocations within the state and neighboring states. This source population may be attributing to some of the importance that shows up in the genetic connectivity models based on the new science. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | The area is largely undeveloped and threats from development are low. Ongoing disturbance in portions of the area are primarily due to livestock grazing infrastructure for wells and pipelines, rock quarries, and railroads. Similarly, the USU seasonal habitat model identifies much of the area as summer, winter, and nesting. Climate change models (Palmquist 2021) show that the population area has the highest value for retention of sagebrush biomass. Area has two key genetic nodes and several others. The key nodes are connected with populations in Idaho and eastern NV, while other nodes are connected with southern UT populations and NE UT. |

| Utah GRSG ACEC Importance Evaluation: Box Elder GRSG Habitat Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The BLM 2015, 2019, and current land use planning initiatives to conserve, enhance, and restore GRSG habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that finding, the USFWS concluded that GRSG was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species.<br><br>Without multiple lines of evidence, including reasonably foreseeable development, valid existing rights, land ownership, crucial GRSG habitat characteristics from multiple science-based models, and on-the-ground conditions provide evidence this area has not been identified as warranting protection beyond the standard approaches to implemented FLPMA and national priorities. |
| **Other Items** | | |
| Boundaries | Focus boundaries on the core, connectivity, genetic nodes, climate in relation to the BLM jurisdiction. | |
| Additional Notes | Connectivity is with the larger subpopulations within Nevada and Idaho. Utah since the 2015 GRSG ARMPA has not lined up with PHMA in Nevada as their populations are generally Other Habitat Management Area (OHMA)/GHMA along the border as these areas are not part of their core. PHMA in Utah lines up fairly well with PHMA in Idaho.<br><br>The SFA boundary in the Box Elder population area included portions of the relevant and important values; consider the potential for an ACEC to include portions of this area which overlaps with the new science. Boundary adjustments would need to include other relevant/important values based on the new science within BLM jurisdiction. | |
| **Conclusion** | | |
| With boundary adjustments the area meets the criteria to move forward to consider needs for special management as a potential ACEC in at least one alternative in the Draft EIS, focusing boundaries on BLM jurisdiction, genetic nodes, core, probability of breeding habitat, and climate sagebrush biomass. Items listed above provide multiple lines of evidence that these areas are important in review of the new science/data sets. From BLM Headquarters' proposed boundary, consider larger tracts of BLM land jurisdiction within the northwestern portion of the PHMA area largely lining up with the 2015 SFA boundaries. Items listed above provide multiple lines of evidence that these areas are more than locally significant to Utah and may provide importance to Management Zone IV. Data most influential justifying the consideration as an ACEC and having more than local significance: high density breeding (Doherty et al. 2016); genetic connectivity (Cross et al. 2023); and genetic mixing (i.e., important area for connectivity well beyond the region being considered; Oyler-McCance et al. 2022). | | |

|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | Since the 2015 GRSG ARMPA, new science addressing GRSG density and habitats has provided additional information about the locations areas that may contain special worth, consequence, or distinctiveness. A portion of the area contains high relative abundance (Doherty et al. 2016), there is a key genetic node (Cross et al. 2018), and the area covers an area where genetic connections between the northern and western portions of management Zone III may be constricted (Row et al 2018, Cross et al. 2023). Based on further coordination and review of the new science, the Parker Mountain Population has been a source population for translocations throughout Utah; therefore, the genetic connectivity may not demonstrate that this population is more than locally significant and that these are natural dispersals. Per conversations with the State of Utah, they have indicated that natural dispersal may be limited based on the nature of the habitat in the area and that the genetic connectivity may be more likely attributed to the translocations. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | The area is not particularly fragile or sensitive to change and threats from land uses/authorizations are low as compared to other sites in the State of Utah, providing opportunity for retention of a relatively large expanse of intact sagebrush habitat. The area is largely undeveloped and threats from development are low. Oil and gas potential is low. Ongoing disturbance in the area is limited to a few minor rights-of-way (i.e., roads and small transmission lines), livestock grazing, and recreation. The area is mostly core sagebrush as identified in Doherty (2022) Sagebrush Conservation Design with a proportionally large core relative to other areas in the state. Much of the core habitat occurs on School and Institutional Trust Lands Administration (SITLA) lands and BLM jurisdiction within the core is fairly limited to the periphery. Similarly, the USU seasonal habitat model identifies much of the area as summer, winter, and nesting habitat. The core has a high probability of lek persistence; however, the majority of occupied leks are on SITLA administered lands. Uncertainty on SITLA administered lands could make the population vulnerable to adverse changes should SITLA management priorities change. Parker Mountain has been a source population for GRSG translocations within the state. This source population may be attributing to some of the importance that shows up in the genetic connectivity models based on the new science. The nature of the habitat in the area may limit natural dispersal to the north and west of the area. This area contains one of the largest populations of GRSG within the southernmost extent of the GRSG range and although it provides importance to those smaller populations that surround it, its importance to the larger overall range of GRSG within Management Zone III is relatively minor and therefore not more than locally significant. |

