ATTN: Coastal Plain Oil & Gas Leasing Program EIS

The Bureau of Land Management's proposal to consider allowing drilling for oil and gas in the Arctic National Wildlife Refuge is a serious mistake. Please STOP any consideration of drilling in this highly sensitive environmental area. It's designation as a "wildlife refuge" was not casually undertaken and must not be violated with drilling, roads and related infrastructure it would take for such short-term extraction benefits. The U.S. does not need this oil and gas as we have done well with so many other sources and options. If our country (at least as represented by the current Trump Administration) had not been so stubborn and stupid as to have canceled the Paris Climate Change accord we would be working towards much greater energy independence rather than being the foolish and embarrassing laughing stock to the rest of the modern world.

In summary, STOP ANY CONSIDERATION OF DRILLING IN ANWR!!

Respectfully,

Kathy & King Cushman
