Ryan Zinke,

Pipelines leak. Tankers spill. These problems are inevitable in hospitable climate regions; they'll destroy fragile ones like the Arctic coastal plain.

Locally, drilling would have devastating and permanent impacts on the refuge's wildlife, as well as the Gwich'in people who rely upon its caribou herd. Furthermore, burning of the oil and gas produced from the coastal plain threatens to accelerate global warming, threatening wildlife and people across the globe.

Given all the known facts, the only sensible decision is to reject this short-sighted proposal.
