8 June 2018

To all concerned and to policy makers;

Enough! We've got a future. —

IF we move away from fossil fuel and toward solar, wind, water (and maybe even nuclear). Detroit and the other great engine producers have worked on cleaner and more efficient powerplants. Lets not throw away or slow down their efforts. We don't need more oil, especially if it rips up areas that deserve to be left alone. Treat the earth well and practice conservation.
