To the U.S. Bureau of Land Management,

The Coastal Plain of the Arctic National Wildlife Refuge includes the calving grounds of the Porcupine Caribou herd that migrates between Canada and Alaska. Disturbing the sensitive calving grounds through oil and gas drilling would have disastrous effects on the health of the herd and the Gwich'in communities of Canada and Alaska that rely on it for their culture and subsistence.

The importance of the Arctic Refuge transcends borders with many species crossing back and forth into Canada. It is therefore critical that Canadian interests be included within the scope of this environmental review. As a Canadian, I urge you to ensure that the environmental review is rigorous and addresses all impacts using both western science and the knowledge of Indigenous people. Oil and gas extraction has no place in the Arctic Refuge.

If the United States of America continues to be only concerned with lining the pockets of CEO's with money rather than the destruction of our environment then you have come to the saddest state every in your country's existence. Alternative resources are the way of the future. Oil and gas will ensure we have no future.

Bonnie McKenzie,
R3R 1A2
