Dear AK BLM,

I would like to see a full robust and comprehensive EIS concerning oil and gas leasing on the coastal plain. The EIS needs to address the proposed leases and subsequent exploration and seismic activity will affect the marine life as well as the wildlife, who inhabit the Coastal Plain and nearby waters. The EIS should address the impact of oil spills and the potential impact on all animals who reside or migrate in that area. If these types of spills cannot be mitigated then the drilling and exploration activity should not be allowed. This is a beautiful and pristine wildlife area. The EIS should address how drilling, exploration and seismic activity on the coastal plain will impact not only the plain but all of ANWR and the species that live there.

Thank you for your consideration.