| Utah GRSG ACEC Importance Evaluation: Parker Mountain Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The BLM 2015, 2019, and current land use planning initiatives to conserve, enhance, and restore GRSG habitat is the result of the March 2010, US Fish and Wildlife Service (USFWS) 12 Month Finding for Petitions to List the Greater Sage-grouse (Centrocercus urophasianus) as Threatened or Endangered. In that finding, the USFWS concluded that GRSG was "warranted, but precluded" for listing as a threatened or endangered species.<br><br>However, in the 2015 listing decision, the USFWS concluded in part that existing regulatory mechanisms, (i.e., "specific direction regarding sage grouse habitat, conservation, or management") in the BLM's Land Use Plans, were adequate to protect the species.<br><br>Without multiple lines of evidence, including reasonably foreseeable development, valid existing rights, land ownership, crucial GRSG habitat characteristics from multiple science-based models, on-the-ground conditions/evidence this area has not been identified for protection beyond those implemented through FLPMA and national priorities. |
| **Other Items** | | |
| Boundaries | No proposed changes to boundaries. | |
| Additional Notes | No maps provided due to no ACEC boundary identified. | |
| **Conclusion** | | |
| The area meets relevance criteria but does not meet importance criteria. Items in bold listed above provide some lines of evidence that warranted a closer review of these areas to determine if Parker Mountain may be important and more than locally significant. In our review of the new science/data sets and coordination with the State of Utah, the lack of information particularly with the genetic connectivity suggests this area is not more than locally significant and does not have greater than local importance to the greater sage-grouse population within Management Zone III. | | |

### *Wyoming*

| Wyoming GRSG ACEC Importance Evaluation: Carbon-Moffat GRSG Connectivity Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | • The nominated area provides a genetic linkage between GRSG populations in NW CO with populations in central and western portions of the species' range (Cross et al. 2023).<br>• However, models of potential movement among PHMA throughout the range of GRSG suggest additional movement pathways from CO populations in this region to population strongholds in WY (Crist et al. 2017; Oyler-McCance et al. 2022; Cross et al. 2023).<br>• The nominated area contains several genetic nodes (i.e., leks most important to the overall genetic connectivity of GRSG populations across their range; Fig. 6; Cross et al. 2018 and 2023).<br>• GRSG population density is high in much of the nominated area with portions of the nominated area modeled as having the highest densities of breeding GRSG in WAFWA MZ 2; MZ 2 has the highest proportion of breeding GRSG in the range of the species (Doherty et al. 2016).<br>• Lek densities are higher in this area than most other areas in WY, although many of the documented leks are currently unoccupied (as defined by the WGFD; Whitford and Bish 2022), especially those more closely associated with energy development.<br><br>The data most likely to suggest the nominated area has more than locally significant qualities are the genetic linkage data. These data suggest the nominated area is a likely corridor for the functional movement of GRSG from habitats in NW CO to the rest of the species' range via population strongholds in WY. But the preponderance of evidence suggests other movement corridors between CO and WY likely exist (see Crist et al. 2017; Oyler-McCance et al. 2022) suggesting the nominated area does not have greater than local-level significance. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | GRSG population linkage (i.e., the functional movement of individuals between CO and WY) in this area may establish the area as being more than locally significant to the sustainability of GRSG populations in the broader region. However, other likely corridors exist allowing movement of individual GRSG between WY and CO so the nominated area is not unique, rare or irreplaceable. |

