There is NO safe drilling. Spills DO and WILL occur. There is so little unvarnished wilderness left on our planet, why damage what is left!

And this is not a project in isolation-- that oil needs to GO SOMEWHERE. Whether by boat or truck or pipeline, the ecological impact is not limited to the local environment.

As for WHY we are doing this -- that is an even bigger question. We no longer NEED to do this. This is old news! We are drowning in our own oil, and we need LESS AND LESS each year, especially as we become more dependent on fossil fuel - INDEPENDENT sources of energy. (Wind, solar, geothermal, etc)

STOP THIS NOW. It see as no-one but a few very rich people who don't give a damn about the rest of us. But this is OUR WORLD, too.

On behalf of my students, who will inherit this planet soon,  
Thank you for listening,

Judith Luber-Narod, Ph. D.  
High School Science Teacher
