Dear BLM,

It's a shame that we are even considering to open the Arctic National Wildlife Refuge to oil and natural gas drilling. According to NASA, "Most climate scientists agree the main cause of the current global warming trend is human expansion of the 'greenhouse effect' — warming that results when the atmosphere traps heat radiating from Earth toward space." Oil and gas productions are a major source of the greenhouse gas emissions. Animals have the same right to live on this planet as we do, they shouldn't be suffering at our expense. The way to put an end to global warming and save our planet from oblivion is by thinking about other species and being more considerate. The possible damage oil rigs can do could be permanent to all the threatened caribou, polar bears, waterbird species and seals. Don't you believe we have already hurt this planet enough? It's the younger generations like mine that are going to have to live with the decisions you make. You may not live long enough to experience life on a dying planet, but we will.

Thank you for your consideration,

-Graciella Blanco