| Wyoming GRSG ACEC Importance Evaluation: Carbon-Moffat GRSG Connectivity Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The nominated area meets relevance criteria but does not meet importance criteria. Therefore, it is not recommended that the nominated area as nominated nor as modified be considered a potential ACEC for GRSG for analysis in the Draft EIS in the current range-wide planning effort. |

| Wyoming GRSG ACEC Importance Evaluation: Little Sandy Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | • GRSG population density is very high especially in northern portions of the nominated area with most of the nominated area modeled as having the highest densities of breeding GRSG in WAFWA MZ 2; MZ 2 has the highest proportion of breeding GRSG in the range of the species (Doherty et al. 2016).<br>• The nominated area contains a genetic node (i.e., leks most important to the overall genetic connectivity of GRSG populations across their range) and includes portions of the most likely genetic linkage between GRSG populations in eastern and central WY with populations in southwestern portions of the State (Fig. 6; Cross et al. 2023).<br>• However, models of potential movement among PHMA throughout the range of GRSG suggest east-west movement pathways are more likely to occur across southern portions of the State (Crist et al. 2017).<br><br>The data most likely to suggest the nominated area has more than locally significant qualities are the GRSG breeding density data. These data suggest the nominated area, especially northern portions of the area, has some of the highest densities of breeding GRSG in the range of the species establishing the nominated area is more than locally important with special worth and is distinctive. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | High densities of breeding GRSG relative to the rest of the species' range establish the area as exemplary, rare, unique, and irreplaceable. The potential expansion of liquid and renewable energy development in the nominated area establishes the area as vulnerable to adverse change. |

**Wyoming GRSG ACEC Importance Evaluation:**
**Little Sandy Proposed ACEC**

| Importance Consideration | Yes/No | Rationale for Determination |
|---|---|---|
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The proposed ACEC includes multiple lines of evidence identifying the area as valuable for the long-term population sustainability of GRSG. Because (1) the area has relatively (compared to the rest of the species' range) robust populations, (2) includes portions of the most likely genetic corridor between populations to the east and west of this region, (3) the loss of the ability of GRSG to move through this area could isolate GRSG populations in eastern and western portions of the species' range and the isolation of populations increases the probability of regional-level extirpation (Knick et al. 2013) and conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005), and (4) the area has high potential for energy development in the future, it is recommended that the nominated area as modified be considered a potential ACEC for GRSG for analysis under at least one alternative in the current range-wide planning effort. |

**Wyoming GRSG ACEC Importance Evaluation:**
**Carter-Cook GRSG Connectivity Proposed ACEC**

| Importance Consideration | Yes/No | Rationale for Determination |
|---|---|---|
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | • The nominated area provides the primary genetic linkage between GRSG populations in the entirety of northeastern portions of the species' range with populations in central and western portions of the species' range (Crist et al. 2017; Oyler- McCance et al. 2022; Cross et al. 2023).<br>• The nominated area contains at least 2 genetic nodes (i.e., leks most important to the overall genetic connectivity of GRSG populations across their range; Cross et al. 2018 and 2023).<br><br>The data most likely to suggest the nominated area has more than locally significant qualities are the genetic linkage data. The nominated area is the most likely corridor and a bottleneck to functional movement of GRSG from habitats in most of Management Zone 1 to the rest of the species' range establishing that the nominated area is more than locally important with special worth and is distinctive. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | Potential genetic bottleneck of the most likely movement corridor between populations in northeastern portions of the GRSG range and the rest of the species' range establish the area as rare, unique, and irreplaceable. Energy development and mining (and the likely expansion of bentonite mining in the area) and invasive annual grass (and the increased risk of fire eliminating the sagebrush overstory) establishes the area as vulnerable to adverse change. |

