The development and use of dirty fossil fuels harms people and our air, water, food, and lands. It is not healthy for us and our planet.

The health of people who use and live near the development of the dirty fossil fuels are already being harmed and with climate changes our health is getting worse.

I've been an Alaskan for 56 years, living most of those years in my little cabin in the woods near Fairbanks. I have seen many changes during these years with more and more people moving to Alaska and the developments they bring and how it is affecting the climate and how things are getting worse because of their dependence of the dirty fossil fuels. Fairbanks, Alaska is now number one on the list of the most polluted cities in the USA. It has become a very unhealthy place to live.

Alaskans and all other American people need to transition away from the use of dirty fossil fuels. Opening the last, truly wild, fragile, pristine, wildlife refuge left in the word to oil and gas development will not make our health better in any way. It will only make the health of the people and our planet much, much worse.

Other sustainable, renewable, safer, cleaner energy resources must be developed for the health of all the people and our planet.
