

Meeting Purpose

Listen to an overview presentation

- ❖ Learn more about what is in the Draft Resource Management Plan Amendment.
- ❖ Gain a greater understanding about the six draft management alternatives.

View maps and plan information

- ❖ Peruse information on the management actions, allowable uses, and administrative designations by viewing posters and asking questions.

Learn how to provide effective comments

- ❖ Find out how to submit comments through the project website (ePlanning) or by mail.
- ❖ Learn how to provide clear, specific, and actionable comments that lead to a better plan.

Key Points

- ✓ Greater sage-grouse populations are still declining, and we need to be able to react quickly and decisively with our partners across state lines.
- ✓ The preferred alternative reflects the most recent science and information on adapting management of greater sage-grouse habitat to a changing climate — which will increase the effectiveness and flexibility of our implementation actions.
- ✓ The preferred alternative combines what was most successful from 2015 to 2019 while addressing issues important to individual states.
- ✓ The plans are durable by balancing a consistent management approach across greater sage-grouse range while addressing unique conditions in individual states. This builds on our long-standing collaboration with state agencies who share management responsibilities.