| Wyoming GRSG ACEC Importance Evaluation: Carter-Cook GRSG Connectivity Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The proposed ACEC includes multiple lines of evidence identifying the area as valuable for the long-term population sustainability of GRSG, especially populations in MZ 1. Because (1) the area is the most likely genetic corridor between populations in eastern portions of the species range, (2) the loss of the ability of GRSG to move through this area could isolate MZ 1 populations, (3) the isolation of populations increases the probability of regional-level extirpation (Knick et al. 2013), and (4) conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005), it is recommended that the nominated area as modified be considered a potential ACEC for GRSG for analysis under at least one alternative in the current range-wide planning effort. |
| **Other Items** | | |
| Additional Notes | While the New Castle FO (NFO) agrees with the premise of the rationale of regional-level extirpation (Knicks et al. 2013), the NFO believes that the added protection of an ACEC is not necessary to meet goals of the area. The NFO believes that goals can be met with the current Core Area strategy as the proposed ACEC area is located in a PHMA Connectivity Area. The protections include a 5% disturbance density threshold and associated NSOs and TLSs, which should allow existing GRSG populations to persist and maintain genetic connectivity between populations. | |

| Wyoming GRSG ACEC Importance Evaluation: Red Desert Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | No | • The nominated area does not contain high density GRSG populations, and only portions of the area provide suitable habitats for the species.<br>• The nominated area is not important for genetic connectivity.<br><br>Data suggest the nominated area does not have more than locally significant qualities for GRSG. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | No | None of the data considered establish the nominated area as having rare, unique, or irreplaceable values for GRSG. Energy development (and the likely expansion of this development in the area) establishes the area as vulnerable to adverse change, but these potential threats are not likely to directly impact substantial numbers of GRSG. |

| Wyoming GRSG ACEC Importance Evaluation: Red Desert Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The proposed ACEC does not include habitat conditions that meet relevance and importance criteria for GRSG. Therefore, it is not recommended that the nominated area be considered a potential ACEC for GRSG for analysis in the Draft EIS for the current range-wide planning effort. |

| Wyoming GRSG ACEC Importance Evaluation: Sagebrush Focal Areas in South-Central and Southwestern Wyoming Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | • GRSG population density is high in far western and far eastern portions of the SFA area with these areas modeled as having the highest densities of breeding GRSG in WAFWA MZ 2; MZ 2 has the highest proportion of breeding GRSG in the range of the species (Doherty et al. 2016).<br>• The SFA area contains several genetic nodes (i.e., leks most important to the overall genetic connectivity of GRSG populations across their range; Fig. 6; Cross et al. 2018 and 2023).<br>• The general area in far western portions of the SFA area additionally appears to be a genetic mixing zone for populations farther to the south in UT, populations in CO and southern WY, and populations in eastern ID (Oyler-McCance et al. 2022).<br>• The SFA area includes portions of the most likely genetic linkage between GRSG populations in eastern and central WY with populations in southwestern portions of the State (Cross et al. 2023).<br>• However, models of potential movement among PHMA throughout the range of GRSG suggest east-west movement pathways are more likely to occur across southern portions of the State (Crist et al. 2017).<br>• Models of climate impacts on sagebrush habitat integrity suggest that some of the habitats throughout the SFA area will not maintain high value conditions for GRSG into the near future (2030-2060; Doherty et al. 2022).<br><br>The data most likely to suggest the SFA-designated area being considered has more than locally significant qualities are the GRSG breeding density data, the genetic mixing data, and the genetic connectivity data. These data suggest far western portions of the SFA area are more than locally important with special worth and are distinctive. |

