This is to add my comment that I think the NEPA process is going to fast. This should be a very well thought out process for many reasons including:

- **Climate change, impacts on water resources**
- **Wildlife impacts**
- **Impacts on original purpose of the refuge**
- **Subsistence uses impacts** Impacts and long term ramifications are a do or die for both the people and the wildlife using the land and the oil and gas companies waiting to drill and mine.
- **Economic.** At what price is this admiration willing to sell our National refuge for.

Thank you for taking the time to read this.
