The Arctic Refuge is no place for oil and gas. Oil and gas activities should not be allowed on the Coastal Plain of the Arctic Refuge. This is the single most destructive attack on the wilderness, wildlife, and subsistence resources of a national wildlife refuge in modern history. The Administration is putting politics above protection of one of our most treasured public lands. Rushing into leasing is not what the Refuge deserves or what the law requires. The administration needs to comply with all the important legal protections that are in place to protect caribou, water, subsistence, and other sensitive resources of the Coastal Plain.

The Coastal Plain is the biological heart of the Arctic Refuge and provides important habitat for polar bears, caribou, muskoxen, and hundreds of species of migratory birds that travel from all 50 states and 6 continents. Oil and gas would harm the most important onshore denning habitat for threatened polar bears in the United States, further placing this imperiled species at risk. Oil and gas activities would also further exacerbate climate change, which is already causing temperatures in the Arctic to rise at twice the rate of the rest of the country. Oil and gas activities are completely at odds with the protection of the wildlife and other values in the Refuge, and with the urgent need to address climate change.

Interior needs to consider the impacts from all stages of oil and gas, including seismic activities, leasing, exploration drilling, and development, as well as any related infrastructure or other activities. The environmental impacts from oil and gas will extend well beyond the footprint of any actual developments and will harm the wildlife, water, subsistence, and other values the Arctic Refuge was set aside to protect.

Thank you.