| Wyoming GRSG ACEC Importance Evaluation: Sagebrush Focal Areas in South-Central and Southwestern Wyoming Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | High densities of breeding GRSG relative to the rest of the species' range, GRSG population linkage (i.e., the functional movement of individuals between UT and WY), and genetic mixing which appears to be relatively unique to the species' range establish far western portions of the SFA area as exemplary, rare, unique, and irreplaceable. Models of habitat response to climate change in the far western region establish the area as vulnerable to adverse change. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | N/A | Far western portions of the SFA-designated area being considered includes multiple lines of evidence identifying the area as valuable for the long-term population sustainability of GRSG. Because (1) the area has relatively (compared to the rest of the species' range) robust populations, (2) is the most likely genetic corridor between populations to the east and west of this region, (3) the loss of the ability of GRSG to move through this area could isolate GRSG populations in eastern and western portions of the species' range and the isolation of populations increases the probability of regional-level extirpation (Knick et al. 2013), and (4) conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005), it is recommended that the SFA- designated area being considered as modified be considered a potential ACEC for GRSG for analysis under at least one alternative in the current range-wide planning effort. |

| Wyoming GRSG ACEC Importance Evaluation: Greater South Pass and Upper Green River Basin GRSG Proposed ACEC | | |
|---|---|---|
| **Importance Consideration** | **Yes/No** | **Rationale for Determination** |
| More than locally significant qualities, especially compared to any similar resource, that give it:<br>• Special worth:<br>• Consequence<br>• Meaning<br>• Distinctiveness<br>• Cause for concern | Yes | • GRSG population density is very high especially in western portions of the nominated area with most of the nominated area modeled as having the highest densities of breeding GRSG in WAFWA MZ 2; MZ 2 has the highest proportion of breeding GRSG in the range of the species (Doherty et al. 2016).<br>• The nominated area contains several genetic nodes (i.e., leks most important to the overall genetic connectivity of GRSG populations across their range; Cross et al. 2018 and 2023).<br>• The nominated area provides the most likely genetic linkage between GRSG populations in eastern and central WY with populations in southwestern portions of the State (Cross et al. 2023).<br>• However, models of potential movement among PHMA throughout the range of GRSG suggest east-west movement pathways are more likely to occur across southern portions of the State (Crist et al. 2017).<br><br>The data most likely to suggest the nominated area has more than locally significant qualities are the GRSG breeding density data. These data suggest the nominated area, especially central and western portions of the area, has the highest densities of breeding GRSG in the range of the species establishing the nominated area is more than locally important with special worth and is distinctive. |
| Qualities or circumstances that make it:<br>• Fragile<br>• Sensitive<br>• Rare<br>• Irreplaceable:<br>• Exemplary<br>• Unique:<br>• Endangered<br>• Threatened<br>• Vulnerable to adverse change | Yes | High densities of breeding GRSG relative to the rest of the species' range establish the area as exemplary, rare, unique, and irreplaceable. Energy development (and the potential expansion of liquid and renewable energy development in the nominated area) establishes the area as vulnerable to adverse change. |
| Has been recognized as warranting protection in order to satisfy national priority concerns or to carry out the mandates of FLPMA | No | The proposed ACEC includes multiple lines of evidence identifying the area as valuable for the long-term population sustainability of GRSG. Because (1) the area has relatively (compared to the rest of the species' range) robust populations, (2) is the most likely genetic corridor between populations to the east and west of this region, (3) the loss of the ability of GRSG to move through this area could isolate GRSG populations in eastern and western portions of the species' range and the isolation of populations increases the probability of regional- level extirpation (Knick et al. 2013), and conserving habitat connectivity is a national priority for managing bureau sensitive status species (Manual 6840 and IM 2023-005), it is recommended that the nominated area as modified be considered a potential ACEC for GRSG for analysis under at least one alternative 4 in the current range-wide planning effort. |

