I am a voter and I have friends who vote

The plan to allow ANWR drilling to be leased to the highest bidder without understanding the full environmental and national security implications is beyond irresponsible it is unconscionable.

Its not just the caribou, but that's important too. What about the permafrost damage? What about the certain pollution effects in the area for subsistence inhabitants. Very important to me is the very real likelihood that all of this will be undertaken with little to no positive benefit, environmentally or economically to the people of Alaska and the US.

Why is this happening? and to be happening so fast?
This is not above board.

I vote and I am mad
