Dear BLM,

The Arctic National Wildlife Refuge is one of the planet's last remaining intact, functioning ecosystems. Let us keep it that way. We know now that functioning ecosystems provide national and global services: regulating climate, preventing disease, serving as a source for new medicines and materials, preventing sea level rise, sustaining local livelihoods, preserving indigenous knowledge, and most importantly providing resilience to change. Please make the right economic and moral choice for America's long term future: preserve the Arctic National Wildlife Refuge with NO drilling activity.

Thank you.

Karen Minkowski