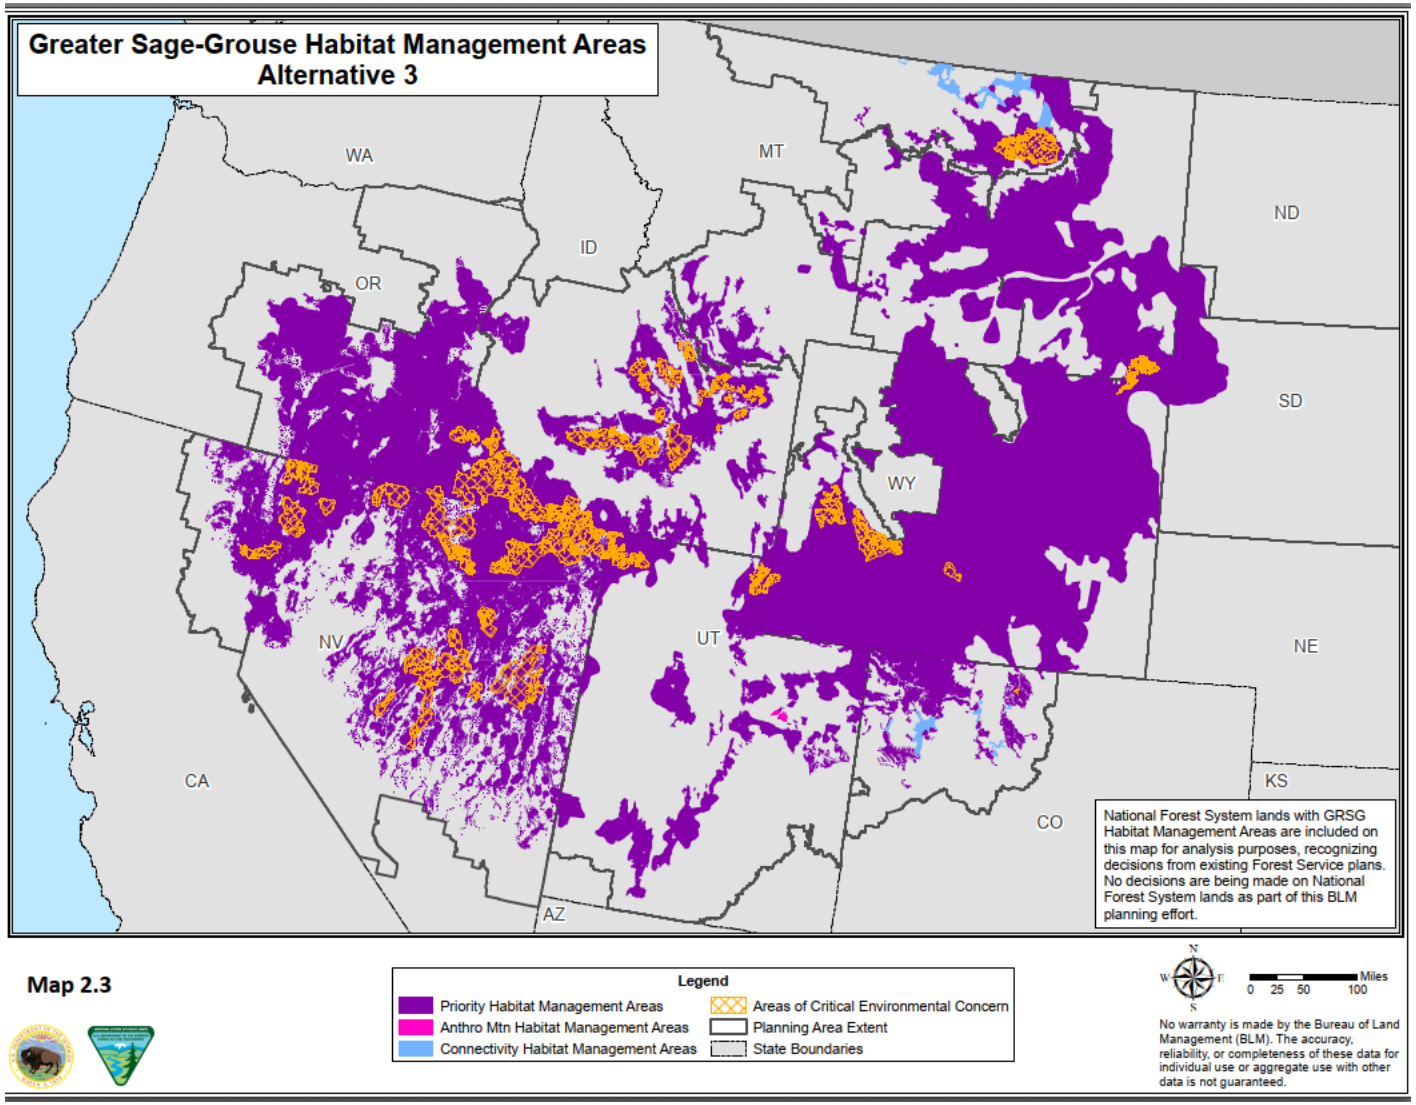
### 5.4.5 Summary Results of Evaluation Process

