The Article Refuge is no place for oil or gas drilling. Infrastructure and most likely oil spills would cause irreversible damage to one of the most pristine, sensitive places on this planet. How can you live with this decision...choosing money that may not come from the drilling, over what we know ; that is that the area is brimming with wildlife, calving caribou, home to migrating birds, and denning habitat to polar bears! Stop the drilling, listen to the people who are the experts and those concerned with defending our environment and wildlife, and to citizens who care. Money can be made other ways, but this area cannot stand this assault!
