To anyone concerned about the future on earth:

America doesn't need more Arctic drilling; it needs clean energy. Making polluted decisions ensures another decade going the wrong direction; painfully backwards. We all need a better place to live and survive, preserved, not damaging our environment for temporary answers.

Investing in green energy is a responsible, renewable, and thoughtful way to provide energy for humans with all beings considered.

Please, represent the views of your state, those that use their voice, acknowledging the animals who cannot. People that care and prove, through science, what is best for the earth through research, data, and publishing.

Do not lease ANWR to oil companies for drilling and do not allow poor, irreversible decisions to ruin the future. We are all connected.

America doesn't need more Arctic drilling; it needs clean energy.

Thank you for your time and dedication to Alaska. Ensure your role is something you believe in.

Respectfully,  
Briana Sullivan  
Lifelong Alaskan
