NEPA requires you to evaluate the cumulative, additive, and synergistic impacts of oil and gas leasing on the Coastal Plain. This includes both impacts that accumulate through time, and also impacts which “add to” the impacts caused by the (already existing and planned) oil and gas developments on nearby federal, state, and Native corporation lands and waters. New oil and gas development on the Coastal Plain would exacerbate some of the existing problems caused by other Arctic oil and gas operations: on air quality for example, and on climate change. Some of the impacts will last for an indefinitely long future and you must project for them.

Thank you.

Jan Bronson, Anchorage AK
