I oppose drilling for oil in the coastal plain of ANWR because

1. The tundra will be harmed . Deep ruts will develop in the permafrost and the ground will continually melt.
- 2, The noise seismic activity will harm the hearing of wildlife, causing them to move away and disturb the migratory path of the Porcupine herd. It will also disturb the 1002 area where the Porcupine herd have their calves. Gwitchin Athabaskan have depended on the Porcupine herd for their meat, hides for 1000s of years.

ANWR through ANILCA is suppose to protect subsistence uses of Alaska Natives.

ANWR through ANILCA is suppose to protect Federal Wildlife and to promote biodiversity of all species of wildlife.

Drilling will result in oil spills and toxins will spill out onto the tundra. thus poisoning plants as well as wildlife.

Oil spills are inevitable.

I oppose the lease of land in 1002 area and the coastal plains for the purpose of extracting oil
