In these rapidly changing times, please take into consideration that renewable, sustainable, wind, water, and solar energy are far cleaner and more practical for providing our energy needs.

The short term gains of oil drilling are greatly offset by the impact on the environment and the lives of future generations. Whether you espouse Christian values or not, ask yourselves if the proposal to drill is in keeping with good stewardship of the earth. Please look at the reality of climate change and the devastating impact it's having, most visibly with the horrific weather events in recent years.

Thank you.
