Please do not open up this sacred area to drilling: this has been protected for years due to its unique character: virgin land, not yet despoiled by acts of mankind. Home and migratory territory to innumerable birds and caribou. Plus disturbing this ecosystem has a major impact on the native populations who hunt these grounds. There is no need to search for oil here. We are rich in oil currently. There are already many BLM leases that have gone wanting.

We need to protect our wild areas for future generations!!

Charles Jacobson
