Dear Fellow Americans - Oil is fading as a major power/heating source, solar and wind are rising; autos will be mostly electric within 20 years. Gas fracking in the lower 48 is at an all time high, prices are down. The ANWR is the largest pristine wilderness left in our country. In 25 years when the energy grid has been reinvented, ANWR will hold enormous value as a tourist and eco destination. Don't despoil it for a few bucks in the short term. Also, this black hole we are pushing wilderness and wildlife in will drag we humans in behind it, regardless of politics. And finally, don't use a budget act as an excuse for this action. The budget Congress just past in combination with the tax cut makes no fiscal sense - it won't stand. But ANWR can last forever if you do what's right.

Best -

John W Mitchell
