To the U.S. Department of the Interior,

The natural ecosystem of the Arctic Refuge must not be tampered with in anyway to preserve the health and preservation of the Porcupine caribou and the Gwinch'in People as well as the environment against any drilling or pipe installation for the draining or transporting of any natural or other resources from the region. Industrial activity and hardware would disturb the migration patterns of the wildlife and pollute the air and waters.

I am against the coastal plain and gas leasing program of the Arctic Refuge. Let there be at least one place on earth free from industrialization and preserved in its natural environment. Let there remain clean air, water, and natural habitat so that the caribou can stay healthy undisturbed as well as the Gwinch'in people whose life depends on the caribou.

Thank you,

Joanne Winship