As a result of the ACEC evaluation process, the following acres were identified as meeting the relevance and importance criteria and have been considered in Alternatives 3 and 6 in the Draft EIS.

| Summary of Potential GRSG ACECs by State | |
|---|---|
| **State** | **Acres of Potential ACEC** |
| Colorado | 4,547 |
| Idaho | 3,438,307 |
| Montana/Dakotas | 726,062 |
| Nevada/California | 5,766,150 |
| Utah | 365,181 |
| Wyoming | 839,225 |
| Total | 11,139,472 |

**Figure 5-3** depicts these areas in relation to the Alternative 3 habitat management area boundaries. **Figure 5-4** depicts these areas in relation to the Alternative 5 and 6 habitat management area boundaries.

**Figure 5-3: Potential ACECs in relation to Alternative 3 Habitat Management Areas**



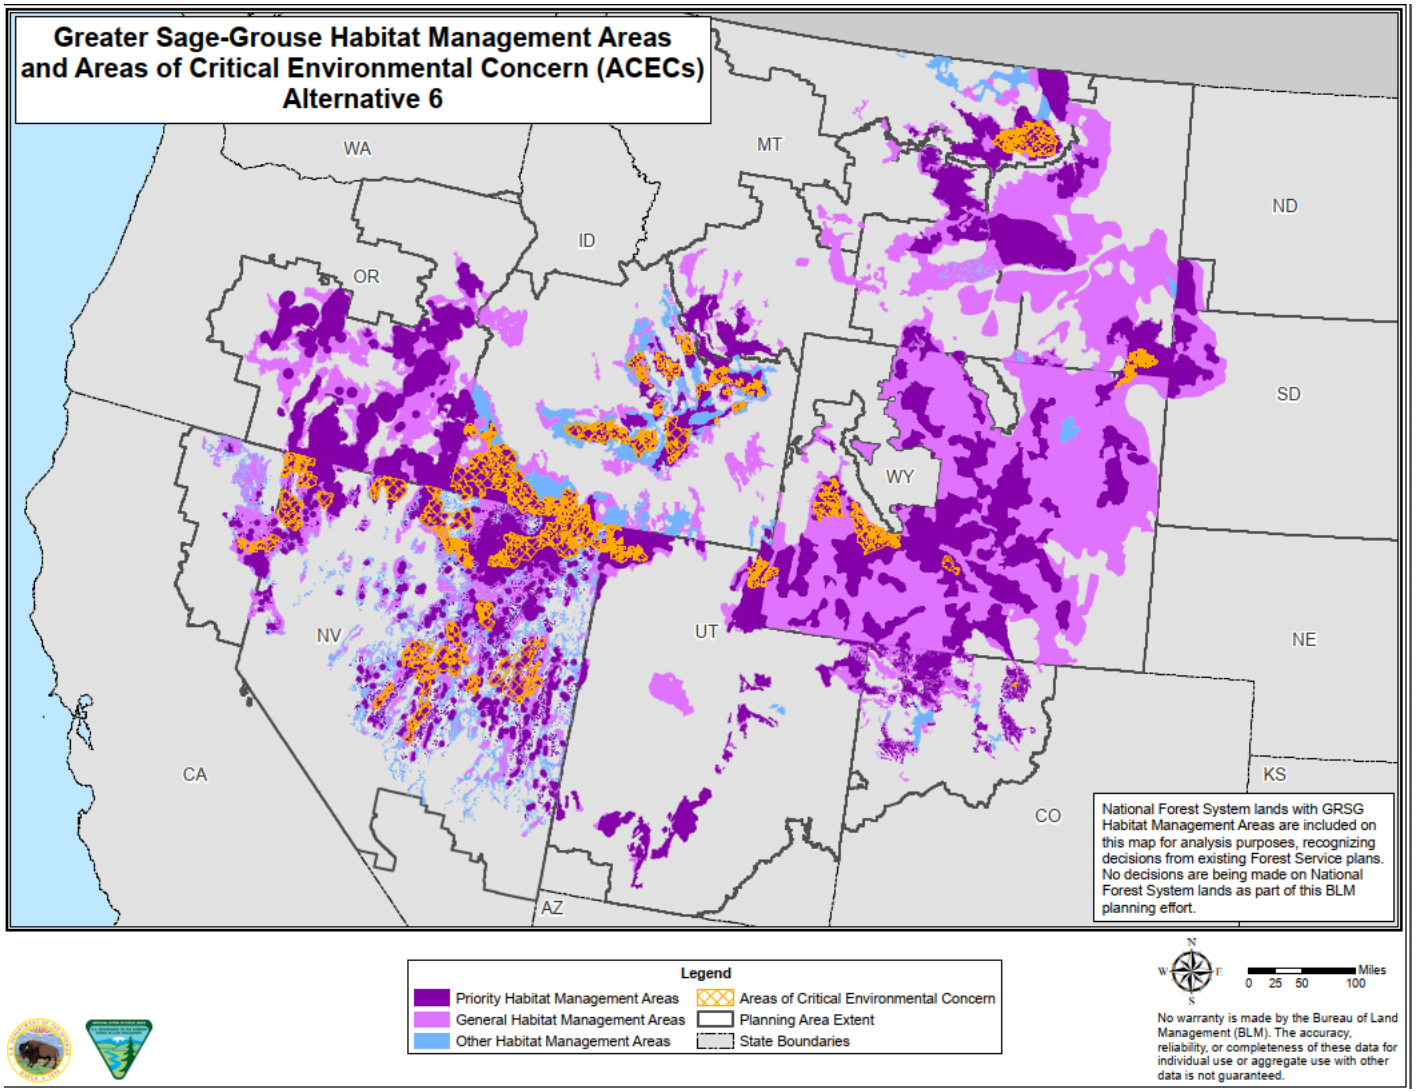


**Figure 5-4: Potential ACECs in relation to Alternative 5 and 6 Habitat Management Areas**

The BLM will continue to review information that could help inform these draft ACEC evaluations. After the public comment period, the BLM will review the evaluations again to determine if any new information received should result in adjustments to the evaluation findings.

## 5.5 SPECIAL MANAGEMENT

As noted in **Section 5.2** above, the presence of an area that meets relevance and importance criteria does not mean that an ACEC is needed. The third component of an ACEC is that the area requires special management to protect and prevent irreparable damage to the given values. Such management would not be present in the absence of the designation.

The relevance and importance criteria were used to evaluate all GRSG habitat, meaning all areas that met the relevance criteria. This evaluation included the applicable (i.e., relevant) portions of the nominated ACECs. All potential ACECs that met both the relevance and importance criteria and for which special management attention has been identified have been carried forward as potential ACECs, and they are considered for designation and management in the Draft RMPA/EIS. See the ACEC section in Chapter 2 for the special management being considered for the ACECs under Alternative 3 and Alternative 6.
